Or'gans of genera'tion. Parts concerned in reproduction. In mammals the male organs are the testicles and penis, with connecting and included ducts and glands; the female organs are the ovaries, oviducts, uterus, vagina, and vulva. **O., ac'cessory,** organs whose functions are less important than those of the main organs. **O., ac'cessory, in the fe'male,** glands, mammary. **O., ex'cretory,** organs whose function it is to eliminate excrementitious matter. **O., lac'rymal,** see *Apparatus, lacrymal.* **O. of locomo'tion,** see *Locomotive.* **O., olfac'tory,** cavities of nose and ends of olfactory nerves.

Or'ganum. Instrument; organ.

Or'gany. Origanum vulgare.

Orgasm, or'gazm (*orgao,* to desire ardently, to be excited). A strong impulse or desire for something. State of excitement and turgescence of any organ whatever. Erethism. Applied particularly to the height of venereal excitement in sexual intercourse.

Orgas'mus. Orgasm; turgescence.

Orgas'tica. Diseases affecting the orgasm; organic or constitutional infirmity disordering the power or desire of procreating.

Or'ge. Rage.

Or'geat (*orge,* because formerly made with barley-water). Syrupus amygdalæ.

Orgo'sis. Orgasm.

Orichal'cum (*oros,* mountain, *chalkos,* brass). Brass.

Oric'ular. Auricular.

Orien'tal. Pertaining to or coming from the Orient. **O. boil,** see *Furunculus Orientalis.* **O. cashew' nut,** marking-nut, Malacca bean, marsh nut; fruit of Semicarpus anacardium; the hard shell contains a corrosive juice; kernel is used for food. **O. el'emi,** see *African elemi.* **O. ring'worm,** tinea circinata tropica. **O. salep',** tubers of various species of Eulophia growing in India. **O. sore,** see *Ulcers, endemic.* **O. ty'phus,** *Plague.*

Orienta'tion. Recognition of points of the compass; optical recognition of horizontal and vertical lines as such, and of stability of objects when their images shift on the retina through the motion of the eye. The O. of a building is the point of the compass to which it faces.

Orifacial, or-e-fa'se-al. Relating to the face and mouth. **O. an'gle,** in craniometry, angle between facial line of Camper (see *Facial angle*) and a plane drawn through masticating surfaces of upper teeth.

Orifice, or'if-iss (*os,* mouth, *facio,* to make). Entrance to a canal or cavity; variously called opening, aperture, foramen, meatus, ostium, mouth, etc.

Orificial, or-if-ish'e-al. Relating to an orifice, as *orificial surgery,* surgery applied to any orifice, as the anus, vulva, etc.

Orificium, or-if-is'e-um (*os,* mouth, *facio,* to make). Ostium; opening; mouth. **O. cuta'neum,** external opening of urethra. **O. dex'trum ventric'uli,** pylorus. **O. epiplo'icum,** foramen of Monro. **O. hyme'nis,** see *Vagina.* **O. infundib'uli,** helicotrema. **O. supe'rius**

laryn'gis, see *Larynx*. **O. u'teri**, os uteri. **O. uteri'num**, see *Uterus*. **O. vagi'næ**, see *Vagina*. **O. vagina'le**, see *Uterus*. **O. vagina'le cana'lis cervi'cis**, os uteri. **O. ventric'uli sinis'trum**, cardiac extremity of stomach. **O. vesica'le**, vesical opening of urethra.

Orig'anum (Ph. U. S.) (*oros*, mountain, *ganos*, delight). *Wild* or *Common marjoram*, *Mancurana*, ord. Labiatæ. Resembles marjoram in smell, and has a pungent taste much like thyme. It is aromatic and stimulant, diaphoretic and emmenagogue, and its oil possesses the properties of the essential oils in general. The *oil of origanum* is very pungent; it is rarely given internally. Used in toothache. **O. aquat'icum**, Eupatorium cannabinum. **O. cre'ticum**, O. dictamnus. **O. dictam'nus**, leaves were recommended as emmenagogue and alexipharmic. **O. heracleot'icum**, origanum. **O. majora'na**, *Sweet marjoram;* odor is strong and fragrant, taste aromatic and bitterish; properties those of a stomachic and errhine; chiefly used, however, for culinary purposes and as a snuff in headache. **O. Syri'acum**, Teucrium marum. **O. vul'gare**, origanum.

Or'igin. Beginning or source. More fixed or central termination of a muscle. Connection of a nerve with the cerebro-spinal axis. **O., appar'ent**, O., superficial. **O., deep**, nucleus of cells to which its fibres penetrate. **O., superfic'ial**, place of appearance on surface.

Orig'inal. Male deer with undescended testicles.

Ori'go (*orior*, to arise). Origin. First attack or onset of a disease.

Orismol'ogy (*orismos*, definition, *logos*, discourse). Terminology; nomenclature.

Oristry, or'ist-re. Surgery relating to the teeth and mouth.

Oriza, or-e'zah. Oryza.

Oriza'ba root. Male jalap.

Orizabin, or-iz-ab'in. Jalapin.

Orlea'na. See *Terra orleana*. Annotta.

Or'me. Appetite.

Ormocarpum (or-mo-karp'um) **lennoï'des.** Species of East India. Root possesses tonic and stimulant properties; bark of the root is employed externally in rheumatism.

Ormosine, or'mo-seen. Crystalline alkaloid from seed of Ormosia dasycarpa; white substance resembling opium in its action.

Ormus, orm'us. Ulmus.

Ornamen'tum folia'ceum. See *Tube, Fallopian*.

Ornithog'alum altis'simum (fanciful name, from *ornis*, bird, *gala*, milk). A South African plant, ord. Asphodeleæ, the fleshy bulb of which is diuretic. An oxymel is prepared of it, which is given in catarrh, asthma, phthisis, and hydrothorax. Resembles squill in its medical properties. **O. marit'imum**, scilla. **O. squil'la**, scilla.

Ornithoglos'sa (*ornis*, bird, *glossa*, tongue). See *Fraxinus excelsior*.

Ornithography, or-nith-og'raf-e (*ornis*, bird, *grapho*, to write). Description of birds.

Ornithol'ogy. Treatise on birds.

Or'nus Europæ'a. See *Fraxinus ornus*. **O. manif'era**, Fraxinus ornus. **O. rotundifo'lia**, Fraxinus ornus. **O. sylves'tris**, Fraxinus excelsior.

Oroban'che America'na and **O. uniflo'ra** (*orobus*, *ancho*, to strangle). *Cancer-root*, *Earthclub*, and *Clapwort*. Same properties as O. Virginiana. **O. Virginia'na**, *Virginia broomrape*, *Beechdrops*, *Cancer-root;* fam. Orobanchoïdeæ. This parasitic plant is astringent, and a peculiar and extremely nauseous bitter. It is most powerful when fresh; has been used in dysentery, and, externally, to obstinate ulcers.

Orobechos (or-ob-ek'os) or **Orebech'us** (*orobos*, *echos*, sound). Sound, crackling in character, elicited occasionally when the inner angle of the eye is subjected to marked pressure.

Orob'ion. See *Ervum ervilia*.

Oroboï'des (*orobus*, *eidos*, form). *Orobodes*. Having the shape of the orobus. A name given to urine when depositing a substance of a fawn color, like the meal of the orobus.

Or'obus. Ervum ervilia. **O. fa'ba**, Vicia faba.

Orognosia, or-og-no'se-ah (*oros*, mountain, *gnosis*, knowledge). Science of mountains, their origin, structure, etc., and, medically, their influence on human health.

Orog'raphy or **Orol'ogy** (*oros*, mountain, *grapho*, to write, *logos*, discourse). Description of mountains, viewed physically or hygienically.

Oron'osus (*oros*, mountain, *nosos*, a disease). Puna; mountain fever.

Orophallus, or-o-fal'lus (*oros*, rump, *phallos*, the male organ). Monster having a second male organ originating from the region of the nates.

O'ros. Crupion; serum.

Orox'ylum Indicum. Ord. Bigoniaceæ. Root employed externally and in form of bath, in acute articular rheumatism. Dose, internally, 3–15 grains, combined with opium; its diaphoretic action is more energetic than that of ipecac. In dysentery a tonic astringent.

Or'piment. Native yellow trisulphide of arsenic. Poisonous, but less so than the oxide. It is also called *King's yellow*, *Adarigo*, *Adarnech*, *Ahusal*, *Althanacha*, *Azarnet*. The Turks prepare a depilatory with it which they call *Rusma*.

Or'pine. Sedum telephium.

Orrhagogus, or-rhag-o'gus (*orrhos*, serum, *ago*, to lead). Hydragogue.

Orrhochezia, or-ro-ke'ze-ah (*orrhos*, serum, *chezo*, to go to stool). Serous diarrhœa.

Orrhocystis, or-ro-sis'tis (*orrhos*, serum, *kustis*, a bladder). An encysted tumor containing a serous fluid.

Orrhohymeni'tis (*orrhos*, serum, *humen*, membrane, *itis*). Inflammation of a serous membrane.

Orrhohymenes, or-ro-hi'men-ees (*orrhos*, serum, *humen*, membrane). See *Membrane, serous*.

Or'rhoid. Serous.

Orrhoposia, or-rho-po'se-ah (*orrhos*, whey, *posis*, drink). Milk-drinking; milk diet.

Orrhopygion, or-rho-pij'e-on (*orrhos*, extremity, *puge*, nates). Inferior extremity of the vertebral column. Os coccygis. Also the raphe extending from the penis to the anus, and separating the scrotum into two parts.

Orrhorrhagia, or-rhor-rhaj'e-ah (*orrhos*, serum, *rhegnumi*, to burst forth). Sudden discharge of serum, as from the bowels in Asiatic cholera.

Orrhosis, or-rho'sis (*orrhos*, serum). Formation of serum.

Orrhoso'len (*orrhos*, serum, *solen*, pipe or tube). Lymphatic vessel.

Orrhosolenitis, or-rho-so-len-e'tis (*orrhos*, serum, *solen*, channel). Inflammation of lymphatic vessel.

Orrhymenitis, or-rim-en-e'tis (*orrhumenes*, serous membrane, *itis*). Inflammation of a serous membrane. **O. thorac'ica**, pleurisy.

Or'ris. Iris Florentina. **O., common**, Iris Germanica.

Orrorrhœ'a (*orrhos*, serum, *rheo*, to flow). A morbidly increased secretion of a serous fluid; watery discharge.

Ortharthragra, or-thar'thrag-rah (*orthos*, true, *arthron*, joint, *agra*, seizure). True gout.

Orthentrop'ia (*ortho*, *entrepo*, to convert). Orthopædia.

Orthiauchenus, or-the-au'ken-us (*orthos*, upright, *auchen*, neck). Applied to skulls in which line joining inion and basion makes an angle of from 49° to 38° with radius fixus (Lissauer).

Orthio (*orthios*, straight). In composition, straight.

Orthiochordus, or-the-o-kor'dus (*orthios*, straight, *chorde*, chord). Applied to skulls in which line joining hormion and basion makes an angle of 33° to 52° with radius fixus (Lissauer).

Orthiocoryphus, or-the-o-kor'if-us (*orthios*, straight, *koruphe*, peak). Applied to skulls in which line connecting bregma and lambda makes an angle of 29° to 41° with radius fixus (Lissauer).

Orthiodontus, or-the-o-don'tus (*orthio*, *odous*, tooth). Applied to skulls in which line joining subnasal and

alveolar points makes an angle of 88° to 121° with radius fixus (Lissauer).

Orthiodoxyben'zine or **-ben'zol.** Pyrocatechin.

Orthiometopus, or-the-o-met-o'pus (*orthio, metopon,* forehead). Applied to skulls in which line joining bregma and nasal point makes an angle of 47° to 60° with radius fixus (Lissauer).

Orthiopisthius, or-the-o-pis'the-us (*orthio, opisthios,* hinder). Applied to skulls in which line joining lambda and inion makes an angle of 84° to 95° with radius fixus (Lissauer).

Orthiopisthocranios, or-the-o-pis-tho-kran'e-us (*orthio, kranion,* cranium). Applied to skulls in which line joining lambda and opisthion makes an angle of 107° to 119° with radius fixus (Lissauer).

Orthioprosopus, or-the-o-pros-o'pus (*orthio, prosopon,* face). Applied to skulls in which line drawn from nasion to alveolar point makes an angle of 89.5° to 100° with radius fixus (Lissauer).

Orthiopylus, or-the-o-pe'lus (*orthio, pule,* inlet). Applied to skulls in which foramen magnum looks markedly forward (15.5° to 24°) when referred to radius fixus as a horizontal (Lissauer).

Orthiorhinus, or-the-o-re'nus (*orthio, rhis,* nose). Applied to skulls in which line joining nasion and subnasal point makes an angle of 87.5° to 98° (Lissauer).

Orthiuraniskus, or-the-u-ran-is'kus (*orthio, ouraniskos,* heavenly). Applied to skulls in which line connecting posterior border of incisive foramen and alveolar point looks backward when referred to radius fixus as a horizontal, making an angle of 40° to 60° (Lissauer).

Or'tho (*orthos*). In composition, straight, right, upright.

Orthocephaly, or-tho-sef'al-e (*ortho, kephale,* head). Having vertical index of 70.1° to 75° (Frankfort agreement).

Orthochorea, or-tho-kor-e'ah (*orthos,* straight, *choreia,* a dance). Chorea in which the patient assumes a straight attitude.

Orthoco'lum (*ortho, kolon,* limb). Stiffness of the limb so that it is kept quite straight.

Orthocyllosis, or-tho-sil-lo'sis (*orthos, kullosis,* mutilation). Ankylosis in which the limb is straight.

Orthodon'tia (*ortho, odous,* tooth). Part of dentistry concerned in treatment of irregularity of the teeth.

Orthodo'ron (*ortho, doron,* palm). A measure with the Greeks equal to eleven finger-breadths.

Orthognath'ic or **Orthog'nathous** (*ortho, gnathos,* jaw). Having a gnathic index less than 98°. Having profile line inclined to auriculo-infraorbital plane from 63° to 90° (Frankfort agreement).

Orthognathism, or-thog'na-thism. State of being orthognathous; distinguished from prognathism and opisthognathism.

Orthokre'sol. See *Kresol.*

Orthometer, or-thom'et-ur (*ortho, metron,* measure). Instrument for measuring the degree of ocular protrusion.

Orthomor'phia (*ortho, morphe,* shape). Orthopædia; plastic surgery for correction of faulty shape or conformation.

Orthomorpho'sis. Orthopædia.

Orthopædi'a (*ortho, pais,* a child). *Orthopedics.* The part of medicine whose object is to prevent and correct deformities in the bodies of children. Often used, however, with a more extensive signification, to embrace the correction or prevention of deformities at all ages. *Orthosomatics* (from *orthos,* right, *soma,* body) has been proposed as a preferable term.

Orthopæ'dic. *Orthopedic.* Relating to orthopædia, as orthopedic institution, an institution for the correction or prevention of deformities in children.

Orthopædy, orth'o-pe-de. Orthopedics.

Orthope'dic. Orthopædic.

Orthope'dics. Orthopædia.

Orthope'dist. One who practises orthopædia.

Orthophe'nol-sulphon'ic acid. Aseptol.

Orthophony, orth-of'on-e (*ortho, phone,* voice). A good pronunciation. Normal voice.

Orthophoria, or-tho-for'e-ah (*ortho, phero,* to carry). Normal tendency to parallelism of visual axes.

Orthophospho'ric acid. Common phosphoric acid as distinguished from pyro- and metaphosphoric acids.

Orthophrenic, or-tho-fren'ik (*ortho, phren,* mind). Relating to sound mind and to the cure of insanity.

Orthophreny, or'tho-fren-e (*orthos, phren,* mind). Treatment of insanity.

Orthophthalmic, orth-of-thal'mik (*ortho, ophthalmos,* eye). Relating to or belonging to the correction of deviations of the eyeball, as of strabismus.

Orthopneumaticus, orth-o-nu-mat'ik-us. Relating to orthopnœa.

Orthopnœa, orth-op-ne'ah (*ortho, pneo,* to respire). *Apnœa.* Impracticability of breathing in the horizontal posture. Necessity of being in the erect posture in order to respire. **O. cardi'aca,** angina pectoris. **O. convulsi'va,** asthma. **O. cynanch'ica,** cynanche trachealis. **O. hydrothorac'ica,** hydrothorax. **O. hyster'ica,** angone. **O. pituito'sa,** orthopnœa from excessive secretion of mucus in the air-passages. **O. tussiculo'sa,** whooping-cough.

Orthopnoicus, orth-o-no'ik-us. Orthopneumaticus.

Orthoprax'is (*ortho, praxis,* action). *Orthopraxy.* Treatment of deformities by mechanical apparatus.

Or'thopraxy. Orthopraxis.

Orthop'tic (*ortho, optomai,* to see). Relating to normal vision with both eyes. **O. train'ing,** mode of correction of defective vision by special ocular exercise of the eye or eyes.

Orthopygium, orth-o-pij'e-um. Coccyx.

Orthorrhachia, orth-or-rhak'e-ah (*ortho, rhachis,* spine). Art of overcoming deformities of the spine.

Orthoscope, or'tho-skope (*ortho, skopeo,* to see). An instrument devised by Czermak to exhibit, on application to the eye, the condition of the superficial portions of that organ.

Orthoscopic, or-tho-skop'ic (*ortho, skopeo,* to see). Relating to the orthoscope or orthoscopy.

Orthos'copy (*ortho, skopeo,* to see). Examination of the eye by means of an orthoscope.

Orthosiphon, orth-o-se'fon (*ortho, siphon,* tube). Stamineus. Plant growing in Japan and the East Indies. The leaves when dried are employed in gout and urinary affections.

Orthosis, or-tho'sis (*orthoö,* to make straight). Process of making or becoming straight.

Orthosomat'ice (*ortho, soma,* body). Orthopædia.

Orthospo'rum anthelmin'ticum. Chenopodium ambrosioides, var. Anthelminticum.

Orthosyne, orth-os'in-e (*ortho*). Capability of erection.

Orthotast, orth'o-tast (*ortho, tasso,* to order). Apparatus for overcoming faulty conformation of the long bones; also employed for compression of the aorta.

Orthotenes, orth-ot'en-ees. Possessing capability of erection.

Ortho'ter. Orthopedist.

Orthoterion, orth-o-ta're-on. Apparatus used to straighten deformed limbs.

Orthot'onos or **Orthotonus,** or-thot'on-us (*ortho, tonos,* stretching). Rigid extension of trunk and neck in a straight line in tetanic spasm.

Orthrine, orth'reen. Product derived from phenylhydrazine.

Orthysteropto'ma (*ortho, hustera,* uterus, *ptoma,* fall). Prolapsus uteri.

Ortil'lus (*articulus,* joint). Digitus pedis.

Or'tyx. Tetrao coturnix.

O'rus. Crupion; serum.

Orvieta'num (from the Italian quack Hieronymus Ferrantes of Orvieto). An electuary regarded as an invaluable antidote. Its medical properties resembled, in some respects, those of the theriac.

Ory'za, O. sati'va. Rice, fam. Gramineæ. A plant, almost aquatic, indigenous in China, one of the richest productions of Egypt, and which prospers in the warmer regions of the four quarters of the globe. Grain enclosed in the husk is called by the Malays *Paddy, Padi,* or *Paddie;* when deprived of the husk, *Bras;* and when boiled, *Nasi.* Its amylaceous seeds

nourish more men than those of wheat and rye together. Besides being alimentary, they are demulcent and emollient.

Mucilage of rice, Rice-water, may be formed by taking one ounce of rice, and, having washed it, macerating it for three hours in a quart of tepid soft water, in a pan placed upon a stove, then boiling the whole slowly for another hour and straining through a sieve. It may be sweetened and acidulated, or be prepared with milk, like arrow root, and be used as a demulcent.

Rice jelly is made by macerating a sufficient quantity of clean rice in as much water as will cover it; boiling slowly, adding water as it evaporates until the rice is reduced to a pap, sweetening and flavoring with *lemon-juice* or *vanilla*, and passing through a fine sieve into a form or mould. It may be eaten alone or with milk, and is a good dietetic preparation for those of weak digestive powers.

Ground rice. Take a teaspoonful of *ground rice*, a pint and a half of *milk*, and half an ounce of *candied lemon-peel*. Rub the rice smooth with the milk, then add the lemon-peel cut into small pieces; boil for half an hour, and strain while hot; used in the same cases as rice jelly.

Ory'zum. Oryza.

Os (gen. ossis) (dim. **Ossiculum**). Bone. **Os** (gen. oris). Mouth. **O. acetab'uli**, acetabulum. **O. acromia'le**, distinct bone sometimes formed by failure of acromion process to unite with rest of scapula. **O. acro'mii**, acromion. **O. adjuto'rium**, humerus. **O. Æthi'opum**, *Negro mouth;* peculiar appearance of the mouth, dependent on projection of the canine and incisor teeth. **O. alæfor'me**, sphenoid. **O. al'agas**, coccyx, sacrum. **O. ala'tum**, sphenoid bone. **O. amphid'eon**, os uteri. **O. anon'ymum**, innominatum os. **O. anti'cum**, mouth, especially portion between the lips and teeth. **O. antiepilep'ticum**, Wormian bone formed in anterior fontanelle. **O. ap'icis squa'mæ** (occipitalis), triangular Wormian bone formed from upper angle of occipital; interparietal bone. **O. arcua'le**, temporal bone. **O. arma'le**, temporal bone. **O. as'ser**, sternum. **O. az'ygos**, sphenoid. **O. balis'tæ**, astragalus. **O. basila're**, occipital bone; palate-bone; sacrum; sphenoid. **O. baxilla're**, sphenoid. **O. bicor'ne**, hyoides os. **O. brachia'le**, humeri os. **O. bra'chii**, humeri os. **O. breg'matis**, parietal bone. **O. cal'cis**, calcaneum. **O. cana'lis naso-lacryma'lis**, os lacrymalis externum. **O. capita'tum**, magnum os. **O. cau'dæ**, occipital bone. **O. centra'le**, centrale. **O. clu'nium**, sacrum. **O. coccy'gis**, coccyx. **O. cogitatio'nis**, parietal bone. **O. colato'rii**, sphenoid bone. **O. colato'rium**, ethmoid bone. **O. colifor'me**, ethmoid bone. **O. convolu'tum supe'rius**, turbinated bone, middle. **O. coracoï'deum**, coracoid bone; in man, element forming coracoid process, distinct until 17th year. **O. cor'dis**, bone found in fibro-cartilaginous tissue at base of ventricles of heart in some animals. **O. corona'le**, frontal bone. **O. cox'æ**, innominatum os. **O. coxen'dicis**, ischium. **O. cribrifor'me**, ethmoid. **O. cribro'sum**, ethmoid. **O. crista'tum**, ethmoid. **O. crotaphit'icum**, temporal bone. **O. cu'bicum**, ethmoid bone. **O. ad cubita'le**, radius. **O. cu'biti infe'rius**, ulna. **O. cuneifor'me**, cuneiform bone of wrist; sphenoid. **O. cu'neo-compara'tum**, sphenoid. **O. cymbifor'me**, scaphoid bone. **O. discifor'me**, patella. **O. du'rum**, temporal bone. **O. ensifor'me**, sternum. **O. epac'tale pro'prium**, interparietal bone. **O. exter'num**, the entrance into the vagina, in contradistinction to the *os internum* or *os uteri*. **O. ex'tra or'dinem car'pi**, os pisiforme. **O. fem'oris**, femur. **O. fibro'sum**, occipital bone. **O. fonticula're poste'rius** or **quadra'tum**, lambdoid bone. **O. foraminulen'tum**, ethmoid. **O. fron'tis**, frontal bone. **O. ge'næ**, malæ os. **O. gladi'oli**, sternum. **O. grandino'sum**, cuboid. **O. gut'turis**, hyoides os. **O. hamat'um**, os unciforme. **O. hu'meri**, humerus. **O. hyoï'des**, hyoides os. **O. hypo'pium**, malar bone. **O. hyseloï'des**, hyoides os. **O. il'ei**, ileum. **O. in'cæ**, interparietal bone. **O. incisi'vum**, intermaxillary bone. **O. inconjuga'tum**, sphenoid. **O. in'cudi sim'ilis**, incus. **O. infe'rius ventric'uli**, pylorus. **O. innomina'tum**, hip-bone. **O. interme'dium**, element of primitive carpus and tarsus, lying between distal extremities of radius and ulna or tibia and fibula; becomes in carpus semilunar, in tarsus unites with tibiale to form astragalus. **O. inter'num**, see *Uterus*. **O. interpariet'ale**, interparietal bone. **O. invercun'dum**, frontal bone. **O. is'chii**, ischion. **O. japon'icum**, superior zygomatic. **O. juga'le**, malæ os. **O. jugamen'tum**, malæ os. **O. jug'uli**, clavicle. **O. lacryma'le**, unguis os. **O. lacryma'le accesso'rium** or **ante'rius**, independent bone sometimes found at extremity of superior maxilla by persistence of sutura imperfecta of Weber. **O. lacryma'le exter'num**, small bone sometimes found in the lacrymal notch and groove of superior maxilla in young subjects; later, unites with superior maxilla or palate-bone; also called *O. lacrymale laterale*. **O. l. poste'rius**, separate ossification of orbital plate of ethmoid. **O. lamb'dæ**, occipital bone. **O. lambdoï'des**, hyoides os, occipital bone. **O. lapid'eum**, temporal bone. **O. lapido'sum**, temporal bone. **O. lat'um**, sacrum. **O. lat'um hu'meri**, scapula. **O. lenticular'e**, os orbiculare, os pisiforme. **O. lepidoï'des**, temporal bone. **O. lin'guæ**, hyoides os. **O. lingua'le**, hyoides os. **O. lithoï'des**, temporal bone. **O. luna'tum**, semilunar bone. **O. mag'num**, magnum os. **O. mag'num, neck of the**, collum ossus magni. **O. mala're**, malæ os. **O. maxil'læ**, superior maxilla. **O. maxil'læ superio'ris undec'imum**, vomer. **O. maxil'lo-tempora'le**, inferior zygomatic. **O. memen'to mo'ri**, temporal bone. **O. memo'riæ**, occipital bone. **O. mendo'sum**, temporal bone. **O. mor'sus Adam'i**, thyroid cartilage. **O. mucronat'um**, xiphoid cartilage. **O. multan'gulum ma'jus**, trapezium os. **O. multan'gulum mi'nus**, trapezoides os. **O. multifor'me**, ethmoid, sphenoid. **O. navicular'e**, scaphoid bone. **O. nerva'le**, temporal bone. **O. nervo'sum**, occipital bone. **O. occip'iti**, occipital bone. **O. odontoï'deum** odontoid process of axis, considered as a separate bone. **O. orbicular'e**, os pisiforme; also small spherical bone, separate in fœtal life, but united after birth to long process of incus. **O. orbita'le**, superior zygomatic. **O. palat'i**, palate-bone. **O. papilla're**, sesamoid bone sometimes found at tip of olecranon. **O. parieta'le infe'rius**, temporal bone. **O. paxilla're**, sphenoid. **O. pec'tinis**, pubis os. **O. pec'toris**, sternum. **O. pelvicephal'icum**, occipital bone **O. pel'vis latera'le**, innominatum os. **O. pero'ne**, fibula. **O. petro'sum**, temporal bone. **O. pisifor'me**, pisiforme os. **O. plan'um**, planum os. **O. polygo'num ma'jus**, trapezium os. **O. polygo'num mi'nus**, trapezoides os. **O. polymor'phon**, sphenoid. **O. pos'terum**, pharynx. **O. premaxilla're**, intermaxillary bone. **O. prærup'tæ ru'pi assimulat'um**, temporal bone. **O. pri'api**, penis-bone. **O. procubita'le**, ulna. **O. pro'ræ**, frontal bone, occipital bone. **O. pterygoï'deum**, sphenoid. **O. pu'bis**, see *Pubis, os*. **O. pubo-ischiad'icum**, pubo-ischiatic bone. **O. pudi'cum**, malæ os. **O. pup'pis**, frontal bone, occipital bone. **O. pyramida'le car'pi**, trapezoides os. **O. pyx'idis**, occipital bone. **O. quadra'tum**, see *Palate bone*. **O. raplogem'mans os'sis petro'si** or **O. Riola'ni**, ossiculum Riolani. **O. ratio'nis**, frontal bone. **O. rhomboï'des**, trapezium. **O. rotun'dum**, pisiform os. **O. sac'rum**, sacrum. **O. sagittal'æ**, interparietal bone. **O. sax'eum**, temporal bone. **O. scutifor'me**, patella. **O. sedenta'rium**, see *Ischiatic*. **O. semiluna're**, lunare os. **O. seni'le**, *Senile mouth*; a peculiar appearance of the mouth, resembling that seen in old persons, in which the chin projects very much and the lips are retracted. **O. se'piæ**, cuttle-fish bone. **O. sex'tum cra'nii**, occipital bone. **O. sincip'itis**, frontal bone. **O. Sömmerin'gii**, processus marginalis; malar bone. **O. sphænobasila're**, occipital bone. **O. sphecoï'deum**, sphenoid. **O. sphenoïda'le**, sphenoid. **O. sphenoï'des**, sphenoid. **O. s. ante'rior**, presphenoid. **O. s. poste'rior**, basisphenoid. **O. spongio'sum**, ethmoid. **O. spongio'sum infe'rius**, turbinated bone, inferior. **O. spongio'sum me'dium**, turbinated bone, middle. **O. spongio'sum supe'rius**, turbinated bone, superior.

O. spongoï'des, ethmoid. **O. squamo'sum**, temporal bone. **O. subocula're**, malæ os. **O. subrotun'dum**, pisiform. **O. Syl'vii**, os orbiculare. **O. syncip'itis**, frontal bone. **O. ta'li**, calcaneum. **O. tem'poris**, temporal bone. **O. tes'seræ**, astragalus; cuboid. **O. tetrago'num**, parietal bone. **O. thyreoï'des**, patella. **O. tib'iæ mi'nus**, fibula. **O. tin'cæ**, os uteri. **O. trape'zium mi'nus**, trapezoid. **O. trapezoï'des**, trapezoid; trapezium. **O. triangula're** or **trique'trum**, cuneiform bone of wrist. **O. tribasila're**, spheno-occipital bone. **O. trique'trum squa'mæ (parietalis)**, os apicis squamæ. **O. turbina'tum**, turbinated bone, middle. **O. turbina'tum infe'rius**, turbinated bone, inferior. **O. tympan'icum**, tympanic portion of temporal. **O. uncina'tum**, os unciforme. **O. un'guis**, see *Unguis os.* **O. un'guis mi'nor**, external lacrymal. **O. upsiloï'des**, hyoides os. **O. us'tum**, bone-ash. **O. u'teri**, the mouth of the womb; see *Uterus.* **O. u'teri exter'num**, see *Uterus.* **O. u'teri inter'num**, see *Uterus.* **O. va'rium**, cuboid. **O. ver'ticis**, parietal bone. **O. vespertilio'nis** or **vespifor'me**, sphenoid. **O. vo'meris**, vomer. **O. xiphoï'des**, sternum. **O. ypseloï'des**, hyoides os. **O. zygomat'icum**, malæ os. **O. zygomat'icum accesso'rium**, superior zygomatic os. **O. zygomat'icum infe'rius** and **supe'rius**, two portions into which the malar bone is sometimes divided by a horizontal suture.

Osbeckia (os-bek'e-ah) **octan'dra.** Possessing astringent properties. **O. Wrightia'na**, leaves of this shrub are employed in stomatitis and inflammation of the intestines.

Osce'do (*os*, mouth, *cio*, to move). Yawning.

Oschæmatœde'ma or **Oschæmœde'ma** (*osche*, *haima*, blood, *oidema*, œdema). Effusion of blood into the scrotum.

Os'che. Scrotum.

Oscheal, os'ke-al. Pertaining to the scrotum.

Oschei'tis (*osche*, *itis*). Orcheitis; oschitis; inflammation of the scrotum.

Oschelephantiasis, osk-el-e-fant-e-as'is (*osche*, scrotum, *elephantiasis*). Elephantiasis of the scrotum.

Oscheocarcinoma, os-ke-o-kar-sin-o'mah. Cancer, chimney-sweeper's; epithelioma of scrotum.

Oscheocele, os-ke-o-se'le (Eng. os'ke-o-seel) (*oscheon*, *kele*, tumor). *Oschocele*, *Scrotocele*, *Scrotal hernia.* See *Bubonocele.* Dropsy of the scrotum; see *Hydrocele.* **O. aquo'sa**, collection of water in the scrotum; hydroscheocele. **O. cruen'ta**, tumor formed by blood; hæmatocele. **O. flatulen'ta**, emphysematous tumor of the scrotum; physocele. **O. hydatido'sa**, hydatidocele. **O. œdemat'ica**, oscheocele with œdema of the scrotum. **O. sanguin'ea**, hæmatocele. **O. semina'lis**, spermatocele. **O. urina'lis**, urocele. **O. varico'sa**, varicocele.

Oscheochalasis, osk-e-o-kal'as-is (*oscheon*, *chalasis*, relaxation). Tumor resulting from hypertrophy of the areolar tissue of the scrotum and the excessive extension of the skin of the part—an affection which has been confounded with sarcocele.

Oscheohy'drocele. Hernial hydrocele.

Oscheolith, os'ke-o-lith (*oscheon*, *lithos*, stone). Calculus of the scrotum.

Oscheolithos, os-ke-ol'ith-os (*oscheon*, *lithos*, stone). Condition in which a stony deposit is present in or on the scrotum.

Os'cheon. Scrotum.

Oscheoncus, os-ke-onk'us (*oscheon*, *onkos*, a tumor). Preternatural swelling or tumor of the scrotum.

Oscheophyma, os-ke-o-fe'ma (*oscheon*, *phuma*, swelling). Preternatural swelling or tumor of the scrotum.

Oscheoplas'tic (*oscheon*, *plasso*, to form). An epithet given to the operation for restoring the scrotum when lost—*Oscheoplasty*—or for plastic operations upon the scrotum.

Oscheopyœdema, os-ke-o-pe-e-de'mah (*oscheon*, *pus*, *œdema*). Purulent tumefaction of the scrotum.

Os'cheus or **Os'cheos.** Scrotum.

Os'chio-amor'phus (*osche*, *a*, priv., *morphe*, form). Term applied to an amorphous tumor of scrotum containing fœtal organs.

Os'chion. Raised margin of the os uteri; excrescence from the os uteri.

Oschitis, os-ke'tis (*osche*, *itis*). Inflammation of the scrotum.

Oschocarcinoma, os-ko-kar-sin-o'mah. Chimney-sweeper's cancer.

Oschocele, os-ko-se'le (Eng. os'ko-seel). Oscheocele; scrotocele.

Oschon'cus. Preternatural swelling or tumor of the scrotum.

Oschophy'ma (*osche*, *phuma*, swelling). Oschoncus.

Oschopyœde'ma. Oscheopyœdema.

Oschurœdema, os-ku-re-de'mah (*osche*, *ouron*, urine, *oidema*, œdema). Œdema from effusion of urine into the scrotum.

Os'chus. Scrotum.

Oschydrœdema, osk-hid-re-de'mah (*osche*, *hudor*, water, *oidema*, œdema). Watery œdema of the scrotum.

Oscillatio, os-sil-lah'she-o. Irritability; oscillation.

Oscillation, os-sil-la'shun (*oscillo*, to swing). Vibration. Also a partial rotatory movement of the eyeball to and from its antero-posterior axis.

Os'citancy (*oscito*, to yawn). Tendency to yawn.

Os'citant fe'ver (*oscito*, to yawn). A fever in which the patient is continually yawning.

Oscitation, os-sit-a'shun. Yawning.

Oscula're (*osculum*, little mouth; kiss). Kiss.

Os'culate. Having little mouths or suckers, as *tænia osculata.*

Oscula'tion. Kissing; anastomosis of vessels.

Osculatorius, os-ku-lat-o're-us (*osculum*, little mouth). Orbicularis oris.

Os'culum deli'bans (*osculum*, little mouth). See *Kiss.* **O. u'teri**, os uteri.

Os'cus. Scrotum.

Ose. Latin suffix signifying full of.

Osier. Salix alba. **O., red**, Cornus sericea.

O'sis. Greek suffix signifying condition in general, and in pathological terms the morbid condition.

Osman'thus fra'grans. Ord. Oleaceæ, native of China and Japan; used by Chinese to flavor tea.

Osmate, oz'mate. Salt of osmic acid.

Osmatics (*osme*, smell). Animals in whom the sense of smell is strongly developed (Broca).

Os'mazome (*osme*, *zomos*, soup). *Osmozome; Extractive* or *Saponaceous extract of meat.* Extractive matter in muscular flesh and in the blood of animals,. A mixture of different crystallizable and uncrystallizable principles with empyreumatic products. It has an agreeable smell and taste, and is found in *bouillons* of meat in the proportion of one part to seven of gelatin. Vauquelin discovered it in some fungi. It gives the flavor of meat to soups.

Osmazome has been prescribed in the dose of ℥ss to ℥j, in broth or in powder, with aromatics, as a stimulant to the digestive actions and a restorer of appetite in convalescence. An *Osmazome chocolate* is used as an analeptic article of diet. It consists of *chocolate*, lb. j, to *osmazome*, ℥j.

Os'me. Odor.

Osme'sis. Olfaction.

Osmiate, oz'me-ate. Osmate.

Os'mic acid. OsO_4. Osmium tetroxide, perosmic or hyperosmic acid; crystalline, volatile substance, subliming at ordinary temperatures, slowly soluble in about 50 parts of water; obtained by heating metallic osmium in a current of oxygen. The vapor is exceedingly pungent and poisonous. Used for hardening tissues for microscopical investigation; has been injected subcutaneously for neuralgia, sciatica, and sarcomatous tumors.

Osmidro'sis (*osme*, *hidros*, sweat). Perspiration of an unusual odor.

Osmitop'sis asteriscoï'des (*osme*, odor). A plant of the Cape of Good Hope which, from its smell and taste, seems to contain camphor, hence its antispasmodic virtues. In infusion said to be beneficially employed in cough, hoarseness, and diseases of the chest generally, and to be serviceable in flatulent

colic. Infused in spiritus bellidis, it has been used successfully as an external remedy in paralysis.

Os'mium. Rare metal, sp. gr. 21.4, infusible; occurs associated with platinum. **O. tetroxide,** osmic acid.

Osmodysphoria, os-mo-dis-fo're-ah (*osme,* odor, *dusphoreo,* to bear ill). Condition of being intolerant of certain odors.

Osmology, os-mol'o-je (*osme,* odor, *logos,* treatise). Treatise on olfaction and odors.

Osmom'eter (*osmose, metron,* measure). Instrument, consisting of a long glass tube over which a membrane is firmly tied, to measure the extent of osmosis in different fluids. Also apparatus to measure acuteness of sense of smell (*osme,* odor).

Osmomet'ricus sen'sus (*osme, metron,* measure). Olfaction; power of appreciating different odors.

Osmonosi, os-mon'o-se (*osme, nosos,* disease). Diseases of olfaction.

Osmonosology, os-mo-no-zol'o-je (*osme, nosos,* disease, *logos,* description). Doctrine of, or a treatise on, the diseases of the sense of smell.

Osmorrhi'za longis'tylis (*osme, rhiza,* root). *Sweet Cicely.* An indigenous plant, ord. Umbelliferæ, which flowers in May and June. An agreeable aromatic, carminative, and expectorant, having much of the flavor of anise.

Os'mose or **Osmo'sis** (*osmos,* impulse). Force by which fluids are impelled through moist membrane and other porous septa in endosmotic and exosmotic actions. Passage of crystalloids in solution through organic membranes, whereby they may be separated from colloid bodies.

Osmot'ic. Relating or belonging to osmosis, as osmotic force, the force which induces osmose.

Os'mozome. Osmazome.

Os'mund roy'al. Osmunda regalis.

Osmun'da cinnamo'mea (*Osmunder,* one of the names of Thor, a Scandinavian deity). *Cinnamon fern.* Indigenous; ord. Filices. Is reported to be demulcent, subastringent, and tonic. Boiled in milk, it yields a fine mucilage, which is used in diarrhœa. **O. luna'ria,** Ophioglossum lunaria. **O. rega'lis,** *Flowering fern, Osmund royal.* Once thought to possess astringent and emmenagogue virtues. **O. spectab'ilis,** O. regalis.

Osoror. Opium.

Osphrante'rius. Olfactory.

Osphranticos, os-fran'ti-kos (*osphrainomai,* to scent). Olfactory.

Osphrasia, os-frah'ze-ah. Olfaction.

Osphresiology, os-frez-e-ol'o-je (*osphresis, logos,* a discourse). Treatise on olfaction and odors.

Osphre'sis. Olfaction.

Ophresom'eter (*osphresis,* olfaction, *metron,* measure). Instrument to determine the acuteness of the sense of smell.

Osphret'icus. Olfactory.

Osphris'tice (*osphresis,* olfaction). The doctrine of the phenomena of odors.

Osphristics, os-fris'tiks. Osphristice.

Osphyalgema, os-fe-al-ga'mah (*osphus,* hip or loins, *algema,* pain). Coxalgia.

Osphyal'gia (*osphys, algos,* pain). Coxalgia. Pain in the loins.

Osphyarthritis, os-fe-ar-thre'tis (*osphys, arthritis*). Inflammation of the parts about the hip.

Osphyarthrocace, os-fe-ar-throk'as-e (*osphys, arthrocace,* disease of a joint). Hip-joint disease; coxarum morbus.

Osphyitis, os-fe-e'tis (*osphys, itis*). Inflammation of the parts about the hip.

Osphyomyelitis, os-fe-o-me-el-e'tis (*osphus,* haunch, *muelos,* marrow). Lumbar myelitis.

Osphyorrheu'ma (*osphys, rheuma,* rheumatism). Lumbago.

Os'phys. Haunch; loins.

Osphy'tis. Osphyitis.

Os'sa (pl. of **Os,** bone) **anon'yma.** Innominate bones. **O. breg'matis,** parietal bones. **O. carpa'lia,** bones of wrist. **O. convolu'ta inferio'ra,** turbinated bones, inferior. **O. costa'lia,** ribs. **O. digito'rum ma'nûs,** phalanges of the fingers. **O. digito'rum pe'dis,** phalanges of the toes. **O. epacta'lia,** Wormiana ossa. **O. episterna'lia,** suprasternal bones. **O. innomina'ta,** irregular bones forming sides and anterior wall of pelvis. **O. internasa'lia** or **prenasa'lia,** independent bones sometimes found at anterior superior angle of perpendicular plates of ethmoid. **O. la'ta,** broad or flat bones, in distinction from **O. lon'ga,** long bones. **O. nasa'lia,** nasal bones. **O. na'si,** nasal bones. **O. nerva'lia,** parietal bones. **O. pisifor'mia lingua'lia,** see *Hyoides os.* **O. raphogeminan'tia,** Wormiana ossa. **O. sesamoï'dea,** sesamoid bones. **O. sincip'itis,** parietal bones. **O. sphenoï'dea tar'si,** cuneiform bones of tarsus. **O. spongio'sa,** turbinated bones. **O. sutura'rum,** Wormiana ossa. **O. ter'tia maxil'læ superio'ris,** turbinated bones. **O. tetrago'na,** parietal bones. **O. triangula'ria,** sphenoidal cornua. **O. triangula'ria Bla'sii,** Wormiana ossa. **O. trique'tra,** Wormiana ossa. **O. tritic'ea,** see *Hyoides os.* **O. turbina'ta,** turbinated bones. **O. vertica'lia,** parietal bones.

Osseine, os'se-een (*os,* bone). Ostein. Albuminoid of bone connective tissue.

Os'seous (*os,* bone). *Ostoid.* Bony; resembling bone. **O. lab'yrinth,** series of cavities within petrous portion of temporal bone, containing parts to which auditory nerve is distributed. It comprises vestibule, semicircular canals, and cochlea. **O. tu'mors,** see *Osteoma.*

Os'sicles. Ossicula. See *Ossiculum.* **O. of ear,** ossicula auditûs. **O. of tym'panum,** ossicula auditûs.

Ossic'ula (pl. of **Ossic'ulum**) **audi'tûs.** Small bones or ossicles situate in the cavity of the tympanum, and forming an uninterrupted chain from the membrane of the tympanum to that of the fenestra ovalis; four in number—from without to within: malleus, incus, os orbiculare, stapes. **O. Berti'ni,** sphenoidal cornua. **O. epacta'lia,** Wormian bones. **O. episterna'lia,** episternal bones. **O. innomina'ta,** innominata minora ossa. **O. intercala'ria,** or **raphogeminan'tia,** or **sutura'rum,** or **trique'tra,** or **Wormia'na,** Wormian bones. **O. n'asi,** nasal bones. **O. sesamoï'dea,** sesamoid bones. **O. tritic'ea,** see *Hyoides os.*

Ossic'ulum. A small bone. **O. cochlea're,** orbicular bone. **O. foram'inis lac'eri posterio'ris,** O. jugulare. **O in'cudi compar'atum,** incus. **O. jugula're,** small bone, rarely found in jugular foramen; probably result of separate ossification of intrajugular process. **O. lenticula're,** os orbiculare. **O. malle'oloassimila'tum,** malleus. **O. mola'ri den'ti compara'tum,** incus. **O. orbicula're,** orbicular bone. **O. quar'tum,** orbicular bone. **O. Riola'ni,** small bone occasionally found lying free in Glaserian fissure; also called *O. sesamoideum Cortesii.* **O. squamo'sum,** orbicular bone. **O. subrotun'dum,** orbicular bone. **O. Syl'vii,** orbicular bone. **O. tegmen'ti tym'pani cuneifor'me,** small bone occasionally found on anterior surface of petrous portion of temporal bone, being a separate ossification of cuneiform portion of the tegmen tympani. **O. termina'le,** separate ossification of tip of odontoid process of axis, considered as an epiphysis of body of first cervical vertebra.

Ossif'erous (*os,* bone, *phero,* to bear). Bearing or producing bone-tissue.

Ossif'ic. Bone-forming.

Ossificatio, os-sif-ik-ah'she-o. Ossification. **O. testic'uli,** induration of the testicle with osseous matter.

Ossifica'tion (*os,* bone, *facio,* to make). Formation of bone; development or increase of the osseous system. Ossification takes place in the same manner as the nutrition of other parts. Bones are at first mucous, and afterward cartilaginous; the cartilage at length receives the phosphate of lime, and is at the same time replaced by a gelatinous parenchyma, when the bone has acquired the whole of its development. **O., points of,** points where the ossification of a bone commences, whence it extends to other parts. Almost all the bones present a greater or less number of points of ossification. Besides the natural ossification which we observe in the fœtus and in the first periods of life, there are also *accidental ossifications,* such as those frequently remarked after the in-

flammation of serous membranes in the parietes of the arteries, and to which the terms *Osthexia, Incrustation,* and *Petrifaction* have sometimes been applied.

Ossified, os'si-fied (*os, facio,* to make). Changed into bone.

Ossif'raga (*os,* bone, *frango,* to break). Osteocolla.

Ossifying, os'se-fi-ing. Ossific.

Os'sis sac'ri acu'men. Point of the sacrum bone; coccyx.

Ossisa'na (*os,* bone, *sano,* to heal). Osteocolla.

Ossiv'orous (*os,* bone, *voro,* to devour). Species of tumor destructive of bone.

Ostæmia, os-te'me-ah (*osteon,* bone, *haima,* blood). Morbid fulness of blood in a bone.

Ostagra, os-tag'rah (*osteon, agra,* seizure). Forceps to cut or remove portions of bone.

Ostalgia, os-tal'je-ah (*osteon, algos,* pain). Pain in a bone. See *Osteocopus.*

Ostalgitis, os-tal-je'tis (*osteon,* bone, *algos,* pain). Painful inflammation of bone.

Osta'rium (*ostarion,* bone). Ossiculum.

Ostarthri'tis. Arthrophlogosis.

Ostarthroca'ce. Spina ventosa.

Osteæmia, ost-e-a'me-ah. Ostæmia.

Os'teagra. Ostagra.

Osteal'gia. Pain in the bones. See *Osteocopus.*

Osteallœosis, os-te-al-le'o-sis (*osteon,* bone, *alloiosis,* alteration). Metamorphosis of substance of bone, as in the progress of osteosarcoma.

Osteanagenesis, ost-e-an-ah-jen'es-is (*osteon, genesis,* production). New growth of bone.

Osteanaphysis, ost-e-an-af'is-is (*osteon, phusis,* growth). Growth or regeneration of osseous tissue.

Ostearthrocace, os-te-ar-throk'as-e (*osteon, arthron,* joint, *kakos,* bad). Cancer or caries of bones of a joint.

Osteauxe, ost-e-awks'e (*osteon, auxe,* growth). Pathological enlarged condition of a bone.

Osteche (ost-ek'e) or **Ostechema,** ost-ek-a'mah (*osteon, eche,* sound). Sound which is elicited when the frontal bone is percussed.

Ostectopy, ost-ek'to-pe. Bony displacement.

Oste-ectomy, ost-e-ek'to-me (*osteon, ektome,* excision). Operation of osteotomy in which part of a bone is removed.

Ostein, os'te-in (*osteon,* bone). *Osteine, Osseine.* Animal matter of bone.

Ostei'tes (*osteon,* bone). Osteocolla.

Osteïtis, os-te-e'tis (*osteon, itis*). *Ostitis.* Inflammation of bone, characterized by violent shooting and lancinating pains in a bone. *Osteïtis interna* or *Caries centralis* is a form of the disease occurring deep in the bone. When accompanied with deposit of bony matter in the medullary cavity, it is generally described as *Sclerosis ossium, Condensing* or *Ossifying osteitis,* or *Diffuse hypertrophy of bone, O. deformans.* In *osteitis fungosa* interstitial granulations cause the bone to be entirely absorbed. Those forms of osteitis which are attended with softening of the bone-substance have been called *rarefying osteitis.* **O., artic'ular,** see *Rheumatism.* **O. defor'mans,** O. in which the bones become twisted and deformed. **O. fungo'sa,** see *Osteitis.* **O. inter'na,** see *Osteitis.* **O. inter'na osteoplas'tica,** see *Osteitis.* **O. os'sificans,** see *Osteitis.* **O., rar'efying,** see *Osteitis.*

Ostem'bryon (*osteon, embruon,* embryo). See *Lithopædion.*

Ostempyesis (ost-em-pe-a'sis), **Oste-empye'sis,** or **Ostempyo'sis** (*osteon, empuesis,* effusion of pus). Abscess in the interior of a bone.

Osteo-anabro'sis. See *Osteonabrosis.*

Osteo-aneurism, os-te-o-an'u-rism. Expansion of a bone from aneurysmal dilatation of its vessels; may be sarcomatous or erectile.

Osteo-arthritis (os'te-o-ar-thre'tis), **chron'ic.** Affection of joints resulting in destruction of cartilage, roughening of articulating surfaces, thickening of ligaments, and deformity. See *Rheumatism.* **O.-a. lon'ga,** see *Rheumatism.*

Osteo-arthrotomy, os-te-o-arth-rot'o-me (*osteon, arthron,* joint, *tome,* incision). Osteotomy in which the section of bone is performed entirely or partially inside a joint.

Os'teoblast (*osteon, blastano,* to bud). Applied to the young cells, *Osteal cells,* in the development of bone which aid in the formation of the osseous tissue, whether in cartilage, membrane, or periosteum.

Osteoblastic, os-te-o-blas'tik. Relating to osteoblasts.

Osteocachexia, os-te-o-kak-eks'e-ah (*osteon, cachexia*). Cachectic state of the bones.

Osteocampsia, os-te-o-kamp'se-ah (*osteon, kampto,* to bend). Curvature of bones caused by osteomalacia.

Osteocan'cer. Osteocephaloma.

Osteocarcino'ma. Carcinoma which has undergone ossification; carcinoma of bone.

Osteocartilag'inous tu'mor. Osteochondroma.

Osteocele, os-te-o-se'le (Eng. os'te-o-seel) (*osteon, kele,* rupture). Hernia in which the sac is cartilaginous and bony—a rare case; also osseous induration of one or both testicles.

Osteocephaloma, os-te-o-sef-al-o'ma (*osteon, kephaloma,* encephaloid). *Osteocancer, Malignant ostoid.* Malignant disease of bone, including two varieties, one arising from the medullary canal, the other attached to the compact substance; chiefly encephaloid; usually attacks the head of the tibia and the lower extremity of the thigh-bone.

Osteochondritis, os-te-o-kon-dre'tis (*osteon,* bone, *chondros,* cartilage, *itis*). Chondritis involving adjacent bone.

Osteochondro'ma (*osteon, chondros,* cartilage, *oma*). *Osteocartilaginous tumor.* A variety of enchondroma resembling bone rather than cartilage, being made up of an osteoid tissue, composed of trabeculæ and medullary spaces, with a small proportion of cartilage; commonly attacks the ends of the long bones.

Osteochondrophyte, os-te-o-kon'dro-fite (*osteon, chondros,* cartilage, *phuo,* to grow). Chondroma.

Osteoclasis, os-te-o-klah'sis (*osteon, klasis,* a fracture). Fracture of bone for the purpose of correcting deformity.

Os'teoclast. Myeloplaxes; giant cell of bone-marrow; large multinucleate granular body, supposed to effect resorption of growing bone. Also apparatus for performance of osteoclasis.

Osteocol'la (*osteon, kolla,* glue). *Glue-bone, Stone* or *Bone binder.* Name given to petrified carbonate of lime, found in some parts of Germany and other portions of the globe; so called because it has been supposed to possess the power of favoring the formation of *callus* in fractures.

Osteocopic, os-te-o-kop'ik. Pertaining to osteocopus.

Osteocopus, os-te-ok'o-pus (*osteon, kopos,* fatigue). *Osteocope, Bone-ache, Bone-ague.* Pain in the bones, as in syphilis. Such pains are said to be *Osteocopic* (bone-tiring).

Osteocystis, os-te-o-sis'tis (*osteon, kustis,* bladder). Osteocystoid.

Osteocys'toid (*osteon, kustis,* sac or cyst, *eidos,* appearance). Morbid growth in bone, consisting of the formation of cysts filled with puriform or other fluid.

Osteocystoma, os-te-o-sist-o'mah. Cystic tumor of bone containing cysts filled with puriform or other fluid.

Osteocystosarcoma, os-te-o-sist-o-sark-o'mah. Cystosarcoma commencing on a bone.

Osteoden'tine. Hard substance sometimes found in pulp-cavity of tooth, resembling bone in structure, but having branched tubules like dentine. See *Tooth.*

Osteodermatoplastic, os-te-o-durm-at-o-plas'tik (*osteon, derma,* skin, *plasso,* to form). Term applied to partial amputation of foot in which bone and skin are utilized.

Osteodermia, os-te-o-dur'me-ah (*osteon, derma,* skin). Osseous formation in the outer integument, normal in some animals.

Osteo'des (*osteon*). Osseous.

Osteodias'tasis (*osteon, diastasis,* standing apart). Separation of bones, as of epiphyses of long bone.

Osteodiclis, os-te-od'ik-lis. Ossification occurring in valves of veins.

Osteodyn'ia. Pain in the bones; ostalgia. See *Osteocopus.*

Osteo-epiphysis, os'te-o-ep-if'is-is (*osteon, epiphysis*). Bony epiphysis. **O.-e., ante'rior,** epiphysis which forms point of acromion. **O.-e. me'dia,** epiphysis supporting acromial surface, which connects with the clavicle by an articulation, and later on forms a union with the scapula. **O.-e., poste'rior,** epiphysis situated between spine of scapula and acromion, and later on forming a union with the spine.

Osteofibrolipoma, os-te-o-fib-ro-lip-o'mah (*osteon, fibrin, lipos,* fat). Tumor consisting of bony, fibrous, and fatty elements.

Osteogangræ'na. Necrosis.

Os'teogen (*osteon, gennao,* to beget). Soft transparent substance in the formation of bone, which afterward becomes ossified, *Osteogenic substance* or *tissue.* See *Ossification.*

Osteogenesis, os-te-o-jen'es-is (*osteon, genesis,* formation). Original formation of bone.

Osteogenet'ic or **Osteogen'ic** (*osteon,* formation). Pertaining to osteogeny; producing bone.

Osteogen'ia (same etymon). Ossification.

Osteogen'ic sub'stance or **tis'sue.** Osteogen.

Osteogeny, os-te-oj'en-e (*osteon, gennao,* to produce). Bone genesis or growth.

Osteog'raphy (*osteon, grapho,* to describe). Description of the bones; the part of anatomy which describes the bones.

Osteohalisteresis, os-te-o-hal-is-ter-a'sis (*osteon, hals,* salt, *stereo,* to deprive). Deprivation of mineral constituents of osseous tissue, with consequent curvature.

Osteohelcosis, os-te-o-hel-ko'sis (*osteon, helcos,* an ulcer). Caries.

Os'teoid (*osteon, eidos,* appearance). Resembling bone, as the osteoid cartilage, as callus has been called. An accidental bony production, or more frequently a morbid production, which is a calcareous incrustation of the normal tissue or of fibrous tumors. **O. can'cer,** ossified fibrous or medullary cancer, most frequent about the femur.

Osteolithos, os-te-ol'ith-os (*osteon, lithos,* stone). Osteocolla.

Osteol'ogy (*osteon, logos,* discourse). Part of anatomy treating of bones.

Osteolysis, os-te-ol'is-is (*osteon, luo,* to dissolve). Necrosis or death of bone, as in hospital gangrene, in which the dead parts are of soft consistence. Dissolution and absorption of bone.

Osteo'ma (*osteon,* bone). Tumor consisting of osseous tissue, *Osseous tumors.* They are formed of newly-developed connective tissue. Several forms have been described, the *eburnated, compact,* and *cancellous,* according to the nature of the structure composing them. Osteomata include *exostoses* and *osteophytes,* the former being outgrowths from pre-existing bone, the latter growing from the cartilage or the connective tissue. See *Exostoses* and *Osteophyton.*

Osteomalacia, os-te-o-mal-ah'se-ah (*osteon, malakia,* softness). Mollities ossium; the softening being dependent on loss of earthy matter. **O. apsathyros,** osteomalacia characterized by exceedingly flexible condition of bones, resembling wax. **O. carcinomato'sa,** in this form of osteomalacia the osseous marrow is infiltrated with cancer, and softening takes place. **O. infan'tum,** rachitis.

Osteomalacic (os-te-o-mal-as'ik) **pel'vis.** Distortion causing lessening of transverse and oblique diameters, with great increase of antero-posterior diameter. See *Pelvis.*

Osteomalaco'sis. Mollities ossium.

Osteo'mata cu'tis. Osseous tumors of the skin.

Osteomeiosis, os-te-o-mi-o'sis. Condition in which osseous tissue becomes affected.

Osteometabole, os-te-o-met-ab'o-le (*osteon, metabole,* change). See *Osteallœosis.*

Osteomyeli'tis (*osteomyelon,* marrow, *itis*). Medullitis or inflammation of the marow of bone, usually traumatic. **O. gummo'sa,** syphilitic o. with formation of gummata. **O. infectio'sa,** suppurative infectious o. **O. malleo'sa,** O. due to presence of bacillus malleus.

Osteomy'elon or **Ostomy'elum** (*osteon, muelos,* marrow). Marrow.

Os'teon. Bone. **O. hi'eron,** sacrum.

Osteonabro'sis or **Osteoanabro'sis** (*osteon, a,* priv., *brosis,* nutriment). Atrophy of the osseous texture marked by diminution of volume.

Osteonagenesis, os-te-on-ah-jen'es-is. Regeneration of bone.

Osteoncosis, os-te-onk-o'sis (*osteon, onkos,* tumor). See *Exostosis.*

Osteon'cus (*osteon, onkos,* tumor). Bony tumor. Exostosis.

Osteonecrosis, os-te-o-nek-ro'sis (*osteon, nekros,* dead). Necrosis; death of a mass of bone.

Osteoneuralgia, os-te-o-nu-ral'ge-ah. Neuralgia or severe pain of the bones.

Osteon'osi or **Osteonu'si** (*osteon, nosos* or *nousos,* disease). Diseases of the bones.

Osteopædion, os-te-o-pe'de-on (*osteon, paidion,* small child). Lithopædion.

Osteopalinclasis, os-te-o-pal-in-kla'sis (*osteon, palin,* again, *klasis,* fracture). Breaking again of a bone which has united unfavorably; *Refracture.*

Osteoparectasis (os-te-o-par-ek'tas-is) or **Osteoparect'ama** (*osteon, parektasis,* lengthening). Abnormal lengthening of bone.

Osteop'athy (*osteon, pathos,* disease). Bone disease.

Osteoperiosteal, os-te-o-per-e-os'te-al (*osteon, periosteum*). Involving osseous tissue and periosteum.

Osteoperiostitis, os-te-o-per-e-os-te'tis (*peri,* around, *osteon*). Periostitis involving bone.

Osteopha'ges (*osteon, phago,* to eat). Myeloplaxes.

Osteophlebi'tis (*osteon, phleps,* vein, *itis*). Inflammation of the veins of bone.

Osteophone, os'te-o-fone (*osteon, phone,* voice). Audiphone.

Osteophony, os-te-of'o-ne (*osteon, phone,* voice). Hearing through the dermatophone sounds supposed to be produced by vibration of long bones when percussed.

Osteophor, os'te-o-for. Forceps used to crush and separate bone.

Osteophthisis, os-te-o-te'sis (*osteon,* bone, *phthisis,* wasting). Wasting of the bones.

Osteophthonge, os-te-o-thon'ge (*osteon, phthonge,* voice). Ostechema.

Osteophthoria, os-te-o-tho're-ah (*osteon, phthora,* corruption). Bone caries.

Osteophyma, os-te-o-fe'mah (*osteon, phuma,* swelling). Bony tumor or swelling; sometimes used in the sense of exostosis. Also a bony production originating in the deep-seated layers of the periosteum in the vicinity of a carious bone, and which seems to be intended to obviate the weakness resulting from the destruction of the bone.

Os'teophyte (*osteon, phuo,* to grow). Exostosis; osteophyton; circumscribed hyperostosis. Tumor of bone.

Osteophyton (os-te-of'it-on). Deposition of bony matter on the inner surface of the parietes of the skulls of pregnant women. See *Osteoma.*

Os'teoplaque. Bony plate formed in muscle or other abnormal situation; flat osteoma.

Osteoplas'tic. See *Osteoplasty.*

Os'teoplasts (*osteon, plasso,* to form). Cells concerned in the formation and growth of bone. Those which form cartilaginous structures are called *Chondroplasts.*

Os'teoplasty (*osteon, plasso,* to form). An operation by which the total or partial loss of a bone is remedied by transplantation of bone covered with periosteum. Also restoration to original site of bone temporarily removed, with or without complete severance of periosteum. The filling of a cavity of a tooth with some appropriate substance; hence termed *Osteoplastic.*

Osteopleura, os-te-o-plu'rah (*osteon, pleuron,* rib). Ossification of the cartilages of the ribs.

Osteoporoma, os-te-o-por-o'mah (*osteon, poros*, passage). Condition due to osteoporosis.

Osteoporosis, os-te-o-por-o'sis (*osteon, porosis*, induration). Interstitial absorption, producing spongy condition or *rarefaction* in bones. **O., fat'ty,** in which there is abundance of adipose cells in medullary spaces and Haversian canals.

Osteopsathyro'sis (*osteon, psathuros*, friable). Fragilitas ossium. **O., arthrit'ic,** chronic rheumatic arthritis.

Osteopyr, os-te-o'pir (*osteon, pur*, fever). Gangrene of bone.

Osteorrhagia, os-te-or-rhaj'e-ah. Hemorrhage from bones.

Osteorrhaphy, os-te-or'rha-fe (*osteon, rhaphe*, suture). Operation of suturing bone, as for fractured patella.

Osteosarcoma, os-te-o-sar-ko'mah (*osteon, sarcoma*). Disease of the bony tissue, consisting in softening of its laminæ and their transformation into a fleshy substance analogous to that of cancer, accompanied with general symptoms of cancerous affection. Often also used synonymously with spina ventosa. **O., benign',** chondroma.

Osteosarcosis, os-te-o-sar-ko'sis (*osteon, sarx*, flesh, *osis*). Osteosarcoma. Ossification of sarcoma.

Osteoscenographia, os-te-o-sce-no-graf'e-ah (*osteon, skenographia*, scene-painting). Representation of bones or skeleton.

Osteoscirrhus, os-te-o-skir'rhus (*osteon, scirrhus*, hard tumor). Loosely applied to scirrhus of bone.

Osteosclerosis, os-te-o-skler-o'sis (*osteon, skleros*, hard). Induration of bone. Osteoporosis.

Osteo'sis (*osteon*). Ossification.

Osteospongioma (os-te-o-spon-je-o'mah), **Osteospongio'sis** (*osteon, spongus*, sponge or fungus). Fungous condition of bone. See *Spina ventosa.*

Osteosteato'ma (*osteon, stear*, suet or fat). Name given to bony tumors or degenerations which sometimes belong to sarcoma; at others, to spina ventosa, exostosis, etc.

Osteoteleangiectasis, os-te-o-tel-e-an-je-ek'tas-is (*osteon, telos*, end, *angeion*, vessel, *ektasis*, stretching). Teleangiectasis of osseous capillaries. Also an osteosarcoma in which numerous blood-vessels of large size are present.

Osteotenor'rhaphy (*osteon*, tendon, *rhaphe*, suture). Operation for healing a ruptured tendon by suture introduced through a bone.

Osteotome, os'te-o-tome (same etymon as **Osteotomy**). A bone-saw which has the form of a chain. Also any bone-saw.

Osteotom'icum. Osteotome.

Osteot'omist. Instrument for cutting the bones of the fœtal cranium where it becomes necessary to greatly reduce the size of the head in parturition.

Osteotom'ium or **Osteot'omus.** Osteotome.

Osteotomy, os-te-ot'o-me (*osteon, tome*, incision). Part of practical anatomy whose object is the dissection of bones. Also surgical term for operations of section of bones, in particular cutting of bone for the purpose of improving deformed conditions.

Osteot'ophus. Tophus.

Osteotrite, os'te-o-trite (*osteon, tribo*, to rub, or L. *tero*, to rub). An instrument for removing carious bone, consisting of a shank having a conical head with spiral cutting edges.

Osteotylus, os-te-ot'il-us (*osteon, tulos*, callus). Callus.

Osteul'cum (*osteon, helko*, to draw). Bone-nippers.

Osteule, ost-u'le (*osteon, hule*, substance). Osseous cicatrix.

Os'teum. Bone.

Osthelcus, os-thel'kus (*osteon, helkos*, ulcer). Caries.

Osthex'ia (*osteon, hexis*, habit). See *Ossification.*

Osthistos, os-this'tos (*osteon, histos*, tissue). Bony tissue.

Ostia'rius (*ostium*, door). Doorkeeper. Pylorus.

Osti'ola (pl. of **Ostiolum**) **cor'dis.** Valves of the heart.

Osti'olum (dim. of **Ostium**). Small door or gate. See *Ostiola.*

Osti'tis. Osteitis.

Os'tium (*os*, mouth). Orifice; a door or gate—of the heart, for example; the opening—*Ostium atrioventriculare* or *ventriculi venosum*—between the auricle and ventricle of each side. *Ostium ventriculi arteriosum* is the opening at the origin of the pulmonary artery and aorta. **O. abdomina'le,** see *Tube, Fallopian.* **O. arterio'sum,** see *Ostium.* **O. arterio'sum aort'icum,** aortic opening of heart. **O. arterio'sum pulmona'le,** opening of pulmonary artery; right ventricle. **O. atrioventricula're,** see *Ostium.* **O. cuta'neum,** see *Urethra.* **O. duodena'le ventric'uli,** pylorus. **O. fronta'le,** opening from middle meatus of nose into infundibulum. **O. inter'num,** minute orifice at beginning of oviduct; see *O. uteri.* **O. maxilla're,** opening from middle meatus of nose into antrum of Highmore. **O. maxilla're accesso'rium,** second opening into antrum found in about 10 per cent. of subjects. **O. oa'ricum,** see *Tube, Fallopian.* **O. œsophage'um,** cardia. **O. pharynge'um,** pharyngeal orifice of Eustachian tube. **O. pharynge'um laryn'gis,** see *Larynx.* **O. si'nûs,** ampullæ of inner ear, opening toward utricle. **O. tu'buli,** ampullæ of inner ear, opening toward semicircular canal. **O. tympan'icum,** tympanic orifice of Eustachian tube. **O. u'rachi,** small opening often found at vertex of bladder leading into urachus. **O. ureter'icum,** opening of ureter into bladder. **O. urethra'le,** opening of urethra into bladder. **O. u'teri,** vulva; vagina. The term *Ostium internum* has been applied to the inferior opening of the uterus, which establishes a free communication between the cavities of the body and neck, and which is often obliterated in old women. Neck of the uterus; mouth of the uterus; see *Uterus.* **O. uteri'num,** see *Tube, Fallopian.* **O. vagi'næ,** see *Vagina.* **O. vagina'le ure'thræ,** see *Urethra.* **O. veno'sum,** see *Ostium.* **O. veno'sum cor'dis,** left auriculo-ventricular opening. **O. ventric'uli dex'trum** or **duodena'le** or **infe'rius** or **pylor'icum,** pylorus. **O. vesica'le,** see *Urethra.*

Ostocopus, os-tok'op-us. Osteocopus.

Osto'des (*osteon, odes*). Osseous.

Os'toid (*osteon, eidos*, resemblance). Osseous. **O., malig'nant,** osteocephaloma.

Ostoï'dea substan'tia. See *Tooth.*

Osto'ma (*osteon, oma*). Exostosis.

Osto'sis (*osteon, osis*). Ossification.

Ostraco'sis (*ostrakon*, shell). Desiccation and conversion of parts of bone, especially of the cranium, into a substance like oyster-shell.

Os'trea. Class Acephala. Oyster. A wholesome article of diet, often advised as an analeptic, and easy of digestion. **O. edu'lis,** edible oyster of Europe. **O. Virginia'na,** common oyster of Atlantic coast of U. S. Oyster-shells, *Testæ ostreæ*, have been received into the pharmacopœias and used medicinally. Their virtues are similar to those of the carbonate of lime. See *Creta.*

Ostreine, os'tre-een (*ostrea*). Substance containing nitrogen derived from fleshy part of oysters.

Ostrei'on. Ostrea.

Ostreios, os-tri'os (*ostrea, ios*, poison). Poisonous substance existing in certain oysters and mussels.

Ostreodermato'rum. Lime-water prepared from oyster-shell lime.

Ostreodermatum, os-tre-o-dur'mat-um. Oyster-shell.

Ostreotoxicum, os-tre-o-toks'ik-um (*ostræa, toxikon*, poison). Ostreios.

Os'treum. Ostrea.

Ostruthin, ost-ruth'in. Substance derived from root of Imperatoria ostruthium.

Ostru'thium. Imperatoria.

Oswe'go tea. Monarda coccinea.

Osy'ris. Antirhinum linaria.

Otacous'tian or **Otacoustic,** o-tak-oo'stik (*oto, akouo*, to listen). Instrument which improves the sense of hearing, as the different species of ear-trumpets.

O'tagra (*oto, agra*, seizure). Otalgia.

Otalgia, o-tal'je-ah (*oto, algos*, pain). *Otalgy.* Pain in the ear; earache. See *Otitis.*

Otalgic, o-tal'jik. An epithet for remedies used in otalgia.

Otanthera (o-tanth-a'rah) (*ous,* ear, *antheros,* flowery) **Moluc'ca.** Shrub growing in the Moluccas. Root is antiabortifacient, and berries are used in nocturnal enuresis.

Otaphone, o'ta-fone (*oto, phone,* voice). Small clamp fastened behind the auricle, causing it to project from the head, thus increasing its power of collecting soundwaves.

Ote'chus (*oto, echos,* sound). Tinnitus aurium.

Otemplas'trum (*oto, emplastron,* plaster). Plaster put behind the ears.

Oten'chytes (*oto, en,* into, *chuo,* to pour). Species of syringe used for injecting the ear.

Othæmatoma, o-the-mat-o'mah (*oto, hæmatoma*). Effusion of blood or sanguineous fluid under the perichondrium of the auricle; it may result from perichondritis. Occurring in the insane, it indicates disease at the base of the brain; has been called the *Insane ear.*

Othæmorrhœa, o-the-mor-rhe'ah (*oto, haima,* blood, *rheo,* to flow). Discharge of blood from the ear.

Othæmorrhois, o-the-mor'rho-is (*ous,* ear, *hæmorrhois,* hemorrhoid). Hemorrhoidal discharge of blood in the ears, due to metastasis.

Othelcosis, o-thel-ko'sis (*oto, helkosis,* ulceration). Ulceration or suppuration of the ear.

Oth'one or **Othon'ion.** Linteum.

Othydrops, o'the-drops (*oto, hudrops,* dropsy). Dropsical condition of middle ear.

Othyg'rotes (*oto, hugrotes,* moisture). Otirrhœa.

Othypersarcoma, o-thip-ur-sar-ko'mah (*oto, huper, sarkoma*). Excrescence in the ear of a fungous character.

Otia'ter (*oto, iatros,* physician). Aurist.

Otiatri'a (*oto, iatreia,* medicine). *Otiatry.* Occupation of the aurist; management of diseases of the ear; aural medicine and surgery; ear surgery.

Otiatric, o-te-at'rik. Relating to otiatrics.

Otia'trice. Otiatria.

Otiatrics, o-te-at'riks. Otiatria.

Otia'trus. Aurist.

Oti'atry. Otiatria.

O'tic (*ous, otos,* ear). Belonging or relating to the ear; medicine employed in diseases of the ear. **O. gan'glion,** *Auricular ganglion, Ganglion of Arnold.* A small oval body, more than double the size of the ophthalmic ganglion, containing multipolar ganglion cells, ash-colored and pulpy like the ganglions of the sympathetic; situate in advance of the ganglion of Gasser, on the lower surface of the inferior maxillary nerve, at the inner margin of the foramen ovale of the sphenoid bone. See *Petrous ganglion.*

Oticodinia, o-tik-o-din'e-ah (*oto, dine,* vertigo). Vertigo consequent upon disease of the ear.

Otion, o'she-on (*otion,* dim. of **Ous,** ear). External ear.

Otirrhœ'a (*oto, rheo,* to flow). *Otorrhœa.* Purulent or puriform discharge from the meatus auditorius externus; a symptom of chronic otitis. Some authors have, indeed, used the term synonymously with chronic otitis. When it extends to the brain it is termed *cerebral otirrhœa* or *otorrhœa;* and when from the middle or internal ear, it is termed *internal otirrhœa* or *otorrhœa, O. interna,* and *entotorrhœa.* **O., cer'ebral,** see *Otorrhœa.*

Oti'tes (appertaining or relating to the ear). See *Digitus.*

Otitic, o-tit'ik. Relating to otitis.

Otitis, o-te'tis (*oto, itis*). *Inflammation of the ear.* Inflammation of the mucous membrane of the ear, characterized by excruciating pain, intolerable humming in the ear, with a discharge of mucus generally from the meatus externus or from the Eustachian tube. When the inflammation is restricted to the lining membrane of the meatus, it is termed *catarrhal otitis.* Otitis is divided into *external, medial,* and *internal,* according as it affects the meatus auditorius, etc., internal ear or labyrinth, or the cavity of the tympanum, including the mastoid cells. It may be acute or chronic. *Acute otitis* commonly terminates in a few days in a favorable manner by the aid of antiphlogistics. *Chronic otitis, otirrhœa,* is almost always accompanied by a purulent discharge from the meatus auditorius; often incurable, and may ultimately give occasion to disease of the internal ear and even of the brain. **O. catarrha'lis,** see *Otitis.* **O. parasit'ica,** myringomycosis.

O'tium (*otion,* little ear). A small ear. Auricle or pavilion of the ear.

Otiyndim'ba. Painful pustular skin disease, endemic in Damara land during hot weather.

Oto (*ous,* ear). In composition, ear.

Oto'ba but'ter. Concrete oil expressed from seeds of Myristica otoba.

Otoblennorrhœa, o-to-blen-nor-rhe'ah (*oto, blenna,* mucus, *rheo,* to flow). Abnormal flow of mucus from the ear.

Otocatarrh, o-to-kat-arrh' (*ous, katarrhos,* discharge). Catarrhal condition of the ear.

Otocephalus, o-to-sef'al-us (*oto, kephale,* head). Monster whose ears are in contact or united into one beneath the chin, with very rudimentary condition or absence of the lower jaw—synotus.

Otocleisis, o-to-kleis'is (*oto, kleio,* to close). Closure or obstruction of the ear.

Otoco'nia (*oto, konia,* dust). Small collections of carbonate and phosphate of lime, finer than otoliths, and amorphous, found in the membranous labyrinth of the inner ear.

Otocrane, o'to-krane (*oto, kranion,* skull). Cavity in petrosal bone for reception of osseo-cartilaginous capsule of aural labyrinth.

Otocyst, o'to-sist. Embryonic epithelial sac which develops into the membranous labyrinth of the adult.

Otod'yne or **Otodyn'ia** (*oto, odune,* pain). Otalgia.

Otogan'glium. Otic ganglion.

Otoglyphis (o-tog'lif-is) or **Otog'lyphum** (*otogluphon,* ear-pick). Ear-pick.

Otog'raphy (*oto, graphe,* description). Description, or descriptive anatomy, of the ear.

Otoiatri'a. Otiatria.

O'toliths (*oto, lithos,* stone). *Otolites, Ear stones.* White crystalline particles of calcium carbonate and phosphate found in the membranous vestibule, and seeming to be suspended in the fluid of the vestibule by means of a number of nervous filaments proceeding from the auditory nerve. Their universal presence in the ear of the mammalia would seem to show that they are inservient to audition. When the substance is of a looser consistence it is called *Otoconia, Otoconite, Ear powder, Ear sand* (*oto, conia,* sand).

Otology, o-tol'o-je (*oto, logos,* discourse). Treatise on structure and affections of the ear.

Otomyces, o-to-mi'sees (*oto, mukes*). Fungus growing in the ear. **O. purpu'reus,** form characterized by presence of coloring matter resembling blood.

Otomycosis, o-to-mik-o'sis. Presence of fungus, usually *Aspergillus nigricans,* in the auditory meatus.

Otoncus, o-ton'kus (*ous, onkos,* swelling). Tumor of the ear.

Otoneuralgia, o-to-nu-ral'je-ah (*oto, neuron,* nerve, *algos,* pain). Neuralgia of the ear.

Otopathe'ma. Otopathy.

Otop'athy (*oto, pathos,* affection). Diseased condition of the ear.

Otopharyngeal, o-to-far-in-je'al. Pertaining to the ear and pharynx. **O. tube,** Eustachian tube.

Otophlegmone, o-to-fleg'mo-ne. Otitis.

O'tophone (*oto, phone,* sound). Ear-trumpet.

Otopiesis, o-to-pe'es-is (*oto, piesis,* a squeezing). Depression of the tympanic membrane by air pressure, due to a partial or complete vacuum being created within the tympanum. Compression of the labyrinth, producing deafness.

Otoplas'ta (*oto, plasso,* to cover over). Plaster for the ear.

Otoplas'tice or **O'toplasty** (*oto, plastikos,* forming). Operation for restoring a lost ear or a portion of it.

Otoplas'trum. Plaster for the ear.

Otoplexiometer, o-to-pleks-e-om'et-ur (*oto, plexis,* blow, *metron,* measure). Instrument for making an examination of the internal ear by percussion.

Otopyorrhœa, o-to-pi-or-rhe'ah (*oto, puon,* pus, *rheo,* to flow). Otirrhœa; discharge of pus from the ear.

Otopyosis, o-to-pi-o'sis (*ous, puon,* pus). Suppuration in the ear.

Otorrhagia, o-tor-rhaj'e-ah (*oto, rhage,* rupture). Bleeding or other discharge from the ear.

Otorrheumatismus, o-tor-ru-mat-iz'mus. Rheumatic earache.

Otorrhœ'a. Otirrhœa. **O., cer'ebral,** see *Otirrhœa.* **O. inter'na,** see *Otirrhœa.* **O. purulen'ta,** otirrhœa.

Otosal'pinx. Eustachian tube.

Otoscope, o'to-skope (*oto, skopeo,* to examine). Instrument for examining the condition of the ear. An elastic stethoscope, the ends of which are tipped with ivory, one to be inserted into the meatus of the patient and the other applied to the ear of the examiner, has been so called, as well as one formed on the principle of the ophthalmoscope, laryngoscope, etc.

Otoscopy, o-tos'ko-pe. Examination by means of the otoscope.

Otos'teal (*oto, osteon,* bone). Relating to the bones of the ear. Applied by Owen to homologue of the aural ossicles.

Otostylic, o-to-stil'ik (*oto, stulos,* process). Relating to the ear and styloid process.

Ototech'us or **Ototechnos,** o-to-tek'nus (*oto, techne,* art). Sensation of hammering felt in the inner ear.

Otot'omy (*oto, tome,* incision). Part of practical anatomy which teaches the mode of dissecting and preparing the ear. Dissection of the ear.

Ot'to or **Ot'tar of ro'ses.** See *Rosa centifolia.*

Ot'toway disease'. Mal de la Baie de Saint Paul, a syphilitic affection which prevailed in Canada from 1760 to 1780 and upward.

Oture, o-tu're (*oto, ouron,* urine). Condition in which a metastasis of urine to the ear is supposed to occur.

Ouabain. $C_{30}H_{46}O_{12}$. Crystallized glucoside from ouabaio tree; aqueous extract from root forms arrow-poison of East-African Comalis; hypodermically a heart-poison; acts on medulla, slowing both respiratory and heart action; no influence on sensation or mobility; a cardiac stimulant.

Ou'la. The gum.

Oula'chan oil. Amber-colored oil obtained from the oulachan, a small fish of British Columbia, proposed as a substitute for cod-liver oil; said to have the properties of the latter without its nauseous taste.

Ou'le. Cicatrix.

Ouli'tis (*oula, itis*). Inflammation of the gums.

Ou'loid (*oule,* a scar). Resembling a scar. **O. cica'trix,** a cicatrix described by Erasmus Wilson, without any open sore or ulcer or lesion of continuity, met with in lupus, syphilis, elephantiasis, etc., and dependent on disorganization and destruction of the skin beneath the epidermis.

Oulorrhagia, ou-lor-rhaj'e-ah (*oula, rhage,* breaking forth). Bleeding from the gums.

Ounce. *Uncia;* a weight equal to the 16th part of a pound avoirdupois, the 12th of a pound troy; composed of 8 drachms. See *Weights and Measures.*

Ourari, ou-rah're. Curare.

Oure'ma. Urine.

Ourol'ogy (*ouron, logos,* discourse). That part of medicine which treats of the urine.

Our'on. Urine.

Ouroscopy, u-ros'ko-pe (*ouron, skopeo,* to examine). Examination of urine for clinical purposes. See *Uromantia.*

Ous. Ear.

Outh'ar. See *Mamma.*

Out-kneed. Cnemoscoliosis; bow-leg.

Out'let of pel'vis. See *Pelvis.*

Out'scooping. Process of removing substance with the aid of a scoop.

Ou'vi-las'sa. Purgative plant of Madagascar, from which scammony is obtained.

Ov. Abbrev. for ovum, egg.

O'va Graafia'na. Folliculi Graafiani. **O. Nabo'thi,** Nabothi glandulæ.

O'val (*ovum,* egg). Egg-shaped; elliptic; that which is round and oblong like an egg. **O. fora'men,** obturator foramen. Also foramen in the inner paries of the middle ear, opening into the vestibule; the foramen in the sphenoid bone, through which the third branch of the fifth pair issues from the cranium; and the aperture in the fœtus between the auricles of the heart. See *Botal foramen.* **O. fos'sa,** a depression observed in the right auricle of the heart in the septum which separates it from the left auricle. It has thick and strong edges at its upper and fore part called *Columnæ foraminis ovalis*; in the fœtus called *Annulus foraminis.* The fossa ovalis in the adult replaces the interauricular aperture in the septum auricularum of the fœtus.

Ovalbu'men. Albumen ovi.

Ovaral'gia or **Ovarial'gia** (*ovum, algos,* pain). Pain in the ovary or ovaries.

Ova'rian (*ovarium,* ovary). *Ovarial.* Relating or belonging to the ovary—as ovarian pregnancy, ovarian tumors, etc. **O. ap'oplexy,** hemorrhage into substance of an ovary through rupture of a follicle. **O. ar'tery,** spermatic artery. **O. drop'sy,** hydroarion. **O. lig'ament,** L. of the ovary. **O. nerves,** spermatic plexus of nerves. **O. plex'us,** bulb of the ovary. **O. preg'nancy,** see *Pregnancy, ovarian.* **O. tubes,** tube-like groups of egg-germs imbedded within stroma of ovary by infolding of the general epithelium. **O. tu'mors,** ovary, tumors of. **O. veins,** spermatic veins. **O. ves'icles,** folliculi Graafiani.

Ovaric, o-var'ik. Relating to the ovaries.

Ovariectomy, o-var-e-ek'to-me (*ovarion, ektome,* excision). Excision of the ovary.

Ovariocele, o-var-e-o-se'le (Eng. o-var'e-o-seel) (*ovarion, kele,* tumor). Hernia of ovary. **O., vagi'nal,** inversion of vaginal wall produced by the ovary or ovaries.

Ovariocentesis, o-var-e-o-sen-ta'sis (*ovarion, kenteo,* to pierce). Puncture of the ovary.

Ovariocyesis, o-var-e-o-se-a'sis (*ovarion, kuesis,* pregnancy). Pregnancy, ovarian.

Ovariomania, o-var-e-o-man'e-ah (*ovarion, mania*). Insanity associated with disorder of the genital organs, the ovaries especially.

Ovarion, o-var'e-on (dim. of **Oon,** egg). Ovum; ovule; ovary.

Ovarioncus, o-var-e-on'kus (*ovarion, onkos,* tumor). Ovarian tumor.

Ovarioparectama, o-var-e-o-par-ek'tam-ah (*ovarion, parektama,* over-extension). Pathological enlarged condition of ovary.

Ovariophyma, o-var-e-o-fe'mah (*ovarion, phuma,* growth). Ovarian tumor.

Ovariorrhexis, o-var-e-or-rheks'is (*ovarion, rhexis,* rupture). Rupture of ovary.

Ovariosteresis, o-var-e-o-ster-a'sis (*ovarion, steresis,* deprivation). Ovariotomy.

Ovariostomy, o-var-e-os'to-me (*ovarion, stoma,* mouth). Operation for the purpose of draining cyst of ovary by means of puncture, allowing the contents to escape, and cauterizing the parietes of the opening.

Ovariot'omy (*ovarion, tome,* section). *Oöphorectomy, Oäriotomy.* Operation for removing the ovary was first performed in 1809 by Dr. Ephraim McDowell of Kentucky. As now practised it includes incision into the peritoneal cavity, exploration for adhesions, evacuation of the cyst, and the treatment of the pedicle, the latter including the employment of the ligature, torsion, acupressure, écraseur, clamp, etc. **O., abdom'inal,** ovariotomy in which the abdominal wall is incised. **O., vagi'nal,** ovariotomy in which the wall of the vagina is incised.

O'varism. See *Ovarists.*

O'varists. *Ovists.* Those physiologists who think that the phenomena of generation in the human species and in every species of animal result from the development of the ova or ovula of the female,

merely incited by the male; the doctrine is called *Ovarism* and *Ovism*.

Ovaritis, o-var-e'tis (*ovarium, itis*). Oaritis.

Ova'rium (*ovarius*, egg-keeper). *Ovary, Egg-bed.* Ovaries are organs in which the ova are formed in oviparous animals. By analogy, the name has been given to the organs which the ancients called the testicles of the females. There are two ovoid bodies, almost as large as the testicles in man, placed on each side of the uterus, between the Fallopian tube and round ligament, and in the substance of the broad ligament. Their outer extremity gives attachment to one of the projections of the fimbriated extremity of the Fallopian tube, and the internal is fixed to the uterus by a small ligamentous cord called *Ligament of the ovary*. Henle calls a ligament passing between the lateral top of the ovary and the ostium abdominale of the Fallopian tube, *Ligamentum infundibulo-ovaricum, Tubo-ovarian ligament.* The *Ligamentum infundibulo-pelvicum* passes between the infundibulum of the tube and the pelvis. The ovaries are composed of a very close, spongy texture—*stroma*—and of small vesicles—*Folliculi Graafiani*—filled with a clear fluid. These vesicles contain ovules, which detach themselves from the ovarium before and after fecundation, and are carried into the cavity of the uterus by the Fallopian tube. The ovary may be affected with apoplexy or sanguineous pelvic effusion, atrophy, dropsy, tumors, inflammation, neuralgia, cancer, cystic tumors of various kinds, as the multiple, proliferous, cysto-sarcomatous, dermoid, tubo-ovarian, etc. **O. luxa'tum**, dislocation of the ovary. **O. masculi'num**, non-pedunculated hydatid; see *Morgagni's hydatid.* **O. Nabo'thi**, Nabothi glandulæ. **O. secunda'rium**, Nabothi glandulæ. **O. tu'midum**, swelling or tumor of the ovary.

Ovariydrectasis (o-var-e-id-rek'tas-is) or **Ovariydrops**, o-var-e-e'drops. Cystoma of ovary.

Ovariypertrophy, o-var-e-ip-ur'tro-fe (*huper, trophe*, nourishment). Hypertrophy of the ovary.

Ovarohysterectomy, o-var-o-his-to-rek'to-me (*ovarion, hustere*, womb, *ektome*, excision). Excision of the uterus and ovaries.

O'vary. Ovarium. **O., bulb of,** *Spongy portion of ovary*, collection of vessels communicating with uterine plexus. **O., bul'bous por'tion of,** principal part of ovary; see *O., bulb of.* **O., hernia of,** hernia ovarii. **O., prolap'sus of,** painful displacement of the organ between the rectum and uterus from increase of bulk and weight due to inflammation or other disease. **O., tu'mors of the,** these are either solid or cystic; the former including fibroma, carcinoma, enchondroma, etc.; the latter—*ovarian cysts*—simple cysts, or hydrops vesicularum, cystoma ovarii, and stroma ovarii. These cysts vary in color, size, and contents, the solid ingredients including fat-granules, epithelial cells, blood, pus, and, in dermoid cysts, hair, bones, sebaceous matter, etc. Treatment includes tapping, injection of iodine, ovariotomy, etc.

Ova'tion. Laying of eggs by animals. See *Parturition.*

Ova'tus (*ovum*, egg). Egg-shaped; oval.

Oven. Apparatus employed in bacteriological investigations for sterilization of culture media, and keeping them at a constant temperature by a self-working mechanism.

Ovenchyma, o-ven'ke-mah (*ovum*, egg, *enchuma*, infusion). Oval cellular tissue.

Overo butua. Pareira brava.

Overcrowd'ing. The crowding of a number of people together in an apartment, causing diseases peculiar to such faulty hygienic surroundings.

Overfeed'ing. Treatment by giving large amount of food in excess of patient's appetite.

Overly'ing. Said of child when laid upon in bed and smothered.

Overpres'sure. Demand for excessive exertion, particularly mental.

O'verreach. *Tread.* A disease of the feet and ankles of horses and cattle, produced by the animal pressing one foot over the other.

Overri'ding. Overlapping of fractured extremities of a bone.

Oversight'ed. Hypermetropic.

O'vi albu'men. White of egg. **O. vitel'lus,** see *Ovum.*

O'vic. Of or pertaining to the ovum.

Ovicap'sule (*ovum, capsule*). See *Folliculi Graafiani.*

Ovicel, o've-sel (*ovum, cella*, cell). Ovisac.

Oviducal, o-ve-du'k'l (*ovum, duco*, to lead). Relating to an oviduct.

O'viduct (*ovum, ductus*, duct). Tube, Fallopian. **O., ampul'la or pavil'ion of,** enlarged portion of abdominal extremity of oviduct, the fringed end of which is called the fimbriated extremity or fimbria.

Oviduc'tus mulie'bris. Tuba Fallopiana.

Oviferous, o-vif'er-us. Ovigerous.

Ovification (*ovum, facio*, to make). Generation of ova.

Oviform, o've-form. Ovoid.

Oviger, o'vij-ur. Ovigerm.

Ovigerm, o've-germ. Ovum, primitive.

Ovigerous, o-vij'er-us (*ovum, gero*, to bear). *Oviger.* Containing or producing ova or eggs.

Ovination, o-vin-a'shun. Inoculation of sheep with sheep-pox virus.

Ovip'arous (*ovum, pario*, to bring forth). Epithet applied to animals hatched from eggs outside of the body. The condition may be termed *Oviparousness.* See *Generation.*

Ovip'arousness. See *Oviparous.*

O'vipont (*ovum, pono, positum*, to lay). Escape of the ovum from the ovary; while *ovulation* includes also the process of its maturation.

Oviposi'tion (*ovum, pono, positum*, to place). Act or process of depositing ovum.

Ovipos'itor (*ovum, pono, positum*, to place). Projecting apparatus formed by last annuli of the abdomen in certain insects for depositing their ova.

O'vis a'ries. The sheep.

O'visac (*ovum, sac*). See *Folliculi Graafiani.* **O., tu'nic of the,** see *Folliculi Graafiani.*

O'vism. See *Ovarists.*

O'vists. Ovarists.

Ovogenous, o-voj'en-us (*ovum, gennao*, to engender). Relating to development of ova.

O'void (*ovum, eidos*, like). Egg-shaped.

Ovolemma, o-vo-lem'mah. Membrane surrounding vitellus of ovum in man.

Ovol'ogy (*ovum, logos*, a discourse). Description of the ovum.

Ovovivip'arous (*ovum, vivus*, living, *pario*, to bring forth). Oviparous animals whose ova are hatched within the mother—vipers, for example. See *Generation.*

O'vula (pl. of **Ovulum**) **Graafia'na.** Ovules of De Graaf, folliculi Graafiani. **O. Nabo'thi,** Nabothi glandulæ.

O'vular. Relating or belonging to the ovule. **O. abor'tion,** see *Abortion.*

Ovulate, o'vu-late. Containing ovules.

Ovula'tion. Formation of ova in the ovary and the discharge of the same. Also the development of the embryo from the egg. See *Ovipont.* **O., sponta'neous,** spontaneous formation and discharge of ova which takes place in the female of the mammalia. See *Heat* and *Menses.*

O'vule. Ovulum; unimpregnated ovum. **O., exter'nal migra'tion of,** passage of ovisac from ovary of one side to oviduct of opposite side. **O., migra'tion of,** passage of ovisac to oviduct. **O. of Naboth,** obstruction of ducts of glands of neck of uterus. **O., po'lar cells of,** cells upon exterior of yolk of ovule. **O., primor'dial,** primitive ovule in internal structure of ovary.

Ovuliferous, o-vu-lif'er-us. Ovulate.

O'vuline (*ovulum*). Decidua reflexa.

Ovulist, o'vu-list. See *Ovarists.*

O'vulum. *Ovule.* A small egg; that which has the appearance of a small egg. See *Ovum.*

O'vum. (*Oon*, egg). The egg of *Phasianus Gallus*, the common hen, is chiefly used as food. The different

parts are likewise employed in medicine. The shell, *Aurancum, Aurantum*, calcined, is esteemed an absorbent. *Oil of egg* is emollient, used externally to burns and chaps. *Yolk* or *Yelk of the egg—Vitellum*—renders oils, etc. miscible with water. Eggs when light-boiled are easy of digestion, but when very hard-boiled or fried they are more rebellious.

Egg brandy is made by taking of brandy, f℥iv, cinnamon-water, f℥iv, the yolk of two eggs, sugar, ℥ss, and oil of cinnamon, gtt. ij; mix the yolks of the eggs first with the water, the oil, and the sugar, stirring constantly; then add the brandy little by little until a smooth fluid is formed. An agreeable mode of giving brandy in adynamic states.

Egg broth is made by beating the yolk of one egg with a spoonful of white sugar to a cream, and pouring on it in a bowl, stirring it, half a pint of boiling new milk or water, adding a spoonful of good brandy and grated nutmeg.

Eggnog is a drink made of eggs, rum or brandy, milk, and sugar beaten up together.

In pharmacy *white of egg*, which consists chiefly of albumen, is used for clarifying syrups, etc.; see *Albumen ovi*. *Yolk of egg* beaten up with warm water and sugar, and aromatized with orange-flower water, forms an emulsion which is emollient, and known under the name *chicken's milk*.

Anatomists give the name *Ova, Ovula, Ovules* to round vesicles containing a humor similar to the yolk of egg, which are situate in the ovaries of the female, and when fecundated constitute the rudiments of the fœtus. During gestation the embryo and its enveloping membranes retain the name *Ovum*. Changes induced in the mammalia after impregnation greatly resemble those in the bird. Egg-cell is a term designating the female generative element; egg-cell after extrusion of polar globules. Oosperm is the female element after impregnation; impregnated ovum in various stages of after-development. Ovum also signifies a testicle. **O., apoplec'tic,** ovum in which blood extravasates between the membranes; usually the ovum perishes or is aborted. **O., blight'ed,** ovum devoid of power of developing after it has been fecundated; generally it is aborted or is transformed into a mole. **O., fe'male,** cells in the female in an embryonic condition which at a later period form ova. **O. gemellif'erum,** ovum in which two embryos are contained. **O. Graafia'num,** see *Graafian vesicles*. **O. hyster'icum,** see *Clavus hystericus*. **O., male,** cells occurring in certain parts of tubuli seminiferi, thought to develop into spermatozoa. **O., ova'rian,** name given to ovum when in Graafian vesicle. **O., prim'itive** or **primor'dial,** see *Cell*.

Ox (abbr. for **Oxymel,** honey and vinegar). In composition, acute, sharp, quick, pointed, acid, oxygen. The chemical symbol and abbreviation of oxygen. See *Oxy*.

Oxac'id. Acid containing oxygen, as distinguished from one formed with chlorine, etc.

Oxalæmia, oks-al-e'me-ah (*oxalic acid, haima,* blood). An excess of oxalic acid in the system.

Ox'alas ce'ricus. Cerium oxalate. **O. ferro'sus,** ferrous oxalate. **O. subpotas'sicus,** potassium oxalate.

Ox'alate of cal'cium. Salt frequently found in the urine.

Oxalat'ic. Relating to oxalates; hence oxalatic or oxalic-acid diathesis. The habit of body which favors the formation and deposition of oxalates from the urine is called *Oxaluria*.

Oxal'ic ac'id (*oxalis,* sorrel). *Acid of sugar* or *of sorrel, Carbonous acid.* An acid found in sorrel—Oxalis—and several other vegetable substances; usually obtained by decomposing sugar with nitric acid; may also be obtained from molasses, rice, gum, etc. Crystallizes in long, transparent, colorless quadrangular prisms, soluble in water and alcohol, and is generally found in nature united with lime or potassa. It has been proposed in a diluted state as a refrigerant, but it is unnecessary, and besides in quantity it is a virulently acrid poison. It strongly resembles magnesium sulphate, and has often been mistaken for it; see *Poisons* (table). **O. a. diath'esis,** See *Oxalatic*.

Ox'alis aceto'sa (*oxus,* acid, owing to the sharpness of its juice). Rumex acetosus. **O. acetosel'la,** systematic name of the *Woodsorrel, Cuckoobread, Sour trefoil, White sorrel, Mountain sorrel, Alleluia;* ord. Oxalidaceæ. This plant has a gratefully acid taste, and is used in salads. It has been esteemed astringent, antiscorbutic, and diuretic. **O. America'na,** O. acetosella. **O. stric'ta,** *Yellow woodsorrel;* indigenous; has similar virtues to O. acetosella. **O. tubero'sa,** *Oca.* A tuberous plant whose oval-shaped root is used as a food by the Peruvians. It is watery, has a sweetish taste, and is much liked.

Oxal'ium. Potassium oxalate.

Oxal'me (*oxus, hals,* salt). Mixture of vinegar and salt.

Oxalmethylin, oks-al-meth'il-in. Derived from dimethyloxamide; increases reflex irritability in animals.

Oxalu'ria. Condition in which urine contains calcium oxalate. See *Oxalatic* and *Urine, oxalitic*.

Oxalu'ric acid. Acid present in normal urine, combined with ammonia; closely related to uric acid, xanthin, guanin, and urea.

Oxazotic, oks-az-ot'ik. Nitric.

Oxazotite, oks-az'o-tite. Nitrite.

Ox'-bile. Ox-gall.

Oxelæ'on (*oxy, elaion,* oil). Mixture of vinegar and oil; used as a condiment.

Oxeolé (F.), oks-a-o-la'. Medicated vinegar.

Oxeronosus, oks-er-on'o-sus (*oxeros,* vinegar, *nosos,* disease). Morbid condition due to excess of acid forming in the body.

Ox'-eye. Helenium autumnale. Buphthalmus.

Ox'-gall. Bile of the ox. Fresh gall of *Bos taurus* (U. S. Ph.); supposed to be laxative and stomachic.

Oxhydryl, oks-hi'dril. Hydroxyl.

Oxichlorate, oks-e-klo'rate. Combination of oxicloric acid with a base.

Oxichlo'ride. Carbonic oxychloride; phosgene gas.

Ox'id. Oxide.

Ox'idated. Combined with oxygen.

Oxida'tion. *Oxydation, Oxygenation.* Action of oxidizing a body; that is, of combining it with oxygen, a combination from which results an oxide.

Ox'ide. *Oxyd, Oxid, Oxyde.* Combination, not acid, of a simple body with oxygen. **O., cal'culous,** oxide, cystic.

Oxidized, oks'id-ized. Combined with oxygen.

Ox'idum. Oxide. **O. antimo'nii cum phos'phate cal'cis,** antimonial powder. **O. fer'ri ni'grum,** *Black oxide of iron, Ferro-ferric hydrate;* scales which fall from iron when heated; consist of iron combined with oxygen; have been used like the chalybeates in general. *Ferri oxidum nigrum,* made by precipitating, by ammonia, a solution of the mixed sulphate of protoxide and sesquioxide of iron, and an analogous preparation under the name *Ferri oxidum magneticum, Magnetic oxide of iron, Martial Ethiops,* have been officinal in some pharmacopœias. **O. fer'ricum crystalliza'tum nati'vum,** hæmatites. **O. fer'roso-fer'ricum,** Æthiops martialis. **O. hydrar'gyri comple'tum,** hydrargyri nitrico-oxidum. **O. hydrargyr'icum,** hydrargyri nitrico-oxidum. **O. hydrargyr'icum præpara'tum,** hydrargyri oxidum cinereum. **O. hydrargyro'sum,** hydrargyri oxidum cinereum. **O. magne'sium,** magnesia. **O. stib'ii sulphurat'um,** formerly exhibited in the cure of fevers; now rarely employed. **O. u'ricum,** uric oxide.

Oxim'eter (*metron,* measure). Measurer of oxygen.

Ox'ines (*oxus,* sharp). Wine already sour, but not yet vinegar.

Oxi'odine. Iodic acid; white, transparent, solid; obtained by boiling iodine with nitric acid.

Oxisalt, oks'e-salt. Salt, basic.

Oxitriphyl'lum (*oxy, triphullon,* trefoil). Oxalis acesotella.

Oxo'des. Acidulous.

Oxoï'des (*oxy, eidos,* resemblance). Acidulous.

Oxonic acid, oks-on'ik as'id. Acid, formula $C_4H_5N_3O_4$, which forms when uric acid oxidizes.

Ox'ter. Axilla.

Ox-tongue. Anchusa officinalis.

Ox'urate. Combination of oxuric acid with a base.

Oxu'ric acid. Superoxygenated uric acid of Vauquelin.

Ox'us. Aceticum acidum; acetum.

Ox'y (*oxus*, acute). In composition, acute, quick, pointed, sharp, acid. In the composition of chemical terms oxy and ox mean oxygen.

Ox'ya. Fagus sylvatica.

Oxyacan'tha (*oxy*, *akantha*, thorn). Mespilus oxyacantha. **O. Gale'ni**, *Berberis*, fam. Berberideæ. The fruit of the berries, *Barberries*, is gratefully acid and moderately astringent. By preparing an alcoholic extract of the root, *Berberis* (Ph. U. S.), and adding water to it, a pulverulent brown substance is thrown down which, when dissolved in alcohol and evaporated, yields the bitter principle *Berberin*, *Berberina*, which is an excellent stomachic in the dose of 2 to 10 grains. *Oxyacanthin*, *Berbina*, and *Vinetina* have also been extracted from it. The hydrochlorate of berberin has been employed in splenic enlargement from malaria. An extract from the wood or roots of Berberis is used in India in affections of the eye under the name of Rusot or Ruswut. The American Barberry, *Berberis Canadensis*, *Pipperidge bush*, *Sowberry*, differs slightly from the European; it flourishes on mountains and hilly districts from Canada to Virginia.

Oxyacan'thin. See *Oxyacantha Galeni*.

Oxyacusis, oks-e-ak-u'sis. Oxyakoia.

Oxyæsthe'sia (*oxy*, *æsthesia*). Exaggerated sensibility.

Oxyakoia, oks-e-ak-oi'ah (*oxy*, *akoue*, hearing). Exaggeration of sense of hearing.

Oxyamygdalic acid, oks-e-am-ig'dal-ik as'id. Acid, formula $C_8H_8O_4$, existing in urine in individuals suffering from acute atrophy of the liver.

Oxyaph'e (*oxy*, *haphe*, touch). Abnormal acuteness of touch.

Oxyaph'ia (*oxy*, *haphe*, touch). Abnormal acuteness of touch.

Oxyarteritis, oks-e-ar-ter-e'tis (*oxus*, sharp, *arteria*). Acute inflammation of an artery.

Oxyarthritis, oks-e-ar-thre'tis (*oxus*, *arthron*, joint). Acute arthritis.

Oxybaphus, oks-ib'af-us. Umbrella-wort, herb growing in America and India; roots are reputed to possess purgative properties.

Oxybenzoic (oks-e-ben-zo'ic) **acid.** Hydroxybenzoic acid.

Oxyben'zol. Phenol.

Oxyblepsia, oks-e-blep'se-ah (*oxy*, *blepo*, to see). Acuteness of sight.

Oxybolia, oks-e-bo'le-ah (*oxy*, *bole*, ejection). Too rapid emission of sperm.

Oxybuturia, oks-e-but-u're-ah. Presence of oxybutyric acid in abnormal urine, as in diabetes.

Oxycannabin, oks-e-kan'na-bin. Oxidation product of cannabin by hot nitric acid.

Oxycedrus, oks-e'sed-rus. Juniperus oxycedrus.

Oxycephalia, oks-e-sef-al'e-ah (*oxy*, *kephale*, head). Sugar-loaf head. Condition of oxycephalus.

Oxycephalus, oks-e-sef'al-us (*oxy*, *kephale*). Monster with head in which there is synostosis of the parietal with occipital and temporal bones, with compensatory development of the skull in the region of anterior fontanelle, giving appearance of a sugar-loaf.

Oxychlorure'tum antimonii. Antimony oxychloride.

Oxycinchonine, oks-e-sin'kon-een. Substance, formula $C_{20}H_{24}N_2O_3$, having the same composition as quinine.

Oxycinesis, oks-e-sin-a'sis (*oxy*, *kinesis*, motion). Rapidity of motion.

Oxycoc'cos (*oxy*, *kokkos*, berry). Vaccinium oxycoccos. **O. macrocar'pus**, see *Vaccinium oxycoccus*. **O. palus'tris**, Vaccinium oxycoccos.

Oxycopaivic (oks-e-ko-pa'vic) **acid.** Acid obtained from resin of copaiba.

Ox'ycrate (*oxy*, *kerao*, to mix). A mixture of vinegar and water; frequently used in medicine as a refrigerant and antiseptic.

Oxycre'osol. Guaiacol.

Oxycro'ceum emplas'trum (*oxy*, *krokos*, saffron). A plaster, composed of various ingredients, formerly employed as a strengthening plaster.

Oxycterus, oks-ik'ter-us. Acute icterus or jaundice.

Ox'ycum. Oxygen.

Ox'yd. Oxide.

Oxyda'tion. Oxidation.

Oxyda'tus. Oxidized.

Oxyden'dron arbo'reum. Sorrel tree, sour-wood; indigenous tree with pleasantly acid leaves; used in decoction as a refrigerant drink.

Oxyderces, oks-id-ur'sees (*oxy*, *derko*, to see). A medicine which sharpens the sight.

Oxydercia, oks-id-ur'se-ah. Sharpness of vision.

Oxydercicus, oks-id-ur'sik-us. A medicine which sharpens the sight.

Oxydiabrosis, oks-e-de-ah-bro'sis (*oxy*, *diabrosis*). Rapid corrosion.

Oxydimorphine, oks-e-di-mor'fine. Pseudomorphine.

Oxydoid, oks'id-oid. Resembling an oxide.

Oxydor'cia. Oxydercia.

Oxydulated, oks-id'u-la-ted. Slightly oxidized.

Oxydula'tus. Oxydulated.

Oxyd'ulum. Body in an inferior degree of oxidation.

Ox'ydum. Oxide. **O. antimo'nii**, antimony oxide. **O. argen'ticum**, silver oxide. **O. azoto'sum**, nitrogen monoxide. **O. cal'cicum**, lime. **O. c. a'quâ solu'tum**, lime-water. **O. cu'pricum**, copper oxide. **O. fer'ri nigrum** or **ferro'so-fer'ricum**, ferroso-ferric oxide. **O. fer'ricum ig'ne para'tum**, ferric oxide. **O. hydrargyr'icum**, mercuric oxide. **O. magne'sicum ig'ne para'tum**, magnesia. **O. magne'sicum le've**, magnesia. **O. magne'sicum pondero'sum**, heavy magnesia. **O. manga'nicum**, manganese dioxide. **O. plum'bicum**, lead monoxide; litharge. **O. plum'bicum fu'sum**, lead monoxide; litharge. **O. plum'bicum ru'brum**, minium; red lead. **O. potas'sicum**, potassa. **O. stib'icum**, antimony oxide. **O. zin'cicum**, zinc oxide.

Oxyecoi'a (*oxy*, *akoue*, hearing). Intense or exaggerated sense of hearing.

Oxyg'ala (*oxy*, *gala*, milk). Sour milk. The *Oxygala equinum*, *Caracosmos*, is reckoned among the delicacies by the Tartars.

Oxygaron, oks-ig'ar-on (*oxy*, *garon*, garum). Composition of garum and vinegar.

Ox'ygen (*oxus*, acid, *gennao*, to engender, that is, *generator of acids;* and such it was believed to be exclusively when the name was given to it; now known not to be the case). *Empyreal*, *Pure*, *Vital*, or *Dephlogisticated air.* Colorless, invisible, tasteless, inodorous gas, sp. gr. 1.1056; slightly soluble in water; enters into combination with all other elements save fluorine, forming oxides. Oxygen is an elementary principle largely distributed in nature. It exists in the air, water, several acids, all the oxides, and in vegetable and animal substances. Obtained by decomposing the peroxide of manganese or potassium chlorate by heat in close vessels. Although oxygen, in the state of admixture in which it is found in the atmosphere, is of vital importance, it cannot be respired in a pure state with impunity. Animals die in it long before all the oxygen is consumed. Its properties are markedly stimulant; it increases the force and velocity of the pulse, and has, accordingly, been used in cases of chronic debility, chlorosis, asthma, scrofula, dropsy, paralysis, etc. It requires to be diluted with from 10 to 20 parts of atmospheric air, one to two quarts being used during the day. **O., neu'tral**, see *Ozone*. **O., po'larized**, ozone. **O., res'piratory**, oxygen in combination with hæmoglobin, which can be respired.

Oxygenated, oks'e-jen-a-ted. Furnished with oxygen. **O. wa'ter**, hydrogen peroxide.

Oxygena'tion. Oxidation.

Oxygenic, oks-e-jen'ik (*oxus*, acid, *gennao*, to engender). Producing acids.

Oxygenized, oks'e-jen-ized. Oxygenated.

Oxygeus'ia (*oxy*, *geusis*, taste). Excessive or exaggerated sense of taste.

Oxyglu'cus (*oxy*, *glukus*, sweet). *Oxyglyces.* Prepared by macerating and boiling honeycomb (from which the greater part of the honey has been taken) in water, and adding vinegar. Oxymel.

Oxyglycy, oks'ig-le-se. Oxyglucus.

Oxyguanine, oks-e-gwan'een. Product obtained by adding soda to solution of guanine and treating with permanganate of potassium.

Oxyhæmoglobin, oks-e-he-mo-glo'bin. Peculiar combination of hæmoglobin with oxygen in proportion of 1 gramme to 1.59 c.cm. when saturated. Combination easily made or disassociated. By this means, largely, oxygen is conveyed from the lungs to the tissues.

Oxyhydrate, oks-e-hi'drate. Substance in which oxygen and hydroxyl are contained.

Oxyhydrocarbure'tum ex o'leo pyroxyl'ico-para'tum. Creasote.

Oxyigasurine, oks-e-ig-as-u'reen. Substance obtained by treating igasurine with potassium nitrate; its physiological action is identical with that of igasurine.

Oxyiodide, oks-e-i'o-dide. Compound in which oxygen and iodine are contained in combination with an element or radical.

Oxylap'athum (*oxy*, *lapathon*, dock). Rumex acutus.

Oxyleucotin, oks-e-lu-ko'tin. A proximate principle of paracoto-bark.

Ox'ymel (*oxy*, *mel*, honey). *Oxymel simple.* Honey and vinegar boiled to a syrupy consistence. Clarified honey, 4℥; acetic acid and distilled water, each, 5 f℥ (B. P.). Honey, 200; vinegar, 50; mix; evaporate to sp. gr. 1.26, clarify, and strain. **O. æru'ginis,** linimentum æruginis. **O. col'chici,** *O. of meadow saffron,* (rad. colch. recent. in laminas tenues sectæ, ℥j; aceti destillati, ℔j; mellis despumat. pond., ℔ij. Macerate in a gentle heat for forty-eight hours. Press and boil the liquor with the honey to the thickness of a syrup, stirring with a wooden spoon; expectorant and diuretic; dose, f℥j in gruel. **O. scil'læ,** *O. of squills;* vinegar of squill, 5; clarified honey, 8; mix and evaporate to sp. gr. 1.32 (B. P.); vinegar of squill, 5; clarified honey, 10; mix and evaporate to 10 parts (P. G.); vinegar of squill, 5; clarified honey, 20; mix and evaporate to sp. gr. 1.26 (Cod.). **O. sim'plex,** oxymel.

Oxymellitum, oks-e-mel-le'tum. Oxymel.

Oxymercu'ric sul'phate. Basic sulphate of mercury.

Oxymetrum, oks-im'et-rum. Acidimeter.

Oxymor'phine or **Oxymor'phia.** Pseudomorphia.

Oxymu'riate. Chloride. **O. of mer'cury,** corrosive sublimate.

Oxymuriat'ic ac'id. Applied by Lavoisier to substance supposed to be compound of muriatic acid and oxygen; discovered by Sir Humphrey Davy to be an elementary body which he termed *Chlorine*, a name it has since retained.

Oxymyelitis, oks-e-me-el-e'tis. Acute myelitis.

Oxymyr'rhine (*oxy*, *murrine*, myrtle). Ruscus.

Oxymyr'sine. Ruscus.

Oxynaphthoic acid, oks-e-naf'tho-ik as'id. Obtained by action of carbonic acid gas on sodium and naphthol; in colorless crystals; antiseptic and disinfectant; employed in skin diseases, applied externally with collodion or lanolin.

Oxynaphthol, oks-e-naf'thol. Dioxynaphthol, substance with the formula $C_{10}H_5(OH)_3$, occurring in yellow needles, possessing active reducing properties.

Oxynarco'tia or **Oxynar'cotine.** $C_{22}H_{23}NO_8$. Alkaloid accompanying narceine in opium, but not medicinally important.

Oxyneu'rin. Betaine.

Oxyn'gium. Adeps suillus.

Oxyni'tron (*oxy*, *nitron*, nitre). Name of a plaster composed chiefly of vinegar and nitre.

Oxynose'ma (*oxy*, *nosema*, disease), **Oxyn'osos** (*oxy*, *nosos*, disease), or **Oxynu'sos.** Acute disease.

Oxyn'tic. Term applied to glands secreting acid principle in the gastric juice. **O. cells,** parietal cells of cardiac glands of stomach, believed by Heidenhain to produce hydrochloric acid of gastric juice. See *Delomorphous.*

Oxynucleus, oks-e-nu'kle-us. Nucleus containing oxygen.

Oxyokoia, ox-e-o-koi'ah (*oxy*, *akoue*, hearing). Production of peculiar disagreeable sensations in the ear when loud sounds are heard.

Oxyoöphoritis, ox-e-o-of-or-e'tis. Acute oöphoritis.

Oxyo'pia (*oxy*, *ops*, sight). Excessive acuteness of the sense of sight. Instances have occurred where persons could see the stars in the day-time. Cause seated in great sensibility of the retina. Term also used synonymously with nyctalopia.

Oxyosphresis, ox-e-os-fra'sis (*oxy*, *osphresis*, smell). Excessive acuteness of the sense of smell.

Oxyphenic acid, oks-e-fen'ik as'id. Pyrocatechin.

Oxyphenyl, oks-e-fen'il. Combination containing phenyl and oxygen.

Oxyphlegmasia, oks-e-fleg-mah'zhe-ah (*oxy*, *phlegmasia*). A violent inflammation.

Oxyphœnicon, ox-e-fe'nik-on (*oxy*, *phoinikos*, deep red). Tamarindus.

Oxyphonia, ox-e-fo'ne-ah (*oxy*, *phone*, voice). *Clangor.* Shrill and squalling voice—frequently a symptom of morbid affection of the larynx.

Oxyphon'ic. Possessed of or relating to oxyphonia.

Oxyphosphide, oks-e-fos'fide. Compound containing an element or radicle in combination with oxygen and phosphorus.

Oxyphyl'lon (*oxy*, *phullon*, a leaf). Oxalis acetosella.

Oxypod'ia (*oxy*, *pous*, foot). Club-foot. See *Kyllosis.*

Oxypropylendiisoamyl'amine. Synthetic alkaloid; colorless, oily liquid, having disagreeable odor. Causes epileptiform convulsions in animals; appears to paralyze the inhibitory fibres of the pneumogastric.

Oxyprotein, oks-e-pro'te-in. Proteid rich in oxygen.

Oxyqui'nia (*oxy*, *quinia*). A substance obtained from boiling sulphate of quinia and solution of potassium nitrate together, differing from quinia in containing two additional equivalents of oxygen.

Oxyreg'mia (*oxy*, *ereugo*, to belch). Acid eructation.

Oxyr'ia renifor'mis (*oxus*, sharp, acid). *Boreal sourdock, Mountain sorrel, Welsh sorrel,* ord. Polygonaceæ. Grows in the northern parts of America and Europe. Possesses the same properties as Oxalis acetosella.

Oxyr'rhinus (*oxy*, *rhis*, nose). Sharp-nosed.

Oxyrrhod'inon (*oxy*, *rhodon*, rose). Composition of vinegar and roses. (Ol. rosat., ℥ij; acet. rosat., ℥j.) Used as a liniment in herpes and erysipelas.

Oxys. Acid, acute. **O. al'ba,** Oxalis acetosella.

Oxysaccharum, ox-e-sak'kar-um (*oxy*, *saccharon*, sugar). Mixture of sugar and vinegar; termed *Oxysaccharum vomitivum* when it held in solution the glass of antimony, and *Oxysaccharum scilliticum* when it contained squills.

Ox'ysal. Oxysalt.

Ox'ysalt. Salt containing oxygen in combination with acid and base.

Oxysepsis, oks-e-sep'sis (*oxus*, *sepsis*, putrefaction). Putrefaction in which acid is developed.

Oxysitia, oks-e-sish'e-ah (*oxus*, *sition*, food). A condition of the stomach in which acidity is apt to occur.

Oxystelma (oks-e-stel'mah) **Ægypti'acum.** Herb growing in Egypt and south of Africa. Juice possesses purgative properties, and in a dried condition furnishes a kind of scammony.

Oxystrychnine, oks-e-strik'neen. Product, formula

$C_{21}H_{28}N_2O_7$, produced by treating strychnine sulphate with boiling potassium nitrite.

Oxysul'phide. Compound of sulphur with metallic oxide, or mixture of oxide and sulphide of same metal.

Oxysulphosal, oks-e-sulf'o-sal. Combination of oxy- and sulpho-salts.

Oxysulphura'tus. Containing oxygen and sulphur.

Oxysul'phuret. Oxysulphide.

Oxysul'phurum. Oxysulphuret. **O. antimon'icum semivitrifac'tum,** liver of antimony. **O. a. s. lo'tum,** crocus of antimony.

Oxytar'tarus. Potassii acetas.

Ox'ytes. Acidity.

Oxytocia, oks-e-to'se-ah (*oxy, tokos,* bringing forth). Rapidity of parturition.

Oxytocic, oks-e-to'sik. A medicine promoting delivery.

Oxytolu'ic acids. Cresotic acids.

Oxyto'luyl-tro'pine. Homatropine.

Oxytox'ic (*oxy, toxicon,* poison). A rapid and decided toxic agent.

Oxytriphyl'lon (*oxy, triphullon,* trefoil). Oxalis acetosella.

Oxytropis (oks-it'ro-pis) **campes'tris** (*oxus, tropis,* ship's keel). Plant growing in Europe and California, reputed to cause loco.

Oxyu'ricide (*oxyuris, cædo,* to kill). An anthelmintic, fatal more especially to oxyuris vermicularis.

Oxyu'ris vermicula'ris (*oxy, oura,* tail). See *Ascaris* and *Parasites.*

Oys'ter, green. Ulva latissima. **O. plant,** tragopogon; root diuretic; cultivated for food. **O., veg'etable,** tragopogon.

Oys'ter-shell. Ostrea testa. **O.-s., prepared,** testa præparata.

Oz. Abbreviation for *uncia,* an ounce.

Ozæna, o-ze'na (*oze,* fetid smell). Ulceration of the nasal cavities with fetid discharge, symptom of atrophic rhinitis; supposed by Löwenberg to be due to ozænococcus—more probably to germs of putrefaction which find here suitable conditions for their development. An affection of the pituitary membrane, giving occasion to a disagreeable odor similar to that of a crushed bed-bug; hence the name *punais,* by which the French designate one laboring under ozæna. It is sometimes due to caries of the bones, but is perhaps most frequently dependent upon syphilitic ulceration of the pituitary membrane, with or without caries of the nose. **O. benig'na,** see *Coryza.* **O., trache'al,** inflammation of the trachea in which crusts are formed, due to nasal ozæna invading this region.

Ozænacoccus, o-ze-nah-kok'kus (*ozaina, kokkos,* grain). Micrococcus Löwenbergii. See *Micrococci.*

O'ze. Offensive breath.

Oze'mum. Albumen.

Ozo'cerite. Ozokerit.

Ozochrotous, o-zo-krot'us. Possessing a bad-smelling skin.

Ozokerine, o-zo'ker-een. Commercial name for a variety of petroleum.

Ozo'kerit. *Ozocerite, Vegetable wax, Fossil wax.* A hydrocarbon found in a layer of bituminous slate in Moldavia, Wallachia, etc.; snowy white; when refined, acting like tar; when mixed with linseed oil, stimulating the diseased skin, as in chronic eczema.

O'zon or **O'zone** (*ozo,* to smell of something). Powerfully odorous matter produced when a current of ordinary electricity passes from pointed bodies into the air, or by placing phosphorus in a flask filled with atmospheric air and partly covered with water, occasionally agitating the flask. Generally presumed to be a peculiar modification of oxygen, and in varying quantity in the atmosphere supposed to affect the health of man. Schönbein considers that oxygen exists in three different allotropic conditions, two of which are active and in opposition to each other. These are *ozone* and *antozone,* equal quantities of which neutralize each other and form inactive or *neutral oxygen.* Ozone is considered by some to be oxygen condensed to two-thirds its bulk, when it possesses remarkable oxidizing properties. Air containing ozone is said to be *ozonized.* **O. car'rier,** red blood-corpuscle.

Ozo'nic e'ther. Solution of hydrogen dioxide in ether; has been used internally in diabetes and other diseases; locally antiseptic.

Ozonized, o'zon-ized. Containing ozone. **O. e'ther,** solution of hydrogen peroxide in ether containing a little alcohol; used in form of spray as disinfectant.

Ozonometer, o-zon-om'et-ur (*ozo,* to smell, *metron,* measure). Instrument for determining the presence of, and quality of, ozone.

Ozostomia, o-zo-stom'e-ah (*oze,* stench, *stoma,* mouth). Offensive breath.

P.

P. A contraction of phosphorus; optic papilla; pars, part; pilula, pill; pondere, by weight; pugillus, handful; pulvis, powder; pupil. See *Abbreviations.*

Pabulin, pab'u-lin. Substance present in blood, usually immediately following digestion, containing fat in emulsion with albumen.

Pab'ulum. Food; aliment. Animal heat and animal spirits—unmeaning terms—were formerly considered the pabulum vitæ, as oxygen is eminently so regarded by many.

Pac'ay. Prosopis dulcis.

Pacchio'ni, cor'puscles or **glands of.** *Pacchionian bodies* or *granulations* (after Pacchioni, an Italian anatomist). Small whitish or yellowish bodies, sometimes separate, at others united like a bunch of grapes, observed in several parts of the dura and pia mater. They receive vessels, but apparently no nerves; their texture and uses are unknown. A considerable number is observed in the longitudinal sinus covered by the internal membrane.

Pacchionian (pak-ke-o'ne-an) **depres'sions** or **fos'sæ.** Small pit-like depressions for Pacchionian bodies found on the cerebral surface of the cranium near the longitudinal sinus.

Pachæmia, pak-e'me-ah (*pachy, haima,* blood). Too great thickness of the blood.

Pacheableph'ara or **Pacheablepharosis,** pak-e-ah-blef-ar-o'sis (*pachy, blepharon,* eyelid). Thickening and hardening of the eyelids produced by tubercles or excrescences formed on their margins.

Pach'etos. See *Laqueus.*

Pachira (pak'ir-ah) **insig'nis.** Plant of Guiana; an infusion of the bark of the root is applied in toothache and in ulceration of the gums; the flowers and leaves possess emollient properties; the kernels of the fruit are edible.

Pachismus, pak-iz'mus (*pachus,* thick). Thickening. Obesity.

Pachulo'sis (*pachulos,* thick). Pachylosis.

Pachu'na. Coccus cordifolia.

Pach'y (*pachus,* thick). In composition, thick.

Pachyacria, pak-e-ak're-ah. Condition in which hypertrophy of a part exists.

Pachyæ'mia. Pachæmia.

Pachybleph'aron. Pacheablepharosis.

Pachycephalia, pak-e-sef-al'e-ah (*pachy, kephale,* head). Condition of skull in which the walls are unusually thickened.

Pachycephal'ic. Having an unusually thickened skull.

Pachycephalus, pak-e-sef'al-us (*pachy, kephale*). Thick head, due to synostosis of parietal and occipital bones.

Pachychol'ia (*pachy, chole,* bile). Morbid thickness of the bile.

Pachychymia, pak-e-kim'e-ah. State in which the fluids of the body are thickened.

Pachydactylous, pak-e-dak'til-us (*pachus,* thick, *daktulos,* finger). Thick-fingered.

Pachyder'ma vul'væ. Elephantiasis of the vulva.

Pachydermatocele, pak-e-dur-mat-o-se'le (Eng. pak-e-dur'mat-o-seel) (*pachy, derma,* skin, *kele,* tumor). Disease of the dermoid tissue, apparently congenital, which increases at times from a small mole or spot to the size and appearance of a relaxed and very emaciated mamma.

Pachydermatous, pak-e-dur'mat-us. Having a thick skin.

Pachyder'mia. Thickening of the skin. Elephantiasis; myxœdema. **P. lactif'lua,** elephantiasis with discharge of lymph. **P. l. scro'ti,** lymph-scrotum. **P. laryn'gis,** papillary growth in larynx. **P. lympangiectat'ica,** lymph-scrotum. **P. verruco'sa,** thickened, warty growth.

Pachylo'sis (*pachus,* thick). An inordinate production of the epidermis dependent upon hypertrophy of the papillæ of the skin. *Pachylosis epidermica* is a form of the disease attacking the palms and soles of the feet.

Pach'yma co'cos. Lycoperdon solidum.

Pachymenia, pak-e-men'e-ah (*pachy, humen,* membrane). Thickening of the skin.

Pachymen'ic. Thick-skinned.

Pachymeningitis, pak-e-men-in-je'tis (*pachymeninx,* dura mater, *itis,* inflammation). *Perimeningitis.* Inflammation of the dura mater. *Hæmatoma of the dura mater* is a blood-sac, resulting from chronic pachymeningitis, with hemorrhagic exudation. **P. acu'ta,** acute, usually suppurative, form. **P. chron'ica** or **inter'na,** chronic form, causing thickening of membrane by new formation of connective tissue. **P. c. hæmorrhag'ica,** chronic form with hemorrhage from newly-formed blood-vessels. **P. exter'na,** fibrous thickening of dura mater with adhesion to the skull. **P. hypertroph'ica,** chronic thickening of the dura mater, usually in the cervical portion of the spinal cord; hypertrophic cervical pachymeningitis. **P. inter'na,** P. chronica.

Pachymen'inx (*pachy, meninx,* membrane). Dura mater.

Pachyn'sis (*pachuno,* to make thick). Thickening. Obesity.

Pachyn'tic. Relating to unnatural induration or thickening of a part or organ.

Pachyn'tica. Agents that produce abnormal thickening of a part.

Pachypelviperitoni'tis. Pelvic peritonitis with membranous deposits over the uterus.

Pachyperitonitis, pak-e-per-e-ton-e'tis (*pachus,* thick, *peritonaion,* peritoneum). Peritonitis in which new membranes are formed and the peritoneum becomes thickened. **P., hemorrhag'ic,** peritonitis in which vessels form in new membrane which rupture readily, thus giving rise to circumscribed hemorrhage.

Pachypodous (pak-ip'od-us) or **Pach'ypous** (*pachus, pous,* foot). Thick-footed or having a thick stipes.

Pachyrrhizus (pak-ir-rhiz'us) (*pachus, rhiza,* root) **angula'tus.** Yaka or wayaka of the Fiji Islanders; roots are edible and employed in the East Indies as refrigerant in febrile affections.

Pachys'mus (*pachus,* thick). Polysarcia adiposa.

Pach'ytes (*pachutes,* thickness). Pacheblepharosis.

Pachytic, pak-it'ik. Thick; obese.

Pacinian (pa-sin'e-an) **cor'puscles** (after Pacini). See *Corpuscles.* Terminal nerve-organs found in many situations, especially hands, feet, and mesentery; oval in form, composed of lamellæ of connective tissue surrounding a soft core where the axis-cylinder of the nerve ends in a bulbar enlargement.

Paci'ni's meth'od. See *Artificial respiration.* Means of reducing bodily temperature by closely enveloping the body in wet cloths with dry sheets or blankets outside of them.

Pack. Packing.

Pack'ing. Wrapping or packing in dry or wet sheets—dry packing or wet packing—practised by the hydropathists to induce sweating.

Pack'thread stric'ture. See *Stricture.*

Pack'wax. See *Nucha,*

Pacquelin's (pak'lan's) **caut'ery.** See *Cautery.*

Paculosis, pak-u-lo'sis. Pachylosis. **P. epider'mica,** see *Pachylosis.*

Pad. A cushion, a little cushion, a junk. Small bag filled with feathers, wool, hair, bran, chaff, etc., used to compress or support parts. In the treatment of certain fractures, soft pads or cushions are placed between the splint and the fractured limb, in order that the prominent parts may not be chafed by the

splints. See *Truss.* **P. of cor'pus callo'sum,** posterior flexure of corpus callosum.

Pad'noon. Bitnoben.

Pa'dus (*pados,* oar). Prunus padus. **P. a'vium,** Prunus padus. **P. laurocer'asus,** Prunus laurocerasus.

P. Æ. A contraction of *partes æquales.* See *Abbreviations.*

Pædanchone, pe-dank'o-ne (*pædo, ancho,* to strangle). Fatal species of cynanche, probably cynanche trachealis or cynanche maligna.

Pædarthrocace, pe-dar-throk'as-e (*pædo, arthrocace*). Fungous inflammation of joints in children; necrotic ulceration or scrofulous necrosis. See *Spina ventosa.*

Pædatrophia, pe-dat-ro'fe-ah (*pædo, a,* priv., *trophe,* nourishment). Atrophy of children; tabes mesenterica. **P. glandulo'sa,** scrofula.

Pæderastia, pe-der-as'te-ah (*pædo, eros,* love). Pederasty; love of boys; a disgraceful passion common in ancient times particularly. Term likewise applied to the crime of sodomy.

Pæderas'tic. Relating or appertaining to pæderastia.

Pæde'ria fœ'tida. Climbing shrub, ord. Cinchonaceæ, native of India, China, and Japan; fruit of an offensive odor when bruised; root is said to be emetic.

Pædero'ta Virgin'ica. Leptandra Virginica.

Pædia, pe-de'ah. Bringing up or education—physical as well as moral—of children.

Pædiatria, pe-de-at-re'ah (*pædo, iatreia,* medical management). *Pædiatrics.* Treatment of the diseases and preservation of the health of children.

Pædiat'rics. Pædiatria.

Pædiat'rophy. Part of hygiene which treats of the rearing of children.

Pædica'tio (*pædico,* to commit pæderastia). Pæderastia.

Pæ'dici (morbi). Developmental affections of children, as malformations and teething.

Pædicterus, pe-dik'ter-us (*pædo, icterus,* jaundice). Jaundice of very young children.

Pædiom'eter or **Pædom'eter** (*pædo, metron,* measure). Baromacrometer.

Pæ'dion or **Pæ'dium.** Young child.

Pædiop'athy. Pathology of children.

Pæ'do (*pais,* child). In composition, child, boy.

Pædobaromacrometer, pe-do-bar-o-mak-rom'e-tur (*pædo, baros,* weight, *makros,* large, *metron,* measure). Baromacrometer.

Pædogen'esis (*pædo, genesis,* production). Sexual reproduction during larval state of parent.

Pædonosology, pe-do-no-zol'o-je (*pædo, nosos,* disease, *logos,* discourse). Treatise on or discussion of the diseases of children.

Pædon'osus (*pædo, nosos,* disease). A disease of childhood.

Pædop'athy (*pædo, pathos,* disease). Pathology of children.

Pædophlebotomia, pe-do-fleb-o-tom'e-ah (*pædo, phleps,* vein, *tome,* incision). Bleeding performed on children.

Pædoph'lysis (*pædo, phlusis,* boiling over). Pemphigus in infants.

Pædophthisis, pe-do-te'sis (*pædo, phthisis,* wasting). Marasamus or tabes in children.

Pædop'yra America'na. Cholera infantum.

Pædostathmion, pe-do-stath'me-on (*pædo, stathmion,* measure). Scale for weighing infants.

Pædot'ribes (*pædo, tribo,* to train). *Minister gymnastæ.* In ancient gymnastics the officer acquainted with all the prescribed exercises, and who carried them into effect according to the direction of a superior.

Pædotrophium, pe-do-trof'e-um (*pædo, trepho,* to nourish). Infant asylum; foundling hospital.

Pædotrophy, pe-dot'rof-e (*pædo, trophe,* nourishment). *Pædiotrophy.* The part of hygiene which concerns the rearing of children.

Pæos'yne. Medicine.

Pæon (*Paion,* the god of physic). Physician.

Pæo'nia (*Paion,* the god of physic). *Peony* or *Piony, male* and *female,* ord. Ranunculaceæ. **P. moutan,** Chinese species, used for congestions, hæmorrhage, and menstrual disorders; believed to be abortifacient. **P. officina'lis,** common peony of Europe, cultivated for ornament; root, flower, and seeds are officinal in Cod.; ancient antispasmodic and emmenagogue remedy; used as a charm in epilepsy.

Pæo'nice (*Paionike techne,* medical art). Medicine.

Pæo'nicus. Medical; healing.

Pæo'nis. Medicine.

Pæo'nius. Medical.

Pæony, pe'on-e. Pæonia.

Pagapoplex'ia (*pagos,* icy coldness, *apoplexia,* apoplexy). Apoplexy from cold.

Pagenstecher's ointment. Yellow oxide of mercury, gr. j–iij, to vaseline, ℥j. Employed in ophthalmic practice.

Paget's (paj'et's) **disease.** Psorospermiasis of the nipple; parasitic disease resembling eczema, having a tendency to terminate in cancer of the breast. Hypertrophic deformative osteitis.

Pagiorrheumatism, pag-e-or-rhu'mat-izm (*pagios,* firm). Rheumatism, chronic.

Paglia'ri's hæmostat'ic or **styp'tic.** See *Hæmostatic, Pagliari's.*

Pagoplexia, pag-o-pleks'e-ah (*pagos,* ice, *plege,* a stroke). Frost-bite; pernio.

Pa'gos. Peritoneum; pellicle. Icy coldness.

Paica. Chenopodium ambrosioïdes.

Paid'ia. Infancy.

Paidiaph'tha (*paidion,* little child, *aphthai*). Aphthæ or thrush of infants.

Paid'ici. Pædici.

Paid'ion. A young child.

Paidonosology (*pais,* child, *nosos,* disease, *logos,* discourse). Discourse on or discussion of diseases of children.

Paigil. Primula veris.

Pail system. Goux system, for collection and removal of night-soil.

Pain. *Ache, Misery* (especially a constant annoying pain or suffering). Disagreeable sensation, difficult to define; generally symptomatic; called *acute* when sharp and violent; when short and sudden, a *twinge;* and when more violent, a *pang; pungent* when it resembles that which would be produced by a sharp instrument run into the part; *heavy* when attended with a sensation of weight; *tensive,* when the part seems distended; *lancinating,* when occurring in shoots; *lacerating* or *tearing,* when the part seems to be tearing; *burning,* when resembling that produced by a burn, etc., *causalgia,* of which most distressing cases have been observed after gunshot wounds. **P., sun,** hemicrania.

Pain'ful. Full of pain. **P. point,** point or points on a neuralgic surface, at various points in the course of the affected nerves, especially sensitive to pressure. **P. subcuta'neous tu'mor,** small and very painful, allied to neuromata.

Pains. *Labor-pains.* Uneasy sensations accompanying labor, and owing to uterine contraction. Pains that precede actual delivery, and are simply employed in dilating the os uteri, are called *grinding;* those which extrude the child, *forcing.* Those which take place in the first days after delivery, and are employed in forcing away coagula, etc., are termed *after-pains.* "To take a pain," "To try a pain," is to make an examination *per vaginam,* during labor, to discover its progress, character, etc. **P., af'ter,** see *Pains.* **P., false,** pains that take place before delivery, and are not caused by parturient contractions of the uterus. **P., gnaw'ing,** pains resembling what might be produced by the gnawing of an animal.

Paint (*pingo,* to paint). Name given to different substances employed for embellishing the complexion or rendering the skin softer. The substances most commonly used for this purpose are: *Subnitrate of bismuth;* a spirituous solution of benzoin, precipitated by water and forming *Virgin's milk;* the red or *rouge*

of the carthamus, *Spanish white;* the oxides of lead, tin, and mercury, vermilion, red saunders, etc. All paints may be said to be noxious; they injure the skin, obstruct perspiration, and thus frequently lay the foundation for cutaneous affections. See *Cosmetic.* *To paint* a surface is to cover it with some topical application, as with iodine to an inflamed part. **P., In'dian,** Hydrastis Canadensis, Sanguinaria Canadensis. **P., i'odine,** see *Iodine.* **P., yel'low,** Hydrastis Canadensis.

Paint'ed tril'lium. Trillium erythrocarpum.

Paint'er's col'ic. Lead colic in painters.

Pairs of nerves. Two nerves of opposite sides arising from homologous areas of the cerebrospinal axis.

Pais. Boy.

Pajanelia (pah-jan-el'e-ah) **Rheed'ii.** Tree of south of India; leaves and bark of root and stem are used externally in abscesses and œdematous conditions.

Pa'la. Name given to syphilis in the Hawaiian Islands.

Pal'ad. Vertex.

Pala'da. Alopecia, especially that due to syphilis.

Palæontol'ogy. Paleontology.

Palæs'tra (*palæstra*, a place for wrestling). Gymnasium.

Pal'ame. Palm.

Palamosyphilolepsia, pal-am-o-sif-il-o-lep'se-ah (*palame, syphilis, lepis,* scale). Syphiloderm of palm of hand.

Palampissa, pal-am-pis'sah. Black pitch.

Pa'las ki'no. Bengal kino.

Pal'atal. Palatine. **P. in'dex,** relation between maximum breadth and maximum length of hard palate, latter taken as 100. **P. pro'cess,** ingrowth from maxillary plate of embryo, meeting its fellow on median line to form the palate.

Pal'ate. *Roof of the mouth; Hard palate.* Upper part of the cavity of the mouth; a kind of parabolic vault formed by the two superior maxillæ and the two palate-bones, covered with a thick and dense mucous membrane; bounded before and at the sides by the superior dental arch, and behind by the velum palati. A whitish line runs along the middle from before backward, at the anterior extremity of which is a tubercle corresponding to the inferior orifice of the anterior palatine canal. The arteries of the palate and corresponding gums proceed from the palatine, alveolar, infraorbitar, labial, and buccal branches. Veins follow a similar course. Nerves are given off from the palatine, facial, infraorbitar, superior dental, and from the naso-palatine ganglion. **P., artific'ial,** *Obturator for the palate.* A plate of tortoise-shell, silver, vulcanite, etc. used to close a deficiency of the palate. **P. bone,** small bone of an irregular shape, situate at the posterior part of the nasal fossæ and palate. It seems formed by the union of two bony plates joined at right angles to each other, so that one is inferior and horizontal, the other superior and vertical. The horizontal or palatine portion or plate, arch of the palate, os quadratum of the ancients, is quadrilateral. Upper surface forms part of the nasal fossæ; the lower forms part of the palatine arch and contains the inferior orifice of the posterior palatine canal. Its anterior edge is articulated with the palatine process of the superior maxilla; the posterior is free and sharp, gives attachment to the velum palati, and presents an eminence which, when joined with one on the opposite side, forms the posterior nasal spine. Inner edge is articulated with the corresponding bone; its outer is confounded with the vertical portion. The vertical or ascending portion has the form of a long square. The inner surface forms part of the outer paries of the nasal fossæ. The outer surface is unequal, and is articulated with the superior maxilla; behind it presents a vertical groove, which forms part of the posterior palatine canal, and, above all, a small free surface which looks into the zygomatic fossa. Its anterior edge is united with the superior maxilla; the posterior is unequal, and rests on the internal ala of the pterygoid process. The angle which it forms by uniting with the posterior edge of the horizontal portion presents a very prominent pyramidal eminence, called the tuberosity of the palate-bone. Its upper margin is surmounted by two eminences: the one, anterior, orbitar process; the other, posterior, sphenoid process. These two processes are separated by an almost circular notch, which the sphenoid bone forms into a foramen, the sphenopalatine. This bone appears to be developed from a single point of ossification. It is articulated with the sphenoid, ethmoid, the cornua sphenoidalia, superior maxilla, the inferior spongy bone, the vomer, and its fellow. **P., cleft,** see *Hare-lip.* **P., fall'ing down of the,** inflammation of the uvula. **P., false,** see *Palate, artificial.* **P., fis'sured,** see *Hare-lip.* **P., hard,** palate. **P. pro'cess,** part of superior maxilla forming anterior portion of hard palate. **P., soft,** velum pendulum palati. **P., split,** see *Hare-lip.*

Pal'atine. *Palatal, Palatic.* Relating to the palate. **P. arches,** see *Arches of the palate.* **P.** or **Pal'atal ar'teries,** two in number: 1. Superior palatal, palatine, or palatomaxillary artery, which leaves the internal maxillary behind the top of the orbit, descends into the pterygomaxillary fissure, and enters the posterior maxillary canal. Its branches are distributed to the velum palati and the nasal fossæ. 2. The inferior or ascending palatine or palatal, which is very small, and separates from the facial near its origin, passes along the lateral and superior part of the pharynx, between the pillars of the velum palati, and divides into a number of ramusculi, which are distributed to the pharynx, the corresponding tonsil, the Eustachian tube, and the velum palati. **P. but'tonhole,** an opening made in the soft palate for the removal of nasopharyngeal polypus. **P. canals'** or **ducts,** two in number: the anterior *Incisive canal,* situate at the anterior part of the palatine arch, and formed by the two superior maxillæ. It is single beneath, but opens above by two apertures, one into each nasal fossa (canals of Stenson). The foramen is called *Foramen incisivum.* The posterior palatine canal, situate at the posterior part of the palate, is formed by the palate and superior maxilla, ascends between these two bones, and in its course gives rise to two or three small accessory palatine canals, which open above the tuberosity of the palate-bone, the outer being sometimes called external palatine canal. It transmits the nerves and vessels which bear its name. The foramen is called *F. palatinum posterius.* **P. cells,** ethmoid cells formed by union with the palate-bone. **P. fos'sæ,** inferior palatine canal. **P. glands,** numerous small racemose glands, which abound especially on the upper surface of the palate and also in the uvula. **P. mem'brane,** the fibro-mucous membrane lining the palate or roof of the mouth. **P.** or **Pal'atal nerves,** three in number, arise from the inferior part of the sphenopalatine ganglion: 1. *Great palatine,* situate anteriorly to the two others, descends into the posterior palatine canal; gives a *Nasal* filament and a *Staphyline* filament, and is distributed on the palate. 2. *Middle palatine,* arising behind the preceding, enters one of the accessory palatine canals and is distributed to the tonsils and velum palati. 3. *Little palatine nerve,* situate still farther back than the last, which loses itself by several filaments in the uvula, tonsils, and follicles of the palatine membrane. **P. pro'cess of supe'rior maxil'la,** palate process. **P. ridges,** tense eminences of mucous membrane of hard palate, less marked in adult than in fœtus and lower animals, being in the latter important masticating organs; a median ridge is the raphe; others run obliquely backward from incisor teeth. **P. sec'tor,** area in median plane of skull between lines drawn from hormion to staphylion and to alveolar point (Lissauer). **P. spine,** nasal spine, posterior; see *Nasal spine.* **P. ster'tor,** see *Stertor.* **P. su'ture,** suture formed by union in median line of palate-bones behind and palate processes of superior maxillary in front. **P. s., trans'verse,** between horizontal plates of palate-bones behind and palate processes of supe-

rior maxilla in front. **P. trigone,** small triangular space at the junction of the zygomatic surface of the superior maxillary bone with the nasal and orbital surfaces, on which the orbital plate of the palate rests. **P. veins,** those supplying soft palate; *inferior* p. v. is tributary to the facial; *superior,* to internal maxillary.

Palatinus, pal-at-e'nus. Palatine.

Palatitis, pal-at-e'tis. Inflammation of the palate.

Palatoglos'sal fold. Anterior pillar of fauces.

Palatoglos'sus. Glossostaphylinus.

Palatognathus, pal-at-o-nath'us (*palato, gnathos,* jaw). One having congenital cleft palate.

Palatola'bial. Relating to palate and lips.

Palatomax'illary arch. Maxillary arch. **P. ar'tery,** superior palatine artery.

Palatopharynge'al. Relating to palate and pharynx. **P. fold,** posterior pillar of fauces.

Palatopharyngeus (pal-at-o-far-in-je'us) or **Pala'to-pharyn'go-larynge'us.** Membranous muscle, broader at its middle than at its extremities, situate vertically in the lateral paries of the pharynx and velum palati. It includes the peristaphylopharyngeus, pharyngostaphylinus, and thyrostaphylinus of Winslow. When the palatopharyngei contract together they depress the velum, elevate and shorten the pharynx, and act principally in deglutition.

Pal'atoplasty (*palato, plasso,* to form). Operation for closing the palatine vault.

Palatoplegia, pal-at-o-plej'e-ah (*palatum,* palate, *plege,* stroke). Paralysis of the palate.

Palator'rhaphy (*palato, rhaphe,* suture). Operation for uniting a cleft palate.

Palatosalpingeus, pal-at-o-sal-pin'je-us. Circumflexus.

Palatos'chisis (*palato, schisis,* cleft). Cleft palate.

Palatostaphyli'ni. See *Azygos muscle.*

Pal'ato-uvula'ris. Azygos uvulæ.

Pala'tum. Palate. **P. du'rum,** see *Palate.* **P. fis'sum,** fissure of the palate; see *Hare-lip.* **P. mo'bile,** velum pendulum palati. **P. mol'le,** velum pendulum palati. **P. os'seum,** see *Palate.* **P. pen'dulum,** velum pendulum palati.

Pale. Pallid, whitish. **P. bark,** pale cinchona. **P. cat'echu,** see *Gambier.* **P. cincho'na,** term applied on account of color of powder to several commercial varieties of cinchona bark, principally *Cinchona officinalis, C. nitida,* and *C. micrantha.* It contains much larger proportion of cinchonine and quinidine or cinchonidine than of quinine. **P. lau'rel,** *Kalmia glauca.* **P. rose,** petals of Rosa centifolia, used in various forms as a fragrant vehicle.

Pa'le (*pale,* dust). Pollen.

Pa'lea Cabot'ii. A fern of Java, the delicate filaments of which, derived from the stipes, act as mechanical styptics.

Pale'ness. Whiteness of complexion; it appears to be owing to a diminution or alteration of the blood circulating in the capillary vessels; often a sign of disease.

Paleontology, pa-le-on-tol'o-je (*palaios,* old, *onta,* beings, *logos,* discourse). Discussion on ancient organisms or fossils.

Pa'li plague. See *Plague.*

Palicour'ea cro'cea. Ord. Cinchonaceæ, a native of the West Indies; emetic. **P. diuret'ica,** native of Brazil; leaves are employed in dropsy and erysipelas; fruits are poisonous. **P. Marcgrav'ii,** native of Brazil; poisonous, and employed there to kill rats and mice. **P. officina'lis,** native of Brazil; reputed to be a powerful diuretic in small doses. **P. specio'sa,** *Goldshrub,* native of New Granada and Brazil; leaves are considered to be antisyphilitic; decoction in large doses is poisonous. **P. stre'pens,** native of Brazil; fruit is poisonous, and has diuretic properties; leaves are employed similar to those of Palicourea officinalis. **P. tincto'ria,** Psychotria tinctoria.

Palicoureatannic (pal-e-koo-re-ah-tan'nik) **ac'id.** Acid derived from Palicourea Marcgravii.

Palicouric (pal-e-koo'rik) **acid.** Acid derived from Palicourea Marcgravii, with an acid taste, and occurring in needle shape; soluble in water, and non-toxic.

Palicourine, pal-e-koor'een. Substance derived from Palicourea Marcgravii.

Palil'lo. Campomanesia lineatifolia.

Palim'bolus (*palim,* again, *ballo,* to throw). Very changeable.

Palimpis'sa (*palimpissa,* pitch reboiled, *palim,* again, *pissa,* pitch). Pinus sylvestris.

Palincote'sis (*palin,* again, *kotos,* animosity). Increase of a disease after temporary remission.

Palindrome (pal-in'drom-e) or **Palindrom'ia** (*palin,* again, *dromos,* course). Reflux of fluids from the exterior toward the interior. Relapse of an affection—the recurrence of a paroxysm or disease.

Palingenesis, pal-in-gen'es-is (*palin,* again, *genesis,* generation). Regeneration.

Palinod'ia (*palin,* again, *hodos,* way). Bending backward; relapse.

Palirrhœa, pal-ir-rhe'ah (*palin,* again, *rhoia,* discharge). Recurrence of a mucous flux.

Paliuri baccæ, pal-e-u're bak'ke. Fruits of Rhamnus catharticus.

Pal'la. Mortar and pestle.

Palla'dium. Rare metal, the chloride of which, when given internally for a long time, is said to produce albuminuria and renal disease.

Pal'lat. Vertex.

Pallia'tion (*pallium,* cover or mask, garment, mantle). Act of palliating; that is, of causing the symptoms of a disease to mitigate, without curing it. The medical art can frequently only moderate the symptoms of a disease, prevent it from making progress, prolong the days of the patient, and diminish his suffering. This is palliative treatment.

Pal'liative. *Antipathic, Enantiopathic.* Remedy or mode of treatment which only relieves a disease, without curing it. Placed in antithesis to the radical treatment. See *Palliation* and *Radical.*

Pal'lid. Pale.

Pallid'ulus (dim. of **Pallidus,** pale). Albino. Paleness of the skin or of a wound.

Pal'lidus mor'bus. Chlorosis.

Pal'lium cer'ebri. Mantle (of the brain). See *Mantle.*

Pal'lor. Paleness. **P. cu'tis,** pallor of the skin. **P. defec'tu san'guinis,** pallor resulting from loss of blood. **P. lu'teus,** chlorosis. **P. morbo'sus,** pallor caused by disease. **P. vir'ginum,** chlorosis.

Palm. *Thenar.* The hollow or inside of the hand; limited without by the thenar eminence, which answers for the thumb; within, by the hypothenar eminence, which answers to the little finger; above, by the wrist-joint; and below, by the four fingers. **P. but'ter** or **P. oil,** bland, butter-like fixed oil; orange-yellow, agreeable odor; from outer coating of fruit of *Elais Guineensis;* see *P. butter* and *Cocos butyracea.* **P. gomuto,** see *Toddy.* **P. sugar,** jaggery, made from juice of various species of palm. **P. wax,** vegetable wax from bark of *Ceroxylon andicola,* a South American palm.

Pal'ma. Palm. **P. Chris'ti** (palm of Christ), Ricinus communis. **P. Co'cos,** Cocos nucifera. **P. dactylif'era,** date tree. **P. hu'milis,** Musa paradisiaca. **P. In'dica vina'ria secun'da,** see *Toddy.* **P. ma'nûs,** palm of hand. **P. unguentario'rum,** myrobalanus.

Pal'mæ u'teri plicat'æ (*palma,* branch of a tree). Arborescent striæ in the interior of the cervix uteri.

Pal'mar (*palma,* palm). Concerning the palm of the hand. The palm has sometimes been divided into three regions called palmar: External, corresponding to the thenar eminence; Internal, formed by the hypothenar eminence; and Middle, the hollow of the hand. **P. aponeuro'sis,** *Palmar fascia,* strong triangular aponeurosis arising from the inferior tendon of the palmaris brevis and the anterior annular ligament of the carpus; covering the whole palm of the hand, and adhering somewhat strongly to the skin of the part. It divides into processes which pass to the bases of all the digits; see *Sulcus digitalis anterior, Sulcus digitalis posterior, Sulcus longitudinalis,* and *Sulcus pollicis.* The *palmar ligaments* are small, very numerous fibrous fasciæ which unite the different

bones of the carpus and metacarpus. **P. arch'es,** curved extremities of the radial and cubital arteries in the palm of the hand. There are two: the cubital or superficial furnishes at its convexity toward the fingers the collateral arteries of the fingers and the internal collateral of the thumb; the radial, profound or deep-seated, is deep in the palm of the hand, beneath the tendons of the flexor muscles of the finger, and gives some small branches only to the surrounding parts. The palmar veins accompany the corresponding arteries. **P. ar'teries,** see *Palmar arches.* **P. cuta'neous nerve,** branch from median, arising above the wrist, supplies the integument of the palm. **P. dig'ital ar'teries,** branches from superficial palmar arch, the inner supplying the ulnar side of the little fingers, three others passing in intermetacarpal spaces to the roots of the fingers, where they divide into collateral digital arteries. **P. fas'cia,** palmar aponeurosis. **P. folds,** lines upon skin of palm shaped like capital *M*, caused by movement of muscles of hand. **P. interos'seous ar'teries,** branches of deep palmar arch in interosseous spaces, joining palmar digital arteries. **P. interos'seous mus'cles,** see *Interosseous muscles.* **P. lig'aments,** see *Palmar aponeurosis* and *Digital fibro-cartilages.* **P. mus'cles,** three in number: 1. *Palmaris magnus,* long fusiform muscle which passes obliquely from the inner tuberosity of the humerus to the upper extremity of the second metacarpal bone; it bends the hand; 2. *Palmaris longus,* situate on the inner side of the last; very slender, and passes from the inner tuberosity of the humerus to the anterior annular ligament of the carpus and to the palmar aponeurosis, which it seems to form by the vanishing of its fibres; stretches the palmar aponeurosis and bends the hand; 3. *Palmaris brevis,* small, thin, quadrilateral muscle, situate before the thenar eminence; passes from the annular ligament of the carpus to the integuments of the palm of the hand, which wrinkles by its contraction. **P. nerves,** branches of ulnar, accompanying deep palmar arch. **P. veins,** see *Palmar arches.*

Palma'res interos'sei. See *Interosseous muscles.*

Palma'ris anti'cus. See *Palmar muscles.* **P. bre'vis** or **P. cuta'neus,** see *Palmar muscles.* **P. inter'nus,** see *Palmar muscles.* **P. lon'gus,** see *Palmar muscles.* **P. lon'gus bicauda'tus,** variation of P. longus, having two tendons of insertion. **P. mag'nus,** see *Palmar muscles.*

Palmarosa (pal-mar-o'sah) **oil.** Oil derived from Andropogon Schœnanthus; is added to attar of roses for purposes of adulteration.

Palmata, pal-mat'ah. Palma Christi.

Pal'matin or **Pal'mitin.** Solid, crystallizable fat occurring in medullary sheath of nerves.

Pal'mature. Condition in which the fingers are united, either as a congenital deformity or the result of burns or injuries.

Palmella, pal-mel'lah. Algæ division of the Cyanophyceæ. **P. cruen'ta,** gory dew; alga occurring on sides of wells or on water. **P. febri'lis,** alga occurring on marshes; spores are reputed to give rise to intermittent fever. **P. prodigio'sa,** bacillus prodigiosus.

Palmellin, pal-mel'lin. Substance giving red color to palmella cruenta, resembling hæmoglobin.

Palmet'to. Genus of palms. Palmæ. **P. saw,** Chamærops serratula.

Pal'micus. Pertaining to palpitation or pulsation.

Palmil'la. Palmella.

Pal'mipede (*palma, pes,* foot). Web-footed.

Pal'mistry (*palma,* palm of hand). Chiromancy.

Palmit'ic ac'id. Colorless, odorless, tasteless solid, existing in free state in old palm oil, sometimes in pus from gangrenous parts, and in combination with glyceryl of palmitin.

Pal'mitin. Tripalmitate of glyceryl; occurs in palm oil and other liquid oils, as well as in butter and human fat.

Pal'moscopy (*palmos,* palpitation, *skopeo,* to view). Investigation of the beating of the heart and pulse. Prognosis from the beating of the heart and pulse.

Palmospasmus, pal-mo-spaz'mus (*palmos, spasmos*). Violent clonic spasm. **P., elec'tric,** palmospasmus following electrical stimulation, occurring in progressive muscular atrophy.

Palmos'sei. Palmar interosseous muscles. See *Interosseous muscles.*

Pal'mus. Palpitation; twitching; convulsive tic. Pulsation; subsultus. **P. cor'dis,** palpitation. **P. plumba'rius,** metallic colic. **P. vom'itus,** vomiting.

Pa'lo armago'za. *Bitter tree of Texas.* Roots and stems have been employed in diarrhœa and dysentery. **P. de calentu'ras** (S.), fever wood, calenturas, cinchona. **P. de campe'che,** hæmatoxylon. **P. del muer'to,** Ipomœa muricoides. **P. san'to,** Guaiacum officinale. **P. de vac'ca,** galactodendron. **P. de ve'las,** Parmentiera cerifera.

Palpate, pal'pate. To explore diseases by palpation.

Palpa'tion (*palpo,* to feel). Sense of touch. Also the mode of exploring diseases by feeling or pressing upon the diseased organ with the fingers of one hand or of both hands. A delicate and discriminating touch —*tactus eruditus*—is important in the diagnosis of many morbid conditions. **P., abdom'ino-vagi'nal,** palpation of the pelvic organs by introducing the finger into the vagina and placing the hand over the abdominal region. **P., biman'ual,** see *Examination, bimanual.*

Palpatom'etry (*palpo,* to feel, *metron,* measure). Estimation of degree of tenderness over particular areas by means of an instrument giving graduated pressure.

Pal'pebra. *The Eyelid.* Two movable vela situate in front of the eye, which, by their separation, permit the organ to receive the impression of light, or by their greater or less occlusion protect it from the influence of too great light or from the action of extraneous bodies; separated above from the forehead by the eyebrows, and confounded below with the cheeks. The upper eyelid is much broader and more movable than the lower. They are separated by a transverse cleft, *Fissura* or *Rima palpebrarum,* and their edges are thick and furnished with the cilia or eyelashes. Supported by the tarsal cartilages, they unite at the extremities of the transverse diameter of the orbit, forming two angles, the innermost being called the *greater angle of the eye* or *inner* or *greater canthus;* the other, the *lesser* or *external angle* or *canthus.* When brought together a triangular space is left between their posterior surfaces and the conjunctiva, which has been called *Rivus lacrymalis.* They are formed—1, of a thin dermoid texture; 2, of a muscular membrane—a portion of the orbicularis; 3, of a particular fibrous membrane; 4, of the tarsi; 5, of a mucous membrane—a part of the tunica conjunctiva. Their vessels and nerves are called palpebral. **P. fico'sa,** old name for trachoma. **P. infe'rior extror'sum flex'a,** ectropion. **P. ter'tia,** valvula semilunaris.

Pal'pebræ superio'ris pri'mus (first muscle of the upper eyelid). Levator palpebræ superioris.

Pal'pebral. Belonging or relating to the eyelid. **P. ar'teries,** those distributed to the eyelids, two in number, an upper and a lower. The former arises from the ophthalmic, a little beyond the cartilaginous pulley of the greater oblique muscle, and descends toward the upper eyelid, over which it is distributed. The latter arises at the side of, or a little behind, the preceding, and sends its ramifications to the lower eyelid and the neighboring parts. Palpebral veins have a similar arrangement, except that some of them open into the temporal and labial veins. **P. car'tilages,** tarsal cartilages. **P. conjuncti'va,** c. lining the eyelids. **P. fas'cia** limits the orbit in front, arises from the periorbital membrane, passes to the tarsi. **P. fis'sure,** slit separating the eyelids from each other. **P. flux, pu'riform,** a puriform discharge furnished by the glands of Meibomius when inflamed, and to which Scarpa attributes fistula lacrymalis in many cases. **P. folds,** formed by reflection of the conjunctiva from the lids to the eyeball. **P. lig'aments,** superior and inferior. Some anato-

mists, with Winslow, have described under this name the fibrous layer which is attached, on the one hand, to the outer part of the circumference of the orbit; on the other, to the tarsal cartilages; see *Orbicular muscles, P. fascia.* **P. mus'cles,** thin sheets of non-striated muscle inserted upon the tarsi. *P. m., inferior,* muscle connected behind with facial process of inferior rectus. *P. m., superior,* muscle better known as *Orbito-palpebralis.* **P. nerves,** *Nerves of the eyelids,* arise particularly from the frontal and lacrymal branches, from the ophthalmic nerve of Willis, and from the facial, nasal, and infra-orbital branches of the superior maxillary nerve.

Palpebra'lis. Orbicularis palpebrarum; orbito-palpebralis; levator palpebræ superioris. **P. infe'rior** and **supe'rior,** see *Palpebral muscles.*

Palpebra'rum ape'riens rec'tus, Levator palpebræ superioris. **P. duo mus'culi,** orbiculares palpebrarum.

Palpebra'tio (*palpebra,* eyelid). Winking. Nictation.

Palpebritis, pal-pe-bre'tis. Inflammation of the eyelid.

Pal'pebrum. Palpebra.

Pal'pitate (*palpito,* to quiver). To beat rapidly or flutter. See *Palpitation.*

Palpita'tio. Palpitation. **P. arteria'rum,** see *Palpitation.* **P. cor'dis trep'idans,** rapid and feeble palpitation or fluttering of the heart. **P. membro'rum,** involuntary shaking of the legs.

Palpita'tion (*palpito,* to throb). A name given to the pulsations of the heart when they become stronger, more extensive, or more sensible to the individual than ordinarily. Palpitations occur in a number of affections; sometimes owing to organic diseases of the heart—hypertrophy, inflammation, etc.; at others, to a disease in some other viscus; while frequently they are merely nervous. Palpitation is sometimes felt in the arteries, constituting *Palpitatio arteriosa,* arterial palpitation. **P., cœ'liac,** palpitation of abdominal aorta. **P. of the heart,** palpitation. **P., idiopath'ic,** palpitation, nervous; see *Palpitation.* **P., symptomat'ic,** palpitation as a symptom of disease, not of the heart only, but of other conditions—tænia in the intestines, for example.

Pal'sied. Paralytic.

Pal'sy. Paralysis. **P., Bell's,** paralysis, Bell's. **P., birth,** spastic diplegia; spasm of all the extremities at birth or soon afterward. **P., creep'ing,** atrophy, progressive muscular. **P., crossed,** see *Hemiplegia.* **P., crutch,** see *Crutch.* **P. of the extremities,** paralysis of the upper or lower extremities. **P., fa'cial,** paralysis, Bell's. **P., fa'cial, mim'ic,** paralysis, Bell's. **P., ham'mer,** see *Hammer.* **P., histrion'ic,** paralysis, Bell's. **P., hyster'ical,** paralysis, hysterical. **P., lead,** *Metallic palsy, Painter's paralysis* or *palsy, Lead tremor;* paralysis of the upper extremities especially, induced by poison of lead. **P., mercu'rial,** *Mercurial tremor, Mercurial shaking palsy, Mercurial trade disease;* paralysis induced by the poison of mercury. **P. metal'lic,** see *Palsy, lead,* and *Tremor.* **P., paint'er's,** P., lead. **P., pen,** writer's cramp. **P., psych'ical,** hysterical paralysis. **P., scribe,** writer's cramp. **P., semp'stress's,** *Sempstress's cramp;* an affection analogous to writer's cramp; usually consists in an entire or partial loss of sensation at the end of the right thumb and index finger, with inability to hold the needle. **P., shak'ing,** paralysis agitans. **P., shak'ing, mercu'rial,** palsy, mercurial. **P., shak'ing, metal'lic,** see *Tremor.* **P., trans'verse,** see *Hemiplegia.* **P., trem'bling,** paralysis agitans. **P., ves'ical,** paralysis of the bladder. **P., wast'ing,** progressive muscular atrophy.

Pal'sywort. Primula veris.

Pal'ta. Persea gratissima.

Palu'dal or **Palus'tral** (*palus,* marsh). Relating to a marsh or to emanations from it. **P. fe'ver,** malarial fever.

Paludapium (marsh apium). Apium graveolens.

Pal'udism. Morbid condition produced by exposure to marsh malaria.

Palu'dose or **Palu'dous.** Relating to a marsh or to emanations from it.

Pa'lus. Marsh. Penis. **P. sanc'tus,** guaiacum.

Palus'ter (*palus,* marsh). Paludose.

Palustrine, pa-lus'treen. Paludose.

Pambio'ma. Original animating principle. General principle of life.

Pambota'no. Native name of Mexican tree, Colliandra Houstoni; used in decoction and alcoholic elixir in malarial poisoning.

Pamphagus, pam-fag'us (*pan,* all, *phago,* to eat). Omnivorous.

Pamphilus, pam'fil-us. Plaster.

Pampho'bia. Panophobia.

Pampin'iform plex'us (*pampinus,* tendril, *forma,* form). Corpus pampiniforme; much-convoluted portion of spermatic and ovarian veins, where they lie in the spermatic cord or broad ligament.

Pampinifor'me cor'pus. See *Corpus pampiniforme.*

Pampinocele, pam-pin-o-se'le (Eng. pam-pin'o-seel) (*pampinus,* vine, tendril, *kele,* tumor). Varicose condition of plexus pampiniformis.

Pample'gia or **Panplegia** (*pan,* all, *plege,* a stroke). General paralysis. Palsy of the whole body. Also bilateral hemiplegia, in which the upper and lower extremities on both sides are paralyzed from cerebral lesion.

Pan, Pan'to (*pan,* all). In composition, all.

Pan, brain. Parts in which the brain is contained. **P., knee,** patella.

Panacea, pan-a-se'ah (*pan, akeomai,* to cure). A pretended universal remedy. There is no such thing in existence. **P. An'glica,** magnesia. **P. du'cis Holsa'tiæ,** potassii sulphas. **P. duplica'ta,** potassii sulphas. **P. lapso'rum,** Arnica montana. **P. mercuria'lis,** hydrargyri submurias. **P. mercu'rii ru'bri,** hydrargyri nitrico-oxidum. **P. pec'toris,** Glechoma hederacea. **P. universa'lis,** kermes mineral. **P. vegetab'ilis,** crocus.

Pan'acon. White, tasteless substance, obtained by action of sulphuric acid upon panaquilon.

Pana'da (*panis,* bread). *Panado, Panata, Panatella.* Bread boiled in water to the consistence of pap, sometimes administered to the sick. **P., sim'ple bread,** may be made by putting any quantity of grated stale bread into enough water to form a moderately thick pulp, covering it up, leaving it to soak for an hour, then beating it up with two tablespoonfuls of milk and a small portion of refined sugar, and boiling the whole for ten minutes, stirring all the time.

Pan'ais. Pastinaca sativa.

Pan'ama fever. Malarial fever of that region. Sometimes applied to yellow fever.

Pana'quilon. Amorphous sweet principle found in ginseng.

Pan'aris. Paronychia. **P. cuta'neum,** onychia. **P. gangræno'sum,** panaris septicum. **P. sep'ticum,** paronychia of septic origin. **P. subungua'le,** onychia.

Panarit'ium. Felon, whitlow—*i. e.* periphalangeal cellulitis. **P. tendino'sum,** acute infective inflammation of the sheath of a tendon, generally of a finger, more rarely of a toe.

Pana'rium. Paronychia.

Panarthri'tis (*pan, arthron,* joint). Inflammation of all the tissues of a joint. General inflammation of a joint. **P. u'rica,** arthritis uratica.

Pan'a's solution. Mild, antiseptic collyrium used in conjunctivitis, blepharitis, etc Hydrarg. biniodide, 1; absolute alcohol, 400; distilled water to 20,000 parts.

Pana'ta. Panada.

Panatel'la. Panada.

Pan'ax (*pan, akeomai,* to cure). See *Panax quinquefolium.* **P. cochlea'tus,** shrub growing in the Moluccas and Java; root is diuretic and diaphoretic; the young leaves are edible, and are applied externally as an application in mastitis. Gum-resin is obtained from the stem, resembling opoponax. **P. costi'num,** Pastinaca opoponax. **P. fructico'sum,** native of the Molucca Islands and certain parts of Asia; has diuretic

and emmenagogue virtues. **P. heracle'um,** Pastinaca opoponax. **P. pastina'ca,** Pastinaca opoponax. **P. quinquefo'lium** (same etymon as panacea), *Ginseng, Ninsing, Gensang, Schinseng, Sang, Redberry, Five fingers;* ord. Araliaceæ; grows in North America. The root, *Radix ginseng,* is about the thickness of the little finger; an inch or two in length, often dividing into two branches, of a whitish-yellow color, wrinkled on the surface, and of a compact, almost horny, texture. It has no smell, but a very sweet taste, combined with a slight degree of aromatic bitterness. Much esteemed by the Chinese, who pay a high price for it. It is a gentle and agreeable stimulant. **P. shin'seng,** *Asiatic ginseng,* a native of Asia, has been usually confounded with the last. Root, *Radix ninsi,* has like virtues.

Panbio'ma (pan-be-o'mah) or **Pambio'ma** (*pan, bios,* life). Original animating principle. General principle of life.

Panblas'tic (*pan, blastos,* germ). Originating from all the germinal layers.

Panchres'ton or **Panchres'tos** (*pan, chrestos,* useful). Panacea.

Panchres'tum chi'næ. See *Quinium.*

Panchym'agogue. Panchymagogum.

Panchymagogum, pank-im-ag-o'gum (*pan, chuma,* juice, *ago,* to drive away). *Panchymagogue.* A medicine which the ancients believed capable of purging away all sorts of humors **P. minera'le,** hydrargyri submurias.

Pancœnon'osus, Pancœnonu'sus, or **Pancœnosus,** pan-se-no'sus (*pancœnus, nosos,* disease). Pandemic.

Pancœ'nus mor'bus (*pan, koinos,* common). Pandemic.

Pancrat'ic (*pan, kratos,* power). All-powerful; very potent.

Pancra'tium (*pan, kratos,* strength). A Grecian athletic exercise. Applied also to a plant which was considered all-powerful. **P. marit'imum,** bulbous plant, native of Europe; medicinal properties resemble those of squills; grows wild in Southern U. S., near the sea-coast. **P. ve'rum,** Scilla maritima.

Pan'creas (*pan, kreas,* flesh, *i.e.* quite fleshy). *Sweetbread.* Gland, deeply seated in the abdomen and lying transversely on the vertical column, between the three curvatures of the duodenum, behind the stomach, and to the right of the spleen. Its left extremity, the tail, is smaller than the right, the head. The body and the tail are described under the name *Portio gastrica.* At its right portion it has, almost always, a greater or less prolongation, called by Winslow and some others the lesser pancreas, *Pancreas of Aselli, Pancreas minus* or *parvum.* It resembles the salivary glands in structure, and has been called the *Abdominal salivary gland;* composed of lobes and granulated lobules, distinct, and united by areolar tissue. From each of the granulations of these lobes arise the radicles of its excretory duct, which are very delicate and united like veins. The duct itself, *Pancreatic duct, Canal* or *Duct of Wirsun* or *Wirsung,* proceeds in a serpentine course through the substance of the organ; behind the second portion of the duodenum it becomes free, and is of the size of a crow's quill. It opens at an acute angle into the choledoch duct, or proceeds close to it, opening separately into the duodenum. At times there is another pancreatic duct, smaller, proceeding from the summit of the head of the gland, and opening separately into the duodenum above the choledoch duct in man. This has been named *Ductus pancreaticus superior.*

The following are some of the measurements of this organ:

Weight, 66–102 g. (Krause).	
Volume	66–103 cm.
Length	190–220
Thickness (in the middle)	15
Breadth	40 (a little more at the head).
Diameter of pancreatic duct at the head	2.3

The pancreatic arteries are very numerous and small. They proceed from the cœliac, splenic, superior mesenteric, right gastro-epiploic, coronaria ventriculi, and left capsular. The veins open into the radicles of the vena porta, and particularly into the splenic and lesser mesenteric. Its nerves emanate from the solar plexus, and its lymphatics pass into the ganglions to which it gives its name. The pancreas secretes the *Pancreatic juice,* which resembles the saliva and converts starch into dextrin and glucose. The quantity of pancreatic juice secreted is difficult to determine; it has been estimated at 200-350 grammes; in a woman æt. 78, suffering from a fistula, 80–125 g. fluid were collected daily. **P. accesso'rium,** pancreatic lobules detached from the main gland; have been found between the membranes of the stomach near the greater curvature in the wall of the jejunum, and even as far as the diverticulum ilei. **P. of Asel'li,** see *Pancreas.* **P. divis'um,** name given to pancreas consisting of two divisions, which are united by Wirsung's canal. **P. mi'nus,** see *Pancreas.* **P. par'vum,** see *Pancreas.* **P., sec'ond,** Brunner's glands. **P., small,** see *Pancreas.* **P. succenturia'tum,** pancreas accessorium. **P. of Wins'low,** see *Pancreas.* Its great use appears to be to emulsify fatty matters by virtue of a peculiar albuminoid principle—*pancreatin,* coagulable by heat or alcohol—which it contains. It also dissolves albuminous substances. The pancreatic juice of the pig has been given in the form of emulsion—*Pancreatic emulsion*—with the fat of beef, stirred in milk, to consumptive patients. An emulsion with cod-liver oil is similarly prescribed.

Pancreatalgia, pan-kre-at-al'je-ah (*pancreas, algos,* pain). Neuralgic pain of the pancreas.

Pancreatec'tomy (*pancreas, ektome,* excision). Excision of a portion or all of the pancreas.

Pacreatemphraxis, pan-kre-at-em-fraks'is (*pancreas, emphrasso,* to obstruct). Engorgement or obstruction of the pancreas.

Pancreathelco'sis (*pancreas, helkos,* ulcer). Ulceration of the pancreas.

Pancreat'ic. Relating to or affecting the pancreas. **P. ar'teries,** see *Pancreas.* **P. di'astase,** amylopsin. **P. duct,** see *Pancreas.* **P. duct, ac'cessory,** see *Accessory pancreatic duct.* **P. emul'sion,** see *Pancreas.* **P. juice,** see *Pancreas.* **P. nerves,** see *Pancreas.* **P. plex'us,** offshoot from splenic plexus of sympathetic lying about the pancreatic vessels. **P. sarco'ma of Ab'ernethy,** tumor, in irregular masses, connected by loose fibrous substance, like the irregular masses of the pancreas; found in the areolar substance, but usually in the lymphatic glands, chiefly in the female breast. **P. veins,** see *Pancreas.*

Pancreaticoduode'nal. Relating to pancreas and duodenum. **P. ar'teries,** those supplying the pancreas and duodenum: *superior,* a branch of gastroduodenal; *inferior,* from superior mesenteric. **P. plex'us,** branches of hepatic plexus extending to P. artery. **P. vein,** tributary of portal, which gathers blood from pancreas and duodenum.

Pancreaticosplen'ic lig'ament. Fold of peritoneum extending from tail of pancreas to spleen, connecting with gastrosplenic omentum.

Pan'creatin. The combined ferments of the pancreatic juice. Soluble ferment, prepared from the pancreas of some animals, having property of emulsifying and decomposing fats and of converting starch into sugar, and aiding the digestion of starchy, fatty, and albuminoid matters. See also *Amylopsin, Myopsin, Trypsin,* and *Steapsin.*

Pancreati'tis (*pancreas, itis*). Inflammation of the pancreas—an affection the phenomena of which are not well known. **P., acute,** acute inflammation of the pancreas, characterized by severe pains in the abdominal region, vomiting, and fatal termination. **P., acute hemorrhag'ic,** acute pancreatitis in which hemorrhages occur into the tissue between the acini.

Pan'creatoid (*pancreas, eidos,* appearance). Like the pancreas. A tumor resembling the pancreas in structure.

Pancreat'omy or **Pancreatot'omy** (*pancreas, tome,* incision). Incision of the pancreas.

Pancreatoncus, pan-kre-at-on'kus (*pancreas*, *onkos*, swelling). Tumor of the pancreas.

Pancreatoptyalin, pan-kre-at-op-ti'al-in. Substance in pancreatic juice resembling ptyalin, but acting more energetically on starch.

Pancreatorrhagia, pan-kre-at-or-rha'je-ah (*rhegnumi*, to flow). Pancreatic hemorrhage.

Pancreatot'omy (*pancreas*, *tome*, incision). Incision of the pancreas.

Pancreazymase, pan-kre-ah-zim'aze (*pancreas*, *zume*, leaven). Ferment existing in the pancreas.

Pancreëctomy, pan-kre-ek'to-me (*pancreas*, *ektome*, excision). Pancreatectomy.

Pancre'ne (*pan*, *krene*, spring). Pancreas.

Pancreopathia, pan-kre-o-path-e'ah (*pancreas*, *pathos*, disease). Disease of the pancreas.

Pan'creum. Pancreas.

Pandalit'ium (corrupted from **Panaritium**). Paronychia.

Pandanus, pan-dan'us. Screw-pine of the Moluccas; leaves are used as an antidote in poisoning resulting from eating poisonous fish. **P. odoratis'simus**, screw-pine, fragrant Eastern species. Oil—keora oil—is obtained from the leaves; the fruit while still unripe is reputed to be used by the Chinese as an abortifacient; juice of the leaves is used in India in diarrhœa and dysenteric affections, and applied externally to wounds.

Pande'mia. Pandemic.

Pandem'ic (*pan*, *demos*, people). *Pandemy.* An epidemic which attacks the whole or a great part of the population.

Pan'demy. Pandemic.

Pandicula'tion (*pandiculo*, *pando*, to stretch out, to stretch, as one awakening from sleep). Stretching; an action which consists in elevating the upper limbs and throwing the head and trunk backward at the same time that the lower limbs are extended. This series of motions of the extensor muscles is in some measure independent of the will, and is accompanied by yawning, which is equally involuntary. In health, stretching occurs before and after sleep, especially when we are fatigued. It is also observed at the onset of certain paroxysms of fever, hysteria, etc.

Pandoce'um (*pan*, *dechomai*, to receive). A house or hotel that receives all classes. A general hospital, or one that admits all cases.

Pandochi'um or **Pandoci'um.** Pandoceum.

Pang (like **Pain**). Brief but intense pain. See *Pain.* **P., breast, suf'focative**, see *Angina pectoris.* **P., brow**, frontal neuralgia.

Pangenesis, pan-jen'es-is (*pan*, *genesis*, generation). A "provisional hypothesis" on which Mr. Darwin has assumed that the whole organization, in the sense of every atom or unit, reproduces itself.

Pangens, pan'jens. Active particles regarded as vehicles of hereditary characters in Darwin's hypothesis of pangenesis.

Pangium (pan'je-um) **edu'le** or **P. Rum'phii.** Tree of East Indian Islands, known as the pangi. The whole tree has anthelmintic virtues and is narcotic.

Panhidro'sis (*pan*, *hidrosis*, sweating). Sweating over the whole body.

Panhistoph'ytum ova'tum. Parasite of pebrine.

Panhyperæ'mia (*pan*, *hyperæmia*). Plethora.

Panhysterec'tomy (*pan*, *hystera*, womb, *ektome*, excision). Total extirpation of the uterus.

Pan'ic grass, Ital'ian. Panicum Italicum.

Panicula, pan-ik'u-lah. Furuncle.

Pan'icum dac'tylon. Cynedon dactylon. **P. Ital'icum** (*panis*, bread), *Italian panic grass*, *Indian millet*, *Guinea corn*, *Barbadoes millet*, *Sorghum*, nat. ord. Gramineæ. The seeds—*Milii semina*—are much esteemed in Italy, being a constant ingredient in soups and made into a variety of forms for the table. **P. milia'ceum**, *Common millet;* millet-seeds are esteemed a nutritious article of diet, and are often made into puddings. **P. mil'ium**, P. miliaceum.

Panidro'sis (*pan*, *hidros*, sweat). General or universal perspiration.

Pa'nis. Bread; see *Triticum æstivum.* **P. canica'ceus**, see *Canicæ.* **P. ciba'rius**, syncomistos. **P. cucu'li**, Oxalis acetosella. **P. lax'ans**, biscuit prepared with jalap-resin in solution. **P. porci'nus**, cyclamen.

Paniv'orous (*panis*, bread, *voro*, to devour). Subsisting on bread.

Panmixia, pan-miks'e-ah. Term applied to careless intercrossing, as in breeding of animals, or even in the human race.

Pan'na. Aspidium athamanticum. **P. root**, the rhizome used by natives of South Africa as a vermifuge.

Pannecrotomy, pan-nek-rot'om-e (*pan*, all, *nekros*, dead body, *tome*, cutting). Plan proposed to prevent burying alive, consisting in dissecting all dead bodies.

Panneuritis, pan-nu-re'tis. Multiple neuritis. **P. epidem'ica**, beri-beri.

Pan'ni. Swathing clothes.

Pan'nicle (dim. of **Pannus**, a web). Membrane.

Pannic'ulus (dim. of **Pannus**, a web). A small membrane; pterygion. **P. adipo'sus**, cellular membrane. **P. carno'sus**, *Muscular web*, *Mantle;* a general covering found in the quadruped, and formed by a thin subcutaneous muscle which serves to move the skin. It exists only in certain parts of the human body, as in the forehead, where it is formed by the occipitofrontalis; in the neck, by the platysma myoides; and in the scrotum, by the cremaster muscle. **P. cor'dis**, pericardium. **P. hymenæ'us**, hymen. **P. sub'tilis**, pia mater. **P. transver'sus**, diaphragm. **P. virgina'lis**, hymen.

Pan'nikell. Cranium.

Pannodic, pan-no'dic. Panthodic.

Pan'nus. A piece of cloth; a web. This word has several other meanings, many of which are equivocal. It means a tent for a wound, and also an irregular nævus or mark on the skin. Modern ophthalmologists apply it to an opaque and vascular condition of the anterior membrane of the cornea, almost invariably produced by the continuance of purulent or strumous ophthalmia or by chronic inflammation of the cornea. This part becomes nebulous, covered with red vessels, and opaque. At times the sclerotic conjunctiva undergoes a similar change to that which occurs in the corneal portion. When the cornea is extremely vascular and opaque, it is called *Pannus crassus;* if the blood-vessels are few and scattered and the cloudiness inconsiderable, it is called *Pannus tenuis.* When the disease is produced by external irritants, as by friction and irritation of the cornea, etc., the term *Traumatic pannus* is applied to it. When pannus is attended with an extremely bloodshot condition of the eye, it is called *Pannus trachomatosus.* **P. cara'tus**, name applied to carate and mal del pinto. **P. carno'sus**, P. crassus. **P. cras'sus**, see *Pannus.* **P. hepat'icus**, chloasma. **P. herpet'icus**, see *Ophthalmia.* **P. lenticula'ris**, ephelides. **P. lepro'sus**, pannus due to leprosy, affecting the palpebral conjunctiva. **P. lymphat'icus**, pannus phlyctænulosus. **P. phlyctænulo'sus**, opaque and vascular condition of the cornea due to inflammation of a phlyctenular type. **P. sarcomato'sus**, pannus crassus. **P. scrofulo'sus**, see *Herpes corneæ.* **P. sic'cus**, pannus associated with xerosis. **P. ten'uis**, see *Pannus.* **P. trachomato'sus**, see *Pannus.* **P., traumat'ic**, see *Pannus.* **P. vesicato'rius**, blistering cloth; prepared by digesting powdered cantharides in sulphurous ether, evaporating, and spreading the oily mass remaining, melted, with twice its weight of wax, on a cloth prepared with waxed plaster.

Pano'chia. Bubo.

Panopho'bia (*pan*, the god Pan, *phobos*, fear. A panic or fear inspired by the god Pan, according to the ancients. Others derive it, and with more probability, from *pan*, all, *phobos*, fear. This universal and groundless fear is morbid, and is a symptom of melancholy.

Panophthal'mia or **Panophthalmi'tis** (*pan*, *ophthalmitis*). Inflammation of the whole eye, frequently producing loss of that organ. So many structures of the eye are involved in the suppurative form of cho-

roiditis that by some the latter is considered synonymous with *panophthalmitis*.

Panosteitis, pan-os-te-e'tis (*pan*, *osteon*, bone). Inflammation of the entire tissue of a bone.

Panotitis, pan-o-te'tis (*pan*, *ous*, ear). Inflammation of the whole ear, particularly the middle and internal portions. **P. diphtherit'ica**, panotitis due to attack of scarlatinal diphtheritis, accompanied by entire loss of hearing power.

Panpharmacon, pan-far'mak-on. Panacea.

Panphlegmon, pan-fleg'mon. Gangrene characterized by great rapidity of development and termination, and thought to be due to presence of a germ.

Panphobia, pan-fo'be-ah. Panophobia.

Panplegia, pan-plej'e-ah. General paralysis; paralysis of the whole body.

Pansclerosis, pan-skler-o'sis (*pan*, *sklerosis*, hardness). Complete induration of a part.

Pansper'mia (*pan*, *sperma*, sperm). *Panspermy*. Theory of *dissemination of germs*, according to which ova or germs are disseminated over all space, undergoing development under favorable circumstances.

Pansperm'ism (*pan*, *sperma*, sperm). Spontaneous generation.

Pansperm'y. Panspermia.

Pansphyg'mograph (*pan*, *sphugmos*, pulse, *grapho*, to write). Cardiograph.

Pan'sy. Viola tricolor.

Pantadenodes, pan-tad-en-o'dees (*pan*, *aden*, gland, *eidos*, resemblance). Consisting throughout of glandular tissue, the pancreas for example.

Pantago'gon (*panta*, all, *ago*, to drive out). Medicine that purges away all deleterious humors.

Pantamorphia, pan-ta-mor'fe-ah. General deformity.

Pantamor'phic. Generally amorphous or deformed.

Pantancyloblepha'ron (*panta*, *ankule*, string, *blepharon*, eyelid). Complete adhesion of eyelids to the eyeball and to each other.

Pantanencepha'lia (*panto*, *anencephalia*). Entire absence of brain—the same as anencephalia; such a monster is said to be *Pantanencephalic*.

Pan'tas. Dysentery in cattle.

Pantatroph'ia (*panto*, *atrophia*, atrophy). Universal atrophy.

Panthod'ic (*panto*, *hodos*, way). An epithet applied to a course of nervous action proceeding from one point in all directions to every other point.

Pan'tices. Ingluvies; intestines.

Pant'ing. Short and rapid breathing, as in asthma.

Pan'to. In composition, all. See *Pan*.

Pantæoperittosis, pan-te-o-per-it-to'sis. Universal hypertrophy.

Pantogamy, pan-tog'am-e. Sexual connection in disregard of all laws pertaining thereto.

Pantoganglii'tis (*panto*, *ganglion*, *itis*). Cholera.

Pantophagists, pan-tof'a-jists (*panto*, *phago*, to eat). See *Omnivorous*.

Pantoph'agous. Omnivorous.

Pantopho'bia (*panto*, *phobos*, fear). Hydrophobia; panophobia.

Pantoplethora, pan-to-pleth-or'ah. Universal plethora.

Pantoscopic, pan-to-skop'ik (*pan*, *skopeo*, to observe). Applying to all forms of vision, near and far, as a bifocal lens, so-called, arranged for distance or for reading.

Pantozoö'tia. Panzoötia.

Panulatus, pan-u-lat'us. Resembling a weaver's shuttle; term applied to furunculoid cutaneous lesion.

Pa'nus. Non-suppurative inflammation of the lymphatic glands. See *Pannus*. **P. fau'cium**, tumefaction of the glands of the mouth. **P. inguina'lis**, bubo.

Panygrous, pan-ig'rus (*pan*, *hugros*, moist). Wholly fluid.

Panzoö'tia (*pan*, *zoon*, animal). An endemic or epidemic disease affecting animals generally.

Pa'o perei'ra. Geissospermum læve.

Pap (*papilla*). Mamma; nipple; also a soft food made of bread boiled or softened with water. *Breadberry*. **P. of the throat**, uvula.

Papain, pap'a-in. Albuminoid ferment from juice of half-ripe fruit of Carica papaya, papaw tree; digests fibrin and albumen more readily than pepsin; recommended as solvent of membrane in croup and diphtheria, also as a digestive in dyspepsia, catarrh of the stomach and intestines, and as a galactagogue and anthelmintic.

Pa'pas America'nus. Solanum tuberosum.

Papa'ver. *White poppy*, ord. Papaveraceæ. The nearly ripe *Capsule of White poppy*, *Papaveris Capsulæ* (Ph. Br.), *Mecon poppyhead*, is used in fomentation as an anodyne and relaxant to inflamed or ulcerated parts. It is from the poppy that *opium*—called also *Laudanum*, *Mecon*—is procured. It is the concrete juice obtained, after the flowering of the plant, by making longitudinal incisions in the unripe capsules, and is commonly obtained from the Levant or India, where the poppy grows abundantly. See *Opium*. **P. cerea'le**, P. rhœas. **P. cornicula'tum**, Chelidonium majus. **P. errat'icum**, P. rhœas. **P. lu'teum**, Chelidonium majus. **P. ni'grum**, variety of the white poppy producing black seeds. **P. rhœ'as**, systematic and pharmacopœial name of the *Red corupoppy*, *Cornrose*, *Copper rose*, *Red mailkes*. Heads of this species contain a milky juice of a narcotic quality. A syrup, *Syrupus rhœados*, of its flowers has been directed, which has been esteemed diaphoretic and slightly soothing, but it is more admired for its color than for any other property.

Papaveraceous, pa-pav-er-a'she-us. Resembling the poppy.

Papavera'ceum (*papaver*). Opiate.

Papaveraldine, pa-pav-er-al'deen. Yellow powder in crystals (formula, $C_{20}H_{18}NO_5$), derived from papaverine by oxidation.

Papaver'culum (*papaver*, inspissated juice of which it resembles). Meconium.

Papav'eric ac'id. Coloring principle in red poppy-petals.

Papav'erine (*papaver*). An alkaloid contained in opium. See *Opium*.

Papav'eris cap'ita or **cap'sulæ**. Poppy-capsules. See *Papaver* and *Opium*.

Papavero'sine. Crystallizable alkaloid found in poppy-capsules.

Papaw' tree or **Papa'ya vulga'ris**. Carica papaya; fruit edible; juice of unripe fruit yields digestive ferment, papain. Papaw is also seed of Asmina triloba, having emetic properties.

Papa'yotin. Dried juice of half-ripe fruit of papaw, Carica papaya. Used as a digestive, like pepsin.

Pa'per. Charta. See *Antirheumatic*, *Blistering*, *Cantharides*, *Congo*, *Litmus*, *Medicated*, and *Turmeric paper*. **P. birch**, Betula papyracea. **P., mus'tard**, Charta sinapis. **P., sin'apized**, see *Sinapism* and *Charta sinapis*.

Papil'la. End of the breast, the nipple. See *Nipple*. An eminence similar to a nipple. Name given to small eminences, more or less prominent, at the surface of several parts, particularly of the skin and mucous membranes, in which latter situation they are also called villi. See *Villous*. They contain the ultimate expansions of the vessels and nerves, and are susceptible in some cases of a kind of erection. They are also called *Nervous papillæ*. **P. acus'tica basila'ris**, patch of nerve-endings on wall of cochlea. In amphibia and reptiles a small rounded eminence; in man, lengthened out to the organ of Corti. **P. basila'ris**, organ of Corti. **P., conges'tion**, papilla, engorged. **P., den'tinal**, see *Tooth*. **P., engorged**, *Congestion papilla*; a swollen, prominent, and even bulging condition of the papilla of the optic nerve, seen in optic neuritis; see *Neuroretinitis*. **P. of the eye**, see *P., optic*. **P., hair**, matrix pili. **P. of kid'ney**, conical projection of apex of pyramid of Malphigi into a calyx of the ureter; uriniferous tubules open upon it from the surface. **P. lacryma'lis**, see *Lacrymal puncta*. **P. mam'mæ**, nipple. **P. ner'vi op'tici**, see *Optic nerve*. **P., op'tic**, see *Optic papilla*. **P. palati'na**,

eminence on anterior portion of palate, just behind anterior palatine foramen. **P. pi'li**, see *Hair*. **P. ret'inæ**, optic disk. **P. saliva'lis bucca'lis**, eminence in mouth opposite second molar tooth of upper jaw, where Stenon's duct discharges. **P. s. infe'rior**, sublingual caruncle. **P. s. supe'rior**, P. s. buccalis. **P. semiluna'ris**, crista acustica. **P. spira'lis**, projection made by organ of Corti in preparation, showing cross-section of ductus cochlearis. **P. sublingua'lis**, sublingual caruncle. **P. umbilica'lis**, rounded cicatricial stump remaining at the bottom of the umbilicus.

Papil'læ. See *Corpuscles, Pacinian*. **P. arcuat'æ, P. calycifor'mes, P. capitat'æ, P. circumvallat'æ, P. clavat'æ, P. con'icæ, P., con'ical, P., conoi'dal, P. conoï'deæ**, see *Papillæ of the tongue*. **P. corallifor'mes**, filiform papillæ. **P. co'rii**, papillæ of skin. **P. cuta'neo-acust'icæ**, papilliform eminences. **P. cu'tis**, see *Cutis*. **P., fil'iform, P., fun'giform, P., fun'goid**, see *Papillæ of the tongue*. **P. gustûs**, papillæ of tongue. **P. of kid'ney**, see *Papilla of kidney*. **P., lentic'ular, P. max'imæ, P. me'diæ, P. min'imæ, P. minor'es, P. muco'sæ**, see *Papillæ of the tongue*. **P., med'ullary**, small prominences on medulla oblongata. **P. ner'veæ**, corpuscles, Pacinian; see *Papilla*. **P. obtu'sæ, P. petiolat'æ, P., pyram'idal**, see *Papillæ of the tongue*. **P. pyramidal'es**, see *Papilla*. **P. re'num** or **renal'es**, see *Papillæ of the kidney*. **P. semilenticula'res**, see *Papillæ of the tongue*. **P. tactûs**, see *Cutis*. **P. of the tongue** are very numerous and marked. They are observed particularly at the upper surface of the organ, and are—1. *Lenticular papillæ*, arranged at the base of the tongue in two oblique lines, having the shape of the letter V, and united angularly at the foramen cæcum. They have, in general, an ovoid or spherical shape, and have seemed to be mucous follicles similar to those of the palate, lips, etc. 2. *Fungiform* or *Fungoid papillæ* are of indeterminate number, but always more numerous than the preceding. They are irregularly disseminated near the edge and the point of the tongue; have a rounded and flattened head, supported by a short and narrow footstalk. Their tint is whitish. *Conical, Conoidal*, or *Pyramidal papillæ* are the most numerous of all. Their arrangement is more regular in the fore part of the tongue than behind. They resemble small cones, the base being toward the tongue and the apex free. The anterior are very small, and have been called *Filiform papillæ*. They appear to be produced by the terminations of the filaments of the lingual nerve, and are surrounded by an evident vascular network. See *Cutis*. **P., trun'cate, P. vallat'æ, P. villo'sæ**, see *Papillæ of the tongue*.

Papillar, pap'il-lar. Papillary.

Pap'illary (*papilla*). *Papillous*. Of or belonging to the nipple or to the papillæ. **P. ar'teries**, main branches of central artery of retina; superior rises upward; inferior passes downward over optic disk. **P. bod'y**, papillary layer of corium. **P. lay'er of co'rium** or **skin**, external layer, containing papillæ. **P. mus'cles**, columnæ carneæ of heart, attached only at their base to the wall. **P. tu'bercle of liv'er**, rounded projection from Spigelian lobe opposite transverse fissure. **P. tu'mor**, papilloma.

Pap'illated. Consisting of papillæ, as the outer surface of the tongue.

Papil'liform (*papilla, forma*, form). Having the appearance or shape of a papilla. **P. em'inences**, projections from walls of membranous semicircular canals, appearing to be of a nature similar to papillæ of skin.

Papillifor'mis. Mastoid; papilliform.

Papillitis, pap-il-le'tis. Inflammation of optic nerve entrance, not necessarily involving the rest of the nerve-trunk; usually symptomatic of lesions, particularly morbid growths in the brain; then commonly affects both eyes at once. See *Neuroretinitis*.

Papilloma, pap-il-lo'mah (*papilla, oma*). *Papillary* or *Villous tumor*. Tumor whose specific elements are those of the papillæ of the normal skin, and which, consequently, is composed of a stem of fibrous or homogeneous connective tissue; is club-shaped, cylindrical, or acuminated, and covered with a layer of epithelial cells similar to those of the normal papillæ. **P. a'reo-eleva'tum**, mycosis fungoides. **P., cys'tic**, see *Cystopapilloma*. **P. diffu'sum**, small tumors generally seen on the legs and buttocks, varying in diameter from 5 mm. to 2 cm. **P. mol'le**, P. mucosum. **P. muco'sum**, condyloma acuminatum. **P. neuropathi'cum** or **neurot'icum**, unilateral papilloma along the course of a nerve. **P. papill'a**, Strychnos Ignatii. **P. of the skin**, corneous growths and even nævi are sometimes included under this head. **P., ure'thral**, urethral caruncle or hemorrhoid. **P., zymot'ic**, yaws.

Papillomatosis, pap-il-lo-mat-o'sis. Condition characterized by formation of papillomata. **P. universa'lis**, disease of the skin, occurring after an attack of variola, in which nearly the whole of the body is affected with papillomatous or verrucous lesions.

Papillomatous, pap-il-lo'mat-us. Relating to, or having shape of, a papilla.

Papilloretinitis, pap-il-lo-ret-in-e'tis. Inflammation involving optic disk and retina.

Papillose, pap'il-loze. Having shape of papillæ or possessing papillæ.

Papil'lous. Papillary.

Papoose' root. Caulophyllum thalictroïdes.

Pappe. Mamma.

Pap'pea Capen'sis (after Karl W. L. Pappe, a botanist of Leipzig). Small tree of ord. Sapindaceæ, common in Cafferland; the fruit is called *Wild plum*. Furnishes a vinous beverage and excellent vinegar. Its kernel contains an oil which, although eatable, is somewhat cathartic, and is recommended as an external application in tinea capitis, alopecia, etc.

Pappoose' root. Caulophyllum thalictroïdes.

Pap'pus. Down on the chin and cheeks. **P. America'nus**, Solanum tuberosum.

Pap'ula (akin to **Papilla**, a pimple). Small acuminated elevation of the cuticle, with an inflamed base; very seldom containing a fluid or suppurating, and commonly terminating in scurf or desquamation. An eruption of pimples is called in Devonshire *Murfles*. *Papulæ* is the first order of Willan and Bateman's arrangement of cutaneous diseases. **P. a'gria**, lichen agrius. **P. fe'ra**, lupus vulgaris, lichen agrius. **P. lenticula'ris**, lenticula. **P. mad'idans**, condyloma latum. **P. milia'ris**, miliary fever. **P., moist**, condyloma latum. **P. muco'sa**, syphilide. **P. typho'sa**, spots, red.

Pap'ulæ. Lichen. **P. sic'cæ**, lichen. **P. sudoral'es**, sudamina. **P. sudo'ris**, miliary fever. **P. syphilit'ica hu'mida**, condyloma latum.

Pap'ule. Papula.

Papulose, pap'u-loze. *Papulous, Pimpled, Papular*. Of or belonging to, resembling, or covered with papulæ or pimples.

Papyra'ceous. Paper-like or parchment-like; thin and dry. **P. fœ'tus**, fœtus papyraceus.

Paquelin's cautery. Thermo-cautery in which the hollow, cauterized point is of platinum and contains spongy platinum. In use the point is first heated in the flame of a lamp, and heat is then maintained by forcing through spongy platinum vapor of benzol by means of hand spray-apparatus.

Par balnea're. Trigeminal nerve. **P. facia'le**, P. septimum. **P. gustato'rium**, trigeminal nerve. **P. medul'læ pri'mum**, glosso-pharyngeal nerve. **P. medul'læ secun'dum**, pneumogastric nerve. **P. nervo'rum**, pair of nerves. **P. no'num**, hypoglossus. **P. op'ticum nervo'rum**, optic nerve. **P. pri'mum nervo'rum cer'ebri**, olfactory nerves. **P. quar'tum**, pathetic nerve. **P. quin'tum nervo'rum cerebra'lium**, trigemini. **P. secun'dum nervo'rum**, optic nerve. **P. sep'timum**, facial or seventh nerve. **P. ter'tium**, motores oculorum. **P. trigem'inum**, trigemini. **P. tri'um funiculo'rum**, trigemini. **P. va'gum**, pneumogastric. **P. visor'ium**, optic nerve.

Pa'ra. Common prefix; by, near, contrary to, through (*per*); above and beyond (*ultra*); besides (*præter*). In certain terms, as in *Para*cusis, *Para*psis, *Para*bysma, etc., *para* means a defective or morbid

condition. II-para, III-para, etc. indicate the number of children borne by a woman. **P. cress,** Spilanthes oleracea. **P. nut,** see *Pichurim beans.*

Para-acetphenet'idin. Phenacetin; colorless, inodorous, insipid crystals, readily soluble in alcohol, less so in water; melting-point 135.5° C.; antipyretic and analgesic in tuberculosis, peritonitis, typhoid fever, neuralgia, migraine, whooping cough, epidemic influenza, etc.

Para-anæsthesia, par'ah-an-ees-the'ze-ah (*a,* priv., *an, aisthesis,* feeling). Anæsthesia of lower part of both sides of the body.

Para-analgesia, par'ah-an-al-ge'ze-ah (*para,* beside, *analgesia,* insensibility). Analgesia in a circumscribed form or involving the inferior half of the body.

Parabal'anus (*para, ballo,* to cast, to expose one's self). Name given by the ancients to a person who devoted himself to the service of the sick in hospitals, and particularly during epidemics and the plague.

Paraban'ic acid. Artificial derivative of uric acid by treatment with nitric acid (sp. gr. 1.3) at 70° C. Thin, colorless, sexagonal prisms.

Parabin, par'ab-in. See *Pararabin.*

Par'ablast (*para, blaste,* a bud). Nucleated layer of yolk immediately underlying peripheral portions of germinal area in mesoblastic vertebrate ova.

Parablas'tic. Pertaining to or derived from the parablast; archiblastic.

Parablep'sis (*para, blepo,* to see). False vision.

Parabu'lia (*para, boule,* will). Disorder of the will.

Parabux'ine. Alkaloid found in bark of Buxus sempervirens.

Parabuxinide, par-ah-buks'in-eed. Crystallized alkaloid occurring in Buxus sempervirens.

Parabysma, par-ah-biz'mah (*para, buo,* to stuff). Infarction or engorgement of an organ, as *Parabysma lienis*; engorgement of the spleen. **P. mesenter'icum,** tabes mesenterica.

Parabys'tia (same etymon). Engorgement or infarction of an organ with blood.

Paracanthoma, par-ak-an-tho'mah (*para, akantha,* thorn). Growth of prickle-cell layer of skin. **P. verruco'sum,** molluscum contagiosum.

Paracantho'ses (*para, akantha,* thorn). Diseases characterized by anomalies of growth of prickle layer of skin.

Par'acary. Peltodon radicans.

Paracelsian, par-ah-sel'se-an. Relating to, originating with, or called after Paracelsus.

Paracelsis'ta. *Paracelsist, Paracelsian.* Follower of Paracelsus.

Paracelsis'tica medici'na. See *Spagyrists.*

Paracentesis, par-ah-sen-ta'sis (*para, kenteo,* to pierce through). Puncturing. Operation of tapping to evacuate the collected fluid in ascites, ovarial dropsy, etc., receiving the names *Paracentesis capitis, P. abdominis, P. corneæ, P. vesicæ,* etc. according to the part selected for the operation. **P. thora'cis,** puncturing the thorax; thoracocentesis. **P. vesi'cæ,** see *Cystotomy.*

Paracentete'rion or **Paracentete'rium.** Small trocar employed by Nuck for puncturing the eye in cases of dropsy of that organ.

Paracentic'ion. Trocar.

Paracen'tral lob'ule. Area between calloso-marginal and paracentral sulci on median surface of cerebral hemispheres. **P. sul'cus,** shallow furrow on median surface of cerebral hemispheres running upward from the calloso-marginal sulcus.

Paracephalus, par-ah-sef'al-us (*para, kephale,* head). Monster with the head badly formed, but voluminous; face distinct, with a mouth, rudimental sensorial organs, and thoracic members. **P. a'pus,** variety of paracephalus in which the trunk and rudiments of head are present, but limbs are absent. **P. di'pus,** paracephalus in which limbs of the thorax may be lacking, but in which limbs of the abdomen are present. **P. pseu'do-acor'mus,** paracephalus with rudimentary trunk.

Parachordal, par-ah-kor'dal (*para, chorde,* cord). Applied to the cartilaginous mass investing anterior extremity of notochord in the embryo, subsequently forming part of the chondrocranium.

Parachroe'a (*para, chroa,* color). Morbid change of color of the surface, especially of the face. **P. cærulo'sis,** cyanosis. **P. lap'idis inferna'lis,** argyria. **P. leuco'sis,** albinism. **P. melano'sis,** melanosis.

Parachro'ma (*para, chroma,* color). Faulty perception or incapability of distinguishing colors; achromatopsia.

Parachromatin, par-ah-kro'mat-in. See *Nucleohyaloplasm.*

Parachromatoblep'sia or **Parachromoblep'sia** (*parachroma, blepo,* to see). False vision of colors.

Parachromato'ses (pl. of **Parachromatosis**). Name given to a group of pigmentary cutaneous affections.

Parachromato'sis. Pigmentary cutaneous affection.

Parachro'sis. Decoloration. Production of parachroma.

Parachymo'sis (*para, chumos,* juice). Disorder of secretion.

Paracinema, par-ah-sin-a'mah. Luxation.

Paracineses, par-ah-sin-a'sees (*para, kinesis,* motion). Diseases of the motor nerves; morbid movements of voluntary muscles; displacements.

Paracit'ric acid. Aconitic acid.

Paraclonus, par-a-klo'nus. Paramyoclonus.

Parac'masis. Decline, remission.

Paracmas'tic (*parakmazo,* to decrease). Epithet for a distemper which gradually decreases, or for the period of life when a person is said to grow old, which Galen places at from thirty-five to forty-nine, a definition that would not suit us at the present day. Preserving an equal degree of intensity throughout its course, as a fever.

Parac'me. Decline.

Paracnemion par-ak-na'me-on. Fibula.

Parac'oe (*para, akoe,* hearing). Perversion of hearing. See *Cophosis, Paracusis.*

Paracœle, par-ah-se'le. Lateral ventricle of the brain.

Paracolpitis, par-ah-kol-pe'tis (*para, kolpos,* womb). Inflammation of external coat of vagina or of parts around the vagina. **P. dis'secans,** variety of p. ending in suppuration and dissecting out of the entire vaginal tube.

Paracol'pium. Connective tissue about the vagina.

Paracon'dyloid pro'cess. Sometimes seen as a continuation, outward and downward, from condyles of occipital bone, articulating with transverse process of atlas.

Paracone, par'ak-one. Anterior outside cusp of a superior molar tooth.

Paraconid, par-ah-ko'nid. Anterior inside cusp of an inferior molar tooth.

Paraconine, par-ak-o'neen. Artificial alkaloid isomeric with natural conine and having its physiological properties.

Parac'ope (*para, kopto,* to strike falsely). Delirium. Slight delirium sometimes occurring in febrile diseases. Insanity.

Paracop'ic (*para, kopto,* to strike falsely). Slightly delirious.

Paracop'ticus. Insane; pertaining to insanity.

Paraco'to-bark. Bolivian bark; botanical origin undetermined; resembles coto-bark in appearance and properties.

Paracotoïn, par-ah-ko'to-in ($C_{19}H_{12}O_6$). Crystallizable, tasteless, proximate principle obtained from paracoto-bark; gr. 1–3 in diarrhœa and night-sweats.

Paracoumaric (par-ak-oo-mar'ik) **ac'id.** Acid prepared by treating aloes with sulphuric acid.

Paracou'sia or **Paracou'sis** (*para, akouo,* to hear). Confused or disturbed hearing.

Paracreaso'tic ac'id. Impurity in salicylic acid; by some thought to be cause of toxic action of the latter.

Parac'rises (*para, krisis,* secretion). Diseases of the secretory function.

Paracru'sis (*para, krouo,* to strike). Paracope. Slight delirium.

Paracrus'tic. Slightly delirious.

Paracusis (par-ah-ku'sis) or **Paracu'sia** (*para, akousis*, act of hearing). Confusion or perversion of hearing. Also perverted audition. **P. a'cris**, painfully acute hearing and intolerance of the lowest sounds; symptom in otalgia, epilepsy, cephalitis, and febrile affections. **P. duplica'ta**, double hearing, **P. imagina'ria**, tinnitus aurium. **P. imperfec'ta**, double hearing. **P. lo'ci**, inability to tell whence sound proceeds. **P. obtu'sa**, hardness of hearing. **P. oxycoi'a**, P. acris. **P. perver'sa**, *Perverse hearing;* the ear being sensible to articulate sounds only when excited by other and louder sounds intermixed with them. **P. sur'ditas**, see *Confusion* or *Perversion of hearing*. **P. Willisia'na**, paracusis perversa.

Paracus'ma. Paracusis.

Paracyan'ic ac'id. Palurinic acid.

Paracycle'ses (*para, kuklesis*, circulation). Diseases of the blood as regards its distribution and motion.

Paracyesis, par-ah-se-a'sis (*para, kuesis*, pregnancy). Morbid, preternatural, or extra-uterine pregnancy. **P. abor'tus**, abortion. **P. tuba'ria**, tubal pregnancy.

Paracynanche, par-ah-sin-an'ke (*para, cynanche*). Inflammation of the external muscles of the larynx. According to others, a slight or unilateral cynanche.

Paracystis, par-ah-sis'tis (*para, kustis*, bladder). Connective tissue about the urinary bladder.

Paracystitis, par-ah-sis-te'tis (*para, kustis*, bladder). Inflammation of tissues about the bladder.

Paracys'tium. Connective tissue about the bladder.

Paracytic, par-ah-sit'ik (*para, kutos*, cell). Situated between cells.

Paradenitis, par-ad-en-e'tis (*para, aden*, gland). Inflammation of tissue around lymphatic glands.

Paradesmo'ses (pl. of **Paradesmosis**). Order of cutaneous affections.

Paradesmosis, par-ah-des-mo'sis (*para*, beside, *desmos*, band). Irregular growth of connective tissue.

Paradid'ymis. Organ of Giraldès.

Paradigital'ein. Digitaliretin, dehydrated.

Paradioxyben'zene. Hydroquinone.

Paradioxyben'zol. Hydroquinone.

Paradox'ia sexua'lis. Appearance of sexual instincts, indulgence in masturbation, etc. before the genital organs are developed.

Paradox'ical contrac'tion. Contraction of muscle caused by passive approximation of its extremities.

Para-epidid'ymis. Organ of Giraldès.

Paræsthe'sia. Abnormal or perverted sensation. **P. olfacto'ria**, parosmia. **P. sexua'lis**, disordered sexual instincts.

Paræsthe'sis. See *Paresthesis*. **P. audi'tûs flac'ca**, broad, loose, and pendent lobe of the ear, congenital.

Paræsthetic, par-ees-thet'ik. Having abnormal sensations.

Paræ'thenar. Parathenar.

Par'affin (*parum*, little, *affinis*, affinity). *Paraffine;* solid or liquid product of destructive distillation of many organic substances, and a natural constituent of petroleum, from which it is commercially prepared. It is a microcrystalline, inodorous mass, melting at 74° to 80° C. In chemistry, petroleum is a term applied to a series of hydrocarbons homologous with methane, having the general formula C_nH_{2n+2}. See also *Hard* and *Soft paraffin*. **P. jel'ly**, petrolatum. **P. oil**, limpid, oily liquid prepared from petroleum, sp. gr. not less than .84, boiling not below 360° (P. G.). **P. oint'ment**, solid paraffin. **P. wax**, see *Hard paraffin*.

Paraffi'num. Paraffin. **P. du'rum**, hard or solid paraffin. **P. liq'uidum**, paraffin oil. **P. mol'le** (Ph. Br.), petrolatum. **P. sol'idum**, solid paraffin.

Paraffoste'arine. See *Splint*.

Paragammacismus, par-ah-gam-mah-siz'mus (*para*, beside, *gamma*, letter γ). Defect in speech, characterized by inability to pronounce *g*, and the use of other letters in place of it.

Paragenesia, par-ah-gen-ez'e-ah (*para, genesis*, production). *Paragenesis.* Defective fecundity of hybrid sterile with similar hybrids, but fertile when crossed with one of its parent race (Broca).

Parageu'sis (*para, geusis*, taste). Depravation or perversion of taste.

Parageus'tia. Parageusis.

Parag'lin. Smilacin.

Paraglo'bin or **Paraglob'ulin.** Form of globulin obtained from blood-serum, supposed to exist in white blood-corpuscles, and to be one constituent of plasmine; also called fibrino-plastin and seroglobulin.

Paraglobulinuria, par-ah-glob-u-lin-u're-ah. Condition in which urine contains paraglobulin.

Paraglos'sa (*para, glossa*, tongue). Swelling of the tongue; also condition of hypertrophy of the tongue, usually congenital. **P. deglutito'ria**, pretended doubling of the tongue into the pharynx. See *Glossocele*.

Paragnathus, par-ag-nath'us. Double monster with a supernumerary inferior jaw situate on the side. Epignathus.

Parago'ge (*para, ago*, to lead). Adduction; coaptation.

Paragompho'sis (*para, gomphosis*, nailing). Incomplete wedging of the head of the child in the pelvis during labor.

Paragraphia, par-ah-graf'e-ah (*para, grapho*, to write). Manifestation of cerebral disorder by making mistakes in writing, as writing one word when another is intended.

Par'aguay tea. Maté, Jesuits' tea, St. Bartholomew's tea; leaves of Ilex Paraguayensis; decoction of the roasted leaves is a habitual drink of certain South Americans; it contains caffeine.

Parahepatic, par-ah-hep-at'ik. About or in the vicinity of the hepatic region.

Parahypnosis, par-ah-hip-no'sis (*para, hupnos*, sleep). Abnormal sleep, as in hypnotism or somnambulism.

Parakantho'ma. Paracanthoma.

Parakantho'sis. Paracanthosis.

Parakerato'sis (*para, keras*, horn). Disease of skin characterized by development of horny tissue.

Parakinesia, par-ah-kin-a'ze-ah (*para, kinesis*, motion). Irregular movement.

Parakre'sol. Hydroxytoluol, found in urine. See *Kresol*.

Paralac'tic ac'id. Sarcolactic acid.

Parala'lia (*para, lalia*, speech). Defective or difficult articulation; impediment of speech. **P. nasa'lis**, nasal voice.

Paralambdacismus, par-ah-lamb-dah-siz'mus (*para*, beside, *lambda*, letter λ). Defect in speech with inability to pronounce *l* distinctly, or in which other letters are substituted.

Paralamp'sis (*paralampo*, to shine at the side of). Cicatrix on the transparent part of the eye.

Paralbu'min (*para, albumen*). Albuminous substance found only in ovarian cysts, and rarely alone.

Paral'dehyd (*para, al*[cohol]*dehyd*[rogenatus]). $C_6H_{12}O_6$. Colorless liquid; below 50° F. crystalline solid, obtained by treating aldehyd with sulphuric or gaseous hydrochloric acid; hypnotic, anodyne, and sedative, and used as a substitute for chloral.

Paraleipsis, par-ah-leip'sis. Steatosis.

Paralere'ma or **Paralere'sis** (*para, leros*, foolish talk). Delirium.

Paralex'ia (*para, lego*, to read). Difficulty in reading, though patient may be able to write readily from dictation; aphasia with word-blindness.

Paralge'sia (*para, algos*, pain). Abnormal or perverted sensation of pain; complete abolition of pain; anæsthesia.

Paralgia, par-al'je-ah (*para, algos*, pain). Disagreeable cutaneous sensations, such as formication, cold, burning, etc.

Parallactic, par-al-lak'tik. Relating to or produced by parallax.

Parallage, par-al'lah-ge. Insanity.

Parallag'ma. Riding of one bone over another after fracture.

Parallax, par'al-laks (*parallasso*, to alter). Apparent

displacement or difference of position of an object as seen from two points of view.

Parallax'is (*parallaxis*, aberration). Insanity; mental confusion.

Par'allel fis'sure. Parallel sulcus. **P. law,** announced by Dechner as parallel to Weber's law: when sensibility is equally altered for two stimuli, perceptibility of their difference remains unchanged —*i. e.* the sensory surface may have become more or less sensitive, but this will not influence differential sensibility. This is a disputed question. **P. sul'cus,** superior temporal sulcus which is parallel to the Sylvian fissure; see *Temporal sulci*.

Paralle'la. A kind of scurfy cutaneous eruption affecting the palms of the hands in parallel lines, and thought to be symptomatic of venereal disease.

Par'allelism of diseases. See *Isopathia*.

Paralogia, par-al-o'je-ah (*para, logos*, discourse). Delirium.

Paralophia (*para, lophia*, first vertebra of the back). The lower and lateral part of the neck, near the vertebræ.

Paral'ysis (*para, lusis*, solution). *Palsy*. Abolition or great diminution of the voluntary or involuntary motions, and sometimes of sensation in one or more parts of the body. Palsy is said to be local when it affects only a few muscles. When it extends to half the body, vertically or horizontally, it is called *hemiplegia* or *paraplegia*. It is commonly symptomatic of disease of the brain or of the nerves themselves, and is a frequent accompaniment, precursor, or successor of apoplexy—*phrenoparalysis*. The immediate cause is generally pressure, either by blood effused or by serum or by vascular turgescence. It generally admits only of palliation, and is extremely apt to recur.

The various forms of paralyses have been thus classified (Ross), arranged separately from the standpoint of clinical and of topographical diagnosis, including neuropathic paralyses and paralyses of the nervous system:

Table I.—Neuropathic Paralyses.

A. ORGANIC PARALYSES.

I. Spinoneural or Atrophic Paralyses.

I. NEURAL OR PERIPHERAL PARALYSIS.
II. REFLEX ATROPHIC PARALYSIS.
III. SPINAL ATROPHIC PARALYSES . . .
1. Acute atrophic spinal paralysis of infants.
2. Acute atrophic spinal paralysis of adults.
3. Acute ascending paralysis.
4. Chronic atrophic spinal paralysis.
5. Peri-ependymal myelitis—syringomyelia.
6. Progressive muscular atrophy.
7. Primary labio-glosso-laryngeal paralysis.
8. Ophthalmoplegia externa.
9. (Pseudo-hypertrophic paralysis.)

II. Cerebrospinal or Spasmodic Paralyses.

I. SPINAL SPASMODIC PARALYSES (PARAPLEGIÆ) . . . . . .
1. Primary lateral sclerosis.
2. Compound lateral sclerosis.
a. Amyotrophic lateral sclerosis.
b. Combined posterior and lateral sclerosis.
3. Secondary lateral sclerosis.
a. Compression myelitis.
b. Transverse myelitis.

II. CEREBRAL PARALYSES (HEMIPLEGIÆ) .
1. Tonic spasm . . . . . *a.* Early rigidity. *b.* Late rigidity.
2. Tonic and clonic spasm . . *a.* Intermittent tremor. *b.* Choreiform movements. i. Pre-hemiplegic chorea. ii. Post-hemiplegic chorea. iii. Spastic hemiplegia of infancy.
3. Clonic spasm . . . . . *a.* Continuous or remittent tremors. *b.* Athetosis. *c.* Post-hemiplegic hemiataxia.

III. Mixed Paralysis.

B. FUNCTIONAL PARALYSES.

(1) Toxic paralysis.
(2) Febrile and post-febrile paralysis.
(3) Reflex paralysis.
(4) Post-epileptic paralysis.
(5) Hysterical paralysis.

Table II.—Paralyses from Organic Disease of the Nervous System.

CLINICAL DIAGNOSIS.	TOPOGRAPHICAL DIAGNOSIS.
I. Atrophic Paralyses.	**I. Spinoneural Lesions.**
I. NEURAL OR PERIPHERAL PARALYSES.	I. LESIONS OF EFFERENT NERVE-FIBRES.
II. REFLEX ATROPHIC PARALYSIS.	II. LESIONS OF AFFERENT NERVE-FIBRES.
III. SPINAL ATROPHIC PAPALYSES.	III. LESIONS OF THE ANTERIOR GRAY HORNS (POLIOMYELOPATHIES).
1. Acute atrophic spinal paralysis of infants.	Poliomyelitis anterior acuta infantium.
2. Acute atrophic spinal paralysis of adults.	Poliomyelitis anterior acuta adultorum.
3. Acute ascending paralysis.	Poliomyelitis acuta.
4. Chronic atrophic spinal paralysis.	Poliomyelitis anterior chronica.
5. Peri-ependymal myelitis. 6. Progressive muscular atrophy. 7. Primary labio-glosso-laryngeal paralysis.	Degeneration of the ganglion cells of the anterior horns of the spinal cord and motor cells of the medulla oblongata.
8. Ophthalmoplegia externa. 9. (Pseudo-hypertrophic paralysis.)	(Primary muscular disease.)
II. Spasmodic Paralyses.	**II. Cerebro-spinal Lesions.** (PYRAMIDAL TRACT.)
I. SPINAL SPASMODIC PARALYSES.	I. LESIONS OF THE LATERAL COLUMNS.
1. Primary spinal spasmodic paralysis.	Primary lateral sclerosis.
2. Compound spinal spasmodic paralysis.	Amyotrophic lateral sclerosis. Combined posterior and lateral sclerosis.
3. Secondary spinal spasmodic paralysis.	Compression myelitis. Transverse myelitis.

II. CEREBRAL PARALYSES.

1. Ordinary hemiplegia.
2. Alternate hemiplegia.
3. Hemiplegia and hemianæsthesia.
4. Hemiplegia, hemianæsthesia, and hemianopsia.
5. Pre-hemiplegic chorea.
6. Post-hemiplegic chorea.
7. Athetosis.
8. Post-hemiplegic continuous tremor and hemiataxia.
9. Spastic hemiplegia of infancy.
10. Unilateral convulsions and hemiplegia.

II. LESIONS OF THE CEREBRAL PYRAMIDAL TRACT AND MOTOR AREA OF CORTEX.

Lesions of lenticular nucleus.
Area of lenticulo-striate artery.
Lesions of crura and pons.
Lesions in area of optostriate artery.

Lesions in the area of the posterior external optic artery.

Unilateral atrophy of the motor area of cortex.
Porencephalus.
Lesions of motor area of cortex.

P., acute' ascend'ing, *Landry's p.* An obscure variety of spinal disease, which is most frequent in males between 20 and 40 years of age; characterized by rapid, progressive paraplegia and by absence of any appreciable organic change in the cord. **P., acute' spi'nal,** *Infantile p.; Anterior poliomyelitis* or *Anterior cornual myelitis;* disease chiefly of young children, characterized by suddenness of attack and by total or nearly total absence of reflexes. **P. ag'itans,** *Shaking palsy, Trembling palsy;* variety of tremor in which the muscles are in a perpetual alternation of contraction and relaxation, often accompanied by inco-ordination. **P. ag'itans mercuria'lis,** mercurial palsy. **P. ag'itans metal'lica,** see *Tremor.* **P. ag'itans saturni'na,** lead palsy. **P., alter'nate** or **crossed,** paralysis of motion on one side and of sensation on the other. **P., atroph'ic spi'nal,** poliomyelitis, acute anterior. **P. atroph'ica,** progressive muscular atrophy. **P., Bell's,** *Bell's palsy, P. of the portio dura, Histrionic paralysis* or *palsy, Prosopoparalysis* or *palsy;* paralysis of the face induced by a lesion of the portio dura, called Bell's palsy, owing to the fact that Sir Charles Bell was one of the first to investigate it minutely. **P. beribe'ria,** beriberi. **P., Brown-Séquard's,** see *Brown-Séquard.* **P., bul'bar,** see *Bulbar.* **P., cer'ebral,** P. due to lesion situate in the brain. **P., cer'ebral in'fantile,** form of spastic hemiplegia occurring in children. **P., cer'ebro-spi'nal,** P. in which the lesion is situate in the motor centres of the cortex of the brain or in the pyramidal tracts. **P. of conver'gence,** paralysis of internal recti, so far as associated movements to produce convergence are concerned, while they act normally when visual axes are parallel. **P., cross,** hemiplegia, alternate. **P., diphtherit'ic,** singular consequence at times of diphtheria supervening when the patient is convalescing or apparently well. It may affect only the palate or pharynx, or be more general. **P., direct,** P. affecting the same side of the body as the cerebral lesion. **P., diver's,** see *Caisson disease.* **P., Duchenne's,** P., pseudo-hypertrophic. **P. extremita'tum,** acroparalysis. **P. facia'lis,** paralysis, Bell's. **P. facie'i,** paralysis, Bell's. **P., feb'rile,** P. occurring in the course of fever. **P., essen'tial,** acute spinal p. **P., func'tional,** paralysis not seemingly due to organic lesion, and usually disappearing in time. This includes those occurring from poisons, during and after fevers, after epilepsy or hysteria, and those of a reflex character. **P., gen'eral, of the insane',** paralysis of the insane. **P., glos'so-la'bio-larynge'al,** see *Bulbar.* **P., glossopharynge'al,** paralysis affecting the muscles of speech and deglutition. **P., hemipleg'ic,** see *Hemiplegia.* **P., histrion'ic,** paralysis, Bell's. **P., hyster'ical,** P., psychical. **P., in'fantile, P., myogen'ic,** acute anterior poliomyelitis. **P. of in'fants, essen'tial,** paralysis, myogenic. **P. of the insane',** *P., general, of insane, General paresis, Progressive paralysis of the insane;* insanity combined with progressive paralysis of the muscular system; an incurable affection, which seems to increase as the powers of the mind diminish. Said by Weidl to depend on hypertrophy of the connective tissue of the minute vessels of the pia mater and cortical substance of the brain. **P. insano'rum,** P. of the insane. **P. intesti'ni rec'ti,** paralysis of the rectum. **P. intestino'rum,** paralysis of the intestines. **P., Lan'dry's,** paralysis, acute ascending. **P. lin'guæ,** paralysis of the tongue. **P. medulla'ris,** paraplegia. **P., metal'lica,** palsy, lead. **P., mus'cular, progres'sive,** atrophy, progressive muscular. **P., myogen'ic,** *Infantile paralysis, Essential paralysis of infants;* partial muscular paralysis dating from very early life; probably due to some defect of conformation, and arising independently of any appreciable lesion of the nervous system. **P., myopath'ic,** P. in which the primary disease is situate in the muscle or muscles affected. **P., myoscle-ro'sic,** P., pseudohypertrophic. **P., myosclero'tic,** P., pseudohypertrophic. **P. ner'vi hypoglos'si,** paralysis of the tongue. **P. ner'vi thora'cis,** paralysis of the muscles of the chest. **P., neuropath'ic,** P. in which the primary disease is seated in some part of the nervous system. **P., neu'ral,** P. in which the lesion is situated in the peripheral nerves. **P. notario'rum,** cramp, writer's. **P., obstet'rical,** paralysis of the infant due to injury received in its birth. **P., organ'ic,** paralysis dependent upon organic lesion. **P., parapleg'ic,** paraplegia. **P., periph'eric,** atrophy, progressive. **P., phonet'ic,** paralytic aphonia or dysphonia. **P. ex plum'bo,** lead palsy. **P. from poi'sons,** paralysis from action of lead, mercury, etc. **P. of the portio dura,** paralysis, Bell's. **P., postepilep'tic,** P. occurring as a sequence of epilepsy. **P., postfeb'rile,** P. as a sequence of an attack of fever. **P., progres'sive, of the insane,** P. of the insane. **P., pseudohypertroph'ic,** *Myosclerosic* or *Myosclerotic paralysis* or *Palsy, Duchenne's paralysis;* a condition characterized by diminution of the powers of motion, with augmentation of the volume of the paralyzed muscles. **P., psych'ical,** *Hysterical paralysis* or *palsy, Psychical palsy;* paralysis associated with or dependent on hysteria; probably unconnected with organic disease of the nerve-centres or the motor nerves. **P. rachial'gica,** colica metallica. **P., re'flex,** palsy occasioned by irritation reflected through the excitomotory nerve system to parts in themselves healthy, as in the case of palsy from dentition, etc. Reflex paralysis would seem at times to assume the paraplegic form—reflex paraplegia. **P., regres'sive,** acute spinal p. **P. re'num,** paralysis of the kidneys. **P., sat'urnine,** palsy, lead. **P. scorbu'tica,** pellagra. **P., scriv'ener's,** cramp, writer's. **P., sen'sory,** anæsthesia. **P., spas'tic spi'nal,** in which there is progressive motor paresis, with increase of reflexes and rigidity of muscles; often connected with sclerosis of lateral columns of the cord. **P., spi'nal,** paraplegia. **P., spinoneu'ral,** P. due to lesion of the anterior gray horns of the spinal cord and their upward prolongations, or of the fibres of the peripheral nerves connecting the ganglion cells of these horns with the muscles. **P. ex to'to,** paralysis of the insane. **P., tox'ic,** P. from effect of poisons. **P., trans'verse,** alternate hemiplegia. **P. trem'ula,** paralysis agitans. **P. vac'illans,** chorea. **P. venena'ta,** *Paralysis from poisons;* paralysis the result of poisonous substances, as of lead, mercury, etc. **P. e vene'nis,** P. venenata. **P. ventricu'li,** paralysis of the stomach. **P., writer's,** cramp, writer's.

Paralyt'ic. *Paralyzed, Palsied.* Affected with or causing paralysis. **P. stroke,** invasion or attack of paralysis; see *Stroke, paralytic.*

Paralyt'icus. Paralytic.

Par'alyzed. Affected with paralysis; paralytic.

Paramastitis, par-ah-mas-te'tis (*para, mastos,* breast). Inflammation of connective tissue around the mammary gland.

Paramas'toid. Jugular process of occipital bone; separate in some cases. Around the mastoid process.

Paramecia, par-ah-me'se-ah (*para, mekos,* length). Longitudinal fissures.

Paramedian, par-ah-me'de-an. Near or in the vicinity of the median line. **P. sul'cus,** furrow on cervical spinal cord near posterior median fissure, separating column of Goll from funiculus cuneatus. An *anterior p. s.* is sometimes found near the anterior median fissure.

Paramen'ia (*para, men,* month). *Mismenstruation.* Difficult menstruation. Disordered menstruation. **P. diffic'ilis,** dysmenorrhœa. **P. error'is,** menstruation, vicarious. **P. obstructio'nis,** amenorrhœa. **P. profu'sa,** menorrhagia. **P. super'flua,** menorrhagia.

Paramenisper'min. Neutral principle, having the same composition as menispermin, derived from Cocculus Indicus.

Parame'ria (*para, meros,* thigh). Internal parts of the thigh. Eastern shrub, reputed to yield pagularay balsam. *Vulneraria.*

Paramerid'ius. Pertaining to the femur or thigh.

Param'esos (*para, mesos,* middle). Annular finger. See *Digitus.*

Paramet'ric (*metra,* womb). Near the uterus.

Parametritis, par-ah-met-re'tis (*para, metra,* uterus). Literally, inflammation of tissues in the immediate vicinity of the uterus; generally considered to denote an inflammation of the cellular tissue between the uterus and the peritoneum, although extended to include inflammation of any other portion of that tissue within the pelvis—as *Parasalpingitis* and *Paroophoritis,* inflammation of the cellular tissue surrounding the Fallopian tube and ovary respectively. *Periuterine phlegmon, Pelvic cellulitis, Subperitoneal inflammation,* and *Inflammation of the uterine appendages* may be regarded as synonymous with parametritis. When the disease terminates in suppuration, it is called *Pelviperitonitis* and *Metroperitonitis,* though not strictly synonymous with them; it implies an inflammation of the uterine peritoneum, including also *Perisalpingitis* and *Perioöphoritis*—inflammation of the peritoneum in relation with the Fallopian tube and ovary respectively. **P. puerperal'is,** parametritis during the puerperal state.

Paramet'rium. Subserous tissue on lateral surface of uterus and vagina and at origin of broad ligaments.

Paramimia, par-ah-mim'e-ah (*para, mimeomai,* to mimic). Disordered expression; use of tone or gesture not in accord with words employed.

Paramitom, par-ah-mit'om (*para, mitos,* web). Fluid substance enveloping the mitom, hyaloplasm, or euchylema. Heteroplasm.

Paramnesia, par-am-na'ze-ah (*para, a,* priv., *mnesis,* memory). Defective or false memory.

Paramœ'cium (*para, moichos,* adulterer). Form of parasitic infusoria sometimes met with in the cæcum and colon.

Paramonobromoacetan'ilid. Antisepsin; obtained by action of bromine on solution of acetanilid in glacial acetic acid; crystallizes in large pearl-colored prisms, insoluble in cold water, odorless and tasteless; recommended as an antiseptic.

Paramor'phia (*para, morphe,* form). Morbid form or structure.

Paramor'phine. *Paramorphia, Thebaïna, Thebaïne.* Principle discovered in the precipitate thrown down from infusion of opium, treated with milk of lime; resembles narcotine.

Param'ylum (*para, amulon,* starch). Starch-like granules found in some infusoria.

Paramyoclo'nus mul'tiplex. Convulsive tremor characterized by clonic spasms in a number of symmetrical muscles. Spasms cease during sleep, and do not interfere with voluntary movements.

Paramyosinogen, par-ah-mi-o-sin'o-jen. Proteid of muscle-plasma, coagulating at 47° C.; precipitated by magnesium sulphate or sodium chloride.

Paramyoton'ia, congen'ital. Curious and unusual family affection, similar to Thomsen's disease in its symptoms, generally affecting the facial muscles, but also those of the extremities.

Paramyotonus, par-ah-me-o-to'nus (*para, mus,* muscle, *tonos,* tone). Disordered muscular tonicity, causing liability to spasm on slight provocation.

Paranæsthe'sia (*para,* excess, *anaisthesia,* loss of sensation). Loss of sensation in all lower parts of the body, including the lower part of the abdomen.

Paranephri'tis. Inflammation of the renal capsules.

Paraneph'rus (*para, nephros,* kidney). Renal capsule.

Paraneurys'mus (*para, neuron,* nerve). Nerve disorder.

Paran'gi. Epidemic skin disease of Ceylon, perhaps identical with yaws.

Paranœ'a or **Paranoi'a** (*para, nous,* understanding). Unsoundness of mind; hereditary or acquired chronic mental instability; protopathic insanity; monomania with delusions.

Paranœ'ic. Pertaining to or affected with paranoia.

Paranoi'ac. Person affected by paranoia.

Paranucleus, par-ah-nu'kle-us. Name given to smaller nucleus of two contained in a cell.

Paranym'phus (*paranumphos, para, numphe,* a young spouse, a bride). A name given by the ancients to him who led the bride to the house of her husband. In ancient schools of medicine, the discourse pronounced at the end of the prescribed period of study for licentiate, in which the qualifications, etc. of the candidate were described.

Paraoxymethylacetanilide, par-ah-ox-e-meth-il-as-et-an'il-eed. Methacetine.

Paraparesis, par-ah-par'es-is (*para. pariemi,* to relax). Partial paraplegia.

Parapathi'a (*para, pathos,* affection). Pathomania; moral insanity.

Parapechyon, par-ah-pek'e-on (*para, pechus,* elbow). Radius.

Parapectin, par-ah-pek'tin. Substance found in fleshy fruits.

Parapep'tone. Body formed by digestion of albumin with an insufficiency of pepsin, or with dilute hydrochloric acid alone at 40° C.; insoluble in water, soluble in dilute acids and alkalies, and convertible into peptone only through tryptic digestion; identical with antialbumate.

Paraphasia, par-ah-faz'e-ah (*para, aphasia.* speechlessness). Speaking one word when another is intended, or mispronunciation of words, due to cerebral disorder.

Paraphenylendiamine, par-ah-fen-il-en'de-am-een. Isomer of metaphenylendiamine; produces marked exophthalmus when injected into some animals.

Paraph'ia (*para, haphe,* touch). Sense of touch or general feeling vitiated or lost.

Paraphimosis, par-ah-fim-o'sis (*para, phimoo,* to bridle). Strangulation of the glans penis by the prepuce withdrawn behind it.

Paraphobia, par-ah-fo'be-ah (*para, phobos,* dread). Hydrophobia.

Paraphonia, par-ah-fo'ne-ah (*para, phone,* voice). Affection of the voice when its character or *timbre* is less agreeable; morbid alteration of the voice. **P. clan'gens,** sharp tone of voice. **P. guttura'lis,** defective articulation from diseased palate. **P. nasa'lis,** nasal voice. **P. palati'na,** abnormal voice due to malformation of palate. **P. pu'berum,** egophony. **P. rauca,** roughness of voice. **P. ulcero'sa,** shrill voice from ulceration of the larynx.

Paraphora, par-af'o-rah (*para, phero,* to carry). Delirium; paracope.

Paraphrasia, par-ah-frah'ze-ah (*para, phrasis,* telling). Disordered or incoherent speech.

Paraphrenesis, par-ah-fren-a'sis (*para, phren,* mind). Paraphrenitis. **P. diaphragmat'ica,** inflammation of the diaphragm.

Paraphre'nia, Paraphrenitis (par-ah-fren-e'tis), or **Paraphrene'sis** (*para, phren,* mind, or *phrenes,* diaphragm). Name given to inflammation of the

diaphragm, which was supposed always to produce delirium—as well as to the delirium itself accompanying that affection. See *Phrenitis.*

Paraphrodiasis, par-af-ro-de'as-is (*para, Aphrodite,* Venus). Morbid or perverted sexual desire.

Paraphronesis (par-ah-fron-a'sis) or **Paraphros'yne** (*para, phronesis,* mental derangement). Delirium; mental disorder of mild or transitory type.

Paraphymata, par-ah-fim'at-ah (*para,* beside, *phuma,* growth). Organic diseases with local manifestations.

Paraphyte, par'a-fite. Diseased condition due to, or associated with, proliferation.

Par'aplasm or **Paraplas'ma** (*para, plasso,* to form). Abnormal or heteroplastic growth; malformation. Substance filling meshes of reticulum of protoplasm.

Paraplas'tic (*para, plastikos,* formative). Possessed of depraved formative powers, as carcinoma, encephaloma, melanosis, etc.

Paraplectic, par-a-plek'tik (*para, plesso,* to strike). Paraplegic; tending to produce paraplegia; paralyzed.

Paraplegia, par-ah-ple'je-ah (*para, plesso,* to strike). Palsy of the lower half of the body, including the bladder and rectum; generally owing to disease of some part of the cerebrospinal axis, especially of the spinal portion. Incomplete apoplexy. Some authors have also made a distinction between *paraplegia* and *paraplexia,* using the former for partial apoplexy, the latter for general or complete apoplexy. **P., alcohol'ic,** P. from chronic alcoholism, probably peripheral neuritis rather than a morbid condition of the spinal cord itself. **P., atax'ic,** sclerosis of posterior and lateral columns of the spinal cord, with symptoms of locomotor ataxia and spastic paraplegia. **P., cer'vical,** paralysis of upper and lower extremities on both sides, due to spinal disease. **P., congen'ital spas'tic,** P. due to meningeal hemorrhage at time of birth. **P. doloro'sa,** paraplegia attended with intense paroxysmal pain along the course of nerves, generally caused by tumor of the cord. **P., hys'tero-traumat'ic,** hysterical variety of p., dependent on injury. **P., organ'ic,** P. from lesion of the great nervous centres. **P., pain'ful,** P. dolorosa. **P., pri'mary spas'tic,** lateral sclerosis, due to lesion of the spinal cord above the lumbar enlargement, tonic spasm being a chief symptom. **P., re'flex,** see *Paralysis, reflex.* **P., spasmod'ic, spas'tic,** or **tet'anoid,** P. from lateral sclerosis of the spinal cord.

Paraple'gic. Pertaining to or affected with paraplegia.

Parapleuritis, par-ah-plu-re'tis. Pleurodynia; slight pleuritis.

Paraplex'ia. Paraplegia; slight apoplexy.

Parapoïë'sis or **Parapoë'sis** (*para, poieo,* to do). Disturbance of function.

Parapophyses, par-ap-of'is-ees. See *Vertebra* and *Capitular process.*

Parapoph'ysis. Process in other animals than man corresponding with lower transverse process of the vertebræ.

Parap'oplexy (*para, apoplexia*). Slight apoplexy; a soporous state resembling apoplexy, and especially that which occurs in pernicious intermittents.

Paraprocti'tis. Phlegmonous inflammation of connective tissue surrounding the rectum.

Paraproc'tium (*para, proktos,* anus). Connective tissue surrounding the rectum.

Parap'sis (*para, haptomai,* to touch). Sense of touch or general feeling injured or destroyed. **P. a'cris, teneritu'do,** soreness. **P. ex'pers,** torpor; anæsthesia. **P. illuso'ria,** pseudæsthesia. **P. pruri'tus,** itching.

Parapyram'idal sulcus. Furrow in medulla oblongata running obliquely from anterior median fissure, upward and outward, to sulcus lateralis ventralis.

Pararabin, par-ar'ab-in. Constituent of sugar-beet, converted by boiling with alkalies into arabic acid.

Pararec'tal pouch. Depression in the peritoneum behind the broad ligament and at the sides of the rectum.

Parareducine, par-ah-red-u'seen. Alkaloid found in urine.

Pararhotacismus, par-ah-rho-tah-siz'mus. Defect in speech from substitution of some other sound for that of *r.*

Parar'ma. Fimbria.

Pararrhyth'micus or **Pararrhyth'mus** (*para, rhuthmos,* rhythm). An epithet applied to the pulse when it has not the rhythm proper to the age and constitution of the individual.

Pararthre'ma (*para, arthron,* joint). Incomplete luxation; subluxation.

Pararthria, par-ar'thre-ah (*para, arthroo,* to articulate). Disordered and difficult articulation. **P. litera'lis paret'ica,** stammering. **P. syllaba'ris spas'tica,** stuttering.

Pararthrosis, par-ar-thro'sis. Production of incomplete luxation or subluxation.

Parasalpingi'tis (*para, salpinx,* a tube). Inflammation of the cellular tissue in immediate relation with the Fallopian tube. See *Parametritis.*

Parascepas'tra (*para, skepastron,* bandage). A cap or bandage which covers the whole head.

Parasceu'e (*para, skeue,* equipment). Apparatus.

Paras'chides (*para, schizo,* to cleave). Fragments or splinters of a broken bone.

Parasecre'tion. Abnormal secretion as to quality, quantity, etc.

Parasemia, par-ah-sa'me-ah. Feigned asemia.

Parasigmatismus, par-ah-sig-mat-iz'mus (*para,* beside, *sigma,* Greek letter *σ*). Defective speech in which other letters are used in place of *s* or *sh.*

Parasinoidal (par-a-si-noi'dal) **spaces.** Hollow spaces in the dura mater near the superior longitudinal sinus, into which the cerebral veins discharge before reaching the sinus; Pacchionian bodies lie therein.

Parasi'tæ. Diseases of the skin in which parasites are invariably present, as tinea tonsurans.

Par'asite (*parasiteo, para, sitos,* corn, food, to eat by the side of). Organism, animal or vegetable, living during the whole or part of its existence in or on the body of some other organism. A fœtus or part of a fœtus living by means of the circulation of another fœtus.

Human parasites are both animal and vegetable. The former include *Entozoa* (animals living in the interior of the human body) and *Ectozoa* (those which infest the exterior). Vegetables parasites are the *Entophyta* and *Epiphyta,* the former existing in the interior of the body, the latter on the exterior. The simplest arrangement of entozoa includes *Cœlmintha* (*koilos,* hollow, *helmins,* worm), hollow worms; *Sterelmintha* (*stereos,* solid), solid worms; and *Accidental parasites.*

The following table, made up from various sources, probably includes most of the human parasites worthy of mention, as well as the locality usually inhabited by them (Aitken). A few additional forms of fungous and other parasitic vegetations might be added. See *Fungus.*

TABLE OF HUMAN PARASITES.

I. ENTOZOA.

Acephalocystis endogena	Liver.
" multifida	Brain.
Anchylostoma	Intestines.
Anthomyia canicularis	"
Ascaris alata	"
" lumbricoïdes	"
" mystax	"
Bilharzia hæmatobia	Portal and venous system.
Bothriocephalus cordatus	Intestines.
" latus	"
Cysticercus cellulosæ or telæ cellulosæ (C. of tænia solium)	Muscles.
Cysticercus of tænia marginata (C. tenuicollis)	Intestines.
Dactylius aculeatus	Urinary bladder.
Diplosoma crenatus	" "
Distoma or Distomum crassum	Duodenum.
" hæmatobia	Portal and venous system.
" hepaticum	Gall-bladder.
" heterophyes	Intestines.
" lanceolatum	Hepatic duct.
" oculi humani or ophthalmobium	Capsule of crystalline.

Ditrachyceras rudus	Intestines.
Dracunculus medinensis	Skin and areolar tissue.
Echinococcus hominis (hydatid of tænia echinococcus)	Liver, spleen, and omentum.
Eustrongylus bronchialis	Bronchial tubes.
" gigas	Kidney, intestines.
Fasciola hepatica	Gall-bladder.
Filaria bronchialis or trachealis	Bronchial glands.
" medinensis	Skin and areolar tissue.
" oculi or lentis	Eye.
Hexathrydium pinguicola	Ovary.
" venarum	Venous system.
Monostoma lentis	Crystalline.
Œstrus hominis	Intestines.
Oxyuris vermicularis	"
Pentastoma constrictum	" and liver.
" denticulatum	" "
Polystoma pinguicola	Ovary.
" sanguicola or venarum	Venous system.
Sclerostoma duodenale	Intestines.
Spiroptera hominis	Urinary bladder.
Strongylus bronchialis	Bronchial tubes.
" gigas (Ascaris renalis)	Kidney, intestines.
Tænia acanthotrias	Intestines.
" elliptica	"
" flavapuncta	"
" lophosoma	"
" medio-canellata	"
" nana	" and liver.
" solium	" "
Tetrastoma renale	Kidney.
Trichina spiralis	Muscles.
Trichocephalus dispar	Intestines.

II. Ectozoa.

Acarus folliculorum	Sebaceous substance of cutaneous follicles.
" scabiei (itch-insect)	Scabies.
Demodex folliculorum	Sebaceous substance of cutaneous follicles.
Pediculus capitis (head-louse);	
" corporis or vestimenti (body-louse);	
" palpebrarum (brow-louse);	
" pubis, phthirius inguinalis (crab-louse);	
" tabescentium	Phtheiriasis (lousy disease).
Pulex penetrans (chigoe)	Skin, cellular tissue.
Sarcoptes scabiei (itch-insect)	Scabies.

III. Entophyta and Epiphyta.

Achorion Lebertii (trichophyton tonsurans)	Tinea tonsurans.
Achorion Schonleinii	" favosa.
Chionyphe Carteri (fungus of mycetoma)	Deep tissue, bones of hand and feet.
Leptothrix buccalis (alga of the mouth).	
Microsporon Audouini	Tinea decalvans.
" furfur	" versicolor.
" mentagrophytes	Follicles of hair in sycosis or mentagra.
Oïdium albicans (thrush fungus)	Mouth, mucous and cutaneous surfaces.
Puccinia favi	Tinea favosa.
Sarcina ventriculi	Stomach.
Torula cerevisiæ (Cryptococcus cerevisiæ, yeast-plant)	Stomach, bladder, etc.
Trichophyton sporuloïdes	Tinea polonica.

To this table may be added the various micro-organisms, including bacteria, bacilli, micrococci, etc., which have been revealed by modern investigations as parasitic in the human system.

Parasitia, par-as-it'e-ah. Parasitism.

Parasit'ic. Having the nature of, or resembling, a parasite—as parasitic growths, p. tubercles, p. cancer, p. monster, etc. **P. diseases,** such as are induced by or connected with animal or vegetable parasites; see *Porrigo favosa, Psora,* etc.

Parasiticide, par-a-sit'i-side (*parasite, cædo,* to kill). Destructive to parasites; antiparasitic.

Par'asitism. Condition of a parasite or of an organized structure or body living on another organized body. **P., intes'tinal,** helminthiasis. **P., superfic'ial,** see *Malis.*

Parasitogeny, par-a-si-toj'en-e (*parasite, gennao,* to beget). *Parasitogenesis.* Corporeal condition which favors the development of parasites. The generation of parasites.

Parasi'toid (*parasite, eidos,* resemblance). Parasitic.

Parasi'tus. Parasite.

Parasor'bic ac'id. Aromatic, oily liquid acid from mountain-ash berries.

Paraspa'dia (*para, spao,* to draw). Preternatural opening of the urethra at the side of the penis. One whose urethra opens in this manner is called *Paraspadiæus* and *Paraspadias.*

Paraspadiæus, par-as-pad-e-e'us. See *Paraspadia.*

Parasphagis, par-as-fag'is (*para, sphage,* throat). Part of the neck contiguous to the clavicles.

Paras'tata (*para,* near, *istemi,* to stand). Prostate; epididymis. The epididymes were called *Varicosæ parastatæ,* to distinguish them from *Glandulosæ parastatæ* or prostate. The tubæ Fallopianæ were also called *Parastatæ varicosæ.* **P. adenoï'des,** prostate. **P. cirsoï'des,** epididymis. **P. glandula,** prostate. **P. glandulo'sa,** prostate.

Parastatadenitis, par-as-tat-ad-en-e'tis. Prostatitis.

Paras'tates. Parastata.

Parastati'tis (*parastata,* epididymis). *Epididymitis.* Inflammation of the epididymis. Prostatitis.

Parasteato'ses. Class of cutaneous diseases in which secretion is altered.

Parasteatosis. par-ah-ste-at-o'sis (*para,* beside, *stear,* fat). Steatosis characterized by altered secretion.

Paraster'nal line. Line drawn from the clavicle to the costal arch, parallel to the edge of the sternum and about 8 cm. from it. **P. re'gion,** region between margin of sternum and parasternal line.

Parastrem'ma (*para, strepho,* to turn). *Parastrophe.* Distortion. Convulsive distortion, especially of the face, the soft parts being drawn laterally.

Parastrep'sis (same etymon). Parasthrema.

Paras'trophe. Parastremma.

Parasynan'che. Cynanche parotidæa.

Parasynovitis, par-ah-sin-o-ve'tis (*para, synovia*). Inflammation of tissue about joint.

Parasyphilitic, par-a-sif-il-it'ik. Caused by syphilis, but not having its symptoms.

Parasystole, par-ah-sis'to-le (*para, sustole,* contraction). Interval between systole and diastole. Acinesia.

Paratar'sia (*para, tarsos,* tarsus). Dislocation of the tarsal bones.

Paratarta'ric acid. Racemic acid.

Parath'enar (*para, thenar,* sole of the foot). *Parathenar.* Winslow called parathenar major a portion of the abductor of the little toe, musculus scandularius; and parathenar minor the short flexor of that toe. **P. ma'jor,** abductor minimi digiti pedis. **P. mi'nor,** flexor brevis minimi digiti pedis.

Parathioformaldehyde, par-ah-the-o-form-al'dehid. Crystalline substance, formula $C_3H_6S_3$, identical with paraformaldehyde.

Parathionic (par-a-the-on'ik) **acid.** Acid ethyl sulphate.

Parathymia, par-ah-thim'e-ah (*para, thumos,* mind). Mental overwork.

Parat'oloid. Koch's tuberculin or lymph employed in tuberculosis; so named by him.

Paratolyl, par-ah-tol'il. *Phosphine.* Liquid with a very strong odor, which gives rise to headache and bleeding of the nose.

Paraton'ia (*para, tonos,* tension). See *Spasm.* Overstraining; excitement.

Paratop'ia (*para, topos,* place). Luxation.

Paratop'iæ. Diseases in which organs are removed from their proper position. See *Ectopia.*

Paratremma, par-ah-trem'mah. Paratrimma.

Paratricho'ses (pl. of **Paratrichosis**). Class of skin diseases, embracing trichorrhesis nodosa and trichoptilosis.

Paratrichosis, par-ah-trik-o'sis (*para,* beside, *thrix,*

hair). Variety of trichosis in which growth of hair is of abnormal quality.

Paratrim'ma (*para, tribo*, to rub). Chafing. Intertrigo.

Paratrip'tic. Tending to produce paratrimma.

Parat'rope (*para, trepo*, to turn). Atrophy.

Parat'rophy (*para, trophe*, nourishment). Misnutrition; hypertrophy.

Paratu'do. See *Gomphrena.*

Paratu'ra. Plant, native of Brazil; root has tonic properties.

Paratyphlitis, par-ah-tif-le'tis (*para, typhlitis*, inflammation of the cæcum). Inflammation of the connective tissue behind or in the vicinity of the cæcum.

Paratypicus, par-ah-tip'ik-us. Not corresponding to a regular type; said of diseases.

Parau'terine. In the vicinity of the uterus. **P. celluli'tis,** parametritis.

Paravagini'tis. Paracolpitis or inflammation of the connective tissue behind or in the vicinity of the vagina.

Paravertebral, par-ah-vur'te-bral. Situate beside or in the vicinity of the vertebral column.

Paraves'ical pouch. Peritoneal pocket on either side of the bladder.

Paraxanthine, par-ah-zan'theen. $C_7H_8N_4O_2$. Leucomaïne found in minute quantity in normal urine. See *Leucomaïnes* (table of).

Paraxial, par-aks'e-al. Situate along the vertical axis. **P. mus'cles,** those along the vertebral axis, consisting of outer part of erector spinæ and its continuations and intercostal group (scaleni, abdominal muscles, etc.).

Parazoön, par-ah-zo'on (*para, zoön*, animal). Animal parasite.

Parazygo'sis (*para, zugoö*, to join together). Condition or formation of monster by union of trunks above the umbilicus. It includes xiphopagus, thoracopagus, and pleuropagus.

Parch'ment skin. Hard, dry, wrinkled condition of skin, result of diffuse idiopathic atrophy. Xeroderma of Hebra and Kaposi. It sometimes occurs in several children of the same family, and is fatal.

Pardalian'ches (*pardalis*, a panther, *ancho*, to strangle). Aconitum.

Pardalian'chum. Aconitum.

Pardanthus (par-dan'thus) **Chinen'sis.** Leopard-flower, native of China, where decoction of root is applied externally to poisoned wounds, and the pulp to bites of snakes.

Pareccœloma, par-ek-se-lo'mah (*para, ek*, out, *koiloo*, to make hollow). Diverticulum; abnormal accessory cavity.

Parec'crises (pl. of **Pareccrisis**). Diseases involving the secretions.

Parec'tama (*para, ek*, out, *teino*, to stretch). Immoderate extension, distension, or dilatation of a part, as of the heart.

Parec'tasis. Abnormal extension or dilatation of a part. See *Pararthrema* and *Parectama.*

Paredria, par-ed're-ah (*para*, beside, *hedra*, seat). Complications existing in a disease.

Paregor'ic (*paregoreo*, to soothe, to calm). That which soothes or assuages, as paregoric elixir. An anodyne. **P. elix'ir,** tinctura opii camphorata. **P. root,** Myrrhis odorata. **P. tinc'ture,** tinctura opii camphorata.

Parei'a. Cheek.

Parei'ra. See *Pareira brava.* Preparations: *Extractum pareira fluidum;* infusum pareiræ (unofficinal). **P. bra'va,** *Wild Vine, Velvet leaf;* fam. Menispermeæ. *Pareira* (Ph. U. S.), the root of Chondodendron tomentosum, a tree of South America and the West Indies, has a sweet taste, with considerable bitterness and slight roughness. It has been recommended in nephritic and calculous affections. Tonic stimulant to genito-urinary mucous membrane. **P. rad'ix** (B. Ph.), pareira.

Pareirine, par-i'reen. Alkaloid, active principle of pareira; motor and respiratory paralyzant. **P. hydrochlo'rate,** salt of pareirine employed as an antiperiodic in malaria.

Parekkrisis, par-ek'kris-is (*para, ekkrisis*, secretion). Disordered secretion.

Parelectron'omy. Condition of diminished force of muscular electrical current when natural section of muscle is preserved.

Parempto'sis (*paremptosis*, intrusion). See *Coincidentia.* Also form of amaurosis.

Parencephalis, par-en-sef'al-is (*para, enkephalos*, the brain). Cerebellum.

Parencephali'tis (*parencephalis, itis*). Cerebellitis.

Parencephalocele, par-en-sef-al-o-se'le (Eng. par-en-sef'al-o-seel) (*parencephalis, kele*, rupture). Hernia of the cerebellum. A rare disease, which occurs under the form of a soft, indolent, or slightly painful tumor, without change in the color of the skin, and is situate in the occipital region. It is constituted of the cerebellum, which escapes through an aperture in the occipital bone. Great attention must be paid not to mistake it for an ordinary tumor, as its extirpation would be attended with fatal consequences.

Parenceph'alum. Cerebellum.

Parenceph'alus. One with defective or unsymmetrical development of the encephalon or of the cerebellum.

Parenchyma, par-en'kim-ah. Texture of glandular and other organs, composed of agglomerated globules united by areolar tissue, and tearing with more or less facility. Such is the texture of the liver, kidneys, etc. According to Virchow, it includes the peculiar constituents of an organ which give it its specific character, its proper parenchyma, in contradistinction to its merely interstitial tissue. *Parenchyma* signifies, in Greek, effusion (*para, en, chuo*, to pour), and it was believed that this tissue consisted of effused blood or other fluid. **P., gland'ular,** gland-substance, **P. tes'tis,** pulpa testis.

Paren'chymal. *Parenchymatous, Parenchymous.* Belonging or relating to the parenchyma of an organ.

Parenchymatitis, par-en-kim-at-e'tis (*parenchyma, itis*). Inflammation of the substance of an organ.

Parenchy'matous. Parenchymal. **P. degenera'tion,** cloudy swelling. **P. neuri'tis,** neuritis in which nerve-elements are primarily involved.

Parenchymepatitis, par-en-kim-ep-at-e'tis (*parenchyma, hepatitis*, inflammation of the liver). Parenchymatous hepatitis.

Parencranis, par-en-kran'is. Cerebellum.

Pa'rent cell. See *Cell.*

Parepidid'ymis (*para, epididymis*). Organ of Giraldès.

Parepithymia, par-ep-e-thim'e-ah (*para, epithumia*, lust). Morbid desire.

Parerethesis (par-er-eth'es-is) or **Parerethis'mus** (*para, erithrizo*, to excite). Morbid excitement.

Par'esifying (*paresis, facio*, to make). Producing paralysis, as paresifying mental disease, the paralysis of the insane.

Paresis, par'es-is (*pariemi*, to relax). Diminution of motor power; slight, incomplete paralysis, affecting motion, but not sensation; but by some regarded as synonymous with paralysis. **P., can'tatory,** inability to use the voice by singers, due to over-exertion of muscles of larynx. **P., gen'eral,** paralysis, general. **P., sat'urnine,** lead palsy.

Paresthesis, par-es-the'sis (*para, aisthesis*, sensation). *Paræsthesis, Paresthesia.* Congenital misconstruction of the external organs of sense; perversion of sensibility.

Paretic, par-et'ik. Pertaining to or affected with paresis. One affected with paresis. **P. demen'tia,** general paralysis.

Paret'ica exarthro'sis. Luxation from relaxation of the ligaments of a joint.

Paret'icus (*paretos*, relaxed). Relaxant.

Pareunia, par-u'ne-ah (*para, eune*, bed). Coitus.

Parey'ra. Pareira brava.

Parhæmasiæ, par-he-mah'ze-e (*para, haima*, blood). Diseases of the sanguineous system.

Parhidro'sis. Paridrosis.

Paricine, par'is-een. $C_{16}H_{18}N_2O$. Alkaloid associated with quinamine in bark of Cinchona siccirubra.

Paridin, par'id-in. Glucoside, $C_{16}H_{28}O_7$, obtained from herb and root of Paris quadrifolia.

Paridol, par'id-ol. Decomposition product, $C_{28}H_{14}O_9$, of paridin.

Paridro'ses (pl. of **Paridrosis**). Affections of the sweat apparatus.

Paridrosis, par-id-ro'sis (*para*, beside, *hidrosis*, perspiration). Disordered condition of perspiration.

Pari'era. Pareira brava.

Pa'ries (wall). Table. See *Parietes.*

Parietal, par-i'e-tal. Appertaining to the parietes or walls of an organ or to the parietal bones. **P. an'gle of Bro'ca,** angle between lines from auricular point to bregma and lambda. **P. an'gle of Lis'sauer,** angle between lines drawn in median plane of skull from parietal eminence to bregma and lambda. **P. an'gle of Qua'trefages,** angle expressive of projection of points on parietal bone with reference to zygomatic arch; *anterior,* lines drawn from most prominent part of arch through stephanion; *posterior,* from same point through the parietal protuberance. **P. arc,** on surface from bregma to lambda. **P. arch'es,** formed by convolutions of convex surface of cerebral hemisphere curving around end of Sylvian fissure; more apparent in lower animals than in man. **P. a'rea,** see *Areas of skull.* **P. ar'teries,** branches from middle cerebral supplying central convolutions, parietal lobe, and outer surface of temporal lobe. **P. bend** or **flex'ure,** flexure occurring at most projecting portion of mesencephalon in course of development of cerebro-spinal axis. **P. bones** are two fellow-bones occupying the lateral and upper parts of the cranium, in the formation of which they assist. They have a quadrilateral shape; their external surface is convex, and presents at its middle part an eminence called the *Parietal protuberance.* Their inner or cerebral surface, which is concave, has a depression that corresponds with the preceding eminence, and which is called the *Parietal fossa.* Above and behind, near the superior edge of these bones, is a foramen, which does not always exist, called the *Parietal foramen,* through which passes a vein—*parietal vein*—that opens into the superior longitudinal sinus of the dura mater; and an artery—*parietal artery.* Each parietal bone is articulated above with its fellow; below, with the temporal; before, with the frontal; behind, with the occipital; and by the anterior and inferior angle with the great ala of the sphenoid; and is developed from a single point of ossification. **P. convolu'tions,** situate upon parietal lobe, three: *ascending,* passing up and back along central sulcus; *superior* and *inferior,* separated by intraparietal sulcus, and from ascending by post-central. The superior appears on the median surface as the *quadrate lobule,* also called præcuneus; inferior borders upon posterior branch of Sylvian fissure, and is there called *supramarginal gyrus;* posteriorly it winds around the end of the parallel sulcus connecting with middle temporal convolution, and is there known as *angular gyrus.* **P. diam'eters** relate to the parietal regions of the skull, usually *biparietal d.* or distance between the parietal protuberances. The maximum p. d. does not necessarily coincide with this. The inferior p. d., between points upon posterior root of zygoma, vertically, over upper edge of auricular foramen; see also *Bi-auricular diameter.* **P. em'inence,** most prominent part of external surface of P. bone. **P. em'issary vein,** communication between superior longitudinal sinus and veins of the scalp through the parietal foramen. **P. eye,** eye-like extension of pineal gland, found betweenthe parietal bones in certain lower vertebrates. **P. fora'men, P. fos'sa,** see *Parietal bone.* **P. lobe,** posterior upper portion of the two hemispheres; convex surface bounded in front by central sulcus, below by posterior branches of Sylvian fissure and temporal lobe, behind by parieto-occipital fissure, transverse occipital sulcus, and occipital lobe; median surface bounded in front by ascending part of calloso-marginal sulcus, below by subparietal sulcus and falciform lobe, behind by parieto-occipital sulcus. **P. lob'ules,** portions of parietal lobe situate behind ascending parietal convolution; the *superior* and *inferior* are separated by the intraparietal sulcus. **P. nerves,** branches from auriculo-temporal to parotid gland. **P. notch,** indentation between squamous and mastoid portions of temporal bone, into which fits the postero-inferior angle of the parietal. **P. perito'neum,** see *Peritoneum.* **P. pleu'ra,** see *Pleura.* **P. por'tion of pericar'dium,** outer portion separated from the heart by the pericardial cavity. **P. protu'berance,** parietal eminence. **P. quad'rangle,** formed by lines connecting two sphenia and two entomia. **P. sec'tor,** area in median plane of skull between lines drawn from hormion to bregma and lambda. **P. seg'ment,** posterior segment of mitral valve. **P. sul'cus,** intraparietal sulcus. **P. ver'tebra,** in vertebral theory of skull, the complex formed by basisphenoid, alisphenoid, and parietal bones; some include also the temporals. See *Cranial vertebræ.*

Parieta'ria (*paries,* wall, because found on old walls). *Wall pellitory;* ord. Urticeæ. This plant contains much nitrate of potassium, and was formerly largely employed as a diuretic and also as an emollient. **P. Pennsylva'nica,** *American pellitory;* small weed, flowering from June to August; has been used, in juice or decoction, as a diuretic, deobstruent, and emmenagogue.

Pari'etes. Name given to parts which form the enclosures or limits of different cavities of the body, as the *Parietes of the cranium, chest,* etc.

Parietic acid, par-e-et'ik as'id. Chrysophanic acid.

Parietin'ic ac'id. Chrysophanic acid.

Parieti'nus. Parietal.

Parieto-hæmal (par-i'e-to-he'mal) **arch.** Hyoidean arch.

Pari'eto-ju'gal in'dex. Ratio of greatest transverse and bizygomatic diameters of skull, latter being taken as 100.

Pari'eto-mas'toid. Belonging to the parietal bone and the mastoid process of the temporal bone, as the parieto-mastoid suture.

Pari'eto-occip'ital fis'sure. Deep cleft appearing mainly on median surface of cerebral hemispheres, where its upper end corresponds nearly to vertex of lambdoidal suture, whence it descends downward and a little forward and ends in the calcarine fissure. The small part continued upon the convex surface is sometimes called *External p. o. fissure.*

Pari'eto-sphenoi'dal ar'tery. Inferior parietal artery. **P.-s. notch,** slight indentation of upper margin of squamous portion of temporal bone between the part which articulates with the parietal and that which articulates with the great wing of the sphenoid.

Parieto-splanchnic, par-i'e-to-splank'nik. Belonging to parietal walls and viscera.

Pari'eto-tem'poral su'ture. Suture between parietal and temporal bones, composed of squamo-parietal and parieto-mastoid sutures.

Parig'lin or **Paril'lin.** Smilacin; salseparin; crystallizable glucoside, active principle of sarsaparilla.

Parilia (par-il'e-ah) **Malabar'ica.** Species of Malabar; bark and leaves are used in decoction in hemorrhoids; root and leaves possess alterative properties.

Paril'la yel'low. Menispermum Canadense.

Par'in. Paridin.

Par'is. *Oneberry, Truelove.* Possesses narcotic properties, and was formerly considered a powerful philter; it is emetic, and is sometimes used externally as a resolvent and anodyne. The leaves are narcotic and diuretic. **P. blue,** Prussian blue; ferric ferrocyanide. **P. green,** *Scheele's green;* aceto-arsenite of copper; used as an insecticide. **P. red,** red sulphide of mercury; red lead; minium **P. white,** very white and soft chalk reduced to fine powder by elutriation. **P. yel'low,** lead chromate.

Parisac'ticus. Intussuscepted.

Parisagog'ge intestino'rum (*pareisago,* to introduce improperly). Intussusception of the bowels. See *Intussusception.*

Paristh'mia (*para, isthmos*, throat). Word employed to designate the tonsils, and likewise inflammation of the tonsils—cynanche tonsillaris—and cynanche in general.

Paristh'mic (*para, isthmos*, throat). Pertaining to the tonsils.

Paristhmion, par-isth'me-on. Cynanche tonsillaris.

Paristhmiot'omus (*paristhmia, tome*, incision). An instrument with which the tonsils were formerly scarified.

Paristhmi'tis (*paristhmia, itis*). Cynanche; C. tonsillaris; tonsillitis; Ludwig's angina.

Paristh'mium. Tonsil.

Paristyphnine, par-is-tif'neen. Glucoside, $C_{38}H_{64}O_{18}$, occurring as a yellowish-white powder; obtained from root of Paris quadrifolia.

Par'iswort. Trillium latifolium.

Par'ity. Equality; ability to bear children.

Parkinso'nia aculea'ta. Shrub; ord. Leguminosæ; South American and Mexican; Mexicans employ it as a febrifuge and sudorific.

Park'inson's disease. Paralysis agitans.

Parmac'ity (corr. from **Spermaceti**). Cetaceum.

P., poor man's, Thlaspi bursa.

Parme'lia furfura'cea (*parme*, light shield, shape of the receptacle). Lichen growing on trees; employed as a febrifuge. **P. Island'ica,** Lichen Islandicus. **P. parieti'na,** *Yellow wall lichen, Common yellow wall moss,* which grows abundantly on trees and walls; order Lichenaceæ; is used in intermittent fever on account of its bitterness. **P. plica'ta,** Lichen plicatus. **P. pulmona'cea,** Lichen pulmonarius. **P. roccel'la,** Lichen roccella. **P. saxat'ilis,** Lichen saxatilis.

Parmentie'ra cerif'era (after Parmentier). *Candle tree;* forest tree in the valley of the Chagres; ord. Crescentiaceæ, the long cylindrical fruit of which, resembling candles, serves for food for cattle.

Paroarion, par-o-ar'e-on (*para, oärion*, ovarium). Parovarium.

Paroccip'ital. Jugular process of occipital bone; separate in some apes. Mastoid apophysis. **P. fis'sure,** posterior part of interparietal fissure.

Parocheteusis, par-o-ke-tu'sis (*para, ocheteuo*, to divert water from). Derivation.

Parodin'ia or **Parodyn'ia** (*para, odune*, labor-pains). Dystocia. **P. perver'sa,** preternatural presentation.

Parodon'tides (pl. of **Parodontis**) (*para, odous*, tooth). Tumors on the gums; parulis, etc.

Parodyn, par'o-din. Name suggested for antipyrine.

Parœnia, par-e'ne-ah (*para*, beside, *oinos*, wine). Legal term denoting a tendency to crime caused by alcoholism.

Parol'ivary body. Nucleus of anterior root-zone.

Paromphalocele, par-om-fal-o-se'le (Eng. par-om'-fal-o-seel) (*para, omphalos*, navel, *kele*, rupture). Hernia near the navel.

Paroniria, par-on-ir'e-ah (*para, oneiron*, dream). Depraved, disturbed, or morbid dreaming. The voluntary organs connected with the passing train of ideas are overpowered by the force of the imagination during dreaming, and involuntarily excited to their natural or accustomed actions, while the other organs remain asleep. **P. am'bulans,** somnambulism. **P. sa'lax,** pollution.

Paronychia, par-o-nik'e-ah (*para, onux*, nail). Inflammation about the nail; periphalangeal cellulitis; panaritium. The ancients gave this name to an inflammatory tumor—*Onychitis, Onyxitis*—seated near the nail, and involving the pulp or matrix. Some moderns have extended it to inflammation of the hand, and even of the forearm. It usually means every phlegmonous tumor of the fingers or toes, and especially of the first phalanx. Four kinds of paronychia are commonly pointed out: 1. That seated between the epidermis and skin, called, vulgarly, in this country, *Runround;* 2. That seated in the subcutaneous areolar tissue; 3. That occupying the sheath of a tendon; and 4. That considered to be seated between the periosteum and bone. The last three are only different degrees of the same disease, constituting *Whitlow.* Also Asplenium ruta muraria. **P. digi'tium,** desiccation or atrophy of the fingers. **P. lateral'is,** onychogryphosis. **P. syphilit'ica,** syphilitic dactylitis. **P. tendino'sa,** panaritium tendinosum. **P. ungula'ris o'vium malig'na,** foot-rot. The worst kinds in English are called *Felon.* The inflammation generally commences in the subcutaneous areolar tissue, and spreads to other parts, occasioning excessive lancinating pain, owing to the parts being put upon the stretch; hence the necessity of dividing them freely—even down to the bone when there is reason to believe that the affection belongs to the fourth division—making use of emollient applications, the antiphlogistic treatment, and opiates to relieve pain.

Paron'ychis or **Paronychitis,** par-on-ik-e'tis. Paronychia.

Paronycho'ses (pl. of **Paronychosis**). Diseases belonging to the onychoses.

Paronychosis, par-on-ik-o'sis. Abnormal nail growth.

Paroöphori'tis. Inflammation near the ovary. See *Parametritis.*

Paroöph'oron. Parovarium.

Paropho'bia (*para, phobos*, dread). Hydrophobia.

Parophrenitis, par-o-fren-e'tis (*para*, beside, *phren*, diaphragm). Inflammation of the diaphragm.

Parophthal'mia (*para, ophthalmos*, eye). Binocular inflammation.

Parophthalmoncus, par-of-thal-mon'kus (*para*, beside, *ophthalmos*, eye, *onkos*, tumor). Swelling around the eye.

Paro'pia (*para, ops*, eye). Lesser canthus.

Paro'pium (*para, ops*, eye). Eye-shade.

Paroplex'ia (*para, plesso*, to strike). Paraplegia.

Parop'sis (*para, opsis*, sight). Sense of sight vitiated or lost. **P. amauro'sis,** amaurosis. **P. catarac'ta,** cataract. **P. glauco'sis,** glaucoma. **P. illuso'ria,** pseudoblepsia. **P. latera'lis,** dysopia lateralis. **P. longin'qua,** presbytia. **P. lucifuga,** nyctalopia. **P. noctifuga,** hemeralopia. **P. propin'qua,** myopia. **P. staphylo'ma,** staphyloma. **P. staphylo'ma purulen'tum,** hypopyon. **P. staphylo'ma simp'lex,** hydrophthalmia. **P. strabis'mus,** strabismus. **P. synezi'sis,** synezisis.

Paroptesis, par-op-ta'sis (*para, optao*, to roast). Forcing a sweat by placing a patient before the fire or putting him in a dry bath.

Parora'sis (*para, orao*, to see). Perversion of sight which prevents the person from judging accurately of the color of objects; achromatopsia; hallucination.

Parorchido-enterocele, par-or'kid-o-en-ter-o-se'le (Eng. en'ter-o-seel). Internal hernia complicated with displacement of the testicle.

Parorganum, par-or'gan-um (*para*, beside, *organon*, instrument). Growth of tissue bearing a resemblance to that of some organ.

Paros'mia (*para, osme*, odor). Anosmia; also perversion of smell. Peculiarity of sense of smell.

Parosphre'sis (*para, osphresis*, smell). Disordered sense of smell.

Parosteitis, par-os-te-e'tis (*para*, beside, *osteon*, bone). Inflammation around the periosteum.

Paros'tia (*para, osteon*, bone). Bones untempered in their substance, and incapable of affording proper support. **P. flex'ilis,** mollities ossium. **P. frag'ilis,** fragilitas ossium.

Parosti'tis. Inflammation on surface of periosteum.

Parosto'sis (*para, osteon*, bone). Formation of bone outside the periosteum, as in the connective tissue, sheaths of the vessels, etc.

Parotia, par-o'te-ah (*para, ous, otos*, ear). Cynanche parotidæa.

Paro'tic. Near the ear; relating to the parotid gland.

Parotid, par-ot'id. Largest of the salivary glands, seated under the ear, and near the angle of the lower jaw; composed of many separate lobes, giving rise to excretory ducts which unite to form one canal, called

the parotid duct, Steno's or Stenon's canal or duct—the ductus superior or superior salivary canal of some; see *Ductus salivalis superior*. This duct, after having advanced horizontally into the substance of the cheek, proceeds through an opening in the buccinator muscle, and terminates in the mouth opposite the second upper molar. About the middle of its course it sometimes receives the excretory duct of a glandular body situate in its vicinity and called the *Accessory gland of the parotid*. In the substance of the parotid are found a number of branches of the facial nerve, of the transverse arteries of the face, and the posterior auricular; it receives also some filaments from the inferior maxillary nerve, and from the ascending branches of the superficial cervical plexus. Its lymphatic vessels are somewhat numerous, and pass into ganglions situate at its surface or behind the angle of the jaw. The parotid secretes saliva and pours it copiously into the mouth. **P., ac'cessory gland of,** see *Parotid*. **P. aponeuro'sis,** a sheath of great thickness, continuous below with the cervical fascia; forms a framework to the parotid by means of fibrous prolongations from its deep surface. Its density accounts for the pain of parotitis and for the difficulty with which pus makes its way to the surface. **P. ar'teries,** see *Parotid*. **P. bu'bo,** cynanche parotidæa. **P. duct,** see *Parotid*. **P. veins,** see *Parotid*.

Parotide'an. Belonging or relating to the parotid. **P. plex'us,** see *Pes anserinus*.

Parotidectomy, par-ot-id-ek'to-me (*parotis, ektome,* excision). Operation for excision of parotid gland.

Parotideo-masseteric, par-ot-id-e'o-mas-se-ter'ik. Relating to vicinity of parotid gland and masseter muscle.

Parotiditis, par-ot-id-e'tis (*parotid, itis*). Cynanche parotidæa or mumps; parotis.

Parotidoncus, par-ot-id-onk'us (*parotid, onkos,* a tumor). Swelling of the parotid. Mumps.

Parotidoscirrhus (par-ot-id-o-skir'rhus). Scirrhus of parotid gland.

Parotine, par'o-tene (*parotis,* parotid). Term applied to the specific principle by which mumps is propagated.

Paro'tis (*para, ous, otos,* ear). Near the ear; parotid gland. **P. accesso'ria,** accessory parotid gland. The name of a tumor seated under the ear, which is reddish, hard, and attended with obtuse pain, the progress to suppuration being slow and difficult. Sometimes it is of a malignant character, sloughing, and long protracted. Also the parotid. **P. contagio'sa,** cynanche parotidæa. **P. epidem'ica,** cynanche parotidæa. **P., idiopath'ic,** mumps occurring without being connected with another disease. **P. sero'so glu'tine tumens,** cynanche parotidæa. **P. spu'ria,** cynanche parotidæa.

Paroti'tis (*parotis, itis*). Inflammation of the parotid; mumps; cynanche parotidæa; parotis. **P., du'plex,** parotitis involving parotid glands on both sides. **P. epidem'ica,** cynanche parotidæa. **P. erysipelato'sa,** cynanche parotidæa. **P., metastat'ic,** attack of mumps in which metastasis to the testicles occurs. **P. polymor'pha,** cynanche parotidæa. **P. specif'ica,** cynanche parotidæa. **P. symptomat'ica,** parotitis, metastatic.

Parou'lis. See *Parulis*.

Parova'rian cysts. Cysts in vicinity of the ovary.

Parovar'ium (*para, oarion,* ovary). Properly *Paroarion, Paroöphoron, Organ* or *Body of Rosenmüller, Appendage to the ovary*. Body closely analogous in structure to the epididymis, which is seated between the Fallopian tube and the ovary in the broad ligament. The corpus Wolffianum concurs in its formation. The portion of the ovary in relation with the hilum of that organ is sometimes called the *Paroöphoron*, and the excretory tubules and ducts attached to the ovary are known as the parovarium. The parovarium existing also in the adult female has been called *Proövarium*.

Paroxyntic, par-ox-in'tic (*paroxuno,* to excite). Relating to a paroxysm.

Paroxyquinoline (pa-roks-e-kwin'o-leen) **hydrochlorate.** Powder, soluble in water, devoid of taste or smell; formula, C_9H_7NO,HCl; possessing antipyretic properties.

Par'oxysm (*paroxuno,* to irritate). Augmentation which supervenes at equal or unequal intervals in the symptoms of acute diseases. Also a periodical exacerbation or fit of a disease.

Paroxys'mal. Of or belonging to a paroxysm, as a paroxysmal day; a day on which a paroxysm of disease occurs.

Paroxys'mus febri'lis. Febrile paroxysm; pyrexia.

Par'rot's disease. Syphilitic pseudoparalysis. Exophthalmic goitre. **P.'s nodes,** syphilitic osteophytes of skull. **P.'s sign,** dilatation of the pupil when the skin is pinched; a symptom of meningitis.

Par'ry's disease. See *Exophthalmic goitre*.

Pars (part). Genital organ. **P. acetabula'ris,** acetabular bone. **P. ascen'dens,** vertical plate of palate-bone. **P. basila'ris os'sis occip'itis,** basilar process of occipital bone. **P. bulbo'sa ure'thræ,** bulbous urethra. **P. carno'sa ure'thræ,** membranous urethra. **P. cartilagin'ea tu'bæ,** cartilaginous portion of Eustachian tube, about two-thirds its length. **P. caverno'sa ure'thræ,** spongy urethra. **P. chorda'lis,** portion of base of skull occupied originally by chorda dorsalis, extending from foramen magnum in body of occipital and sphenoid bones as far forward as sella turcica. **P. cilia'ris,** see *Retina*. **P. cilia'ris hyaloi'dea,** ciliary zone. **P. conjunctiva'lis cor'neæ,** epithelial layer of cornea. **P. cor'poris,** genital organs. **P. cuneifor'mis tegmen'ti tym'pani,** anterior portion of tegmen. **P. descen'dens substan'tiæ perfora'tæ anti'cæ me'diæ,** lamina terminalis. **P. fronta'lis,** squama frontalis. **P. horizonta'lis,** horizontal plate of palate-bone. **P. horizonta'lis duode'ni,** horizontal portion of duodenum. **P. h. d. infe'rior,** transverse portion of duodenum. **P. h. d. supe'rior,** horizontal portion of duodenum. **P. infe'rior pe'dis,** sole. **P. interfascia'lis ure'thræ,** membranous urethra. **P. interme'dia,** intermediary nerve. **P. irid'ica ret'inæ,** P. retinalis iridis. **P. i. u'veæ,** P. uvealis iridis. **P. mala'ris,** portion of malar bone forming prominence of cheek. **P. mastoi'dea of tem'poral bone,** mastoid process. **P. membra'na sep'ti,** area at upper part of interventricular septum of heart that remains thin and membranous. **P. membra'no-ure'thræ,** membranous urethra. **P. muscular'is,** see *Urethra*. **P. nasa'lis,** horizontal part of frontal bone between two orbital plates; vertical plate of ethmoid. **P. natura'lis medici'næ,** physiology. **P. nu'da,** see *Urethra*. **P. obli'qua ascen'dens duode'ni,** transverse duodenum. **P. obscœ'na,** genital organs. **P. occipita'lis,** supraoccipital bone. **P. os'sea tu'bæ,** osseous portion of Eustachian tube, about one-third its length. **P. palati'na,** horizontal plate of palate-bone. **P. papilla'ris,** papillary layer of skin. **P. pelvi'na,** see *Urethra*. **P. perinea'lis ure'thræ,** spongy urethra. **P. perpendicula'ris,** vertical plate of palate-bone. **P. petro'sa,** see *Temporal bone*. **P. pri'ma as'peræ arte'riæ,** larynx. **P. prostat'ica,** prostatic portion of the urethra. **P. pylor'ica,** pyloric end of stomach. **P. pyramida'lis os'sis tem'poris,** see *Temporal bone*. **P. reticula'ris,** reticular layer of skin. **P. retina'lis ir'idis,** epithelial portion of iris, formed originally from secondary optic vesicle. **P. sclera'lis cor'neæ,** Bowman's membrane. **P. spongio'sa,** see *Urethra*. **P. squamo'sa,** see *Temporal bone*. **P. transver'sa duode'ni,** transverse duodenum. **P. triangula'ris,** anterior portion of third frontal convolution. **P. tympan'ica,** tympanic portion of temporal bone. **P. ure'thræ membrana'ceæ,** see *Urethra*. **P. urethra'lis levato'ris a'ni,** erroneous designation of fibres of inferior sheet of ischio-rectalis, which loop around the urethra. **P. uvea'lis cor'neæ,** Descemet's membrane. **P. uvea'lis ir'idis,** connective-tissue portion of iris forming its external layer. **P. va'ga,** pneumogastric. **P. vir'ilis,** penis.

Pars'ley camphor (corr. from **Petroselinum**). Stearopten obtained from volatile oil of parsley. **P., com'mon,** Apium petroselinum. **P., fool's,** Æthusa

cynapium. **P. fruit,** *Petroselinum sativum,* contains volatile oil and apiol; carminative, antiperiodic. **P., hem'lock,** Conioselenium Canadense. **P., Macedo'nian,** Bubon Macedonicum. **P., mountain, black,** Athamanta aureoselinum. **P., piert** (corr. from Fr. *perrer la pierre,* to pierce the stone), Alchemella arvensis. **P., poi'son,** Conium maculatum. **P. root,** carminative, diuretic, emmenagogue. **P., water,** Cicuta maculata.

Par'snep or **Par'snip, cow.** Ord. Umbelliferæ; Heracleum spondylium; Heracleum lanatum. **P., crow,** Leontodon taraxacum. **P., gar'den,** Pastinaca sativa. **P., mead'ow,** thaspium. **P., water, common,** Sium latifolium.

Par'sons' disease. Exophthalmic goitre.

Part. Member or organ of the body.

Part. æq. (abbr. for partes æquales). Equal parts.

Part. aff. (abbr. for partes affectæ). Parts affected.

Part. dolent. (abbr. for partes dolentes). Parts in pain.

Part. vic. (abbr. for partitis vicibus). In divided doses.

Par'tes (pl. of **Pars**). Genital organs. **P. generatio'ni inservien'tes,** genital organs. **P. genita'les,** genital organs. **P. jugula'res** or **latera'les os'sis occip'itis,** exoccipital bones. **P. latera'les na'si,** lateral portions of the nose. **P. nervo'sæ,** see *Nerve.* **P. obscœ'næ,** genital organs. **P. orbita'les,** orbital plates.

Partheni'a. Virginity.

Parthenicine, par-then'is-een. Parthenine.

Parthen'ii ra'dix. Root of Artemisia vulgaris.

Parthenine, par'then-een. Alkaloid from Parthenium hysterophorum, said to be a substitute for quinine as a febrifuge.

Partheni'um febrif'ugum (*parthenos,* virgin; used in diseases of virgins). Matricaria. **P. hysteroph'orum,** broombrush, West Indian mugwort; has febrifuge properties, and is employed externally in cutaneous affections. **P. integrifo'lium,** *Prairie dock;* an herbaceous perennial of the south-western portions of the U. S., an infusion of the flowering tops of which is used as an antiperiodic. **P. mas,** tanacetum.

Partheni'us (morbus) (*partheneios,* relating or appertaining to a virgin). Disease in a young female.

Parthenochloro'sis (*parthenos, chloros,* green). Chlorosis of girls.

Parthenogalactozemia, par-then-o-gal-ak-to-ze'me-ah (*parthenos,* virgin, *gala,* milk, *zemia,* loss). Discharge of milk from the breast occurring in young girls.

Parthenogenesis, par-then-o-jen'es-is (virgin birth, *parthenos,* virgin, *genesis,* generation). *Virginal generation; Parthenogenetic reproduction.* Successive production of procreating individuals from a single ovum, without any renewal of fertilization.

Parthenogenet'ic. Relating or appertaining to parthenogenesis.

Parthenol'ogy (*partheneia,* virginity, *logos,* description). Description or consideration of the state of virginity in health or disease.

Parthenonosus, par-then-on'o-sus (*parthenos, nosos,* disease). Chlorosis.

Par'thenus. Virgin.

Par'tial (*pars,* part). Comprising or affecting a part only, not total or general; as partial paralysis, etc. **P. aponeuro'sis,** aponeurosis of intersection. See *Aponeurosis.* **P. re'flexes,** movements in one muscle or one limited group of muscles from reflex irritation.

Partia'lis (*pars,* part). Local.

Par'ticles, prim'itive, of mus'cles. Sarcous elements. **P-s, red, of the blood,** blood-corpuscles, red.

Partic'ula femora'lis. Nates.

Partic'ulæ (dim. of **Pars,** part) **san'guinis.** Globules of the blood.

Par'tio (*pario,* to bring forth). Parturition.

Par'tite. Divided nearly to the base.

Part'ridge ber'ry. Gaultheria; Mitchella repens. **P. pea,** Cassia chamæchrista.

Parts, pri'vate. External genitals. **P., the,** genital organs.

Partu'ra (*parturio,* to bring forth). Parturition.

Partu'rient. Bringing forth, or about to bring forth, or having recently brought forth, young. The *Parturient, Puerperous, Childing, Child-bed,* or *Lying-in* or *Lying-down state, Confinement, Puerperium,* generally comprises the period from parturition to perfect recovery, which is usually a month. It requires careful management, and is subject to various diseases. A *parturient* or *parturifacient* is a medicine which induces or promotes labor, as ergot; see *Abortive.* **P. ap'oplexy,** puerperal disease of cows, characterized by arrest of lactation, fever, delirium, and brain congestion.

Parturien'tes dolo'res. Labor-pains.

Parturifa'cient (*parturio,* to bring forth, *facio,* to make). Parturient; abortive.

Parturiom'eter. Instrument which, applied to the presenting part of the fœtus during labor, indicates the expulsive contractile force of the uterus.

Parturit'ion. *Delivery, Labor, Childbearing, Childbirth, Birth, Travail;* expulsion of fœtus at term. Act of delivery of the fœtus and its appendages; also the state during and immediately after delivery—*Childbed;* see *Parturient.* Labor is the necessary consequence of conception, pregnancy, and the completion of gestation. It does not take place, at the full time, until after nine months of uterogestation, the causes producing it being the contraction of the uterus and abdominal muscles. By different authors the stages of labor have been variously divided. We may, perhaps, admit of four. The *first stage* comprises the precursory signs. One, two, or three days before labor, a mucous discharge, streaked with blood, takes place from the vagina, which is called *Laborshow* or *Show,* and along with this, trifling grinding pains, called by the French *Mouches,* are felt in the loins and abdomen. The *second stage:* peculiar pains which extend from the lumbar region toward the uterus; tension and dilatation of the neck and orifice of that organ; protrusion into the vagina of the envelopes of the fœtus, forming the *bag of waters;* and rupture or breaking of the waters. *Third stage:* contractions of the uterus and abdominal muscles; forcing pains; the head of the fœtus becomes engaged in the pelvis; the occiput, being commonly situate above the left acetabulum, passes beneath the arch of the pubis. *Fourth stage:* the head now presents at the vulva, the perineum being considerably distended; at length it clears the external parts, and the rest of the body is easily disengaged. The child still continues attached to the mother by the umbilical cord, which has to be divided. In the course of fifteen or twenty minutes trifling pains occur, and the secundines are expelled. This completes delivery—the *birth* of the child. In by far the majority of cases the head is the presenting part, the occiput directed anteriorly, and the face posteriorly. Of 12,633 children born at *La Maternité,* in Paris, from the 10th of December, 1797, to the 31st of July, 1806, the following were the presentations:

The head, with the face posteriorly	12,120
The head, anteriorly	63
The breech	198
The feet	147
The knees	3
Other positions	102
	12,633

Labor has received different names according to the period of pregnancy at which it occurs and the mode in which it takes place. It is called *miscarriage* or *abortion* prior to the seventh month; *premature labor* or *parturition* between this and eight months and a half; and *labor at the full period* when it happens at the end of nine months. Labors have likewise been variously divided by different authors. Perhaps the one into *natural* and *preternatural* is as good as any—natural labor meaning that which would occur without manual assistance; and preternatural, requiring the assistance of art, either by the hand solely, or with the aid of instruments—*instrumental labor.*

Powerless labor is that in which the muscular powers, from exhaustion, cannot accomplish delivery. *Precipitate labor* is one hastened by circumstances usually beyond control. *Forced labor* is labor or abortion produced by art. When accompanied with phenomena of a deranging character, it is *complicated*. When the child cannot pass, it is termed *impracticable*, etc.

The following table, from data furnished by Velpeau, gives an approximate view of the nature of the presentations in 1000 cases in the experience of each of the individuals mentioned. A second table presents a comprehensive sketch of the course and management of the different kinds of labor, natural and preternatural:

Table of the Course and Management of Different Kinds of Labor.

I. Natural Labors,

Or those in which Delivery can be effected without Assistance.

Head Presenting. (*Four Positions.*)

1. *Occiput toward the left acetabulum.* — The head with the chin bent upon the breast clears the brim of the pelvis. Movement of rotation produced by the inclined planes of the pelvis; the occipital protuberance is carried behind the symphysis pubis, and the face toward the hollow of the sacrum.
2. *Occiput toward the right acetabulum.* — The head attains the outlet; clears it; the occiput being first disengaged, and the face afterward, which passes successively along the whole of the hollow of the sacrum. The shoulders enter the brim diagonally and execute the movement of rotation. The one behind first clears the outlet. The same thing occurs with the nates.
3. *Occiput toward the right sacro-iliac symphysis.* — The same course is here followed, except that after the rotary movement the face passes behind the symphysis pubis, and the occiput into the hollow of the sacrum. The occiput is first extruded, the face next.
4. *Occiput toward the left sacro-iliac symphysis.* — When the chin presents and is turned forward the face is first expelled; the head is thrown backward. This presentation is uncommon. If the chin present and be thrown backward, natural delivery cannot be effected.

Lower Extremity Presenting. (*Four Positions of the Feet, Knees, and Breech.*)

1. *Heel, tibia, or sacrum toward the left acetabulum.* — The nates enter the brim diagonally; movement of rotation; the one passes behind the symphysis pubis; the other toward the hollow of the sacrum. The one behind is first extruded.
2. *Heel, tibia, or sacrum toward the right acetabulum.* — The same thing happens to the shoulders. The chin is bent upon the chest to clear the brim; movement of rotation; the occiput passes behind the symphysis pubis, and the face toward the hollow of the sacrum. The face clears the outlet first; the occiput last.
3. *Heel, tibia, or sacrum toward the right sacro-iliac symphysis.*
4. *Heel, tibia, or sacrum toward the left sacro-iliac symphysis.* — The same progress, except that after the movement of rotation the face is toward the pubis, and the occiput toward the sacrum. The face is here again delivered first.

II. Preternatural Labors.

1. *Those which require Manual Assistance only.*

Presentation of the Head, Upper Extremities, Back, Abdomen, etc.

1. When the labor is without any serious complication, and the head is not in a good position at the brim of the pelvis, endeavors are to be made to place it in its natural position: the hand to be introduced with the fingers united, and the long diameter of the head to be placed diagonally in the brim, if possible. Or the lever may be fixed over the occiput, and, by drawing it down, a closer approximation of the chin and chest may be effected; the position of the head to the pelvis being at the same time attended to.
2. If complicated with syncope, convulsions, hemorrhage, want of uterine action, etc., the feet must be laid hold of and the child *turned*. For this purpose, empty the rectum and bladder, and turn, if possible, prior to the escape of the liquor amnii. The female may be placed on her back or left side, with the breech over the edge of the bed. Use the right or left hand, according as the feet of the child are to the right or left side of the pelvis; always so introducing the hand that the child shall be in its palm, and the back of the hand opposed to the inner surface of the uterus. The hand and arm to be introduced during an interval of pain; and they must be flattened and tranquil while the uterus is contracting forcibly. If both feet cannot be readily brought down, seize one, and tie a fillet around it.

PRESENTATION OF THE HEAD, etc. (*Cont'd.*).

3. If the toes point to the vertebral column or to the abdomen of the mother, the head, in its descent, will not enter the pelvis: the chin and occiput will be hitched on the pubis and promontory of the sacrum. In such case, grasp the nates as soon as they have passed the os externum; and, during a pain, endeavor to direct the toes toward either sacro-iliac synchondrosis. When the fingers are passed along the body of the child and over the shoulders to the bend of the elbows, draw down the arms successively. When the body is expelled, and the head filling up the brim, the termination of labor must be accelerated by passing two fingers over the shoulder of the child, using moderate and steady extracting power, while one finger of the other hand, passed into the mouth, depresses the chin on the sternum. In this way the head may be extracted.

2. *Those requiring the Assistance of Appropriate Instruments.*

GENERAL OBSERVATIONS . . . . . If the pains become feeble, or inadequate from any cause, or if the presenting part be firmly wedged in the pelvis, or the woman be becoming exhausted, instrumental assistance may be required. In all such cases place the female on the back or left side, empty the bladder and rectum; wait till the os uteri is in a fit state; afford assistance during the pains; introduce the instrument during the intervals between the pains; have the patient on her left side (generally), and extract according to the axes of brim and outlet, as the case may be.

USE OF FORCEPS, ETC.

1. *Short Forceps* . . . . . Apply these to the sides of the head of the child, so that the ears and parietal protuberances may be within the fenestræ. Introduce the left-hand blade first, the index and middle fingers of the right hand guiding it to the ear. With the right hand pass the other in an opposite line, corresponding with the course of the first blade, guided by the fore and middle fingers of the left hand, the third and little fingers being employed to retain the left-hand blade in place; humor the instrument so as to allow the blades to lock. The handles may now be tied gently together. The force used must be from blade to blade, with a gentle, tractile effort.

2. *Long forceps* . . . . . Applicable where the head has not entered the brim. The long forceps must be applied, in most cases, over the occiput and face of the child, so that the convex edges of the blades may be toward the hollow of the sacrum. When used, the power may be exerted from side to side, with moderate traction.

3. *Lever* or *Vectis* . . . . . The lever is applicable to the same cases as the forceps. It must not be used strictly as a lever, but as a hook with which to draw downward. It may be applied to any part of the head, but is generally hitched on the occiput.

4. *Fillet* and *Blunt Hook* . . . . In certain cases of breech and knee presentation, where the hand is sufficient, it may be necessary to pass over the joint a fillet, or the blunt hook, with which to exert some force of traction. The operation is very simple.

EMBRYULCIA . . . . . Disproportionate size of head or distorted or deformed pelvis may require the child to be destroyed and its bulk lessened; or the Cæsarean section or symphyseotomy, or the induction of premature labor, may be called for.

The instruments here are the *Perforator*, *Crotchet*, and *Craniotomy forceps*. Make a steady pressure on the abdomen; pass two fingers of the left hand up to the head; feel for a suture or fontanel; introduce the perforator, and bore through until the progress of the instrument is arrested by its *shoulders*. Open the handles, and turn the instrument in different directions, so that the opening may be large enough to admit the perforator, with which the brain must be broken down.

If, after, this, delivery cannot be accomplished without further aid, pass up the craniotomy forceps; open the handles slightly, and introduce the blade without teeth within the cranium. On closing the forceps, a hold is obtained, and a tractile force can now be exerted during the pains, and the extrusion of the child be effected.

Should great difficulty exist at the brim, the bones at the top of the head may have to be removed, until the base alone remains. The chin must then be brought through first.

The guarded crotchet is sometimes used instead of the craniotomy forceps, being passed into the opening made by the perforator, and hooked upon some bony projection in the interior of the skull; but it is not a good instrument. In presentations of the face demanding perforation of the cranium the perforator should be introduced just above the nose, in the sagittal suture.

When it is necessary to open the head after the lower extremities have been expelled, the perforation must be made behind the ear.

SYMPHYSEOTOMY AND CÆSAREAN SECTION. In cases of great narrowness of the pelvis, the operation of *Symphyseotomy* has been adopted by the Italian and French practitioners—rarely by the British, much more frequently by the American; and, in extreme cases, recourse has been had to the *Cæsarean section*.

SEPARATION OF THE HEAD OF THE FŒTUS FROM THE BODY. If the body of the fœtus has been forcibly separated and the head left in the uterus, it must be laid hold of with one hand and the forceps be applied; or the head be opened and delivered, as under Embryulcia. Should the head have been brought away and the body left behind, the feet must be brought down.

INDUCTION OF PREMATURE LABOR. In cases of narrowness of the pelvis, where the fœtus, at the full term, cannot be born alive, delivery may be brought about at an earlier period, or as soon as the child is capable of carrying on its functions independently of the mother.

One plan for accomplishing this object is merely to pass the finger round and round within the os and cervix uteri, so as to detach the decidua, the membranes being thus left entire and the life of the child not as much endangered as where the membranes are punctured and the waters evacuated. Parturition usually follows within forty-eight hours. At the present day the introduction of a flexible bougie between the uterine wall and the membranes is the plan generally adopted.

The laying of eggs by animals is called *Ovation*, a term applied to periodical discharge of ova supposed to take place at each menstrual period.

Parturit'ion, dry. See *Partus siccus.*

Partu'rium va'num. Abortion. Expulsion of products of false conceptions, as hydatids, clots, etc.

Par'tus (*pario*, to bring forth). Parturition. As an adjective, born. **P. abac'tio**, abortion. **P. abac'tus**, abortion. **P. æ'gre**, partus Agrippinus. **P. Agrippi'nus**, labor in which the breech presents. **P. Cæsa'reus**, see *Cæsarean section*. **P. cap'ite præ'vio**, delivery, head. **P. clu'nibus præ'viis**, delivery in which the breech presents. **P. diffic'ilis**, dystocia. **P. emor'tuus**, stillborn. **P. immatu'rus**, parturition, premature. **P. imperfec'tus**, delivery, incomplete. **P. intempesti'vus**, see *Parturition*. **P. laborio'sus**, dystocia; laborious labor. **P. le'ge ar'tis procuran'dus**, premature artificial parturition. **P. matu'rus**, parturition at full term. **P. præcipita'tus**, labor, precipitate. **P. præ'cox**, premature parturition. **P. præmatu'rus**, premature parturition. **P. seroti'nus**, labor succeeding a pregnancy that has been extended beyond the usual period. **P. sic'cus**, *Dry labor* or *Parturition:* labor which is neither preceded nor attended by a discharge of the liquor amnii. **P. per vias natura'les**, natural parturition, in contradistinction to delivery by operation.

Paru'lis (*para*, *oulon*, gum). *Gumboil*, *Alveolar abscess.* Small abscesses are so called which generally form in the alveoli and involve the gums, sometimes without

any known cause, but which often depend upon carious teeth.

Parumbilical, par-um-bil'ik-al. Near the umbilicus. **P. veins,** small vessels running from the portal vein along the round ligament of the liver to the umbilicus, and there connecting with the epigastric veins.

Paru'ria (*para, oureo,* to pass urine). Morbid secretion or discharge of urine. **P. incon'tinens,** enuresis. **P. incon'tinens aquo'sa,** see *Diabetes.* **P. inops,** ischuria, false. **P. melli'ta,** diabetes. **P. retentio'nis,** ischuria. **P. retentio'nis rena'lis,** ischuria. **P. retentio'nis vesica'lis,** retention of urine. **P. stillati'tia,** strangury. **P. stillati'tia muco'sa,** cystirrhœa.

Paruroseptis, par-u-ro-sep'tis (*para, ouron,* urine, *kustis,* bladder). Appendage or sacculus of urinary bladder.

Parvipsoas, par-ve-so'as. Psoas parvus.

Par'vitas morbo'sa par'tium organica'rum. Morbid smallness of organic parts.

Parvoline, par'vo-leen. First ptomaïne analyzed and chemically defined; discovered by Gautier and Etard in 1881; oily liquid, amber-colored, odor of hawthorn, boiling slightly below 200° C.; obtained from putrefying mackerel and horseflesh. Compound obtained from bituminous schists rich in animal fossils.

Par'ygron (*para, hugros,* humid). Liquid or moist preparation for allaying topical inflammation.

Pas'ma (*passo,* to sprinkle). Catapasm.

Pas'palum longiflo'rum. Millet grass, the juice of which, added to rice and cocoanut oil, is employed locally as an anæsthetic.

Pasque flower (from flowering about Easter). Anemone pulsatilla.

Pas'sa (*patior,* to suffer). Paronychia.

Pas'sæ (*passus,* dried) **Corinthi'acæ.** See *Vitus Corinthiaca.*

Pas'sage. Dejection from the bowels. Canal.

Pas'sages, alve'olar. Passages which originally were bronchioles, and which receive openings of the infundibula. **P., diges'tive,** portion of alimentary canal and its accessory parts concerned in digestion. **P., lac'rymal,** lacrymal passages. **P., lob'ular, of lung,** passages, alveolar. **P., lymph,** lymph-sinus. **P., sec'ond,** chyliferous vessels, lymphatics, and blood-vessels.

Passeri'na tartonraira (*passer,* a sparrow, alluding to the beaked seed). Plant whose bark is possessed of epispastic properties. An ointment, prepared like that of mezereon, is said to possess more activity than the latter. **P. tincto'ria,** shrub employed in dyeing wool in South of Europe; bark possesses purgative properties.

Passerva. Name given in the East Indies to sediment found in vessels in which opium-juice is stored.

Passibil'ity, great (*patior,* to suffer, *habilis,* able). Hyperæsthesis.

Passiflo'ra laurifo'lia (*passio,* passion, *flos,* flower). *Bayleaved passion flower,* ord. Passifloreæ; a native of Surinam; fruit has a delicious smell and flavor, and quenches thirst, abates heat of the stomach, increases the appetite, etc. **P. malifor'mis,** *Apple-shaped granadilla;* fruit of this species is esteemed a delicacy in the West Indies, where it is served up at table in desserts. Some of the genus are said to possess narcotic and emetic properties.

Passiflorine, pas-se-flo'reen. Alkaloid from Passiflora quadrangularis, possessing virtues similar to morphine.

Passio, pas'se-o (*patior,* to suffer). Disease; passion. **P. æmopto'ica,** hæmoptysis. **P. cadi'va,** epilepsy. **P. cardi'aca,** cardialgia. **P. choler'ica,** cholera. **P. cœli'aca,** cœliac flux. **P. fellif'lua,** cholera. **P. hæmopto'ica,** hæmoptysis. **P. hypochondri'aca,** hypochondriasis. **P. hyster'ica,** hysteria. **P. ili'aca,** ileus. **P. ischiad'ica,** neuralgia femoropoplitæa. **P. pleurit'ica,** pleuritis. **P. stomach'ica,** dyspepsia. **P. ventriculo'sa,** cœliac flux. **P. vomico'flua,** phthisis pulmonalis.

Pas'sion. An active affection or emotion of the mind, as rage, terror, love, hatred, etc.; also suffering from disease; ardent sexual desire. **P., cœ'liac,** see *Cœliac flux.* **P. flow'er, bay'leaved,** Passiflora laurifolia. **P., hæmatocœ'liac,** dysentery in which bloody evacuations occur. **P., hyster'ic,** hysteria. **P., il'iac,** ileus.

Passio'nes (pl. of **Passio**) **an'imi.** Affections of the mind.

Pas'sive. Epithet for diseases which seem, owing to a greater or less diminution of the strength, or which are, without apparent reaction. Thus, passive hemorrhages are such as supervene in debilitated individuals or under conditions in which increased action of the arteries can scarcely be presumed. Term has also been given to aneurisms of the heart with the extenuation of the parietes; in opposition to *active* aneurisms with thickness of the parietes—hypertrophy. *P. processes* are those which exhibit little cellular activity, with tendency to degeneration. **P. insuffi'ciency of mus'cles,** see *Insufficiency.* **P. mo'tion,** motion caused by external force, not by muscular efforts of the patient.

Pas'sulæ majo'res (dim. of **Passæ** [*uvæ*]). See *Vitis vinifera.* **P. mino'res,** see *Vitis Corinthiaca.*

Passula'tum. A medicine in which the pulp of raisins or currants is a chief ingredient.

Passum, pas'sum. Wine made from raisins.

Pas'ta. Paste. **P. althæ'a,** paste, marshmallow. **P. amygdali'na,** confection (almond). **P. caus'tica Viennen'sis,** see *Powder, Vienna.* **P. de dac'tylis,** paste, date. **P. emulsi'va,** confection (almond). **P. glycyrrhi'zæ gum'mata et anisa'ta,** a compound of *Extract of licorice, Gum Senegal, Sugar, Florence orris root,* and *Volatile oil of aniseed;* demulcent. **P. guarana** (gwar-an-ah'), guarana. **P. gummo'sa,** gum paste. **P. de juju'bis,** paste of jujubes. **P. re'gia,** confection (almond). **P. zin'ci chlo'ridi,** *Paste of chloride of zinc, Canquoin's caustic paste, Canquoin's paste* (zinc chloride 32, water 4 parts; dissolve and add zinc oxide 8, wheat flour 24 parts; dry thoroughly); escharotic. This caustic destroys the part in a direct ratio with the thickness of the layer applied. A cancer composition of which the effective ingredient is chloride of zinc was introduced into England by an American of the name of Fell. The external application or paste was composed of decoction of sanguinaria and chloride of zinc, of each two ounces; flour, a sufficient quantity to form a glutinous paste. The decoction of sanguinaria was also given internally, but was probably of no effect.

Paste. A viscid, tenacious mixture; also a compound medicine like the pastil, but less consistent, flexible, less saccharine, and more mucilaginous. Pastes of opium, etc. are used by the dentist in dental caries to relieve pain; and similar preparations of astringents and aromatics are applied to the gums to give tone to them and improve the breath. See *Canquoin's, Coster's, Dupuytren's, Jujube, Licorice, London, Marshmallow, Michel's,* and *Vienna paste.* A convenient paste for attaching labels to glass or for other services is made of gum tragacanth and water, to which alum is added. Another form is to make a solution of gum arabic, ℥j, boiling water, f℥ij, and glycerin, f℥ij; and another is made by mixing powdered gum arabic and powdered tragacanth, of each ʒss, water, f℥jss, acetic acid, ♏xx. **P., Caglia'ri,** see *Turundæ Italicæ.* **P., Can'quoin's,** pasta zinci chloridi. **P. of chlo'ride of zinc,** pasta zinci chloridi. **P., Cos'ter's,** see *Coster's paste.* **P., date,** composed of dates, sugar, gum arabic, water, and orange-flower water (Ph. P.); demulcent. **P. of Ice'land moss,** a paste made by boiling Lichen Islandicus to a proper consistence and adding gum arabic and sugar. **P., Ital'ian,** see *Turundæ Italicæ.* **P. of ju'jubes,** composed of jujubes, gum Senegal, sugar, water, and tincture of lemon-peel; demulcent. **P., Llandolf'i's,** see *Bromine.* **P., Lon'don,** a paste made of equal parts of caustic soda and unslaked lime in powder, prepared as a paste with water when required for use; it is applied to growths in the larynx, enlarged tonsils, etc. **P., Manec''s,** a powerful paste employed

for the removal of epithelial growths, composed of white arsenic, gr. xv, cinnabar, gr. lxxv, burnt sponge, gr. xxxv, made into a thick paste with a few drops of water. **P., marsh'mallow,** a compound of gum arabic, sugar, white of egg, and orange-flower water; it is demulcent. **P., sen'na,** a paste prepared by beating figs and powdered senna thoroughly together to the consistence of a confection and covering with sugar. **P., tooth,** see *Dentifricium.* **P., Vien'na,** see *Powder, Vienna.* **P., Ward's,** confectio piperis nigra.

Pastel' (dim. of **Pasta**). Isatis tinctoria.

Pas'tern. Part between fetlock joint and hoof in the horse; homologue of phalanges.

Pasteurization, pas-tur-i-za'shun. Prevention of decomposition, as in milk or wine, by destroying the micro-organisms contained therein.

Pasteur's (pas-ter's) **fluid.** Cane-sugar, 108 gm.; ammonium tartrate, 10 gm.; ashes of yeast, 0.75 gm.; distilled water, 1000 cc. Used as a culture-medium.

Pastil, pas-teel' (dim. of **Pasta**). A compound of aromatic substances with nitre; used as a fumigating material when set fire to. See *Fumigation.* The French use the term *pastille* for a solid, dry, round, oblong, square, or triangular compound whose base is essential oil, and sugar the excipient. These pastilles are in fact small lozenges, and only differ from the *tablette* in their lesser size.

Pastil'li digesti'vi Darcet'ii. See *Trochisci sodæ bicarbonatis.* **P. emeti'næ pectora'les,** trochisci emetinæ pectorales. **P. men'thæ piperi'tæ,** *Peppermint drops* (sacch. alb., aquæ menthæ pip., aq. destillat., āā ℥ij; boil to the consistence of an electuary; take of fine white sugar in powder, ℥iv, volatile oil of peppermint, ℥ss; mix, and add the electuary while warm; drop it then on marble, and dry the drops; Ph. P.). **P. nat'rii bicarbon'ici** or **P. de Vich'y,** troches of bicarbonate of sodium.

Pastil'lus. Pastil.

Pastina'ca altiss'ima (dim. of **Pasta,** from *pastus,* food). P. opoponax. **P. ane'thum,** Anethum graveolens. **P. grave'olens,** Anethum graveolens. **P. opa'ca,** P. sativa. **P. opop'anax,** ord. Umbelliferæ; furnishes the opoponax; *Opopanax, Opoponax, Gezir, Popanax,* exudes from the roots when wounded; odor is strong and peculiar; taste bitter and acrid; met with in the shops in lumps of a reddish-yellow color without, white within; has been recommended as an antispasmodic and emmenagogue. **P. praten'sis** or **P. sati'va,** *Garden parsnip;* root sweet and nutritious, in esteem as an article of food; has been used as a diuretic and demulcent in calculous affections, etc. **P. sylves'tris,** P. sativa. **P. sylves'tris tenuifo'lia officina'rum,** Caucus carota.

Pas'ture-evil. See *Milk sickness.*

Pata'te. Convolvulus batatas.

Patch. Discoloration of the skin. **P., moth,** chloasma. **P., mu'cous,** see *Condyloma.* **P., o'paline,** an appearance seen in the second stage of syphilis on mucous surfaces; if the patch be detached, a red, raw, bleeding surface results.

Patch'es, Pey'er's. See *Peyeri glandulæ.* **P., white,** *Milky stains;* smooth patches, seen in the third stage of syphilis, resulting from the peeling off of opaque epithelium over a deposit of syphilitic lymph.

Patchou'li. Pogostemon patchouli. **P. oil,** see *Pogostemon patchouli.*

Patella, pat-el'lah (diminutive of **Patera,** a bowl, so called from its shape). Knee-pan. A sort of sesamoid, flat, short, thick, rounded bone, situate in front of the knee, and enveloped in the substance of the tendon common to the extensor muscles of the leg. The posterior surface of the patella is divided into two facettes, united angularly, which are encrusted with cartilages, and each of which is articulated with one of the condyles of the femur. When fractured it is difficult to produce bony union. This can only be accomplished by keeping the fractured extremities closely in apposition. The ligamentum patellæ is a strong flat tendon attached to the lower extremity of the patella and the anterior tubercle of the tibia. It may be considered a part of the tendon of the rectus femoris, the patella being regarded as a sesamoid bone. **P. brachia'lis,** patella. **P. fix'a,** olecranon.

Patel'lar. Relating to the patella. **P. fos'sa,** depression on trochlea of femur for reception of patella. **P. plex'us,** formed in front of the knee by branches of the internal saphenous and internal and middle cutaneous nerves. **P. re'flex** or **P. ten'don,** knee-jerk.

Patellaria, pa-tel-lar'e-ah. Genus of fungi. **P. geograph'ica,** species of Europe having febrifuge properties.

Patella'tus. Applied to polypus forming an almost orbicular expansion.

Patel'liform. Shaped like a patella or small dish.

Pa'tency of the fora'men ova'le (*pateo,* to open). See *Cyanopathy.*

Pat'ent med'icine. Medicinal compound for the sale of which the proposer obtains from the government an exclusive privilege. A specification of his invention must be registered in the Patent Office, and hence it differs from a secret medicine.

Pa'ter om'nium viven'tium (father of all living). Penis.

Pate'ra (*patera,* a flat dish) **Diog'enis.** Palm.

Pathe'ma. Affection; disease.

Pathematol'ogy (*pathema, logos,* discourse). Pathology.

Pathengenetic, path-en-jen-et'ik (*pathos,* disease, *engignomai,* to produce). Produced by disease.

Pathet'ic (*pathos,* passion). That which moves the passions. Name given to the superior oblique muscle of the eye, and also to the fourth pair of nerves. **P. mus'cle,** superior oblique of the eye. **P. nerve,** *Trochlear nerve,* the smallest encephalic nerve. Arises behind the inferior part of the tubercula quadrigemina (testes) at the lateral parts of the valvula Vieussenii. Its roots unite into one thin round cord, which makes a turn upon the peduncles of the brain, and passes into a canal of the dura mater near the posterior clinoid process. It enters the orbit by the broadest part of the sphenoidal fissure, and terminates in the superior oblique muscle of the eye by dividing into several filaments.

Patheticus, path-et'ik-us. Muscle, superior oblique, of the eye.

Path'etism. Animal magnetism. Doctrine of mental influences, including hypnotism, telepathy, etc.

Path'ic. Morbid. See *Buggery.* **P. re'flexes,** movements due to stimulation of sensory fibres.

Path'ical. Morbid.

Path'icus. Morbid. See *Buggery.*

Pathisotherapi'a. See *Isopathia.*

Path'ne. Alveolus.

Patho-anatomical, path'o-an-at-om'i-kal. Relating to pathological anatomy.

Path'ogenes. Micro-organisms which give rise to morbid processes in man and the lower animals.

Pathogenesis, path-o-jen'es-is (*pathos, genesis,* generation). Pathogeny.

Pathogenet'ic or **Pathogen'ic** (same etymon). Relating to pathogeny. Having the power to produce disease; a term applied to a number of micro-organisms. **P. physiol'ogy,** that part of physiology relating to the origin of disease.

Pathogen'icus. Pathogenetic.

Pathogeny, path-oj'en-e. Branch of pathology relating to the generation, production, and development of disease.

Pathognomonic, path-o-no-mon'ik (*pathos, gignosko,* to know). Characteristic of a disease, so that it may be readily differentiated from other diseases.

Pathog'raphy (*pathos, grapho,* to describe). Description of disease.

Patholog'ia. Pathology. **P. humora'lis,** humorism. **P. solida'ris,** solidism.

Patholog'ical. Relating to pathology. Often used in the sense of pathic. **P. anat'omy,** see *Anatomy.*

Patholog'ically. Considered from a pathological standpoint.

Pathol'ogist (*pathos, logos,* discourse). One versed in pathology.

Pathol'ogy. *Pathematology.* Doctrine of disease, its nature and results; *general*, with reference to diseases in common; *special*, to particular history of each. **P., cel'lular,** view advanced by Virchow, assuming that every vital process originates from cellular form, and that all cells take their origin from a previous cell. **P., compar'ative,** pathology in relation to the animal or the vegetable. **P., experiment'al,** pathology in relation to diseases produced in animals for purposes of pathological research. **P., exter'nal,** pathology relating to surgical diseases. **P., hu'moral,** humorism. **P., inter'nal,** pathology, medical. **P., med'ical,** pathology in relation to internal treatment.

Pathol'ysis, path-ol'is-is (*pathos, luo*, to dissolve). Decomposition of substances in the living body under the influence of disease.

Pathomania, path-o-man'e-ah. Moral insanity.

Pathomyotom'ia (*pathos, mus*, muscle, *tome*, incision). Title of a work by Dr. John Bulwer (1649), being "a dissection of the significative muscles of the affections of the mind."

Pathonomia, path-o-no'me-ah (*pathos, nomos*, law). Classification of pathological conditions; study of laws of disease.

Pathopatridalgia, path-o-pat-rid-al'je-ah (*pathos, patris*, one's fatherland, *algos*, pain). Nostalgia.

Pathopatridomania, path-o-pat-rid-o-man'e-ah. Nostalgia.

Pathopho'bia (*pathos, phobos*, dread). Term proposed as a substitute for hypochondriasis, on account of the individual's impression that he is sick or going to be sick. Morbid dread or fear, including such forms as agoraphobia, claustrophobia, etc.

Pathopoëtic, path-o-po-et'ik (*pathos, poieo*, to make). Producing disease.

Pathopoiesis, path-o-poi-e'sis (*pathos, poieo*, to make). Production of disease.

Path'os (suffering). Affection; disease.

Pa'tience dock. Rumex patientia; root used as an alterative.

Pa'tient (*patior*, to suffer). One who is affected with disease, especially if under medical treatment. See *Sick*. **P. of death,** agony.

Patientia, pash-e-en'she-ah. Rumex patientia.

Patien'tiæ mus'culus. Levator scapulæ.

Pat'ne. Alveolus.

Pa'tor na'rium (opening of the nostrils—*pateo*, to be open). Cavity or opening of the nostrils.

Patratio, pat-rah'she-o (*patro*, to accomplish). Coition; ejaculation of sperm.

Patrin'ia jataman'si (after E. L. M. Patrin, a naturalist and traveller of Lyons). Nardus Indica. **P. scabiosæfo'lia,** root of this species yields Japanese valerian.

Pat'ulous. Open.

Patur'sa. Syphilis.

Paullin'ia (after S. Pauli, professor of botany at Copenhagen). Extract of Paullinia sorbilis, known as guarana. **P. pinna'ta,** of Brazil, acronarcotic and poisonous; root-bark used as an anodyne externally and internally. **P. sor'bilis,** of Brazil, climbing shrub, source of guarana.

Paullinitannic (pawl-in-e-tan'nik) **ac'id.** Kind of tannic acid derived from Paullinia sorbitis.

Paul's bet'ony. *Veronica officinalis.* Common speedwell.

Paunch. Cavity of the abdomen; ingluvies.

Pauonta (*pauo*, to allay). Sedatives.

Pausemenia, paw-se-men'e-ah (*pausis*, cessation, *menes*, menses). Cessation of menses.

Pau'sis. Sedation.

Pava'na wood. Croton tiglium.

Pave'ment epithe'lium. Flattened, scaly, irregularly shaped nucleated cells, arranged in several superposed layers, lining mucous (in part) and dermal tissues.

Pavetta Indica, pa-vet'tah in'dik-ah. The root of this shrub is stomachic and diuretic. The leaves are employed in cutaneous affections and applied to hemorrhoids.

Pavietin, pav'e-et-in. Prasetin.

Paviin, pav'e-in. Prasin.

Pavil'ion. The French gave the name *pavillon* (*papilio*, a canopy) to the expanded extremity of a canal or cavity—for example, of a catheter, sound, etc. **P. of the ear** is seated behind the cheeks, beneath the temple, and anterior to the mastoid process; its size varies in individuals; it is free above, behind, and below; anteriorly and within it is continuous with the neighboring parts. Its outer surface has several prominences—the *Helix, Anthelix, Tragus, Antitragus*, and *Lobe*—and several cavities—the *Groove of the Helix*, the *Fossa navicularis*, and the *Concha*. The skin covering the pavilion is very fine, and studded with a number of sebaceous follicles. The auricle is fixed to the head by three fibro-areolar ligaments—a superior, anterior, and posterior. **P. of Fallo'pian tube,** its free expanded extremity.

Pavimen'tum cer'ebri (pavement of the brain). Base of the brain. **P. or'bitæ,** floor of orbit. **P. tym'pani,** floor of tympanic cavity. **P. ventric'uli,** floor of ventricle.

Pavi'na. Æsculus hippocastanum.

Pavita'tio (*pavito*, to tremble from fear). *Tremor.* Trembling from fright.

Pavonia coccinea, pav-o'ne-ah kok-sin'e-ah. Scarlet mallow; plant growing in the Antilles. The flowers are applied externally in inflammations of the eye, and given internally as demulcent.

Pavor (L.). Dread; great fright. Panophobia. Old term for scabies. **P. noctur'nus,** fear during sleep; night-terrors.

Pa'vy's disease'. Intermittent cyclic albuminuria. **P.'s solu'tion or test,** copper sulphate 16 gr., neutral potassic tartrate 32 gr., caustic potash 64 gr., water 1 oz.; 100 ♏ represent half a grain of grape-sugar; test for sugar in the urine.

Paw ([W.] *pawen*, a foot). Manus.

Paw'paw. See *Carica papaya.*

Pax'wax or **Paxywax'y.** See *Nucha.*

Pay'ta bark. Variety of pale cinchona-bark from Payta, Peru.

Pay'tamine. Amorphous alkaloid in white Payta bark.

Paytine, pa'teen. $C_{21}H_{24}N_2O,H_2O$. Natural crystallizable alkaloid in white Payta bark.

Pb. Abbv. for plumbum, lead.

P. B. or **Br.** Abbv. for Pharmacopœia Britannica, British Pharmacopœia.

P. Bor. Abbv. for Pharmacopœia Borussica, Prussian Pharmacopœia.

P. D. Abbv. for Pharmacopœia Dublinensis, Dublin Pharmacopœia.

P. E. Abbv. for Pharmacopœia Edinensis, Edinburgh Pharmacopœia.

Pea. Pisum; see *Peas.* **P., gar'den,** pisum. **P., ground squir'rel,** Jeffersoniana Bartoni. **P., hoar'y,** Galega Virginiana. **P., love,** Abrus precatorius. **P. nut,** Arachis hypogea. **P., part'ridge,** Cassia chamæcristi. **P., tur'key,** Galega Virginiana.

Peach (*pessicum*, corr. from *persicum*, Persian). See *Amygdalus Persica.* **P. bran'dy,** see *Amygdalus Persica.* **P. tree,** Amygdalus Persica. **P. wood,** see *Cæsalpinia.*

Peach'wort. Polygonum persicaria.

Pea'gle. Primula veris.

Péan's opera'tion. Laparotomy for removal of uterine fibroids.

Pea'-nut. Ground-nut. Arachis hypogea. **P.-n. oil,** ground-nut oil; oleum arachis.

Pear. See *Pyrus malus.* **P., al'ligator,** Persea gratissima. **P., an'chovy,** Grias cauliflora. **P., avoca'do,** Persea gratissima.

Pearl. Roundish concretion, of a silvery white color and brilliant polish, found in several shells, and especially in the *Avicula margaritifera*, which has hence been called *Mother of pearl*, and is much used in the fabrication of handles for surgical instruments, etc. Pearls were formerly given in powder as astringents and antacids. They consist of lime and an animal matter. **P. ash,** potash of commerce. **P. bar'ley,** barley deprived of all its investments and afterward rounded and polished in a mill. **P. dis-**

ease, tuberculosis in cattle. **P., medic'inal**, capsules containing medicine for internal use; also capsules of thin glass containing liquid for inhalation. **P., moth'er of**, see *Pearl*. **P. plant**, Lithospermum officinale; seed diuretic; lithontryptic. **P. sa'go**, sago in small grains, prepared by passing moistened sago through a sieve and drying small fragments by constant stirring over a fire. **P. tu'mor**, cholesteatoma. **P. white**, bismuth subnitrate.

Pearl-like tu'mor. Cholesteatoma; tuberculosis in cattle.

Pearl'y bod'ies. Collections of concentrically laminated, flattened, fibre-like cells seen in epitheliomata; known also as bird's-nest bodies or epidermic spheres. **P. everlast'ing**, Antennaria margaritacea. **P. tu'mor**, cholesteatoma; tuberculosis in cattle.

Pear'son's arsen'ical solu'tion. Aqueous solution of sodium arseniate, about 0.1 per cent.

Peas, is'sue. Round bodies of wood of the size of a pea, which are placed in issues for the purpose of hastening suppuration.

Peas'lee's opera'tion. Superficial tracheotomy.

Peat, pete. Brown or black unctuous substance, composed of decomposing vegetable matter found in bogs beneath surface of turf. Contains humic, phosphoric, and sulphuric acids; used for baths and poultices and for antiseptic surgical dressing.

Pebrine, peb'reen. See *Muscardine*.

Pecan' or **Peccan' nut.** See *Hickory*.

Peccant, pek'kant (*pecco*, to sin). Morbid; not healthy; epithet given by humorists to the humors when erring in quality or quantity. Pathogenic. See *Materia morbosa*.

Pechedion, pek-e'de-on. Perineum.

Pechi'agra. Gout in the elbows.

Pechu'rim or **Pichu'rim cor'tex.** A highly aromatic bark, the produce of a species of Laurus; extremely fragrant, like cinnamon, which it greatly resembles in its properties. In Portugal used in the cure of dysentery, etc. See *Pichurim beans*.

Pechy'agra (*pechus*, elbow, *agra*, seizure). Gout affecting the elbow.

Pe'chys. Elbow.

Pechytyr'be. Porphyra nautica; scurvy.

Pecquet (pek'ka), **cis'tern** or **res'ervoir** or **duct of.** Receptaculum chyli; thoracic duct.

Pectase, pek'taze. Albuminoid ferment found in unripe fruit, roots, etc.

Pectate, pek'tate. Salt of pectic acid.

Pec'ten (border, row). Pubes; also a comb. **P. commissu'ræ anterio'ris**, bundles of fibres running transversely, existing in velum of anterior commissure of brain. **P. den'tium**, see *Sepes*. **P. ven'eris**, Scandix cerefolium.

Pec'tic ac'id. Substance obtained from pectin.

Pec'tin (*pektos*, coagulated, curdled). A principle which forms the basis of vegetable jelly. Extensively diffused in the juices of pulpy fruits and roots, especially when mature, and occasions the coagulation of these juices when they are mixed with alcohol or boiled with sugar. Basis of one of the classes of elementary principles called the *pectinaceous*.

Pectina'ceous. Pectinous.

Pectinæ'us or **Pectina'lis** (*pecten*, pubes). Muscle situate at the inner and upper part of the thigh; it is long, flat, and triangular; attached, above, to the space which separates the iliopectineal eminence from the spine of the pubis, and below, by a flat tendon, to the oblique line which descends from the lesser trochanter to the linea aspera. It bends the thigh on the pelvis, and carries it outward in adduction and rotation; may also bend pelvis on thigh.

Pec'tinate lig'ament of the i'ris. Peculiar spongelike, tubercular connective tissue filling up the angle at the juncture of the cornea and iris.

Pec'tinated (*pecten*, comb). Having the shape of the teeth of a comb. **P. mus'cles**, *Pectinati musculi*; the fascicular texture observed in the right auricle of the heart—*Musculi auriculæ pectinati*. Their main use probably is to prevent the over-dilatation of the auricles.

Pectina'tus. Pectinalis.

Pectine'al bursa. Bursa under the tendon of the pectineus muscle. **P. fas'cia**, part of fascia lata covering pectineus and adductor longus, attached above to crest of pubis.

Pectineofem'oral band. Pubofemoral ligament.

Pectine'us. Pectinalis.

Pectiniductor pek-tin-e-duk'tor. Pectinalis.

Pectin'iform (*pecten*, comb, *forma*, shape). Pectinated; fimbriated. **P. sep'tum**, median septum of connective tissue between corpora cavernosa.

Pec'tinous. *Pectinaceous.* Of or belonging to pectin or vegetable jelly, as a pectinous or pectinaceous vegetable principle.

Pectization, pek-ti-za'shun. Process of being converted into a gelatinous state.

Pectoic acid, pek-to'ik as'id. Product of transformation of pectose occurring in ripe fruit.

Pec'toral (*pectus*, breast). Relating to the breast; see *Pectoralis* and *Pectorals*. **P. aor'ta**, thoracic aorta; see *Aorta*. **P. arch**, bony apparatus by which the pectoral limb is attached to the axial skeleton; in man it consists of clavicle and scapula. **P. drops, Bate'man's**, consist chiefly of tincture of castor, with some camphor and opium, flavored by aniseed. Gray gives the following formula: Castor, ℥j; ol. anisi, ℥j; camph., ℥v; cocci, ℥jss; opii., ℥vj; proof spirit, a gallon. A form advised by a committee of the Philadelphia College of Pharmacy is the following: Alcohol. dil., cong. iv; santal. rubr. ras., ℥j; digere per horas xxiv; cola et adde pulv. opii, pulv. catechu., camphoræ, āā ℥ij; ol. anisi, ℥iv; digest for ten days. **P. frem'itus**, vibration of chest-walls on speaking. **P. fruits**, dates, figs, jujubes, Corinthian raisins, equal parts; cut and mix. **P. glands**, lymphatics accompanying the long thoracic artery. **P. intercos'tal nerves**, upper six, supplying thorax only. **P. limb**, that attached to the trunk by the pectoral arch, in man upper extremity, in quadrupeds anterior extremity. **P. nerves**, see *Thoracic nerves*. **P. ridge**, external lip of bicipital groove, to which is attached pectoralis major. **P. syr'up, Jack'son's**, see *Jackson*. **P. tea**, mixture of althea, glycyrrhiza, mullein flowers, orris root, colt's foot, and anise (P. G.); of flowers of althea, mallow, mullein, mouse-ear, violet, colt's foot, and poppy (Cod.); used in preparation of a demulcent infusion or tisane. **P. tu'bercle**, impression for pectoralis major on anterior surface of the clavicle near its external end.

Pectora'le. Corset; also medicine for relieving or removing affections of the chest.

Pectora'lis inter'nus. Triangularis sterni. **P. ma'jor**, *Pectoralis*. A large, flat, triangular muscle, situate at the anterior part of the chest before the axilla. Attached, on the one hand, by means of aponeurotic fibres, to the inner half of the anterior edge of the clavicle, the anterior surface of the sternum, and to the cartilages of the first six true ribs; on the other, by a strong tendon which is inserted at the anterior edge of the bicipital groove of the humerus. It moves the arm in various directions. If it be hanging by the side of the body, it carries it inward and a little forward. When the arm is raised, it depresses it and carries it inward. It can also move it in rotation inward. If the humerus be raised and fixed, the pectoralis major draws the trunk toward the upper extremity. **P. min'imus**, supernumerary muscle sometimes found arising from first rib and inserted into coracoid process. **P. mi'nor**, situate beneath the preceding, at the anterior and upper part of the chest. It is flat and triangular; attached by its base, which appears digitated, to the upper edge and outer surface of the third, fourth, and fifth true ribs, and is inserted at the interior part of the coracoid process. It draws the scapula forward and downward, and makes it execute a rotatory motion, by virtue of which its inferior angle is carried backward and the anterior depressed. When the shoulder is fixed, it elevates the ribs to which it is attached and aids in the dilatation of the chest.

Connected with the upper edge of the pectoralis minor and inserted into the first rib and the coracoid process, and the clavicle between these points, is a thick fascia called the *costocoracoid membrane*.

Pec'torals. Medicines considered proper for relieving or removing affections of the chest.

Pectoril'oquous bronchoph'ony. See *Pectoriloquy.*

Pectoril'oquy. *Pectoriloquism, Cavernous voice.* Speech or voice coming from the chest. Laënnec has designated by this name the phenomenon often presented by consumptive individuals when their chests are examined with the stethoscope. The voice seems to issue *directly* from the chest and to pass through the central canal of the cylinder—a phenomenon owing to the voice resounding in the anfractuous cavities produced in the lungs by the suppuration or breaking down of tubercles, which constitute *abscesses* or *ulcers of the lungs.* By some it is not separated from bronchophony, having been termed, at times, *strong bronchophony* and *pectoriloquous bronchophony.* See *Laryngophony. Whispering pectoriloquy* is that produced by the whispering of the patient.

Pectoro'sus (*pectus*, chest). One who has a broad chest.

Pec'tose. Neutral amorphous principle, insoluble in all neutral solvents, found in unripe fruits and some fleshy roots; by action of acids, etc. convertible into pectin.

Pec'tous. Gelatinous.

Pectun'culus. Series of fine longitudinal furrows, seen with slightly magnifying power on the wall of the Sylvian aqueduct.

Pec'tus. Sternum; thorax. **P. carina'tum,** see *Carina* and *Lordosis.* **P. excava'tum,** condition in which the chest has a sunken appearance.

Pectusculum, pek-tus'ku-lum. Metatarsus.

Pecu'lium (private property). Penis.

Ped'agra. Potassii supertartras impurus.

Pe'dal (*pes*, foot). Relating to the foot; **as P. aponeuro'sis,** a thin aponeurotic layer which invests the extensor brevis digitorum pedis and separates the tendons of the foot from each other.

Peda'lium mu'rex. Gokhru, large, succulent East Indian herb, ord. Pedalineæ; leaves and seeds are very mucilaginous, and in high repute in urinary disorders.

Ped'erasty or **Pæd'erasty.** See *Pæderastia.*

Pedesis, ped-a'sis (*pedao*, to leap). Pulsation.

Pedeth'mos. Pulsation; subsultus.

Pediæ'us exter'nus. Extensor brevis digitorum pedis. **P. inter'nus,** flexor brevis digitorum pedis.

Pedialgia, ped-i-al'je-ah (*pedion, algos*, pain). *Pedionalgia, Pedioneuralgia.* Pain in the side of the foot. Neuralgia of the foot in general. An affection of this kind, under the name *Pédionalgie,* prevailed in 1672 at Savigliano in Piedmont, and in 1806 among the military at Padua.

Pediat'rics. Treatment of the diseases and preservation of the health of children.

Pediatry, ped-e-at're. Pædiatrics.

Ped'icellated. Pediculated.

Ped'icle (dim. of **Pes,** foot). A slender stalk. Narrow portion of a tumor, from which it has been developed and by which it is supported. See *Ovariotomy.* **P., neu'ral,** see *Neural arch.* **P-s of op'tic thal'ami,** peduncles of optic thalami. **P. of ver'tebra,** narrowed portion connecting the lamina with the body. **P., vitel'line,** see *Vesicula umbilicalis.*

Pedic'ular. Relating to a pedicle.

Pedicula'ria (*pediculus*). Delphinium staphisagria; pediculosis.

Pedicularis, ped-ik-u-lar'is (*pediculus*, louse). Lousy; relating to lice. **P. palus'tris,** marsh lousewort; herb is used externally to kill vermin on horses and cattle.

Pedic'ulated. *Pedicellated.* Supported by a pedicle.

Pedicula'tio (*pediculus*). Phtheiriasis.

Pediculation, ped-ik-u-la'shun. Formation of a pedicle. Condition of lousiness.

Pediculodermata, ped-ik-u-lo-dur'mat-ah. Cutaneous affections due to presence of pediculi.

Pediculopho'bia (*pediculus, phobos*, fear). Morbid dread of phtheiriasis, with erroneous belief that one is affected with it.

Pediculo'sis (*pediculus*). Phtheiriasis.

Pedic'ulus (dim. of **Pes,** foot, from its having many feet). Louse. A genus of wingless, non-metamorphosing, parasitic insects. The human body is infested by several kinds: The *Body-louse* or *Clothes-louse, Pediculus vestimenti* or *vestimentorum* or *corporis;* the *Head-louse, Pediculus capitis,* which lives in the hair; the *Brow-louse, Pediculus palpebrarum;* the *Crab-louse, Pediculus pubis,* which infests the hair of the pubes. Infusion of tobacco or mercurial ointment, or ointment of white precipitate or of red precipitate of mercury, readily destroys them. Solution of the bichloride, also extractum staphisagriæ fluidum (℥j) to acidum aceticum dilutum (℥iij), are very useful applications. The louse occurring in phtheiriasis, *Pediculus tabescentium, Distemper louse,* is said to differ from the common louse. The eggs are called *nits.* See *Parasites.* Also a pedicle. **P. cap'itis,** see *Pediculus.* **P. cor'poris** or **vestimen'ti,** see *Pediculus.* **P. inguina'lis** or **pu'bis,** crab-louse. **P. palpebra'rum,** see *Pediculus.* **P. tabescen'tium,** see *Pediculus.*

Ped'icure (*pes*, foot, *curo*, to cure). Chiropodist.

Ped'icus (*pes*). Extensor brevis digitorum pedis.

Pedigam'bra. Ysambra.

Pedilan'thus padifo'lius (*pedilon*, shoe, *anthos*, flower). Plant of South America and Antilles, employed in syphilis; root is used like ipecac. **P. pavo'nis,** plant, milk of which is drastic; root possesses emetic qualities, and leaves are said to be emmenagogue and antisyphilitic. **P. tithymaloï'des,** *Euphorbia tithymaloïdes, Jewbush,* ord. Euphorbiaceæ, grows in various parts of the West Indies. The practitioners of Curaçoa give a decoction in venereal cases. It is also used in domestic practice in amenorrhœa. It is, moreover, known and used like ipecacuanha.

Pedilu'vium (*pedes*, feet, *lavo*, to wash). Bath for the feet. See *Bath.*

Pedimana, ped-im'an-ah. Marsupial animals having the feet in shape of hands, as monkeys.

Pediococ'cus. Genus of Schizomycetes. **P. cerevis'iæ,** species found on beer. **P. Koch'ii,** species occurring in discharges from wounds. **P. maggio'ræ,** found in skin of foot and region of nose and thorax in man; non-pathogenic organism.

Pedi'olus (dim. of **Pes,** foot). Petiolus.

Ped'ion. Sole.

Pedional'gia or **Pedioneural'gia.** Pedialgia.

Peditis, ped-e'tis. Laminitis.

Ped'ium. Tarsus.

Pedometer, ped-om'e-tur (*pes, metron*, measure). Instrument for measuring the distance covered in walking.

Pedora. Sordes of the eyes, ears, and feet.

Ped'uncle (dim. of **Pes,** foot, flower-stalk). Term applied to different supporting parts, or, more specifically, to certain prolongations or appendices of the encephalon. **P-s of the brain,** two white cords, about three-fourths of an inch in diameter, on the outside of the corpora albicantia. They arise from the medullary substance of the brain, and gradually approach till they join the tuber annulare. They are formed, internally, of a mixture of cineritious and medullary matter, the former of which, being of a darker color at one point than in any other part of the brain, has been called *Locus niger, Substantia nigra, Gray substance of Sömmering.* It separates the main body of peduncular fibres into two parts. The lower or superficial consists almost wholly of white fibres collected into coarse fasciculi, and is called the crust or basis or fasciculated portion of the peduncle. The upper portion is named tegmentum. **P. of the cerebel'lum,** six in number, three on each side—superior, middle, and inferior. The superior peduncles are generally known as the *Processus cerebelli ad testes, Crura cerebelli ad corpora quadrigemina, Brachia copulativa;* the inferior, the *Processus cerebelli ad medullam oblongatam;* and the middle are called also *Cerebellar peduncles —Processus* or *Crura cerebelli ad pontem, Processus ad*

pontem, Brachia pontis. **P. of cor'pus callo'sum,** two white bands continuous with longitudinal striæ above, diverging below to anterior perforated space of either side. **P., infe'rior, of the cerebel'lum,** corpora restiformia. **P. of the medul'la oblonga'ta,** corpora restiformia. **P. of op'tic thal'amus,** bundles of white fibre connecting it with other parts of the brain: *anterior,* from frontal end and external nucleus of ganglion to frontal lobes; *inferior* or *internal,* downward and outward from zonal stratum and internal nucleus to near Sylvian fissure under the optic tract. A *superior* is constituted by anterior pillars of fornix and bundle of Vicq d'Azyr, taken together; *posterior,* by optic radiations. **P. of the pin'eal gland,** two medullary bands or strips which seem to issue from the pineal gland, and proceed on each side upon the upper and inner region of the optic thalami. See *Pineal gland.* **P. of sep'tum lu'cidum,** white fibres running upon either side in front of septum lucidum to corpus callosum.

Pedun'cular. Relating to a peduncle. **P. ar'teries,** twigs supplying crura cerebri: *median,* arising from posterior communicating; *lateral,* from posterior cerebral or choroid arteries. **P. lam'inæ,** portion of pineal gland above processus pinealis. **P. sul'ci,** on either side of crus cerebri, separating crusta from tegmentum; the inner is also known as oculomotor sulcus; outer as lateral sulcus of mesencephalon.

Pedun'culate or **Pedun'culated.** Having a peduncle or fruit-stalk. **P. fi'broid,** myoma of uterus attached to mucous membrane by a pedicle. **P. hydat'id,** see *Morgagni's hydatids.*

Pedun'culi cerebel'li. Peduncles of the cerebellum. **P. cer'ebri,** peduncles of the brain. **P. cona'rii,** peduncles of the pineal gland; see *Pineal gland.* **P. medul'læ oblongat'æ,** corpora restiformia.

Pedun'culus. Peduncle. **P. cerebel'li infe'rior,** restiform body. **P. cona'rii,** P. of pineal gland. **P. cor'poris mammilla'ris,** superficial bundle of fibres in trigonum interpedunculare, connected with mammillary tubercles. **P. floc'culi,** commissure of flocculus. **P. gan'glii haben'ulæ,** fasciculus retroflexus. **P. hypophys'eos,** infundibulum of brain. **P. medul'læ oblonga'tæ,** restiform body. **P. nu'clei globo'si,** stem-like process of nucleus globosus directed forward. **P. oli'væ,** olivary peduncle. **P. pulmo'nis** or **pulmo'num,** root of lung. **P. sep'ti pellu'cidi,** P. of septum lucidum. **P. substan'tiæ ni'græ,** fibres of crusta between pyramidal tract and substantia nigra passing up to caudate nucleus; degenerate downward.

Pee'nash. Maggots in the nasal passages (India).

Pe'ga. Lesser canthus of the eye.

Peganelæ'on (*peganon,* rue, *elaion,* oil). Oil of rue.

Peganerum, peg-an-a'rum. Plaster into composition of which rue enters.

Peg'anum. Ruta. **P. harmala,** plant of the Rue family, growing in S. Europe and N. Africa; seeds are emmenagogue and intoxicant; two alkaloids have been extracted—harmaline and harmine.

Peg'leg. Simplest form of artificial leg, consisting of socket for stump with straight rod for support.

Peg'ma (*pegnumi,* to stick on). Concretion.

Pegmaticus, peg-mat'ik-us. Producing coagulation or concretion.

Peg'min (*pegma,* coagulation). Buffy coat; corium phlogisticum.

Pegology, peg-ol'o-je (*pege,* fountain, *logos,* doctrine). Balneology.

Pegu cat'echu. Black catechu; officinal catechu of U. S. Ph.

Peg'wood. Euonymus atropurpurea.

Pei'na. Hunger.

Peinotherape'ia (*peina, therapeia,* treatment). Hunger cure.

Peinother'apy. Peinotherapeia.

Pe'ira. Effort; experience; nisus.

Pela'da. A word of uncertain origin, applied to alopecia, especially to that resulting from syphilis, caused by a parasite, the microsporon Audouini. See *Alopecia* and *Porrigo decalvans.* It is thought that pelada is the same as pellagra and rose sickness.

Pelage, pel'ag-e (*pella,* hair). The whole hairy system of the body.

Pelagia, pel-aj'e-ah. A kind of scaly erysipelas of the hands, sometimes of the legs, at others of the face; pellagra.

Pelagra, pel'ag-rah. Pellagra.

Pelargo'nic ac'id. Fatty acid obtained by action of nitric acid upon oil of rue.

Pelargo'nium an'ceps (*pelargos,* crane, from the shape of the capsules). A South African plant, ord. Geraniaceæ, the decoction of which is used by the Malays in amenorrhœa and to promote parturition and abortion. **P. antidysenter'icum,** South African plant used by the natives in dysentery. It is boiled in milk. **P. cuculla'tum,** common on the Table Mountain, Africa. It has been recommended in decoction as an enema in colic, nephritis, and suppression of urine; an excellent emollient, formerly exported to Holland under the name Herba althææ. **P. ro'seum,** rose-geranium, ord. Aristolochiaceæ; yields oil of rose-geranium. **P. tris'te,** root which grows at the Cape of Good Hope; is somewhat astringent, and is used there in diarrhœa and dysentery and as an anthelmintic.

Pelarium, pel-ar'e-um. Ancient collyrium.

Pel'ican (*pelekao,* to cleave). Instrument curved at the end like the beak of a pelican; used to extract teeth. **P. flow'er,** Virginia snake-root; Aristolochia serpentaria.

Peli'cide. Boiled honey.

Pelicol'ogy (*pelix,* basin, *logos,* discourse). Discourse or discussion on the pelvis.

Pelicom'eter (*pelix,* basin, pelvis, *metron,* measure). Pelvimeter.

Pelidno'ma or **Pelioma,** pel-e-o'mah (*pelidnos,* livid, *oma*). A livid ecchymosis; see *Ecchymoma.* **P. typho'sum,** condition in which spots of a bluish-red color appear on the body and extremities.

Pelio'sis (*pelos,* livid). Purpura hæmorrhagica. **P. rheumat'ica,** see *Purpura rheumatica.*

Pel'la (*pella,* skin). Cutis; prepuce.

Pella'cia. Pica.

Pel'lagra (*pella,* skin, *agra,* seizure). *Pelagra, Ichthyosis, Italian leprosy, Scurvy of the Alps.* Endemic disease of Italy, of toxic origin, characterized by chronic, erythematous, desquamative inflammation of the skin, with digestive and neurotic derangement. Italian leprosy. It has been ascribed to a diseased condition of Indian corn, in which it is affected by a parasitic fungus, sporisorium maidis. An affection endemic in the Asturias is said to be a variety of pellagra; it is the rosa or lepra Asturica, mal de la rosa.

Pellagroceine, pel-lag-ro'se-een. Poisonous material obtained from decomposed corn-meal, a mixture of toxical ptomaïnes.

Pel'lagrous. Relating to or affected with pellagra.

Pellar'sis. Pellagra.

Pel'lens (*pello,* to drive). Driving, impelling.

Pellen'tia (pl. of **Pellens**) **medicamen'ta.** Medicines that promote the occurrence of the menstrual or hemorrhoidal flux.

Pel'let (*pila,* ball). See *Globule.*

Pelletierine, pel-la'te-er-een. $C_8H_{15}NO$. Oily, aromatic alkaloid, the active principle of pomegranate-bark. **P. tan'nate,** amorphous salt of pelletierine; efficient tæniafuge in dose of gr. v–xx, taken on an empty stomach, and followed in fifteen minutes by an active purgative. The sulphate, hydrobromide, and hydrochloride are also anthelmintic.

Pel'licle. Pellicula.

Pellic'ula (dim. of **Pellis,** skin). *Pellicle;* a thin skin or membrane; a film. **P. angi'na,** amnion. **P. o'vi,** membrana putaminis. **P. sub'tilis,** pia mater. **P. sum'ma,** epidermis. **P. supe'rior,** epidermis.

Pellic'ulæ cor'dis. Valves of the heart.

Pellic'ular. Resembling or relating to a pellicle.

Pel'lis. Skin. **P. æ'gra,** pellagra. **P. sum'ma,** epidermis.

Pel'litory. Xanthoxylum fraxineum. **P., Amer'ican,** Parietaria Pennsylvanica. **P., bas'tard,** Achil-

lea ptarmica. **P. of Spain,** Anthemis pyrethrum. **P., wall,** parietaria.

Pel'lous. Dusky, dark-colored.

Pellu'cid zone. Zona pellucida.

Pel'ma. Sole.

Pel'matogram (*pelma*, sole, *grapho*, to write). Imprint of the foot.

Pelohæmia, pel-o-he'me-ah (*pellos*, dark, *haima*, blood). Viscidity of blood.

Pelopic (pel-o'pik) **ac'id.** Niobic acid.

Pelopium, pel-o'pe-um. Niobium.

Pe'lor, Pelo'ria, Pelo'rium, or **Pelo'rum.** Large monster, or one with some part of excessive size.

Peloricus, pel-or'ik-us. Monstrous; abnormally large.

Pelo'sia or **Pel'sine.** See *Pareira brava.* Cissampeline.

Pelta'lis or **Pelta'tus cartila'go** (*pelte*, small shield). Thyroid cartilage; xiphoid cartilage.

Peltan'dra Virgin'ica (*pelte*, small shield, from shield-shaped stamens). *Arum Virginicum, Arrow arum, Taraho, Wampee;* indigenous, ord. Araceæ; fresh roots and seeds are active stimulants, diuretic and diaphoretic.

Peltid'ea amplis'sima (*pelte*, small shield). Lichen caninus. **P. aphtho'sa,** Lichen aphthosus. **P. cani'na,** Lichen caninus. **P. leucorrhi'za,** Lichen caninus. **P. mala'cea,** Lichen caninus. **P. spu'ria,** Lichen caninus.

Peltig'era cani'na. Lichen caninus.

Pel'todon radi'cans. Paracary; Brazilian herb, used in asthma and as antidote to snake-poison.

Pelu'de. Pelicide.

Pelvangustia, pel-van-gus'te-ah. Contraction of the pelvis.

Pelveoperitoni'tis. Pelvic peritonitis.

Pelviarium, pel-ve-ar'e-um. Artificial pelvis used for demonstrations.

Pel'vic. Belonging or relating to the pelvis. **P. aponeuro'sis,** a tendinous lamina given off from the sides of the pelvis and from the entire circumference of the brim, which passes into and lines the pelvis, and is soon divided into two distinct layers: one, external, the *lateral pelvic* or *obturator fascia*, which is continued to line the sides of the pelvis, and covers the obturator internus muscle; the other, internal or superior, which passes inward upon the side of the prostate, bladder, and rectum in the male, and of the bladder, vagina, and rectum in the female, in order to form the floor of the pelvis. **P. arch,** bony apparatus by which the pelvic limb is attached to the axial skeleton; in man, the hip-bone. **P. ax'is,** line drawn from centre of conjugate diameter of inlet parallel to face of sacrum and coccyx to centre of conjugate diameter of outlet. **P. brim, in'dex of,** see *Index of pelvic brim.* **P. canal',** cavity of true pelvis considered as passage through which the child passes at birth. **P. cav'ity,** cavity of the pelvis. **P. cellul'itis,** see *Parametritis.* **P. diam'eters,** measurements expressing dimensions of pelvic cavity. At inlet, *anteroposterior* or *conjugate d.* is taken in median line from promontory of sacrum to symphysis pubis; *transverse* or *basiliac d.*, at widest part; *oblique d.*, from sacro-iliac joint to iliopectineal eminence; *obstetrical conjugate d.* (conjugate vera), from promontory to about 1 cm. below upper border of symphysis; *diagonal conjugate*, from same to lower border of symphysis. In the middle of the cavity conjugate is taken from second and third sacrovertebral junction to middle of symphysis pubis. Meyer's *normal conjugate* is from the most retreating portion of the third sacral vertebra to the upper border of the symphysis. At the outlet, conjugate is from tip of coccyx (lower end of sacrum if coccyx is absent) to lower border of symphysis; transverse or bi-ischiatic, between tuberosities of ischia. **P. di'aphragm,** rectal diaphragm. **P. fas'cia,** see *Pelvic aponeurosis.* **P. floor,** see *Pelvis.* **P. gir'dle,** pelvic arch. **P. hæmat'ocele,** see *Hæmatocele, pelvic.* **P. hæmato'ma,** see *Hæmatocele, pelvic.* **P. in'dex,** relation of antero-posterior to transverse diameter, the latter being taken as 100. **P. limb,** attached to the trunk by the pelvic arch; lower extremity in man, hinder in quadrupeds. **P. mem'bers,** the lower extremities. **P. out'let,** inferior strait. **P. peritoni'tis,** pelviperitonitis. **P. plex'us,** continuation of hypogastric plexus of sympathetic down along internal iliac arteries. **P. re'gion, ante'rior,** that in front of the pelvis, limited laterally on either side by anterior edge of tensor fasciæ latæ. **P. sur'face of il'eum,** that which faces the pelvic cavity. **P. throm'bus,** see *Hæmatocele, pelvic.* **P. tu'mor, sanguin'eous,** see *Hæmatocele, pelvic.*

Pelvicellulitis, pel-ve-sel-u-le'tis. Pelvic cellulitis.

Pelvicliseometer, pel-ve-klis-e-om'et-ur (*pelvis, klisis*, a bending, *metron*, measure). Instrument for measuring pelvic inclination and pelvic diameters.

Pelvicol'ogy (*pelvis, logos*, discourse). Treatise on, or description of, the pelvis.

Pelvic'ula (dim. of **Pel'vis**, basin) **oc'uli.** Orbit.

Pelvid'ymus (*pelvis, duo*, to mingle). A monster united at the pelvis and double above; dipygus.

Pel'viform. Basin-shaped.

Pelvigraph, pel've-graf (*pelvis, grapho*, to write). Instrument for noting anatomic measurements of the pelvis when in a dry condition.

Pelvig'raphy (*pelvis, grapho*, to write). Measurement of the contour of the pelvis.

Pelvimensuratio, pel-ve-men-su-rah'she-o. Pelvimetry.

Pelvim'eter (*pelvis, metron*, measure). *Pelycometer, Pelicometer, Pelyometer, Pyelometer.* A barbarous hybrid. This name has been given to different instruments invented for measuring the diameters of the pelvis, and particularly the antero-posterior or fore-and-aft diameter of the brim—*Pelvimetry.* The finger is, decidedly, the best pelvimeter, and by it we can judge whether the base of the sacrum be unusually prominent. Measurement of the pelvis by the hand has been called *Pelycochirometresis* (*pelux*, pelvis, *cheir*, hand, *metron*, measure).

Pelvim'etry. See *Pelvimeter.*

Pelviot'omy (*pelvis, tome*, incision). Division of any pelvic bone, especially of the pubes in pubeotomy or symphyseotomy.

Pelviperitonitis, pel-ve-per-i-to-ne'tis. *Pelvic peritonitis.* Inflammation of the pelvic peritoneum. See *Parametritis.*

Pel'vis (*pelux*, basin, because fancied to be shaped like an ancient basin). Part of the trunk which bounds the abdomen below. It is a large, bony, irregular, conoidal cavity, open above and below, which supports and contains a part of the intestines and the urinary and genital organs, and serves at the same time as a fixed point for the articulation of the lower limbs, the attachment of their muscles, and the execution of their movements. It supports, behind, the vertebral column, and is sustained, before, by the ossa femorum. It is situate, in the adult, near the middle part of the body, and is composed of four broad, flat, unequally thick bones, differing much in their shape, size, and arrangement, which touch, are articulated at some part of their surface, and intimately united by means of a number of ligamentous fasciæ. Of these bones, two are behind on the median line—the sacrum and the coccyx; the two others are before and at the sides—the ilia. They are fellows, and unite, before, with each other. The most important parts of the pelvis, in an obstetrical point of view, are the *brim* and the *outlet.* The brim, *Upper opening* or *Strait of the cavity of the pelvis*, is the narrow part which separates the greater pelvis from the less—the false from the true. The *true pelvis* forms a girdle proper, and is below the promontory of the sacrum and iliopectineal line; the *false pelvis* is the expanded portion of the pelvis above that line. In the well-formed woman it is elliptical and slightly inclined forward. Its antero-posterior, sacro-pubic, or conjugate diameter in a standard pelvis measures 4½ inches, but with the soft parts 3⅝ inches; its transverse, or iliac, or lateral, 5¼ inches, but with the soft parts 4 inches; and its oblique, *Diameter of Deventer*, with the soft parts, 4⅝ inches. The outlet, *Exitus, Inferior opening* or *strait,*

forms the lower aperture of the pelvis. The antero-posterior diameter is here, on account of the mobility of the coccyx, 5 inches; the lateral, 4 inches. The *Axis of the pelvis* is important to be known in obstetrics. The *Axis of the brim* is indicated by a straight line drawn from the umbilicus to the apex of the coccyx; the *Axis of the outlet*, by a line drawn from the first bone of the sacrum to the entrance of the vagina. An imaginary curved line which indicates the direction of the canal of the pelvis has occasionally been termed the *curve of Carus*, in consequence of its having been pointedly described by that German obstetrician. **P. æquabil'iter justo-ma'jor**, one equally enlarged in all directions, with natural proportions maintained. **P. æquabil'iter justo-mi'nor**, naturally proportioned pelvis with diminution of the several diameters. **P., anatom'ical**, bony pelvis. **P. au'ris**, tympanum. **P. aur'ium**, cochlea. **P., beaked**, pelvis triradiata. **P., car'dinal points of**, four points of the pelvis: two ilio-pectineal eminences anteriorly, and two sacro-iliac articulations posteriorly. **P. cere'bri**, infundibulum of the brain. **P., diam'eters of**, see *Pelvis*. **P., dynam'ic**, P. of the parturient female. **P. fal'sa**, false pelvis; see *Pelvis*. **P., flat**, P. with antero-posterior diameters diminished, others about normal. **P., floor of**, inferior portion of the pelvis, composed of integument, muscles, fasciæ, etc. **P., fun'nel-shaped**, narrowed from above; also called *masculine p.* **P., inferior**, true pelvis; see *Pelvis*. **P. of the kid'ney**, small, membranous pouch occupying the posterior part of the fissure of the kidney; placed behind the renal artery and vein; is elongated from above to below; flattened from before to behind; irregularly oval in figure; and below contracts considerably to be continuous with the ureter. Receives the orifices of the infundibula, which pour the urine secreted in the kidney into its cavity. **P., kyphot'ic**, see *Kyphosis*. **P., lordot'ic**, see *Lordosis*. **P. ma'jor**, false pelvis; see *Ante*. **P. mi'nor**, true pelvis; see *ante*. **P., Naegele's**, see *Naegele*. **P. obtec'ta**, kyphotic pelvis. **P. ocular'is**, glass used for applying lotions to the eye. **P., osteomalac'ic**, see *Osteomalacia*. **P., out'let of**, lower opening of pelvic canal. **P. ovalis**, elliptical fossa above promontory on inner wall of tympanum, in bottom of which appears the fenestra ovalis. **P., rachit'ic**, see *Rachitis*. **P. rena'lis**, pelvis of the kidney. **P. re'num**, pelvis of the kidney. **P., Rob'erts's**, uncommon deformity of the pelvis, the oblique and transverse diameters being much diminished. **P., ros'trated**, mollities ossium. **P., scoliot'ic**, see *Scoliosis*. **P., spondylolisthet'ic**, see *Spondylolisthesis*. **P., stat'ic**, bony pelvis. **P., straits of**, see *Pelvis*. **P., superior**, false pelvis; see *Pelvis*. **P., thorny**, see *Acanthopelis pelvis*. **P. triloba**, pseudo-osteomalic p., deformity produced by rachitis, resembling osteomalacic p. **P. triradia'ta**, sacrum and lumbar vertebra project inward toward the centre of the pelvic canal. **P., true** or **ve'ra**, part of pelvis below the ileo-pectineal line; see *Pelvis*.

Pelvitrochante'rian. Relating to the pelvis and great trochanter. The pelvitrochanterian region is formed by the pyramidalis, two obturators, gemini, and quadratus femoris muscles, which pass from the pelvis to the digital cavity of the great trochanter.

Pelycochirometre'sis (*pelux*, pelvis, *cheir*, hand, *metron*, measure). Pelvimetry with the hand.

Pelycom'eter (*pelux*, pelvis, *metron*, measure). Pelvimeter.

Pelycometresis, pel-i-ko-met-ra'sis. Pelvimetry.

Pelycotomia, pel-ik-o-to'me-ah. Pubiotomy.

Pelyom'eter. Pelvimeter.

Pem'mican or **Pem'ican.** Meat cured, pounded, and mixed with fat. It has been much used as nutriment on long overland journeys.

Pemphigodes, pem-fig-o'dees. Epithet given to the fever accompanying pemphigus.

Pemphigoid, pem'fig-oid. Resembling pemphigus.

Pem'phigus (*pemphix*, blister). *Vesicular fever*, *Bladdery fever*, *Waterblebs*. Skin disease characterized by successive formation of variously-sized bullæ, usually seated on slightly inflamed base, with fever. **P. apyret'icus**, form of p. without fever. **P. chron'icus mor'ta**, pompholyx. **P. circina'tus**, form in which new bullæ rise in a circle around the older one. **P. diphtherit'icus**, exposed cutis at base of bullæ, covered with whitish-yellow layer. **P. diu'tinus**, P. vulgaris; attack prolonged, eruption following in quick succession. **P. folia'ceus**, flaccid bullæ only partly filled with fluid. **P. hæmorrhag'icus**, blebs contain bloody fluid. **P. Hungar'icus**, anthrax. **P. lepro'sus**, prodromic vesicles of lepra nervorum. **P. malig'nus**, blebs large, form rapidly, and ulcerate. **P. mor'ta**, pemphigus. **P. prurigino'sus** (Hardy), dermatitis circumscripta herpetiformis (Duhring). **P. veg'etans** first appears as a few blebs which break, and are followed by warty growths resembling condylomata; fatal. **P. vulga'ris**, pemphigus.

Pem'phix or **Pem'phyx.** Pemphigus.

Pemptæ'a febris (*pemptas*, five). Quintan.

Penæ'a mucrona'ta (after P. Pena, a French botanist). See *Sarcocolla*. **P. sarcocol'la**, sarcocolla.

Pencil flower. Stylosanthes elatior.

Pencil-like pro'cesses. Styloid processes.

Pencil wood. Juniperus communis.

Pendin'ski ulcer or **Pend'jet sore.** Aleppo button. See *Ulcers, endemic*.

Pen'dulous abdo'men. Physconia.

Pen'dulum pala'ti (*pendo*, to hang). Velum pendulum palati.

Pen'etrating (*penetro*, to go into). A wound is so called which penetrates below the surface or into one of the great splanchnic cavities. A medicine is also so called which is supposed to pass through the pores and stimulate. Also used in the sense of pungent.

Penetra'tion. Power of an objective to give good definition of several planes of an object at once. Entrance of male organ within the labia majora; proof of penetration is necessary to establishment of crime of rape; not essential that the hymen should have been ruptured.

Penghawar. Drug derived from certain tree-ferns in Java, which has had a reputation in Holland, especially as a styptic.

Pe'nial (penis). Relating to the penis.

Penicil'li lie'nis. Tufts of fine twigs into which the small arteries of the spleen suddenly break up.

Penicil'liform. Arranged in tuft-like or radiate manner.

Penicil'lium glau'cum. A common fungus which gives to decaying organic matter its mildewed appearance; generated also in urine after standing a few days, or in acid urine containing mucus, albumen, etc.; also tuft arising from radiation of a number of vessels or fibrous structures from a single point. **P. ro'seum**, species, thought to be a variety of Penicillium glaucum, occurring on bread.

Penicil'lum or **Penicil'lus** (a painter's brush, dim. of **Penis**, tail). Tent or pledget; pessary. The secreting glandiform extremities of the venæ portæ have been so termed, as well as the villous textures; a group or pencil of arterioles.

Penic'ulum. Compress.

Penic'ulus. Penicillus; tent.

Peni'des. Saccharum hordeatum.

Penid'ium (*penis*, tail, from the shape [?]). Clarified sugar made up into rolls. *Barley-sugar*. It is demulcent. See *Saccharum hordeatum*.

Pe'nile. Relating to the penis, as penile fistula. See *Urethral fistula*.

Pe'nis (a tail, *pendo*, to hang down). This organ, the main use of which is to carry the seminal fluid into the female organs of generation, is cylindroid, long, and erectile, and situate before and beneath the symphysis pubis. In the ordinary state it is soft and pendent in front of the scrotum. During erection it becomes elongated, upright, and assumes a triangular shape. Its upper surface is called the *Dorsum penis*, and at its anterior surface there is a longitudinal projection formed by the canal of the urethra. Two sides of the penis are round, and its posterior extrem-

ity or root is attached to the pelvis. Its anterior extremity is free, and presents the glans, prepuce, and orifice of the urethra; formed of the corpora cavernosa, the principal seat of erection, the corpus spongiosum of the urethra for the conveyance of the urine and sperm, and the glans which terminates the canal. The arteries of the penis are branches of the internal pudic. The veins correspond with the arteries. The nerves are from the internal pudic. **P. bone,** ossification found in the corpora cavernosa in many animals, traces of it being occasionally seen in man. **P. capti'vus,** said of the penis when held fast during coition by contraction of muscles of the perineum in the female. **P. cer'ebri,** pineal gland. **P., club or clubbed,** a permanent incurvation or bending of the penis backward toward the scrotum, which is remedied by the removal of a V-shaped piece from the corpora cavernosa; see *Kyllosis.* **P., factit'ious,** dildoo. **P. femine'us,** clitoris. **P. lipoder'mus,** paraphimosis. **P. luna'tus,** curved shape of penis caused by formation of bands. **P. mulie'bris,** clitoris. **P. palma'tus,** said of penis when enclosed by skin of scrotum. **P. succeda'neus,** dildoo. **P., suspen'sory lig'ament of,** see *Suspensory.*

Penischisis, pe-nis'kis-is (*penis, schizo,* to cleave). Fissure of penis producing epi- or hypo-spadias.

Peni'tis (*penis, itis*). A hybrid word denoting inflammation of the penis.

Penj'deh sore. See *Ulcers, endemic.*

Penna'tus. Penniform.

Pen'niform (*penna,* pen, *forma,* form). Epithet for muscles whose fleshy fibres are inserted at the side of a middle tendon, like the feathers of a pen on their common stalk. When on one side of the tendon they are called *simple* or *single penniform;* when on both sides, *double penniform.*

Pennisetum, pen-ne-sa'tum (*penna,* feather, *seta,* bristle). Plant growing in the East Indies, Cochin China, and the Molucca Islands; root possesses diuretic and slightly astringent properties. **P. spica'tum,** gero corn; grass growing in certain parts of Asia and North Africa; grain is edible.

Pen'nycress. Thlaspi; used like mustard.

Pennyroy'al. Mentha pulegium, Hedeoma pulegioides. **P., hart's,** Mentha cervina.

Pen'nyweight. Weight consisting of 24 grains troy.

Pen'nywort. Cotyledon umbilicus. **P., Asiat'ic,** Hydrocotyle Asiatica.

Pen-palsy. Writer's palsy or cramp. See *Cramp, writer's.*

Pen'sile (*pendo,* to hang). Applied to tumors which hang by small roots.

Pensil'ia (*pendo,* to hang). Pudibilia; male genitals.

Pen'sy. Viola tricolor.

Pen'ta (*pente,* five). In composition, five.

Pentabro'mide of i'odine. See *Iodine bromide.*

Pentachloride, pen-tah-klo'rid. Compound of chlorine in which five atoms of chlorine are combined with one of another element.

Pen'tal. Colorless, inflammable liquid obtained from amylene hydrate by action of acids; recently introduced as an anæsthetic, two or three drachms being usually sufficient.

Pentamethylenediamine, pen-ta-meth-il-ene-de'ameen. Pentamethylendiamin. Cadaverine.

Pentamyron, pen-tam'ir-on (*penta, muron,* ointment). Ancient ointment consisting of five ingredients—storax, mastich, wax, opobalsamum, and unguentum nardinum.

Pen'tane. See *Amyl hydride.*

Pentapharmacon, pen-tah-far'mak-on (*penta, pharmakon,* remedy). Any medicine consisting of five ingredients.

Pentaphyl'lum (*penta, phullon,* leaf). Potentilla reptans.

Pentas'toma coarcta'tum. Tænia solium. **P. constric'tum,** see *Parasites.* **P. denticula'tum,** see *Parasites.* **P. emargina'tum,** pentastoma tænioides. **P. fe'rum,** pentastoma denticulatum. **P. serra'tum,** pentastoma denticulatum.

Pentateuch (pen'tah-tuke), **surg'ical** (*penta, teuchos,* book, which signifies the five books of Moses—Genesis, Exodus, Leviticus, Numbers, and Deuteronomy). By analogy some surgeons have given the name *Surgical Pentateuch* to the division of external diseases into five classes—wounds, ulcers, tumors, luxations, and fractures.

Pentath'etum (*penta, tithemi,* to place). An ancient plaster consisting of five ingredients.

Pen'tene. Amylene.

Pentho'rum sedoï'des. Virginia or ditch stonecrop, ord. Crassulaceæ; common N. A. plant; used as astringent in catarrhal affections.

Pen'tyl ac'etate. Amyl acetate. **P. al'cohol,** amylic alcohol.

Pentylic, pen-til'ik. Relating to or containing pentyl or amyl.

Pen'ula (a cover). Ingluvies.

Pen'ydeh ulcer. See *Ulcer, endemic.*

Pe'ony. Pæonia.

Pe'os. Penis.

Peot'omy (*peos, tome,* incision). Amputation of the penis.

Pepan'sis (*pepairo,* to maturate). Coction, maturation.

Pepan'ticus. Maturative.

Pepas'mus. Coction, maturation.

Pepas'tic. Medicine supposed to have the power of favoring the concoction of diseases. Maturative.

Pepei'rus. Concocted.

Pep'eri. Piper.

Peperomia (pep-er-o'me-ah) **rotundifo'lia** (*peperi,* pepper). The leaves of this plant, which is a native of the West Indies and South America, are diaphoretic, antispasmodic, and applied externally to wounds. **P. umbella'ta,** plant of South America; the Brazilians use an infusion of the root as a diuretic; oil derived from the seeds is used as a stomachic and in scurvy; leaves are applied externally in glandular affections.

Pep'lus. Peritoneum.

Pe'po. Cucurbita pepo. **P. lagena'rius,** Cucurbita lagenaria. **P. vulga'ris,** Cucurbita pepo.

Pep'per. Piper. Black pepper; unripe fruit of *Piper nigrum* (Ph. U. S. and Br.); a warm carminative stimulant; see also *African, Ashantee, Bird, Black, Bell, Bonnet, Bush, Cayenne, Cherry, Goat, Guinea, Jamaica, Japan, Japanese, Long, Malaguetta, Pot, Red, Spur, Sweet, Wall, Water, West African,* and *White pepper.* **P., Af'rican,** Capsicum annuum. **P., black,** Piper nigrum. **P. bush, sweet,** Clethra alnifolia. **P., Cayenne',** Capsicum annuum. **P., chil'ly,** Capsicum annuum. **P., cu'beb,** Piper cubeba. **P., decor'ticated,** see *Piper nigrum.* **P., Guin'ea,** Capsicum annuum. **P., Jamaica,** Myrtus pimento. **P., Japanese,** Fagara piperita. **P., long,** Piper longum. **P., malaguet'ta,** applied to the fruit or seeds of several zingiberaceous plants, as well as to the pimento; usually considered to be synonymous with grains of paradise and Guinea grains.

Pep'permint. Mentha piperita. Carminative and stimulant. **P. cam'phor,** menthol. **P. drops,** sugar drops flavored with oil of peppermint. **P. test,** use of oil of peppermint, poured down a soil-pipe and followed by a dash of hot water, to detect leaks in pipe or fixtures by peculiar odor of the drug. **P. tree,** Eucalyptus amygdalina. **P. water,** aqua menthæ piperitæ. Solution of oil of peppermint in water to 500 (Ph. U. S.); prepared by aqueous distillation from the herb (P. G., Cod.); from the oil (Ph. Br.).

Pep'perpod. Capsicum annuum. **P., poor'man's,** Polygonum hydropiper. **P., tailed,** Piper cubeba. **P., turnip,** Arum triphyllum. **P., wall,** sedum. **P., water,** Polygonum hydropiper. **P., water, of Amer'ica,** Polygonum punctatum. **P., white,** Piper album.

Pep'per-root. Dentaria.

Pep'perwort. Lepidium.

Pep'sin (*pepsis,* coction, digestion). *Digestive principle.* Characteristic nitrogenous enzyme found in the gastric juice. Preparation of mucous lining of fresh and healthy stomach of the pig, sheep, or calf (Br. Ph.); used to assist gastric digestion. Also applied locally in form of ointment to ulceration covered with a slough or membrane, and as a solvent of false membranes in

diphtheria. Saccharated pepsin, pepsinum saccharatum (Ph. U. S.), is pepsin mixed with sugar of milk. Usual dose is gr. x–xv.

Pepsi'na por'ci. Pepsin.

Pepsinogen, pep-sin'o-jen. Substance in gastric glands which develops into pepsin.

Pepsi'num. Pepsin. **P. saccharа'tum,** saccharated pepsin. See *Pepsin.*

Pep'sis. Coction, digestion.

Pep'tic (*pepto,* to digest). An agent that promotes digestion or is digestive. See *Oxyntic.* **P. glands,** tubular glands in cardiac end of stomach, which secrete gastric juice. **P. persua'der,** see *Pilulæ aloës et kinæ kinæ.*

Peptogen, pep'to-jen (*pepto,* to digest, *gennao,* to beget). Substance favoring production of pepsin.

Peptonæmia, pep-ton-e'me-ah (*pepto,* to digest, *haima,* blood). Presence of artificially produced peptone in the blood.

Peptonate, pep'ton-ate (*pepto,* to digest). Product of action of peptone upon metallic salts, as upon iron —peptonate of iron.

Pep'tone (*pepto,* to digest). Product of action of gastric juice upon albuminoids. Whitish, pale, brown powder, free from saline matter, soluble in water; prepared by artificial digestion of beef and subsequent desiccation.

Pep'tones. Products of digestion of proteids with gastric or pancreatic juice or its equivalent, soluble in water, diffusible, not precipitated by acids, alkalies, heat, or saturation with ammonium sulphate, but precipitated by alcohol and phosphotungstic acid. See also *Antipeptone, Hemipeptone,* and *Amphopeptone.*

Peptonization, pep-ton-i-za'shun. Conversion into peptones.

Pep'tonized food. Food partially converted into peptones by artificial digestive ferments before being swallowed or injected.

Peptonuria, pep-ton-u're-ah (*pepto, ouron,* urine). Production or passage of urine containing peptones.

Peptotoxine, pep-to-toks'een (*pepto, toxikon,* poison). Poisonous alkaloid or ptomaïne extracted from peptonized albumin, disappearing as putrefaction progresses. See *Ptomaïnes* (table).

Pequet's reservoir, pek-a's rez'er-vwor. Receptaculum chyli.

Per. By or through, in composition. Often, also, gives intensity to the signification. In chemical terms it implies the highest known or possible combining proportion, as perchloric acid, perbromide, etc.

Per sal'tum. By jump or jerk, applied to flow of arterial blood.

Pera, pe'rah. Scrotum.

Peracephalus, per-ah-sef'al-us (*per, akephalos,* without a head). A genus of monsters, comprising one of the most extensive groups of the teratological series, characterized by a sufficiently regular form of the body, by the absence of upper extremities, and by the thorax being more imperfect than in acephali, or even completely null. The essential conditions, consequently, in their degree of anomaly pass beyond the true type of the acephalous monster.

Peracu'tus. Very acute.

Peragua, per-ag'wah. Ilex vomitoria.

Perarticulatio, per-ar-tik-u-lah'she-o. Diarthrosis.

Peratodynia, per-at-o-din'e-ah (*pera,* a pouch for provisions, stomach, *odune,* pain). Cardialgia.

Percep'ta (*percipio,* to perceive, to receive). The effects of nervous action on the animal economy; in other words, the sensations, the functions of the mind, and their deterioration or privation.

Perceptibil'ity. See *Sensibility.*

Percep'tion. Appreciation which the brain has of an impression made upon an organ of sense.

Perceptiv'ity. Power of perception.

Per'cha lamella'ta. Gutta-percha in thin, translucent sheets.

Perchlore'thane. Carbon trichloride.

Perchlo'ric acid. Colorless, oily, very acid liquid; distillate of potassium perchlorate with sulphuric acid.

Perchlo'ride. Compound of perchloric acid and a base. **P. of mer'cury,** mercuric chloride.

Perchlo'ridum. Perchloride.

Perchlormethane, per-klor-me'thane. Carbon tetrachloride.

Perclu'sion (*per, claudo,* to shut). State dependent upon peripheral lesion of a part, in contradistinction to that associated with lesion of the central nervous system or some remote organ.

Per'colate. See *Percolation.*

Percola'tio (*percolo,* to strain through). Filtration, percolation.

Percola'tion. The terms *percolation* and *displacement* are applied, in pharmacy, to an operation of filtration which consists in placing any substance, the virtues of which have to be extracted by a menstruum, in a funnel-shaped instrument having a septum perforated with holes, or its tube stuffed with cotton or tow, and pouring fresh portions of the menstruum upon it until all its virtues have been extracted. The first portion of the filtered liquor is called *percolate.* Used in the formation of certain infusions, extracts, tinctures, etc. An instrument used for this purpose is called a *displacer* or *percolator.*

Per'colator. See *Percolation.*

Percuss' (*per, quatio,* to strike). To strike upon with the view of appreciating the resulting sound. To practise percussion.

Percus'sion. When *immediate* or direct percussion is made on the chest or abdomen, the more or less perfect resonance is an index of the state of the contained organs, and the physician is thus aided in his diagnosis. For this purpose the part may be struck with the fingers gathered into a bundle and their tips placed upon a level. Frequently, however, resort is had to *mediate* percussion, which consists in interposing between the point of the fingers and the part the finger of the other hand, or a pleximeter, and striking this instead of the naked chest. **P., auscult'atory,** see *Acouophonia.*

Percusso-punctator, per-kus'so-punk-ta'tor. Instrument provided with needles for puncturing the skin in rheumatic affections.

Percussor, per-kus'sor. Hammer employed in percussing.

Perditio, per-dish'e-o. Abortion.

Perdo'nium. A medicated wine of herbs.

Perei'ra. Geissospermum Vellosii; pereiria.

Perei'ria or **Perei'ra med'ica** (after Dr. Jonathan Pereira, an eminent English pharmacologist). *Womival, Venivel, Bangwellgetta,* ord. Menispermaceæ; Ceylonese plant. An infusion of the root is considered by the Cingalese to be an excellent stomachic.

Perei'rine. Amorphous alkaloid found in bark of Geissospermum læve. Tonic, antipyretic, and antiperiodic. The valerianate and hydrochloride are also employed.

Pereskia (per-es'ke-ah) **aculea'ta.** Gooseberry of the West Indies; fruits have expectorant and antisyphilitic virtues.

Perete'rium (*perao,* to bore). Trepan.

Pereto'rium. Trepan.

Pere'zia adna'ta. Mexican herb, genus of Compositæ; root is an active purgative; see *Pipitzahoa.* **P. mictico'sa,** P. adnata. **P. na'na** and **P. Wright'ii** also contain pipitzahoic acid and are purgative.

Perfla'tion (*perflo,* to blow through). Act of blowing through a tube or canal to effect expulsion of its contents.

Perfoliata, per-fo-le-at'ah. Bupleurum rotundifolium.

Per'forans (*perforo,* to bore through). Name given to different muscles whose tendons pass through intervals between the fibres or tendons of other muscles, thence called *perforated.* See *Flexor longus digitorum,* etc. Under the name *Perforating arteries* are included—1. In the hand—arterial branches, given off by the profound palmar arch, which traverse the muscles and interosseous spaces; 2. In the thigh—three or four arteries, furnished by the profunda, which pass through the openings of the abductor magnus;

3. In the foot—the anterior and superior branches of the plantar arch. **P. Casse'rii,** musculo-cutaneous nerve. **P. manûs,** flexor profundus perforans. **P. profun'dus,** flexor longus digitorum pedis profundus perforans.

Perforata, per-for-at'ah. Perforated space.

Per'forated mem'brane. See *Artery.* **P. space or spot,** locus perforatus. Grayish depressions at base of brain presenting numerous orifices for blood-vessels: anterior, two in number, situate laterally at beginning of Sylvian fissure; posterior, single, in trigonum interpedunculare on median line.

Per'forating ar'teries. See *Perforans.* **P. cuta'neous nerve,** branch from fourth sacral or pubic nerve, perforates great sciatic ligament; is distributed to skin over inner and lower border of gluteus maximus. **P. disease of foot,** trophoneurotic affection beginning as a cutaneous disorder of the sole of the foot, followed by ulceration and destruction of soft parts and bones. **P. fi'bres,** Sharpey's fibres. **P. ul'cers of foot,** ulcers with sharp edges which occur on the soles of the feet or between the toes in locomotor ataxy; probably analogous to bed-sores. **P. ves'sels of bone,** found in Volkman's canals in the cortical substance.

Perforatio, per-for-ah'she-o. Perforation. **P. cran'ii,** see *Perforator.* **P. intestino'rum,** perforation of the intestines. **P. ventric'uli,** gastrobrosis.

Perforation, per-for-a'shun (*perforo,* to bore through). An accidental opening in the continuity of parts or organs.

Per'forator. Instrument for perforating osseous structures, or for opening the head of the fœtus in utero when it is necessary to diminish its size. The operation is called *Cephalotomia; Perforatio cranii.*

Perforato'rium. Perforator.

Perfora'tus. That which is pierced. Anatomists have given this name to muscles whose fibres or tendons separate to suffer other parts to pass through them. Such are the flexor brevis digitorum pedis, F. sublimis perforatus, and coracobrachialis. Also to parts that are perforated for any purpose—as the substantia perforata of the brain. **P. Casse'rii,** coracobrachialis.

Perfrica'tion (*per, frico,* to rub). Inunction.

Perfrictio, per-frik'she-o (*per, frigeo,* to shiver with cold). Considerable refrigeration; great sense of cold; shivering.

Perfrigeratio, per-frij-er-ah'she-o. See *Rigor.*

Perfrigerium, per-frij-a're-um. Perfriction.

Perfumed' spir'it. Alcoholic solution of volatile oils, principally of orange-flowers, bergamot, lemon, rosemary, and lavender, with sometimes cinnamon, cloves, and orange-peel; commonly called cologne water.

Perfu'sio (*per, fundo, fusum,* to pour over). Fomentation. **P. frig'ida,** see *Affusion.*

Perfu'sion can'ula. Two-way canula.

Per'i. Prefix signifying about, on all sides, round about; also an augmentative prefix.

Periadenitis, per-e-ad-en-e'tis (*peri, aden,* gland). Inflammation of the surroundings of a gland, as the cellular tissue, etc.

Periære'sis (*peri, aireo,* to take away). A sort of circular incision made in the neighborhood of large abscesses; now only practised in some forms of tumor.

Perial'ges (*peri, algos,* pain). Very painful; melancholic.

Perialgia, per-e-al'je-ah (*peri, algos,* pain). A very violent pain.

Periam'ma (*peri, hapto,* to hang). Amuletum.

Perianal, per-e-an'al (*peri, anus*). Periproctic.

Periangeiocholitis, per-e-an-ji-o-ko-le'tis (*peri,* around, *angeion,* vessel, *chole,* bile). Inflammation of tissue around biliary canals, of both large and small size.

Periangeio'ma (*peri, angeion,* vessel). A new growth around a vessel, occupying its outermost structures.

Perianthopodus (per-e-an-thop'od-us) **diffu'sus** (*peri,* around, *anthos,* flower, *pous,* foot). Plant of Brazil used internally in diseases of the skin and as an emmenagogue.

Periap'ton (*periaptos,* hung around). Amuletum.

Periarteritis, per-e-ar-ter-e'tis (*peri, arteritis,* inflammation of an artery). Inflammation of the sheath of an artery. **P., gum'matous,** see *Gummatous.*

Periarthritis, per-e-ar-thre'tis (*peri, arthron,* joint, *itis*). Inflammation of the tissues surrounding a joint.

Periarticular, per-e-ar-tik'u-lar (*peri, articulo,* to join). Around a joint. **P. car'tilages,** circumferential cartilages.

Per'iblast (*peri, blastos,* germ). *Periplast.* Amorphous matter which surrounds the endoblast, endoplast, or cell-nucleus, and undergoes segmentation.

Periblastula, per-e-blas'tu-lah (*peri,* around, *blastos,* sprout). Ovum in a more developed condition than when in the morula.

Periblema, per-e-bla'mah (*peri, ballo,* to throw). Outer coating.

Periblep'sia or **Periblep'sis** (*peri, blepo,* to look). Wild look accompanying delirium.

Peribole, per-ib'o-la (*peri, ballo,* to throw). The dress of a person. Pericardium. Translation of morbific matter toward the surface of the body.

Peribol'ic (*peribole*). Surrounding, encasing.

Peribronchial, per-e-bron'ke-al (*peri,* around, *bronchos,* bronchus). Situated around a bronchus.

Peribronchitis, per-e-bron-ke'tis (*peri, bronchos,* bronchus). Inflammation of cellular tissue around the bronchi. **P. fibro'sa,** in this variety fibrous hyperplasia around the bronchi occurs. **P. nodo'sa,** in this form miliary tubercles exist in the tissue surrounding the bronchi.

Peribro'sis (*peri, brosko,* to eat around). Ulceration or erosion at the corners of the eyelids.

Pericæ'cal (*peri, cæcum*). That which surrounds the cæcum; hence pericæcal abscess.

Pericæes, per-is'e-ees. Feverish (old term).

Perical. Elephantiasis; also Madura foot.

Pericar'diac. Pericardial; relating to the pericardium. **P. ar'teries,** small branches from the internal mammary and aorta. **P. pleu'ra,** mediastinal pleura. **P. veins,** small branches collecting blood from the pericardium, emptying into the superior cava.

Pericardiacophren'ic ar'teries. Branches of internal mammary supplying diaphragm and pericardium.

Pericar'dial. Pericardiac.

Pericardiopleu'ral cav'ity. Part of embryonic body-cavity extending into the neck.

Pericardiopneumato'sis. Effusion of air into the pericardium.

Pericardiothyroï'deus. Muscular bundle extending from outer surface of the pericardium to the body of the thyroid; regarded as an independent fascicle of the sternothyroid.

Pericardit'ic. Relating to pericarditis.

Pericardi'tis (*pericardium, itis*). Inflammation of the pericardium. This is probably the proper appellation for most of those cases which have received the names carditis, cardiopericarditis, cardopericarditis, and cardipericarditis. Along with signs of pyrexia, the local symptoms resemble those of pneumonia. Those which point out that the pericardium is the seat of disease are the following: pain referred to the region of the heart or the scorbiculus cordis, sometimes pungent, at others dull and heavy; palpitation, accompanied with spasmodic twitchings in the neighborhood of the heart, shooting up to the left shoulder; pulsation and sometimes soreness of the carotids, with tinnitus aurium and vertigo. The breathing is by catches; dyspnœa considerable; pulse jarring, jerking, peculiar; the tongue white, covered with a mucous coat; and the skin often bathed in sweat, as in acute rheumatism. The physical signs during the first period are as follows: The action of the heart is generally evident to the eye, and may be felt by the hand. There is soreness to the touch over the intercostal spaces and over a small surface in the epigastric region when the pressure is directed

toward the pericardium. Percussion is usually natural, but at times there is dulness. On auscultation the cardiac movements are found to be frequent, abrupt, jerking, and tumultuous; often irregular and intermittent. The pulse presents corresponding characters. When effusion of lymph has occurred, percussion may be negative or be but slightly affected. On auscultation, in addition to the preceding signs, there may be one or more of the rubbing or friction sounds resembling the rustling of parchment, or of a sawing or rasping character. In some cases the sound is like the creaking of new leather. This has been supposed to be pathognomonic of effused lymph. The most important point in the pathology of pericarditis is its connection with acute rheumatism, and it forms one of the most dangerous occurrences in the latter disease. It may be acute or chronic; in either case it is, of course, formidable. **P., can'cerous,** carcinoma of pericardium. **P., dry,** pericarditis in which there is no effusion. **P. exsudato'ria sanguinolen'ta,** effusion of blood in the pericardium. **P. gummato'sa,** syphilitic pericarditis accompanied by formation of gummata. **P. inter'na,** inflammation involving inner pericardial layer. **P., moist,** pericarditis with effusion. **P. oblit'erans,** in this form of pericarditis the cardiac muscle atrophies. **P., rheumat'ic,** pericarditis due to rheumatism.

Pericardium, per-e-kar'de-um (*peri, kardia,* heart). *Sac* or *Capsule of the heart.* The pericardium is a membranous sac which envelops the heart and the arterial and venous trunks passing from or into it. It is situate in the separation of the mediastinum, above the central aponeurosis of the diaphragm, to which it strongly adheres. Its shape is triangular like that of the heart, to which it is fitted; composed of two membranes: external, fibrous; internal, serous. The latter, having lined the inner surface of the external layer, is reflected over the heart and covers it entirely—*epicardium*—without, however, having the heart within it; in which arrangement it resembles other serous membranes. It retains the heart in position and facilitates its movement by means of the serous fluid contained in its cavity and secreted by the membrane. The arteries of the pericardium are small and derived from the superior phrenic, anterior mediastinal, and bronchial. The veins accompany them and open into the brachiocephalic. The lymphatics enter the lymphatic glands that surround the vena cava superior. **P. exter'num,** parietal portion. **P. inter'num** or **viscera'le,** visceral portion of pericardium.

Pericar'pium (*peri, karpos,* fruit). Epicarpium.

Pericellular, per-e-sel'u-lar. Situate around a cell.

Pericementitis, per-e-sem-en-te'tis. Inflammation of the pericementum. Periodontitis.

Pericemen'tum. Osseous layer over the fangs of the teeth and under the periodontal membrane.

Pericephalic (per-e-sef-al'ik) **ar'tery.** External carotid.

Pericholecystitis, per-e-kol-e-sis-te'tis (*peri,* around, *chole,* bile, *kustis,* bladder). Inflammation involving tissue surrounding the gall-bladder.

Perichol'ia (*peri, chole,* bile). Superabundance of bile.

Pericholus, per-ik'o-lus (*peri, chole,* bile). Very bilious.

Perichondral, per-e-kon'dral. Relating to the perichondrium.

Periochondriodynia, per-e-kon-dre-o-din'e-ah (*peri,* around, *chondros,* cartilage, *odune,* pain). Pain in the perichondrium.

Perichondritis, per-e-kon-dre'tis (*perichondrium, itis*). Inflammation of the perichondrium; hence perichondritis laryngea, inflammation of the perichondrium covering the larynx. See *Larynx, diseases of* (table). **P. auric'ulæ,** hæmatoma auris.

Perichon'drium (*peri, chondros,* cartilage). Fibrovascular membrane surrounding the cartilage and serving for its nutrition.

Perichondrome, per-e-kon'drome. Tumor of the perichondrium.

Perichoroi'dal or **Pericho'roid.** *Perichoroideal.* Surrounding the choroid, as perichoroidal space, lymph-space between choroid and sclerotic.

Perichrisis, per-ik'ris-is (*peri, chrio,* to anoint). Liniment.

Perichris'ton. Liniment.

Periclasis, per-ik-las'is (*peri, klao,* to break). A comminuted fracture, with denudation of the bone.

Pericly'menum. Lonicera periclymenum. **P. vulga're,** Lonicera periclymenum.

Pericnemia, per-ik-na'me-ah (*peri, knemè,* the leg). Parts surrounding the tibia; the tibia itself.

Pericnemious, per-ik-ne'me-us (*peri,* around, *kneme,* leg). Relating to the tibia and to parts surrounding it.

Pericolonitis, per-e-ko-lon-e'tis (*peri, colonitis*). *Pericolitis.* Inflammation of the areolar tissue surrounding the colon.

Pericolpitis, per-e-kol-pe'tis (*peri, kolpos,* vagina, *itis*). Inflammation of the areolar tissue surrounding the vagina.

Periconchal, per-e-kon'kal (*peri, concha,* shell). Surrounding the concha of the ear. **P. sul'cus,** groove between the helix and convex posterior surface of the concha.

Periconchitis, per-e-kon-ke'tis. Inflammation of lining membrane of orbit.

Pericorneal, per-e-kor'ne-al. Surrounding the cornea.

Pericowperitis, per-e-kow-per-e'tis. Inflammation around Cowper's gland.

Pericraniœdema, per-i-kran-i-e-de'mah (*pericranium, œdema,* swelling). Œdema of the head, owing to fluid effused under the pericranium.

Pericranitis, per-e-kran-e'tis (*peri, kranion,* cranium). Inflammation of the pericranium.

Pericranium (*peri, kranion,* cranium). Periosteum covering the cranium externally. **P. inter'nus,** endocranium.

Pericysti'tis (*peri, cystitis*). Inflammation of the areolar tissue separating the bladder from the neighboring parts.

Pericystomatitis, per-e-sis-to-mat-e'tis. Inflammation of surrounding coat or membrane of ovarian cystoma.

Pericytula, per-e-sit'u-lah (*peri,* around, *kutos,* cavity). Ovum in an impregnated state prior to superficial segmentation.

Peridectomia, per-e-dek-to'me-ah. Removal of band of conjunctiva from around base of cornea. Peritomy.

Peridenti'tis. Periodentitis.

Peridentium, per-e-den'she-um (*peri,* around, *dens,* tooth). Periodontium.

Perideria, per-e-da're-ah (*peri, dere,* neck). Twisting of the cord around the neck of the child.

Perides'mic (*peri, desmos,* ligament). Some nosologists have given this name to ischuria caused by a ligature round the penis or by stricture of the urethra.

Peridesmi'tis. Inflammation of the peridesmium.

Perides'mium (*peri, desmos,* ligament). Delicate areolar tissue covering a ligament.

Peridiastole, per-e-de-as'to-le. See *Diastole.*

Perididymis, per-e-did'im-is (*peri, didumos,* testicle). Tunica albuginea.

Perididymitis, per-e-did-im-e'tis (*peri, didumos,* testicle, *itis*). Inflammation of the tunica albuginea testis or areolar tissue surrounding the testis.

Perididymium, per-e-did-im'e-um. Peridídymis.

Peridiodynia, per-id-e-o-din'e-ah. Perodynia; cardialgia.

Perid'romus (*peri, dromos,* a course). The extreme circumference of the hairs of the head.

Periencephali'tis (*peri, enkephalos*). Inflammation of the pia mater and superficial layers of the brain.

Perienteri'tis (*peri, enteron,* intestine). Inflammation of subperitoneal cellular tissue around the intestines.

Perienteron, per-i-en'ter-on (*peri, enteron,* intestine). Primitive perivisceral cavity.

Per'ier's opera'tion. Removal of inverted uterus by elastic ligature.

Perifolliculitis, per-e-fol-lik-u-le'tis. Inflammation around a follicle.

Perifolliculo'ses. Follicular affections of the skin.

Periangliïtis, per-e-gan-gle-e'tis. Inflammation of cyst-wall of ganglion.

Perigastric, per-e-gas'trik. In immediate vicinity of the stomach.

Perigastri'tis (*peri, gaster,* stomach). Inflammation of peritoneal coat of stomach.

Perigastrula, per-i-gas'tru-lah. Bladder gastrula.

Periglot'tis (*peri, glotta,* tongue). Mucous membrane of the tongue. Epiglottic gland. See *Tongue.*

Perignathic, per-e-nath'ik (*peri,* around, *gnathos,* jaw). In the immediate vicinity of the jaws.

Perigraphe, per-ig'raf-a (*peri, grapho,* to write). Circumscription. Aponeurotic intersections of the rectus abdominis are so called.

Perihepati'tis (*peri, hepatitis*). Inflammation of peritoneum covering the liver.

Perihyster'ic (*peri, hustera,* uterus). Around the uterus; periuteriue.

Perikardi'tis. Pericarditis.

Perilaryngeal, per-e-lar-in-je'al. Situate around the larynx.

Perilaryngi'tis (*peri, laryngitis*). Inflammation of the areolar tissue surrounding the larynx, which not unfrequently ends in perilaryngeal abscess.

Per'ilymph. Liquor of Cotunnius; fluid surrounding the membranous labyrinth. Aqua labyrinthi.

Perilymphangeal, per-e-limf-an-je'al. Situate around lymphatic vessel. **P. nod'ules,** lymphoid cells developed around lymphatic vessels.

Perilymphangeïtis, per-e-limf-an-je-e'tis (*peri, lymphangia,* a lymphatiç vessel, *itis*). Inflammation of the connective tissue around a lymphatic vessel.

Perimad'arous (*peri, madao,* to melt away). Applied to spreading ulceration of the skin.

Perimenia, per-e-men'e-ah. Hemorrhage about the uterus and its appendages, usually about the time of the catamenia.

Perimeningitis, per-e-men-in-je'tis (*peri, meningitis*). Pachymeningitis or inflammation of the dura mater.

Perimenin'go-encephali'tis (*peri,* around, *meninx,* membrane, *enkephalos,* brain). Periencephalitis.

Perimen'inx (*peri, meninx,* a membrane). Dura mater.

Perim'eter (*peri, metron,* measure). Circumference. Instrument for measuring the visual field.

Perimet'ric. Pertaining to perimetry.

Perimetrit'ic. Relating or appertaining to perimetritis.

Perimetri'tis (*peri, metritis*). Inflammation of the peritoneum connected with the uterus. See *Parametritis.*

Perimetrium, per-e-met're-um (*peri,* around, *metra,* womb). Peritoneal covering of the womb.

Perim'etry. Measuring of visual field.

Perimyelis, per-e-me'el-is (*peri, muelos,* marrow). Medullary membrane.

Perimyelitis, per-e-me-el-e'tis (*peri, myelitis*). Spinal meningitis.

Perimysiïtis, per-e-mis-e-e'tis (*peri, mus,* muscle). Inflammation of the perimysium.

Perimys'ium (*peri, mus,* muscle). Fascia. Areolar membrane or sheath surrounding a muscle or its fasciculi. The sheath of the whole muscle is termed P. externum; of the fasciculi, P. internum.

Pe'rin (sac or pouch). Scrotum; testicle; vagina; peritoneum; the anus.

Perinæauxe'sis. Perineauxesis.

Perinæocele, per-in-e-o-se'le (Eng. per-in-e'o-seel) (*perinæum, kele,* rupture). Perineal hernia.

Perinæoplasty, per-in-e'o-plas-te (*perinæum, plasso,* to mould). Plastic operation on the peritoneum.

Perinæorrhaph'ia or **Perinæorrhaphy,** per-in-e-or'rhaf-e (*perinæum, rhaphe,* suture). Suture of the perineum, in cases of laceration of the same. **P., Em'met's opera'tion for,** see *Emmet's operation.* **P., flap,** perinæorrhaphy in which flaps are obtained from the region around the cicatrices.

Perinæosynthesis, per-in-e-o-sin'thes-is. Langenbeck's operation for restoring limited loss of perineal tissue by perinæorrhaphy.

Perinæ'um. Perineum.

Perine'al. Relating or belonging to the perineum, as perineal artery, P. hernia, etc. **P. aponeuro'sis,** P. fascia. **P. ar'tery,** branches of the internal pudic distributed to the perineum, superficial and transverse perineal arteries. **P. bod'y,** term applied to designate a sort of fusing together of perineal structures by a great accession of elastic tissue, at a point midway between the posterior vulvar commissure and the anus, thus forming a highly elastic and resistant structure or body. **P. cuta'neous nerve,** see *Sciatic nerve, lesser.* **P. cystot'omy,** cystotomy by incision through the perineum. **P. fas'cia,** *Perineal aponeurosis.* The fasciæ, superficial and deep-seated—*Perineal ligament, Camper's ligament, Triangular ligament*—which belong to the perineum. In the anterior half of the perineum, beneath the subcutaneous fat, is a special layer of fascia continuous with the dartos. It is the proper superficial perineal fascia, sometimes called *Fascia of Colles.* It closes in the urogenital outlet of the pelvis. The inferior (superficial, deep layer of superficial) perineal fascia lies below the inferior muscular sheet, composed of transversus perinei, bulbo- and ischio-cavernosus. Middle perineal fascia lies between the inferior muscular sheet and superior, composed of ischio-urethralis. The inferior perineal fasciæ are between the superior muscular layer and urogenital viscera; middle and superior layers are often classed together as deep perineal fascia, also known as triangular ligament of urethra. **P. flex'ure,** short turn which the rectum makes just above the anus. **P. fos'sa,** *Ischiorectal fossa;* conical fossa, the base of which corresponds with the skin; formed anteriorly by the transversus perinæi muscle, behind by the inferior border of the gluteus maximus, internally by the levator ani, and externally by the tuber ischii. It is filled up with fat and fibrous striæ, and usually described as the superficial portion of the ischio-rectal fossa. **P. ischu'ria,** retention of urine caused by a tumor seated in the perineum. **P. lig'ament,** triangular ligament; see *P. fascia.* **P. nerve,** branch of the internal pudic, mainly distributed to the perineum and scrotum of the male, and to the vulva and perineum of the female. **P. nerves, deep,** branches of the perineal supplying muscles of the perineum. **P. nerves, superfic'ial,** branches of perineal supplying perineum, scrotum (labia, female), and inner part of the thigh; two in number, internal or posterior and external or anterior. **P. re'gion,** perineum. **P. sec'tion,** incision through the perineum for the cure of stricture of the urethra.

Perineauxesis, per-in-e-aux-a'sis (*perineum, auxesis,* growth). Reparatory operation for fissured or lacerated perineum; colpoperinæorrhaphy.

Perineoce'le (Eng. per-in-e'o-seel). See *Hernia, perineal.*

Perineo-cheilorrhaphy, per-in-e'o-ki-lor'rhaf-e. Operation of uniting by suture the freshly-cut surfaces of the labia majora and a small section of perineum for relief of prolapsed uterus.

Perineoplasty, per-in-e'o-plas-te (*perineum, plasso,* to repair). Operation for repair of ruptured perineum when performed after involution has taken place and surfaces must be freshened or denuded before sewing.

Perineor'rhaphy. Perinæorrhaphia.

Perineosynthesis, per-in-e-o-sin'the-sis (*perineum, sunthesis,* placing together). Operation devised by Langenbeck for relief of ruptured perineum by making a graft from the mucous membrane of the vagina.

Perineovagi'nal. Relating to the perineum and vagina, as perineovaginal fistula.

Perinephric, per-e-nef'rik (*peri, nephros,* kidney). Relating to the surroundings of the kidney, as perinephric abscess, which is not necessarily dependent on perinephritis.

Perinephrit'ic (*peri, nephros,* kidney, *itis*). Relat-

ing or appertaining to perinephritis, as perinephritic abscess, an abscess dependent especially on inflammation of the tissues surrounding the kidney.

Perinephritis, per-e-nef-re'tis (*peri, nephritis*). Inflammation of the areolar and fibrous membranes of the kidney, or of their investing adipose areolar tissue.

Perinephrium, per-e-nef're-um. Membrane enveloping or surrounding the kidney.

Perineph'ros or **Perinephrus** (*peri, nephros,* kidney). See *Kidney.*

Perineum, per-in-e'um (*perinaios*). The space at the inferior region of the trunk, between the ischiatic tuberosities, anus, and genital organs. It is smaller in the female than in the male, has a triangular shape, and is divided into two equal parts by a median line called the *raphe.* It is occasionally ruptured during labor. At times it has been made to extend posteriorly as far as the os coccygis. The part between the pudendum and anus is sometimes called *anterior perineum,* to distinguish it from that which extends from the anus to the coccyx, called *posterior perineum.*

Perineurion, per-e-nu're-on (*peri, neuron,* nerve). Neurilemma.

Perineuri'tis. Inflammation of the neurilemma.

Perineu'rium. Neurilemma. **P. of the brain,** neuroglia. **P. inter'num,** neuroglia.

Perine'us. Perineal.

Perinuclear, per-e-nu'kle-ar. Situated around a nucleus.

Perinyc'tides (pl. of **Perinyctis**) (*peri, nux,* night). Eruption appearing at night and disappearing by day.

Periocular, per-e-ok'u-lar. Situate around the eye or region of the eye. **P. space,** space between the eyeball and orbit.

Pe'riod (*peri, hodos,* way). *Circuit.* Periods are the different phases or revolutions of a disease, or the epochs which are distinguishable in the course of it. Three periods are commonly enumerated: *Augmentation, increase,* or *progress; Acme,* or height; *Decline.* Some authors reckon only the invasion and termination. Period is used, in describing an intermittent, for the time between the commencement of a paroxysm and that of the next, including the fit as well as the interval. **P., child'bearing,** period of life in woman when she may give birth to children, commencing at puberty and ceasing with the menopause. **P., incuba'tion of disease,** see *Incubation.* **P., intermen'strual,** time elapsing between occurrences of menstruation. **P., month'ly,** menses. **P., puer'peral,** period following and extending from delivery to reappearance of menstruation.

Periodei'a or **Periodeu'sis.** Period; also quackery.

Periodeu'tes or **Periodeu'ta** (*peri, hodeuo,* to travel). Charlatan.

Period'ic or **Period'ical.** See *Periodicity.* **P. fe'ver,** malarial fever.

Periodic'ity. *Rhythm.* Aptitude of certain physiological or pathological phenomena in health or disease to recur at particular periods after longer or shorter intervals, during which they cease completely. Diseases thus recurring are called periodical or rhythmical.

Periodol'ogy (*periodos,* period, *logos,* discourse). Doctrine of periodicity in health and disease.

Periodon'tal (*peri, odous,* tooth). Surrounding a tooth. **P. mem'brane,** *Dental periosteum;* fibro-vascular membrane, analogous to periosteum, and itself united to the periosteal membrane lining the sockets.

Periodonti'tis (*peri, odous,* tooth, *itis.*) Inflammation of the membrane lining the socket of a tooth. **P. gingiva'rum,** inflammation of the gums and their surroundings.

Periodon'tium. Periodontal membrane.

Periodoscope, per-i-od'o-skope (*periodos,* period, *skopeo,* to view). Instrument for ready calculation of the periodical functions of the female sex. It consists of a movable circular dial, upon which the months and days are engraved, fixed on a pivot in the centre of a large plate on which are numbered the different conditions of the reproductive system, as conception, abortion, premature labor, hemorrhage, labor, etc.

Pe'riods. Menses.

Peri'odus luna'ris. A lunar period. See *Menses.* **P. mor'bi,** type of disease. **P. san'guinis,** circulation.

Periodynia, per-e-o-din'e-ah (*peri, odune,* pain). A violent and extensive pain. Cardialgia.

Periœsophagitis, per-e-e-sof-aj-e'tis. Inflammation of the cellular tissue around the œsophagus.

Per'ion (*peri, ovum*). Decidua.

Perionyxis, per-e-on-iks'is (*peri,* around, *onux,* nail). Inflammation involving the fold of skin adjoining the nail.

Perioöph'oric. Surrounding the ovary.

Perioophori'tis. See *Parametritis.*

Periophthalmitis, per-e-of-thal-me'tis (*peri,* around, *ophthalmos,* eye). Inflammation of periorbital tissues.

Perioptometry, per-e-op-tom'et-re (*peri,* around, *optos,* visible, *metron*). Measurement or estimation of visual power in parts situate at the periphery of the retina.

Perior'bita (*peri, orbita,* the orbit). Periosteum lining the orbit, a continuation of the dura mater.

Perior'bital mem'brane. Periorbita.

Periorbi'tis or **Periorbiti'tis.** Inflammation of the periosteum lining the orbit.

Periorchi'tis (*peri, orchis,* testicle). Inflammation of the tunica vaginalis testis or cellular tissue around the testicle. **P. adhæsi'va,** in this form the tunica vaginalis and testis adhere.

Perios'teal. Relating to the periosteum.

Periosteï'tis. Periostitis.

Periosteoma, per-e-os-te-o'mah (*peri, osteon,* bone). *Osteoid chondroma, Periostosis.* Periosteal tumor, or a tissue resembling its deep layer, which becomes transformed into bone by the cells taking the shape of bone-cells, and the matrix calcifying. These tumors are more rapidly developed, have a less degree of consistence, and sooner disperse than exostoses, which they resemble greatly.

Periosteomyeletis, per-e-os-te-o-me-el-e'tis (*peri,* around, *osteon,* bone, *muelos,* marrow). Periostitis accompanied with increase of bone.

Periosteophyma, per-e-os-te-o-fe'mah (*phuma,* swelling). Periosteal swelling; periosteophyte.

Perios'teophyte (*periosteum, phuo,* to grow). Osseous formation commencing in the periosteum.

Periosteosis, per-e-os-te-o'sis (*peri,* around, *osteon,* bone). Periostitis; also periosteoma.

Periosteotome, per-e-os'te-o-tome (*peri,* around, *osteon,* bone, *tome,* incision). Instrument for cutting and lifting the periosteum from a bone.

Periosteot'omy (*periosteum, tome,* incision). Incision of the periosteum.

Perios'teum (*peri, osteon,* a bone). Fibrovascular membrane surrounding the bones everywhere, except the teeth at their coronæ and the parts of the bones covered with cartilage. The external surface is united in a more or less intimate manner to the neighboring parts by areolar tissue. Its inner surface covers the bone, whose depressions it accurately follows. It is united to the bone by small fibrous prolongations, and especially by a prodigious quantity of vessels which penetrate their substance. It unites the bones to the neighboring parts, and assists in their growth, either by furnishing at its inner surface an albuminous exudation, which becomes cartilaginous and at length ossifies, or by supporting the vessels which penetrate them to carry the materials of their nutrition. See *Medullary membrane.* **P., alveoloden'tal,** see *Alveolar.* **P., den'tal,** see *Alveolar membrane* and *Periodontal.* **P. inter'num,** medullary membrane. **P. or'bitæ,** periorbita.

Perios'tic. Relating or appertaining to the periosteum, or to parts surrounding a bone.

Periosti'tis (*periosteum, itis*). *Periosteitis.* Inflammation of the periosteum. When of a different nature, accompanied by suppuration, it is called acute subperiosteal abscess. **P. au'ris me'diæ,** inflammation of middle ear, acute and purulent in character. **P. caseo'sa,** tubercular periostitis. **P. gummato'sa,**

periostitis of syphilitic origin in which gummata exist under the periosteum. **P. inter'na cra'nii**, pachymeningitis of exterior part of dura mater. **P. malig'na**, suppurative periostitis due to presence of microbes. **P. mastoï'dea**, inflammation of periosteum of mastoid process. **P. phlegmono'sa**, malignant periostitis.

Periosto'ma. Bony growth around a bone.

Periostomedullitis, per-e-os-to-med-ul-le'tis (*periosteum, medulla*, marrow, *itis*). Simultaneous inflammation of the periosteum and medulla.

Periosto'sis (*peri, osteon, osis*). Tumor of the periosteum. Enlargement of a bone from inflammation. See *Periosteoma.*

Periostosteï'tis (*periosteum, osteon*, bone, *itis*). Simultaneous inflammation of the periosteum and bone.

Periostotomy, per-e-os-tot'om-e (*peri*, around, *osteon*, bone, *tome*, incision). Operation of cutting into the periosteum.

Periotic, per-e-o'tik (*peri, ous, otos*, ear). Surrounding the ear. **P. por'tion**, petromastoid portion of temporal bone.

Periovular, per-e-o'vu-lar (*peri*, around, *ovum*). Surrounding the ovum.

Peripachymeningitis, per-e-pak-e-men-in-je'tis (*peri, pachus*, thick, *meningitis*). Purulent inflammation of connective tissue between the dura mater and vertebræ.

Peripancreatitis, per-e-pan-kre-at-e'tis. Inflammation involving the external tissue of the peritoneum around the pancreas.

Peripe'nial mus'cle. Dartos-like envelope of smooth muscular fibres around the penis.

Peripetasma, per-e-pet-az'mah. Sick-bed.

Periphacitis, per-e-fas-e'tis (*peri, phakos*, lens). Inflammation of the capsule of the lens.

Periphacus, per-if'ak-us (*peri, phakos*, lens). See *Crystalline.*

Periph'eral (*peri, phero*, to bear). *Peripheric, Periipherical.* Relating or appertaining to the periphery or circumference. **P. anæsthe'sia**, anæsthesia of the cutaneous nerves. **P. as'pect**, aspect toward the circumference of an organ. *Peripherad* is used adverbially to signify "toward the peripheral aspect." **P. lay'er**, outer portion of molecular cortex of brain, composed entirely of medullated nerve-fibres. **P. neuri'tis**, a condition having the symptoms of neuritis, with paralysis, dependent usually on chronic alcoholism. **P. vas'cular sys'tem**, capillary system. **P. veins**, interlobular veins.

Periph'eric im'pulses. Influence transmitted by nerves from periphery to nerve-centres. **P. lin'ear extrac'tion.** Modified linear extraction.

Peripheritis, per-e-fer-e'tis. Periophthalmitis.

Periph'ery (same etymon). External surface or its boundary-line.

Periphimo'sis. Paraphimosis.

Periphlebitis, per-e-fleb-e'tis (*peri, phlebitis*). Inflammation of the sheath of a vein.

Periphracterythema, per-e-frak-ter-ith-e'mah. Circumscribed erythema.

Periphractolichen, per-e-frac-to-le'ken. Circumscribed herpes.

Periplasm, per'e-plazm. Ectoplasm.

Per'iplast (*peri, plasso*, to form). Periblast.

Peripleumo'nia. Peripneumonia.

Peripleuritis, per-e-plu-re'tis (*peri, pleuritis*). Inflammation of the subserous areolar tissue of the costal pleura; in many cases due to actinomycosis.

Perip'loca In'dica (*peri, pleko*, to twine). Hemidesmus Indicus. **P. Mauri'tia'na**, Bourbon scammony.

Periplysis, per-ip'lis-is (*peri, plusis*, the act of washing). A copious discharge from any part, especially from the bowels.

Peripneumonia (per-e-nu-mo'ne-ah) or **Peripneumoni'tis** (*peri, pneumon*, lung). *True peripneumony.* Inflammation of the substance of the lungs. See *Pneumonia.* **P. bilio'sa**, inflammation of the lungs accompanied with bilious fever. **P. catarrha'lis**, bronchitis or pulmonary catarrh with pain in some part of the chest; peripneumonia notha. **P. no'tha**, *False* or *Bastard peripneumony.* An inexact name under which some affections are comprised that resemble pneumonia, and especially chronic bronchitis with pleurodynia; see *Bronchitis, chronic.* **P. pituito'sa**, P. notha.

Peripneumonitis, per-e-nu-mon-e'tis. Peripneumonia.

Peripneu'mony. Pneumonia. **P., bas'tard**, peripneumonia notha. **P., la'tent**, peripneumony whose symptoms are so obscure as to be recognized with difficulty.

Peripolar, per-ip'o-lar. Surrounding poles; term applied to parts around the negative and positive poles of minute portions which are thought to form muscles and nerves.

Periproctic, per-e-prok'tik (*peri, proktos*, anus). Applied to organs or lesions around the anus.

Periprocti'tis (*peri, proktos*, anus, *itis*). Inflammation of the areolar tissue surrounding the rectum or in the anal region.

Periprokti'tis. Periproctitis.

Periprostatic, per-e-pros-tat'ik (*peri, prostate*). A term especially applied to abscesses situate around the prostate gland—periprostatic abscesses.

Periprostatitis, per-e-pros-tat-e'tis. Inflammation of periprostatic tissue.

Peripsoitis, per-e-so-e'tis (*peri, psoas*). Inflammation of connective tissue surrounding the psoas muscle.

Peripsyxis, per-e-six'is (*peri, psuxis*, becoming cold). Refrigeration; sense of cold; shivering.

Peripyema, per-e-pe-a'mah (*peri, puon*, pus). Suppuration around an organ—a tooth, for example.

Peripylephlebitis, per-e-pe-la-fleb-e'tis (*peri, pylephlebitis*, inflammation of the vena porta). Inflammation of the connective tissue in immediate relation with the portal vein.

Perirrhepsis, per-ir-rhep'sis. Term applied to a bandage when not in proper place.

Perirrhexis, per-ir-rheks'is. Term applied to a muscle when completely ruptured, or to a bone when fractured.

Perirrhœa, per-ir-rhe'ah (*peri, rheo*, to flow). Afflux of fluids from every point of the body toward an organ which has to remove them from the economy. Also enuresis.

Pe'ris. Perin.

Perisalpingi'tis (*peri, salpinx*, tube). Inflammation of the connective tissue around the Fallopian tube.

Perisceles, per-is'sel-ees (*peri, skello*, to dry). Irritating; said of drugs.

Peris'celis (*peri, skelos*, leg). Herpetic eruption at the place at which the garter is worn.

Periscop'ic glasses. Concavo-convex lenses, arranged with the view of obviating spherical aberration and allowing a greater degree of oblique vision. See *Lens* and *Meniscus.*

Periscyphis'mus or **Periscythismus**, per-is-se-thiz'mus (*peri, skuthes*, Scythian—that is, scalping after the manner of the Scythians). Scalping; an operation described by Paulus of Ægina; it consisted of an incision made around the cranium, and was employed in habitual weakness of the eyes, pains of the head, etc.

Perisialdochitis, per-is-e-al-dok-e'tis (*peri, sialon*, saliva, *docheion*, holder). Inflammation involving connective tissue around duct of Steno.

Perispermatitis, per-e-spur-mah-te'tis (*peri, sperma*, sperm). Hydrocele of the spermatic cord.

Perisphalsis, per-e-sfal'sis (*peri, sphallo*, to move). Circular motion impressed on a luxated bone for the purpose of reducing it.

Perisphinx'is (*peri, sphingo*, to compress). Ligation.

Perisplenitis, per-e-splen-e'tis. See *Splenitis.*

Perisporium, per-e-spo're-um. Genus of Fungi which are destructive to paper and tissue of vegetables.

Perissarte'ria (*perissos*, superabundant, *arteria*). Excessive development of arteries or of arterial tissue.

Perissodac'tylus (*perissos*, superabundant, *daktulos*, finger). Having supernumerary fingers or toes.

Perissoma, per-is-so'mah (*perissos*, superabundant). Excreted matter.

Perissopracticus, per-is-so-prak'tik-us (*perissos*, *prasso*, to do). Physician who uses more medicine than necessary, or who orders excessive doses.

Peristalsis, per-e-stal'sis (*peri*, *stello*, to contract). Peculiar, rhythmic, vermicular motion of a muscular tube, as the alimentary canal, by which its contents are forced onward.

Peristal'tic (*peri*, *stello*, to contract). Relating or appertaining to peristole, as peristaltic action. A medicine that promotes peristalsis. See *Systaltic*. **P. ac'tion**, peristole.

Peristaph'yline (*peri*, *staphule*, uvula). Relating to the parts immediately around the uvula.

Peristaphyli'nus exter'nus (*peri*, *staphule*, uvula). Circumflexus muscle. **P. infe'rior**, circumflexus musculus. **P. inter'nus**, levator palati.

Peristaphylopharynge'us. First or upper portion of palatopharyngeus muscle; second or middle is pharyngostaphylinus; third or lower, thyrostaphylinus.

Peris'tera an'ceps (*peristera*, pigeon, *anceps*, double). Pelargonium anceps.

Perister'ium. Verbena officinalis.

Peristerna, per-e-stur'nah (*peri*, *sternon*, the sternum). Lateral parts of the chest.

Peristole, per-is'to-le (*peri*, *stello*, to contract). A kind of undulation or vermicular movement, in appearance irregular, but in which the circular fibres of the muscular membrane of the intestine contract successively, from above downward, in proportion as the chyme advances in the alimentary canal; so that, being compressed above, it is pushed into the next portion of the intestine, whose fibres are in a state of relaxation. When the fibres contract inversely they occasion an antiperistaltic action. Peristaltic action is involuntary, and is not under the immediate influence of either brain or spinal marrow. It continues for some time after death. See *Peristalsis*.

Peris'toma (*peri*, *stoma*, mouth). Part immediately around the mouth or a similar opening.

Peristom'ium (*peri*, *stoma*, mouth). See *Mouth*.

Peristro'ma (*peri*, *stroma*, bed). Villous or mucous coat of the intestines.

Perisystole, per-e-sis'to-le (*peri*, *sustole*, contraction). Interval between the systole and diastole of the heart; only perceptible in the dying.

Perit'asis (*periteino*, to stretch all around). Extension or swelling in all directions.

Peritendineum, per-e-ten-din-e'um. Loose, connective-tissue sheath surrounding tendons and containing blood-vessels.

Periterion, per-e-ter'e-on (*peri*, *tero*, to rub, to drill). Perforating trepan.

Perites'tis (*peri*, *testis*). Tunica albuginea.

Peritexis, per-e-teks'is. Dissolution of an abscess.

Perithe'lium. Sheath of a small blood-vessel. **P., vas'cular**, external vascular epithelium. Nucleated membrane forming the outer covering of the larger-sized capillaries.

Perithoracic, per-e-tho-ras'ik. Around the thorax.

Peritome, per-it'o-me (*peri*, *tome*, incision). Circumcision.

Perit'omy. Circumcision of the cornea. Excision of the conjunctiva and subconjunctival tissue for pannus. See *Syndectomy*.

Peritonæalgia, per-it-o-ne-al'je-ah (*peritonæum*, *algos*, pain). Peritoneal pain or neuralgia.

Peritonærhexis, per-it-o-ne-rheks'is (*peritonæum*, *rhegnumi*, to break out). *Peritonæorexis*. Hernia formed by the rupture of the perineum.

Peritonæ'um. Peritoneum.

Peritone'al. Appertaining or relating to the peritoneum. **P. cav'ity**, space included by layers of peritoneum; see also *Sacs of peritoneum*. **P. fe'ver**, peritonitis. **P. fos'sæ**, see *Abdomino-vesical pouch*, *Cæcal fossa*, *Duodeno-jejunal recess*, *Ileo-cæcal fossa*, *Inguinal fossa*, *Intersigmoid fossa*, *Pararectal pouch*, *Paravesical pouch*, *Recto-vaginal pouch*, *Recto-vesical pouch*, *Subcæcal fossa*, and *Vesico-uterine pouch*.

Peritoneoc'lysis (*peritoneum*, *kluzo*, to wash). Injection of fluids into the peritoneal cavity.

Peritoneotomy, per-it-o-ne-ot'om-e. Operation of incising the peritoneum.

Peritoneovagi'nal. Relating to the peritoneum and vagina, as peritoneovaginal fistula.

Perito'neum (*peri*, *teino*, to stretch). *Peritonæum*. Serous membrane lining the abdominal cavity. *P. parietale* extends over the greater part of the organs contained therein. *P. intestinale* or *viscerale* envelops them wholly or in part, and maintains their respective relations by means of different prolongations and ligamentous folds—the mesentery, epiploon, mesocolon, etc. Like all the serous membranes, the peritoneum, except in the female, is a sort of sac without aperture, which covers the abdominal organs, without containing them within it, and the internal surface of which is smooth and lubricated by a serous fluid. In the male fœtus the peritoneum furnishes a prolongation which accompanies the testicle at the time of its descent, and, in the female fœtus, forms the canal of Nuck. Below the neck of the gall-bladder the peritoneum has a triangular opening, called the foramen or hiatus of Winslow, through which it proceeds behind the stomach, to form a sort of secondary cavity, called the *posterior cavity of the peritoneum*. **P. duplica'tum**, gastrocolic epiploon.

Peritonism, per'it-on-izm. Spurious peritonitis; this term also denotes a complication of serious symptoms occurring in peritonitis, or in diseased structures which are supplied by the peritoneum.

Peritoni'tis (*peritonæum*, *itis*). Inflammation of the peritoneum. The characteristic signs of acute inflammation of the peritoneum are violent pain in the abdomen, increased by the slightest pressure, often by simple weight of the bed-clothes. It may involve only a part or the entire membrane. It frequently occurs in the parturient state, *Lochoperitonitis*, and begins on the second or third day after delivery. At times a malignant epidemic and perhaps contagious variety has made its appearance and destroyed numbers of females. This has been described under the name *Puerperal fever*, *Erythematic* or *Non-plastic puerperal peritonitis*, *Typhohæmic peritonitis*, *Malignant puerperal fever*, *Low fever of childbed*. It is, according to some, a malignant inflammation of the peritoneum and uterus; according to others, a uterine phlebitis. In any form it requires active treatment, early employed. The appearances on dissection are such as occur whenever a serous membrane has been inflamed and such inflammation has produced death: effusion of fluid with flakes of coagulable lymph in it; appearances of vascularity, etc. in the membrane. Subdivisions of the subject have been made, as general or partial peritonitis, hypochondriac, epiploic, iliac, intrapelvic, etc., according to the nature of the region involved. **P., adhe'sive**, in this form adhesions between the two peritoneal layers are formed. **P., appendic'ular**, perityphlitis; appendicitis. **P., diaphragmat'ic**, inflammation involving the peritoneum of the diaphragm. **P., dry**, peritonitis before the occurrence of effusion. **P., erythemat'ic**, see *Peritonitis*. **P. hepat'ica**, inflammation of peritoneal covering of the liver; see *Hepatitis*. **P., non-plas'tic**, see *Peritonitis*. **P., omen'tal**, epiploitis. **P., pel'vic**, pelviperitonitis. **P., puer'peral**, see *Peritonitis*. **P., pyæ'mic** or **sep'tic**, P. from septic poison in the cavity of the peritonæum. **P., se'rous**, P. attended with exudation of serum. **P., tuber'cular**, form of peritonitis often met with in children or in early adult life, associated with tubercular deposit or the symptoms of tuberculosis. **P., typhohæ'mic**, see *Peritonitis*. **P., u'terine**, perimetritis.

Peritonsillitis, per-e-ton-sil-le'tis. Inflammation of tissues surrounding the tonsils. **P. absce'dens**, peritonsillitis in which an abscess forms.

Peritracheitis, per-e-trak-e-e'tis (*peri*, *trachea*). Inflammation of connective tissue around the trachea.

Peritrope, per-it'ro-pe. Circulation.

Peritto'ma (*perissos*, over and above). Excrement.

Perityphlitic, per-e-tif-lit'ic (*peri*, *tuphlos*, blind). Relating to inflammation around the cæcum, as perityphlitic abscess.

Perityphli'tis (*peri*, *typhlitis*, inflammation of the cæcum). Inflammation of the areolar substance surrounding the cæcum and vermiform appendix. See *Typhlo-enteritis*.

Periurethritis, per-e-u-reth-re'tis. Inflammation of connective tissue around the urethra.

Periuterine, per-e-u'ter-in (*peri*, *uterus*). *Perihysteric*. Situate around the uterus; hence periuterine inflammation or periuterine phlegmon, inflammation of areolar tissue around the uterus.

Perivaginitis, per-e-vaj-in-e'tis. Paracolpitis. **P. phlegmono'sa dis'secans**, paracolpitis with suppuration.

Perivascular, per-e-vas'ku-lar (*peri*, *vasculum*, vessel). Situate around a vessel, as the perivascular canals or grooves, which have been said to surround the minute cerebral vessels, having an epithelial lining and communicating with the lymphatic system. **P. lymphat'ics**, lymphatic vessels or plexuses ensheathing blood-vessels. **P. sheath**, sheath of pia mater forming a perivascular canal.

Perivasculi'tis. Inflammation of perivascular sheaths, especially of retinal vessels. **P. nodo'sa**, in this form indurated tubercles exist around the vessels. **P. specif'ica**, form due to specific bacteria or their products, as in tuberculosis, glanders, or leprosy.

Perivesical, per-e-ves'ik-al (*peri*, *vesica*, bladder). Situate around the bladder.

Perivis'ceral. Surrounding the viscera.

Perivitel'line space. Space between zona pellucida and vitellus when the latter shrinks.

Per'iwinkle, les'ser. Vinca minor.

Perizo'ma (*peri*, *zonnumi*, to gird). Bandage; girdle; a truss. Herpes zoster. Diaphragm.

Perizostra, per-e-zos'trah (*peri*, *zoster*, a belt). Bandage for different parts of the body, especially the waist.

Per'kinism. A therapeutical means first employed by Dr. Elisha Perkins of Norwich, Connecticut, toward the termination of the last century, and named after him. It consisted in drawing over the affected or other parts the pointed extremities of two metallic rods, called metallic tractors, each made of a different metal. The success obtained was through the influence of the imagination; as a remedial agent it ranks as high as animal magnetism, but no higher. The operation was also called *tractoration*.

Per'kinist. A believer in, and practiser of, Perkinism.

Perkinis'tic. Relating or belonging to Perkinism.

Per'la. Pearl. Cicatrix on the transparent part of the eye.

Per'manent car'tilage. That which remains, without ossifying, throughout life. **P. teeth**, those not replaced by others, but replacing milk or temporary teeth.

Perman'ganas. Permanganate. **P. potas'sicus**, potassium permanganate.

Perman'ganate. Salt formed by combination of permanganic acid with a base. **P. of potas'sium**, see *Potassium*.

Per'meable. Capable of affording passage to fluids. Term also applied to strictures through which an instrument can be passed.

Permis'sus (*per*, *mitto*, to pass). Licentiate.

Permis'tio (*per*, *misceo*, to mix). Coition.

Permix'tio. Coition.

Permo'tio (*per*, *moveo*, to move). Motion.

Pernicious, per-nish'us (*per*, *neco*, to destroy). Deleterious. **P. anæ'mia**, progressive, fatal form of anæmia. See *Anæmia*. **P. fe'ver**, fatal form of malarial fever with great prostration.

Per'nio. Chilblain. **P. sim'plex**, pernio with unbroken skin.

Pernocta'tion (*per*, *nox*, night). Insomnia.

Per'o (*peros*, deficient). In composition, deficient. Also external layer of olfactory lobe giving rise to olfactory nerve.

Perobrachius, per-o-brak'e-us (*pero*, *brachion*, arm). Wanting arms or with greatly malformed arms. Condition of monstrosity in which the lower extremity of one of the upper limbs is either absent or badly developed.

Peroceph'alus (*pero*, *kephale*, head). Monster with a defective head.

Perochirus, per-o-ki'rus (*pero*, *cheir*, hand). Having a malformed hand.

Perocormus, per-o-kor'mus (*pero*, *kormos*, trunk). Malformation in which the trunk is defective, and too short, from the absence of one or more vertebræ —the head and limbs being normal.

Perodactyl'eus (*pero*, *daktulos*, finger or toe). Flexor longus digitorum pedis profundus perforans.

Perodactyly, per-o-dak'til-e. Deficient or defective fingers.

Perodynia, per-o-din'e-ah (*pera*, a sac, stomach, *odune*, pain). Cardialgia.

Peroma, per-o'mah (*peroo*, to disable). Paralysis.

Peromel'ia (*pero*, *melos*, limb). Congenital misconstruction or mutilation of the limbs.

Perom'elus (*pero*, *melos*, a limb). Monster having deformed limbs, or in which the inferior extremity of one limb is absent or badly developed.

Peronæ'us or **Perone'us** (*perone*, fibula). Relating to the fibula, as the Peronæi muscles, etc. **P. anti'cus, P. bre'vis**, etc., see *Peroneal muscles*.

Peronarthrosis, per-on-ar-thro'sis (*pero*, *arthron*, joint). Saddle-joint.

Perone, per'o-na (*peiro*, to transfix). Fibula.

Perone'al (*perone*). *Peronæus*, *Fibular*. Belonging or relating to the fibula. **P. ar'tery**, *Fibular artery*; arises from the popliteal, situate deeply in the posterior and outer part of the leg It gives off branches of little importance; near the outer ankle it divides into two branches: posterior peroneal, which descends behind the lower joint of the fibula, on the outer surface of the calcaneum; anterior peroneal, which crosses the inferior extremity of the interosseous ligament, to be distributed on the dorsal surface of the foot. **P. bone**, fibula. **P. commu'nicating nerves**, branches from external popliteal joining short saphenous. **P. groove**, on outer and under surface of cuboid bone, for tendon of peroneus longus. **P. mus'cles**, three in number: *Peronæus brevis*, situate beneath the peronæus longus; attached above to the outer surface of the fibula, and terminating below at the posterior extremity of the fifth metatarsal bone, after having been reflected beneath the malleolus externus. It extends the foot upon the leg, at the same time raising a little the outer edge; may also act upon the leg and extend it upon the foot. 2. *Peronæus longus*, situate at the outer part of the leg. It is long, thick, and triangular above; thin, narrow, and flat below; attached above to the outer edge of the upper extremity of the fibula and to the upper third of the outer surface of that bone; below, it terminates at the outer part of the posterior extremity of the first metatarsal bone; extends the foot on the leg, turning its point outward and raising its outer edge; it acts also upon the leg, which it extends on the foot. 3. *Peronæus tertius*, situate at the anterior, outer, and inferior part of the leg. It is long and flat, attached above to the inferior third of the anterior margin and inner surface of the fibula, terminating below at the posterior extremity of the fifth metatarsal bone; bends the foot on the leg by raising its outer edge. It can also bend the leg on the foot. **P. nerve**, external popliteal nerve. **P. ridge** or **spine**, ridge separating grooves for tendons of peroneal muscles on outer surface of calcaneum. **P. veins** follow the same course as the artery; they discharge into the posterior tibial.

Peronedactylius, per-o-ne-dak-til'e-us (*perone*, *daktulos*). Flexor longus digitorum pedis profundus perforans.

Perone'o. In combination, denotes relation with the fibula.

Peroneocalca'neus inter'nus. Accessorius ad accessorium.

Peroneosupraphalanget'tian. Extensor digitorum pedis longus.

Peroneosupraphalanginia'nus. Relating to or connected with the fibula and upper phalangeal surfaces.

Peroneotibia'lis. Pronator tibiæ.

Perone'um (*perone*). Fibula.

Perone'us. Peronæus. **P. accesso'rius,** apparently a form of peroneus quinti digiti. **P. ante'rior** or **anti'cus,** or **P. bre'vis,** see *Peroneal muscles.* **P. lon'gus, posti'cus,** or **pri'mus,** or **posti'cus lon'gus,** see *Peroneal muscles.* **P. me'dius** or **P. posti'cus bre'vis,** see *Peroneal muscles.* **P. quar'tus,** form of P. quinti digiti. **P. quin'tus** or **P. dig'iti,** muscle formed in many mammals, arising from the fibula between the peroneus longus and brevis, inserted upon proximal phalanx of little toe. In man it appears to be represented by a tendinous slip passing from P. brevis to extensor tendon of little toe. In about one-third of human subjects there appears a more or less complete restoration of the muscle. **P. secun'dus,** P. brevis; see *Peroneal muscles.* **P. sex'tus,** apparently a form of P. quinti digiti. **P. ter'tius,** see *Peroneal muscles.*

Peronodactyliæ'us or **Peronodactyl'ius** (*perone, daktulos,* finger or toe). Flexor longus digitorum pedis profundis perforans.

Feronospora, per-on-os'po-rah. Genus of Fungi; mildew is an example. **P. Barcino'næ** or **Ferra'ni,** supposed by Ferran to be a cholera micro-organism; but it is a fungus.

Pero-olfacto'rius (Wilder). Softer outside portion of olfactory bulb, from which olfactory filaments arise.

Per. op. emet. Abbv. for peractâ operatione emeticâ, when the operation of the emetic is finished.

Peropla'sia (*pero, plasso,* to form). Malformation by defect.

Per'opus (*pero, pous,* foot). Having deformed feet; monstrosity in which the lower extremity of one of the lower limbs is either absent or badly deformed.

Pero'sis (*peroö,* to maim). Defective formation; condition of being malformed or maimed.

Peros'mic acid. Osmic acid.

Peroso'mus (*pero, soma,* body). Monster whose whole body is imperfectly developed.

Perosplanchnica, per-o-splank'nik-ah (*pero, splanchnon,* viscus). Congenital misconstruction of the viscera.

Perotis (per-o'tis) **latifo'lia.** The root of this grass is diuretic and slightly astringent.

Perox'ide. One of a series of oxides containing highest quantivalence of oxygen. **P. of hy'drogen,** hydrogen peroxide. **P. of i'ron** (B. P.), ferric oxyhydrate. **P. of man'ganese,** manganese dioxide. **P. of mer'cury,** mercuric oxide.

Perox'idum. Peroxide.

Peroxyhydrate, per-oks-e-hi'drate. Hydrate of a peroxide.

Perpendicular line of ulna. Ridge on posterior surface separating attachment of extensor carpi ulnaris from that of supinator brevis and extensors of thumb and index finger. **P. plate,** central, vertical portion of ethmoid, thin lamina of bone in median line separating the nasal fossæ, ossified separately.

Perpendicularis, per-pen-dik-u-lar'is. Perpendicular. **P. extre'mus lin'guæ,** intrinsic muscle of tongue; vertical fibres passing downward forming curves with concavity outward.

Perpendic'ulum hep'atis (*perpendiculum,* plumb-line, *hepar,* liver). Suspensory ligament of the liver.

Perperacu'tus (extremely acute). An epithet applied to very violent and rapid diseases.

Perplex'i mor'bi (*per, plecto, plexum,* to interweave). See *Complication.*

Perplica'tion (*per, plico,* to fold). Method of tying arteries, which consists in making a small incision in the side of the artery near its bleeding orifice, introducing a small pair of forceps, seizing the open extremity, and drawing it backward through the aperture made in the side of the vessel, so as to form a kind of knot.

Perrosin. See *Pinus abies.*

Per'ry. See *Cider.*

Per'sea cam'fora. See *Camphor.* **P. cas'sia,** Laurus cassia. **P. cinnamo'mum,** Laurus cinnamomum. **P. cube'ba,** Piper cubeba. **P. gratis'sima,** *Laurus persea, Palta tree, Avocado* or *Alligator pear.* Slender, very high tree of Peru, with a small dome-like top, which grows on the eastern declivity of the Andes, and rises at times to the height of more than 60 feet. Its fruit —(S.) *Palta*—which is pear-shaped, is generally much liked. It dissolves like butter on the tongue. The leaves are reckoned balsamic, pectoral, and vulnerary; seeds are very astringent. **P. In'dica,** bay tree of the East Indies. Bark has stomachic and leaves antidysenteric properties. **P. pichu'rim,** see *Pichurim beans.* **P. sas'safras,** Laurus sassafras.

Persecu'tion, ma'nia of. Form of chronic mental disorder in which the patient ascribes all his morbid sensations to persecution of which he is the supposed victim.

Perseite, per'se-ite. Substance, $C_6H_{14}O_6$, derived from Persea gratissima.

Per'sian. Pertaining to or coming from Persia. **P. bal'sam,** compound tincture of benzoin. **P. ber'ries,** fruit of *Rhamnus amygdalina* and other species of R.; furnishes a yellow dye. **P. fire,** anthrax. **P. in'sect pow'der,** powdered flowers of *Pyrethrum roseum* and *Pyrethrum carneum;* used for killing insects. **P. man'na,** saccharine exudate from *Hedysarum alhagi,* resembling manna; used in India and Persia. **P. o'pium,** obtained from poppy grown in Persia; variable in quality, and used only by manufacturing chemists in preparation of opium alkaloids. **P. pel'litory,** *Pyrethrum roseum;* see *P. insect powder.* **P. ul'cer,** see *Ulcers, endemic.*

Per'sica vulga'ris. Amygdalus Persica; peach tree, native of China, cultivated in temperate climates. Leaves and flowers have been officinal; young branches, leaves, flowers, and seed yield, after maceration in water, a volatile oil identical with oil of bitter almonds.

Persica'ria (*persica,* peach tree, the blossoms being similar). Polygonum Persicaria. **P. mi'nor,** Polygonum Persicaria. **P. mi'tis,** Polygonum Persicaria. **P. u'rens,** Polygonum hydropiper. **P., wand'spiked,** Polygonum Virginianum. **P., wa'ter,** Polygonum amphibium.

Per'sicus ig'nis. Anthrax.

Persim'mon. Dyospyros Virginiana. See also *Chinese* and *Japanese persimmon.*

Persist'ent. Continued, permanent; not undergoing the usual development or change.

Persola'ta, Persolla'ta, or **Persolu'ta.** Arctium lappa.

Per'sonal equa'tion. Special reaction time or capability of each individual. See *Reaction time.* **P. er'ror,** time lost—the fraction of a second—in personal observation of execution of a voluntary movement.

Perspecillum, per-spes-il'lum (*per, specio,* to behold). See *Spectacles.*

Perspira'bile Sanctoria'num (after Sanctorius). Perspiration.

Perspira'tion (*per, spiro,* to breathe, to exhale). Insensible transpiration or exhalation is continually going on at the surface of the skin and membranes. Sensible perspiration is called *sweat.* The perspiratory fluid is secreted by an appropriate glandular apparatus termed sudoriparous glands, sweat-glands, consisting of a convoluted tube situate beneath the true skin, and of spiral ducts which open obliquely under the scales of the epidermis. A certain portion of the perspired fluid is thrown off by ordinary physical exertion. The following estimates have been made of the number, size, etc. of sweat-glands in the human body: The body of a gland averages 0.17–0.35 mm. in diameter; in the axilla, 0.75–1.25, up to 3.9.

The total number of glands is about two millions (Krause); their volume about 80 cm. On 1 cm. of surface (Moleschott) there are: In the hand (volar surface), 373 of these glands; in the foot (plantar surface), 366; hand (back part), 103; neck, 178; forehead, 172; forearm (flexor side), 157; breast and abdomen, 155; forearm (extensor side), 149; foot (back part), 126; thigh and leg (median side), 79; cheeks, 75; nucha and back, 54. Pulmonary exudation or transpiration is that which takes place into the bronchia and is sent out with the expired air. See *Diaphoresis*, *Hidrosis*, *Sudation*, and *Sudor*. **P., dimin'ished** or **obstruct'ed**, see *Adiaphoresis*, *Adiapneustia*, and *Anidrosis*. **P., insen'sible**, see *Perspiration*. **P., mor'bid**, see *Ephidrosis*.

Perspirator, per'spir-a-tor. Respirator.

Perspiratory, per'spir-a-to-re. *Transpiratory*. Relating or belonging to, or the product of, perspiration.

Perstric'tion (*per*, *stringo*, to bind). Operation to arrest the flow of blood, as by compression or ligation.

Persudatio, per-su-dah'she-o (*per*, *sudo*, to sweat). Diapedesis. Bloody sweating.

Persul'phate of mer'cury. Mercuric sulphate.

Persulphuric (per-sulf-u'rik) **ac'id**. Acid prepared by adding hydrogen peroxide to diluted sulphuric acid.

Persulta'tion (*persulto*, to leap through). Sweating of blood. Profuse perspiration.

Per'tica (pole) **per se**. Penis.

Pertroph'ic (*per*, *trophe*, nourishment). Relating or pertaining to excess of nourishment or nutrition.

Pertru'sio mu'tua (*per*, *trudo*, to thrust). Endosmose.

Perturbatio, per-tur-bah'she-o. Mental disturbance. Malaise. Functional loss of equilibrium. **P. al'vi**, diarrhœa.

Perturbatio'nes (pl. of **Perturba'tio**) **an'imæ** (*per*, *turbo*, to disturb). Affections or disturbed conditions of the mind.

Perturba'trix medici'na. *Perturbating treatment*. Mode of treatment in which very active means are employed, and such as impress upon diseases a different course from that natural to them. It is the antithesis of *Medicina expectans*. Much evil has resulted from such treatment, especially in febrile diseases.

Pertusorium, per-tu-so're-um (*pertundo*, to pierce). Instrument for rupturing membranes of the fœtus and facilitating discharge of liquor amnii.

Pertus'sal. Relating or appertaining to pertussis.

Pertus'sine. A term proposed for the specific zymotic principle by which whooping cough, or pertussis, is propagated.

Pertus'sis (*per*, *tussis*, cough). A violent cough. *Hooping cough*, *Whooping cough*, *Chin cough*, *Kin cough*, *Kind cough* (Ger. *Kind*, a child). A violent convulsive cough, returning by fits at longer or shorter intervals, and consisting of several expirations, followed by a sonorous inspiration or whoop. Fits of coughing generally recur more frequently during the night, morning, and evening than in the day. It is esteemed to be contagious, and attacks the young more particularly. It is rare for it to affect an individual the second time. The duration is various—six or eight weeks or more. Although the paroxysms are very violent, it is not a dangerous disease. It may, however, give rise to other affections, as convulsions, pneumonia, etc., when the complication is very dangerous, as the cause cannot be removed. Those children suffer the least who evacuate the contents of the stomach during the fit. In the treatment all that can be done is to palliate. It must be borne in mind that the disease will in time wear itself out. After the disease has continued for some weeks, and persists in part from habit, change of air is essential.

Peru'. See *Lima*. **P., bal'sam of**, see *Balsam of Peru*.

Perunc'tio (*per*, *ungo*, to anoint). Inunction.

Peru'vian bal'sam. See *Balsam*. **P. bark**, cinchona. **P. ipecacuan'ha**, striated or black ipecacuanha; root of Psychotria emetica; contains emetine; occasionally appears in commerce as substitute for official ipecac. **P. wart**, verrugo Peruana.

Peruvin, per-u'vin. Cinnamin alcohol, obtained from Peruvian balsam.

Perver'sion (*per*, *verto*, to turn). One of the four modifications of function in disease, the three others being augmentation, diminution, and abolition. Also disorder or morbid change in fluids.

Pervigilium, per-vij-il'e-um (*per*, *vigilo*, to watch). Insomnia; coma vigil.

Pervious, pur've-us. Open; penetrable.

Pes. Foot. Inferior extremity of the abdominal member, representing a bony arch, an elastic vault, which transmits the weight of the body to the ground. It is divided into three parts—the tarsus, metatarsus, and phalanges or toes. **P. accesso'rius**, eminence of white matter situate between the hippocampus major and minor, at the junction of the posterior with the descending cornu ammonis. **P. Alexandri'nus**, Anthemis pyrethrum. **P. anseri'nus**, Chenopodium bonus Henricus. **P. anseri'nus fasc'iæ lat'æ**, radiating bands formed by insertion of sartorius, gracilis, and semitendinosus on inner side of the knee. **P. a. ma'jor**, plexus formed by interlacing of branches of facial nerve in substance of parotid gland and on side of the face. **P. a. mi'nor**, infraorbital plexus. **P. a. ner'vi media'ni**, plexus anserinus of the median nerve. **P. calca'neus**, talipes calcaneus. **P. ca'ti**, Antennaria dioica. **P. ca'vus**, talipes cavus. **P. coro'næ radiat'æ**, foot of corona radiata. **P. equi'nus**, talipes equinus. **P. fabric'itans**, elephantiasis cruris. **P. hippocam'pi ma'jor**, cornu ammonis. **P. hippocam'pi mi'nor**, hippocampus minor. **P. hippopot'ami ma'jor**, cornu ammonis. **P. hippopot'ami mi'nor**, cornu ammonis. **P. leo'nis**, alchemilla. **P. olfacto'rius**, inner fibrous layer of olfactory lobe. **P. pedun'culi**, crusta. **P. plan'us**, see *Kyllosis*. **P. val'gus**, talipes valgus. **P. va'rus**, talipes varus.

Pes'sary (*pessos*, small stone or other substance for playing at draughts). Solid instrument, made of cork, ivory, or elastic gum, which is introduced into the vagina to support the uterus in cases of prolapsus of that organ or relaxation of the vagina, to keep vaginal hernia reduced, etc. The ancients made use of medicated pessaries, which they distinguished into emollient, astringent, aperient, etc., and they are still used, although generally called vaginal suppositories. An anal pessary is sometimes employed for the compression of hemorrhoids. The form of pessaries is very variable—round, oval, etc., according to fancy and circumstances. Some of them have an external support from a stem, the intra-uterine pessary, for example. Some forms of pessary are referred to according to their shape, as the ring pessary, the horseshoe pessary, etc., and the various modifications of shape are also named after their proposers, as Hodge's pessary, etc. **P., a'nal**, see *Pessary*. **P., intra-u'terine**, *Stem pessary*; an instrument for rectifying uterine displacements, as anteversion and retroversion, consisting of a stem which is introduced into the uterus; this stem is attached to a flattened ovoid bulb or ball, on which the cervix uteri rests. Connected with this is sometimes an external part or wire frame, which is attached at one extremity to a flat tubular portion passing into the vagina, to be fixed to the intra-uterine portion. The wire frame is made to press upon the pubis, so that the pessary can be kept in position *in utero*. This is essentially the intra-uterine pessary of Professor Simpson of Edinburgh. See *Uterine elevator*. **P., med'icated**, see *Pessary*. **P., stem**, pessary, intra-uterine.

Pesse'ma or **Pessi'ma**. Mycosis fungoïdes. Skin disease characterized by hard, brownish-yellow pustules, surrounded by inflammatory areolæ, covering the entire body and producing a checker-board appearance; a variety of papilloma.

Pes'simism (*pessimus*, worst). Viewing everything in the worst light, a common symptom of melancholy and hypochondriasis.

Pes'sulus (dim. of **Pessus**). Pessary; penis.

Pes'sum or **Pes'sus**. Pessary.

Pest. Plague or endemic contagious disease.

Pestich'iæ or **Pesticiæ**, pes-tik'e-e. Petechiæ.

Pestif'erous (*pestis*, pest, *fero*, to bear). Tending to produce pestilence.

Pest'ilence (*pestis*, pestilence). Malignant spreading disease; applied especially to plague. **P., chol'eric**, spasmodic cholera. **P., gland'ular**, plague. **P., hæmagas'tric**, yellow fever. **P., sep'tic**, plague. **P. weed**, Petasites vulgaris; leaves are detergent, flowers diaphoretic; root is vermifuge.

Pestilen'tia (*pestis*). Pestilence; plague. **P. hæmagas'trica**, yellow fever.

Pestilen'tial. Relating or appertaining to a pest or plague. Pestilential diseases are those that bear some resemblance to the plague in respect to the mode of propagation, symptoms, danger, etc. **P. fe'ver**, malignant fever, generally typhus.

Pes'tilentwort. Tussilago petasites.

Pestil'itas (*pestis*). Plague.

Pest'ine (*pestis*, plague). Term for the specific zymotic principle by which plague is propagated.

Pes'tis. Pest. **P. acutis'sima**, plague. **P. adenosep'tica**, plague. **P. American'a**, yellow fever. **P. Antoninia'na**, plague of Antoninus. **P. bel'lica**, typhus. **P. bovil'la**, rinderpest. **P. Britan'nica**, sudor Anglicus. **P. bubona'ria orienta'lis**, plague. **P. contagio'sa**, plague. **P. glandulo'sa**, plague. **P. glossan'thrax**, glossanthrax. **P. inguina'ria**, plague. **P. intertrop'ica**, yellow fever. **P. marrano'rum**, syphilis. **P. ni'gra**, black death. **P. occidenta'lis**, yellow fever. **P. orienta'lis**, plague. **P. sep'tica**, plague. **P. variolo'sa**, variola.

Pes'tle (*pistillum*). See *Pilum*. **P., spring**, see *Pilum*.

Peta'la. Petals. **P. rhœ'ades**, red-poppy petals. **P. ro'sæ**, pale rose. **P. r. Gal'licæ**, red rose.

Peta'le. Phtheiriasis.

Pet'als. Leaves of corolla of flower.

Petasi'tes (*petasos*, a sun-hat). Tussilago petasites. **P. hy'brida**, Tussilago petasites. **P. ma'jor**, Tussilago petasites. **P. officina'lis**, Tussilago petasites. **P. ru'bens**, Tussilago petasites. **P. vulga'ris**, Tussilago petasites.

Petaur'um. A seat suspended by ropes, in which a person taking exercise sat and was tossed about by assistants.

Petechiæ, pet-ek'e-e (pl. of **Petechia**) ([I.] *pedechio*, flea-bite). Small spots, similar in shape and color to flea-bites, which occur spontaneously upon the skin in the course of severe fevers, etc. They are, under such circumstances, signs of great prostration. The smallest spots—mere specks or dots—are often termed *stigmata*. **P. ex ic'tu pu'licum**, purpura pulicosa. **P. sine feb're**, purpura simplex.

Petechial, pet-e'ke-al. Resembling or accompanied by petechiæ. **P. fe'ver**, cerebrospinal meningitis; typhus fever. **P. scur'vy**, purpura simplex.

Petechian'osus (*petechia*, *nosos*). Purpura hæmorrhagica. Typhus. Formation of petechiæ.

Petersen's bag. Rubber bag to be introduced into the rectum and distended during suprapubic lithotomy.

Petic'ulæ. Petechiæ.

Peti'go. Impetigo.

Peti'na (*peto*, to go). Sole.

Peti'olus (dim. of **Pes**, foot). *Pediolus*. A footstalk or leaf-stalk of a plant. A petiole. **P. epiglot'tidis**, the root of the epiglottis. **P. glan'dulæ pinea'lis**, peduncle of pineal gland. **P. mal'lei**, manubrium mallei. **P. tetran'dra**, root of this plant is employed by the Brazilians as a sudorific.

Petit, canal of. *Godronné canal*. Sacculated passage encircling lens of the eye, lying within two layers of suspensory ligament.

Petit mal (F.). Mild form of epilepsy.

Petit's her'nia. Lumbar hernia. **P.'s opera'tion**, herniotomy without opening the sac.

Petiveria (pet-iv-er'e-ah) **allia'cea.** Guinea-hen-weed. The plant is febrifuge, diaphoretic, and anthelmintic.

Petræ'leum (*petra*, rock, *elaion*, oil). Petroleum.

Petræ'um (*petraios*, living among rocks). Solidago virgaurea.

Petrap'ium (*petro*, *apium*, parsley). Bubon Macedonicum.

Petrifaction, pet-re-fak'shun (*petra*, rock, *facio*, to make). Process of changing into stone. Obstetrical term denoting the condition of a fœtus being converted into a lithopædion. Hardening of a tissue by deposit of saline material from the blood.

Petrissage (F.), pet-ris-sazh'. A form of massage in which the part is gathered up in the hand and firmly pressed and rolled.

Pe'tro (*petros*, rock). In composition, rock, and the petrous or rocky portion of the temporal bone.

Petrobas'ilar fis'sure. Narrow irregular space at base of skull between petrous portion of temporal bone, the basilar process of occipital, and the body of the sphenoid, filled during life by basilar fibrocartilage.

Petrohy'oid mus'cle. Aberrant form of stylohyoid, arising from petrous portion of temporal bone.

Petrolar'ium or **Petrolari'num.** Petrolatum.

Petrolat'um (Ph. U. S.). Petroleum ointment; purified residue after distilling off lighter and more volatile portions from American petroleum; yellowish, fluorescent, amorphous, tasteless, odorless, neutral, fat-like mass, melting at 40° to 51° C., insoluble in water, soluble in ether, chloroform, carbon bisulphide, oil of turpentine, benzin, benzol, and in fixed and volatile oils; protective; used in pharmacy as a substitute for lard. For various purposes of external application it is well known under the names Cosmoline and Vaseline.

Petro'leum (*petro*, *elaion*, oil). *Rock oil*, *Earth oil*, *Barbadoes tar*. Bituminous substance flowing spontaneously from the earth in various parts of the world, and abounding on this continent over a large area. It has a fetid odor, bitter, acrid taste; is semiliquid, tenacious, semitransparent, of a reddish-brown color; insoluble in water and alcohol; combines with fixed and essential oils and sulphur, and is partially soluble in ether. The petroleum found at Gabian, near Béziers, in France, has been called *Oleum Gabianum*, *Petroleum rubrum*. Petroleum has been given as an excitant expectorant and anthelmintic, and mixed with tincture of asafœtida in tapeworm; also used externally in chilblains, chronic rheumatism, affections of the joints and skin, and paralysis, and is a disinfectant and parasiticide. *New York petroleum*, called *Seneca oil*, is used externally in similar cases. **P. Barbaden'se**, petroleum. **P. ben'zin**, benzin. **P., crude**, limpid, iridescent, yellowish or reddish liquid, of peculiar bituminous odor, sp. gr. 0.75 to 0.85; soluble in fixed and volatile oils, ether, and absolute alcohol. Native petroleum partially purified by fractional distillation. **P. e'ther**, benzin. **P. oint'ment**, petroleum. **P. spirit** (Ph. U. S.), benzin. **P. sulphura'tum** (composed of petrol. Barbad., ℥xvj; flor. sulph., ℥iv) has been used as a pectoral, and as a detergent to ulcers. It has been accounted antispasmodic and sudorific; dose, gtt. x to xxx; externally it is used as a stimulant and discutient.

Pet'rolin. Commercial name given to a combination of hydrocarbons obtained from petroleum.

Petromas'toid canal'. Short passage from back part of tympanum to mastoid antrum. **P. fora'men**, tympanic orifice of petromastoid canal. **P. por'tion**, united petrous and mastoid portions of temporal bone considered as an ossific integer.

Pe'tro-occip'ital. Belonging to the petrous portion of the temporal bone and to the occipital bone. **P.-o. si'nus, infe'rior**, vein running on external surface of base of skull between middle lacerate and jugular foramina. **P.-o. si'nus, supe'rior**, inferior petrosal sinus. **P.-o. su'ture**, formed by the junction of the petrous portion of the temporal with the occipital bone; a deep groove separating the bones, which have between them a thin layer of cartilage.

Petropharyngeus, pe-tro-far-in-ja'us. Small muscle occasionally found arising from the under surface of

the petrous bone and inserted into the pharynx with stylopharyngeus.

Petro'sal. Petrous; relating to petrous portion of temporal bone. **P. bone,** petrous bone. **P. crest,** lower edge of vaginal process of temporal bone. **P. gan'glion,** petrous ganglion. **P. nerves,** small nerves passing through foramina in the petrous portion. The *great superficial p. n.* arises from geniculate ganglion, passes out through hiatus Fallopii, joins *great deep p. n.*, which arises from filaments of the carotid plexus; the two united constitute the Vidian. *Small superficial p. n.* and *small deep p. n.*, branches from tympanic plexus, first to the otic ganglion through the canaliculus tympanicus, later along tensor tympani to carotid plexus; *external superficial p. n.*, inconstant filament uniting the geniculate ganglion with the sympathetic plexus on the middle meningeal artery. **P. si'nuses,** venous channels of dura mater in relation with petrous portion; *superior*, running along its upper border from the cavernous to the lateral sinus; *inferior*, along the lower border of the bulb of the internal jugular vein. *External p. s.* is an emissary of the carotid canal.

Petrosalpingopharyngeus, pet-ro-sal-pin-go-far-in-ja'us. Fleshy fasciculus which extends from the sphenoid bone, from the petrous portion of the temporal bone, and from the Eustachian tube to the upper part of the pharynx. See *Constrictor.*

Petrosalpingostaphylinus, pet-ro-sal-pin-go-staf-il-e'nus. Circumflexus; levator palati.

Petroselinites, pet-ro-sel-in-e'tees. Wine made from parsley.

Petroseli'num (*petro, selinon,* parsley). Apium petroselinum. **P. Macedon'icum,** Bubon Macedonicum. **P. sati'vum,** fruit and root are official; see *Parsley.*

Petrosphe'noid. Belonging to the petrous portion of the temporal bone and to the sphenoid bone. **P. lig'ament, ante'rior,** connective tissue and fibro-cartilage filling up the middle lacerate foramen at the base of the skull. **P. l., poste'rior,** band stretching from apex of petrous portion of temporal bone to posterior clinoid process over the sixth nerve. **P. su'ture,** small suture formed by the anterior edge of the petrous portion of the temporal bone and the posterior edge of the sphenoid.

Petrosphenoi'dal. Petrosphenoid.

Petrosquamo'sal fis'sure or **su'ture.** Seam which at birth separates the squamous and petrous portions of the temporal bone; traces of it are usually visible in the adult skull, limiting the anterior surface of the petrous portion within the cranium.

Petrosqua'mous si'nus. Venous passage of dura mater sometimes found at junction of petrous and squamous portions of the temporal bone, discharging into lateral sinus.

Petrostaphyli'nus. Levator palati.

Petro'sum, os. Petrous portion of the temporal bone.

Pe'trous. *Petrosus, Petrosal.* Resembling stone; having the hardness of stone; relating or belonging to the petrous portion of the temporal bone. **P. bone,** petrous portion of temporal bone. **P. gan'glion,** *Petrosal ganglion, Ganglion of Andersch,* formed by the glossopharyngeal nerve shortly after it emerges from the jugular fossa. From this ganglion M. Jacobson, of Copenhagen, traced an anastomosing loop through the cavity of the tympanum, which left branches there, and was thence reflected downward to join the Vidian nerve. See *Otic ganglion.* This has been called the *nerve of Jacobson, tympanic branch of the glossopharyngeal;* and the inosculation, *Jacobson's anastomosis.* **P. por'tion of tem'poral bone,** see *Temporal bone.* **P. pro'cess,** see *Temporal bone.* **P. si'nuses,** *Petrosal sinuses,* two venous sinuses of the dura mater connected with the petrous portion of the temporal bone. The superior petrosal sinus arises from the cavernous sinus; follows the upper edge of the petrous portion, which affords it a gutter; passes into the great circumference of the tentorium cerebelli; and opens into the lateral sinus, where the latter experiences a bend near the base of the pars petrosa; it is triangular. The inferior petrosal sinus arises from the cavernous sinus at the same point as the last, with which it communicates at the moment of its origin; descends between the inferior edge of the pars petrosa and the basilary process; and terminates in the lateral sinus at the sinus or gulf of the internal jugular vein. It is triangular, and broader at its extremities than at the middle.

Pet'tenkoffer's test. Test for the presence of bile-acids, as in the urine, by dropping any solution containing bile into a mixture of sulphuric acid and sugar, a purplish-crimson color being produced.

Pet'tymorrel. Aralia racemosa.

Pe'tum or **Pe'tun.** Nicotiana tabacum.

Peuce, pu'se. Pinus sylvestris.

Peucea (pu'se-ah) **balsame'a.** See *Pinus abies.*

Peucedanine, pu-sed'an-een. Crystallizable substance ($C_{12}H_{12}O_3$) obtained from root of Peucedanum ostruthium and Peucedanum officinale.

Peuced'anum (*peuke,* pine tree, its leaves resembling those of the pine). *Hog's fennel, Sulphurwort.* Ord. Umbelliferæ. The root has a strong fetid smell, somewhat resembling that of sulphureous solutions, and an acrid, unctuous, bitterish taste. It has been recommended as antihysteric and nervine. **P. Alsat'icum,** peucedanum. **P. altis'simum,** peucedanum. **P. Austri'acum,** see *P. palustre.* **P. grave'olens,** dill-seed; see *Anethum graveolens.* **P. officina'le,** peucedanum. **P. oreoseli'num,** Athamanta aureoselinum. **P. ostruth'ium,** Imperatoria ostruthium. **P. palus'tre,** *Marsh selinum,* a European plant, has been recommended as an antiepileptic. In Courland it has been a famous remedy in epilepsy. Peucedanum Austriacum is possessed of the same virtues. **P. panicula'tum,** peucedanum. **P. praten'se,** P. silaüs. **P. sati'vum,** Pastinaca sativa. **P. sil'aüs,** *English* or *Meadow saxifrage;* roots, leaves, and seeds were once recommended as aperients, diuretics, and carminatives. **P. terra'tum,** peucedanum.

Peu'mus. Ord. Monimiaceæ. **P. bol'dus,** Chilian evergreen shrub; leaves are called boldo; reputed to be of value in genito-urinary inflammations, and employed in France in inflammation of the liver. The bark is used for tanning, and the wood for charcoal-making. **P. fra'grans,** P. boldus.

Pex'is. Concretion.

Pey'eri glan'dulæ. *Peyer's glands* or *patches, Agminated* or *Aggregate glands.* Small glands situated beneath the villous coat of the intestines (called after Peyer, who well described them). They are clustered together, having a honeycomb appearance, and are extremely numerous. They occur mostly in the lower portion of the ileum, and resemble, in their morphology and functions, the lymphatic ganglions. When scattered singly, they are called *glandulæ solitariæ.* They are evidently concerned in the great functions of lymphosis and hæmatosis.

Pe'za. Foot. According to some, the sole of the foot; and to others, the astragalus, the ankle.

Pezi'za (or **Peze'za**) **acetab'ulum.** Species growing in France, which is edible and reputed to be purgative. **P. auric'ula,** *Jew's ear,* ord. Fungi. This fungus is said to be astringent, but has chiefly been used in decoction or infusion as a gargle in relaxed sore throat.

Pflüger's (pflig'er's) **gas-pump.** Mercurial pump used to extract gases from the blood and to collect them for chemical analysis. **P.'s sacs,** tubular passages observed in the ovary in very early fœtal development. **P.'s sal'ivary tubes,** intralobular ducts of the salivary glands. **P.'s tubes** or **tu'bules,** ovarian tubes.

Pha'ce (*phake,* a grain of the lentil; a lens). Chloasma; lens; crystalline lens; and a flask for the application of heat, so called owing to its flattened, lens-like shape.

Phacecphlogiscon, fas-ek-flo-jis'kon. Varicella lentiformis.

Phacellus (fas-el'lus) or **Phace'lus.** Fasciculus.

Phacentocele, fas-en-to-se'le (Eng. fas-en'to-seel) (*phace, entos,* within, *kele,* swelling). Dislocation of the lens into the anterior chamber.

Phachymenitis, fak-him-en-e'tis. Inflammation of the capsule of the crystalline.

Pha'ci or **Pha'cia.** Ephelides.

Phacicus, fas'ik-us (*phake*). Lens-shaped, lenticular.

Phacitis, fas-e'tis (*phake,* lens, *itis*). Inflammation of the crystalline lens.

Phacium, fas'e-um. A drink or poultice of lentils.

Phacocatapiesis, fak-o-kat-ap-e-a'sis (*phace, katapiesis,* downward pressure). Depression of the lens.

Phaco'copis (*phace, kopis,* knife). Lens-shaped knife.

Phacocyste, fak-o-sis'te (*phace, kustis,* cyst or bladder). Capsule of the lens. See *Crystalline.*

Phacocystectom'ia (*phacocyste, ektome,* cutting out). Operation for cataract, which consists in cutting out a part of the capsule of the lens.

Phacocysti'tis (*phacocyste,* capsule of the lens, *itis*). Inflammation of the capsule of the lens.

Phaco'des (*phace, odes*). Lens-shaped.

Phacohydropsia, fak-o-hid-rop'se-ah (*phace, hudrops,* dropsy). Dropsy of capsule of lens.

Phacohymenitis, fak-o-him-en-e'tis (*phace, humen,* membrane, *itis*). Inflammation of the capsule of the crystalline.

Pha'coid (*phace, eidos,* resemblance). Resembling a lens. See *Crystalline.*

Phacoideï'tis (*phacoid, itis*). Inflammation of the crystalline lens.

Phacoid'oscope (*phace, skopeo,* to view). Modification of what was formerly called the ophthalmoscope, for the observation and measurement of reflected images.

Phacomalacia, fak-o-mal-ah'se-ah (*phace, malakos,* soft). Soft cataract.

Phacometachoresis (fak-o-met-ak-o-ra'sis) or **Phacometœce'sis** (*phace, metachoreo,* to change place). Dislocation of the crystalline.

Phacometer, fak-om'et-ur (*phace, metron*). Instrument for determining the refractive power of lenses.

Phacopalingen'esis (*phace, palin,* again, *genesis,* generation). Regeneration of the crystalline.

Phac'opis (*phace, kopis,* knife). Lens-shaped knife.

Phacoplane'sis (*phace, planesis,* wandering). Mobility of the lens.

Phacoplas'ma (*phace, plasso,* to mould). Linseed-meal poultice.

Phacoptis'ana (*phace, ptisane,* drink). A drink of lentils; a poultice of lentils.

Phacopyosis, fak-o-pe-o'sis (*phace, puosis,* suppuration). Name given formerly to suppuration imagined to occur in crystalline lens.

Pha'cos. Ervum lens.

Phacosclero'ma or **Phacosclero'sis** (*phace, skleros,* hard, *oma*). Induration of the crystalline.

Phacosclerosis, fak-o-skler-o'sis (*phace, skleroo,* to harden). Hardening of crystalline lens.

Phacoscope, fak'o-skope (*phace, skopeo,* to see). Instrument for measuring the crystalline lens during accommodation.

Phacoscotasmus, fak-o-sko-taz'mus. Condition in which the crystalline lens is obscured.

Phacoscoto'ma (*phace, skotoma,* darkness). Opacity of crystalline lens.

Phacoscotome, fak-os'ko-tome (*phace, skotoma,* darkness). Opacity of crystalline lens.

Phaco'sis (*phace*). Production of freckles.

Phaco'tus (*phakotos,* lens-shaped). Lenticular; having chloasma or freckles.

Pha'cus. Ervum lens.

Phacydropsia (fak-e-drop'se-ah) or **Phac'ydrops** (*phace, hudrops,* dropsy). Fluid cataract.

Phacymeni'tis. Inflammation of the capsule of the crystalline lens.

Phænicis'mus. Rubeola.

Phænomenogenia, fen-om-en-o-jen'e-ah. Genesis of phenomena occurring in disease.

Phænomenolo'gia (*logos,* description). Description of phenomena; symptomatology; semeiology.

Phænom'enon (*phaino,* to manifest). Phenomenon.

Phænomenoscop'ia (*phænomenon, skopeo,* to examine). See *Symptomatology.*

Phænophthalmotropia, fe-nof-thal-mo-tro'pe-ah (*phaino,* to manifest, *ophthalmos, trepo,* to turn). Apparatus designed by Donders to illustrate the movements of the eye by movable globe, rings, and axes.

Phænozygous, fe-noz'ig-us. Term applied to skulls having zygomatic arches visible when viewed directly from above.

Phæochlorophyll, fe-o-klo'ro-fil. Coloring matter obtained from chlorophyll.

Phæomyelitis, fe-o-me-el-e'tis (*phaios,* gray, *muelos,* marrow). Inflammation, acute in character, of gray matter of spinal cord.

Phæore'tin. Brown resinous matter contained in rhubarb, but not of therapeutic value.

Phagæna, faj-e'nah (*phago,* to eat). Boulimia.

Phagedæna, faj-e-de'nah (*phagedaina,* ravenous hunger). Boulimia. Phagedenic ulcer. **P. gangræno'sa,** hospital gangrene. **P. nosocomia'lis,** hospital gangrene. **P. pu'tris,** see *Phagedenic ulcer* and *Hospital gangrene.*

Phageden'ic. *Phagedenous, Rodent.* That which rapidly eats away; gangrenous. **P. chan'cre,** destructive form of primary syphilitic sore. A virulent variety has been long known in London hospitals under the name "Swan-alley sore," from the miserable locality inhabited by prostitutes in which it formerly prevailed. **P. slough'ing of the mouth,** cancer aquaticus. **P. ul'cer,** *Phagedenic sore, Nome, Phagedæna,* one which rapidly eats and corrodes the neighboring parts. Where the slough extends deeper than the surface, the term *Sloughing phagedæna* is applied to it. The morbid condition which gives occasion to this destruction of parts is called *Phagedenism.* A *Phagedenic* in the materia medica is a substance used for destroying fungous granulations in ulcers, etc.

Phagedenism, faj'e-den-izm. See *Phagedenic ulcer.*

Phagede'nous. Phagedenic.

Phagocytes, fag'o-sites (*phago,* to eat, *kutos,* hollow). Leucocytes which destroy bacteria by enclosing and absorbing them.

Phagocytoblast, fag-o-si'to-blast. Mesoderm.

Phagocyto'sis. Condition in which phagocytes have an existence. Destruction of bacteria by phagocytes. Development of phagocytes.

Phagomania, fag-o-man'e-ah (*phago,* to eat, *mania,* insanity). Paroxysmal craving for food, leading to theft.

Phakitis, fak-e'tis. Phacitis.

Phakohydrops'ia. Dropsy of capsule of lens.

Phakohymeni'tis. Inflammation of the capsule of the lens.

Phakom'eter (*phake,* lens, *metron,* measure). Instrument for determining the power of lenses.

Phakosclerema, fak-o-skler-a'mah (*phace, skleros,* hard). Induration of the crystalline lens. Hard cataract.

Phakosclero'sis. Induration of the crystalline lens. Hard cataract.

Phakoscope, fak'o-skope (*phace, skopeo,* to observe). Instrument for observing changes in form of the lens during accommodation by doubling the reflected image with prisms.

Pha'lacra, Phalacro'ma, or **Phalacro'sis.** Calvities; baldness.

Phalac'rotes. Alopecia.

Phalæ'na pinguina'lis (*phalaina,* moth). See *Ectozoa.*

Phalangagra, fal-an'gag-rah (*phalanx, agra,* seizure). Phalangarthritis.

Phalan'gal (*phalanx*). *Phalangial, Phalangian.* Having relation to a phalanx.

Phalangarthritis, fal-an-gar-thre'tis (*phalanx, arthron,* joint, *itis*). *Phalangagra.* Gout in the fingers. Inflammation of the joints of the fingers or toes.

Phalange, fal-an'je. Phalanx.

Phalangeal, fal-an'ge-al. Like or relating to a phalanx. **P. pro'cess,** process of head-plate of outer rod of Corti, which joins with outer hair-cells; slen-

der prolongation of cells of Deiters of organ of Corti, attached above to phalanges of reticular lamina.

Phalan'ges (pl. of **Phalanx**). Bones of fingers and toes, fourteen in each member, arranged in three rows: proximal or basilar p., middle p., and distal or ungual p. Chaussier used the term only for the proximal p. **P. basila'res**, basilar p. **P. of Deiters**, see *Deiters, phalanges of.* **P. of the ear**, minute fibres in the organ of Corti. **P., me'dial**, second row of phalanges. **P. unguicula'res**, ungual phalanges.

Phalan'gial, Phalan'gian, or **Phalangia'nus.** Phalangal.

Phalangitis, fal-an-je'tis. Inflammation of a phalanx.

Phalan'gium esculen'tum (*phalangion*, venomous spider, whose poison it was supposed to neutralize). Scilla esculenta.

Phalango'sis (*phalanx*, row of soldiers, *osis*). An affection of the eyelids in which the lashes are arranged in two or three rows. See *Trichiasis.* Also dropping of the upper eyelid, from paralysis of the levator palpebræ superioris muscle.

Pha'lanx (*phalanx*, row of soldiers). A name which has been given to the small bones which form the fingers and toes, because placed alongside each other like a phalanx. They are the phalanges of the fingers and the phalanges of the toes. I. *Phalanges of the fingers*, in each hand fourteen—three to each finger, and two to the thumb; situate one above the other. They are distinguished numerically, reckoning from the base toward the tip of the finger. 1. The first or metacarpal; 2. The second or middle phalanges; 3. The third phalanges, which terminate each finger and support the nail. II. *Phalanges of the toes*, the same in number as those of the fingers, but much smaller and of a very different shape. The phalanges of a finger or toe are united with each other, and the first with the metacarpal or metatarsal bone. They are developed from two points of ossification, one for the superior extremity and the other for the body and inferior extremity.

Phal'aris Canarien'sis (*phalaros*, brilliant, white, shining, in application to the seed). *P. ovata. Cultivated Canary grass*, ord. Gramineæ. Seed of this grass, *Canary seed*, afford a nourishing meal. The ancients recommended them for allaying pains in the kidney and bladder. **P. zizanoï'des**, Andropogon muricatus.

Phallal'gia (*phallo, algos*, pain). Pain in the male organ.

Phallanastrophe, fal-lan-as'tro-fe (*phallo, anastrophe*, turning back). Distortion of the male organ backward.

Phallancylosis, fal-lan-kil-o'sis (*phallo, ankulosis*, bending). Chordee.

Phallaneurism, fal-lan'u-rizm. Aneurism of the penis.

Phal'lic (*phallos*, penis). Pertaining to the penis.

Phalli'tis (*phallo, itis*). Inflammation of the male organ.

Phal'lo (*phallos*, male organ). In composition, the male organ.

Phalloblennorrhœa, fal-lo-blen-nor-rhe'ah. Gleet.

Phallocamp'sis (*phallo, kampsis*, bending). Chordee.

Phallocarcinoma, fal-lo-kar-sin-o'mah (*phallo, karkinoma*, cancer). Carcinoma or cancer of the penis.

Phallocrypsis, fal-lo-krip'sis (*phallo, krupto*, to cover). Retraction of the penis; abnormal smallness of the penis.

Phallodyn'ia (*phallo, odune*, pain). Phallalgia.

Phal'loid (*phallo, eidos*, resemblance). Resembling the penis.

Phalloïdeæ (fal-lo-id'e-e) or **Phalloïd'ei** (*phallos*, penis, *eidos*, resemblance). Division of Fungi, the most important of which, medically, is phallus; see *Phallus.*

Phalloncus, fal-lon'kus (*phallo, onkos*, swelling). Tumefaction or tumor of the male organ.

Phalloplasty, fal'lo-plas-te (*phallo, plasso*, to form). Plastic surgery of the penis.

Phallopsoph'ia (*phallo, psophos*, noise). Discharge of wind from the male urethra.

Phallorrhag'ia (*phallos, rhegnumi*, to break forth). Hemorrhage from the male urethra.

Phallorrhœ'a (*phallos, rheo*, to flow). Gonorrhœa in the male.

Phallorrhoïschesis, fal-lor-rho-is-kes'is (*phallos, rheo*, to discharge, *ischo* to withhold). Sudden arrest of a gonorrhœal discharge.

Phal'lus. Penis; dildoo. **P. esculen'tus**, Morchella esculenta. **P. impudi'cus**, the thick, glutinous liquid in the sporules of this fungus, which grows largely in the Ukraine, is applied popularly to painful limbs. Infusion of the powdered plant is given in arthritic affections.

Phanakis'toscope. See *Zoetrope.*

Phanerobiotic, fan-er-o-be-ot'ik (*phaneros*, visible, *bios*, life). Having some clear evidence of life or existence.

Phanerog'amous (*phaneros*, evident, *gamos*, marriage), **Phanerogam'ic.** Epithet used by botanists for plants whose sexual organs are apparent. It is, consequently, the opposite to *cryptogamous.*

Phanerogenous (fan-er-oj'en-us) **tis'sue** (*phaneros*, visible, *gennao*, to beget). *Phanerophorous tissue.* Special substance forming the pulp of the tooth (Robin).

Phaneroph'orous tis'sue (*phaneros*, visible, *phoreo*, to bear). Phanerogenous tissue.

Phanerozoous, fan-er-o-zo'us (*phaneros*, visible, *zoon*, animal). Giving manifestations of life.

Phanta'sia (*phaino*, to bring to light, to make appear). Delirium. Imagination.

Phantasm, fan'tazm. A phantom, false appearance, apparition, hallucination. Derangement of the sense of sight or of the intellectual faculties, causing objects to be perceived which are not before the eyes.

Phantas'ma. Phantasm. Pseudoblepsia.

Phantasmat'icus (*phantasma*). Phantasticus.

Phantasmatoscop'ia (*phantasma, skopeo*, to view). Aberration of the sense of sight, which transmits the image of imaginary objects.

Phantasmophrenosis, fan-taz-mo-fren-o'sis (*phantasma, phren*, mind). Condition of dreaming in a waking state.

Phantasmos'copy. Phantasmatoscopia.

Phantas'ticus. Inebriant. Creating phantoms.

Phan'tom (*phaino*, to cause to appear). Fantom; apparition; manikin. **P. stric'ture**, imaginary stricture of the urethra or rectum, based on supposed symptoms. **P. tu'mor**, tumor that forms, in the abdomen for example, simulating organic disease, and sometimes very deceptive.

Phanto'ma. Phantasm. **P. obstetric'ium**, fantom.

Pharbet'isin. Resin of kaladana (P. Ind.).

Pharbitine, far'bit-een. Pharbetisin.

Pharbit'is nil. See *Kaladana.* **P. sem'ina**, kaladana.

Pharcidous, far-sid'us. Wrinkled.

Pharicum, far'ik-um. Ancient poison of vegetable origin.

Pharm'acal. Relating to pharmacy.

Pharmaceial, far-ma-se'al. Pharmacy. Poisoning.

Pharmaceum, far-ma-se'um. Drug-store or apothecary shop.

Pharmaceuma, far-ma-su'mah. Medicament.

Pharmaceus far-mas'e-us. Apothecary. Also poisoner or sorcerer.

Pharmaceu'ta. Apothecary.

Pharmaceutic (far-ma-su'tik) or **Pharmaceu'tical.** Epithet for everything belonging to pharmacy. Thus, we say pharmaceutical preparations, etc. **P. chem'istry**, chemistry relating to medicinal substances and compounds.

Pharmaceu'tice. Pharmacy.

Pharmaceutics, far-ma-su'tiks. Pharmacy.

Pharmaceutist, far-ma-su'tist. Apothecary.

Pharmaceu'tria. A woman who prepares or deals in drugs or poisons.

Pharma'cia. Pharmacy; poisoning.

Pharmacic, fahr'mas-ik. Pharmaceutic, poisonous.

Pharmacion, far-mah'se-on. Purgative; mild remedy.

Phar'macist. Apothecary; one skilled in pharmacy.

Pharmacites, fahr-ma-se'tees. Medicated; drugged.

Phar'maco (*pharmakon*, a medicine, a poison). In composition, generally medicine, at times poison.

Pharmacocatagraphology, far-ma-ko-kat-a-graf-ol'-o-je (*pharmaco*, *kata*, beneath, *graphe*, a writing, *logos*, a description). Art of writing prescriptions.

Pharmacochymia, far-mah-ko-kim-e'ah (*pharmaco*, *chymia*). Pharmaceutical chemistry.

Pharmacocollocyst, fahr-ma-ko-kol'o-sist (*pharmakon*, drug, *kolla*, glue, *kustis*, cyst). Capsule made of gelatin for administering medicine.

Pharmacodynam'ic. Relating to pharmacodynamics.

Pharmacodynamics, far-ma-ko-di-nam'iks (*pharmaco*, *dunamis*, power). *Dynamical materia medica.* Division of pharmacology considering the effects and uses of medicines.

Pharmacodynamolog'ia (same etymon, and *logos*, discourse). Pharmacodynamics.

Pharmacogno'sia (*pharmaco*, *gnosis*, knowledge). Division of pharmacology treating of simples or unprepared medicines. It is variously called pharmacognosis, pharmacognostics, pharmacography, and pharmacology.

Pharmaco-koniantron, far'mah-ko-kon-e-an'tron (*pharmakon*, *konia*, powder, *antron*, opening). Instrument for introducing liquids in spray form into the Eustachian tube and cavity of the tympanum.

Pharmacol'ogy (*pharmacon*, *logos*, discourse). Materia medica. Division of materia medica treating of the action of drugs upon the living body.

Pharmacoma'nia (*pharmaco*, *mania*). Mania for prescribing or for taking or giving medicine or for drugging.

Pharmacometry, far-ma-kom'et-re (*pharmacon*, *metron*, measure). Art relating to measuring and weighing of drugs.

Pharmacomor'phic. Pertaining to form or appearance of drugs.

Phar'macon. Medicament; poison.

Pharmacopœ'ia (*pharmaco*, *poieo*, to make). *Pharmacopœa.* A work containing a collection of formulæ for the preparation, etc. of medicines, generally published by official authority. Formerly a chemical laboratory.

Pharmacopœial, far-ma-ko-pe'al. Pertaining to, or contained in, a pharmacopœia.

Pharmacopœ'us. Apothecary, druggist.

Pharmacopo'la (*pharmaco*, *poleo*, to sell). *Pharmacopole.* Apothecary; druggist.

Pharmacopolist, far-ma-kop'o-list (*pharmakon*, drug, *poles*, seller). Apothecary.

Pharmacopo'lium. Drug-store; apothecary shop.

Pharmacopo'sia (*pharmaco*, *posis*, potion). A liquid medicine, especially one that is cathartic.

Pharmaco'sa medicamen'ta (*pharmacon*). Medicines that contain poisonous substances.

Pharmacothe'ca (*pharmaco*, *theke*, sheath). A case for medicines. A medicine-chest.

Pharmacotherapeutic, far-ma-ko-ther-ah-pu'tik. Relating to therapeutics in connection with pharmacy.

Pharmacotherapi'a (*pharmaco*, *therapeia*, treatment). Cure of diseases by medicine.

Pharmac'ter. Apothecary.

Phar'macum. Medicament; poison. **P. Ægypti'acum,** Ægyptiacum. **P. amator'ium,** philter. **P. ad aur'es,** medicine composed of bitter almonds, white pepper, saffron, myrrh, opium, frankincense, castor, verjuice, sulphate of iron, vinegar, pomegranate-bark, unguentum nardinum, etc., believed to be useful for cleansing fetid ulcers in the ears.

Pharmacurgicus, far-mah-kur'jik-us (*pharmaco*, *ergon*, work). Apothecary.

Pharmacur'gus. Apothecary.

Phar'macy (*pharmacon*). Art which teaches the knowledge, choice, preservation, preparation, and combination of medicines. It was formerly divided into *Galenical* and *Chymical.* The former, called after Galen, embraced the operations to which medicines were subjected without chemistry; the latter, *Chymical pharmacy* or *Pharmaceutic chymistry*, *Pharmacochymia*, comprised the preparation of medicines founded on chemical action of their principles. Pharmacy is also used in the sense of apothecary shop or drug-store.

Pharmax'is. Pharmacotherapia; pharmacy.

Pharmianum, far-me-an'um. Preparation resembling a cataplasm.

Pharna'ceum linea're (called after Pharnaces, king of Pontus). A South African plant, ord. Paronychiaceæ, employed at the Cape in pulmonary affections, generally in infusion. **P. Malabar'icum,** plant of Malabar, employed as an antiemetic and to prevent purging; juice is slightly diuretic. **P. spathula'tum,** South American and West Indian plant; externally applied, it possesses emollient and discutient properties; given internally in phthisis and menorrhagia.

Pha'rus, Phary'athron, or **Pharyg'ethrum.** Pharynx. **P. sappula'ceus,** plant of Guiana, used by the natives for making a pectoral; seeds are eaten as gruel.

Pharyngæ'a ascen'dens. Inferior ascending pharyngeal artery.

Pharyngæ'um (sal) (*pharynx*). Compound of cream of tartar, potassium nitrate, burnt alum, and distilled vinegar; formerly employed, united with honey and plantain-water, to make gargles, which were advised in quinsy.

Pharyngal'gia (*pharyngo*, *algos*, pain). Pain in the pharynx.

Pharyngea, far-in-je'ah. Pharyngeal artery.

Pharyngeal, far-in-je'al (*pharynx*). *Faucial.* Relating to the pharynx or fauces. Name given to the muscles, vessels, and nerves connected with the pharynx. **P. aponeuro'sis,** fibrous tissue forming walls of the pharynx; strong above, where attached to base of skull; weak below, where covered with muscles. **P. ar'teries** are two in number. The *superior* or *pterygo-palatine* arises from the internal maxillary at the base of the zygomatic fossa, passes through the pterygo-palatine canal, and proceeds to be distributed to the pharynx and the corresponding part of the Eustachian tube. The *inferior* or *ascending pharyngeal artery* arises from the external carotid on a level with the facial, ascends along the lateral and posterior part of the pharynx, and divides into two branches: the one—the pharyngeal, properly so called—distributed to the pharynx; the other—the meningeal—gives its branches particularly to the dura mater. **P. bur'sa,** pouch in mucous membrane of back part of pharynx. **P. cav'ity,** that part of the alimentary canal and respiratory passages extending from the mouth and nasal cavities above to the œsophagus and larynx below. **P. gan'glion,** minute sympathetic ganglion on the ascending pharyngeal artery near its origin; see *Pharyngeal plexus.* **P. glands,** numerous mucous glands which are found especially in the posterior wall of the pharynx. **P. nerves,** branches from the trifacial, glossopharyngeal, and pneumogastric; name especially applied to the branch passing through Meckel's ganglion backward through the pterygopalatine canal to the mucous membrane of the pharynx. **P. plex'us,** formed by pharyngeal branches of the pneumogastrics, with contributions from the glossopharyngeal and sympathetic; contains small ganglia; a rich network of veins covering the outer surface of the pharynx. **P. spine,** pharyngeal tubercle. **P. ton'sil,** considerable collection of adenoid tissue and lymph-follicles found in the pharynx at the upper end of the posterior wall on the median line. **P. tu'bercle,** that to which the pharyngeal raphe is attached on the under surface of the basilar process of the occipital bone. **P. veins** collect from the pharyngeal plexus and discharge into the internal jugular. **P. voice,** see *Voice.*

Pharyngectomy, far-in-gek'to-me (*pharyngo*, *ektome*). Excision of the pharynx.

Pharyngemphrax'is (*pharyngo, emphraxis,* obstruction). Obstruction of the pharynx.

Pharyn'gethron. Pharynx.

Pharyngeurys'ma (*pharyngo, eurusma,* dilatation). Pharyngocele.

Pharynge'us. Pharyngeal.

Pharyn'gicus. Pharyngeal.

Pharyngis'mus. Spasm or cramp of the pharynx.

Pharyngi'tis (*pharyngo, itis*). Inflammation of the pharynx; cynanche pharyngea. **P. apostemato'sa,** abscess of the pharynx. **P. atroph'ica,** pharyngitis characterized by atrophy of the mucous membrane and of the glandular structures of the pharynx. **P., catar'rhal,** catarrhal angina. **P., diphtherit'ic,** *Pseudomembranous inflammation of the throat, Diphtheritis* or *Diphtheria of the throat, Hog-skin angina;* diphtheritic inflammation of the pharynx; see *Diphtheritis.* When *diphtheria* is spoken of, it is usually this affection that is meant; although the local phenomena are rather expressions of the peculiar adynamic condition termed diphtheritic, which may destroy without much or any evidence of the pharyngeal affection. It is this adynamic condition which demands the main attention, the pharyngeal exudation requiring but little. During convalescence peculiar paralytic phenomena supervene at times. See *Paralysis, diphtheritic.* Diphtheritic pharyngitis is not new. It is manifestly the malignant sore throat which is described as having been so fatal—in the time of Horace Walpole, for example. See *Cynanche maligna.* **P., erythem'atous,** simple pharyngitis without complications. **P., follic'ular,** *Follicular inflammation of the pharynx, Acne of the throat;* inflammation and enlargement of the follicles of the pharynx, occasionally extending to the larynx; sometimes termed *Clergyman's sore throat, Tubercles of the larynx* and *fauces,* and *Tubercular sore throat;* see *Clergyman's sore throat.* **P. gangræno'sa,** cynanche maligna. **P., gran'ular,** pharyngitis, follicular. **P. hypertroph'ica,** in this form the mucous membrane of the pharynx becomes hypertrophied. **P. latera'lis hypertroph'ica,** inflammatory thickening of lateral pharyngeal bands. **P. leucæ'mica,** inflammation of the pharynx, involving also the lymphatic glands, and attended with an increase of the white corpuscles of the blood. **P. malig'na,** cynanche maligna. **P., mem'branous,** pharyngitis in which membrane forms on the wall of the pharynx. **P., phlegmo'nous,** angina, phlegmonous. **P. ulcero'sa,** *Ulcerative pharyngitis;* inflammation of the pharynx attended with ulceration; see *Cynanche maligna.* **P. villo'sa,** in this variety papillomata are present on the posterior wall of the pharynx.

Pharyn'go. In composition, the pharynx.

Pharyngoc'ace (*pharyngo, kakos,* evil). Cynanche maligna.

Pharyngocele, far-in-go-se'le (Eng. far-in'go-seel) (*pharyngo, kele,* tumor). An enlargement at the upper part of the gullet, in which the food sometimes rests in considerable quantity.

Pharyngocenterium, far-in-go-sen-ta're-um (*pharynx, kenteo,* to prick). Trocar used to puncture the thorax.

Pharyngocephale, far-in-go-sef'al-e. Pharynx.

Pharyngocynan'che (*kunanche,* cynanche). Pharyngitis.

Pharyngodynia, far-in-go-din'e-ah (*pharyngo, odune,* pain). Pain in the pharynx.

Pharyn'go-epiglot'tic fold. Concave plication of mucous membrane on either side of the epiglottis, passing to the pharynx.

Pharyn'go-epiglot'ticus. Fibres of stylopharyngeus inserted into side of epiglottis and pharyngo-epiglottic ligament.

Pharyngoglos'sal. *Glossopharyngeal.* Belonging to the pharynx and tongue. **P. nerve,** *Glossopharyngeal nerve;* a portion of the eighth pair, arising from the superior and lateral parts of the spinal marrow, between the facial and pneumogastric nerves, by several filaments, which soon unite into a single cord that passes out of the cranium by the foramen lacerum posterius, goes downward and forward, and gains the posterior and inferior part of the tongue. Immediately after its exit from the cranium it gives a branch to the meatus auditorius externus, and receives a filament from the facial and another from the pneumogastric nerve. It then furnishes two other filaments, which descend upon the carotid artery and unite at the bottom of the neck with branches from the cervical ganglions and cardiac nerves, and give two filaments to the stylopharyngeus muscle. After sending a twig or two to the tonsil, to the upper part of the pharynx and membrane of the epiglottis, it divides into many branches, which run partly to the margin and partly to the middle of the root of the tongue, supplying especially the papillæ majores and the parts in their neighborhood. By some this nerve is regarded as the controller of the associated motions of the tongue and pharynx. By others it is esteemed to be the specific nerve of gustation.

Pharyngog'raphy (*pharyngo, graphe,* description). An anatomical description of the pharynx.

Pharyngolaryngeal, far-in-go-lar-in-je'al. Relating to pharynx and larynx. **P. cav'ity,** pharyngeal cavity below the soft palate during deglutition. **P. si'nus,** pyramidal or pyriform sinus.

Pharyngolaryngi'tis. Inflammation of the pharynx and larynx.

Pharyngolith, far-in'go-lith (*pharynx, lithos,* stone). Calcareous deposit under mucous membrane of pharynx near the tonsil.

Pharyngol'ogy (*pharyngo, logos,* discourse). The part of anatomy which treats of the pharynx.

Pharyngol'ysis (*pharyngo, lusis,* solution). Paralysis of the pharynx.

Pharyngomastoï'deus. Supernumerary muscle arising from the mastoid process, inserted into the pharyngeal wall.

Pharyngomyco'sis (*pharyngo, mukes,* fungus). Growth of fungi, usually leptothrix, in the pharynx.

Pharyngona'sal cav'ity. Pharyngeal cavity above the soft palate during deglutition; nasopharynx.

Pharyngopalati'nus. Palatopharyngeus; also that part thereof inserted into the pharynx only.

Pharyngoparal'ysis. Paralysis of the pharynx.

Pharyngop'athy (*pharyngo, pathos,* disease). Disease of the pharynx.

Pharyngoperis'tole (*pharyngo, peristello,* to contract). Stricture or contraction of the pharynx.

Pharyngople'gia (*pharyngo, plesso,* to strike). Paralysis of the pharynx or œsophagus; commonly a symptom of general paralysis or of approaching dissolution.

Pharyngoplethora, far-in-go-pleth-o'rah (*pharyngo, plethora,* fulness). Plethoric condition of the pharynx.

Pharyngorhinitis, far-in-go-rhin-e'tis (*rhis,* nose). Inflammation of nasopharynx.

Pharyngorhinos'copy (*rhis, skopeo,* to observe). Examination of the nasopharynx by the rhinoscope.

Pharyngorrhagia, far-in-gor-rhaj'e-ah (*pharyngo, rhage,* rupture). Hemorrhage from the vessels of the pharynx.

Pharyngorrhœa, far-in-gor-rhe'ah (*pharynx, rheo,* to flow). Discharge of mucus from the membrane of the pharynx.

Pharyngoscope, far-in'go-skope (*pharyngo, skopeo,* to observe). Modified laryngoscope for examination of the pharynx.

Pharyngos'copy (*pharyngo, skopeo,* to view). Inspection of the pharynx.

Pharyn'gospasm (*pharyngo, spasmos,* spasm). Spasm or cramp of the pharynx.

Pharyngostaphyli'nus or Pharyngostaphyle'us (*pharyngo, staphule,* uvula). Palatopharyngeus.

Pharyngosten'ia (*pharyngo, stenos,* narrow). Stricture or contraction of the pharynx.

Pharyn'gotome (*pharyngo, tome,* incision). An instrument used to scarify inflamed tonsils and to open abscesses which form in the parietes of the pharynx.

Pharyngot'omy. Some authors have used this word synonymously with œsophagotomy. It means,

also, scarification of the tonsils, or an incision made in them for opening an abscess, etc.

Pharyngotonsillitis, far-in-go-ton-sil-le'tis (*pharyngo, tonsilla,* tonsil). Inflammation involving the pharynx and tonsil. **P. lacuna'ris,** infectious tonsillitis due to micro-organisms.

Phar'ynx (*pharunx; pharo,* to cut or divide). *Fauces, Isthmus.* A musculomembranous, symmetrical canal on the median line, irregularly funnel-shaped and extending between the base of the cranium and the œsophagus, in front of the vertebral column, to the cricoid cartilage. It is very narrow above, dilates in the middle, and again contracts below, at its junction with the œsophagus. Into the interior paries of the pharynx open, successively, from above downward, the posterior orifices of the nasal fossæ, the Eustachian tubes, the posterior aperture of the mouth, and the top of the larynx. The pharynx is formed externally of a muscular coat, and internally of a mucous membrane which is continuous above with the Schneiderian membrane, and in the middle with that of the mouth; below with that of the œsophagus; and at the sides with that of the Eustachian tubes. This membrane has no villi, and presents only a few inequalities, which are owing to the presence of muciparous follicles. The muscular coat is composed of the constrictor muscles, stylopharyngei, and pharyngostaphylini. The vessels and nerves are called pharyngeal. It serves as a common origin for the digestive and respiratory organs. It gives passage to the air during respiration, and to the food at the time of deglutition. **P., follic'ular inflamma'tion of,** pharyngitis, follicular.

The following are some of the measurements of the pharynx (Luschka):

Length (from the pars basilaris of the occiput to the fifth cervical vertebra)	140 mm.
Breadth of posterior wall at upper end	44
Depth of pharynx at upper end (from the tuberculum pharyngeum to posterior margin of the vomer) in man	20
Thickness of wall of pharynx	2½
Constrictor inferior muscle in the median line, high	70–80
Acinous mucous papillæ, large	1–2

Phar'yx. Pharynx.

Phase. Condition or stage of disease or physiological function at a given time.

Phase'lus or **Phase'olus** (*phaselos,* a small boat). *Kidney bean, French bean, Bush bean, String bean, Snap bean, Snaps;* ord. Leguminosæ. When young and well boiled the unripe pods are used as a legume. They are easy of digestion and delicately flavored. The sweet taste of the juice is owing to the presence of mannite—phaseomannite. The ripe beans—haricot beans—dried, are used in soups, etc. **P. albiflo'rus,** white runner, plant of Mexico; root is poisonous. **P. cre'ticus,** *Cajan, Cayan;* a decoction of the leaves has been used to restrain the hemorrhoidal flux when excessive. **P. multiflo'rus,** scarlet runner. **P. vulga'ris,** phaseolus.

Phaseoman'nite. Inosite. See *Phaselus.*

Phasia'nus gal'lus (from the river *Phasis,* in Colchis, near the Black Sea). *Cock.* Parts of generation of the cock, dried and pulverized, were formerly regarded as proper for increasing the quantity of semen. The fat was used as an emollient and resolvent; the brain in diarrhœa; the gall in freckles and diseases of the eyes.

Phasi'olus. Phaseolus.

Phas'ma (*phao,* to cause to appear). Phantasm.

Phat'ne (*phatne,* crib with divisions). Alveolus.

Phat'nion (dim. of **Phatne**). Alveolus.

Phatnorrhagia, fat-nor-rha'je-ah (*phatne, rhegnumi,* to break forth). Hemorrhage from the alveoli.

Phausin'ges (*phauzo,* to roast). Spots or blisters on the legs, produced by heat, and, in a more extensive signification, by any other cause. Also a pustule.

Phaustianus, faws-te-an'us. Ancient cautery for removing tumors.

Phaylopsis (fa-lop'sis) **longifo'lia.** Plant of Malabar and East Indies; root has aperient and hydragogue virtues.

Pheas'ant's eye. *Adonis autumnalis.* Indigenous; plant is astringent and bitter.

Phellan'drium aquat'icum. *Water fennel, Fine-leaved water hemlock;* ord. Umbelliferæ. This plant is stimulant and narcotic. Has been used in intermittents and dyspepsia; also in phthisis pulmonalis and in cases of scrofulous atonic ulcers.

Phelps's opera'tion. Section of tendo Achillis and of resisting tissues, just in front of and below the inner malleolus, down to the bone, for relief of talipes valgus.

Phenacethydrazine, fen-as-et-hid'rah-zeen. Hydracetin.

Phenac'etin. Para-acetphenetidin.

Phenaceturic acid, fen-as-et-u'rik as'id. Acid found in urine of dogs after taking phenylacetic acid and phenylacetonitril.

Phenakis'toscope (*phenakistes,* trickster, *skopeo,* to observe). Disk provided with radial openings, regularly placed near the edge, carrying on its face a second smaller disk on which are drawn at regular distances, in a circle, successive phases of a periodic movement, equal in number to the number of slits. When the instrument is held before a mirror and revolved, one sees, through the slits, the drawings apparently in motion.

Phenamid, fen-am'id. Suilin.

Phe'nas so'dicus aq'ua solu'tus. Aqueous solution of carbolate of sodium.

Phenate, fe'nate. Carbolate.

Phenazone, fen'a-zone. Antipyrine.

Phe'ne. Benzole.

Phenetidene, fen-et'id-een. Substance from which phenacetin is obtained by process of substitution.

Phengopho'bia (*phengos,* light, *phobos,* dread). Photophobia.

Phe'nic. Obtained from or containing phenyl. **P. ac'id,** carbolic acid.

Phen'icated. Containing phenic acid.

Phenicin, fen-is'in. Indigo carmine.

Phenig'mus (*phoinix,* purple or red). *Phœnigmus, Red jaundice.* Cutaneous affection consisting of redness diffused over the skin without fever. Also the act of irritating a part by a stimulating application.

Phe'nion. Anemone pulsatilla.

Phenocoll hydrochlorate (fe'no-col hy-dro-klo'rate) or **hydrochlo'ride.** White powder, closely allied to phenacetin; antipyretic in affections of the lungs, acute rheumatism, or neuralgia, in powder, capsules, or solution. Acetate, carbonate, and salicylate of phenocoll exist, but are not as yet therapeutically important.

Phe'nol. Carbolic acid. See also *Iodized phenol.* **P. cam'phor,** camphorated carbolic acid. **P. sulphon'ic acid,** unimportant constituent of normal urine, much increased by vegetable diet or ingestion of phenol or benzol, and by peritonitis resulting from ileus or lymphosarcomatous tissue.

Phenoliodat'um. Iodized phenol.

Phenoloxyhy'drate. Carbolic acid.

Phenolphthal'ine or **thal'ein.** Nearly colorless crystalline substance, readily soluble in alcohol, insoluble in water; produced by action of phenol upon phthalic anhydride; a delicate test in alkalimetry.

Phenom'enon (*phainomai,* to appear). *Phænomenon.* An extraordinary and unexpected event. In medicine it means any change, appreciable by our senses, which supervenes in an organ or function, as the phenomena of the circulation, respiration, etc. It is used in pathology synonymously with symptom. **P., Cheyne-Stokes,** see *Cheyne-Stokes.* **P., knee,** see *Reflex, patellar.*

Phenopyrin, fe-no-py'rin. Oily, colorless liquid, composed of equal parts of carbolic acid and antipyrine.

Phenoqui'none. Substance produced by oxidation of phenol, or by combining quinone and phenol.

Phenoreson'cin. Mixture containing carbolic acid 67 per cent., resorcin 33 per cent.

Phenoxycaffeine, fe-noks-e-kaf'fe-een. White powder, derivative of caffeine; mild narcotic in neuralgia, migraine, etc. Also locally anæsthetic.

Phenyl, fen'il. Diphenyl. **P. acet'anide,** acetanilid. **P. al'cohol** or **P. hy'drate,** carbolic acid. **P. glucosa'zon,** yellow crystalline material obtained in the phenyl-hydrazin test for sugar in urine. **P., hy'drated ox'ide of,** carbolic acid. **P. hydra'zin,** colorless oil, soluble in water; the hydrochloride is used in the phenyl-hydrazin test for sugar in the urine. **P.-h. test,** test for sugar dependent upon formation of crystals of phenyl-glucosazon in presence of phenyl-hydrazin hydrochloride and sodium acetate. **P. hy'dride,** benzol. **P., hy'druret of,** benzol. **P. sal'icylate,** salol.

Phenylan'iline. Aniline.

Phenylate, fen'il-ate. Carbolate.

Phenylben'zene. Diphenyl.

Phenyldihydrochinazoline (fen-il-di-hy-dro-chin-az'o-leen) **hydrochlo'ride.** Orexine hydrochloride.

Phenyl'ic ac'id. Carbolic acid. **P. al'cohol,** carbolic acid.

Phenylmethylace'tone or **Phenylmethylke'tone.** Hypnone.

Phenylsulphu'ric ac'id. Sulphocarbolic acid.

Phenylure'thane. Euphorin. White crystalline powder resembling in composition carabaminic acid and acetanilid; antipyretic, antiarthritic, and analgesic. Applied also externally in venereal ulcers, wounds, skin diseases, etc.

Pheomyelitis, fa-o-me-el-e'tis. Disseminated inflammation of the gray matter of the spinal cord.

Phere'a. Swollen condition of parotid glands.

Pheug'ydron (*pheugo,* to flee, *hudor,* water). Hydrophobia.

Phi'ala (*phiale,* a broad drinking-cup, a saucer). *Phial* or *Vial.* Small bottle in which apothecaries are in the habit of sending out their mixtures, draughts, etc., hence called *Medicine vials.*

Philadel'phia flea'bane. Erigeron Philadelphicum.

Philadynamica, fil-ad-in-am'ik-ah (*philo, a,* priv., *dunamis,* power). Debilitants.

Philanthro'pus (*philo, anthropos,* man). Galium aparine.

Philermum, fil-ur'mum. Mercaptan.

Philetron, fil-et'ron. Groove of the upper lip.

Philia'ter (*philo, iatrike,* medicine). An amateur of medicine. One who studies medicine.

Phi'lo (*phileo,* to love). In composition, love.

Philobio'sis (*philo, bios,* life). Love of life.

Philœn'ia (*philo, oinos,* wine). Love of wine. Addiction to wine.

Philogynia, fil-o-gin'e-ah (*philo, gune,* a woman). Fondness for women.

Philomedica, fil-o-med'ik-ah. Ancient cooling draught given in fevers.

Philomime'sia (*philo, mimeomai,* to imitate). Morbid tendency to mimic.

Philoneism, fil-o-ne'izm (*philo, neos,* new). Morbid desire for new things.

Philo'nium Londinen'se (after its proposer, Philo). Confectio opii.

Philopatridal'gia (*philo, patris,* one's country, *algos,* pain). Nostalgia.

Philopatridoma'nia (*philo, patris,* one's country, *mania*). Nostalgia.

Philos'opher's stone. See *Alchemy.*

Philosophia (fil-o-sof'e-ah) **adep'ta.** Alchemy. **P. cor'poris vi'vi,** physiology. **P. hermet'ica,** alchemy. **P. per ig'nem,** chemistry.

Phil'ter (*phileo,* to love). Medicine or drink considered capable of causing love.

Phil'trum. Groove of the upper lip.

Philypostrophous, fil-ip-os'tro-fus. Likely to recur (said of disease).

Phily'ra. The lime or linden tree. See *Tilia.*

Philyrea latifo'lia (after Philyra, mother of Chiron). Shrub of the south of France and Spain, ord. Oleaceæ, whose leaves have been used as an astringent in ulcers of the mouth and throat. The flowers, steeped in vinegar, have been applied to the head in headache. Decoction of the leaves is said to be diuretic.

Philyrine, fil'ir-een. Alkaloid obtained from Philyrea latifolia.

Phi'mos. Form of bandage for the head.

Phimo'sicus. Relating to phimosis.

Phimosientomy, fe-mo-ze-en'to-me (*phimosis, entome,* incision). Incision for relieving contraction of the prepuce.

Phimosis, fim-o'sis, improperly **Phymo'sis** (*phimoö,* to bind tight). Preternatural narrowness of the opening of the prepuce, so that it cannot be carried behind the corona glandis; most commonly congenital. Sometimes it is accidental, and dependent upon tumefaction of the glans or of the prepuce, as occurs in syphilis. To remedy this state the prepuce may be divided by means of a bistoury and director, or circumcision may be practised. **P. adna'ta,** congenital phimosis. **P. circumliga'ta,** paraphimosis. **P. congen'ita,** P. adnata. **P. œdemato'des,** *Hydrophimosis;* phimosis with œdematous swelling of the prepuce. **P. o'ris,** congenital condition of smallness of mouth. **P. palpebra'rum,** congenital diminution of space between the eyelids. **P. pueri'lis,** P. adnata. **P. vagina'lis,** atresia vaginæ.

Phimotic, fi-mot'ik. Pertaining to phimosis.

Phlas'ma (*phlao,* to bruise). Contusion.

Phleb (*phleps,* vein). Prefix signifying a vein or relation to a vein.

Phlebangioma (fleb-an-je-o'mah) **caverno'sum.** Acquired angioma cavernosum.

Phlebarteriectasia, fleb-ar-te-re-ek-tah'ze-ah (*phleb, arteria,* artery, *ektasis,* dilatation). Varicose aneurism.

Phlebarteriodialysis, fleb-ar-te-re-o-de-al'is-is (*phleb, arteria,* artery, *dialusis,* a loosing or separating). Arterio-venous aneurism.

Phlebec'tases (*phleb, ektasis,* dilatation). Varicose veins.

Phlebecta'sia (*phleb, ektasis,* dilatation). *Phlebectasis, Phlebectasy.* Dilatation of a vein or portion of a vein.

Phlebec'tasis. Phlebectasia. **P. hæmorrhoïda'lis,** hæmorrhois.

Phlebec'tasy. Dilatation of a vein or portion of a vein.

Phlebectopia, fleb-ek-to'pe-ah (*phleb, ektopos,* misplaced). Abnormal position of a vein.

Phlebemphrax'is (*phleb, emphraxis,* obstruction). Obstruction or plugging of a vein.

Phleb'es (pl. of **Phleps**). See *Artery.*

Phlebepati'tis (*phleb, hepatitis*). Hepatic phlebitis.

Phlebeurys'ma (*phleb, eurusma,* dilatation). Varix.

Phleb'icus. Relating or appertaining to a vein.

Phleb'ion (dim. of **Phleps**). Vein; small vein—*Venula.*

Phlebis'mus (*phleps,* a vein). Turgescence of veins produced by impeded return of the blood. See *Trachelismus.*

Phlebitis, fleb-e'tis (*phlebo, itis*). Inflammation of the inner membrane of a vein, *Endophlebitis,* which sometimes follows bloodletting, and extends from the small wound made in that operation to the neighboring parts of the venous system. The symptoms are, first, inflammation in the punctured part, and afterward a knotty, tense, painful cord, following the direction of the vessel, and accompanied with more or less fever, according to the extent of the inflammation, the nervous symptoms, etc. Phlebitis also sometimes supervenes on the ligation or excision of varices, after amputation, gunshot wounds, delivery (*uterine phlebitis*), the ligation of the umbilical cord, etc. It may terminate by resolution, suppuration, ulceration, or gangrene. Sometimes, when a clot forms in a vein and the vessel becomes permanently obliterated, the clot and vein ultimately contracting so as to form a firm cord, it constitutes *adhesive phlebitis.* **P., adhe'sive,** see *Phlebitis.* **P., cru'ral,** phlegmatia dolens. **P., gout'y,** phlebitis due to gout. **P., por'tal,** inflammation of the portal vein. **P., puer'peral,** phlebitis uterina. **P., suppura'tive,** phlebitis in which suppu-

ration occurs. **P. umbilica'lis**, inflammation of the umbilical vein. **P. uteri'na**, see *Peritonitis* and *Phlebitis*. **P., var'icose**, inflammation involving a varicose vein.

Phleb'o (*phleps*, a vein). In composition, a vein.

Phlebocarcino'ma. Cancer of a vein.

Phlebodes, fleb-o'dees (*phlebo*, *eidos*, resemblance). Having resemblance to a vein; well supplied with veins.

Phlebodiastasis, fleb-o-de-as'tas-is (*phlebo*, *diastasis*, separation). Separation of ends of vein after division.

Phlebog'enous (*phlebo*, vein, *gennao*, to generate). Term applied to angiomatous tumors—*phlebogenous angiomata*—which are in communication with large venous trunks.

Phlebogram, fleb'o-gram. Sphygmographic tracing of movements of a vein.

Phlebog'raphy (*phlebo*, *graphe*, description). Description or anatomy of the veins.

Phleboid, fleb'oid. Relating to a vein.

Phlebolith, fleb'o-lith (*phlebo*, *lithos*, stone). *Vein-stone.* Loose concretion, varying in size from that of a currant to that of a pea, occasionally found in the veins; it would seem to be formed in the blood.

Phlebolithiasis, fleb-o-lith-e'as-is. Formation of phleboliths.

Phlebol'ithus. Phlebolith.

Phlebol'ogy (*phlebo*, *logos*, discourse). The part of anatomy treating of the veins.

Phlebometritis, fleb-o-met-re'tis (*phlebo*, *metritis*). Metrophlebitis.

Phlebopalia, fleb-o-pal'e-ah (*phlebo*, *pallo*, to palpitate). With the ancients, pulsation, which they conceived to be produced by the veins. See *Pulsus venarum.*

Phlebophlogosis, fleb-o-flog-o'sis (*phlebo*, *phlogosis*, burning heat). Phlebitis.

Phlebophthalmotom'ia (*phlebo*, *ophthalmos*, eye, *tome*, incision). Bloodletting in the eye.

Phleboplero'sis (*phlebo*, *plerosis*, fulness). Distension or fulness of the veins. **P. ecphrac'tica**, inflammation.

Phleborrhagia, fleb-or-rhaj'e-ah (*phlebo*, *rhegnumi*, to break out). Rupture of the veins, and, in a more extensive sense, venous hemorrhage.

Phleborrhex'is (*phlebo*, *rhexis*, rupture). Rupture of a vein; also hemorrhage from a vein, *Phleborrhagia.*

Phlebosclero'sis (*phlebo*, *skleros*, hard). Thickening and calcification of a vein.

Phlebosteno'sis (*phlebo*, *stenosis*, contraction). Constriction or contraction of a vein.

Phlebostrep'sis (*phlebo*, *strepsis*, twist). Torsion of a vein.

Phlebothrombo'sis (*phlebo*, *thrombosis*). Coagulation of blood in a vein. **P. puerpera'lis**, phlegmatia dolens.

Phlebotome, fle'bo-tome. Instrument employed for bloodletting.

Phlebot'omist (*phlebo*, *tome*, incision). A bleeder. One who practises particularly the art of phlebotomy. See *Bloodletting.*

Phlebotomomania, fleb-o-to-mo-man'e-ah (*phlebotomy*, *mania*). *Phlebotomania.* An extravagant estimate of the value of bloodletting as a curative agent.

Phlebot'omum. Fleam; lancet.

Phlebot'omy. Venesection. See *Bloodletting.*

Phlebs. Vein.

Phlebyperectasia (fleb-ip-ur-ek-taz'e-ah) or **Phlebyperec'tasis** (*phleps*, *huper*, *ektasis*, stretching). Condition in which the veins are over-distended.

Phlebypostenosis, fleb-ip-o-sten-o'sis (*phleps*, *hupo*, *stenosis*, constriction). Moderately constricted condition of a vein.

Phledo'nia (*phleo*, to talk idly). Delirium.

Phlegm, flem. *Phlegma*, *Mucus*, *Mother.* One of the four natural humors of the ancients, which, according to them, was cold and moist, as atrabilis was cold and dry. It predominated especially in winter. The term *pituita* or *phlegm* was afterward applied to every aqueous or excrementitious humor, such as the saliva, nasal and intestinal mucus, serum, etc. These terms are no longer employed in physiology, but the vulgar still use phlegm to designate a stringy mucus expectorated or rejected by vomiting. Phlegm was also formerly an aqueous, insipid, and inodorous product obtained by subjecting moist vegetable matters to heat.

Phleg'ma. Phlegm. **P. na'rium cras'sum**, nasal mucus. **P. vit'riol**, sulphuric acid (very dilute).

Phleg'magogue (*phlegma*, *ago*, to expel). Medicine formerly believed capable of cutting or removing phlegm.

Phlegmap'yra (*phlegma*, *pur*, fire, fever). Adenomeningeal fever.

Phlegmasia, fleg-maz'e-ah (*phlego*, to inflame). Inflammation; phlegmon. **P. adeno'sa**, adenitis; phlegmatia alba. **P. Æthi'opum**, phlegmatia or chlorosis of negroes. **P. al'ba do'lens puerpera'rum**, phlegmatia dolens. **P. cellula'ris**, induration of the cellular tissue. **P. do'lens**, phlegmatia alba dolens. **P. glandulo'sa**, adenitis. **P. lac'tea**, phlegmatia alba dolens. **P. myoi'ca**, myositis. **P. of the peritone'um**, peritonitis.

Plegmatia, fleg-mah'she-ah (*phlegma*). Œdema; anasarca; dropsy. **P. do'lens**, *Crural phlebitis*, *White leg*, *Swelled leg*, *Milk leg*, *White swelling of lying-in women.* Acute painful œdema, due to venous obstruction from thrombosis, most frequent in the lower extremity in women in labor. It occurs, for the most part, in the second or third week after delivery, is limited to the lower extremity, and chiefly to one side, exhibiting to the touch a feeling of numerous irregular prominences under the skin. It is accompanied, sooner or later, with febrile excitement. After a few days the heat, hardness, and sensibility diminish, and the limb remains œdematous for a longer or shorter period. **P. lac'tea**, P. dolens.

Phlegma'tiæ. Inflammations. **P. membrano'sæ et parenchymato'sæ**, internal inflammations.

Phlegmat'ic. Abounding in phlegm, as the phlegmatic or lymphatic temperament.

Phlegmatoch'emy (*phlegma*, *chemia*, chemistry). Chemistry of the animal humors.

Phlegmatoid, fleg'mat-oid (*phlegma*, *odes*). Full of inflammation or phlegm.

Phlegmatop'yra (*phlegma*, *pur*, fire, fever). Fever, adenomeningeal.

Phlegmatorrhagia, fleg-mat-or-rhaj'e-ah (*phlegma*, *rhage*, a breaking forth). *Phlegmatorrhœa*, *Catarrh.* Copious secretion, by the nostrils, of a limpid and thin mucus, without inflammation. See *Coryza.*

Phlegmatorrhœa, fleg-mat-or-rhe'ah (*phlegma*, *rheo*, to flow). Catarrh.

Phleg'matous. Relating to or resembling phlegm.

Phlegmhymenitis, flem-him-en-e'tis. Inflammation of the mucous membrane.

Phlegmon, fleg'mon (*phlego*, to burn). *Beal.* Inflammation of the areolar texture accompanied with redness, circumscribed swelling, increased heat, and pain which is at first tensive and lancinating, afterward pulsatory and heavy. It is apt to terminate in suppuration; it requires knife treatment. **P., sim'ple**, in this form of phlegmon the inflammation is not extensive and is non-malignant.

Phlegmonaposteme, fleg-mon-ap-os'tem-e (*phlegmone*, inflammation, *apostema*, abscess). Abscess.

Phleg'mone. Inflammation; phlegmon. **P. mam'mæ**, inflammation and abscess of the breast. **P. mastodyn'ia**, inflammation and abscess of the breast. **P. musculo'rum**, myositis. **P. parotidæ'a**, parotis. **P. paru'lis**, parulis. **P. pel'vica**, see *Parametritis.* **P. peritonæ'i**, peritonitis. **P. ventric'uli**, gastritis.

Phlegmono'des. Phlegmonous.

Phleg'monoid (*phlegmon*, *eidos*, resemblance). Resembling phlegmon.

Phleg'monous (*phlegmon*). *Phlegmonoid.* Relating or belonging to phlegmon. Inflammatory. **P. inflamma'tion** is the active inflammation of the areolar

membrane, in contradistinction to erysipelatous inflammation, or that of the skin.

Phlegmop'yra (*phlegma, pur*, fire, fever). Fever, adenomeningeal.

Phlegmorrhagia, fleg-mor-rhaj'e-ah (*phlegma, rhage*, a breaking forth). Blennorrhœa.

Phlegmorrhœa, fleg-mor-rhe'ah (*phlegma, rheo*, to flow). Blennorrhœa.

Phlegmymen, fleg'me-men (*phlegma, humen*, membrane). Muscular membrane.

Phlegmymeni'tis (*phlegma, humen*, membrane, *itis*). Inflammation of mucous membrane. **P. enter'ica,** inflammation of the mucous membrane of the bowels; see *Enteritis*.

Phleme. Lancet.

Phleps. Vein.

Phlobaphene, flo-baf'een. Amorphous principle obtained from hops.

Phlœum, fle'um. Bark.

Phlogæmia, flog-e'me-ah (*phlogia, haima*, blood). See *Hæmitis*.

Phlo'gia. Inflammation.

Phlo'gicus (*phlogia*, inflammation). Inflammatory.

Phlogistic, flo-jis'tik (*phlogia*, inflammation). Inflammatory; heat-producing.

Phlogisticated, flo-jis'tik-a-ted. Containing phlogiston or hydrogen.

Phlogis'ton (*phlogizo*, to burn). Hydrogen. Term formerly used which recognized fire as an essential element of the composition of many substances, being set free from them during combustion.

Phlogmocausus, flog-mo-kaw'sus (*phlogmos*, intense heat, *kausos*, burning). Inflammatory fever.

Phlog'mus. Verbascum thapsus.

Phlogochroma, flog-o-kro'mah (*phlogia*, a flame, *chroma*, color). Inflammatory color or tint.

Phlogochymia, flog-o-kim-e'ah (*phlox*, flame, *chumeia*, chemistry). Chemistry pertaining to changes occurring in the tissues due to inflammatory processes.

Phlogo'des (*phlogia, odes*). Inflamed. Inflammatory. Epithet employed particularly to express the red color of the face.

Phlo'gogene(*phlox*, flame, *gennao*, to beget). Hydrogen.

Phlogogenic (flog-o-jen'ik) or **Phlogogenet'ic.** Having the symptoms of acute gonorrhœa.

Phlogogenous, flog-oj'en-us (*phlogia*, inflammation, *gennao*, to produce). Exciting inflammation, as the action of pus after wounds.

Phlogogonorrhœa, flog-o-gon-or-rhe'ah. Acute gonorrhœa.

Phlogop'yra (*phlox*, flame, *pur*, fever). Continued fever.

Phlogosed'. Inflamed.

Phlogosin, flog-o'sin. Product of cultures of *Staphylococcus aureus* which produces intense inflammation and suppuration.

Phlogosis, flog-o'sis (*phlogia*). Inflammation. Some writers use this word exclusively for external inflammation—phlegmon; others, for that which is superficial or erysipelatous.

Phlogot'ica. Inflammations.

Phlogozelotism, flog-o-zel'ot-izm (*phlox, zeloo*, to admire warmly). Propensity to regard all morbid conditions as inflammatory, and to employ antiphlogistic treatment.

Phlogurgia, flog-ur'je-ah. Phlogochymia.

Phlomis, flo'mis. *Lychnitis*. Lamp-wick, European plant; flowers and leaves have stimulant and emmenagogue virtues, and are used externally in hæmorrhoids. **P. tubero'sa,** Jerusalem sage; leaves are employed in diarrhœa and dysentery.

Phlo'os. Cortex.

Phloret'ic ac'id. Crystalline product of action of potassa upon phlorizin.

Phloretin, flo'ret-in. Decomposition product of action of dilute acids upon the glucoside phlorizin.

Phloridzin, flo'rid-zin. Phlorizin.

Phlorizein, flo-riz'e-in. Product of action of ammonia upon phlorizin.

Phlori'zin (*phloos, rhiza*, root). $C_{21}H_{24}O_{20}$. Bitter or active principle of the root and trunk of the apple, pear, cherry, and plum tree, deposited from the decoction on cooling; crystallizes in silky spicula or in long slender prisms or tables. It has been administered successfully in intermittents. It produces artificial diabetes, and is employed in physiological investigations.

Phloroglucin, flo-ro-glu'sin. Derivative of resorcin or phlorizin; used in solution with vanilla as test for free hydrochloric acid in the contents of the stomach, producing a deep-red color.

Phlorol, flo'rol. One of the constituents of creasote; existing also in crude carbolic acid.

Phlo'rose. Dextrose.

Phlorrhi'zin. Phlorizin.

Phlox. Verbascum thapsus. Flame. **P., Caroli'na,** indigenous southern herb, ord. Polemoniaceæ; roots said to furnish portion of commercial spigelia, and to be equally efficacious.

Phlyctænoi'des. Phlyctenoid.

Phlyctænophthal'mia. See *Phlyctenular*.

Phlyctænosis, flik-te-no'sis. Formation of phlyctenæ. Under Phlyctænosis, Hebra includes herpes, miliaria, and pemphigus acutus. **P. aggrega'ta,** skin disease characterized by eruption of pin-head vesicles, thickly set on an intensely red base, appearing in succession on different parts of the body, with intense itching. **P. labia'lis,** herpes labialis. **P. spar'sa,** herpes.

Phlyctænula, flik-te'nu-lah (dim. of **Phlyctæna**). Small vesicle or blister. Presence of serous fluids under the epidermis, conjunctiva, or cornea. See *Hydatid* and *Phlyctenular*.

Phlyctena, flik-te'nah (*phluo*, to bubble up). Small vesicle containing serum.

Phlyc'tenoid (*phlyctæna, eidos*, resemblance). Resembling phlyctæna. A variety of herpes is so called.

Phlycten'ular (*phlyctænula*). Of or belonging to phlyctænula, as phlyctenular ophthalmia, inflammation of the eye accompanied with phlyctænulæ on the cornea (phlyctænophthalmia, phlyctenular corneitis, scrofulous ophthalmia of writers).

Phlyctenule, flik'ten-ule. Phlyctænula.

Phlyc'tides (pl. of **Phlyctis**). Phlyctænæ.

Phlyctidium, flik-tid'e-um (dim. of **Phlyctis**). A circular or annular spot of inflammation of the corium, encircled by a red ring or zone, within which suppuration takes place. Genuine small-pox pustule and that produced by the application of tartar-emetic ointment are examples of it.

Phlyc'tis. Phlyctæna.

Phlyktæ'na. Phlyctæna.

Phlysis, fle'sis (*phluo*, to bubble up). Cutaneous eruption. An ulcerative, subcutaneous tumor; flat, tensive, glabrous; diffused, hot, throbbing; at length fluctuating, with an acrid ichor. Phlyctæna. **P. ecthy'ma,** ecthyma. **P. impeti'go,** impetigo. **P. porri'go,** porrigo. **P. scab'ies,** psora.

Phlyza'cia. Ecthyma.

Phlyza'cion (*phluzo*, to bubble up). Phlyctæna. **P. acu'tum,** acute ecthyma. **P. chron'icum,** chronic ecthyma.

Phobodip'sia or **Phobodipson,** fo-bo-dip'son (*phobos*, dread, *dipsa*, thirst). Hydrophobia.

Phoce'nia. Trivalerin.

Phocenic (fo-se'nik) **ac'id.** Delphinic acid.

Phocomelus, fo-kom'el-us (*phoke*, seal, *melos*, limb). Monster in which the hands and fect appear to be inserted immediately on the trunk, as in the seal and the herbiverous Cetacea. Condition is called *Phocomelia*.

Phœnicine, fe'nis-een (*phoinix*, red). Hæmatin. Indigo carmine.

Phœnicismus, fe-nis-iz'mus (*phoinix*, red). Rubeola; measles; rötheln.

Phœnicius (fe-nis'e-us) **mor'bus.** Leprosy.

Phœnig'mus. Phenigmus. **P. petechia'lis,** purpura simplex.

Phœ'nix dactylif'era. Date tree. **P. excel'sa,** date tree.

Phœnodine, fe'no-deen (*phoinodes*, blood-red). Hæmatin.

Phois, fo'is. Burn; blister.

Pholidata (fol-id-at'ah) **imbrica'ta.** Plant of Malabar; natives apply the bulb externally to ulcers, etc.

Pho'lis. Scale, horny in character.

Phonas'cia (*phone*, voice, *askeo*, to exercise). Art of exercising the voice.

Phonation, fo-na'shun (*phone*, voice). Voice-production.

Phonautograph, fo-naut'o-graf (*phone*, *autos*, self, *grapho*, to write). Apparatus for recording vibrations of air set in motion by the voice.

Pho'ne. Voice.

Phonesis, fo-na'sis. Phonation.

Phonet'ic or **Pho'nic** (*phone*, voice). Relating or appertaining to sound or to the voice. See *Paralysis, phonetic.*

Pho'nica (*phone*, voice). Diseases affecting the vocal avenues, the passage of the voice being impeded or its power suppressed or depraved.

Pho'nics. See *Acoustics.*

Phonocamptic, fo-no-kamp'tik (*phone*, sound, *kampto*, to break). Echoing. Reflecting sound.

Phonocamp'tics. Branch of science treating of reflection of sound.

Phonochordæ, fo-no-kor'da (*phone*, *chordæ*, cords). Vocal cords.

Pho'nograph (*phone*, *grapho*, to write). Instrument for making graphic record of sounds, which may be reproduced by reversing the action of the apparatus.

Phonol'ogy (*phone*, *logos*, discourse). Science treating of modifications of the voice.

Phonometer, fo-nom'et-ur (*phone*, *metron*, measure). Instrument for estimating the intensity of the human voice.

Phonom'etry (*phone*, *metron*, measure). Measurement of intensity of sound emitted by a vibrating tuning-fork, to determine presence or absence of a cavity beneath the surface.

Phonon'osi or **Phononu'si** (*phone*, *nosos* or *nousos*, a disease). Disorders of the voice.

Phonopathiæ, fo-no-path-e'e (*phone*, *pathos*, affection). Diseases of the vocal organs.

Phonop'athy (*phone*, *pathos*, disease). Disease of the vocal organs.

Phonophobia, fo-no-fo'be-ah (*phone*, *phobos*, dread). Morbid dread of sound.

Phono'sis. Phonation.

Pho'nospasm. Spasm of the vocal organs.

Pho'ra. Gestation.

Phoradendron, for-ah-den'dron. *Flavescens.* American mistletoe, growing on oaks, etc. Berries of this parasitic shrub have produced catharsis and vomiting, and have even proved fatal in young subjects. It is reputed to resemble digitalis in its action; has been employed in affections of the heart, dropsies, etc.; also to produce abortion.

Phor'be. Pabulum.

Phor'mia. Pseudomorphia.

Phormi'um te'nax. New Zealand flax; decoction of root and leaf bases used as a lotion for wounds. Ord. Liliaceæ.

Phorometer, for-om'e-tur (*phoreo*, to carry away, *metron*, measure). Instrument for determining insufficiencies of the external ocular muscles, as shown by a tendency to deviation of the visual axes from their normal relations. Instrument for measuring degree of intensity of light (*phos*, light).

Phoromet'ria. Measurement of movement.

Phoron'omy (*phoreo*, to carry forward, *nomos*, law). Doctrine of muscular motion.

Phor'ous (*phoreo*, to move or carry). Suffix denoting conveyance; hence galactophorous, etc.

Phos. Light.

Phosgene, fos'jeen (*phos*, *gennao*, to produce). Producing light. **P. gas**, carbonyl chloride.

Phos'phas. *Phosphate.* Salt formed by the union of phosphoric acid with a salifiable base. **P. ammonicoso'dicus**, microcosmic salt. **P. ammo'nicus**, ammonium phosphate. **P. bical'cicus**, neutral calcium phosphate. **P. cal'cicum stibia'tum**, antimonial powder. **P. cal'cicus**, calcium phosphate. **P. cal'cis stibia'tus**, antimonial powder. **P. ferrosofer'ricus**, ferrosoferric phosphate. **P. nat'ricum**, sodium phosphate. **P. nat'ricus** or **so'dicus**, sodium phosphate.

Phos'phate. Phosphas. **P. of i'ron**, see *Ferrosoferric phosphate, Ferric phosphate*, and *Sodioferric citrophosphate.* **P., trip'le**, phosphate of ammonium and magnesium; normal urinary deposit during alkaline fermentation, sometimes pathologically present in fresh urine.

Phos'phates, wheat. See *Wheat.*

Phosphat'ic (*phosphorus*). Relating to the phosphates; hence the *Phosphatic diathesis* is the habit of body which favors or occasions the deposition of the phosphates from the urine. **P. ac'id**, name given to union of phosphoric and phosphorous acids produced by gradual combustion of phosphorus.

Phosphaturia, fos-fat-u're-ah (*phosphas*, *ouron*, urine). Condition in which urine contains a large quantity of phosphates.

Phosphene, fos'feen (*phos*, *phaino*, to become manifest). Photopsia.

Phos'phenes (*phos*, *phaino*, to appear). Subjective sensations of light produced by pressure upon the eyeball. **P. of accommoda'tion**, similar affection caused by contraction of the ciliary muscle during the act of accommodation.

Phosphen'yl. Compound formed by combining phosphorus and phenyl.

Phosphide, fos'fide. Compound of phosphorus with another element.

Phosphine, fos'feen. Hydrogen phosphide (PH_3), produced by boiling phosphorus with solution of caustic alkali.

Phos'phite. A salt of phosphorous acid.

Phos'phorated. *Phosphuretted.* Combined or impregnated with phosphorus. **P. oil**, one per cent. solution of phosphorus in expressed oil of almonds; Ph. U. S. directs subsequent addition of a small quantity of ether; convenient form for administration of phosphorus. Officinal as oleum phosphoratum.

Phosphores'cence. *Luminosity.* Property possessed by certain bodies of being luminous in obscurity or under particular circumstances. It is noticed in some forms of putrefying organic matter, in excreta of some animals, etc. This phosphorescence has been occasionally witnessed in man when suffering from some wasting disease, as phthisis, and especially when near death.

Phosphoretted, fos'for-et-ted. Containing or united with phosphorus.

Phosphoretum, fos-for-e'tum. Phosphide.

Phosphorhidro'sis. Phosphoridrosis.

Phosphoric, fos-for'ik. Relating to phosphorus. **P. ac'id**, colorless, odorless, strongly acid liquid, sp. gr. 1.347, composed of 50 per cent. of orthophosphoric acid and 50 per cent. of water (Ph. U. S.); sp. gr. 1.50–66, 3 per cent. of acid (Ph. Br.); sp. gr. 1.12, 20 per cent. of acid (Ph. G.); tonic, refrigerant, caustic. Dilute phosphoric acid is officinal in the Ph. U. S. and Br. under the name acidum phosphoricum dilutum. See also *Dilute* and *Glacial phosphoric acid.*

Phosphoridro'sis (*phosphorus*, *hidros*, sweat). Phosphorescent sweat, making the body luminous in the dark; reported in malaria, phthisis, and after digestion of certain fish.

Phos'phorism. Condition produced by long-continued or excessive doses of phosphorus.

Phosphornecro'sis (*phosphorus*, *necrosis*). Necrosis, especially of the maxillary bones, from chronic phosphorus-poisoning, as in those engaged in the manufacture of matches.

Phos'phorous ac'id. Crystalline, deliquescent substance formed by slow oxidation of phosphorus in moist air or by action of water on phosphorus trioxide. It forms with bases salts called phosphites.

Phosphoru'ria (*phosphorus*, *ouron*, urine). Phosphorescent urine. Also urine containing an excess of phosphates. See *Urine.*

Phos'phorus (*phos*, light, *phero*, to carry). Translucent, nearly colorless, wax-like, non-metallic element. Sp. gr. 1.83. Soft and flexible at ordinary

temperatures; melts at 440° C.; emits white fumes when exposed to air; ignites at temperature slightly above melting-point; insoluble in water, soluble in absolute ether, fatty oils, and abundantly in carbon bisulphide. It is a nerve tonic and stimulant; also an active, irritant poison. In acute phosphorus-poisoning the vomited matters and tissues are luminous in the dark. Lipowitz's test is to acidulate the suspected liquid with sulphuric acid and boil with sulphur, which abstracts and combines with the phosphorus, which may be recognized by its luminosity or as phosphoric acid. See *Poisons and antidotes;* also, *Amorphous* and *Red phosphorus.* **P. necro'sis,** phosphornecrosis. **P. pills** (Ph. U. S. and Br.), pills of phosphorus.

Phosphuret'ted. Phosphorated.

Phosphure'tum zin'cicum. Zinc phosphide.

Phosphu'ria (*phosphorus, ouron,* urine). Phosphorescent urine. Also, urine containing an excess of phosphates. See *Urine.*

Phosphypostasis, fos-fip-os'tas-is (*phosphas, hupostasis,* sediment). Deposition of phosphates in the organism.

Photal'gia (*phos, algos,* pain). Pain caused by light.

Pho'tic (*phos,* light). Relating or appertaining to light and to the acts concerned in its production in the lower animals.

Photocamp'sis (*phos, kampsis,* bending). Refraction.

Photochronography, fo-to-kro-nog'raf-e. Process of successively photographing objects while moving.

Photodysphoria, fo-to-dis-for'e-ah (*phos, dusphoreo,* to bear ill). Intolerance of light.

Photogenic, fo-to-jen'ik (*phos, gennao,* to produce). Light-producing.

Photography, fo-tog'raf-e. Process of producing pictures of objects by action of light on chemically prepared substances. It is valuable as an auxiliary in medical practice.

Photohæmatachometer, fo-to-he-mat-ak-om'e-tur (*phos, haima,* blood, *tachus,* swift, *metron,* measure). Instrument for measuring, photographically, the velocity of the blood-current.

Photokinetic, fo-to-kin-et'ik. Producing movement with bright rays of light.

Photol'ogy (*phos, logos,* discourse). Treatise on light and its laws and influences.

Photomania, fo-to-man'e-ah (*phos, mania*). Insane delirium induced by light.

Photomechanical, fo-to-me-kan'ik-al. Mechanical, and due to influence of light.

Photometer, fo-tom'e-tur (*phos, metron,* measure). Apparatus for comparing intensity of the sources of light; see *Unit, photometric.*

Photomet'ric. Pertaining to photometry. **P. u'nit,** see *Unit.*

Photom'etry. Measurement of intensity of light.

Photomicrograph, fo-to-mik'ro-graf (*phos, mikros,* small, *grapho,* to write). Photograph of a microscopic object.

Photon'osus (*phos, nosos,* disease). Disease due to exposure to sunlight.

Photopho'bia (*phos, phobos,* fear). Aversion to light, intolerance of light; a symptom in several affections of the eye.

Photophob'icus. Having a dread of the light.

Photophobophthalmia, fo-to-fob-of-thal'me-ah (*phos, phobos,* dread, *ophthalmia*). Ophthalmia with great intolerance of light.

Photoph'obus. Having a dread of the light.

Photophone, fo'to-fone (*phos, phone,* sound). Apparatus in which the transmitting substance—*e. g.* selenium—is so affected by sound-waves that there is a change in transmitted light for each alteration in sound-wave lengths.

Photophore, fo'to-for (*phos, phero,* to carry). Electric lamp for illuminating the interior of canals or cavities of the body.

Photopsia, fo-top'se-ah (*phos, ops,* eye). False perception of light, as of sparks, flashes of fire, etc. occasioned by certain conditions of the retina and brain and by pressure of the eyeball. When pressure does not induce the luminous appearance, the existence of amaurosis may be inferred. See *Metamorphopsia.*

Photoptom'eter (*phos, ops,* eye, *metron,* measure). Instrument for measuring acuteness of vision for homogeneous light.

Photoptometry, fo-top-tom'et-re. Measurement of acuteness of vision for homogeneous light.

Photorrhexis, fo-tor-rheks'is (*phos, rhexis,* breaking). Refraction of rays of light.

Photoxylin, fo-toks'il-in. Kind of pyroxylin made by nitrating wood-pulp; recommended for use in preparation of collodion. When itself applied to a surface, as in plastic surgery, it leaves on evaporation a firmer film than collodion does. Used also in mounting specimens for the microscope.

Photu'ria (*phos, ouron,* urine). Luminous condition of the urine.

Phoxos, foks'os. One with a peaked head.

Phragmidiothrix, frag-mid-e'o-thriks. Genus of Schizomycetes, similar to the Beggiatoa.

Phragmites (frag-me'tees) **commu'nis.** Common reed; in Utah the leaves are eaten by the Indians.

Phrag'mus (*phragmos,* fence). A row of teeth.

Phrasis, frah'sis. Articulated voice.

Phra'sum. Marrubium.

Phren (*phren,* mind). The mind or organ of the mind. Also the diaphragm and scrobiculus cordis.

Phrenalgia, fren-al'je-ah (*phren, algos,* pain). Melancholia; psychalgia. **P. si'ne delir'io,** melancholy.

Phrenasthenia, fren-as-then-e'ah (*phren, asthenes,* weak). Diaphragmatic paresis; also congenital mental disease, consisting in cretinism, idiocy, imbecility, etc.

Phrenatrophia, fren-at-ro'fe-ah (*phren, a,* priv., *trophe,* nourishment). Wasting or atrophy of the brain.

Phrenaux'e (*phren, auxe,* increase). Hypertrophy of the brain.

Phrenes, fren'ees. Diaphragm.

Phrene'sia, Phrene'sis, or **Phreneti'asis** (*phren*). Phrenitis.

Phrenet'ic. Relating or appertaining to phrenitis; frantic; mad.

Phrenetis'mus. Phrenitis.

Phreniatric, fren-e-at'rik (*phren, iatros,* physician). Relating to phreniatrics.

Phreniat'rics. Therapeutics of mental disorders.

Phren'ic (*phren,* diaphragm). Diaphragmatic. **P. ar'teries,** those supplying the diaphragm: *superior,* from internal mammary; *inferior,* from abdominal aorta. **P. cen'tre,** central tendon of diaphragm; see *Diaphragm* and *Centre, phrenic.* **P. gan'glion,** small ganglion in diaphragm connected with right phrenic nerve and with solar plexus. **P. nerve,** principal motor nerve of diaphragm, derived from cervical plexus, mainly from fourth cervical; passes across scalenus anticus, in front of subclavian artery and root of lung, between pericardium and pleura (to which it gives filaments) to the diaphragm. **P. plex'us,** division of solar plexus accompanying inferior phrenic artery. **P. veins** correspond to arteries of same name; empty into inferior cava.

Phren'ica (*phren,* mind). Diseases affecting the intellect, characterized by error, perversion, or debility of one or more of the mental faculties (*Phrenopathia*). Also remedies that affect the mental faculties.

Phrenicol'ic. Relating to diaphragm and colon. **P. lig'ament,** phrenocolic ligament.

Phren'ics. Phrenica.

Phrenic'ula (or **Phrenetic'ula**) **hydrocephal'ica.** Hydrocephalus internus.

Phrenicus, fren'ik-us. Phrenic.

Phrenis'mus. Phrenitis.

Phrenit'icus. Phrenetic.

Phrenitis, fren-e'tis (*phren, itis*). *Phrensy, Frenzy, Delirium, Brain fever, Encephalitis, Acute delirium.* Disease characterized by violent pyrexia, pain in the head, redness of the face and eyes, intolerance of light and sound, watchfulness, and delirium, either

furious or muttering. Its causes are the same as those of other inflammations; sometimes, however, it is induced by a coup-de-soleil, by inebriation, violent mental emotions, etc. Some authors have given the name phrenitis and meningitis to inflammation of the membranes of the brain, and that of cephalitis, encephalitis, or cerebritis to inflammation of the substance of the brain; but there are no pathognomonic symptoms which can lead us to refer the seat of the disease to any of those parts exclusively. When the brain and meninges were affected only symptomatically, as in inflammation of the diaphragm, the disease was formerly called *Paraphrenitis*. Hydrocephalus acutus is a variety of phrenitis. **P. aphrodisi'aca,** erotomania. **P. calentu'ra,** insolation; sunstroke. **P. la'trans,** hydrophobia. **P. potato'rum,** delirium tremens. **P. vermino'sa,** a form of phrenitis supposed to be dependent on the presence of a worm in the brain.

Phrenob'labes or **Phrenoblabia,** fren-o-blab'e-ah (*phren, blapto,* to hinder). Mental impairment; dementia.

Phrenocolic, fren-o-kol'ik. Relating to the diaphragm and colon. **P. lig'ament,** fold of peritoneum passing from diaphragm opposite tenth or eleventh rib to splenic flexure of colon. It assists in supporting the spleen, forming the splenic recess.

Phrenocos'tal. Relating to diaphragm and ribs.

Phrenogas'tric. Relating to the diaphragm and stomach; gastrophrenic.

Phrenoglot'tism. Asthma thymicum.

Phrenoglottismus, fren-o-glot-tiz'mus (*phren,* diaphragm, *glotta,* tongue). Spasmodic condition of the glottis considered to originate from the diaphragm.

Phren'ograph (*phren,* diaphragm, *grapho,* to write). Apparatus for noting the arrest of respiration in galvanization of the pneumogastric nerve after section.

Phrenography, fren-og'raf-e. Science of the mind; psychology.

Phrenolepsia, fren-o-lep'se-ah (*phren, lepsis*). Loss of mind. **P. erotomat'ica** (relating to interrogation), doubting insanity.

Phrenolin, fren'o-lin. Phrenosia.

Phrenolog'ical (*phren, logos,* discourse). Relating or pertaining to phrenology.

Phrenology, fren-ol'o-je (*phren, logos,* discourse). Craniology.

Phrenomag'netism. *Phrenomesmerism, Mesmerophrenology.* Condition of a mesmerized person, in which, when any phrenological organ (so called) is touched, its functions are manifested. It has been established that no such phenomena can be elicited in children or in those who have never seen a phrenological cast or picture.

Phrenonarcosis, fren-o-nar-ko'sis. Stupefaction; dulling of the senses or intellect.

Phrenoparal'ysis (*phren,* mind, *paralysis*). Paralysis of the brain. See *Paralysis.*

Phrenopath, fren'o-path. Psychiater; one who treats diseases of the mind.

Phrenopathi'a. Mental disease. **P. æthe'rea,** encephalic phenomena induced by inhalation of ether.

Phrenopathic, fren-o-path'ik. One who is insane.

Phrenop'athy (*phren,* mind, *pathos,* affection). Mental alienation. See *Phrenica.*

Phrenoplegia, fren-o-ple'je-ah (*phren, plesso,* to stun). Sudden mental failure; paralysis of the brain.

Phrenoplexia, fren-o-pleks'e-ah. Ecstatic condition.

Phrenorthosis, fren-or-tho'sis. Right condition of mind; orthophreny.

Phrenosin, fren'os-in. Nitrogenized substance obtained from white cerebral matter.

Phreno'sis. Phrenopathy.

Phrenosplen'ic. Relating to the diaphragm and spleen; splenophrenic.

Phrenotherapy, fren-o-ther'ap-e. Psychiatry or treatment of mental diseases.

Phren'sy. Phrenitis, or delirium associated with it.

Phricas'mus, Phri'ce, Phri'cia, or **Phriciasis,** frik-e'as-is. Shivering from emotion; horripilation.

Phrico'des (fe'bris) (*phrike,* shivering, *odes*). Fever in which the chill is very intense and prolonged.

Phricogen, frik'o-gen. Material producing cold.

Phronemophobia, fro-ne-mo-fo'be-ah (*phroneo,* to think, *phobos,* fear). Morbid dread of thought.

Phronesis, fron-a'sis (*phroneo,* to think). Reason.

Phron'tis. Thought or reason.

Phryg'ius (la'pis). An earthy matter found in Phrygia and Cappadocia, and formerly employed as an astringent.

Phthar'ma cali'go (*phtharma,* anything spoiled). Caligo. **P. catarac'ta,** cataract. **P. glauco'ma,** glaucoma.

Phtharsis, thar'sis. Decomposition; corruption.

Phthar'ticus (*phtheiro,* to destroy). Deleterious; deadly.

Phtheir, thire. Pediculus or louse.

Phtheiræmia, thire-e'me-ah (*phtheiro,* to corrupt, *haima,* blood). State in which the plastic powers of the blood are deteriorated.

Phtheiriacus, thire-e'ak-us. Lousy or relating to phtheiriasis.

Phtheiriasic, thire-e-as'ik. Phtheiriacus.

Phtheiri'asis or **Phthiri'asis** (*phtheir,* a louse). *Lousiness, Lousy disease.* A disease which consists in the excessive multiplication of lice, *Pediculi tabescentium,* on the human body, under conditions in which it does not ordinarily take place, and in spite of cleanliness. Simple and medicated baths have been recommended for its removal; lotions of decoction or infusion of tobacco and stavesacre, mercurial frictions, etc. **P. cilio'rum,** lousiness of the eyelashes. **P. palpebra'rum,** P. of the eyelashes; P. ciliorum. **P. supercilio'rum,** lousiness of the eyebrows.

Phtheir'ium. Delphinium staphisagria.

Phtheirius, thire'e-us. Crab louse. See *Pediculus.* **P. inguina'lis** or **P. pu'bis,** the favorite habitats of this louse are the hairy parts of the genitals; it is met with, however, on the hairy part of the chest, in the axillæ, and on the eyebrows.

Phtheiroc'tonum (*phtheir, kteino,* to kill). Delphinium staphisagria.

Phthi'nas. Phthisis.

Phthino'des. Phthisicus.

Phthinoplasm, te'no-plasm (*phthino,* to waste, *plasso,* to form). Degradation of the natural bioplasm or germinal matter, chiefly in the lungs and lymphatic system, with a low-lived but proliferating matter, which clogs and irritates the tissues and involves them in its disintegration and destruction. It is thus a substitute for the word tubercle, which is inapplicable to all the forms of degeneration causing phthisis.

Phthinoporinous, te-no-por-e'nus. Autumnal.

Phthinopo'ron (*phthino,* to decay, *opora,* beginning of autumn). See *Autumn.*

Phthinosis, te-no'sis (*phthino,* to waste). Decay or waste, as the phthinosis of plasms in phthisis pulmonalis.

Phthiri'asis. Malis; phtheiriasis.

Phthir'ium scab'iei. See *Psora.*

Phthir'ius. Antiparasitic. **P. inguina'lis,** pediculus pubis.

Phthiroc'tonus (*phtheiro,* to destroy, *teknon,* child). Abortive.

Phthises, te'sees (*phthio,* to waste away). Diseases attended with ulceration, hectic fever, and emaciation.

Phthisic, tiz'ik. Phthisis; also a slight tickling cough.

Phthisical, tiz'ik-al. Phthisicus.

Phthis'ici (mor'bi). Tubercular diseases.

Phthis'icus. *Phthisical, Tisical.* Belonging to phthisis; also one laboring under phthisis or who is consumptive. **P. sa'lax,** individual with strong sexual passion caused by phthisis.

Phthisinoid, tiz'in-oid. Form of long and flat chest, associated with pulmonary tuberculosis, having a short antero-posterior diameter, prominent scapulæ, depression of spaces above and below the clavicles, etc.

Phthisiol'ogy (*phthisis, logos,* discourse). Treatise on phthisis.

Phthisiophobia, tiz-e-o-fo'be-ah. Morbid fear of phthisis.

Phthisio'sus. Affected with phthisis.

Phthisiotherapy, tiz-e-o-ther'ap-e. Therapeutic treatment of phthisis pulmonalis.

Phthisipneumonia, tiz-e-nu-mo'ne-ah. Phthisis pulmonalis.

Phthisis, te'sis (*phthio*, to waste away). *Consumption, Decline, Phthisic, Tisic.* In a general sense, progressive emaciation; it is usually, however, restricted to phthisis pulmonalis. Tuberculosis; pulmonary tuberculosis. **P. acu'ta,** galloping consumption; see *Phthisis pulmonalis.* **P., albu'minous,** see *Phthisis pulmonalis.* **P., black,** miner's asthma; see *Anthracosis* and *P., carbonaceous.* **P., bronch'ial,** phthisis occasioned by the pressure of enlarged tuberculous bronchial glands, which not infrequently communicate with caverns in the lungs or with the bronchia. **P. bul'bi,** wasting of the eyeball, the result of inflammation of the internal membranes of the eye, usually a purulent irido-choroiditis. Von Graefe described a form of essential wasting of the ball under the name *essential phthisis bulbi*, in which there is sudden and marked reduction in tension without any pathological change in the interior of the eye, the ball gradually returning to the normal pressure. **P. calculo'sa,** lithiasis pulmonum; formation of calculous concretions in the lungs. **P., can'cerous,** *Medullary* or *Encephaloid tumor of the lung;* cancer of the lung, which gives rise to carcinomatous phthisis. **P., carbona'ceous,** miner's asthma; anthracosis. **P., catar'rhal,** see *Phthisis pulmonalis.* **P., coal-mi'ner's,** anthracosis. **P. consummat'a,** see *P. pulmonalis.* **P., cot'ton,** see *Pneumonia, cotton.* **P. dorsa'lis,** tabes dorsalis. **P., dyspep'tic,** see *Phthisis pulmonalis.* **P. exulcera'ta,** P. pulmonalis. **P. fa'brum molario'rum,** millstone-maker's phthisis. **P., fi'broid,** see *Phthisis pulmonalis* and *Cirrhosis of the lung.* **P. flor'ida,** see *Phthisis, acute.* **P., gas'tric,** see *Phthisis pulmonalis.* **P. ab hæmop'töe,** see *Phthisis pulmonalis.* **P., hemorrhag'ic,** see *Phthisis pulmonalis.* **P. hepat'ica,** hepatophthisis. **P. ischiad'ica,** wasting from suppuration of the hip-joint. **P. larynge'a,** *Laryngeal phthisis* or *Consumption;* tuberculosis of the larynx, a similar affection seated in the trachea. **P., mam'mary,** atrophy of the mammary gland, usually the result of suppuration after inflammation. **P. mesera'ica,** tabes mesenterica. **P., mill'stone-mak'er's,** see *Millstone-maker's.* **P. muco'sa,** see *Bronchorrhœa.* **P. nodo'sa,** P. pulmonalis. **P. no'tias,** tabes dorsalis. **P. pituito'sa,** see *Bronchorrhœa.* **P., placen'tal,** see *Placental.* **P., pneumon'ic,** see *Phthisis pulmonalis.* **P. pulmona'lis** or **P. pulmo'num,** *Tuberculous* or *Tubercular disease of the lungs, Pulmonary consumption, Consumption, C. of the lungs, Decline, Phthisic.* Pulmonary tuberculosis, an infective disease of the lungs caused by the bacillus tuberculosis. See *Bacillus tuberculosis.* The lesions are characterized by nodular bodies called tubercles, or diffuse infiltration of tuberculous tissue, which undergo caseation or sclerosis, and may finally ulcerate or in some situations calcify (Osler). Three chief clinical groups may be recognized: (1) *Tuberculo-pneumonic p.*, acute phthisis; (2) *chronic ulcerative p.;* (3) *fibroid p.* According to the mode of infection there are two distinct types of lesions: (*a*) when the bacilli reach the lungs through the blood-vessels, the primary lesion is usually in the tissues of the alveolar walls, in the capillaries, epithelium of air-cells, and connective-tissue framework of septa; (*b*) when through the bronchi—inhalation tuberculosis—the smaller bronchi and bronchioles are more extensively affected; the process is not confined to single groups of alveoli, but has a more lobular arrangement, and tuberculous masses from the outset are large, more diffuse, and may in some cases involve an entire lobe or greater part of a lung. Until recently the view has been universal that pulmonary phthisis consists in the formation of tubercles in the lungs, which sooner or later soften and break down. According to the nomenclature of the Royal College of Physicians of London, phthisis now includes two general varieties: 1. As allied to scrofula: general constitutional disease with or without scrofula, *Tuberculo-pneumonia* and *Tubercular phthisis*; 2. Destructive disintegration of pulmonary tissue, having its source in chronic or acute pneumonia, *Acute* and *Chronic pneumonic phthisis.* According to the most recent theories of the nature of phthisis pulmonalis, the affection may occur in non-tuberculous persons, who may never become tuberculous; it may be caused by chronic inflammatory processes in the lungs, such as bronchial catarrh, and especially chronic catarrhal pneumonia, etc., which is preceded by bronchitis, the air-cells and smaller air-cells being next involved and filled with the products of the inflammatory processes. The solid structures may gradually undergo a cheesy or caseous degeneration (see *Tyrosis*) and become softened. Phthisis may be also excited by hæmoptysis, *Phthisis ab hæmoptöe*, inducing lobular pneumonia. The yellow cheesy tuberculous matter is frequently not tubercle, but merely a product of disintegration.

The following table (Aitken) affords an exposition of some of the views on this subject, and of the variety of diverse affections productive of ulceration and destruction of the tissue of the lungs included under the generic name of phthisis:

1. Tubercular, specific, or granular phthisis.	The true gray granulation. Pigmentary tubercle. Fibrous tubercle. Cellular tubercle.
2. Scrofulous or epithelial phthisis.	Primitive yellow tubercle; accumulation, cheesy degeneration, and disintegration of epithelium-like cells.
3. Catarrhal or bronchial phthisis.	Ulceration of bronchi, with adjacent fibroid and cellular deposits, and cheesy degeneration of the same.
4. Pneumonic phthisis.	Disintegration of recent or old deposits, occurring in vesicular, lobular, or lobar pneumonia, primary or secondary, common or scrofulous.
5. Fibrous phthisis (cirrhosis, chronic or interstitial pneumonia).	Fibroid deposits, with cheesy degeneration of imprisoned portion of lung, due to: 1. Mechanical irritation (as in grinders, miners, masons, etc.); 2. Rheumatic inflammation of interlobular tissue; 3. Chronic pleurisy; 4. Constitutional states, as in granular kidney and liver.
6. Lardaceous phthisis.	Circumscribed or diffuse cellular formations composed of lardaceous material.
7. Syphilitic phthisis.	Cheesy disintegration of nodules of nucleo-fibrous tissue, and diffuse infiltration of the same.
8. Hemorrhagic phthisis.	Cheesy degeneration and disintegration of nodules of extravasated blood.
9. Embolic phthisis (including pyæmic deposits and suppurations).	Cheesy degeneration and disintegration of gray or yellow deposits, arising directly or indirectly from pulmonary emboli coming from the liver, lymphatics, or veins.

The chief symptoms of *Tubercular phthisis* or *Phthisis pulmonalis* are the following: A sense of uneasiness in the chest, severe fits of coughing, or short and dry cough with dyspnœa, becoming troublesome, especially in the morning, and dyspnœa increased on exertion. The expectoration is evidently purulent, with fever in the evening, circumscribed redness of the cheeks, wasting and colliquative sweats early in the morning—*Phthisis consummata, Pneumophthisis.* In the third stage the hectic is constant, with small pulse, pungent heat, colliquative sweats, diarrhœa, and exhaustion. In some cases the symptoms run their course so rapidly as to constitute what is popularly known as *Galloping consumption, Phthisis florida. Physical signs:* 1. In the first stage, whilst there are yet scattered miliary tubercles, there is sometimes a want of freedom in the movements under one or both clavicles. Percussion will generally discover a slight diminution of sound corresponding to the summit of one lung; auscultation shows that the inspiratory murmur is weaker, rougher, or confused. The sound of expiration is more distinct. The voice and cough are rather more resonant, and wheezing or mucous *râles* are occasionally heard in the same region. 2. When the tubercular deposition has become

more abundant, the motion of the chest is more markedly diminished. Loss of sound on percussion is more distinct, inspiration on auscultation is bronchial, expiration louder and more superficial, and the resonance of the voice and cough is increased. The rest of the lung is perhaps healthy, or the respiration may be puerile. 3. When the tubercles are undergoing softening, in addition to the preceding signs, auscultation exhibits a subcrepitant *râle* around the apex of the lung, decreasing from above downward. It is most distinct during or after the cough and at the close of a deep inspiration. Soon the bubbling becomes successively larger, and ultimately gurgling is heard. The inspiration and expiration are cavernous or tracheal. The voice and cough indicate unusual resonance and pectoriloquy. The intercostal spaces are often depressed locally, and percussion may become gradually clearer and even tympanitic as the cavern increases. Usually tubercular phthisis is inherited. It is more a disease of the temperate regions, where its pathology is often intimately allied with that of scrofula; ulceration of the lungs does not then readily heal, and hectic fever is established, ending in death.

If removal to a climate in which air and exercise can be daily enjoyed during the autumnal, winter, and spring months be impracticable, the patient must be kept in a regulated temperature, the chamber being duly ventilated, and proper exercise in the open air used whenever the atmosphere, although cold, is dry. The other palliative indications will be to moderate inflammatory action, support the strength, and palliate urgent symptoms.

Phthisis which is characterized in the early stages by various deranged states of the digestive organs, the epigastric region more or less full and tender on pressure, etc., is called *Dyspeptic phthisis* or *consumption, Gastric phthisis.* Writers have also described albuminous, catarrhal, and hemorrhagic phthisis, febrile phthisis, senile phthisis or consumption, etc. **Phthis'is pulmona'lis purulen'ta exulcera'ta,** phthisis pulmonalis. **P. pulmona'lis scrofulo'sa,** phthisis pulmonalis. **P. pulmona'lis tuberculo'sa,** phthisis pulmonalis. **P. pulmona'lis tuber'culoulcera'ta,** phthisis pulmonalis. **P. pulmona'lis ve'ra,** phthisis pulmonalis. **P. pupil'læ,** synezisis. **P. pupillar'is,** smallness of the pupil, often permanent, and the result of iritis. **P., re'nal,** wasting of the kidney from inflammation, etc. **P. scrophulo'sa,** phthisis pulmonalis. **P. sic'ca,** tabes dorsalis. **P. tuberculo'sa,** phthisis pulmonalis. **P. uteri'na,** wasting from ulceration of the uterus. **P. vesica'lis,** wasting from ulceration of the bladder.

Phthisis-weed. Ludwigia palustris.

Phthisu'ria (*phthisis, ouron,* urine). Diabetes.

Phtho'e. Phthisis.

Phthoicus, tho'ik-us. Phthisical.

Phthois, tho'is. Pastil; trochiscus.

Phthois'cus. Pastil; trochiscus.

Phthongodysphoria, thon-go-dis-for'e-ah (*phthongos,* a cry, *dusphoria,* impatience). Excessive sensibility of the organ of hearing.

Phthora, tho'ra (*phthora,* destruction). Abortion; corruption; plague.

Phtho'ric. Causing corruption. **P. acid,** hydrofluoric acid.

Phtho'rius (*phthora,* destruction). Abortive.

Phthoroc'tonus (*phthora,* destruction, *teknon,* child). Abortive; fœticide.

Phu. Valeriana phu.

Phucagos'tris mi'nor. Pila marina.

Phus'ca. Mixture of vinegar and water.

Phy'cit. Kind of sugar obtained from alga Protococcus vulgaris.

Phycocystitis, fik-o-sis-te'tis. Capsulitis.

Phycoërythrin, fik-o-er'ith-rin. Red coloring matter contained in certain algæ.

Phycology, fi-kol'o-je. Botany relating to algæ.

Phycomyces, fik-om'e-seez. Genus of Mucorini.

Phyganthro'pia (*phugo,* to flee, *anthropos,* man). Misanthropia.

Phygantrus, fig-an'trus (*phugo,* to flee, *antrum,* antrum of Highmore). Applied to skulls in which line let fall upon radius fixus from most projecting point of torus frontalis falls behind that let fall from nasion by from 6 to 10 mm. (Lissauer).

Phygeth'lon. Inflammation of the superficial lymphatic glands, especially of the axilla, not ending in suppuration. A boil.

Phygœdema, fig-e-de'ma (*phuge,* flight, *œdema*). Transient swelling or inflation met with in nervous or hysterical persons; wandering œdema.

Phygogalac'tics (*phuge,* flight, *gala,* milk). Dispersers of the milk. Medicines that arrest its secretion.

Phygometopus, fig-o-met-o'pus (*phugo, metopon,* forehead). Applied to skulls in which line drawn from bregma to nasal point makes with radius fixus an angle of 8° to 33.5° (Lissauer).

Phygopisthius, fig-o-pis'the-us (*phugo, opisthe,* behind). Applied to skulls in which line drawn through lambda and inion makes with radius fixus an angle of 106° to 127° (Lissauer).

Phygoprosopus, fig-o-pros-o'pus (*phugo, prosopon,* face). Applied to skulls in which line drawn from nasion to alveolar point makes with radius fixus an angle of 38° to 66.5° (Lissauer).

Phygorrhinus, fig-or-rhe'nus (*phugo, rhis,* nose). Applied to skulls in which line drawn between nasion and subnasal point makes with radius fixus an angle of 36° to 66.5° (Lissauer).

Phylact. An amulet; a prophylactic.

Phylacterion, fil-ak-ta're-on (*phulax,* a guard). Amulet; prophylactic.

Phylacte'rium (*phulax,* a guard). Phylactery.

Phylaxins, fil-aks'inz. See *Proteids.*

Phyllactis coarctata, fil-lak'tis ko-ark-tat'ah. Plant of Peru possessing antispasmodic and vulnerary properties.

Phyllan'thus dis'ticha (*phullon,* leaf, *anthos,* flower). Ord. Euphorbiaceæ. Country gooseberry; East Indian tree; leaves are sudorific; root has active cathartic virtues, and seeds are purgative. **P. multiflo'rus,** plant of East India, having root with alterative properties. **P. urina'ria,** *Binkohumba,* plant employed in Ceylon as a diuretic.

Phyllax'is. Conservation.

Phyllerythrin, fil-er'ith-rin. Phylerythrin.

Phyllon, fil'lon. Medicinal aromatic leaf.

Phyllosteophytum, fil-os-te-o-fe'tum (*phullon,* leaf, *osteon,* bone, *phuo,* to grow). Laminated osteophyte.

Phylloxanthin, fil-loks-an'thin. Yellow coloring principle united with phyllocyanin to make up chlorophyll.

Phylloxera, fil-oks'er-ah. Species of Aphidæ which produce excrescences known as galls by puncturing the under side of leaves to deposit their ova. **P. vasta'trix,** grapevine louse, which inflicts much damage on vineyards.

Phylogen'esis. Philogeny.

Phylogenetic, fil-o-jen-et'ik. Pertaining to phylogeny.

Phylogeny, fil-oj'en-e (*phulon,* a race, *gennao,* to produce). Evolutionary history, genesis of race, as opposed to ontogeny, development of the individual.

Phy'ma (*phuo,* to grow). By the ancients this word was used with great latitude; sometimes in the sense of phlegmon, for tumors larger than a boil, and perfectly suppurative; also at a later day to include erysipelas, œdema, phlegmon, emphysema, scirrhus, etc., and even hordeolum, furunculus, sycosis, and anthrax. Tubercle. **P. an'thrax,** anthrax. **P. an'thrax termin'thus,** terminthus. **P., fi'cous,** sycosis. **P. hordeo'lum,** hordeolum. **P. lu'pus,** lupia cancrosa. **P. per'nio,** frost-bite. **P. syco'sis,** sycosis. **P. verruco'sa,** verruca.

Phymato'des. Affected with phymata.

Phy'matoid (*phyma, eidos,* resemblance). State of cancerous tissue in which the dull yellow hue and the consistence are like those of tubercle. Tubercular.

Phymatorrhisin, fe-mat-or'rhis-in. Black granular pigment obtained from melanotic sarcoma.

Phymato'ses (*phyma, osis*). Scrofulous or tuberculous diseases.

Phymatosis, fe-mat-o'sis. Excrescence; elephantiasis. **P. ac'ne,** gutta rosea. **P. cer'ebri,** encephalophyma. **P. elephanti'asis,** elephantiasis. **P. lu'pus,** lupus. **P. pulmo'num,** see *Tubercle.* **P. verruco'sa,** verruca.

Phymocnidosis, fe-mok-ne-do'sis (*phyma, knidosis,* itching). Urticaria.

Phymolepra, fe-mo-lep'rah. Tubercular leprosy.

Phymo'sis. Phimosis.

Phypel'la. Phygethlon.

Phyrama, fir-am'ah. Ancient gum resembling gum ammoniac.

Physa, fe'zah (*phusa,* wind). Crepitation; flatulence; bulla.

Physago'ga (*phusa,* wind, *ago,* to carry off). Carminatives.

Physaliderysipelas, fis-al-id-er-e-sip'el-as (*phusalis,* bladder or vesicle, *erusipelas*). Form of erysipelas in which bullæ occur.

Physal'ides (pl. of **Phusalis,** bladder). See *Physaliphores.*

Physalidocnidosis, fis-al-id-ok-nid-o'sis (*phusalis, knidosis,* itching). Urticaria bullosa.

Phy'salin. Amorphous bitter principle of physalis alkekengi (*phusalis,* bladder, referring to the inflated calyx).

Physal'iphores (*phusalis,* bladder, *phoreo,* to carry). In endogenous new formations there are cells containing vesicles, the vesicular cavities being called *physalides* or *brood-cavities,* and in the interior of the cellular elements which they contain elements of a similar kind are developed.

Phy'salis alkeken'gi. Strawberry tomato; winter-cherry; European; naturalized in U. S. **P. halicacabum,** physalis. **P. obscu'ra,** P. viscosa. **P. Pennsylvan'ica,** P. viscosa. **P. pubes'cens,** P. viscosa. **P. stramo'nium,** Anisodus luridus. **P. visco'sa,** ground cherry; indigenous; berries are diuretic.

Physasth'ma. Asthma with emphysema.

Phys'ce. Abdomen; colon.

Phys'cia Islan'dica. Lichen Islandicus. **P. niva'lis,** Lichen caninus.

Physconia, fis-ko'ne-ah (*phuskon,* the paunch). *Potbelly, Pendulous abdomen, Swagbelly.* A generic term comprising every large solid tumor developed in the abdomen. Hyposarca; excessive corpulency. **P. adipo'sa,** accumulation of fat in the intestines. **P. bilio'sa,** distension of the gall-bladder with bile. **P. emphysemat'ica,** accumulation of air in the areolar tissue or between the coats of particular viscera. **P. lie'nis,** tumor of the spleen. **P. mesenter'ica,** tabes mesenterica. **P. splen'ica,** ague-cake. **P. strumo'sa,** tumid abdomen from scrofulous enlargement of the glands.

Physeche'ma (*phusa,* wind, *echema,* sound). Bruit de soufflet.

Physech'os or **Physechus,** fis-ek'us (*phusa,* echo). Vesicular murmur.

Physe'ma. Tympanites. Emphysematous tumor.

Physe'sis (*phusao,* to inflate). An emphysematous tumor. Tympanites.

Physe'ter macroceph'alus (*phuseter,* one that blows, *makros,* large, *kephale,* head). Spermaceti whale. See *Cetaceum.*

Physiasiologia, fiz-e-az-e-o-loj'e-ah (*phusis,* nature, *Asia,* Asia, *logos,* description). The vis medicatrix naturæ in the treatment of Asiatic cholera.

Physiatreusiologia, fiz-e-at-ru-se-o-loj'e-ah (*phusis,* nature, *iatreusis,* medical treatment, *logos,* doctrine). Doctrine of powers of medicine.

Physiatrice, fiz-e-at'ris-e (*physis, iatreia,* treatment). Vis medicatrix naturæ.

Physiatrics, fiz-e-at'riks. Part of medicine relating to therapeutical application of physical forces, such as heat, light, electricity, etc.

Physiautocrasy, fis-e-aw-tok'ra-se (*physis, autos,* self, *kratos,* power). Vis medicatrix naturæ.

Physiautother'apy (*physis, autos,* self, *therapeia,* treatment). Vis medicatrix naturæ. Expectant treatment.

Phys'ic (*physis*). Medicament. Medicina. To *physic* is to administer medicine, and, at times, to purge. Also science and art of medicine. **P., In'dian,** Euphorbia corollata, Gillenia trifoliata. **P. nut,** Jatropha curcas. **P. root,** Leptandra purpurea.

Phys'ical. Pertaining to physics, to matter in mass, and forces acting on it. **P. educa'tion,** training of the body by means of gymnastic exercises, etc. **P. examina'tion,** examination of appearances, dimensions, sounds, etc. presented by a patient. **P. signs,** those derived from physical examination.

Physician, fiz-ish'an (*phusikos,* an investigator of nature). Properly, one who has received his degree from an incorporated institution as doctor of medicine or has been licensed to practise medicine; but often applied in the United States to any one who practises physic. The French formerly used the word *physicien* in the same sense. It is now appropriated by them to the natural philosopher. *Physicist* has the latter signification. **P. accoucheur',** accoucheur. **P., a'lienist,** one who treats mental diseases. **P., botan'ical,** herb doctor. **P., fam'ily,** one regarded as the regular attendant on a family. **P. priest,** see *Asclepiadæ.*

Phys'icist (*physis*). See *Physician.*

Physico-chemical, fiz'ik-o-kem'i-kal. Physical and chemical at the same time.

Phys'ics, med'ical. *Iatrophysics.* Physics directly applied to medicine—to the explanation of the vital phenomena, the preservation of the individual, or the treatment of disease.

Physicus, fiz'ik-us. Physician.

Physiogeny, fiz-e-oj'en-e (*phusis,* nature, *gennao,* to produce).

Physiog'nomist. One who busies himself especially with, or pretends to be versed in, physiognomy.

Physiognomon'ic (*physis, gnome,* knowledge). Relating to physiognomy.

Physiognomy, fiz-e-og'no-me (*physis, gnome,* knowledge). *Physiognomony, Metoposcopy.* The art of knowing the dispositions of men from their external appearance, especially from the features. Every inference of this kind must necessarily be extremely fallacious, and cannot be reduced to rule, as was attempted by Lavater and others. In infantile diseases numerous shades of expression are evident which experience teaches us to appreciate, and which afford guides in understanding the pathology of that period of life.

Physiolog'ia pathogenet'ica. See *Pathogenetic.*

Physiolog'ical. Relating or belonging to physiology. **P. anat'omy,** see *Anatomy.* **P. an'tidote,** one which when administered to a healthy person produces effects opposite to those produced by the poison for which it is administered. **P. doc'trine,** Broussaism. **P. salt solu'tion,** see *Salt solution.* **P. test,** trial by its physiological action upon animals of a substance suspected of being poisonous; see *Atropia, Strychnia,* etc.

Physiologice, fiz-e-o-loj'is-e. Physiology.

Physiologico-histological, fiz-e-o-loj'ik-o-his-to-loj'ik-al. Relating to physiological and histological structure of parts.

Physiol'ogism. Abuse of physiology. The improper application of physiological data to the theory of disease.

Physiol'ogist. One who occupies himself specially, or is well acquainted, with physiology.

Physiology, fiz-e-ol'o-je (*phusis,* nature, *logos,* description). Science of vital phenomena of organisms and their relations to chemical and physical laws. *General p.* treats of the general laws of life; *Special,* of the nature and functions of particular organs, as heart, lungs, etc. It is called zoöphysiology or zoöbiology, animal physiology, and phytophysiology or phytobiology, vegetable physiology, according as it considers the life of animals or of vegetables singly. *Comparative physiology* comprises both. To the latter belongs the physiology of man, human physiology, called also hygienic physiology, to distinguish it from pathological physiology or pathology. **P., cell'ular,** physiology treating of anatomical elements. **P., pathogenet'ic,** see *Pathogenetic.*

Physiolysis, fiz-e-ol'is-is (*physis, luo,* to dissolve). Process of natural decomposition of organic matter by oxidation, putrefaction, etc.

Physio-medicalism, fiz'e-o-med'e-kal-izm. Eclectic and Thomsonian doctrines combined.

Physion'omy. Physiognomy. Natural philosophy.

Physiophilosophia, fiz-e-o-fil-o-sof'e-ah. Physics.

Physiotherapia, fiz-e-o-ther-ap-e'ah. Expectant treatment.

Physique, fiz-eek'. Natural constitution; corporeal form; personal endowments.

Phy'sis. Nature.

Phy'so (*phusa,* air). In composition, air.

Physocele, fiz-o-se'le (Eng. fiz'o-seel) (*physo, kele,* tumor). *Pneumatocele.* Emphysematous tumor of the scrotum; probably a case of intestinal hernia containing much flatus. See *Pneumocele.*

Physocephalus, fiz-o-sef'al-us (*physo, kephale,* head). Emphysematous tumefaction of the head.

Physocœl'ia (*physo, koilia,* intestines). Tympanites.

Physocolica, fiz-o-kol'ik-ah. Flatulent colic.

Physo'des (*phusa,* air, *odes*). Full of air; apparently full of air—applied to tumors, etc.

Physodyspnœa, fiz-o-dis-ne'ah. Dyspnœa from emphysema.

Physohæmatometra, fiz-o-he-mat-om-e'trah (*physo, haima,* blood, *metra,* womb). Accumulation of sanguineous fluid and gas in the womb.

Physohydrome'tra (*physo, hudor,* water, *metra,* uterus). Discharge of watery fluid, mixed with air, from the cavity of the uterus.

Physol'ogy (*phusa,* flatus, *logos,* doctrine). Treatise on flatulency.

Physometer, fiz-om'e-tur (*phusao,* to inflate, *metron,* measure). Instrument for determining variations in volume of the confined body of air.

Physome'tra (*physo, metra,* the womb). *Tympany of the womb; Uterine tympanites.* A light, tense, circumscribed protuberance in the hypogastrium, obscurely sonorous, with wind occasionally discharged through the os uteri with noise.

Physoncus, fis-on'kus (*physo, onkos,* swelling). Tumefaction from air; emphysema.

Physopsoph'ia (*physo, psophos,* noise). Discharge of air with noise.

Physoscheocele, fis-os-ke-o-se'le (Eng. fiz-os'ke-o-seel) (*physo, osche,* scrotum, *kele,* tumor). Flatulent oscheocele.

Physospas'mus. Flatulent colic.

Physos'terin. Substance allied to cholesterin, found in physostigma.

Physostigma (fis-o-stig'mah) **veneno'sum** (*physo, stigma,* in botany, top of the style). Leguminous, woody, climbing plant of West Africa. The seed, physostigma (Ph. U. S.), is the Calabar bean, ordeal bean or nut. It contains alkaloids physostigmine or eserine and calabarine; used by the natives in trial by ordeal. See *Physostigmine.*

Physostig'matine. Eserine.

Physostig'mia. Physostigmine.

Physostigmi'na. Physostigmine.

Physostigmi'næ sal'icylas (Ph. U. S.). Salicylate of physostigmine, See *Physostigmine.*

Physostig'mine. $C_{15}H_{21}N_3O_2$. Eserine. Amorphous alkaloid, principle of Calabar bean, used to produce contraction of the pupil, internally in paralysis, and as an antidote to strychnine and atropine. Powerful depressant, nerve-poison; slightly soluble in water, soluble in alcohol, ether, chloroform, benzol. Bromine in potassium bromide gives a red color (very delicate); most satisfactory test-application to the pupil; see *Calabar bean,* also *Poisons and Antidotes* (table). **P. sal'icylate,** combination with pure salicylic acid. $C_{15}H_{21}N_3O_2C_7H_6O_3$. It is said to be less liable to decomposition than other salts of physostigmine; chiefly used externally in ophthalmic practice as a mydriatic, gr. i-ij to f℥j; internally, in doses gr. $\frac{1}{100}$–$\frac{1}{50}$, in spasmodic nervous affections, atonic dyspepsia, and as an antidote to strychnia. **P. sul'phate,** eserine sulphate; used particularly by veterinary surgeons in colic.

Physotho'rax. Pneumothorax.

Phytal'bumoses. Vegetable albumoses.

Phytanat'omy (*phyton, anatomia*). Vegetable anatomy. See *Anatomy.*

Phytelephas (fit-el'e-fas) **macrocar'pa** (*phyton, elephas,* elephant). Tree of South America, elephantasia, the dense albumen of whose nut is the vegetable ivory, which is as durable and nearly as hard as the ivory of the elephant.

Phytelminthus, fit-el-min'thus (*phuton,* plant, *helmins,* worm). Bothriocephalus.

Phyterythrin, fit-er'ith-rin. Coloring matter which gives to plants and leaves their red color in the fall of the year.

Phyteuma spicatum, fit-u'mah spik-at'um. European herb, the juice of which is narcotic.

Phytiatrica, fit-e-at'rik-ah *phyton, iatrike,* medicine). Botanic or herb medication.

Phy'ticus. Vegetative.

Phy'tiform. Phytoid

Phytiv'orous (*phyto, voro,* to devour). Feeding or subsisting on vegetables.

Phy'to. Greek prefix signifying connection with, or relation to, vegetable organisms.

Phytoalopecia, fit-o-al-o-pe'she-ah (*phyto, alopecia*). Porrigo decalvans.

Phytobiol'ogy (*phyto, bios,* life, *logos,* a discourse). See *Physiology.*

Phytoblast, fi'to-blast (*phyto, blastos,* sprout). Living body containing protoplasm, and of which the cell-unit is composed.

Phytocerosium, fit-o-ser-o'se-um (*phyto, keros,* wax). Wax contained in vegetables.

Phytochem'istry. See *Chemistry.*

Phytocol'la (*phyto, kolla,* glue). Extractive matter obtained from belladonna

Phytocyst, fi'to-sist (*phyto, kustis,* cyst). Cyst in which the phytoblast is contained.

Phytodermata, fit-o-dur'mat-ah (*phyto, derma,* skin). Cutaneous diseases dependent on parasitic vegetable organisms.

Phytodermat'ic affec'tions. Phytodermata.

Phytogenesis, fi-to-jen'es-is. Germination.

Phytogeography, fi-to-je-og'ra-fe. Geographical botany.

Phytog'raphy (*phyto, grapho,* to write). Description of plants.

Phy'toid (*phyto, eidos,* appearance). *Phytiform.* Having the form or appearance of a vegetable growth.

Phytolac'ca decan'dra (*phyto, lacca,* because the color of the juice of the berries resembles that of lacca). *P. vulgaris, Pokeweed, American nightshade, Cancer root, Poke, Skoke, Jucato calleloe, Jalap, Pigeon berry, Jalap cancer root, Red weed, Red nightshade, Coakum.* Ord. Chenopodeaceæ. The berries—Phytolaccæ baccæ (Ph. U. S.)—and root—Phytolaccæ radix (Ph. U. S.)—are employed. The young stems, when boiled, are sometimes eaten; but, when old, they must be cautiously used, as the plant is emetic and cathartic. Pokeweed is employed in chronic rheumatism, and is given in the form of tincture of the ripe berries. It is also used in cutaneous eruptions, tinea capitis, itch, cancerous ulcers, etc.

Phytolaccic (fi-to-las'ik) **ac'id.** Amorphous principle separated from phytolacca-berries.

Phytolaccin, fi-to-lak'kin. Name improperly given to powdered alcoholic extract of poke-root; more correctly a neutral principle found in it. **P. dras'tica,** species possessing a root with active purgative properties.

Phytology, fi-tol'o-je (*phyton, logos,* a discourse). See *Vegetable.* **P., med'ical,** botany, medical.

Phytomen'tagra (*phyton, mentagra*). Sycosis, so called on account of the disease of the chin being caused by a vegetable micro-organism.

Phytomyce'tes (*phyto, mukes,* fungus). Moulds, as in putrid urine.

Phy'ton. Vegetable.

Phytonomy, fi-ton'om-e. Vegetable physiology.

Phytopar'asite. A parasite from the vegetable kingdom. *Epiphyte.*

Phytopathol'ogy (*phyton, pathologia*). Properly, the pathology of vegetables; but occasionally applied to the knowledge of morbid states induced by vegetable growths.

Phytophagous, fit-of'ag-us (*phyton, phago,* to eat). *Phytivorous.* Feeding or subsisting upon vegetables.

Phytophthora, fi-tof'thor-ah (*phyton, phthora,* destruction, corruption). Genus of Fungi. **P. infes'tans,** fungus causing potato disease.

Phytophysiology, fi-to-fiz-e-ol'o-je (*phyton, physiologia*). Vegetable physiology. See *Physiology.*

Phy'toplasm (*phyton, plasso,* to form). Substance in vegetable matters analogous to protoplasm.

Phytorgan'ica (*phyton, organon,* an organ). Vegetable growths on the living body.

Phyto'sis (*phyton, osis*). Porrigo, impetigo. **P. annula'ta,** tinea circinata. **P. circina'ta,** a term employed by Mr. E. Wilson for ringworm of the hairless skin. **P. favo'sa,** porrigo favosa. **P. ton'surans,** porriga decalvans. **P. versic'olor,** tinea versicolor.

Phytosperm'ata (*phyton, sperma,* sperm). Particles similar to the spermatozoids of animals, observed in vegetables, and presumed to possess a similar agency in reproduction.

Phytos'terin. Neutral principle obtained from physostigmine.

Phytotomy fi-tot'o-me (*phyton, tome,* section). Vegetable anatomy. See *Anatomy.*

Phytovitellin, fi-to-vit-el'lin. Vegetable vitellin; globulin-like body resembling animal vitellin, found in seeds of many plants, as in the pumpkin.

Phytozo'on (*phyton, zoon,* animal). Lowest class of animals, seeming to form a transition between the animal and vegetable kingdoms. *Zoophyte.*

Phytozooria, fi-to-zo-o're-ah). Protozoa.

Pia mater (delicate mother), pe'ah mat'er. A very delicate membrane which covers the brain immediately, penetrates into its anfractuosities, and envelops also the cerebellum and the spinal prolongation, etc. The exterior pia mater is the portion of membrane which covers the exterior of the encephalon and faces the arachnoid externally; the interior pia mater is that which lines the cerebral fossa, into which it penetrates by a cleft situate beween the posterior part of the corpus callosum and the fornix, and by two other fissures, situate between the corpora fimbriata and the thalami nervorum opticorum. It contains a number of granulations similar to the glandulæ Pacchioni. **P. m. tes'tis,** tunica vasculosa. **P. men'inx,** pia mater. **P. spina'lis,** pia of spinal cord.

Pial, pe'al. Relating to the pia mater. **P. sheath,** sheath of optic nerve.

Pi'an. Frambœsia; yaws.

Pian'oforte-play'er's cramp. Painful spasm of muscles of forearm due to excessive piano practice.

Pi'ans, moth'er of. Mama pian.

Pi'ar. Fatness.

Piarhæ'mia (*piar, haima,* blood). Fat in the blood.

Piarolytic, pe-ar-o-lit'ik (*piar,* fat, *luo,* to dissolve). Fat decomposing or emulsifying.

Piarrhæ'mia. Piarhæmia.

Pica, pe'ka. Morbid appetite for unusual articles of food. Malacia. **P. Africano'rum,** Chthonophagia.

Pic'ac. Euphorbia corollata.

Picacismus pik-as-iz'mus (*pix,* pitch). Depilation by means of a pitch plaster.

Pic'amar. Bitter, oily compound found in heavy oil of tar.

Picatio, pik-ah'she-o. Picacismus.

Picea, pis-e'ah (*pix,* pitch). Pinus abies.

Picealis, pis-e-al'is. Produced by tar.

Piceous, pis'e-us. Having the nature of pitch. Thick; viscous.

Pice'rion. Butter.

Pi'chi. Terebinthinate wood of Fabiana imbricata of Chili; has been used in lithiasis, cystitis, and other diseases of the bladder, in decoction or in fluid extract; dose of the latter, ♏xv-xxx.

Pichu'rim beans. The seed—Para nut, sassafras nut, puxiri, Brazilian nutmeg—of a tree supposed to be Nectandra puchury, puchury, or puchyry of the Brazilians, ord. Lauraceæ, which grows in Brazil, Guiana, Venezuela, and other parts of South America. They are of an elliptical shape, flat on one side, convex on the other; of an aromatic odor between that of nutmeg and sassafras; and of a spicy, pungent taste. The medical properties are the same as those of other aromatics. For the bark, see *Pechurim cortex.* **P. cam'phor,** body contained in fat of pichurim analogous to laurel camphor. **P. fat,** matter resembling butter occurring in pichurim beans, consisting of laurin and pichurim camphor.

Pick'erelweed, shov'el. Unisema deltifolia.

Pi'cra (*pikros,* bitter). Pulvis aloës et canellæ.

Picraconine, pik-rak'o-neen. Derivative of picraconitine by saponification with an alkali.

Picraconitine, pik-rak-on'it-een. Alkaloid from Aconitum napellus, either pre-existing in the plant or an accidental product due to method of preparation.

Picræ'na excel'sa (*pikraino,* to be bitter). Quassia.

Picram'nia antides'ma. Shrub of Mexico and West Indies; genus of Simarubæ; bark—cascara amagra, Honduras bark—recommended as an alterative in syphilis. **P. cilia'ta,** native of Brazil; bark used as a substitute for cascarilla.

Picranisic (pik-ran-is'ik) **ac'id.** Picric acid.

Pic'ras. Picrate. **P. ammo'nicus,** ammonium picrate. **P. Javan'ica,** species of Japan, possessing tonic, antidysenteric, and febrifuge properties. **P. potas'sicus,** potassium picrate.

Picras'ma excel'sa. Picræna excelsa.

Pic'rate. Salt of picric acid. **P. of ammo'nium,** carbazotate of ammonium.

Pic'ria. Bitterness.

Pic'ric ac'id. Carbazotic acid; trinitrophenic, nitrophenisic acid; bright-yellow, inodorous, crystalline substance, having an acid and extremely bitter taste, staining organic matter permanently yellow. It is obtained by heating a mixture of carbolic and strong nitric acids, evaporating, and crystallizing. It is used for hardening tissues for microscopic examination, as a test for albuminuria, and internally as an antiperiodic. **P.-a. test,** for glycosuria, deepred coloration of picric-acid solution in presence of liquor potassæ.

Pic'rin. Bitter substance from Digitalis purpurea, said to be identical with digitalin.

Pic'ris (*pikros,* bitter). Cichorium intybus.

Pic'rium spica'tum. Coutoubea alba.

Picrocar'mine. Staining fluid employed in microscopical examinations, made by adding picric acid to an ammoniacal solution of carmine.

Picroch'olos (*picros, chole,* bile). Bilious.

Picrogly'cion. Peculiar principle isolated from dulcamara, having bitter-sweet taste.

Pic'romel (*picros, meli,* honey). *Bilin.* Colorless, soft substance, of acrid, bitter, saccharine taste, nauseous smell, and very soluble in water, considered to be a bilate of soda. It is not an immediate principle, but a mixture of different substances. It forms part of the bile, and is generally classed among the animal immediate principles.

Picrope'gæ (*picros, pege,* spring). Bitter mineral waters from the presence of chloride of magnesium.

Picropodophyl'lin. A principle found in Podophyllum peltatum.

Picropodophyl'lon. Intensely bitter, crystallizable compound produced by action of ammonia on podophyllotoxin; cholagogue, cathartic.

Pic'ros (*pikros,* bitter). Bitter. See *Amarus.*

Picrotin, pik'ro-tin. One of the constituent principles of picrotoxin.

Picrotoxin, pik-ro-toks'in (*picros, toxikon,* poison). *Picrotoxine.* A vegetable alkali discovered in Menispermum cocculus. Crystallizes in quadrangular, white, brilliant, semitransparent prisms, which are excessively bitter. It is said to be a mixture of picrotoxinin, picrotin, anamirtin, and cocculin. A motor stimulant, bitter tonic, remedy for night-sweats, and parasiticide. Sparingly soluble in water, very soluble in alcohol and chloroform. Acts like grape-sugar in Trommer's test. See *Poisons.* Cocculus Indicus owes

its poisonous properties to this principle. A physiological antidote to opium.

Picrotox'inin. See *Picrotoxin.*

Picrotoxin'um. Picrotoxin.

Pie'bald skin. Achroma vitiligo; acquired achroma. See *Pied* and *Vitiligo.*

Pied ne'gro. Dappling of negroes from partial discoloration after enervating diseases.

Piedosa, pe-a-do'sah. Disease similar to dengue existing in Spain in the 18th century.

Piedra, pe-a'drah. Form of trichorrhexis nodosa.

Pie'plant. Rheum rhaponticum. **P., rhu'barb,** Rheum rhaponticum.

Piestron, pe-es'tron (*piezo,* to press). Instrument recommended by Hippocrates for breaking the bones of the fœtal head when too large to be extracted otherwise.

Piezometer, pe-ez-om'et-ur (*piezo,* to press, *metron*). Apparatus for estimating compression of gases.

Pig-back'ed kid'ney. Form of alcoholic renal cyanosis from venous congestion.

Pig'eon ber'ry. Phytolacca decandra. **P. lice,** Dermanyssus avium. **P. tree,** Aralia spinosa.

Pig'eon-breast'ed. See *Lordosis.*

Pig'ment. See *Pigmentation* and *Cells, pigment.* **P., blood,** see *Globules, red.* **P. cells,** see *Cell, pigment.* **P. embol'ia,** pigmentary embolism. **P. liv'er,** blackish appearance of the liver after remittent, intermittent, or cutaneous fevers, from the accumulation of pigment matter in its vascular apparatus. **P., res'piratory,** histohæmatin. **P. sarco'ma,** see *Sarcoma.* **P. spot,** nævus. **P., u'veal,** pigment on posterior part of iris, on ciliary processes, and choroid.

Pigmen'tal (*pigmentum*). *Pigmentary.* Having relation to pigment or coloring matter. **P. appara'tus,** apparatus concerned in the coloration of the skin of the colored varieties of man.

Pigmenta'rius. One who makes and sells pigments or ointments.

Pig'mentary. Pigmental. **P. degenera'tion,** pigmentation. **P.** or **Pigmen'tal em'bolism,** condition met with in bad cases of malarial fever. Pigment is formed in the spleen, whence it is carried to the liver, the smaller flakes thence passing into the general circulation, and when deposited in the cutaneous capillaries giving a peculiar malarious tint to the skin. **P. lay'er,** outer stratum of the retina, composed of pavement epithelium, thickly filled on the inner surface with pigment. **P. mole,** nævus pigmentosum. **P. næ'vi,** see *Nævus.*

Pigmenta'tion. *Pigmentary degeneration.* Degeneration of tissues in which pigment takes the place of their minute elements.

Pig'ments, bil'iary. See *Bile.* **P., fæ'cal,** see *Excrement.* **P., u'rinary,** see *Urine.*

Pigmen'tum (*pingo,* to paint). Paint pigment. **P. In'dicum,** indigo. **P. i'odi et o'lei pi'cis,** Coster's paste. **P. ni'grum,** see *Choroïdea tunica.* **P. uracu,** terra Orleana.

Pig'my. Pygmy.

Pig'nut. *Earth-nut, Ground-nut.* The bulbous root of Bunium bulbocastanum, ord. Umbelliferæ. (Called *pignuts,* from the fondness of the pig for them.) They have been considered styptic, and serviceable in atonic affections of the kidney. See *Bunium bulbocastanum, Broom hickory, Carya porcina.*

Pigodidymus, pig-o-did'im-us (*puge,* buttock, *didumos,* double). Monster consisting of two bodies connected about the buttocks.

Pig's flare. Adeps.

Pig-ty'phoid. Swine-plague.

Pig'weed. Chenopodium album; said to be sedative and antihemorrhoidal.

Piitis, pe-e'tis. Inflammation of the pia mater.

Pikrope'gæ. Picropegæ.

Pikropodophyllin, pik-ro-po-do-fil'lin. Picropodophyllin.

Pikrotox'in. Picrotoxin.

Pi'kry (*pikros,* bitter). Pulvis aloës et canellæ.

Pila, pe'lah. A ball. Mortar and pestle. **P. dama'rum,** ægagropila. **P. mari'na,** certain light, round, depressed, or oblong masses, inodorous and insipid, in which rushes, hairs, and the *débris* of shells are met with. These are found on the seashore, and consist chiefly of the roots of *Big tangles, Ware, Wair, Seaware, Seawrack, Eel grass.* Iodine is detected in the ashes, which accounts for their success in goitre. They have also been given as a vermifuge. **P. rupicapra'rum,** ægagropila.

Pi'lar. Pileous; pertaining to or covered with hair. **P. mus'cles,** arrectores pilorum.

Pila're ma'lum. Trichosis.

Pilaris, pil-ar'is. Pilar.

Pilastered, pil-as'tur'd. In anatomy, having a fluted appearance. **P. fe'mur,** condition found in some races, in which the backward concavity of the shaft of the femur is intensified and the linea aspera prominent.

Pilatio, pil-ah'she-o (*pilus,* a hair). Fracture of the cranium in which the fissure is narrow and has the appearance of a hair—a *capillary fissure.*

Pile (*pilus*). Hair; hemorrhoid; also battery. **P., prostat'ic,** state in which the prostate is enlarged and hemorrhages take place.

Pi'lea pu'mila (*pilus,* a hair). *Richweed, Clearweed, Coolweed;* indigenous; ord. Urticaceæ; has been used as a wash in poisoning by rhus; it has a strong grateful smell.

Pile'olum (dim. of **Pileus**). Aponeurosis of occipitofrontalis muscle.

Pile'olus (*pilus,* a hair). *Pilose, Pilous, Pilar.* That which relates to hair; hairy. **P. sys'tem** of Bichat is that formed by the hair; it comprises the different species of hair of the human body.

Piles. See *Hæmorrhois.* **P., bleed'ing,** see *Hæmorrhois.* **P., blind,** cæcæ hæmorrhoïdes; see *Hæmorrhois.* **P., o'pen,** see *Hæmorrhois.*

Pil'eus (*pileos,* a hat, cap, or bonnet for the head). *Pileolus.* A shield; a nipple-like instrument formed of various materials, and used by females for protecting the nipple during the child's sucking, when the part is painful; also a caul; cucupha. **P. Hippocrat'icus,** capeline bandage.

Pile'wort. Ranunculus acris and R. ficaria.

Pi'li (pl. of **Pilus**) **ana'les.** See *Anal.* **P. cap'itis,** see *Capillus.* **P. cibo'tii,** hairs of fern, Cibotium Barometz; used as styptic in hæmorrhage from wounds. **P. cu'tis,** lanugo. **P. gossyp'ii,** cotton. **P. palpebra'rum,** cilia. **P. pudendo'rum,** hair of the pubes. **P. subaxillar'es,** hair under the axillæ.

Piliferous, pi-lif'er-us (*pili,* hairs, *fero,* to bear). Pile- or hair-bearing, as a piliferous cyst—one containing hair.

Piliform, pi'le-form (*pilus,* hair, *forma,* form). Having the form of a hair.

Pilimictio, pil-e-mik'she-o (*pili,* hairs, *mingo, mictum,* to urinate). See *Trichiasis.*

Pill. Pilula; medicine in small globular mass that may be swallowed without mastication. **P., Ab'ernethy's,** see *Pilulæ hydrargyri.* **P. of aloes and camboge,** pilulæ aloës et cambogiæ. **P. of aloes and cincho'na,** pilulæ aloës et kinæ kinæ. **P. of aloes and col'ocynth,** pilulæ aloës et colocynthidis. **P. of aloes and fetid gums,** pilulæ de aloë et fœtidis. **P. of aloes and gin'ger,** pilulæ aloës et zingiberis. **P. of aloes and iron,** pilulæ aloës et ferri. **P. of aloes and mas'tich,** pilulæ aloës et mastiches. **P., aloes and myrrh,** pilulæ aloës et myrrhæ. **P., aloet'ic,** pilulæ aloëticæ. **P., aloet'ic and asafœ'tida,** pilulæ aloës et asafœtida. **P., aloet'ic, com'pound,** pilulæ aloës compositæ. **P. of ammo'niuret of cop'per,** pilulæ ammoniureti cupri. **P., analept'ic, James',** see *Analeptica.* **P., An'derson's,** see *Pilulæ aloës et jalapæ.* **P., an'odyne,** pilulæ opiatæ. **P., antibil'ious,** pilulæ antibiliosæ. **P., antibil'ious, Barclay's,** pilulæ antibiliosæ. **P., asafœ'tida,** pilulæ asafœtida. **P., Asiat'ic,** pilulæ Asiaticæ. **P., Bacher's,** pilulæ ex helleboro et myrrhâ. **P. of Barbadoes aloes,** see *Pilulæ aloes.* **P., Barbaros'sa's,** Barbarossæ pilulæ. **P., Barthez's,** see *Aloës et myrrha.* **P., Bec'querel's,** *Gout pills of Becquerel,* are formed of quiniæ sulph., ʒij; ext. digit., gr. xv; semin. colchic. pulv., ℈ij; made into fifty pills; dose, one to three pills. *Debout's pills* are said to have a like composition. **P., Belloste's,** in the

French Codex, are made of pure mercury, white honey, Cape aloes, black pepper, rhubarb, and scammony. **P., Blair's**, an empirical preparation of colchicum, much used in England in cases of gout. **P., Blaud's**, proposed as antichlorotic, are made of gum tragacanth, sulphate of iron, and subcarbonate of potassium. **P., blue**, pilulæ hydrargyri. **P. of Bon'tius**, in the French Codex, are made of Barbadoes aloes, gamboge, gum ammoniac, and white vinegar. **P., Brandreth's**, see *Pilulæ aloës et cambogiæ*. **P., cal'omel**, pilulæ hydrargyri chloridi mitis. **P., cal'omel, com'pound**, pilulæ hydrargyri submuriatis compositæ. **P., cal'omel and o'pium**, pilulæ calomelanos et opii. **P., camboge**, pilulæ cambogiæ compositæ. **P., camboge, com'pound**, pilulæ cambogiæ compositæ. **P. of car'bonate of iron** (B. P.), pilulæ ferri carbonatis. **P., cathar'tic, com'pound**, pilulæ catharticæ compositæ. **P., Cham'berlain's restor'ative**, see *Chamberlain's restorative pills*. **P., co'chy**, pilulæ aloës et colocynthidis. **P. of col'ocynth, com'pound**, pilulæ colocynthidis compositæ. **P. of col'ocynth and hen'bane**, pilulæ colocynthidis et hyoscyami. **P., com'mon**, pilulæ aloës et myrrhæ. **P. of cop'per, ammo'niated**, pilulæ cupri ammoniati. **P., Debout's**, see *Pill, Becquerel's*. **P. of digita'lis and squill**, pilulæ digitalis et scillæ. **P., din'ner**, see *Pilulæ aloës et kinæ kinæ, Pilulæ rhei*, and *Pilulæ aloës et mastiches*. **P. ,din'ner, of May'o**, is composed of pulv. rhei, gr. iv; sodæ carb., gr. j. **P., Du'puy'tren's**, in the French Codex; these are made of *bichloride of mercury, extract of opium*, and *extract of guaiac*. **P., everlast'ing**, a pill once in vogue, and said to be composed of metallic antimony. It was believed to have the property of purging as often as it was swallowed. **P., fe'male**, pilulæ de aloë et fœtidis. **P., ferru'ginous, of Vallet**, see *Ferri protocarbonas*. **P., Foth'ergill's**, see *Pilulæ aloës et colocynthidis*. **P., Frank's**, see *Pilulæ aloës et kinæ kinæ*. **P., Ful'ler's**, see *Pilulæ de aloë et fœtidis*. **P., gal'banum, com'pound**, pilulæ galbani compositæ. **P., Grif'fith's**, pilulæ ferri compositæ. **P., Griffitt's**, see *Pilulæ rhei compositæ*. **P., gum**, pilulæ galbani compositæ. **P., Har'vey's**, pilulæ aloës et colocynthidis. **P. of hel'lebore and myrrh**, pilulæ ex helleboro et myrrhâ. **P. of Helve'tius**, the French Codex has a formula for their preparation, consisting of *alum, sandragon*, and *honey of roses*. **P. of hem'lock, com'pound**, pilulæ conii compositæ. **P., Hol'loway's**, see *Pilulæ aloës et jalapæ*. **P., Hoop'er's**, see *Pilulæ aloës et myrrhæ*. **P. of i'odide of i'ron**, pilulæ ferri iodidi. **P. of ipecacuan'ha and o'pium**, pilulæ ipecacuanhæ et opii. **P. of ipecacuan'ha and squill**, pilulæ ipecacuanhæ cum scillâ. **P. of iron sulphate**, pilulæ ferri sulphatis. **P., James's analep'tic**, see *Analeptica*. **P., Key'ser's**, see *Hydrargyrus acetatus*. **P., Lady Crespigny's**, pilulæ aloës et kinæ kinæ. **P., Lady Hes'keth's**, see *Pilulæ aloës et kinæ kinæ*. **P., Lady Web'ster's**, pilulæ aloës et kinæ kinæ; pilulæ aloës et mastiches. **P., Lartigue's** (their composition is not definitely known) (ext. coloc. comp., ℥ss; ext. sem. colchic. alcoholic., extract. digital. alcoholic., ää gr. jss; fiat massa in pilul. x. dividend.); dose, two, three, or more in the 24 hours, in gout, until purging is induced. As a substitute M. Bouchardat recommends a combination of extractum colocynthidis compositum, extractum colchici, and extractum opii, which is almost identical with pills prescribed by Sir Henry Halford for the gout; the latter substituting Dover's powder for the extractum opii. The composition of Lartigue's pills is also said to be *powdered colchicum*, two grains; *sugar* and *mucilage*, each half a grain. **P., Laville's**, said to consist of *physalin, silicate of soda*, and *powdered chamædrys*. One is taken before a meal, for several weeks, in a case of gout. **P. of lead o'piate**, pilulæ plumbi opiatæ. **P., Lee's New Lon'don**, is composed of scammony, gamboge, calomel, jalap, aloes, soap, and syrup of buckthorn. **P., Lee's Wind'ham**, consists of gamboge, aloes, soap, and nitrate of potassium. **P. machine'**, instrument for rolling and dividing pills. **P., Mat'thew's**, see *Pilulæ ex helleboro et myrrhâ*. **P., Meg'lin's**, in the French Codex, made of alcoholic extract of hyoscyamus, alcoholic extract of valerian, and sublimed oxide of zinc. **P., mercu'rial**, pilulæ hydrargyri. **P. of mer'cury**, pilulæ hydrargyri. **P. of mild chlo'ride of mer'cury**, pilulæ hydrargyri chloridi mitis. **P., Moffat's**, pilulæ aloës et cambogiæ. **P., Mor'rison's**, pilulæ aloës et cambogiæ; see *Pilulæ cambogiæ compositæ*. **P., Mose'ley's**, pilulæ rhei compositæ. **P., night, common**, pilulæ opiatæ. **P., o'piate**, pilulæ opiatæ. **P., Pe'ter's**, see *Pilulæ aloës et cambogiæ*. **P., Plum'mer's**, pilulæ hydrargyri submuriatis compositæ. **P. of qui'nia sul'phate**, pilulæ quiniæ sulphatis. **P., red**, pilulæ hydrargyri submuriatis compositæ. **P., red, Boer'haave's**, see *Hydrargyri sulphuretum rubrum*. **P. of rhu'barb**, pilulæ rhei. **P. of rhu'barb, com'pound**, pilulæ rhei compositæ. **P., Ricord's**, see *Ricord*. **P., Ru'dius's**, pilulæ aloës et colocynthidis. **P., Rufus's**, pilulæ aloës et myrrhæ. **P., Rush's**, see *Pilulæ aloës et cambogiæ*. **P., Scotch**, pilulæ de aloë et fœtidis. **P. of Sédillot**, in the French Codex these are made of mercurial ointment, medicinal soap, and licorice powder. **P. of soap, com'pound**, pilulæ saponis cum opio. **P., soap and opium**, pilulæ saponis cum opio. **P. of Soc'otrine al'oes**, see *Pilulæ aloës*. **P., Speediman's**, see *Pilulæ aloës et myrrhæ*. **P., squat'ting**, pilulæ opiatæ. **P., squill, com'pound**, pillulæ scillæ compositæ. **P., Stahl's**, see *Pilulæ de aloë et fœtidis*. **P., Stark'ey's**, see *Pilulæ ex helleboro et myrrhâ*. **P., stomach'ic**, see *Pilulæ aloës et kinæ kinæ* and *Pilulæ rhei*. **P., sto'rax**, pilulæ e styrace. **P. of strych'nia**, pilulæ strychniæ. **P. of submu'riate of mer'cury, com'pound**, pilulæ hydrargyri submuriatis compositæ. **P., Tanjore**, pilulæ Asiaticæ. **P. tile**, see *Pilula*. **P., tur'pentine**, pilulæ de terebinthinâ. **P., Vallet's**, see *Ferri protocarbonas* and *Pilulæ ferri carbonatis*. **P., Web'ster's**, pilulæ aloës et kinæ kinæ. **P., Whytt's**, see *Pilulæ de aloë et fœtidis*.

Pil'lar. In anatomy, structure of columnar form serving as an appendage to a vaulted organ. **P-s of Cor'ti**, rods of Corti. **P-s of di'aphragm**, see *Diaphragm*. **P-s of exter'nal abdom'inal ring**, two diverging bundles of fibres implanted on either side, the inner to the anterior surface of symphysis pubis, the outer with Poupart's ligament upon spine of pubis. **P-s of fauces**, curved arches at sides of passage from mouth to pharynx, formed by prominence of muscles; anterior occupied by the palatoglossus, posterior by the palatopharyngeus. **P-s of for'nix**, continuation of fornix downward toward base of brain; anterior pass down in front of foramina of Monro, and can be traced as *radices ascendentes fornicis* to the maxillary tubercles, thence reflected upward as *radices descendentes fornicis*, or bundles of Vicq d'Azyr, to basis of anterior nucleus of optic thalamus; posterior usually called crura of fornix. **P-s of ve'lum palat'i**, pillars of the fauces.

Pill-bearing spurge. Euphorbia pilulifera.

Pill'box hydat'id. See *Acephalocyst*.

Pillicosh'y or **Pilliocausia.** Hiera picra.

Pills. See *Pill, Pilula*, and *Pilulæ*.

Pil'ula. Pilula.

Pilocarpidine, pi-lo-karp'id-een. Alkaline base from pilocarpus.

Pilocarpina, pil-o-kar-pe'nah. Pilocarpine.

Pilocarp'inæ hydrochlo'ras (Ph. U. S.). White crystals, soluble. Usually given hypodermically in dose of gr. ½ as a diaphoretic in dropsy, diseases of the chest, diphtheria, rheumatism, skin diseases, etc. Externally applied as a hair-invigorator in washes, pomades, etc., and in solution as a mydriatic.

Pilocarpine, pi-lo-kar'peen. $C_{11}H_{16}N_2O_2$. Alkaloid from Pilocarpus pennatifolius. Soft mass, used principally in the hydrochloride or hydrochlorate.

Pilocar'pus (Ph. U. S.). Leaflets of Pilocarpus pennatifolius, jaborandi. Active diaphoretic; also sialagogue. See *Pilocarpine* and *Pilocarpinæ hydrochloras*. Jaborine is another alkaloid separated from it, but resembling atropine in action.

Pilocys'tic tu'mors (*pilus*, hair). Encysted tumors containing hair and fatty matters—dermoid cysts.

Pilosel'la (*pilosus*). Hieracium pilosella. **P. alpi'na**, Hieracium pilosella.

Pilo'sus (*pilus*, hair). Pileous.

Pi'lous. Pileous.

Pil'ula (pl. **Pil'ulæ**) (dim. of **Pila**, a ball). A pill. Simple or compound medicine, weighing from one to five grains, of a firm consistence and spherical form, intended to be swallowed at once without chewing. The pill differs from the bolus, the latter being softer and larger. Medicines are often given in the form of pill on account of their disagreeable taste and odor, and for the like reason pills are now sugar-coated or gelatin-coated. Pilula also means a pilular mass, or the mass formed by the amalgamation of the different articles that enter into the composition of the pill. To form the mass into pills, it is rolled out and divided by the spatula on a pill tile or by a pill machine. The British Pharmacopœia has directions for various forms of pilula, or pill in mass, but, unlike the Ph. U. S., has no pilulæ or separate pills. See the various *Pilulæ*, also *Asiatic, Bontius's, Belloste's, Blaucard's, Blaud's, Blue, Compound, Compound cathartic, Dinner, Dupuytren's, Frank's, Fuller's, Griffith's, Hooper's, Lady Webster's, Lartigue's, Meglin's, Morrison's, Mercurial, Plummer's, Phosphorus, Rufus's, Ricord's, Tanjore pills*, etc.

Pil'ulæ. See *Pilula*. **P. æter'næ**, pill, everlasting. **P. ex al'oë**, P. aloës compositæ. **P. de al'oë et cambo'giâ**, P. aloës et cambogiæ. **P. de al'oë et fœ'tidis**, *Pills of aloes and fetid gums, Female pills* (aloës Socotr., sennæ, asafœtidæ, galbani, āā ℥ij; myrrh., ℥iv; croci, macis, āā ℥j; ferri sulphat., ℥iss; ol. succin., gtt. viij; syrup. artemisiæ, q. s.); purgative, and given in hysteria; dose, gr. xv–xx. **P. de al'oë et sapo'ne**, P. aloëticæ. **P. al'oës**, *Aloetic pill* (Ph. U. S.); each pill contains aloes, gr. ij, and soap, gr. ij. **P. al'oës et asafœ'tidæ** (Ph. U. S.), *Aloëtic and asafœtida pills* (each pill contains aloes, asafœtida, and soap, gr. j½ of each); purgative and stomachic. **P. al'oës Barbaden'sis**, *Pill of Barbadoes aloes* (aloes Barbad. pulv., ℥ij; saponis dur. pulv., ℈j; ol. carui, f℥j; confect. ros., ℥j); dose, gr. v–x. **P. al'oës et cambo'giæ**, *Pill of aloes and camboge* (aloës, cambog., gum ammoniac., āā p. æ.); purgative; used in dropsy; dose, gr. xij–xxx. **P. al'oës et colocyn'thidis**, *Pill of aloes and colocynth*, vulg. *Pill cochy* and *Pill a coshy* (colocynth. pulp., ℈j; aloës Barbad., scammon., āā ℥ij; potass. sulph., ℥ij; ol. caryophyl., f℥ij; aquæ destillat., q. s.; Ph. Br.); cathartic; dose, gr. v–x or more. **P. al'oës compos'itæ**, *Compound aloëtic pills* (aloës spic. extract., ℈j; ext. gentianæ, ℥ss; olei carui, gtt. xl; syrup., q. s.). These are sometimes also called *Family pills, Antibilious pills*, etc. **P. al'oës et fer'ri**, *Pill of aloes and iron;* aloes, 100 grs.; dried sulphate of iron, 100 grs.; aromatic powder, 100 grs.; confect. rosæ, q. s. ft. 100 pills (Ph. U. S.). **P. al'oës et jalap'æ**, *Scot's* or *Scotch pills* (aloes Barbad., ℔j; rad. helleb. nigr., rad. jalapæ, potassæ subcarb., āā ℥j; ol. anisi, ℥iv; syrup. simpl., q. s.—M.); dose, gr. x to xxx. A committee of the Philadelphia College of Pharmacy recommended the following: Aloës Barbadens., ℥xxiv; saponis., ℥iv; colocynthidis, ℥j; cambogiæ, ℥j; ol. anis., f ℥ss. **P. al'oës et ki'næ ki'næ**, *Pill of aloes and cinchona* (aloes Socotr., ℥vj; ext. cinchon., ℥iij; cinnam., ℥j; syrup absinth., q. s.); stomachic and laxative; dose, gr. x to xx. *Lady Crespigny's pills, Lady Webster's pills, Lady Hesketh's pills*, resemble these; see *Pilulæ aloës et mastiches*. **P. al'oës martia'les**, P. de aloë et fœtidis. **P. al'oës mas'tiches**, *Pills of aloes and mastich* (aloës Socotrin. pulv., gr. 100; mastich. pulv., ros. gallic., āā gr. 50; aquæ, q. s. to form 100 pills; Ph. U. S.). Mastich is added to prevent the too ready solution of the aloes in the gastric and intestinal fluids, so that it is long in operating as a laxative. One is usually taken before dinner as a dinner pill. It was introduced into the Ph. U. S. as a form for Lady Webster's pills. **P. al'oës et myr'rhæ** (Ph. U. S.), *Rufus's* or *Ruffus's pills, Common pills, Pills of aloes and myrrh* (aloës pulv., gr. 200; pulv. aromat., gr. 50; myrrh., gr. 100; syrup., q. s. to form 100 pills; Ph. U. S.); cathartic and emmenagogue; dose, gr. x–xx. **P. al'oës Socotri'næ**, *Pill of Socotrine aloes* (aloës Socotrin., ℈j; sapon. dur., ℈j; ol. myrist., f℥j; confect. ros., ℥j; or aloës Socot., ℈ij; sapon. dur., ℈j; ol. myrist. volatil., f℥j; confect. rosæ, ℈j); made into pills about same strength as pilulæ aloës (Ph. U. S.). **P. al'oës cum zingib'ere**, *Pills of aloes and ginger* (aloës hepat., ℈j; rad. zingib., ℥j; sapon. Hispan., ℥ss; ol. ess. menthæ pip., ℥ss); in habitual costiveness; dose, gr. x to xx. **P. aloët'icæ cum myr'rhâ**, pilulæ rhei compositæ. **P. aloët'icæ cum sapo'ne**, pilulæ aloës. **P. amarocathar'ticæ**, pilulæ ecphracticæ. **P. ammoniure'ti cu'pri**, *Pills of ammoniuret of copper* (ammoniur. cupri, gr. xvj; micæ panis, ℈iv; aquæ carbonatis ammoniæ, q. s.; beat into a mass and divide into 32 pills); tonic and antispasmodic in epilepsy, etc.; dose, one pill twice daily, and gradually increased. **P. An'glicæ**, pills containing opium, 1 part; aloes and gum arabic, 6 parts; syrup of saffron, q. s. **P. an'te ci'bum** (pills before food), P. aloës et kinæ kinæ. **P. antibilio'sæ** (extract of colocynth, ℥ij; resin of jalap, ℥j; almond soap, ℥iss; guaiac, ℥iij; emetic tart., gr. viij; oils of juniper, caraway, and rosemary, āā iv drops; syrup of buckthorn, q. s. to form 64 pills); dose, two or three. **P. antiherpet'icæ**, pilulæ hydrargyri submuriatis comp. **P. antihyster'icæ**, P. galbani compositæ. **P. antimo'nii compos'itæ** (Ph. U. S.), P. hydrargyri submuriatis compositæ. **P. antiscrophulo'sæ**, (scammon. pulv., hydrarg. sulphur. nigr., āā ℈ij; antimonii oxidi albi, milleped., sapon. amygdalin., āā ℥iij; extract. glycyrrh., ℈v; make into a mass); dose, gr. iv. to xx. **P. antispas'ticæ**, P. galbani compositæ. **P. asafœ'tidæ** (Ph. U. S.), *Asafœtida pills* (assafœtid., gr. ccc; saponis., gr. c; beat with water so as to form a mass, to be divided into 100 pills). **P. asafœ'tidæ compos'itæ**, P. galbani compositæ. **P. Asiat'icæ**, *Asiatic* or *Tanjore pills* (acid. arsenios., gr. lv; piper. nigr. pulv., ℥ix; acaciæ, q. s. ut fiant pil. 800). Each pill contains about one-fifteenth of a grain of arsenious acid. Employed in India for the cure of syphilis and elephantiasis. **P. balsam'icæ** (milleped., ℥xviij; gum ammon., ℥xj; acid. benzoic., ℥vj; croci, balsami Peruv., āā ℥j; balsam. sulph. anisat., ℥vj); tonic, expectorant, and balsamic. **P. Barbaros'æ**, see *Barbarossæ pilulæ*. **P. benedic'tæ Fulleri**, P. de aloë et fœtidis. **P. calomel'anos compos'itæ**, P. hydrargyri submuriatis compositæ. **P. calomel'anos et o'pii**, *Pills of calomel and opium* (hydrarg. chlorid. mit., p. iij; opii, p. j; confect. ros., q. s.; to be divided into pills each containing two grains of calomel). **P. cambo'giæ compos'itæ**, *Pilula cambogiæ compositæ* (Ph. Br.), *Gamboge pills, Compound pills* (cambogiæ, aloes Barbad., pulv. cinnam. comp., āā ℈j; saponis dur., ℈ij; syrup, q. s.; Ph. B.); cathartic; dose, gr. v–x. **P. cathar'ticæ compos'itæ** (Ph. U. S.), *Compound cathartic pills* (ext. colocynth. comp., gr. cxxx; abstract. jalapæ, hydrarg., chlorid. mit., āā gr. c; gambog., gr. xxv; to make 100 pills); two or three for a dose. **P. coc'chii**, P. aloës et colocynthidis. **P. coc'ciæ mino'res**, P. aloës et colocynthidis. **P. coc'cinæ**, P. aloës et colocynthidis. **P. col'chici et digita'lis**, P., Lartigue's. **P. ex colocyn'thide cum al'oë**, P. aloës et colocynthidis. **P. colocyn'thidis compos'itæ**, P. aloës et colocynthidis. **P. colocyn'thidis et hyoscy'ami**, *Pill* or *Pills of colocynth and henbane* (pil. colocynth. comp., ℥ij; ext. hyoscyam., ℈j; Ph. B.); dose, gr. v to gr. xx. **P. commu'nes**, P. aloës et myrrhæ. **P. coni'i compos'itæ**, *Pilula conii composita* (Ph. B.), *Compound pill of hemlock* (ext. conii, ℈iiss; ipecac., ℈ss; theriac, q. s.; Ph. B.); dose, gr. v-x. **P. copai'bæ**, *Pills of copaiba* (copaib., ℈ij; magnesiæ, recenter præpar., ℈j; to be divided into 200 pills); each pill contains nearly five grains of copaiba; two to six for a dose. **P. cu'pri ammonia'ti**, *Pills of ammoniated copper* (cupri ammon., p. j.; micæ panis, p. vj; liq. ammon. carbonat., q. s.); dose, one to six pills. **P. de cynoglos'so** (pulv. rad. cynogloss., semin. hyoscyam. alb., extract. opii vinos., āā ℥iv; pulv. myrrh., ℥vj; olibanı., ℥v; croci, castor., āā ℥iss; syrup. opii, q. s.); anodyne, in

cough, etc.; dose, gr. iv–viij. **P. depuran'tes,** depurative pills; P. hydrargyri submuriatis compositæ. **P. digita'lis et scil'læ,** *Pills of digitalis and squill* (digital., scillæ, āā p. j.; elect. aromat., p. ij); one or two pills for a dose. **P. ecphrac'ticæ,** P. de aloë et fœtidis. **P de extrac'to o'pii,** P. de cynoglosso. **P. fer'ri carbona'tis,** pilula ferri carbonatis (Ph. Br.), *Pill* or *Pills of carbonate of iron, Vallet's pills, Vallet's ferruginous pills* (ferri carbonat. saccharat., ℥j; confect. rosar., ℥ij); dose, gr. v to xv or more. **P. fer'ri compos'itæ** (Ph. U. S.), *Compound pills of iron* (myrrh., gr. cl; sodii carb., ferri sulph., āā gr. lxxv; syrup., q. s. to form 100 pills); tonic; dose, gr. x–xx. **P. fer'ri io'didi,** *Pills of iodide of iron, Blaucard's pills* (ferri redact., ℥j; iodi., gr. lxxx; glycyrrhiz., gr. l; sacchar., gr. l; extract. glycyrrhiz., gr. xij; acaciæ, gr. xij; aquæ, æther. fortior., balsam tolu, q. s. to make 100 pills); each pill contains of ferrous iodide 0.063 gm. or gr. j (Ph. U. S.). **P. fer'ri cum myr'rhâ,** P. ferri compositæ. **P. fer'ri sulpha'tis,** *Pills of sulphate of iron* (ferri sulph. exsicc., p. ij; ext. taraxac., p. v; conserv. rosæ, p. ij; glycyrrhiz., p. iij); dose, gr. v–xx. **P. fœ'tidæ,** P. galbani compositæ. **P. gal'bani compos'itæ** (Ph. U. S.), *Compound galbanum pill, Gum pill* (galban., myrrh., āā gr. cl; asafœtidæ, gr. l; syrup., q. s. to make 100 pills); dose, two to four pills; antispasmodic and emmenagogue. The Ph. Br. has a formula for pilula asafœtidæ composita, compound pill of asafœtida, which was formerly called *Pilula galbani composita.* **P. gum'mi,** P. galbani compositæ. **P. gum'mi gut'tæ aloët'icæ,** P. cambogiæ compositæ. **P. gummo'sæ,** P. galbani compositæ. **P. de gut'tâ gaman'drâ,** P. cambogiæ compositæ. **P. ex helleb'oro et myr'rhâ,** *Pills of hellebore and myrrh* (ext. helleb. nig., myrrh., āā ℥j; fol. cardui Benedict., ℥iij); tonic and emmenagogue. In dropsical, cutaneous, and verminous affections; dose, gr. iv–viij. **P. hydrago'gæ,** P. cambogiæ compositæ. **P. hydrago'gæ Bon'tii,** pilulæ aloës et cambogiæ. **P. hydrar'gyri,** *Mercurial* or *Blue pill, Blue mass, Pills of mercury;* for formula, see *Massa hydrargyri.* Antisyphilitic; mercurial; in large doses, purgative. The Ph. B. has a similar formula for pilula hydrargyri. A purgative pill, much prescribed by Mr. Abernethy, and called *Abernethy's pill,* consisted of pil. hydrarg., gr. x; jalap., gr. xx; syrup. rhamni., q. s. ut fiant pil. vj. Two were given at night, and the next morning a wineglassful of infusum sennæ. **P. hydrar'gyri chlo'ridi mi'tis,** *Pills of mild chloride of mercury, Calomel pills* (hydrarg. chlorid. mit., ℥ss; acaciæ, ℥j; syrup., q. s. ut fiant pil. 240); each pill contains one grain. **P. hydrar'gyri chlo'ridi et o'pii,** P. calomelanos et opii. **P. hydrar'gyri submuria'tis compos'itæ,** *Pilulæ antimonii compositæ* (Ph. U. S.), *Compound calomel pill, Compound pills of submuriate of mercury, Calomel pills, Red pill* (antimonii sulphurat., hydrarg. chlorid. mit., āā gr. xij; guaiac., syrup. fusc., āā gr. xxiv; divide into 24 pills); mercurial, diaphoretic, and alterative; dose, g. v to x. The Ph. B. has a formula for *Pilula hydrargyri subchloridi compositæ, Compound pill of subchoride of mercury.* **P. hydrar'gyri submuria'tis et o'pii,** P. calomelanos et opii. **P. de hydrar'gyro, scammo'nio, et al'oë,** vulgo **mercuria'les,** *Mercurial pills* (hydrarg. purif., ℥j; mellis, ℥xj; aloës Socot., scammon., āā ℥ij; macis, cinnam., āā ℥ij); uses same as the last, but they are more active; dose, gr. viij to xxx. **P. de hydrar'gyro muriat'ico mi'ti cum sul'phure stibia'to auranti'aco,** pilulæ hydrargyri submuriatis compositæ. **P. ipecacuan'hæ et o'pii,** *Pills of ipecacuanha and opium* (pulv. ipecac. et opii, p. iij; conserv. rosæ, p. j); one grain of opium in about thirteen grains. **P. ipecacuan'hæ cum scil'lâ,** *Pills* (or *Pill*) *of ipecacuanha with squill* (pulv. ipecac. comp., ℥iij; scillæ pulv., ammoniac. in pulv., āā ℥j; theriac., q. s.; Ph. B.); dose, gr. v to x. **P. mercuria'les,** P. hydrargyri; P. de hydrargyro, scammonio, et aloë. **P. myrrh'æ compos'itæ,** P. galbani compositæ. **P. opia'tæ,** P. opii (Ph. U. S.), *Opiate pills, Common night pills, Anodyne pills* (opii, gr. c.; sapon, gr. xxv; to be made into 100 pills); each pill contains a grain of opium. **P. ex ox'ido stib'ii et hydrar'gyri sulphure'to ni'gro compos'itæ,** pilulæ antiscrophulosæ. **P. phos'phori** (Ph. U. S.) (phosphorus, 0.06 gm.; althæa, 5.20 gm.; acacia, 1.30 gm.; glycerin, 2.60 gm.; water, 1.30 gm.; chloroform, 3.20; balsam of Tolu, q. s.; ether, q. s., 100 pills). **P. plum'bi opia'tæ, P. plum'bi cum o'pio** (Ph. Br.), *Opiate pills of lead, Pill of lead and opium* (plumb. acetat., gr. xxxvj; opii, gr. vj; conserv. rosæ, gr. vj; to be made into four-grain pills); dose, gr. ij–iv. **P. qui'niæ sulpha'tis,** *Pills of sulphate of quinia* (quin. sulph., gr. xxiv; mel. despumati, gr. xiv; to be made into 24 pills; Ph. U. S); each contains a grain of the sulphate of quinia. The Ph. Br. has a formula for *Pilula quiniæ, Pill of quinine.* **P. resolven'tes cum mercu'rio,** P. hydrargyri submuriatis compositæ. **P. de rhabar'baro,** pilulæ rhei compositæ. **P. rhe'i** (Ph. U. S.), *Pills of rhubarb* (rhei pulv., gr. ccc; saponis pulv., gr. c; to be made into 100 pills). A good *dinner* or *stomachic pill* is made of rhubarb, gr. ij; capsicum, gr. j; dose, two or three before dinner. **P. rhe'i compos'itæ** (Ph. U. S.), *Compound rhubarb pills* (rhei, gr. cc; aloës purificat., gr. cl; myrrh, gr. c; ol. menthæ pip., gr. x; to make 100 pills); laxative and stomachic; dose, gr. x to xx. The Ph. Br. has a formula for *Pilula rhei composita,* compound rhubarb pill. **P. rhe'i et fer'ri,** *Pills of rhubarb and iron* (ferri sulph. exsiccat., p. iv; ext. rhei, p. x; conserv. rosæ, p. v; make into five-grain pills); dose, as tonic and laxative, two or three pills. *Griffitts' pills,* so called after Dr. S. P. Griffitts of Philadelphia, who prescribed them as a tonic aperient, were formed as follows: rhei pulv., ℥iss; ferri sulphat., ℥ss; saponis, ℈ij; aquæ, q. s. to make 40 pills; dose, three or four at bedtime. **P. Ru'fi,** p. aloës et myrrhæ. **P. saluta'riæ,** see *Pilulæ hydrargyri submuriatis compositæ.* **P. sapona'ceæ,** P. saponis cum opio. **P. sapo'nis compos'itæ,** P. saponis cum opio. **P. sapo'nis cum o'pio,** *P. saponaceæ* or *saponis compositæ, Pilula saponis composita* (Ph. U. S.), *Pills of soap and opium, Compound pill of soap* (opii, ℥ss; sapon. dur., ℥ss; glycerin, q. s.); five grains contain one of opium. The Ph. Br. has a formula for *Pilula saponis composita,* compound pill of soap. **P. scammo'nii compos'ita,** *Resin of scammony* (resin of jalap, curd of soap, āā ℥j; strong tincture of ginger, f℥j; rectified spirit, f℥ij; evaporate); dose, gr. v–xv. **P. scil'læ,** P. scillæ compositæ. **P. scil'læ compos'itæ** (Ph. U. S.), *Compound squill pills, Compound pills of squill* (scillæ, gr. xij; zingib. pulv., ammoniac pulv., āā gr. xxiv; saponis pulv., gr. xxxvj; syrup, q. s.; divide into 24 pills; Ph. U. S.); expectorant and diuretic; dose, gr. x to xx. The Ph. Br. has a formula for *Pilula scillæ composita,* compound squill pill. **P. scil'læ cum zingib'ere,** P. scillæ compositæ. **P. scillit'icæ,** P. scillæ compositæ. **P. ex stib'io et hydrar'gyro,** P. hydrargyri submur. compos. **P. stomach'icæ,** P. aloës et kinæ kinæ. **P. strych'niæ,** *Pills of strychnia* (very pure strychnia, gr. ij; conserve of roses, gr. xxx; make into 24 pills). Each pill contains one-twelfth of a grain of strychnia. **P. sty'racis or sty'racis compos'itæ,** *Storax pills* (styracis pur., ℥vj; opii, croci, āā ℥ij). Five grains contain one of opium. **P. sublingua'les,** hypoglottides. **P. de terebin'thinæ,** *Turpentine pills,* made of turpentine boiled in three times its weight of water, until, when thrown into cold water, it forms a soft paste having the properties of turpentine and administered in gleet, etc. **P. Theba'icæ,** P. opiatæ. **P. ton'icæ,** P. ex helleboro et myrrhâ.

Pil'ular (*pilula,* pill). Relating or appertaining to pills, as a pilular mass, a pilular form, etc.

Pilum, pe'lum. Pestle. Wooden, iron, bell-metal, marble, agate, porcelain, or glass instrument for beating or dividing substances in a mortar.

Pi'lus. Capillus; caul; hair.

Pimeladenes, pim-el-ad'en-ees (*pimele,* fat, *aden,* gland). Sebaceous glands.

Pim'ele. Fat.

Pimelecchysis, pim-el-ek'kis-is (*pimele, ekchusis,* pouring out). Pimelorrhœa.

Pimelicus, pim-el'ik-us. Fatty.

Pimelitis, pim-el-e'tis. Inflammation of the adipose tissue.

Pimelodes, pim-el-o'dees. Fatty.

Pimeloma, pim-el-o'mah. Fatty swelling.

Pimelopterygium, pim-el-o-ter-ij'e-um (*pimele, pterugion*, small wing). Fatty outgrowth or tissue of conjunctiva.

Pimelorrhœa, pim-el-or-rhe'ah (*pimele, rheo*, to flow). Morbid discharge or disappearance of fat.

Pimelorthopnœa, pim-el-or-thop-ne'ah (*pimele, orthos*, upright, *pneo*, to breathe). Dyspnœa, practicable only in the erect attitude, owing to fat.

Pimelosis, pim-el-o'sis. Conversion into or formation of fat, as fatty degeneration of the liver. **P. hepat'ica**, adiposa hepatica; see *Pimelosis*. **P. nim'ia**, see *Polysarcia*.

Pimeluria, pim-el-u're-ah (*pimele, ouron*, urine). Fatty urine.

Pimenta, pim-en'tah. See *Myrtus pimenta*.

Pimen'tæ bac'cæ. See *Myrtus pimenta*.

Pimentelia, pim-en-tel'e-ah. Tree, species of Cinchoneæ, bark of which is astringent.

Pimen'to (S. *pimienta*, pepper). See *Myrtus pimenta*.

Pimiacula, pim-e-ak'u-lah. Lips of the vulva.

Pimpernel (pim'per-nel), **blue** (see *Pimpinel*). Scutellaria laterifolia. **P., red**, Anagallis arvensis. **P., scarlet**, Anagallis arvensis. **P., water**, Veronica beccabunga.

Pimpilim, pim'pil-im. Piper longum.

Pimpinel, pim'pin-el (*bipinella* or *bipinula*, from the double pennate order of its leaves). See *Pimpinella*. **P., Ital'ian**, Sanguisorba officinalis.

Pimpinel'la al'ba. P. saxifraga. **P. angelicæfo'lia**, Ligusticum podagraria. **P. ani'sum**, *Anise plant, Water anise*, ord. Umbelliferæ. Native of Egypt. Fruit, *Anisum* (Ph. U. S.), *Semina anisi, Aniseed*, have an aromatic odor and a sweetish, warm, grateful taste; are carminative; used in dyspepsia and in tormina of infants. Dose, gr. xv to ʒj, bruised. The oil—*Oleum anisi*—is officinal; dose, gtt. v to xv. Most of the oil used in this country under the name of *Oil of anise* is said to be obtained from *Illicium anisatum* in China. **P., great'er**, P. magna. **P. hirci'na**, P. saxifraga. **P. laterifo'lia**, Sion ammi. **P. mag'na**, *Greater pimpinella;* root has been extolled as diuretic and resolvent, as well as in erysipelatous ulceration, tinea capitis, rheumatism, etc. **P. ma'jor**, P. magna. **P. ni'gra**, P. magna. **P. nos'tras**, P. saxifraga. **P. officina'lis**, Sanguisorba officinalis. **P. ru'bra**, P. magna. **P. saxif'raga**, *Saxifrage, Burnet saxifrage;* root has an unpleasant smell, and hot, pungent, bitterish taste; is used in medicine.

Pimpinellin, pim-pin-el'lin. Crystalline acid principle contained in Pimpinella saxifraga.

Pim'ple. Papula. **P., Amboy'na**, disease resembling syphilis, epidemic in the island of Amboyna in the early part of the 18th century. **P., goose**, see *Horrida cutis*. **P. mi'te**, steatozoon folliculorum.

Pim'pled. Papulose.

Pim'ples, mag'got. Term given by the laity to comedones and acne punctata.

Pin (perhaps from *pinnum*, low Latin, or from *spina*, or from Gael. *pin*). Steel or brass instrument, pointed at one extremity and having a head at the other; used in surgery to fix rollers and dressings, and occasionally in sutures. **P. bone**, ischion. **P. and web**, caligo; pterygion. **P. worm**, oxyuris vermicularis.

Pinacoline, pin-ak'ol-een. Liquid derived from pinacone.

Pinacone, pin'ak-own. Alcohol or glycol with two atoms.

Pinalik (pin-al'ik) **ac'id.** Valeric acid.

Pinastellum, pin-as-tel'lum (*pinus*). Peucedanum.

Pinaster, pin-as'ter (*pinus*). Pinus sylvestris.

Pince-cystitome (F.), pans-sis'te-tom. Instrument employed in operations on the eye for removing flap of capsule of lens.

Pincers, pin'sers. Forceps.

Pincette, pin-set'. Forceps.

Pinched. Epithet applied to the face when the features are contracted or shrunken, as in violent abdominal affections or during intense pain.

Pinckneya pubens (pink-ne'a pu'bens) or **pubes'cens.** *Georgia bark, Bitter bark, Florida bark, Fever tree.* Used in intermittents; a powerful bitter.

Pin'dars. Arachis hypogea.

Pine. Pinus. **P., aphernous'li**, Pinus cembra. **P. ap'ple**, Bromelia ananas. **P., ground**, Lycopodium complanatum. **P., ground, stink'ing**, Camphorosma Monspeliaca. **P., loblol'ly**, Pinus tæda. **P., moun'tain**, see *Pinus mughos*. **P., mug'ho**, see *Pinus mughos*. **P., prince's**, Pyrola umbellata. **P., sap, Amer'ican**, Hypopitys lanuginosa. **P., stone**, Pinus pinea. **P. su'gar**, see *Arrow root*. **P., yel'low**, Pinus palustris.

Pinea, pin'e-ah. Pinus pinea.

Pineal, pin'e-al (*pinea*, a pine cone). Resembling a pine cone. **P. gland**, *Cerebral epiphysis*. Small body of conical shape, pale red or grayish color, and soft consistency, situate between the fornix and the tubercula quadrigemina. It almost always contains sabulous particles, sabulum conarii, brain-sand, pineal sand. When these are grouped together over the base of the gland, they form the acervulus cerebri of Sömmering, acervuli or lapilli glandulæ pinealis. From its anterior parts arise two medullary striæ, which proceed over the posterior commissure, coast along the optic thalami, and unite at the anterior pillar of the fornix, habenæ, habenulæ, or reins of the pineal gland—pedunculi conarii; see *Peduncles of the pineal gland*. The uses of the pineal gland are unknown; some comparative anatomists have regarded it as a rudimentary eye. Descartes supposed it to be the seat of the soul. **P. sand**, see *Pineal gland*.

Pine'apple. Ananas sativa.

Pinei (pin'a-e) or **Pineoli**, pin-a'o-le. Nuts of Pinus pinea, eaten raw.

Pinellia (pin-el'le-ah) **wawræ.** Herb used by the Chinese in obstruction of the bowels.

Pinenchyma, pin-en'kim-ah (*pinax*, tablet, *enchuma*, infusion). Tissue consisting of cells of tabular shape.

Pine-needle oil. Oil distilled from the needles of Pinus sylvestris, resembling turpentine in medicinal effects, and used by inhalation in bronchial affections. A pine-needle bath is made from the branches and leaves of the pine or spruce tree. See *Pinus pinea*.

Pineum, pin'e-um. Pinea.

Pineus (pin'e-us) **pur'gans.** Jatropha curcas.

Pine'weed. Hypericum sarothra.

Pinguecula (pin-gwek'u-lah) or **Pinguic'ula** (*pinguis*, fat). Small, whitish-yellow tumor in the sclerotic conjunctiva and subjacent areolar tissue, close to the margin of the cornea on its nasal or temporal side; supposed, erroneously, to be of a fatty nature.

Pinguedinous, pin-gwed'in-us. Fatty.

Pinguedo, pin-gwa'do. Fat; adeps. **P. rena'lis**, nephridion.

Pinguefaction, pin-gwe-fak'shun (*pinguefacio*, to make fat). Process of being converted into fat.

Pinguicula vulgaris, pin-gwik'u-lah vul-gar'is (*pinguis*, fat). *Yorkshire sanicle*, ord. Lentibulaceæ. The unctuosity of this plant has caused it to be applied to chaps and as pomatum to the hair. Decoctions of the leaves are cathartic.

Pin'guid. Fatty.

Pin'guin. Bromelia pinguin.

Pinguitudo, pin-gwe-tu'do. Polysarcia adiposa. **P. cor'dis**, steatosis cordis.

Pinguoleum theobromatum, pin-gwo'le-um the-o-bro-mat'um (*theos*, god, *broma*, food). Oil of theobroma.

Pin'hole pu'pil. Condition of the pupil in typhus, in which it is so contracted as to resemble a pinhole. It indicates a dangerous brain complication.

Pinhones Indici, pin-ho'nees in'dis-e. Jatropha curcas.

Pinic (pi'nik) **acid.** Substance, $C_{20}H_{30}O_2$, contained in pine resin.

Pinidecussatio, pin-e-dek-us-sah'she-o. Piniform decussation.

Piniform decussation, pi'ne-form de-kus-sa'shun. Decussation of the pyramids. See *Corpora pyramidalia.*

Pinipicria, pin-e-pik're-ah. *Pinipicrin.* Amorphous powder with bitter taste; glucoside contained in Pinus sylvestris and Thuja occidentalis.

Pinitannic (pi-ne-tan'nik) **acid.** Powder of a yellowish-red color derived from Pinus sylvestris and Thuja occidentalis.

Pinite, pi'nite. Substance, crystalline and having very sweet taste and laxative properties, existing in exudation of Pinus Lambertiana.

Pink, Caroli'na. Spigelia Marilandica. **P., clove,** Dianthus caryophyllus and Pinguis oleum. **P., ground,** Silene Virginica. **P., In'dian,** Spigelia Marilandica. **P., wild,** Silene Virginica.

Pink-eye. Contagious epidemic of muco-purulent conjunctivitis in horses; exists also in man.

Pink'root. Spigelia Marilandica. **P., Demera'ra,** Spigelia anthelmia.

Pin'na (wing). Ala; pavilion of the ear. **P. mari'na,** see *Byssus.*

Pinnaculum (pin-nak'u-lum) (dim. of **Pinna**) **for'nicis guttura'lis** (pinnacle of the arch of the throat). Uvula.

Pinnæ (pin'næ) (pl. of **Pinna**) **hep'atis.** Lobes of the liver. **P. na'ris,** see *Nasus.*

Pinnula (pin'u-lah) (dim. of **Pinna**). Extremity of the wing of a bird.

Pin'nulæ hep'atis. Lobes of the liver.

Pinodes, pin-o'dees. Dirty.

Pins and Needles. Obtunding of local sensation from pressure on an important nerve, as of the leg. As the nerve-fibres gradually recover from the effect of the pressure, a pricking sensation is experienced, familiarly known as "pins and needles."

Pint. Octarius, symbol of which is O.

Pin'ta ([S.] *pintar,* to paint). *Blue stain.* Disease prevailing in Mexico, a variety of pityriasis versicolor or chloasma.

Pinus abies, pe'nus ab'e-ees. *Norway spruce fir, Yew-leaved fir;* ord. Coniferæ. Tops are used in making *Spruce beer. Essence of spruce, Essentia abietis,* a fluid extract prepared by decoction from the twigs of this species of fir, is used for this purpose. This fir affords the Burgundy pitch and common frankincense. 1. *Burgundy* or *White pitch, Pix Burgundica* (Ph. U. S. and Br.). Prepared concrete juice of close consistency, rather soft, of reddish-brown color, and not unpleasant smell. It is very adhesive to the skin, and consequently forms excellent plasters. 2. *Abietis resina, Common frankincense, Resin of the spruce fir.* It is solid, dry, brittle; externally, brownish-yellow; internally, whitish. Used in plasters like the last. See *P. picea.* **P. al'ba,** P. picea. **P. austra'lis,** yellow pine, native of the Southern United States; used for ship timber, and furnishes rosin and turpentine. **P. balsame'a,** balsam fir, the tree which affords the Canada balsam, Canada turpentine or balsam, balsam of fir. It is one of the purest turpentines, and has the common properties of those substances, and is employed by microscopists. **P. Canaden'sis,** *Abies Canadensis, Hemlock, Hemlock spruce;* abundant in Canada, Nova Scotia, and the more northern parts of New England, and found in the elevated and mountainous regions of the Middle States. The pitch obtained from it—*Pix Canadensis* (Ph. U. S.), *Canada pitch, Hemlock pitch*—is commonly known under the name hemlock gum. **P. can'dicans,** P. picea. **P. cem'bra,** *P. montana, Apherncusli pine,* yields an agreeably scented turpentine—the *Carpathian balsam, Balsamum carpathicum, Briançon turpentine.* The nuts, *Cembro nuts, Nuclei cembræ,* have an eatable kernel and yield oil. The shoots yield Riga balsam by distillation. **P. damar'ra,** *Agathis damarra,* grows in the East India Islands. The juice speedily concentrates into very hard resin, the damarra turpentine, which is used for fine microscopic preparations. Cowrie or cowdie resin is procured, by incision, from Damarra australis in New Zealand. **P. excel'sa,** P. abies. **P. Gal'lica,** P. picea. **P. Lambertia'na,** of Oregon and California. The exudation from this tree, pinit, a crystallizable sugar resembling manna, is eaten. **P. la'rix** or **La'rix Europæ'a,** *Abies larix, Larix, L. communis, Larch.* From this tree exudes *Oremberg gum, Briançon manna.* It also yields, by boring, *Common Venice turpentine.* It is usually thinner than the other sorts of turpentine. **P. Monta'na,** P. cembra. **P. mu'ghos,** *Mountain* or *Mugho pine, Pinus pumilio.* From the extremities of the branches exudes the *Resina strobilina* of the Germans, or *Hungarian balsam.* It is also obtained by expression from the cones. By distillation the Hungarian balsam affords the Krumholz oil. **P. palus'tris,** P. Australis; see *Pinus sylvestris.* **P. pic'ea,** *European silver fir tree.* Strasburg turpentine is obtained from this tree. **P. pinas'ter,** see *Pinus sylvestris.* **P. pi'nea,** *Stone pine.* The nuts, *Zirbel nuts, Pine nuts,* are eaten raw or preserved like almonds, and are also used in emulsions. **P. pumil'io,** see *Pinus mughos.* **P. religio'sa,** of Mexico, yields turpentine. **P. sabinia'na,** native of California and Oregon; the seeds are eaten by the Indians. **P. sati'va,** P. pinea. **P. stro'bus,** white pine of the North-western United States. **P. sylves'tris,** *Scotch fir.* This pine, as well as *P. maritima* (P. pinaster) and other species of Pinus, affords common turpentine and its oil, resin, tar, and pitch. 1. *Common turpentine of Europe, Terebinthina, Horse turpentine, Bordeaux turpentine,* is obtained by wounding the tree in hot weather. Is used chiefly as dressing for wounds, etc. in horses, and for the distillation of oil (see *Oleum terebinthinæ*). White turpentine or common turpentine of America, terebinthina (Ph. U. S.), is produced chiefly from pinus palustris, yellow pine, and P. tæda, loblolly pine, and perhaps from other species inhabiting the Southern States. When the oil is distilled with water, yellow resin, *Rosin,* resina (Ph. U. S.), resina flava, is left, which is only used in the formation of ointments and plasters. If without the addition of water, the residuum is common resin or colophony. 2. When the cold begins to check the exudation of the common turpentine, part of it concretes in the wounds, called *White* rosin, *Resina alba,* when hardened after long exposure to the air. 3. When the old trees are subjected to distillation in a coarse manner, tar is obtained—*Hygropissos, Pissa, Pix cedria* or *liquida, Pix liquida,* used in skin diseases; *Resina pini empyreumatica liquida, Terebinthina empyreumatica, Alchitram, Alchitura, Cedria, Tarwater,* infusion of tar, infusum picis (Ph. U. S.), made by mixing a pint of tar with four pints of water, shaking the mixture frequently during twenty-four hours. Then pour off the infusion and filter through paper. It is employed chiefly in pulmonary and bronchial affections, and the vapor has been used in pthisis and other diseases of the lungs; externally detergent. 4. Common pitch, black pitch, stone pitch, is obtained by inspissating tar, and is used only as a resolvent in plasters. **P. tæ'da,** see *P. sylvestris.* **P. uber'rima,** Pinus picea. **P. vulga'ris,** P. picea.

Pin-worm. Ascaris vermicularis.

Pi'ony. Pæonia.

Piorthopnœa, pe-or-thop-ne'a (*pion,* fat, *orthos,* straight, *pneo,* to breathe). Dyspnœa from impracticability of breathing except in the erect attitude, from excess of fat.

Pioscope, pe'o-skope (*pion,* fat, *skopeo,* to see). Shallow disk on which are strips of differently colored oil-paint from white to dark gray, to determine the quality of cream and milk.

Pioxæmia, pe-ox-e'me-ah (*pion,* fat, *haima,* blood). Piarhæmia.

Pipe'plant. Monotropa uniflora.

Piper, pe'per (pepper). See *Piper nigrum* and other varieties. **P. adun'cum,** species of tropical America. **P. al'bum,** *White pepper;* black pepper freed from its cuticle. **P. angustifo'lium,** matico. **P. aromat'icum,** P. nigrum. **P. be'tel,** betel. **P. Brazilia'num,** Capsicum annuum. **P. calecut'icum,** Capsicum annuum; P. siriboa. **P. Capen'se,** a South African species, has properties of the peppers, and in appearance and taste resembles cubebs, possessing similar virtues. **P. carpun'ya,** small tree of Chili

and Peru; leaves are used in disorders of digestion. **P. caryophylla'tum**, see *Myrtus pimenta*. **P. cauda'tum**, P. cubeba. **P. Chi'apæ**, see *Myrtus pimenta*. **P. Clu'sii**, species of tropical Africa yielding Ashantee pepper. **P. cube'bæ**, *Cubeba* (Ph. U. S.), is the unripe fruit of Cubeba officinalis, called Piper cubebæ (Ph. Br.); native of Java and Guinea. The odor of these berries, *Cubeb* or *Tailed pepper*, is aromatic; taste at first cooling, afterward pungent. The active principle is an essential oil—oleum cubebæ, oil of cubebs—officinal in the Ph. U. S. and Br. The properties of the cubeb are stimulant and purgative. Used chiefly in gonorrhœa. Dose, gr. x to ʒj, in powder, three or four times a day; of the volatile oil, 10 to 20 drops. Turkey-yellow berries—the dried fruit of Rhamnus catharticus—are often substituted for cubebs. **P. elonga'tum**, matico. **P. Guineen'se**, Capsicum annuum. **P. Hispan'icum**, capsicum. **P. In'dicum**, Capsicum annuum. **P. Jamaicen'se**, see *Myrtus pimenta*. **P. lon'gum**, *Long pepper;* berries consist of the unripe fruit dried in the sun; small round grains; stimulant, carminative, and tonic, like the other peppers; dose, gr. v to ʒj. **P. Lusitan'icum**, Capsicum annuum. **P. methys'ticum**, see *Ava*. **P. mura'le**, sedum. **P. ni'grum**, *Black pepper*, *Piper* (Ph. U. S.), is the unripe fruit dried in the sun; virtues same as the other peppers. The active principle is piperia, piperina, or piperine; see *Piperina*. **P. odora'tum Jamaicen'se**, see *Myrtus pimenta*. **P. officina'rum**, native of the Indian Archipelago. **P. Tabas'cum**, see *Myrtus pimenta*. **P. Tur'cicum**, Capsicum annuum.

Piperaz'idine. Piperazine.

Piperazine, pi-per-a'zeen. $C_4H_{10}N_2$. Substance formed by the action of ammonia on ethylene bromide or chloride; very soluble. It is said to dissolve uric acid with great facility; hence has been employed in gouty diseases, gouty concretions, etc. It has been proposed to inject a solution into the bladder for dissolution of calculi. Piperazine is a diethylenediamine. Dose, gr. v-viij.

Pi'percoorn. Form of epidemic typhus fever was so called which prevailed in Holland during a portion of the sixteenth century.

Pipe'ria. Piperina.

Piperidine, pip-er'id-een. Volatile alkaloid produced by action of alkali on piperine.

Piperina, pip-er-e'nah (Ph. U. S.). $C_{17}H_{19}NO_3$. Resinous substance obtained from the Piper nigrum, in which a part of the virtues of the pepper reside. Employed, like quinine, in intermittents; also laxative.

Piperine, pi'per-een. Piperina.

Piperis, pip'er-is. Piper.

Piperoid, pip'er-oid (*piper*, *eidos*, resemblance). A yellow syrupy mass obtained by exhausting ginger root by ether. It is soluble in ether, alcohol, and oils, and given in tincture, sugar, lozenge, or syrup where ginger is indicated. **P. of gin'ger**, oleoresina zingiberis.

Pi'peronal. $C_8H_6O_3$. Derivative of piperine, piperic acid being first obtained and oxidized. Antiseptic and antipyretic. Dose, 15 grains.

Piperopastus, pip-er-o-pas'tus (*piper*, *passo*, to strew). Strewed with pepper—socks, for example, where it is desirable to excite the surface of the feet.

Piperyluria, pip-er-il-u-re'ah. Alkaloid made artificially.

Pipette, pip-et' (a small pipe). In pharmacy, a small tube terminating in a perforated point, which is passed into a liquid to be removed. The liquid is drawn into the tube by applying the mouth to the free extremity.

Pipinna, pip-in'nah. Small penis.

Pipitzahoic acid, pip-its-a-ho'ic as'id. Hydroxyquinone derived from root of Trixis fruticosa.

Pipmenthol, pip'men-thol. Menthol derived from oil of peppermint.

Pip'peridge bush. See *Oxyacantha Galeni*.

Pipsissewa, pip-sis'e-wa. Pyrola umbellata. **P., spot'ted**, Pyrola maculata. **P., white**, Pyrola maculata.

Piptadenia (pip-tad-en'e-ah) **peregri'na** (*pipto*, to fall, *aden*, gland). South American niopo tree, where the natives utilize the seeds for making a highly intoxicating snuff. **P. rig'ida**, tree of South America from which gum is obtained.

Piptonychia, pip-to-nik'e-ah (*pipto*, to fall, *onux*, nail). Falling off of the nails.

Piptostegia (pip-to-stej'e-ah) **opercula'ta.** See *Batata de purga*. **P. piso'nis**, Convolvulus Mechoacan.

Piqueria (pik-a're-ah) **triner'va.** Eupatorium febrifugum, shrub of Mexico possessing stimulant and febrifuge virtues.

Pirennia Abyssinica, pir-en'ne-ah ab-is-sin'ik-ah. Order Phytolaccaceæ; native of Abyssinia; root is purgative and emetic; fruits are used as tæniafuge.

Piriformis, pir-e-for'mis. Pyramidalis.

Pirogoff's (pir'o-goff's) **opera'tion.** Mode of amputating at the ankle, proposed by Pirogoff of Russia, which retains a portion of the calcaneum to impart greater length and rotundity to the stump.

Pirus, pir'us. See *Pyrus malus*.

Pisciculus, pis-sik'u-lus (dim. of **Piscis**, fish), Biceps flexor brachii.

Piscidia erythrina, pis-cid'e-ah er-e-thre'nah (*piscis*, fish, *cædo*, to kill). *Jamaica dogwood;* ord. Leguminosæ. Small branching tree, common in most of the West India Islands; Diadelphia decandria of Linnæus; used in the West Indies to poison fish. It appears to be an acronarcotic. The fluid extract has been used as an application in hemorrhoids, burns and scalds, in painful conditions of tooth-structures, etc.; and internally in neuralgias of various kinds, as a substitute for opium.

Piscidin, pis'sid-in. Resinoid derivative from Piscidia erythrina, but not fully recognized as its active principle.

Pisci'na (fish-pond). Place for bathing.

Piscivorous, pis-siv'o-rus (*piscis*, fish, *voro*, to eat). *Ichthyophagous*. Feeding or subsisting on fish.

Pisiform, pis'e-form (*pisum*, pea, *forma*, shape). Pea-like; pea-shaped. See *Pisiforme*.

Pisiforme (pis-e-form'e) **os.** *Os lenticulare*. Fourth bone of the first row of the carpus; is round, and gives attachment to the tendon of the cubitalis anterior and to the anterior transverse ligament of the carpus; is articulated, behind, with the os cuneiforme.

Pi'so. Mortar.

Piso-hama'tus. Piso-uncinatus.

Pisonia (pis-o'ne-ah) **fra'grans.** Plant of the West Indies possessing emetic properties. **P. morindifo'lia**, Indian lettuce tree; leaves are employed in elephantiasis.

Piso-uncinatus, pe'so-un-sin-at'us (*pisum*, pea, *uncinatus*, barbed). Muscle (very rare) replacing the ligamentum piso-hamatum.

Pis'sa. Pitch. See *Pinus sylvestris*.

Pissasphaltus, pis-as-fal'tus (*pissa*, *asphaltos*, bitumen). *Pissasphaltum*, *Mineral pitch*. Thicker kind of petroleum or rock oil; synonymous with glutinous bitumen, Malta bitumen, and mineral tar.

Pisselæum, pis-sel-e'um (*pissa*, *elaion*, oil). *Oleum picinum*. Oily matter obtained from boiling pitch, and used for the same purposes as tar. **P. In'dicum**, petroleum.

Pisseros, pis-sa'ros (*pisseros*, made of pitch). Ancient name of a cerate prepared of olive oil, oil of roses, and dried pitch. It was also called Ceratum picatum and C. tetrapharmacum.

Pissites, pis-se'tees (*pissites*). Wine prepared from tar and the must of the grape.

Pissocopy, pis-sok'o-pe (*pissa*, *kopto*, to strike). Depilation with plaster made of pitch.

Pissosis, pis-so'sis (*pissa*, pitch). See *Depilatory*.

Piss'weed. Anthemis cotula.

Pistachio (pis-tah'she-o) **nuts** (*pistakia*). Pistacia vera. See *Arachis hypogea*.

Pista'cia Chi'a. P. lentiscus. **P. lentis'cus**, *Mastich tree;* ord. Terebinthaceæ. The wood of this tree abounds with the resinous principles of mastich. It yields by incision the resin *Mastich*, *Mastiche* (Ph. U. S.

and Br.), *Mastix*, which has an agreeable smell when heated; soluble in ether, partly so in alcohol; is stimulant. It is sometimes also employed to stop holes in carious teeth. **P. Narbonen'sis**, P. lentiscus. **P. reticula'ta**, P. lentiscus. **P. terebin'thus**, *P. Narbonensis, Turpentine tree, Hab-el-ka-limbat;* tree which affords the Cyprus turpentine, resina terebinthi, terebinthina vera or Chia or Cypria. This substance is classed among the resins; it is procured by wounding the bark of the trunk. The best Chio turpentine is of about the consistence of honey, very tenacious, clear, and almost transparent; of a white color, inclining to yellow, and of a fragrant smell; moderately warm to the taste, but free from acrimony and bitterness, resembling in virtues the other turpentines. **P. ve'ra** (*pistake*), name of the tree which affords the *Pistachio nuts.* These have a sweetish, unctuous taste, resembling that of sweet almonds. Like these, they afford an oil and are used in emulsions.

Pistation, pis-ta'shun (*pisto*, to pound). Act of bruising in a mortar soft and parenchymatous substances.

Pistia, pis'te-ah. Water-lettuce; tropical herb, leaves possessing demulcent and refrigerant, and the root emollient and laxative, properties.

Pistillum, pis-til'lum (*pisto*, to pound). Mortar.

Pistolochia, pis-to-lok-e'ah (*pistos*, faithful, *locheia*, parturition). Aristolochia pistolochia.

Pistoriensis (pis-tor-e-en'sis) **glad'ius** (*Pistoria*, now *Pistoia*, in Tuscany). Bistoury.

Pisum, pe'sum (*pison*). *P. sativum, Pea, Garden pea.* Seeds of the pea, ord. Leguminosæ, are farinaceous, and, when dried, not easy of digestion.

Pit. Depression remaining in œdematous tissue after pressure by the finger has ceased; pock-mark. **P., na'sal**, two indentations on anterior vesicle of cerebrum, giving rise to nasal fossæ. **P. of the stom'ach**, depression at the anterior part of the abdomen, below the xiphoid cartilage. **P., tear**, see *Sinus, lacrymal.*

Pitaya (pit-a'yah) **bark.** Bark of Cinchona pitaya, ord. Cinchonaceæ. Preferred in Colombia to any other. It contains a new vegetable alkali, to which the name *Pitayine* has been given.

Pitayine, pit-a'yin. See *Pitaya bark.*

Pitch (L. *pix*). Colophonia pissa. **P., birch**, see *Betula alba.* **P., black**, see *Pinus sylvestris.* **P., Bur'gundy**, see *Pinus abies.* **P., Can'ada**, see *Pinus Canadensis.* **P. cap**, see *Depilatory.* **P., com'mon**, see *Pinus sylvestris.* **P., hem'lock**, see *Pinus Canadensis.* **P., Jews'**, asphaltum. **P., min'eral**, pissasphaltum. **P. plas'ter**, see *Depilatory, Emplastrum picis.* **P., stone**, see *Pinus sylvestris.* **P., white**, see *Pinus abies.*

Pitch'er plant. Sarracenia purpurea.

Pith. Spinal cord or marrow; the marrow of bones. As a verb, to introduce an instrument into the cranial or spinal cavity of an animal and destroy the cerebrospinal axis.

Pithecolobium, pith-ek-o-lo'be-um (*pithekos*, ape, *lobion*, small lobe). Soap-bark tree of Malabar. Bark is employed in leprosy and cutaneous affections.

Pithyrinus, pith-ir-e'nus (*pituron*, bran). Term applied to a coarse bread made of flour not separated from the chaff.

Pittacium, pit-tah'se-um (*pitta*, pitch). Pitch plaster.

Pit'ting. Indentation or marking from disease, as small-pox; pock-mark.

Pittosis, pit-to'sis (*pitta*, pitch). See *Depilatory.*

Pittota, pit-to'tah. Medicines in which pitch is the chief ingredient.

Pituita, pit-u-it'ah. Mucus; phlegm. **P. na'rium**, nasal mucus. **P. unguis cati**, cat's-claw tree of tropical America, having an edible fruit; bark is applied externally in powders to ulcers, and given internally in fevers.

Pituitary, pit-u'it-a-re (*pituita*, phlegm). Concerned in the secretion of mucus or phlegm. A name given to several parts. **P. bod'y**, P. gland. **P. fos'sa**, sella turcica. **P. gland**, *Pituitary body;* a small, round body; the anterior portion is of a cineritious yellow hue, and the posterior, which is smaller, is whitish and pulpy. It occupies the sella turcica of the sphenoid bone. **P. mem'brane**, mucous membrane lining the nasal fossæ, and extending to the different cavities communicating with the nose. In the nasal fossæ the membrane appears formed of two layers, intimately united; the one in contact with the bone is fibrous, the other is free at one surface. The latter is a mucous membrane in which papillæ are not easily distinguishable, but which contains them, as well as a number of very small mucous follicles that open into the cavity of the nares. On penetrating the maxillary, frontal, sphenoidal, and ethmoidal sinuses the membrane becomes very thin, transparent, less vascular, and seems reduced to its mucous layer. The pituitary membrane receives the impression of odors by means of the expansion of the olfactory nerves upon it. This portion of it is at times alone called the olfactory membrane. It is the seat of smell.

Pituitous, pit-u'it-us. Consisting of, or resembling, or full of, mucus or phlegm. **P. fe'ver**, enteric fever.

Piturine, pit'u-reen. Alkaloid contained in Duboisia Hopwoodii, similar to, if not identical with, nicotine.

Pityre'nus (*piturenos*). See *Pithyrinus.*

Pityriasis, pit-e-re'as-is (*pituron*, bran). *Tetter, Dandruff, Dander.* Very superficial affection, characterized by irregular patches of thin scales, which repeatedly exfoliate and recur, but never form crusts or are accompanied with excoriations. It occurs under three or four varieties of form. See *Porrigo.* **P. al'ba**, same as pityriasis simplex. **P. cap'itis**, an erythematous desquamation of the head in infants and old persons. When accompanied with clots of sebaceous matter, as in infants, it is called *Seborrhœa furfuracea.* **P. lin'guæ**, partial coating of the tongue with white circular or semicircular spots, due to accumulation of epithelial cells. **P. macula'ta et circina'ta**, identical with pityriasis rosea. **P. ni'gra**, melasma. **P. ni'gricans**, dark discoloration of the skin, a form of chromidrosis. **P. pila'ris**, hypertrophied condition of epidermis about the orifice of the hair-follicles. Synonym of keratosis pilaris and lichen pilaris. **P. ro'sea**, herpes tonsurans (Hebra), form of dermatitis with pale-reddish, scaly, irregular or circular patches. **P. ru'bra**, synonym of dermatitis exfoliativa and pityriasis rubra essentialis; rare affection, usually chronic. **P. sim'plex**, scurfy condition of epidermis. **P. tabescen'tium**, seborrhœa. **P. versic'olor**, tinea versicolor.

Pityrisma, pit-e-riz'mah. Pityriasis.

Pityroïdes, pit-e-ro-e'dees (*pituron*, bran, *eidos*, resemblance). Furfuraceous.

Pityron, pit-e'ron (*pituron*, bran). Furfur.

Piv'oting. Operation of fastening a new crown upon the root of a tooth with a piece of gold wire called a pivot.

Pix (*pissa*, pitch). See *Pinus sylvestris; Sperm.* **P. abieti'na**, see *Pinus abies.* **P. abi'etis**, see *Pinus abies.* **P. al'ba**, see *Pinus abies.* **P. ar'ida**, see *Pinus abies* and *Pinus sylvestris.* **P. at'ra**, see *Pinus sylvestris.* **P. bru'tia**, brutia. **P. Burgun'dica**, see *Pinus abies.* **P. Canaden'sis**, see *Pinus Canadensis.* **P. ce'dria**, see *Pinus sylvestris.* **P. Græ'ca**, colophonia. **P. liq'uida**, see *Pinus sylvestris.* **P. nava'lis**, see *Pinus sylvestris.* **P. ni'gra**, see *Pinus sylvestris.* **P. sic'ca**, see *Pinus sylvestris.*

Placebo, plas-e'bo (*placebo*, 'I will please'). A medicine prescribed rather to satisfy the patient than with any expectation of its effecting a cure.

Placenta, plah-sen'ta (*plakous*, a cake). *P. uteri.* Soft, spongy, vascular body, adherent to the uterus, and connected with the fœtus by the umbilical cord. It is not in existence during the first period of the embryo state, but its formation commences perhaps with the arrival of the embryo in the uterus. It is generally considered to have two portions, one fœtal and the other maternal. The fœtal portion consists of highly vascular villi and tufts, containing the inosculating loops of the umbilical arteries and umbilical vein of

the fœtus. The maternal portion consists essentially of a large sac formed by the inner coat of the vascular system of the mother, into which the maternal blood is poured by the curling arteries of the uterus, and from which it is returned by the uteroplacental veins. The tufts and villi of the fœtal placenta are ensheathed by this inner coat of the maternal vascular system. The placenta is formed of several lobes or cotyledons, which can be readily distinguished from each other on the uterine surface, but toward the fœtal surface are confounded into one mass. When a lobe is so distinct from the rest as to form, as it were, a supplementary placenta, it is termed *placenta succenturiata*. The placenta is composed of the umbilical vessels, areolar tissue, and whitish, resisting filaments, which are vascular ramifications obliterated. Lymphatic vessels have also been presumed to exist in it; and nerves have been traced, proceeding from the great sympathetic of the fœtus. The veins of the placenta anastomose freely with one another, and give rise at its edge to a venous channel which runs around the whole circumference—the *placental sinus*. The umbilical cord usually arises from the centre of the placenta, but occasionally from its edge, when it is called *battledore placenta*. The placenta admits of the fœtal blood being shown, as it were, to that of the mother and undergoing requisite changes, and serves as the organ of circulation, respiration, and nutrition of the fœtus. The placenta is liable to inflammation, and also to fatty and calcareous degeneration. Animals which have no placenta—as the Marsupialia—are called *implacental* and *non-placental*. **Placen'ta, adhe'rent,** which is due to inflammation during pregnancy, adheres abnormally to the uterus. **P., bat'tledore,** see *Placenta*. **P. cruo'ris,** see *Blood*. **P., decid'uate,** P. in which the maternal part comes away entire at birth. **P., dis'coid** or **discoi'dal,** P. of defined and circular shape, as in woman. **P. febri'lis,** ague-cake. **P., fœ'tal,** portion of the placenta in which the umbilical vessels ramify. **P., incar'cerated,** see *Incarceration*. **P. margina'ta,** P. in which the chorion is so connected with its fœtal aspect that the edges of the placenta are left free. **P., non-decid'uate,** P. in which the maternal portion does not come away at delivery. **P. obla'ta,** P. prævia. **P. ob'via,** P. prævia. **P., polycotyl'edonary,** P. in which fœtal villi are arranged in distinct tufts. **P. præ'via** (*præ*, before, *via*, way), presentation of the placenta which gives rise to *unavoidable hemorrhage* from the uterus. The safety of the mother depends upon speedy delivery. **P. san'guinis,** blood-clot. **P. sple'nica,** see *Ague-cake*. **P. succenturia'ta,** see *Placenta*. **P. u'teri succenturia'ta,** decidua. **P., u'terine,** maternal portion of the placenta.

Placental, pla-sen'tal. *Placentalis*. Relating or appertaining to the placenta; possessed of a placenta, as a placental mammal. **P. dysto'cia** (*dus*, *tokos*, accouchement), difficult birth of placenta. **P. mur'mur** or **souffle,** a sound heard on auscultation of the uterus in pregnancy, supposed to be due to placental circulation. **P. phthi'sis,** wasting of the placenta from inflammation, gangrene, degeneration, etc. **P. si'nus,** see *Placenta*. **P. souffle,** sound heard on auscultation over the placenta, but due to pressure of the uterine tumor on the large vessels of the mother.

Placenta'lia. Mammals having a placenta.

Placentary, plah-sen'ta-re. Placental.

Placenta'tion. Formation of a placenta.

Placentitis, plah-sen-te'tis (*placenta*, *itis*). Inflammation of the placenta.

Placentula, plas-en'tu-lah (a little cake) (dim. of **Placenta**, a cake). Rudimental placenta; placenta of an abortion.

Placoid, plak'oid. Resembling a plate.

Placoïtis, plak-o-e'tis (*plakous*, placenta). Placentitis.

Placountitis or **Placuntitis,** plak-oun-te'tis (*plakous*, placenta, *itis*). Placentitis.

Placous, plak'us. A cake; hence the placenta.

Placuntechos, plak-unt-ek'os (*plakous*, placenta, *echos*, echo). See *Placental murmur*.

Placus (plak'us) **Chinen'sis.** Plant employed by the Chinese in applications to ulcers and in diseases involving skin provided with hair; the root is given in coughs.

Pladaroma, plad-ar-o'mah (*pladaroma*). Pladarosis.

Pladarosis, plad-ar-o'sis (*pladaros*, humid). Soft tumor on the eyelid, unaccompanied with redness or pain; thickening of the palbebral conjunctiva; trachoma.

Pladarotes, plad-ar-o'tees. Pladarosis.

Plaga, plag'ah. Wound; formerly any kind of wound or disease caused by violence. **P. ig'nis,** anthrax.

Plagiobolia, plag-e-o-bol'e-ah (*plagios*, to one side, *ballo*, to throw). Imperfect emission of sperm into the vagina; emission to one side, sometimes practised to render impregnation less probable.

Plagiocephalia, plag-e-o-sef-al'e-ah. See *Plagiocephalic*.

Plagiocephalic, plag-e-o-sef-al'ik (*plagios*, to one side, *kephale*, head). Having the skull twisted to one side; this oblique asymmetrical condition being called *plagiocephalia*.

Plague, plaig (*plege*, a blow, a stroke). *Pestis, P. Orientalis, Pest, Levant plague, Adeno-nervous fever, Septic* or *Glandular pestilence, The sickness*. Eminently malignant disease endemic in the Levant; frequently epidemic, and destroying at least two-thirds of those it attacks. A fever of the most aggravating kind, with affection of the lymphatic glands of the groins or axillæ and carbuncles. Its miasmata—it has been conceived—adhere to different organic textures, to woollen goods, clothing, and furniture, and may thus be transported to a considerable distance; but this is disputed. Period of incubation, two to seven days; typical attack begins with sudden prostration, headache, dizziness, and occasionally vomiting and diarrhœa; mean duration of the disease, six or seven days; some die in twenty-four hours, others not till ten or twelve days. Pathological anatomy has afforded little light with respect to it. Various means have been used for arresting it, but none have seemed to be pre-eminently distinguished. The great point is to watch the indications as they develop themselves, and to treat the case, in general, like one of typhus gravior. For preventing the importation and spread of the plague the quarantine laws were instituted; and when the disease has actually appeared a *cordon sanitaire* has been drawn around the infected district so as to prevent all communication. **P. of Antoni'nus,** severe febrile disease which prevailed in the Roman empire during the reign of Antoninus. **P. of Ath'ens,** febrile disease which raged at Athens during the Peloponnesian war, in the fifth century before the Christian era, a description of which is given in Thucydides. It was characterized by a cutaneous eruption, accompanied by small ulcerations, vomiting, affection of the respiratory organs, and diarrhœa. **P., black,** death, black. **P., cold,** severe form of congestive fever, seen in the Southern States. Bilious pneumonia, in which there is no reaction, has been also so called. **P. cross,** cross formerly affixed by the authorities to the door of a house in which there was plague. **P., great, of London,** last visitation, in London, of the plague, in 1665, the year before the great fire, which gave occasion to the rebuilding of a large portion of the city and to improved sanitary arrangements. On the 15th of September, Evelyn records the deaths of the preceding week at 5000, and in another week of September they reached nearly 10,000. **P., hunger,** fever, relapsing. **P., Pa'li,** malignant fever, greatly resembling plague, which prevailed in Rajpootana in 1836. **P. spot,** plague token. **P., swine,** hog cholera. **P. to'ken,** *Plague mark, Plague spot;* mark by which one struck with the plague was known. Perhaps the early stage of carbuncle in unfavorable cases.

Plagula, plag'u-lah (dim. of **Plaga**). Compress, pledget, splint.

Plain'tive. Lamenting; complaining.

Plaister, plas'tur. Plaster.

Plakous, plak'us. A cake; hence the placenta.

Planæa, plan-e'ah (*planus*, flat). Fourth stage of development in embryo.

Plananthus (plan-an'thus) **fastiga'tus.** Lycopodium selago. **P. sela'go**, Lycopodium selago.

Planaria (plan-ar'e-ah) **latius'cula** (*planus*, flat). Distoma hepaticum.

Planarthragra, plan-arth'rag-rah (*plane*, wandering, *arthron*, joint, *agra*, seizure). Gout (wandering).

Plancus, plan'kus (*planea*, plane, table). One the soles of whose feet are flat and devoid of the usual concavity.

Plan'e (*plane*, wandering). Plexus.

Plane of mastica'tion. Plane tangent to masticating surface of teeth of upper jaw. **P., me'sial**, see *Mesial*. **P. of regard'**, plane which contains lines of regard, and also point of fixation.

Planes of mo'tion. Planes in which the visual line is moved in motions of the eye.

Planesis, plan-a'sis. Wandering, as of the mind. Anxiety.

Planetes, plan-e'tees (*plane*, wandering). *Erratic.* Epithet given to diseases whose returns are irregular; especially intermittent fever.

Planetica (pla-net'e-kah) **arthri'tis.** Gout (wandering).

Planet-struck, plan'et-struk. The state of one suddenly stricken, without apparent cause, as if by the influence of the stars or planets, with apoplexy, paralysis, phrenitis, etc.

Planicus, plan'ik-us. Planetes.

Planipedes, plan-ip'e-dees (*planus*, flat, *pes*, foot). Steganopodes.

Planities (plan-ish'e-ees) **pe'dis** (*planus*, flat). Sole.

Planobolia, plan-o-bol'e-ah (*plane*, wandering, *ballo*, to throw). Imperfect emission of sperm into the vagina; emission to one side, sometimes practised to render impregnation less probable. See *Plagiobolia.*

Plano-concave, pla'no-kon'kave (*planus*, plane, *concavus*, concave). Plane on one side and concave on the other.

Plano-conical, pla'no-kon'e-kal (*planus*, *conicus*, conical). Plane on one side and conical on the other. In optics, a lens.

Plano-convex, pla'no-kon'veks. Plane on one side and convex on the other.

Planodia, plan-o'de-ah (*plane*, wandering, *hodos*, way). False passage, as from introducing the catheter.

Planomania, plan-o-man'e-ah. Insane desire to leave home and wander about.

Plant, aërial. Plant which is nourished solely by air. **P., dys'entery**, Oldenlandia globosa. **P., for'cible**, Bupleurum rotundifolium. **P., hu'mus**, saprophyte. **P., lit'mus**, Chrozophora tinctoria.

Plan'ta. Sole. **P. noc'tis**, hydroa, sudamina. **P. pe'dis**, sole. **P. pri'ma pe'dis**, tarsus.

Plantago, plan-tah'go (*planta*, sole, from resemblance of the leaves). *P. major, Great plantain, Waybread*, ord. Plantaginaceæ. The leaves have been said to be refrigerant, attenuant, substyptic, and diuretic. **P. aquat'ica**, Alisma plantago. **P. arena'ria**, European species. **P. corda'ta**, *Heartleaved plantain.* **P. coron'opus**, *Coronopodium, Plantago, Buckshorn plantain*, has similar properties. **P. isphaghu'la**, India; seeds are demulcent and astringent. **P. lanceola'ta**, *Ribgrass.* **P. ma'jor**, plantago. **P. nit'ida**, P. psyllium. **P. psyl'lium**, *P. nitida, Branching plantain, Fleawort;* seeds have a nauseous, mucilaginous taste. The decoction of the seeds is recommended in hoarseness and roughness of the fauces. **P. Virgin'ica**, *White plantain* or *Ribwort*, indigenous, have properties like Plantago major. **P. vulga'ris**, plantago.

Plantain (plan'tan), **branch'ing.** Plantago psyllium. **P., bucks'horn**, Plantago coronopus. **P., com'mon**, plantago. **P., great**, Plantago major. **P., heartleaved**, Plantago cordata. **P. meal**, see *Musa paradisiaca.* **P., rat'tlesnake**, Goodyera pubescens. **P., rob'in's**, Erigeron bellifolium. **P., true**, Musa paradisiaca. **P., wa'ter**, Alisma plantago; Unisema deltifolia. **P., white**, Plantago Virginica.

Plantar, plan'tar (*planta*). *Plantaris.* Relating or belonging to the sole of the foot. This epithet has been given to several parts. **P. aponeuro'sis**, *P. fascia*, a thick, dense, resisting aponeurosis, of a triangular shape and superficially situate, occupying the middle and sides of the sole of the foot, and furnishing insertions to several of the muscles of the region, either directly or through the medium of septa which it sends between them. **P. arch**, see *Plantar arteries.* **P. ar'teries**, two in number, arising from the extremity of the posterior tibial artery. They are distinguished into: The internal plantar artery, situate above the abductor pollicis pedis. It extends from the termination of the posterior tibial to the trunk of one of the collaterals of that toe. The external plantar artery is larger than the preceding, and ought to be considered as the termination of the posterior tibial. Situate above the flexor communis digitorum pedis, it extends from beneath the calcaneum to the posterior extremity of the last metatarsal space. When it has reached this part it turns from without inward, advances toward the posterior extremity of the first metatarsal bone, and anastomoses with the perforating branch of the dorsalis tarsi. In the first part of its course it furnishes calcaneal, articular, muscular, and adipous branches. The second portion of the artery is called the plantar arch or cross. It gives branches in all directions. The inferior and posterior have received no name. The superior—three in number—are the posterior perforating arteries. The anterior branches are larger, and there are commonly four. They furnish the *anterior perforating* and the *collaterals* of the last four toes. **P. cross**, see *Plantar arteries.* **P. fas'cia**, P. aponeurosis. **P. interos'seous mus'cles**, interosseous muscles. **P. lig'aments**, name given to the inferior ligaments which unite the bones of the tarsus and metatarsus, to distinguish them from the superior, called *dorsal.* **P. metatar'sal ar'teries**, plantar interosseous arteries. **P. mus'cle**, muscle situate at the posterior part of the leg; is long, thin, and narrow. Above, it is attached to the posterior part of the external condyle of the os femoris; below, it terminates by a long tendon which is attached to the posterior and inner part of the calcaneum. This muscle extends the leg on the foot, and conversely; it can also assist in the flexion of the leg on the thigh. **P. nerves** are two in number, and are furnished by the termination of the posterior tibial nerve; they are distinguished into—1. The *internal plantar nerve*, which extends from the inferior part of the tibial nerve to both sides of the first three toes and the inner side of the fourth. It furnishes branches to the abductor of the great toe, to the short flexor of the toes, to the accessory, to the short flexor of the great toe, the lumbricales, etc. 2. The *external plantar nerve* proceeds from the termination of the posterior tibial to the posterior extremity of the fifth metatarsal bone, and gives branches to the flexor brevis digitorum pedis, the accessory, and the abductor of the little toe. This trunk subsequently divides into two branches: the one—*profunda*—is distributed to the short flexor of the great toe, the interosseous and abductor pollicis pedis; the other—*superficialis*—sends filaments to the short flexor of the little toe, the two sides of that toe, the outer side of the fourth, and the last lumbricalis. **P. re'gions** or **sur'faces** are different regions or surfaces of the sole of the foot. Three are generally reckoned—the internal, middle, and external. **P. tu'bercle**, tubercle on plantar surface of first metatarsal bone, to which tendon of peroneus longus muscle attaches. **P. veins** follow an arrangement similar to that of the arteries.

Planta'ria. Dengue.

Planta'ris. Plantar; P. muscle. **P. superfic'ies pe'dis**, sole. **P. ve'rus**, see *Flexor longus digitorum pedis profundus perforans* (*accessorius*).

Plantarium, plan-tar'e-um (nursery ground; *planta*, a plant). Pubes.

Planula, plan'u-lah. Embryo of Cœlenterata provided with cilia.

Planum aponeuroticum diaphragmatis, plan'um

ap-on-u-rot'ik-um de-ah-frag'mat-is (*planus*, flat, level, smooth). Tendinous expansion of the diaphragm. **P. auricula're**, auricular surface of ilium. **P. circula're elas'ticum**, sphincter of bladder. **P. fibro'sum dorsa'le transver'sum**, transverse ligament on dorsum of wrist. **P. infraorbita'le**, portion of orbital surface of superior maxillary bone on external side of sutura infraorbitalis. **P. is'chii**, inner surface of ischium. **P. nucha'le**, surface between superior curved line of os occipitis and foramen magnum. **P. occipita'le**, surface above upper curved line of occipital bone. **P. orbita'le**, see *Maxillary bone* (*superior*). **P. os**, papyraceous or orbital plate of the ethmoid—*Lamina papyracea*, *Lamella plana*. **P. os'sis isch'ii**, inner surface of ischium. **P. pe'dis**, sole. **P. poplite'um**, popliteal surface. **P. semiluna'tum**, half-moon shaped surface by which ends of crista acustica are connected to ampulla of semicircular canal. **P. sphenoïda'le**, flat surface anterior to optic groove on superior region of sphenoid bone. **P. sterna'le**, anterior portion of thorax. **P. supe'rius lin'guæ**, upper surface of the tongue. **P. tempora'le**, a somewhat flattened portion of the temporal fossa.

Planuria, plan-u're-ah (*plane*, a wandering, *ouron*, urine). Discharge of urine through unwonted ways.

Plaques (plaks) **of Peyer.** See *Peyeri glandulæ*.

Plas'ma (*plasma*, thing formed). Liquor sanguinis. Pharmaceutical preparation from glycerin and starch heated together. It constitutes the basis of different ointments. Called also *Glycamil*. **P., histiogenet'ic**, body protoplasm from which tissue is regenerated. **P., lymph**, see *Lymph*. **P., mus'cle**, see *Muscle*. **P., somat'ic**, plasma, histiogenetic.

Plasmasome, plaz'ma-some (*plasma*, thing formed, *soma*, body). Separate particle of plasma.

Plasmatic (plaz-mat'ik) or **Plasmat'ical** (*plasso*, to form). Having the power to form; plastic. **P. cur'rent**, external colorless space, devoid of red corpuscles, noticed in blood-vessels, with the aid of a microscope, in contradistinction to axial current.

Plasmexhidrosis, plaz-meks-hid-ro'sis (*plasma*, *ex*, out of, *hidrosis*, perspiration). Exudation of the plasma of the blood from the vessels.

Plasmic, plaz'mik. Relating or appertaining to the plasma of the blood.

Plasmin, plaz'min. Matter contained in blood thought to produce fibres.

Plasmochyma, plaz-mok'im-ah. Heteroplasia; paraplasm.

Plasmodiæresis, plaz-mo-de-air'es-is (*plasma*, *diairesis*, division). Division of cellular body.

Plasmo'dium mala'riæ (*plasma*, thing formed, *eidos*, form). Organism found in malarial blood, probably a changed or modified condition of the red corpuscles, perhaps due to the action of a bacillus.

Plasmogen, plaz'mo-jen (*plasma*, thing formed, *gennao*, to produce). True protoplasm.

Plasmology, plaz-mol'o-je (*plasma*, thing formed, *logos*, description). Histology.

Plasmolysis, plaz-mol'is-is (*plasma*, *lusis*, loosing). Contraction of protoplasm in active cells, due to action of reagents.

Plasmoma, plaz-mo'mah (*plasma*, *oma*). Fibroplastic growth.

Plasson, plas'son (*plasso*, to form). Protoplasm.

Plas'ter (*emplastron*, *plasso*, to smear). Emplastrum. **P., ac'onite**, emplastrum aconiti. **P., adhe'sive**, emplastrum resinæ; sparadrapum adhæsivum. **P., adhe'sive, Baynton's**, see *Emplastrum resinæ*. **P., adhe'sive, of pitch and resins**, emplastrum de pice et resinis glutinans. **P., ammo'niac**, emplastrum ammoniaci. **P., ammo'niac, with mercury**, emplastrum ammoniaci cum hydrargyro. **P. of an'timony**, emplastrum antimonii. **P., antisep'tic**, plaster made by dipping ordinary adhesive plaster in a hot solution of carbolic acid (1 to 60). **P., antisep'tic lac**, plaster made, according to Professor Lister, by heating shellac, three parts, with crystallized carbolic acid, one part. **P. of ar'nica**, emplastrum arnicæ. **P., aro'mat'ic**, emplastrum aromaticum. **P., asafœ'tida**, emplastrum asafœtidæ. **P. of belladon'na**, emplastrum belladonnæ. **P., black**, see *Emplastrum plumbi*. **P., blis'ter**, blister. **P., blis'tering**, emplastrum lyttæ. **P. of blis'tering fly**, emplastrum lyttæ. **P., Bur'gundy pitch**, emplastrum picis Burgundicæ. **P., calefa'cient**, emplastrum calefaciens. **P. of Can'ada pitch**, emplastrum picis Canadensis. **P. of canthar'ides, compound**, emplastrum lyttæ compositum. **P., cephal'ic**, emplastrum picis compositum. **P., chalyb'eate**, emplastrum ferri. **P., corn**, sparadrapum viride. **P., corn, Ken'nedy's**, sparadrapum viride. **P., court, English**, see *Ichthyocolla*, *Sparadrapum adhæsivum*. **P., cum'min**, emplastrum cumini. **P., defen'sive**, sparadrapum Galteri. **P., diach'ylon**, emplastrum plumbi. **P., fly**, emplastrum lyttæ. **P., frank'incense**, emplastrum thuris. **P., gal'banum**, emplastrum galbani. **P., gal'banum, com'pound**, emplastrum galbani compositum. **P., gum**, emplastrum gummosum. **P. of gum-res'ins**, emplastrum cum gum-resinis. **P., hem'lock**, emplastrum cicutæ. **P., hemlock pitch**, emplastrum picis Canadensis. **P. of i'odide of lead**, see *Emplastrum plumbi*. **P. of i'odide of potas'sium**, emplastrum potassii iodidi. **P. of i'ron**, emplastrum ferri. **P., i'singlass**, see *Sparadrapum adhæsivum*. **P., is'sue**, sparadrapum profonticulus. **P., lead**, emplastrum plumbi. **P. machine**, machine for spreading plasters, used by the pharmacist. **P., mercu'rial**, or **P. of mer'cury, compound**, emplastrum hydrargyri compositum. **P., mus'tard**, cataplasma sinapis. **P., Nu'remberg**, emplastrum Norimbergense. **P., o'pium**, emplastrum opii. **P. of Paris**, calcii sulphas. **P., pitch**, see *Depilatory* and *Emplastrum picis Burgundicæ*. **P. of pitch with canthar'ides**, emplastrum calefaciens. **P., pitch, com'pound**, emplastrum picis compositum. **P., poor man's**, see *Poor man's plaster*. **P. of potas'sium i'odide**, emplastrum potassii iodidi. **P. of red lead**, see *Emplastrum plumbi*. **P. of red ox'ide of i'ron**, emplastrum oxidi ferri rubri. **P., res'in**, emplastrum resinæ. **P., soap ce'rate**, emplastrum cerati saponis. **P. of Span'ish flies**, emplastrum lyttæ. **P. of Span'ish flies, com'pound**, emplastrum lyttæ compositum. **P., spice**, see *Emplastrum aromaticum*. **P., stick'ing**, emplastrum resinæ. **P., strength'ening**, emplastrum ferri; emplastrum oxidi ferri rubri. **P. of Vi'go**, see *Emplastrum hydrargyri compositum*. **P., warm**, emplastrum calefaciens. **P., warm'ing**, emplastrum calefaciens. **P., wax**, emplastrum ceræ.

Plas'ter-of-Par'is jack'et. Sayre's method of applying plaster bandage in orthopædic surgery.

Plas'tic (*plastikos*, formative). That which forms or serves to form. **P. bronchi'tis**, pseudomembranous bronchitis. **P. el'ement**, one which bears within it the germs of a higher form. Plastic, histogenic, or organoleptic elements of nutrition are those elements of food which go to the formation of organized tissue. Agents—hygienical or curative—which take part in such formations may be termed histotrophic or constructive. See *Aliment*. **P. force**, *Plasticity*, *Force of nutrition*, *F. of assimilation*, *F. of formation*, *F. of vegetation*, generative or formative power in organized bodies. **P. lymph**, liquor sanguinis. **P. sur'gery**, anaplastic or autoplastic surgery, autoplasty; operation for restoration of lost parts. Operations for this purpose have various names according to the part concerned, as cheiloplasty (plastic operation on the cheek), rhinoplasty (plastic operation on the nose), etc. The following table gives a modern view of the methods used in plastic surgery (J. B. Roberts):

METHODS USED IN PLASTIC SURGERY.

DISPLACEMENT—stretching or sliding of tissues.

I. *Simple approximation after fastening the edges*, as in harelip, vesico-vaginal fistule, and notches caused by tearing out ear-rings.

II. *Sliding into position after transferring tension to adjoining localities*, as in v-shaped incision for ectropium and cicatricial contraction of joints after burns, and in linear incisions to allow stretching of skin to cover large wounds and to relax contracted parts.

INTERPOLATION—borrowing material from adjacent regions, from a limb, or from another person.

I. *Transferring flap with a pedicle.*

[When a flap is borrowed from the arm or hand there is less necessity for rotating and twisting than when it is taken from the neighborhood of the organ to be constructed. The latter is generally the preferred method, however, because less irksome to the patient than the former with its constrained posture.]

A. Putting it in place at once:

1. By rotating flap on the pedicle in its own plane through one-fourth or one-half a circle, as in making upper eyelid or nose from forehead.
2. By twisting flap on its pedicle, as in making side of nose from lip.
3. By everting flap entirely so that raw surface is uppermost, as in covering exstrophy of bladder by a scrotal flap.
4. Superimposing one flap on another which has been everted. This is done where a thick wall is desirable, as in closing the front of an exstrophy of the bladder.
5. By jumping or carrying flap across a bridge of skin, and fixing only its end to the part to be repaired. When the flap has become attached the pedicle is severed. This manœuvre is rarely employed.

B. Putting in place gradually by successive migrations, by same manœuvres as when the flap is placed at once in its permanent position.

This method is not very commonly needed, but may be valuable when there is nothing but cicatricial material in the immediate vicinity of the part to be repaired.

II. *Transplanting without a pedicle.*

a. By carefully suturing or fixing in the gap areas of tissue recently dissected from distant regions or taken from the lower animals; such as replacing the bone button after trephining, inserting portions of nerve-trunks in wounded nerves, etc.

b. By skin-grafting with small pieces of large shavings of skin. This is the manœuvre of this class that has been followed by the greatest success. As it lessens cicatricial contraction it may be advantageously used at times in plastic operations that necessarily leave surfaces to heal by granulation. Skin from the frog's abdomen may answer well.

c. By readjusting finger-tips, ears, and noses recently completely severed by injuries.

RETRENCHMENT—removing superfluous material and causing cicatricial contraction.

I. By cutting out elliptical or semi-elliptical pieces of tissue, as in ptosis, cystocele, and prolapse of the rectum.

II. By cutting out triangular or wedge-shaped portions of tissue, as in closing the vaginal aperture, decreasing the size of a lip, ear, or nose, and separating webbed fingers.

Plasticismus (plas-te-sis'mus), or **Plasticitas** (plas-tis'it-as), or **Plasticity,** plas-tis'it-e (*plasso*, to form). Plastic force.

Plas'ticule. Plastidule.

Plastidules, plas'tid-ules. Smallest particles constituting matter imbued with life.

Plastilytic, plas-til-it'ik (*plasso*, to form, *luo*, to loose). Diminishing the quantity of plastic matter in the blood.

Plastilyticum (plas-til-it'ik-um) **hæmatolyt'icum.** Having a diminution of red corpuscles or of plastic matter in the blood.

Plastin, plas'tin. One of the important proteids occurring in protoplasm.

Plastinx, plas'tinks. Ancient apparatus for reducing dislocations.

Plastocolysis, plas-to-kol'is-is. Defective growth.

Plastodynamia, plas-to-din-am'e-ah (*plasso*, to form, *dunamis*, force). Manifestation of nutritive activity or power.

Plastodynam'ic (*plasso*, to form, *dunamis*, force). Relating to nutritive activity or power.

Plastoprolepsis, plas-to-pro-lep'sis (*plasso*, to form, *prolambano*, to preoccupy). Very rapid development of a part.

Plas'tron. Sternum with costal cartilages attached, which is removed in post-mortems.

Pla'ta (*platus*, broad). Scapula.

Platano. Musa sapientum.

Platanthera orbiculata, plat-an-tha'rah or-bik-u-lat'ah (*platus*, wide, *anthe*, flower). Large round-leaved orchid; indigenous; ord. Orchidaceæ. The leaves are large, soft, and fleshy, and are used for dressing blisters.

Platanus, plat'an-us (*platus*, broad). Musa paradisiaca. **P. acerifo'lia,** plane tree of North America. Like the eucalyptus, when grown in low marshy ground it exerts a beneficial influence in checking malarious emanations.

Platea, plat'e-ah (*platus*, broad). Bothriocephalus latus.

Plate, ambulac'ral. See *Ambulacrum.* **P. approxima'tion,** see *Anastomosis, intestinal.* **P., ax'ial,** primitive streak of blastoderm. **P., blood,** see *Blood.* **P., crib'riform,** see *Ethmoid.* **P., elec'trical,** see *Electricity.* **P., end,** see *End-plate.* **P., gray,** lamina cinerea. **P., me'sial,** see *Visceral.* **P., moto'rial,** see *Motorial end-plate.* **P., or'bital,** os planum. **P., Senn's,** see *Anastomosis, intestinal.* **P., spi'ral,** lamina spiralis. **P., vis'ceral,** see *Visceral.*

Plate'bone. Scapula.

Plate-cul'ture. Culture of microbes on gelatin on a plate. See *Culture* and *Bacteria.*

Plateias'ma. Platiasmus.

Plate'let. Small plate.

Plates, Mans'ford's. See *Galvanism.*

Platetrope, plat'e-trope (*platus*, *trepo*, to turn). Term applied, in bodies which have the same shape on both sides, to part which corresponds on the other side of the body.

Platias'mus (*platus*, broad). Excessive development of the lips, causing articulation to be imperfect.

Platinibromide, plat-in-e-bro'mide. Salt hæmatoblasts or blood-plaques of bromoplatinic acid.

Platinichloride, plat-in-e-klor'ide. Chlorplatinate.

Platini-iodide, plat-in-e-i'od-ide. Salt in which platinum tetraiodide is combined with an iodide.

Platinithiocyanate, plat-in-ith-e-o-si'an-ate. Platinic thiocyanate in combination with base of a thiocyanate.

Platinobromide, plat-in-o-bro'mide. Compound consisting of platinum dibromide with bromide of an element.

Platinochloride, plat-in-o-klor'ide. Compound consisting of platinum dichloride with chloride of an element.

Platinocyanide, plat-in-o-si'an-ide. Salt of hydroplatinocyanic acid.

Platinode, plat'in-ode. Cathode.

Platinum, plat'in-um (*plata*, silver). *Platina.* The preparations of platinum resemble in therapeutical properties those of gold. The *bichloride,* platini bichloridum, made by dissolving platinum in aquæ regia, and the *double chloride of platinum* and *sodium,* sodii chloroplatinas, chloroplatinate of sodium, prepared by dissolving bichloride of platinum and pure chloride of sodium, in proper proportions, in water, evaporating and crystallizing, are the preparations used. They are not much prescribed.

Platula, plat'u-lah (*platus*, broad). See *Pediculus.*

Plat'y (*platus*, broad), In composition, broad.

Platybregmate, plat-e-breg'mate (*platy*, *bregma*). See *Cranium.*

Platycephalic (plat-e-sef-al'ik) or **Platyceph'alous** (*platy*, *kephale*, head). Having a broad skull.

Platycnemia, plat-ik-na'me-ah. Breadth and flatness of a bone of the leg, especially the tibia.

Platycnemic, plat-ik-ne'mic (*platus*, broad, *kneme*, a leg). Appearance of a bone of the leg, especially the tibia, when broad and flattened on the sides. Some African tribes have the femur so constituted.

Platycnemism, plat-ik-ne'mizm. Breadth and flatness of tibiæ.

Platycœlian, plat-e-se'le-an. Opisthocœtous.

Platycoria (plat-e-kor'e-ah) or **Platycoriasis,** plat-e-kor-e'as-is (*platukoria*, *platy*, *kore*, pupil). Mydriasis.

Platydolichocephalic, plat-e-dol-e-ko-sef-al'ik (*platus*, broad, *dolichos*, long, *kephale*, head). Relating to a flat and narrow skull.

Platyelmia, plat-e-el'me-a (*platy*, *helmins*, worm). Variety of worms, long and flat, including, among others, tapeworms, tæniadæ, etc.

Platyelmins, plat-e-el'mins (*platy*, *helmins*, worm). Bothriocephalus.

Platyglossus, plat-e-glos'sus (*platus*, broad, *glossa*, tongue). Having a broad tongue.

Platyhieric, plat-e-hi'er-ik (*platy*, *hieros*, sacred or sacrum). Having the sacrum in breadth greater than its length.

Platylobus, plat-il'o-bus (*platus*, broad, *lobos*, lobe). Having broad lobes.

Platymesaticephalic (plat-e-mes-at-e-sef-al'ik) or **Platymesocephal'ic** (*platys*, broad). Term applied to skull when platycephalic and mesaticephalic at the same time.

Platynosis, plat-e-no'sis (*platus*, *nosos*, disease). Enlargement due to disease. Morbid extension of parts.

Platyophthalmus, plat-e-of-thal'mus (*platy*, *ophthalmos*, eye). One who has broad eyes.

Platypel'lic or **Platypelvic**, plat-e-pel'vik (*platus*, *pelus*, pelvis). Having a broad pelvis.

Platypodia, plat-e-po'de-ah (*platy*, *pous*, foot). Condition of flat-footedness. See *Kyllosis*.

Platypus, plat'e-pus (*platupous*). See *Kyllosis*.

Platypygous, plat-ip'i-gus (*platus*, broad, *puge*, buttock). Having broad buttocks.

Plat'yrrhine or **Platyrhine**, plat'ir-rheen (*platus*, broad, *rhis*, nose). Having a flat nose; term used in craniometry.

Plat'yrrhiny or **Platyrhiny**, plat'ir-rhin-e. Condition in which there is a platyrrhine skull.

Platysma, plat-iz'mah (*platus*, broad). Anything broadly extended; spread plaster. **P. myoï'des** or **myo'des**, muscle situate superficially on the lateral parts of the neck; flat, broad, and quadrilateral. Its fibres, which are all parallel to each other, pass obliquely upward and from without inward. They arise from the areolar tissue, which covers the anterior and superior part of the chest, pass before the clavicle, and proceed to attach themselves at the interior part of the symphysis menti, at the external oblique line of the jaw, and at the commissure of the lips. The fibres of this last insertion form a distinct fasciculus, called by some anatomists *Musculus risorius Santorini*. The platysma myoides depresses the commissure of the lips and carries it outward; contributes, also, to the depression of the lower jaw. When it contracts, it wrinkles the skin of the neck transversely.

Platysternus, plat-e-ster'nus (*platy*, *sternon*, sternum). Broad, well-developed chest.

Platystomus, plat-is'to-mus (*platy*, *stoma*, mouth). Having a broad mouth.

Plau'tus. One the soles of whose feet are flat and devoid of the usual concavity.

Plax (plaks). Genus of Schizomycetes. **P. scin'dens**, organism met with in blood and urine of individuals suffering with scarlet fever.

Ple'chas. Perineum.

Plec'tanæ. Cornua uteri.

Plectane, plek'tan-a (*pleko*, to twine). Fold; plexus; also cornu of the uterus.

Plectrum, plek'trum. Styloid process of the temporal bone; uvula; tongue.

Pledget, plej'et. A small compress of lint, applied over wounds, ulcers, etc., to preserve them from the contact of air, to retain dressings *in situ*, and to absorb discharges.

Plegaphonia (pleg-ah-fo'ne-ah) or **Plegaphony**, pleg-ah'fo-ne (*plege*, blow, *phone*, sound). Sound elicited in percussion of the larynx when the glottis is open at the same time.

Plege, pla'ge. Blow; stroke.

Pleg'ma. Plectane; plege; plexus.

Plegometer, pleg-om'e-tur (*plege*, stroke, *metron*, measure). Pleximeter.

Pleiomasthus, pli-o-mas'thus (*pleion*, more, *masthos*, breast). A monster having several breasts.

Pleiomazia, pli-o-maz'e-ah (*pleion*, *mazos*, breast). See *Polymasthus*.

Plemmyria, plem-mir'e-ah. Plethora.

Ple'na mu'lier (a full woman). Pregnant.

Plenalvia, plen-al've-ah (*plenus*, full, *alvus*, abdomen). *Grain-sick*, *Mawbound*. Impaction of the paunch or rumen of cattle.

Plen'itude or **Plenitu'do** (*plenus*, full). Plethora; fulness.

Ple'no ri'vo (in full stream). Term applied to the blood when it flows freely from the vein in venesection.

Pleocatantes, ple-o-kat-an'tees (*pleon*, *katantes*, downward). Said of skulls in which angle is formed by line uniting with radius between 45° and 67°.

Pleochromat'ic (*pleon*, *chroma*, color). Highly colored; of intense color.

Pleo-epignathus, ple'o-ep-ig-nath'us (*pleon*, *epi*, *gnathos*, jaw). A double monster in which an incomplete fœtus is rooted, with its vessels, in the palate of one more complete.

Pleomastia, ple-o-mas'te-ah (*pleon*, more, *mastos*, nipple). Condition of having several nipples developed on one breast. See *Polymasthus*.

Pleomazia, ple-o-maz'e-ah (*pleon*, more, *mazos*, breast). Condition in which there are more than the normal number of breasts. See *Polymasthus*.

Pleomorphism, ple-o-mor'fizm (*pleon*, *morphe*, shape). Polymorphism.

Pleon. Additional.

Pleonasm, ple'o-nazm. Pleonasmus.

Pleonasmus, ple-o-naz'mus (*pleonazo*, to abound). Abnormal or defective formation by excesssive abundance or size.

Pleonectica (ple-o-nek'tik-ah) **athym'ia** or **melanchol'ia.** Form of insanity characterized by a desire for gain or by covetousness.

Pleonecticus, ple-o-nek'tik-us (*pleon*, more, *echo*, to have). Covetous; desirous to acquire; hence, mania pleonectica.

Pleonexia, ple-o-neks'e-ah. Greediness or selfishness indicating diseased mental condition.

Plerocercus, pler-o-sur'kus. Term applied to tapeworm when in larval state.

Plerosis, pler-o'sis (*pleres*, full). *Repletion*. Restoration of flesh after sickness; plethora.

Plerot'ica. Medicines which were fancied to promote the regeneration of the flesh.

Pleroticus, pler-ot'ik-us (*pleroo*, to fill up). Promoting the regeneration of the flesh.

Plesmone, ples'mo-ne. Intemperance; condition opposite to that of hunger.

Ples'ser (*plesso*, to strike). Plexor.

Plessigraph, ples'se-graf (*plesso*, to strike, *grapho*, to write). Instrument not only intended for the purposes of percussion, but also to indicate a change in the nature of the sound elicited.

Plessimeter, ples-sim'e-ter. Pleximeter.

Plethomeria, pleth-o-mer'e-ah (*plethos*, great number, *meros*, part). Superabundance of parts, as in the case of six fingers to one hand.

Pletho'ra. *Plethory*, *Repletion*, *Sanguineness*, *Fulness*. Superabundance of blood in the general system or in some part of it; hence the division of plethora into general and local, the latter being called, according to its seat, cerebral, pulmonary, uterine, etc. The principal symptoms of plethora exist in the circulatory system: redness of the surface, swelling of the veins, increase in the fulness of the pulse, in the strength of the heart's pulsations, etc., with spontaneous hemorrhages occasionally. With these are usually united general heaviness, torpor, lassitude, vertigo, tinnitus aurium, flushes of heat, etc. The blood of plethoric persons differs from healthy blood in the smaller ratio of water which it contains, and especially in the augmentation of the red corpuscles. **P. arterio'sa**, form in which the blood is rich in fibrin and red corpuscles, the *arterial constitution*. **P., hydræ'mic**, hydræmia. **P. hyperalbumino'sa**, increased quantity of albumin in the blood. **P., lo'cal**, hyperæmia. **P. partia'lis**, hyperæmia. **P. polycythæ'mia**, condition of the blood in which there is an increase of the red corpuscles. **P., se'rous**, condition in which an excessive amount of serum is contained in the blood.

Plethoric, pleth-or'ik. *Polyæmic, Sanguine, Sanguineous.* Full of blood. Relating to or affected with plethora.

Pleth'ory. Plethora.

Ple'thos. Satiety.

Plethysmograph, pleth-is'mo-graf (*plethos,* fulness, *grapho,* to write). Instrument for determining the difference in the size of parts of the body.

Plethysmographic, pleth-iz-mo-graf'ik. Relating to the plethysmograph.

Pleumon, plu'mon. The lung.

Pleumo'nia. Pneumonia.

Pleura, plu'rah (*pleura*). The pleuræ are two thin, diaphanous, perspirable membranes lining each side of the chest, and are reflected thence upon each lung. Like other serous membranes—to which class they belong—each represents a sac without aperture. From the junction of the pleura of each side the mediastina are formed. That portion of the pleura which lines the parietes of the chest is called *Pleura costalis* or *parietalis;* the portion that covers the lungs, *Pleura pulmonalis.* The arteries of the pleuræ are from the intercostals, internal mammaries, phrenic, inferior thyroid, etc. The veins correspond with the arteries. They are also supplied with lymphatics. A fold of the pleura, reaching from the lower edge of the root of the lung to the diaphragm, is called ligamentum latum pulmonis, broad ligament of the lung. Pleura is also used for cavity of the pleura, saccus pleuræ. **P., diaphragmat'ic,** that portion of the pleura which lines the superficial part of the diaphragm. **P. pericardi'aca,** pleura of the mediastinum. **P. phren'ica,** pleura of the diaphragm.

Pleuræ, plu're (pl. of **Pleura**). Sides of the chest.

Pleur'al. That which concerns the pleura.

Pleuralgia, plu-ral'je-ah (*pleura,* side, *algos,* pain). See *Pleurodynia.*

Pleurapophyses, plu-rap-of'is-ees (*pleura,* side, *apophyses,* processes). Costæ veræ, or true ribs. See *Costa.*

Pleurapostema, plu-rap-os-ta'mah (*pleura, apostema,* abscess.) Empyema.

Pleurarthrocace, plu-rar-throk'as-e (*pleura,* rib, *arthron,* joint, *kakos,* bad). Caries of the ribs.

Pleurarthron, plu-rar'thron (*pleura,* rib, *arthron,* joint). Articulation of a rib.

Pleuresia, plu-ra'se-ah. Pleuritis.

Pleuresis, plu-ra'sis. Pleuritis.

Pleurisy, plu'ris-e. See *Pleuritis.* **P., bil'ious,** pleurisy accompanied with bilious symptoms; the effect of duodenitis or duodenohepatitis. **P., dry,** see *Pleuritis.* **P., false,** pleurodynia. **P., pneumat'ic,** pleurodynia. **P., hemorrhag'ic,** hæmatothorax. **P., la'tent,** see *Pleuritis.* **P. root,** Asclepias tuberosa. **P., ty'phoid,** pleurisy accompanied with adynamic symptoms.

Pleurites, plu-re'tees. Pleural.

Pleuritic, plu-rit'ik (*pleuritikos*). Relating or appertaining to pleuritis.

Pleuritis, plu-re'tis. Pleurisy; inflammation of the pleura. It may be acute, subacute, or chronic. Perhaps the most violent of all internal inflammations is the active form; known by acute, lancinating pain on one side of the chest, increased by inspiration, by coughing, and often by pressure; dyspnœa, the inspirations short and frequent; cough dry or with little expectoration; and difficulty of lying on the affected side, with symptoms attending the phlegmasiæ in general strongly marked. There are four varieties of pleurisy: acute, exudation mainly fibrous; subacute, exudation mainly serous; chronic or empyema, exudation mainly cells and pus; hydropneumothorax, air and fluid in the pleuræ. Acute pleurisy may be primary or secondary. The pleura becomes thickened and rough, fibrous exudation occurs. Acute pleurisy can be divided into four stages: dry stage, or hyperæmia; plastic stage; stage of liquid effusion; and stage of absorption and adhesion. *First stage.* Inspection, diminished movement of affected side; percussion, negative; palpation, negative; auscultation, friction sound, grating or creaking. *Second stage.* Inspection, movements of affected side more diminished; palpation, diminished vocal fremitus; percussion, marked dulness; auscultation, crepitating friction sound at end of inspiration. *Third stage.* Inspection, no visible motion; palpation, vocal fremitus absolutely suppressed; percussion, flatness on percussion; auscultation, respiratory sounds below the level of the fluid are suppressed, above they are exaggerated. *Fourth stage.* Normality reappears; friction sound; all signs diminished until they become normal. Physical signs: Seldom any perceptible alteration in the exterior of the chest. When effusion has taken place to a great extent, the signs will be similar to those of chronic pleurisy. Motion of the affected side is diminished, and the vibrations of the voice cannot be detected by the hand. More or less dulness of sound on percussion, the dulness diminishing or disappearing by change of position. On auscultation the inspiration is feeble, distant, or inaudible, but change of position modifies it. Egophony is usually present when the effusion is in moderate quantity, and is best heard over a portion of the thoracic parietes represented by a band of three inches running from below the inferior margins of the scapula in the direction of the ribs to the sternum. Simple pleurisy rarely attacks both sides at once. When such is the case the presence of tubercles may be suspected. Formerly, a *true pleurisy* meant one seated in the pleura; a *mediastinal pleurisy,* one situated in the anterior mediastinum; and *false pleurisy* or *rheumatic pleurisy,* that which occupied the intercostal muscles. The last has received the name pleurodynia, that of pleurisy being exclusively appropriated to inflammation of the pleura. Pleurisy has also been distinguished into *dry* or *humid,* according as it is or is not accompanied by expectoration. Humid or moist pleurisy is now properly regarded as a complication of pleurisy with pulmonary catarrh. It is the catarrhal pleurisy of some. In *Latent pleurisy* pain, cough, and dyspnœa may all be absent, and yet a serious amount of effusion occur. The term *Dry pleurisy, Pleuritis sicca,* has been given by Niemeyer to a form of the disease without any effusion except a merely nutritive exudation.

The causes of pleurisy are like those of other internal inflammations. It may terminate by resolution, effusion, or suppuration. Chronic pleurisy may form slowly, without evident symptoms, or may succeed acute pleurisy. In the former case vague pains are felt in the chest, with small dry cough, oppression at intervals, shivering, irregular febrile symptoms, and hardness of pulse. It most frequently terminates by a serous or purulent effusion, which sometimes simulates hydrothorax; at others, phthisis pulmonalis. Physical signs: Affected side is smoother, more rounded, and motionless; the intercostal spaces are dilated and filled up, or may even protrude slightly. In very chronic cases, however, the affected side may be smaller. The triangular space above the clavicle and the depression immediately above the sternum are often drawn downward on the diseased side. No vibration is experienced by the hand when the patient speaks. The parietes of the thorax are sometimes œdematous, and fluctuation may occasionally be felt between the ribs. On percussion the sound is dull, or, if clear, only so in the upper portions of the chest. On auscultation an absence of the usual sounds over the affected parts, excepting occasionally transmitted sounds. On dissection of those who have died of pleurisy the pleura is found thickened, red, inflamed, and covered with membranous exudations or false membranes. Sometimes it seems cartilaginous and ossified. Its cavity frequently contains serous or seropurulent effusions. The acute form of the disease requires most active treatment. To remove effusion, acetate of potash and infusum digitalis; flying blisters to affected side; also large doses of concentrated saline cathartics for removing the effusion. In pleuritic effusion on both sides an aspirator should be used as soon as possible. Potassium iodide and blisters, changing to mistura Basham and counter-irritation, are indicated

in chronic pleurisy. The name *Pleuritis ventosa* or *Pleurodynia ventosa* is given to a pain behind the false ribs, attributed to the presence of air in the intestines. **P. bilio'sa**, bilious pleurisy. **P. bronchia'lis**, bronchitis. **P. costa'lis**, pleuritis. **P. defor'mans**, form of pleurisy in which the pleura becomes thickened like fibro-cartilage, occurring in cirrhosis of the lungs. **P. diaphragmat'ica**, diaphragmitis. **P. duplica'ta**, bilateral pleurisy. **P. hu'mida**, bronchitis. **P. idiopath'ica**, pleuritis. **P. legit'ima**, pleuritis. **P. muscula'ris**, pleurodynia. **P. notha**, pleurodynia. **P. pericar'dii**, pericarditis. **P. pulmo'nis**, pleuro-pneumonia. **P. pul'sans**, pulsating empyema. **P. rheumat'ica**, pleurodynia. **P. sic'ca**, see *Pleuritis*. **P. spu'ria**, pleurodynia. **P. spu'ria simula'ta**, pleurodynia. **P. typhoï'des**, typhoid pleurisy. **P. vento'sa**, see *Pleuritis*. **P. vera**, pleuritis.

Pleurocele, plu-ro-se'le (Eng. plu'ro-seel) (*pleura*, *kele*, tumor). *Hernia of the pleura*. An inaccurate term, as the pleura never protrudes alone. It only forms a hernia when it serves as an envelope to the lung, to tumors, or to purulent collections which have protruded from the thoracic parietes.

Pleurocholecystitis, plu-ro-kol-e-sis-te'tis (*pleura*, *chole*, bile, *kustis*, bladder). Inflammation involving the pleura and gall-bladder.

Pleurococcus (plu-ro-kok'kus) **Beigel'ii**. Vegetable fungus developed in human hair, improperly named *Gregarine*.

Pleurocœnadelphus, plu-ro-se-nad-el'fus (*pleura*, *koinos*, common, *adelphos*, brother). Monster possessing two bodies which are connected by the trunks at the side.

Pleurocol'ic lig'ament (*pleuron*, rib, *colon*). Identical with costo-colic ligament.

Pleurocollesis, plu-ro-kol-la'sis (*pleura*, *kollao*, to glue). Adhesion between the pleura costalis and pleura pulmonalis.

Pleurocutaneous, plu-ro-ku-ta'ne-us. Extending through the pleura and skin; said of a fistula.

Pleurodiplosyrinx, plu-ro-dip-lo-sir'inks (*pleura*, *diploos*, double, *surinx*, syringe). Double syringe used for washing out the pleura.

Pleurodont, plu'ro-dont (*pleura*, *odous*, tooth). Possessing teeth attached laterally to the lower jaw.

Pleurodyn'ia (*pleura*, side, *odune*, pain). *Pseudopleurisy*, *Pain in the side*, *Stitch in the side*, *False*, *Rheumatic*, or *Rheumatismal pleurisy*. Spasmodic or rheumatic affection, generally in the muscles of the chest, and, ordinarily, in the intercostals. It is usually augmented by outward pressure, inspiration, coughing, exertion, moving the thorax, and sometimes even the corresponding arm. It is unaccompanied by fever, cough, or dyspnœa, excepting under the form of a *stitch*, when dyspnœa exists; is generally by no means obstinate, and yields promptly to the proper external applications. If it still resists, a blister will almost always remove it. **P. vento'sa**, see *Pleuritis*.

Pleurodynic, plu-ro-din'ik. *Pleurodynical*. Relating or belonging to pleurodynia.

Pleurogenous, plu-roj'en-us (better **Pleuritog'enous**). Producing pleuritis, as P. pneumonia.

Pleurohepatitis, plu-ro-hep-at-e'tis (*pleura*, *hepar*, liver). Inflammation of the liver and neighboring pleura.

Pleuroma, plu-ro'mah (*pleura*, *oma*). Costa or rib; pleura.

Pleuromelus, plu-rom'el-us (*pleura*, *melos*, limb). Monster with accessory members of the thorax in which the scapulæ connect with normal members of the body.

Pleu'ron. Rib.

Pleuro-œsophageus, plu'ro-e-sof-aj-e'us (*pleura*, *œsophagus*). Band of smooth muscle-fibres connecting the left pleura posteriorly with the œsophagus.

Pleuropathy, plu-rop'ath-e (*pleura*, *pathos*, disease). Disease of the pleura.

Pleuropericarditis, plu-ro-per-e-kar-de'tis. Inflammation of the pleura and the pericardium.

Pleuroperipneumony (plu-ro-per-e-nu'mon-e) or **Pleuropneumonia**, plu-ro-nu-mo'ne-ah (*pleura*, *peripneumonia*). Pleuroperipneumony. Pleurisy and peripneumony existing simultaneously. *Physical signs:* Full sound is yielded by percussion for a variable extent over the more dependent portions of the affected side. Loss of sound is partially modified by change of position. Respiratory murmur on auscultation is very feeble or absent inferiorly; higher up the crepitation or bronchial respiration of pneumonia may be detected; around the root of the lung and near the inferior angle of the scapula egophony is generally present. There is seldom much enlargement of the affected side or displacement of the adjacent organs, as in the case of simple chronic pleurisy. **P., hypostat'ic**, pneumonia in which a hypostatic condition and pleurisy exist.

Pleuroperitoneal, plu-ro-per-e-to-ne'al. Belonging to the pleura and peritoneum, as P. cavity, a space in the early development of the embryo, which afterward becomes separated into the pleural and peritoneal cavities.

Pleuroperitonitis, plu-ro-per-e-to-ne'tis. Condition in which pleurisy and peritonitis coexist.

Pleuropneuma, plu-ro-nu'mah (*pleura*, *pneuma*, wind). Pneumothorax.

Pleuropneumo'nia or **Pleuropneumonitis**, plu-ro-nu-mon-e'tis. See *Pleuroperipneumony*. Also specific contagious disease among cattle.

Pleuropyesis, plu-ro-pe-a'sis (*pleura*, *puesis*, suppuration). Empyema.

Pleurorrhagia, plu-ror-rhaj'e-ah (*pleura*, *rhage*, breaking forth). Hæmatothorax.

Pleurorrhœa, plu-ror-rhe'ah (*pleura*, *rheo*, to flow). Accumulation of fluid in the pleura. **P. chylo'sa**, effusion of chyle into the chest, owing to the rupture of a chyliferous vessel. **P. lymphat'ica**, hydrothorax. **P. purulen'ta**, empyema. **P. sanguin'ea**, hæmatothorax. **P. sero'sa**, hydrothorax.

Pleurorthopnœa, plu-ror-thop-ne'ah (*pleura*, *orthos*, erect, *pneo*, to respire). Pain of the side which does not permit the patient to breathe except when in the vertical position.

Pleurosomus, plu-ro-so'mus (*pleura*, *soma*, body). Malformation in which the fissure is somewhat lateral, with eventration extending chiefly upon the upper part of the abdomen and upon the chest; the upper extremity of the fissured side being more or less atrophied. The condition is called *Pleurosomia*. See *Celosoma*.

Pleurospasm, plu'ro-spasm (*pleura*, *spasmos*, spasm). Cramp in the side.

Pleurostosis, plu-ros-to'sis (*pleura*, *osteon*, bone). Ossification of the pleura or in the cavity of the pleura, *Osteopleuria*.

Pleurotetanus, plu-ro-tet'an-us (*pleura*, side, *tetanus*). Pleurothotonus.

Pleurothotonus, plu-ro-thot'o-nus (*pleurothen*, laterally, *tonos*, tension). Variety of tetanus in which the body is curved laterally by the stronger contraction of the muscles of one side of the body.

Pleurotomy, plu-rot'o-me (*pleura*, *tome*, incision). Incision of the pleura.

Pleurotonus, plu-rot'o-nus (*pleura*, side, *teino*, to stretch). Pleurothotonus.

Pleurotransversalis, plu-ro-trans-vur-sal'is. Muscular strip arising from transverse process of seventh cervical vertebra, inserted upon apex of pleural sac.

Pleu'rum (*pleuron*). Costa or rib; pleura.

Plexiform, pleks'e-form. Resembling a plexus, as plexus of nerves.

Pleximeter, pleks-im'e-tur (*plesso*, to strike, *metron*, measure; measure of percussion). Ivory plate of a circular or ovoid shape, from an inch and a half to two inches in diameter, and about one-sixth of an inch in thickness. Has either a raised rim or edge, or projecting handles on the upper side, to permit its being held between the finger and thumb of the left hand whilst it is struck with the right. It is used in percussion of the chest. A piece of metal, a coin, or the finger of the left hand may be used with equal advantage. See *Percussion, mediate*.

Plexor, pleks'or (*plesso*, to strike). *Plesser*. Any in-

strument employed in percussion. The ends of the fingers of the right hand brought together are the best *plexor;* the finger of the left is the best *plexim-eter.*

Plexus, pleks'us (*plecto, plexum,* to interlace). Network of blood-vessels or nerves. The nervous plexuses, *Implicationes reticulares,* belong, some, to the system of encephalic nerves; others, to that of the great sympathetic; whilst some, as the pharyngeal, seem to be formed of the two sets. The plexuses represent complex networks, with more or less loose meshes, formed by the numerous and diversified anastomoses of the nervous filaments, from which proceed other branches that are distributed to organs or to other plexuses. **P., aor'tic,** *Intermesenteric plexus;* plexus of the sympathetic placed along the abdominal aorta, and occupying the interval between the origin of the superior and inferior mesenteric arteries. **P. brachia'lis,** brachial plexus. **P., car'diac,** see *Cardiac plexus.* **P., carot'id,** see *Carotid nerve.* **P. caverno'sus,** bulb of the vestibule. **P., cer'vical,** see *Cervical plexus.* **P. choroï'des,** see *Choroid.* **P. choroï'deus me'dius,** choroïdea tela. **P. cilia'ris,** ciliary ligament. **P. coccyge'us,** coccygeal plexus, same as caudal plexus. **P., cœ'liac,** see *Cœliac plexus.* **P. col'icus,** colic plexus. **P. corona'rius ventric'uli,** gastric plexus. **P., cor'onary,** see *Cardiac plexus* and *Coronary plexus.* **P. crura'lis,** crural plexus. **P. cys'ticus,** plexus to the gall-bladder, formed by filaments from the hepatic plexus of the sympathetic. **P. deferentia'lis,** continuation of vesical plexus upon vasa deferentia and seminal vesicles. **P., diaphragmat'ic,** see *Diaphragmatic plexus.* **P. dorsa'lis spi'næ,** dorsi-spinal plexus of veins. **P. epigas'tricus,** solar plexus. **P. ganglifor'mes,** nervous ganglions. **P. ganglifor'mis semiluna'ris,** cœliac plexus. **P. ganglio'sus,** plexus formed at the places of union of the spinal branches of the pelvic plexus and elsewhere in the plexus. **P., gastroduode'nal,** secondary plexus, derived from the hepatic plexus. **P., gas'tro-epiplo'ic,** secondary plexus, derived from the hepatic plexus. **P. glandifor'mes,** nervous ganglions. **P. glandulo'si Pey'eri,** Peyeri glandulæ. **P. hæmorrhoïda'lis,** hæmorrhoidal plexus. **P. hedera'ceus,** corpus pampiniforme. **P., hepat'ic,** see *Hepatic plexus.* **P. hepat'icus,** hepatic plexus. **P., hypogas'tric,** see *Hypogastric plexus.* **P. ili'acus exter'nus,** external iliac lymphatic plexus. **P., infraor'bital,** formed by the union of infraorbital branches of the superior maxillary nerve with branches of the facial. **P., infrathyroid'eal,** see *Thyroideal veins.* **P., interlam'inar,** see *Interlaminar.* **P., intermesenter'ic,** aortic plexus. **P. intestina'les,** Peyeri glandulæ. **P., lum'bar,** see *Lumbar plexus.* **P., lum'bo-abdom'inal,** lumbar plexus. **P., me'dian,** cœliac plexus. **P. mesenter'ii pro'prius,** see *Myentericus.* **P. nervo'rum anseri'nus,** facial nerve. **P., œsophage'al,** formed by connecting cords between the right and left pneumogastric nerves while in contact with the œsophagus. **P., pancreat'ic,** plexus of the sympathetic, derived from the splenic plexus. **P., pel'vic,** the inferior hypogastric plexus has been so called by some anatomists. **P., pharynge'al,** see *Pharyngeal nerve.* **P. pneumogas'tricus,** see *Pneumogastric nerve.* **P., pre-aor'tic,** see *Pre-aortic.* **P., prever'tebral,** see *Prevertebral.* **P., pul'monary,** see *Pulmonary plexus.* **P., pylo'ric,** is derived from the hepatic plexus of the sympathetic. **P., re'nal,** see *Renal plexus.* **P. reticula'ris,** bulbus vestibuli; choroïdes plexus. **P. retifor'mis,** corpus cavernosum vaginæ. **P., sa'cral,** see *Sacral plexus.* **P. semina'lis,** rete testis. **P., so'lar,** cœliac plexus. **P., spermat'ic,** see *Spermatic.* **P., suprare'nal,** plexus formed by branches from the solar plexus, semilunar ganglion, and splanchnic and phrenic nerves. **P., tympan'ic,** formed by communication between the nerve of Jacobson, a filament from the carotid plexus, a branch from the Vidian, and the small superficial petrosal nerve. **P., vagi'nal,** see *Vaginal branches of the vena porta.* **P. vasculo'sus coccyge'us,** coccygeal gland. **P. vasculo'sus funic'uli spermat'ici pampinifor'mis,** corpus pampiniforme.

Plica (ple'kah) or **Pli'ca Polonica,** po-lon'ik-ah (*plico,* to fold). *Matted hair, Plaited hair, Trichomatose hair.* Disease endemic in Poland, Lithuania, and other parts of Northern Europe, so called on account of its being characterized by interlacing, twisting, and agglutination or matting of the hair. By some it has been regarded as a real disease, by others as the want of attention to cleanliness. It generally appears upon the hair of the head, but sometimes on that of other parts, as the beard, the hair in the axilla, pubes, etc. Three chief species of plica are: 1. *P. multiformis,* in which the hairs are mixed and agglutinated in greater or less masses; if the meshes are almost straight, it is called *Plica caput Medusæ laciniata.* 2. *Plica longicauda:* the hair is united into a single long mass. 3. *Plica cespitosa:* the hairs are matted into one large, shapeless mass. See also *Plectane.* **P. cachec'tica,** plica. **P. ca'put Medu'sæ,** plica. **P. centra'lis ret'inæ,** see *Optic nerve.* **P. glosso-epiglot'tica,** fold of mucous membrane of the tongue and epiglottis, caused by the lifting up of the longitudinal fibres. **P. guberna'trix,** see *Gubernaculum testis.* **P. longicau'da latera'lis,** plica. **P. longitudina'lis Vateri,** *Diverticulum Vateri;* vertical projection, about an inch in length, formed at the posterior part of the duodenum by the mucous membrane raised up by the common choledoch duct before it opens into the intestine. **P. luna'ta,** small doubling of the conjunctiva which lies between the caruncula lacrymalis and the ball of the eye. **P. Polon'ica,** plica. **P. Polon'ica Juda'ica,** plica. **P. Saxon'ica,** plica. **P. semiluna'ris,** P. lunata.

Plicæ (ple'ke) **adipo'sæ.** Synovial ligaments. **P. adipo'sæ pericardi'acæ,** processes due to formation of adipose tissue under the pericardium. **P. alifor'mes,** alar ligaments of the knee. **P. cilia'res,** folds of ciliary body situate between ciliary processes; also ciliary process. **P. conniven'tes,** valvulæ conniventes. **P. membra'næ muco'sæ tym'pani,** folds of mucous membrane of tympanum. **P. palma'tæ,** arborescent striæ in the interior of the cervix uteri. **P. rec'ti,** semilunar folds of the rectum. **P. retrovesica'les,** lines which bound the outer margin of the recti muscles of the abdomen. **P. semiluna'res,** see *Urinary bladder* and *Uterus.* **P. semiluna'res Douglas'sii,** lines which bound the outer margin of the recti muscles of the abdomen. **P. synovia'les patella'res,** alar ligaments. **P. vagi'næ,** folds of the vagina. **P. villo'sæ,** folds of mucous membrane of the stomach.

Plicaria, plik-a're-ah. Lycopodium clavatum.

Pli'cate. Folded.

Plicatio, plik-ah'she-o. Fold or plica.

Plicatu'ra. Fold or plica.

Plicatu'ræ cer'ebri. Cerebral convolutions or gyri.

Pli'chos (*plichos*). Perineum.

Pli'ers. Small pincers or scissors with long jaws.

Plin'thium (*plinthion*). Machine formerly employed in the reduction of fractures and luxations.

Plocaria candida, plo-kar'e-ah kan'did-ah. Fucus amylaceus. **P. helminthochor'ton,** Corallina Corsicana.

Ploess'lea floribun'da (after Ploessl, an optician of Vienna). See *Juniperus lycia.*

Ploratio, plo-rah'she-o (*ploro,* to weep). Lacrymation.

Ploratus, plo-rat'us. Lacrymation.

Plotus, plo'tus (flat). Having a flat foot, devoid of the usual concavity.

Ploucquet's stat'ic test. See *Docimasia.*

Ploughshare (plow'share) **bone.** Vomer.

Pluchea (ploo'ke-ah) **camphora'ta.** Salt-marsh fleabane; North American plant possessing stimulant and aromatic properties. **P. odora'ta,** plant growing in West Indies; leaves and flowers are reputed to have tonic and stomachic virtues; plant is also used externally to wounds.

Plug. Material employed to close an opening; also anything obstructing a hollow tube. **P., kite-tail,** tampon, kite-tail. **P., mu'cous,** collection of secretion

from cervix uteri in canal of cervix during pregnant state.

Plug'ger. Dental instrument for plugging cavities in teeth.

Plug'ging. Act of stopping a hole. Introduction of a plug or dossil of lint or rag into a wound or natural cavity—as the nostrils, uterus, or vagina—to arrest hemorrhage; or of some substance into a carious tooth to prevent toothache; see *Filling*. **P. for'ceps,** dental instrument for compressing the filling in teeth.

Plum. Prunum; Prunus domestica. **P., Assyr'ian,** sebestina. **P., wild,** Pappea Capensis.

Plu'ma (down). Lanugo.

Plumaceolus, plu-mas-e'o-lus (*pluma*). Pad; pledget.

Plumaria lancifolia, plu-mar'e-ah lan-se-fo'le-ah. Plumifera lancifolia.

Plumbagin, plum'ba-jin. Substance derived from Plumbago Europæa.

Plumbago, plum-ba'go (*plumbum*, leaves having lead-colored spots). Persicaria graphites. **P. Europæ'a,** *Leadwort, Toothwort*, ord. Plumbaginaceæ. Formerly employed as a remedy for toothache. **P. ro'sea,** used in India for blistering. **P. scan'dens,** *Devil's herb;* climbing plant of West Indies and South America; plant possesses irritant properties applied externally; leaves are actively emetic; root is purgative. **P. Zeylan'ica,** *Chittramoolum* of India; said to possess powerful emmenagogue and parturifacient properties. The bark of the root is applied internally and given locally.

Plum'bi ace'tas (Ph. U. S. and Br.). Acetate of lead. **P. ace'tas dilu'tum alcohol'icum,** liquor plumbi subacetatis dilutus. **P. acid'ulus suc'cus,** plumbi superacetas. **P. azo'tas,** P. nitras. **P. carbo'nas** (Ph. U. S. and Br.), P. subcarbonas. **P. chlo'ridum,** *Chloride of lead;* lead chloride; not used now. **P. deutox'idum ru'brum,** P. oxidum rubrum. **P. hydri'odas,** P. iodidum. **P. io'didum** (Ph. U. S. and Br.), PbI_2, *Iodide* or *Ioduret of lead;* lead iodide. This salt is formed by the double decomposition of iodide of potassium and nitrate of lead; used in scrofulous affections internally and externally; dose, gr. ss-iij or iv. **P. iodure'tum,** P. iodidum. **P. iohy'dras,** P. iodidum. **P. ni'tras** (Ph. U. S. and Br.), *Nitrate of lead* (salt formed by the action of diluted nitric acid on litharge); has the same medical action as the other soluble salts of lead, and is a valuable antibromic and an excitant antiseptic to wounds, ulcers, etc.; it is the basis of Ledoyen's disinfecting liquid. **P. nitrosac'charas,** *Nitrosaccharate of lead* (sugar, nitric acid, chalk, acetate of lead); has been used as a solvent of phosphatic calculi. **P. ox'idum** (Ph. U. S. and Br.), plumbi oxidum semivitreum. **P. ox'idum al'bum, P. ox'idum carbonat'um per ac'idum aceto'sum,** plumbi subcarbonas. **P. ox'idum fu'sum,** plumbi oxidum semivitreum. **P. ox'idum ru'brum,** *Minium, Red lead,* is sometimes used to kill vermin. **P. ox'idum semivit'reum,** *P. oxidum* (Ph. U. S. and Br.), *Semivitrified oxide of lead* or *litharge* (a yellow protoxide of lead prepared by heat, combined with carbonic acid gas); employed for pharmaceutical purposes, as in the liquor plumbi acetatis, emplastrum plumbi, etc. **P. sac'charas,** *Saccharate of lead, Oxalhydrate of lead* (a salt of saccharic acid and protoxide of lead); employed as a solvent of urinary calculi. **P. subcarbo'nas,** *Plumbi carbonas* (Ph. U. S. and Br.), *Subcarbonate of lead, Cerusse, White lead, Flake white* (prepared by exposing spiral rolls of lead to the fumes of vinegar in vessels placed in manure); it is astringent and sedative, and is sprinkled on parts affected with local inflammation or to prevent chafing in children; also used in the formation of ointments and plasters. **P. superace'tas,** *Cerussa acetata, P. acetas* (Ph. U. S.), *Sugar of lead, Acetate* or *Superacetate of lead, Protoacetate of lead;* astringent, and in weak solution cooling and sedative; in strong solution stimulant. It is given internally in visceral and other hemorrhages, combined with opium, and used externally, in solution, in inflammation, burns, bruises, gonorrhœa, etc.; dose, gr. ss to iss. In overdoses it is an irritant poison. **P. tan'nas,** tannite of lead; used as an external application to white swelling, gangrenous ulcers, excoriations, etc.

Plumbic, plum'bik. Containing or relating to lead. **P. ac'id,** acid obtained when salts of lead are electrolyzed.

Plumbicum acetas crystallisatum, plum'be-kum as-e'tas krys-tal-lis-at'um. Plumbi superacetas.

Plumbism, plum'bizm (*plumbum*, lead). Lead-poisoning; disease affecting persons employed in the manufacture of lead paints, and also painters.

Plumbosum superoxydum, plum-bo'sum su-per-ox'id-um. Plumbi oxidum rubrum.

Plum'bum. Lead. Solid metal of a bluish-white color. Very fusible and oxidizable when heated in the air, and existing in nature under a number of different shapes, the principal of which are those of sulphuret and oxide. S. g. 11.352. It is used to form oxides and salts. In its metallic state it has no action upon the body, but when oxidized or united with an acid it acts, in large doses, as a powerfully astringent poison. **P. ace'ticum,** plumbi superacetas. **P. al'bum,** tin. **P. can'didum,** tin. **P. carbo'nicum,** plumbi subcarbonas. **P. cine'reum,** bismuth subnitrate. **P. hydroiod'icum,** plumbi iodidum. **P. iodat'um,** plumbi iodidum. **P. ni'grum,** graphites. **P. nit'ricum,** plumbi nitras. **P. oxyda'tum carbo'nicum,** plumbi subcarbonas. **P. oxyda'tum ru'brum,** plumbi oxidum rubrum. **P. superoxyda'tum,** plumbi oxidum semivitreum.

Plumie'ra or **Plumieria alba,** plu-me-a're-ah al'bah (after Plumier, a French botanist). Native of tropical America; has a milky juice which is cathartic. **P. dras'tica** is given in Brazil in jaundice and chronic obstructions, mixed with milk of almonds. **P. phagedæ'nica** is in repute in Brazil as an anthelmintic. **P. ru'bra,** jasmine mango, native of tropical America; fruit is edible; therapeutic properties like those of Plumiera alba.

Plumifera (plu-mif'er-ah) or **Pluma'ria lancifo'lia.** *Aguomeda.* The bark of this tree, indigenous to the Brazils, is employed under the name of *Agonia bark* as a febrifuge.

Plum'mer's pills. Pilulæ hydrargyri submuriatis compositæ.

Plums, seed'ed. See *Diospyros Virginiana.* **P., win'ter,** see *Diospyros Virginiana.* **P., yel'low,** see *Diospyros Virginiana.*

Plumula, plu'mu-lah. Row of furrows on superior wall or aqueduct of Sylvius.

Plunge (plunj) **bath.** See *Bath.*

Plunging (plun'jing) **si'phon.** See *Siphon.*

Plu'ral birth. See *Multiparous.*

Pluricellular, plu-re-sel'u-lar. Having many cells.

Plurilocular, plu-re-lok'u-lar (*loculus*, a small space). Provided with numerous small spaces or compartments.

Pluripara, plu-rip'ar-ah (*plus*, many, *pario*, to bring forth). Multipara.

Pluriparity, plu-re-par'it-e. The condition of being a pluripara.

Plurip'arous. Multiparous.

Plu'risy (*plus*, more). Plethora. Pleurisy.

Plutea, plu'te-ah. Duplicatures of the dura mater, such as the falx cerebri.

Plutomania, plu-to-man'e-ah (*ploutos*, wealth, *mania*). Insane delusion in which the patient imagines himself to be very rich.

Plutonium, plu-to'ne-um (after *Pluto*). Barium.

Plyntriopsora, plin-tre-o-so'rah (*pluntria*, washerwoman, *psora*). Form of psoriasis occurring in washerwomen.

Pneobiomantia (ne-o-be-o-man'she-ah) or **Pneobiognosis,** ne-be-og-no'sis (*pneo*, to breathe, *bios*, life, *manteia*, divination). Docimasia pulmonum.

Pneobioman'tica. Docimasia pulmonum.

Pneodynamics, ne-o-di-nam'iks (*pneo, dunamis*, power). Science of mechanics of respiration.

Pneogaster, ne-o-gas'ter (*pneo, gaster*, stomach). Respiratory tract.

Pneograph, ne'o-graf (*pneo, grapho*, to write).

Instrument for testing and indicating force and duration of respiration.

Pneometer, ne-om'e-tur (*pneo,* to breathe, *metron,* measure). Spirometer.

Pneometry, ne-om'et-re (*pneo, metron,* measure). Measurement of inspired and expired air.

Pneophore, ne'o-for (*pneo, phoreo,* to carry). Instrument intended, by artificial means, to overcome asphyxia.

Pneoscope, ne'o-skope (*pneo, skopeo,* to view). Instrument to measure the extent of movement of the thorax in respiration.

Pneuma, nu'mah (*pneuma*). Air; life. See *Pneumatic physicians.*

Pneumapostema, nu-map-os-ta'mah (*pneuma, apostema,* abscess). Abscess of the lung.

Pneumapyothorax, nu-map-e-o-tho'raks (*pneuma,* air, *puon,* pus, *thorax,* chest). Pyopneumothorax.

Pneumarthrosis, nu-mar-thro'sis (*pneuma, arthron,* articulation). Secretion or effusion of air into an articular cavity.

Pneumatelectasis, nu-mat-el-ek'tas-is (*pneumon, atelectasis*). Atelectasis pulmonum.

Pneumathæmia, nu-math-e'me-ah (*pneuma, haima,* blood). *Pneumatæmia.* Morbid condition in which air is developed in the blood-vessels.

Pneumathorax, nu-mah-tho'raks. Pneumothorax.

Pneumatic, nu-mat'ik (*pneumatikos*). *Pneumatical.* Relating to air or life. **P. as'pirator,** see *Aspirator.* **P. cab'inet,** air-tight cabinet in which patients are treated by compressed air. **P. differentia'tion,** causing patients to inhale air more rarefied than that which surrounds the body. **P. med'icine,** treatment of diseases by fumigation or inhalation. **P. occip'ital bones,** see *Occipital bone.* **P. physic'ians,** *Pneumatists;* name given to a sect of physicians, at the head of whom was Athenæus, who made health and disease to consist in the different proportions of an element—which they called *Pneuma*—to those of the other elementary principles. Pneuma was a fancied spiritual principle which the Stoics regarded as an element different from water, air, earth, and fire. The doctrine was called *Pneumatism.* The epithet *pneumatic* is sometimes applied to those who treat diseases chiefly by the inhalation of gases. **P. pro'cess,** continuation, occasionally found, of air-cells of processus mastoideus to lateral regions of os occipitis. **P. repos'itor,** globe dilated with air and introduced into the vagina with the view of replacing the uterus.

Pneumat'ica (*pneuma,* air). Appertaining to the breathing; diseases of the respiratory function; agents that act on the respiratory organs.

Pneumat'ical. Pneumatic.

Pneumaticity, nu-mah-tis'it-e. Condition of containing air.

Pneumatics, nu-mat'iks. Division of science relating to properties of air, etc.

Pneumatocardia, nu-mat-o-kar'de-ah. Condition in which gas collects in the cardiac cavities.

Pneumatocele, nu-mat-o-se'le (Eng. nu'mat-o-seel) (*pneuma, kele,* tumor). See *Pneumocele* and *Physocele.*

Pneumatoceph'alus. Emphysematous tumefaction of the head.

Pneumatochemia, nu-mat-o-kem-e'ah. Chemistry of gases.

Pneumatodes, nu-mat-o'dees (*pneuma, odes*). One distended with air or who breathes with difficulty, owing to accumulation of flatus in the digestive tube or from emphysema.

Pneumatodic, nu-mat-o'dik. Filled with air.

Pneumatodyspnœa, nu-mat-o-dis-ne'ah (*pneuma, dus,* difficult, *pneo,* to breathe). Dyspnœa due to emphysema.

Pneumatogram, nu'mat-o-gram (*pneuma, grapho,* to write). Tracing of respiratory movements.

Pneumatograph, nu'mat-o-graf. Instrument designed to exhibit the movements of the chest in respiration.

Pneumatology, nu-mat-ol'o-je (*pneuma, logos,* discourse). Treatise on air and other gases.

Pneumatometer, nu-mat-om'e-tur (*pneuma, metron,* measure). Spirometer.

Pneumatometry, nu-mat-om'et-re. Measurement of the capacity of the lungs for air. Treatment of diseases affecting organs of respiration and circulation with pneumatic apparatus.

Pneumatomphalocele, nu-mat-om-fal-o-se'le (Eng. nu-mat-om'fal-o-seel) (*pneuma, omphalos,* navel, *kele,* hernia). Pneumatomphalus.

Pneumatomphalus, nu-mat-om'fal-us (*pneuma, omphalos,* umbilicus). *Pneumatomphalocele.* Umbilical intestinal hernia containing a considerable quantity of flatus.

Pneumatopathy, nu-mat-op'ath-e (*pneuma, pathos,* disease). Mind cure.

Pneumator'rhachis (*pneuma, rhachis,* spine). Accumulation of air in the vertebral canal.

Pneumatosis, nu-mat-o'sis. Flatulence; flatulent distension of the stomach or bowels, or both; emphysema; abnormal collection of gaseous matters in any part of the body. **P. abdom'inis,** tympanites. **P. enter'ica,** colica flatulenta. **P. pericar'dii,** pneumopericardium. **P. pulmo'num,** emphysema of the lung. **P. ventric'uli et enter'ica,** flatulence of the stomach and bowels.

Pneumatotherapy, nu-mat-o-ther'ap-e (*pneuma, therapeia,* therapeutics). Treatment of disease by means of compressed air.

Pneumatothermanter, nu-mat-o-thur-man'ter (*pneuma, thermaino,* to warm). Respirator.

Pneumatothorax, nu-mat-o-tho'raks. Pneumothorax.

Pneumatotomy, nu-mat-ot'o-me. Pneumotomy.

Pneumaturia, nu-mat-u're-ah (*pneuma, ouron,* urine). Escape of gas from the urethra.

Pneumectasis, nu-mek'tas-is (*pneumon, ektasis,* dilatation). Emphysema of the lungs.

Pneumectomy, nu-mek'to-me (*pneumon, ektome,* excision). Excision of a portion of the lung.

Pneumic (nu'mik) **acid.** See *Acid, pneumic.*

Pneumoactinomycosis, nu-mo-ak-tin-o-mik-o'sis. Actinomycosis of the lung.

Pneumobacillus, nu-mo-bas-il'lus. Bacillus pneumoniæ. **P. liquefa'ciens bo'vis,** bacillus met with in pleuro-pneumonia affecting cattle.

Pneumocace, nu-mok'as-e (*pneumon, kakos,* evil). Necropneumonia.

Pneumocarcinoma, nu-mo-kar-sin-o'mah (*pneumon, karkinoma,* cancer). Carcinoma of the lungs.

Pneumocele, nu-mo-se'le (Eng. nu'mo-seel) (*pneumon, kele,* rupture). Hernia of the lung through one of the intercostal spaces; neumatocele.

Pneumocholosis, nu-mo-kol-o'sis (*pneumon, cholosis,* biliary disease). Bilious pneumonia.

Pneumochysis, nu-mok'is-is (*pneumon, chuo,* to pour out). Œdema of the lungs.

Pneumococcus, nu-mo-kok'kus (*pneumon, kokkos,* kernel). Micrococcus of the lung. See *Bacillus pneumoniæ.* **P. of Fränk'el,** micrococcus Pasteuri. **P. of Fried'länder,** bacillus pneumoniæ.

Pneumoconiosis (nu-mo-ko-ne-o'sis) or **Pneumonoconio'sis** (*pneumon, konis,* dust). Disease of the lungs due to inhalation of dust or irritating particles.

Pneumodynamics, nu-mo-di-nam'iks (*pneumon, dunamis,* power). Medical physics treating of respiration.

Pneumoenteritis, nu-mo-en-ter-e'tis (*pneumon,* lung, *enteron,* intestine). Hog cholera.

Pneumogastric, nu-mo-gas'trik (*pneumon, gaster,* stomach). Belonging to the lungs and stomach. **P. nerve,** eighth pair of nerves—tenth pair of some; middle sympathetic, so called because distributed especially to the organs contained in the chest and abdomen. It arises from behind the eminentiæ olivariæ and near the corpora restiformia by one or two rows of filaments regularly arranged. These filaments unite to form a flat cord, which issues from the cranium by the foramen lacerum posterius, behind the glossopharyngeal nerve. At its exit from the cranium the pneumogastric nerve has the appearance of a very compact plexus—plexus gangliformis,

ganglion of the superior laryngeal branch of Sir Astley Cooper. It descends along the neck, deeply seated on the outside of the carotid artery and the internal jugular vein. When it has attained the lower part of the neck it enters the chest, gliding behind the subclavian vein, and passing on the right side in front of the subclavian artery, and on the left before the arch of the aorta. It proceeds at first backward, increasing in size; afterward it passes from behind the bronchia to the œsophagus, which it accompanies through the diaphragm, and terminates on the stomach. In the neck the pneumogastric nerve anastomoses with the spinal, glossopharyngeal, great hypoglossal, and great sympathetic nerves, and furnishes the following branches: pharyngeal, superior laryngeal, and cardiac. In the chest it gives off the inferior laryngeal or recurrent, the pulmonary plexus, and the œsophageal branches. On entering the abdomen the œsophageal branches which terminate the pneumogastric are distributed upon the stomach, and give numerous filaments to that viscus, to the hepatic, cœliac, gastro-epiploic, and solar plexuses; some go also to the pancreas, liver, gall-bladder, duodenum, etc. The pneumogastric nerve is interested in most important functions, being excito-motory, excito-secretory, and excito-nutrient. Some of its branches are wholly motor, others sensory-motor, while one of its branches—the superior laryngeal—is the sensitive nerve of the larynx.

Pneumogram, nu'mo-gram. See *Pneumatogram.*

Pneumograph, nu'mo-graf (*pneumon, grapho,* to write). Pneumatograph.

Pneumography, nu-mog'raf-e (*pneumon, graphe,* description). The part of anatomy describing the lungs.

Pneumohæmothorax, nu-mo-he-mo-tho'raks (*pneuma,* air, *haima,* blood, *thorax,* chest). Collection of gas or air and blood in the pleural cavity.

Pneumohydrometra, nu-mo-hid-ro-me'trah (*pneuma, hudor,* water, *metra,* uterus). Condition in which gas is generated in the uterus by the decomposition of fluid.

Pneumohydrothorax, nu-mo-hid-ro-tho'raks (*pneuma, hudor,* water, *thorax,* chest). Collection of air and water in the pleural cavity.

Pneumokoniosis, nu-mo-ko-ne-o'sis. See *Pneumoconiosis.*

Pneumolith, nu'mo-lith (*pneumon, lithos,* stone). Calculus in the lungs.

Pneumolithiasis, nu-mo-lith-e'as-is (*pneumon, lithiasis,* formation of stone). Morbid state in which calculi form in the lungs.

Pneumology, nu-mol'o-je (*pneumon, logos,* discourse). Anatomical treatise on the lungs; anatomical description of the lungs.

Pneumomalacia, nu-mo-mal-ak'e-ah (*pneumon, malakia,* softening). Softening of the lungs.

Pneumometer, nu-mom'e-tur (*pneumon, metron,* measure). Spirometer.

Pneumometry, nu-mom'et-re. Pneumatometry. See *Spirometer.*

Pneumomycosis, nu-mo-me-ko'sis (*pneumon, mukes,* fungus, *osis*). Growth of fungi in the lungs.

Pneu'mon. Lung.

Pneumonæmia, nu-mon-e'me-ah (*pneumon, haima,* blood). Congestion of the lungs.

Pneumonal'gia (*pneumon, algos,* pain). Pain in the lung; angina pectoris.

Pneumonatelec'tasis (*pneumon, atelectasis,* imperfect expansion or dilatation). Imperfect expansion of the lungs at birth, giving rise to cyanosis.

Pneumonec'tasis (*pneumon, ektasis,* dilatation). Emphysema of the lungs.

Pneumonemphrax'is (*pneumon, emphraxis,* obstruction). Congestion and infarction of the lungs.

Pneumonia, nu-mo'ne-ah (*pneumon,* lung). Of old it meant a disease of the lungs. Inflammation of the vesicular structure of the lungs. There are three chief varieties of pneumonia: 1. P., *croupous,* which is always acute. 2. P., *catarrhal,* either acute or chronic. 3. P., *interstitial,* or fibrous induration of the lung. Croupous pneumonia is most common in adults; it usually involves the whole of the affected lobe (hence called lobar pneumonia).

There are three stages of pneumonia: *Stage of Engorgement or Congestion:* The affected lung is distended; firmer, of a red color; crepitates less than normal lung tissue. *Red Hepatization or Consolidation:* The affected portion becomes solid, brownish in color, resembling normal liver tissues; alveoli and smaller bronchi are filled with solid exudation. *Gray Hepatization and Resolution or Purulent Infiltration:* Affected portion becomes gray by the discoloration of the blood-globules (fatty degeneration); infiltration or absorption takes place; gangrene or calcareous encapsulation may occur. *Predisposing Causes:* Age mostly under five years, then between 20 and 40, and after 60; poverty, intemperance, and changes of temperature. *Exciting Causes:* Exposure to changes of temperature; atmospheric conditions.

Symptoms.—Distinct chills (violent for one-half or two hours); these are only absent in old people after 70; prostration; pain underneath the nippie of affected side; increased respirations, more than thirty per minute; dyspnœa, cough, mucous expectoration at first; after this it becomes gelatinous, viscid, tenacious, yellow or brick-dust color; countenance is flushed; temperature, 102°–105°. Catarrhal pneumonia has in general the same stages and symptoms as croupous: restrained movement, normal vocal fremitus, slight dulness, crackling sounds heard at end of inspiration. Crepitant râles heard in the first twelve or twenty-four hours. Crepitant râle characteristic sign of first stage of pneumonia. *Second Stage:* Inspection—Expansive movements are diminished on the affected and increased on healthy side. Palpation —As a rule, increased vocal fremitus. Percussion—Marked dulness. Auscultation—Bronchial breathing; bronchophony. *Third Stage:* Physical signs in early part of this stage are the same as those of second stage. Rude (or broncho-vesicular) respiration, subcrepitant and crepitant râles.

Prognosis.—In young children and old persons almost always fatal. Double pneumonia generally fatal.

Treatment.—In vigorous and undoubtedly healthy individuals, with elevated temperature and high pulse, flushed surface and marked dyspnœa, bleeding has been resorted to by some advocates; rest in bed; liquid food, milk, eggs; for pain and cough, opium; for high temperature, quinia. If the heart is feeble, stimulants, alcohol or carbonate of ammonium, digitalis; nutritious diet, and, when the violence of the inflammation has been subdued, counter-irritants, etc. Chronic pneumonia sometimes succeeds the acute form, or it may occur accidentally; must be managed on general principles, and counter-irritants of all kinds are indicated.

Pneumo'nia, adynam'ic. See *P., bilious.* **P. bilio'sa,** P., bilious. Inflammation of the lungs, accompanied by gastric fever, and not uncommonly by typhoid symptoms; *Pneumotyphus, Putrid, Typhoid, Adynamic,* or *Erysipelatous pneumonia.* **P., catar'rhal,** bronchopneumonia. **P., cer'ebral,** pneumonia with serious brain complications. **P., cot'ton,** mechanical form of pneumonia occurring in operatives employed in cotton-mills. *Cotton phthisis* is similarly produced. **P., croup'ous,** P., fibrinous. **P. dis'secans,** acute purulent pneumonia following destructive suppurative inflammation of the bronchi and surrounding tissues and blood-vessels. **P., embol'ic,** from introduction of solid particles into the pulmonary circulation. **P., erysipel'atous,** see *P., bilious.* **P., fi'brinous,** pneumonia characterized by coagulable fibrinous exudation; the form of the affection generally described under the single word pneumonia. **P. gangræno'sa,** necropneumonia. **P. hypostat'ica,** P. in a depending portion of the lung, caused by lying on the back. **P. intermit'tens,** P. characterized by periodicity. **P., interstit'ial,** form of pneumonia affecting the connective tissue of the lungs. Sclerosis of the lung. **P., lo'bar,** pneumonia characterized by deposit of plastic ma-

terial in the air-cells, and involving a lobe of a lung or the whole lung, or even the lobes of both lungs; see *Pneumonia*. **P., lob'ular**, see *Lobular*. **P. mi'grans**, insidious attack of pneumonia which wanders from one lung to the other. **P. no'tha**, peripneumonia notha. **P., pleuri'tis**, pleuropneumonia. **P., pu'trid**, P., bilious. **P. typho'des**, P., bilious. **P., ty'phoid**, P., bilious. **P. typho'sa**, P., bilious; necropneumonia. **P., vesic'ular**, vesicular bronchitis.

Pneumonic, nu-mon'ik. Pulmonic.

Pneumonica, nu-mon'ik-ah (*pneumon*). Diseases affecting the lungs, their membranes or motive power; characterized by irregular, impeded, or painful respiration.

Pneumonici (nu-mon'is-e) (**mor'bi**). Lung diseases.

Pneumonicula, nu-mon-ik'u-lah (dim. of **Pneumonia**). Slight inflammation of the lung.

Pneumonitic, nu-mon-it'ik. Of or belonging to pneumonitis.

Pneumonitis, nu-mon-e'tis (*pneumon, itis*). Pneumonia.

Pneumonocarcinoma, nu-mon-o-kar-sin-o'mah (*pneumon, karkinoma*). Cancer of the lungs.

Pneumonocele, nu-mon-o-se'le (Eng. nu'mon-o-seel) (*pneumon, kele*, hernia). Hernia of the lung. **P. diaphragmat'ica inter'na**, hernia of the lung through the diaphragm. **P. exter'na** or **thorac'ica**, hernia through the parietes of the chest.

Pneumonocirrhosis, nu-mon-o-sir-rho'sis. Cirrhosis of the lungs.

Pneumonococ'cus. See *Pneumococcus*.

Pneumonodynia, nu-mon-o-din'e-ah (*pneumon, odune*, pain). Pain in the lungs.

Pneumonœdema, nu-mon-e-de'mah. Œdema of the lungs.

Pneumonokoniosis, nu-mon-o-kon-e-o'sis (*pneumo, konia*, dust). Disease arising from the inhalation of dust, as of coal, iron, etc. See *Anthracosis, Siderosis*.

Pneumonolith, nu-mon'o-lith. See *Pneumolith*.

Pneumonomalacia, nu-mon-o-mal-ak'e-ah. See *Pneumomalacia*.

Pneumonomelanosis, nu-mon-o-mel-an-o'sis. See *Melanosis*.

Pneumonom'eter (*pneumon, metron*, measure). Spirometer.

Pneumonomycosis, nu-mon-o-mik-o'sis (*pneumon, mukes*, fungus). Vegetable parasitic growth in the lungs.

Pneumonoparalysis, nu-mon-o-par-al'is-is. Paralysis of the lungs.

Pneumonopathia, nu-mon-o-path-e'ah. Disease of the lungs.

Pneumonopericardi'tis. See *Pneumopericarditis*.

Pneumonopericardium. See *Pneumopericardium*.

Pneumonophlebitis, nu-mon-o-fleb-e'tis. Inflammation of pulmonary veins.

Pneumonophthisis, nu-mon-o-te'sis. Phthisis pulmonalis.

Pneumonophthoe, nu-mon-of'tho-e (*pneumon, phthoe*, wasting away). Phthisis pulmonalis.

Pneumonophyseter, nu-mon-o-fis-e'tur (*pneumon, phuseter*, blowpipe). Apparatus for making insufflation into the lungs.

Pneumonopleuresis (nu-mon-o-plu-ra'sis) or **Pneumonopleuritis**, nu-mon-o-plu-re'tis. Pleuroperipneumony.

Pneumonoptysis, nu-mon-o-te'sis (*pneumon, ptusis*). Hæmoptysis.

Pneumonorrhagia, nu-mon-or-rhaj'e-ah (*pneumon, rhage*, breaking forth). Hæmoptysis.

Pneumonorrhœ'a (*pneumon, rheo*, to flow). Hæmoptysis.

Pneumonosaprosis, nu-mon-o-sap-ro'sis (*pneumon, sapros*, putrescent). Gangrene of lung.

Pneumonoscirrhus, nu-mon-o-skir'rhus (*pneumon, skirrhos*, induration). Induration of the lungs.

Pneumonoscope, nu-mon'o-skope (*pneumon, skopeo*, to see). Stethoscope.

Pneumonosepsis, nu-mon-o-sep'sis. Pneumosepsis; necropneumonia.

Pneumono'sis. Disease of the lungs, of whatever character it may be.

Pneumonospasmus, nu-mon-o-spaz'mus (*pneumon, spasmos*, spasm). Asthma.

Pneumonostenosis, nu-mon-o-sten-o'sis. Contracted condition of lung.

Pneumonosyrinx, nu-mon-o-sir'inks. Syringe for injecting the lungs; pulmonary fistula. Also apparatus for insufflating the lungs.

Pneumonotelectasis, nu-mon-o-tel-ek'tas-is (*pneumon, telos*, completion, *ektasis*, dilatation). Aggravated emphysema of lungs.

Pneum'ony. Pneumonia.

Pneumonyperpathia, nu-mon-ip-ur-path-e'ah (*pneumon, huper, pathos*). Aggravated diseased condition of lungs.

Pneumonypostasis, nu-mon-ip-os'tas-is (*pneumon, hupostasis*, settling down). *Pneumonia hypostatica*. Pneumonia in a depending portion of the lung, caused by lying on the back.

Pneumoparesis, nu-mo-par'es-is. Paralysis of the lung from sudden failure of nervous stimulus.

Pneumopericarditis (nu-mo-per-e-kar-de'tis) or **Pneumopericar'dium** (*pneumon, pericardium*). Effusion of air into the cavity of the pericardium.

Pneumoperitonitis, nu-mo-per-e-ton-e'tis (*pneumon, peritonaion*, peritoneum). Collection of gas in cavity of peritoneum occurring in peritonitis.

Pneumophthalmos, nu-mof-thal'mos (*pneumon, ophthalmos*). Air contained within the eye.

Pneumophthisis, nu-mo-te'sis. Phthisis pulmonalis.

Pneumophthoe, nu-mof'tho-e (*pneumon, phthoe*, a wasting away). Phthisis pulmonalis.

Pneumophymata, nu-mo-fe'mat-ah (*pneumon, phuma*, a growth). Tubercles of the lungs.

Pneumophymia, nu-mo-fim'e-ah. Tuberculosis of the lungs.

Pneumopleuresis, nu-mo-plu-re'sis. Pleuroperipneumony.

Pneumoproteins, nu-mo-pro'te-inz. Proteins produced by pneumococcus during life.

Pneumopyopericardium, nu-mo-pe-o-per-e-kar'de-um (*pneumon, puon*, pus). Collection of pus and gas in the pericardium.

Pneumopyothorax, nu-mo-pe-o-tho'raks. See *Pneumothorax*.

Pneumorrhagia, nu-mor-rhaj'e-ah (*pneumon, rhage*, a breaking forth). Hæmoptysis. **P. inter'na**, hæmatothorax.

Pneumorrhœa, nu-mor-rhe'ah (*pneumon, rheo*, to flow). Bronchorrhœa.

Pneumoscope, nu'mo-skope. Pneumograph.

Pneumosepsis, nu-mo-sep'sis (*pneumon, sepsis*, putrefaction). Necropneumonia.

Pneumoserothorax, nu-mo-se-ro-tho'raks (*pneumon, serum, thorax*). Pneumothorax in which effusion of serum is present.

Pneumoses, nu-mo'sees (*pneumon, osis*). Morbid affections of the lungs.

Pneumotherapeutical, nu-mo-ther-ap-u'tik'l (*pneumon, therapeutikos*). Relating to pneumotherapeutics.

Pneumotherapy, nu-mo-ther'a-pe. Medical treatment of lung diseases. Also pneumatotherapy, or treatment of disease by compressed or rarefied air, or by introduction of air into a cavity, as in Politzer's plan of injecting air through the Eustachian tube into the cavity of the tympanum.

Pneumothorax, nu-mo-tho'raks (*pneuma, thorax*). Accumulation of air in the pleural cavity; generally sudden in invasion and fatal in character. In many instances along with the air a liquid is effused, consisting of a serous fluid constituting *Hydropneumothorax*, or of one that is purulent, *Pneumopyothorax*. The disease may be spontaneous and simple, but in a large proportion of cases it is complicated with pleurisy and pulmonary tubercles; signs vary according as there is or is not a communication between the pleura and the bronchia; the affected side gives a hollow, tympanitic sound, even where the thickness of the parietes of the thorax is great. When the effusion is considerable the affected side is dilated, but there is no râle

of any kind. When a gaseous and a liquid effusion are present at the same time, the sound on percussion is found to be clear at the superior part of the thorax, but dull inferiorly; hence, by changing the position of the patient, and by consequence that of the contained fluids, the seats of the clear and the dull sound will be varied. When the gaseous effusion is owing to a fistulous communication between the pleura and bronchia, the metallic respiration and resonance are heard; and if there be both gaseous and liquid effusion, with a fistulous communication, in addition to these signs there is the *tintement métallique*. Presence of liquid may be ascertained by succussion. See *Emphysema*.

Pneumot'omy (*pneumon, tome*, incision). Dissection of the lungs; opening into a cavity in the substance of the lung by incision or cautery, and drainage.

Pneumotoxin, nu-mo-toks'in (*pneumon, toxikos*, poisonous). Poisonous substance produced by the pneumococcus. *Antipneumotoxin* is a substance existing in animals after inoculation with pneumotoxin, which confers immunity against the formation of the pneumococcus in animals thus treated.

Pneumotuberculum, nu-mo-tu-bur'ku-lum. Tubercle in the lung.

Pneumoty'phus. Typhoid pneumonia.

Pneumotypo'sis (*pneumon, tupos*, a stamp, a type). Pneumonia characterized by periodicity.

Pneuobiomantia, nu-o-be-o-man'she-ah (*pneo*, to breathe, *bios*, life, *manteia*, divination), or **Pneusiobiognosis**, nu-se-o-be-og-no'sis (*pneusis, bios*, life, *gnosis*, knowledge). Docimasia pulmonum.

Pneusiobioscope, nu-se-o-be-os'ko-pe (*pneusis, bios*, life, *skopeo*, to examine). Docimasia pulmonum.

Pneusis, nu'sis. Respiration. **P. pertus'sis**, pertussis. **P. singul'tus**, singultus. **P. tus'sis**, tussis.

Pneusometer, nu-som'et-ur (*pneusis, metron*, measure). Spirometer.

Pnigalion, ne-gal'e-on (*pnigo*, to suffocate). Incubus.

Pnigma, nig'mah. Orthopnœa; strangulation.

Pnigophobia, nig-o-fo'be-ah (*pnigos, phobos*, dread). Angina pectoris; suffocation.

Pnigos, nig'os. Orthopnœa; strangulation.

Pnix, niks (*pnix*, strangulation). Orthopnœa; strangulation.

Pnixis, niks'is (*pnixis*, strangulation). Orthopnœa; strangulation.

Pno'e (*pnoe*) or **Pnœ'a** (*pnoë*). Aura; breath.

Pnoöcolyticus, no-o-kol-it'ik-us (*pnoos*, breath, *koluo*, to hinder). Asthmatic.

Pnous, noos. Aura; breath.

Po'a Abyssin'ica. The grain of this plant is used in Abyssinia for bread.

Poad'milk. Colostrum.

Poaya bran'ca. White ipecac.

Po-baia. Powder resembling chrysarobin, used in Cochin China in diseases of the skin.

Pock (Teut. *pocca*, a pock or a little pouch). Pustule of small-pox. **P., black**, see *Variola*. **P., crys'talline**, variola verrucosa. **P., horn**, variola verrucosa. **P., kine**, vaccina. **P., stone**, old name given to acne pustule.

Pock'broken. See *Pockmark*.

Pock'eting. Treatment of the pedicle in ovariotomy by bringing its extremity between the inner lips of the wound at its lower angle, the raw surface of the pedicle being thus attached directly to the raw surface of the abdominal wall.

Pock'hole. Pockmark.

Pock'mark. Mark or *pit* or *pitting* left from a small-pox pustule. One pitted with small-pox is said to be pockmarked or pockbroken.

Pock'wood. Lignum vitæ; Guaiacum officinale.

Pock'y. Infected with or appertaining to or resembling small-pox or syphilis.

Poculum (pok'u-lum) **amato'rum**. Philter. **P. Dio'genis**, palm. **P. emet'icum**, emetic goblet. **P. vomito'rium**, emetic goblet.

Podagra, pod-og'rah (*podo, agra*, seizure). Pain which attacks the feet. Gout situate in the articulations of the foot. It has also been used in a more extensive signification synonymously with gout. **P. aber'rans**, gout (wandering). **P. arthri'tis**, gout. **P. aton'ica**, gout (atonic). **P. regula'ris**, gout (regular). **P. retroce'dens**, gout (retrograde). **P. retrogra'da**, gout (retrograde).

Podagraria, pod-a-gra're-ah. Ligusticum podagraria. **P. ægopo'dium**, Ligusticum podagraria.

Podagric (pod-ag'rik) or **Pod'agrous**. *Arthritic, Gouty*. Relating or belonging to gout; affected with or liable to gout.

Podagrism, pod'a-grism. See *Diathesis*.

Podalgia, po-dal'je-ah (*podo, algos*, pain). Pain in the foot; gout; podagra.

Podalic, po-dal'ik. Pedal. **P. ver'sion**, see *Turning*.

Podaliria (pod-al-ir'e-ah) **austra'lis** (after Podalirius, son of Æsculapius). Baptisia australis. **P. tincto'ria**, sophoria tinctoria.

Podanencephalia, pod-an-en-sef-al'e-ah. See *Podencephalus*.

Podarthritis, pod-ar-thre'tis. Podagra. Gout of the feet.

Podarthrocace, pod-ar-throk'as-e (*podo, arthron*, an articulation, *kakos*, bad). Caries of the articulation of the foot.

Podarthrum, pod-ar'thrum (*pous*, foot, *arthron*, joint). Joint of the foot.

Podaxis (pod-aks'is) or **Podaxon**. Genus of fungi.

Podelcoma, pod-el-ko'mah (*podo, helkoma*, ulcer). Peculiar ulceration of the foot but little amenable to treatment, and which has been likewise called *Morbus tuberculosis pedis, Tumor albus articuli pedis*. See *Mycetoma*.

Podencephalia, pod-en-sef-al'e-ah. See *Podencephalus*.

Podencephalus, pod-en-sef'al-us (*podo, kephale*, head). *Podanencephalus*. Monster whose brain is placed outside the skull, and seems to be supported on a pedicle which traverses the summit of the skull. This state of monstrosity is termed podancephalia, or, more properly, podencephalia.

Podex, po'deks. Anus; nates.

Podismus, po-diz'mus. Spasm of the feet.

Podisoma, pod-is-o'mah. Genus of fungi. **P. macro'pus**, fungus reputed to cause outgrowths on Juniperus Virginiana; among the laity employed as an anthelmintic.

Pod'ium. Foot.

Po'do (*pous*, foot). In composition, foot.

Podobromhidrosis, pod-o-brom-hid-ro'sis (*pous, broma*, stench, *hidros*, perspiration). Bromidrosis.

Podocace, pod-ok'as-e (*pous, kakos*, evil). Podarthrocace.

Podocarpinic (pod-o-kahr-pin'ik) **ac'id**. $C_{17}H_{22}O_3$, contained in resin of Podocarpus cupressina.

Pododynia, pod-o-din'e-ah (*podo, odune*, pain). Pain in the soles of the feet induced by long standing, as in cutters of garments, etc. Podalgia.

Podœdema, pod-e-de'mah (*podo, oidema*, swelling). Œdema of the foot.

Podology, po-dol'o-je (*podo, logos*, discourse). Description of the foot; treatise on the foot.

Podomancy, po'do-man-se (*podo, manteia*, divination). Art of divining by inspection of the feet.

Podometer, po-dom'e-tur (*pous, metron*, measure). Pedometer.

Podophyllic (po-do-fil'lik) **ac'id**. *Podophyllinic acid*. Acid derived from podophyllin of commerce; devoid of active properties.

Podophyllin, pod-o-fil'lin. See *Podophyllum peltatum* and *Resina podophylli*.

Podophyllitis, pod-o-fil-le'tis. Condition in which podophyllous tissue is inflamed.

Podophylloquercitin, pod-o-fil-lo-kwur'sit-in. Coloring principle of Podophyllum peltatum.

Podophyllotoxin, pod-o-fil-o-toks'in. Highly poisonous white powder, amorphous and acid, derived from podophyllin of commerce. It is a combination of picropodophyllin and picropodophyllic acid.

Podophyl'lous (*podo, phullon*, leaf). Relating to the foot and lamellar tissue of hoof of animals.

Podophyllum (pod-o-fil'lum) **monta'num** (*podo, phullon*, leaf, in reference to the shape of the leaf). *Mountain May apple, Mandrake, Wild lemon, Duck's foot, Raccoon berry, Yellow berry, Ground lemon;* ord. Berberidaceæ; native of India. It has the same properties as **P. pelta'tum**, *May apple, Mandrake*, a common plant throughout North America; fruit is edible, and esteemed by many; leaves are said to be poisonous; the rhizome and rootlets, *Podophyllum* (Ph. U. S.), *Podophylli radix* (Ph. Br.), are purgative in the dose of twenty grains. *Podophyllin*, obtained by evaporating an alcoholic solution of the root or by displacement by alcohol, throwing down the precipitate by water, and drying—*Resina podophylli*—is an excellent purgative and a laxative in small doses. See *Resina*.

Podorrheuma, pod-or-rhu'mah (*podo, rheuma*, defluxion). Podagra.

Podotheca, pod-o-the'kah (*podo, theke*, sheath). Cuticle of the foot. Anatomical preparation. *Chirotheca* has been used for the cuticle of the hand.

Podotrochilitis, pod-o-trok-il-e'tis (*podo, trochilia*, pulley). Navicular disease in the horse, frequently causing lameness.

Pod'pepper. Capsicum.

Podyperidrosis, pod-ip-er-id-ro'sis (*podo, hyper*, over, *hidrosis*, perspiration). Excessive sweating of the feet.

Pœcilia, pe-sil'e-ah (*poikilia*, variegated appearance). See *Achroma*.

Pœcilocyte, pe'sil-o-site (*poikilos, kutos*, hollow). See *Poikilocyte*.

Pœcilocytosis, pe-sil-o-sit-o'sis. See *Poikilocytosis*.

Pœcilomelasma, pe-sil-o-mel-as'mah (*poikilos*, various, *melas*, black). Gangræna senilis.

Pœciloperissoma, pe-sil-o-per-is-so'mah (*poikilos, perissoma*, excretory matter). Excessive development of heterogeneous tissue.

Pœcilothermal, pe-cil-o-thur'mal (*poikilos, therme*, heat). Term applied to cold-blooded animals whose bodily temperature varies with that of the surrounding medium.

Pœ'onin. Coralline.

Poë'phagus (*poe* or *poa*, plant, *phago*, to eat). One who subsists on plants or vegetables. The act of subsisting or feeding on herbs or vegetables is called *Poëphagia*.

Pœtium (Brazil). Nicotiana tabacum.

Po'gon. Beard.

Pogoniasis, po-gon-e'as-is (*pogon*). Female beard. Also great strength or quantity of beard. Term also applied to a woman having a beard—*Virago*.

Pogonium, po-gon'e-um (dim. of **Pogon**). Weak or small beard.

Pogonology, po-gon-ol'o-je (*pogon, logos*, description). Description of, or treatise on, the beard.

Pogonopus (po-gon'o-pus) **febrif'ugus.** Tree of South America with tonic bark, in which an alkaloid called howardine and a bitter substance is contained.

Pogonotrophy, po-gon-ot'ro-fe (*pogon, trophe*, nourishment). Growth and nutrition of the beard.

Pogostemon (po-go-sta'mon) **interme'dius** (*pogon, stemon*, stamen). P. patchouli. **P. patchou'li**, native of Penang and the Malayan peninsula. Distilled oil is used as a perfume. **P. sua'vis**, P. patchouli.

Pohon antiar, po'hon an'te-ar. Upas. **P. u'pas**, upas.

Poi, po'e. Paste made from root of Arum esculentum; used in Sandwich Islands.

Poi'kiloblasts (*poikilos*, varied, *blastos*, germ). Blood-corpuscles of irregular shape and size.

Poikilocyte, poi'kil-o-site (*poikilos*, varied, *kutos*, cell. Red blood-corpuscle of irregular shape.

Poikilocyto'sis. Irregularity of shape of the red corpuscles, as in pernicious or other form of anæmia.

Poikilothermal, poi-kil-o-thur'mal. See *Pœcilothermal*.

Point (*pungo, punctum*, to prick). Punctum; stitch; see *Punctum*. To come to a head—said of an abscess; see *Suppuration*. **P., apoph'ysary** or **spi'nous**, see *Apophysary*. **P., blis'tering**, name given by Dr. Rush to an indeterminate period in a continued fever, intermediate between the stages of high excitement and collapse, in which blisters will usually produce unequivocally good effects. **P., pain'ful**, tender or painful spot along an inflamed nerve; see *Painful*. **P., pres'sure, pres'sure-arrest'ing**, and **pres'sure-excit'ing**, see *Pressure*. **P., spi'nous**, see *Apophysary*. **P., vi'tal**, see *Centrum vitale*.

Point'ing of an ab'scess. See *Suppuration*.

Poiseuille, space of. Lateral current in the capillaries. **P., still lay'er of**, see *Still layer*.

Poison, poi'zn. *Venenation*. Generic name for all substances which, when introduced into the animal economy, either by cutaneous absorption, respiration, or the digestive canal, act in a noxious manner on the vital properties or the textures of an organ. Hence we speak of *fever poison, cholera poison*, etc. Poisons exist in the three kingdoms of nature; poisons from animals are called venoms, as the venom of the viper, scorpion, tarantula, etc., whilst those that are the products of disease have the name *virus*. In common parlance, therefore, poison is restricted to deleterious articles furnished by the mineral and vegetable kingdoms. Orfila has divided poisons into four classes: 1. *Acrid, Irritating, Corrosive*, or *Escharotic*, as the concentrated acids and alkalies—mercurial, arsenical, cupreous, and antimonial compounds, cantharides, etc. 2. *Narcotic*, those that act particularly upon the brain—as hyoscyamus, opium, etc.—but without inflaming the organ with which they come in contact. 3. *Narcotico-acrid* or *Acro-narcotic*, those that act on the brain or spinal marrow, or both, but at the same time irritate the parts to which they are applied, as aconite, belladonna, etc. 4. *Septic* or *Putrescent*, those furnished by the animal kingdom; see *Venom* and *Virus*. Various classifications of a similar character have been recommended by different toxicologists, but they are liable to the objection that they throw substances together whose physiological action on the system is very different. The classification of Dr. A. S. Taylor is as follows:

- **Irritants**
  - **Mineral**
    - Non-metallic — Acids, Alkalies, and their Salts.
    - Metallic. — Metalloids.
  - **Vegetable.**
  - **Animal.**
- **Neurotics**
  - **Cerebral.**
  - **Spinal.**
  - **Cerebrospinal.**

Arsenic may be cited as an example of the metallic irritants, savin of the vegetable, and cantharides of the animal irritants. Of the neurotics, morphia is a cerebral and strychnia a spinal neurotic, and conia and aconitia are cerebrospinal neurotics. *Irritants* produce speedy vomiting and purging, with pain in the stomach and bowels, which organs are irritated and inflamed. Some of this class are also *corrosive*, as the strong mineral acids, corrosive sublimate, etc. Others, as arsenic and carbonate of lead, are not chemically destructive, being pure irritants only. *Neurotics* act upon the nervous system, producing headache, giddiness, numbness, etc. They include *narcotics*, or *cerebral poisons*, which do not irritate the abdominal organs, and *narcotico-irritants*, as nux vomica and aconite, which do exert such an action. Spectrum analysis, in certain cases, is capable of detecting the most inconceivably minute portions of a metal, as the 195,000,000th part of a grain. See *Spectrum analysis*.

The following table exhibits a *coup d'œil* of the chief poisons and of the circumstances of importance connected with them:

TABLE OF THE CHIEF POISONS.

N. B.—In all cases the Stomach-pump should be used as soon as possible.

I. INORGANIC POISONS.

Poisons.	Symptoms.	Treatment.
ACIDS.	Acids, generally, are strong corrosive poisons. Sour, acrid taste; burning in the throat, increased by pressure, swallowing, or coughing; eructation and excruciating pain in the stomach; more or less corrugation of the lining membranes of the mouth and alimentary canal; excoriation about the mouth or such other parts of the skin as the acid may have touched. The matter vomited effervesces with carbonate of lime. The countenance becomes glazed, extremities cold and clammy; convulsions and death. Nitric acid occasions yellow stains, and sulphuric acid, black.	The carbonates of sodium, potassium, calcium, and magnesium are all antidotes to the acids; chalk and calcined magnesia also are to be used with the following restrictions: for acetic, citric, muriatic, sulphuric, and tartaric acids they may be used indiscriminately. For nitric and oxalic, carbonates of magnesium and calcium can alone be employed with safety. The salts of potassium or sodium should not be given in oxalic-acid poisoning, as the oxalates formed are soluble. In the case of sulphuric acid water should not be drunk, on account of the great heat which is produced by their mixture. Subsequent inflammation to be treated by ordinary means. Flaxseed tea, milk, olive oil, soaps, white of egg, etc. may be employed to protect the inflamed mucous membrane. Carbonates of the alkalies and of magnesium and calcium have the inconvenience that a large quantity of gas is extricated in the stomach.
Acetic Acid.		
Citric Acid.		
Muriatic Acid.		
Nitric Acid (Aqua Fortis).		
Nitromuriatic Acid (Aqua Regia).		
Sulphuric Acid (Oil of Vitriol).		
Tartaric Acid.		
Oxalic Acid.		
Prussic or *Hydrocyanic Acid.*	Sedative poison; nausea, giddiness, debility, hurried pulse, weight and pain in the head, dyspnœa, and prolonged expiration; eructations having the flavor of the acid; spasms, tetanus, contractile pupil, insensibility; involuntary passages of fæces and urine; cyanosis, convulsions, paralysis, death.	Thorough stimulation; atropine hypodermically; ammonia inhaled or swallowed, but not in a very concentrated form. Cold douche to the head; douches hot and cold to the chest.
Oil of Bitter Almonds.		
Laurel Water.		
Nitrobenzole (Essence of Mirbane).	Narcotic irritant both in liquid and vapor, but differs from ordinary narcotics in its persistent odor and in the rapidity of its fatal effects; coma following stupor at uncertain intervals.	Nitrobenzole-poisoning must be treated on the same general principles as prussic-acid poisoning.
Carbolic Acid.	Irritant poison; gastro-enteritis; vomiting of frothy mucus; lining membrane of the mouth white and hardened; severe burning abdominal pain; purging; cold, clammy skin; insensibility, coma, stertorous breathing; pinched and distressed face; thready and indistinct pulse; dyspnœa; pupils contracted; odor of carbolic acid; collapse.	Treatment must be based on the general treatment indicated for other irritant acids, with free ingestion of sweet or castor oil or of soluble sulphates. Saccharate of lime is probably the best antidote. Mucilaginous drinks should be given; counter-irritation applied over the abdomen; stimulants given to excite respiratory and cardiac action; strychnine and digitalis administered, and ether and dilute sulphuric acid hypodermically.
ALKALIES AND THEIR SALTS.	Violent, caustic, acrid taste; great heat in the throat, with destruction of lining membrane; difficult and painful deglutition; vomiting of bloody matter, which turns the yellow of turmeric brown; acute pain in the stomach; gastro-enteritis; cold sweats, weakness, hiccough; violent colic pains, with purging of bloody stools and membranous flakes; stupor or coma, death.	Vegetable acids, such as vinegar, lemon-juice, citric and tartaric acid in solution, are antidotes to the alkalies and their carbonates. The fixed oils, such as castor, linseed, almond, and olive, form soaps with the free alkalies, and therefore destroy their caustic effects.
AMMONIA.		
Strong Liquor or *Water of.*		
Ammonium Chloride or *Muriate, Sal Ammoniac.*		
Ammonium Carbonate.		
POTASSA.		
Caustic Potassa and *Liquor Potassæ.*		
Potassium Sulphate.		
Potassium Carbonate or *Pearlash*, and *Salt of Tartar.*		
Potassium Bitartrate (Cream of Tartar).	Irritant poison, sometimes with paralysis of the lower extremities.	
Potassium Nitrate (Saltpetre).	Will not manifest the effect with turmeric paper. The carbonates when vomited will effervesce with acids; and the liver of sulphur will give rise to eructations of sulphuretted hydrogen.	Poisoning to be treated on general antiphlogistic principles; mucilaginous drinks.
Potassium Nitrite.	Same symptoms as for amyl nitrite.	Same treatment as for amyl nitrite.
Potassium Binoxalate.	The symptoms of poisoning correspond to those of oxalic acid.	Same treatment as for amyl nitrite.
Potassium Sulphuret (Liver of Sulphur).		Liver of sulphur is said to be decomposed and neutralized by common salt. Liquid chloride of soda will also decompose it.
Potassium Cyanide (see *Hydrocyanic acid*).		
SODA.		
Sodium Nitrate. *Sodium Nitrite.*	Same symptoms as for amyl nitrite	Same treatment as for amyl nitrite.

Poisons.	Symptoms.	Treatment.
EARTHS AND COMPOUNDS. BARYTA. *Barium Carbonate.* *Barium Chloride.* *Baryta Nitrate.* LIME AND PREPARATIONS OF CALCIUM.	Analogous to those of the corrosive metals. Violent burning in the stomach, vomiting, gripes, diarrhœa; excessive muscular debility, headache, convulsions, death. Lime differs from baryta in being a pure irritant.	The sulphates of sodium and magnesium are prompt and effective antidotes to all the poisonous salts of baryta. Phosphate of sodium will also counteract their effects. Lime may be neutralized by dilute acids, as vinegar, lemon-juice, etc. Carbonic acid in soda water, effervescing draught, or yeast, it is supposed, would answer a good purpose. The fixed oils may be employed either for baryta or lime when not in a compound state.
ALCOHOL. *Brandy, Whiskey, Wines, and all Spirituous Liquors.*	Intoxication, and when alcohol has been taken very freely, stupor, rapid pulse; complete insensibility, with apoplexy or paralysis of one side; the countenance swollen and of a dark-red color; the breathing difficult, and often stertorous, with a peculiar puffing out of the lips; the breath smells of liquor, which will distinguish the symptoms from those of spontaneous apoplexy.	A powerful emetic should be given as soon as possible; and if the person has lost the power of swallowing, a flexible catheter or tube should be the means of conveying it to the stomach. Vomiting should be encouraged as much as possible with warm water; and large and active glysters of salt and water should be thrown up. Apply heat externally; administer strychnine, ammonia, or atropine by hypodermatic injection. The patient should be placed erect, and cold wet cloths applied to the head, particularly if the body be hotter than natural. If the extremities become cold, warmth and friction should be perseveringly used until a more normal temperature results.
VOLATILE OILS. *Creasote* (see also *Carbolic acid*). *Dippel's Animal Oil.* *Oil of Tar.* *Oil of Tobacco.* *Oil of Turpentine.* *Amylic Alcohol* (*Fusel Oil*). *Other Volatile Oils.*	General action, that of irritant poisons. Burning pain, vomiting, pungent taste, purging, etc. The oils of turpentine and tobacco affect the nervous system; the peculiar odor of each oil will be manifested in the matter vomited. The vapor of fusel oil when inhaled in a diluted state irritates the respiratory organs, produces headache, nausea, and giddiness. It is more potent in its effects in vapor than when swallowed as a liquid.	Creasote is immediately coagulated by albumen. Dippel's animal oil may be counteracted with dilute acids and the fixed oils. The other oils have no particular antidotes, and their effects must, therefore, be counteracted upon general principles. The sulphates, of magnesia particularly, may be given in turpentine-poisoning with demulcent or albuminous drinks.
GASES. *Carbonic Acid* or *Fixed Air.* *Carbonic Oxide.* *Fumes of Burning Charcoal.* *Chlorine.* *Sulphuretted Hydrogen.* *Sulphurous Acid.* *Nitrous Acid.* *Hydrochloric Acid.* *Ammonia.* *Carburetted Hydrogen* (*Coal Gas*).	Chlorine, sulphurous, nitrous, and hydrochloric acid gases produce, when inhaled, violent irritation of the organs of respiration; cough, bloody expectoration, inflammation of the lungs, and permanent pulmonary disease. Ammonia vapor is poisonous, exciting inflammation of the larynx, bronchial tubes, and lungs. The other gases, although producing some effect on the respiratory organs, act as poisons in consequence of their sedative agency. The symptoms, therefore, are those of apoplexy or narcotic poisoning.	The antidotes to chlorine are the cautious inhalation of ammonia or sulphuretted hydrogen. The inflammatory symptoms from chlorine to be treated on general principles. For the other gases alternate warm and cold effusions to the head and chest, friction, mustard plasters, etc., artificial respiration. In poisoning by chlorine, ether may be cautiously inhaled or steam may be similarly employed. For carbonic oxide, fresh air and artificial respiration, and even transfusion may be resorted to. For sulphuretted hydrogen, chlorine may be cautiously inhaled. The vapor of vinegar may be used for vapors of ammonia-poisoning.
CHLOROFORM, ETHER, CHLORAL, ETC. *Chloroform.* *Bichloride of Methylene.* *Ether.* *Amylene.* *Nitrous Oxide.* *Hydrate of Chloral.* *Amyl Nitrite.* *Ethyl Nitrite.*	These substances, as therapeutic agents, belong to the class of anæsthetics or neurotic poisons, which act on the brain and produce insensibility. Chloroform vapor, inhaled in a concentrated form, produces speedily fatal effects. Diluted with atmospheric air, it causes insensibility and total loss of muscular power, stertorous breathing, death sometimes resulting from shock, syncope, or convulsions. Dilatation of the pupil, associated with anæsthesia, is an unfavorable sign. When swallowed as a liquid, it is a much less active poison. Ether in its effects, when swallowed, resembles alcohol; the vapor, when inhaled, has, however, been fatal in several instances. Blueness of the skin, paralysis of movements of the chest, weak and quick pulse, stertorous respiration and depression of temperature are the chief symptoms.	The treatment must be conducted on general principles and according to the symptoms. At once cease the application of the anæsthetic; invert the patient; attempt resuscitation by hypodermic injections of digitalis, strychnia, atropia, etc., not alcohol or ether; use electricity. Treatment similar to that for chloroform.

Poisons.	Symptoms.	Treatment.
	Amylene, seldom employed as an anæsthetic, may induce narcotism and paralysis of the heart. Nitrous oxide, in addition to its exhilarating effects, produces loss of consciousness and insensibility to pain, which may be pushed so far as to produce death; although such a result is very rare. Hydrate of chloral is a sedative, hypnotic, and narcotic, without producing a stage of excitement; and sudden death has resulted after profound sleep and coma from excessive doses. The pulse is slow and thready; respiration weak and labored; the temperature much reduced. The fatal effects have been ascribed by some toxicologists and therapeutists to the conversion of chloral in the system into chloroform and formic acid, through the instrumentality of the alkalies of the blood.	Treatment of chloral-poisoning is by emetics; hypodermic injection of strychnine, digitalis, ammonia, atropia, etc. Keep head low; apply heat externally; stimulate with oxygen inhalation, artificial respiration, etc.
NITROGLYCERIN.	Vertigo; headache, irregular pulse; dilated pupil; pain over the heart; partial suppression of urine; nausea, etc.	General principles of stimulation, externally and internally; cold applications to the head; ergotin internally; subcutaneous injection of atropine.
IODINE. *Potassium Iodide.* BROMINE.	Analogous to those of irritant poisons; burning pain in the throat, lacerating pain in the stomach, and fruitless efforts to vomit; gastro-enteritis; salivation; feeble pulse; excessive thirst; pallor of the face; suffusion of the eyes; excessive pain and tenderness of the epigastrium; suppression of urine; albuminuria, convulsions, and death.	Iodine combines with starch and forms an insoluble compound. The prompt administration of starch, wheat flour, or other vegetable matter containing fecula, beat up in water, is recommended. Iodide of potassium has no antidote. Vomiting should be promoted by draughts of warm water, and inflammation be subdued by general treatment. Steam inhalations should be employed; also in bromine-poisoning. Alcohol, digitalis, strychnine, etc. may be given hypodermically whenever indicated, in either iodine- or bromine-poisoning.
ANTIMONY. *Tartar Emetic.* *Chloride* or *Butter of Antimony.* *Antimony Oxide.*	Vomiting of mucus, bile, or even blood. If vomiting do not occur promptly, violent irritant effects are produced. Gastro-intestinal disturbances; burning pain in the pit of the stomach; purging, fecal or bilious, or even blood; subsequently rice-water discharges, resembling those of Asiatic cholera; colicky pains, sense of tightness in the throat, violent cramps; repeated recurrence of vomiting; weak, slow, almost imperceptible pulse; pinched face; reduced temperature, delirium, unconsciousness, convulsions, and perhaps death.	If vomiting have not been produced, it should be brought about by tickling the fauces and administering copious draughts of warm water. Tannic acid. Astringent infusions, such as of galls, oak bark, Peruvian bark, act as antidotes, and should be given promptly; powdered yellow bark may be used until the infusion is prepared. White of egg. General stimulation internally and externally.
ARSENIC. *Arsenious Acid* or *White Arsenic.* *Arsenic Acid.* *Orpiment*, or *Yellow Sulphuret of Arsenic.* *King's Yellow.* *Realgar*, or *Red Sulphuret of Arsenic.* *Fly Powder.* *Solution of Arsenite of Potash (Fowler's Solution).* *Arsenical Paste.* *Arsenical Soap.* *Copper Arsenite (Scheele's Green, Emerald Green).* *Arseniuretted Hydrogen.* *Paris Green* or *Copper Arseniate.*	Violent burning pain in the œsophagus and region of the stomach and bowels; colic; tenderness on pressure; retching; vomiting; sense of dryness and tightness in the throat; excessive thirst; metallic taste in the mouth; hoarseness and difficulty of speech; the matter vomited greenish or yellowish, sometimes streaked with blood; purging; tenesmus; sometimes excoriation of the anus; urinary organs occasionally affected with violent burning pains and suppression; pulse is weak and small; respiration rapid and labored; convulsions and cramps; clammy sweats; lividity of the extremities; countenance at first swollen, afterward collapsed; eyes red and sparkling; delirium; convulsions, coma, and death. Eruptions in subacute or chronic cases are sometimes present. Some of these symptoms may be absent where the poisoning results from inhalation, as of arseniuretted hydrogen.	The hydrated peroxide or sesquioxide of iron diffused through water; or the precipitated carbonate; or the rubigo ferri, in very fine powder, to be administered every five or ten minutes until relief is obtained. It may be found already prepared in the drug-store, or be prepared at once, in an emergency, by adding ten troy oz. of solution of tersulphate of iron to eight troy ounces of water of ammonia. Ferrum oxidum hydratum cum magnesia (Ph. U. S.) is a still better antidote. This is particularly efficacious when the *white arsenic* has been swallowed. If the arsenic have been taken in the form of Fowler's solution, lime-water, in copious draughts, may be given. For either of the other forms, emetics of sulphate of zinc; diluents; demulcents, such as flaxseed tea, infusion of slippery elm, etc. Counter-irritants may be used to relieve the spasm and violent pain in the stomach. Bleeding, as promoting absorption, should not be employed until the stomach is completely evacuated. Magnesia, freshly precipitated or not too highly calcined, has been used with advantage in arsenious-acid poisoning. If there should be suppression of urine, sweet spirits of nitre should be freely given.
BISMUTH. *Bismuth Nitrate.* *Bismuth Subnitrate (Pearl Powder.)* *Bismuth Oxide.* *Bismuth Subcarbonate.*	Similar to those produced by other irritant poisons. General inflammation of the whole alimentary canal; suppression of urine; hiccough; disagreeable metallic taste; vomiting; cramps; delirium; death.	Milk and sweet mucilaginous drinks are recommended. Leeches, general bleeding; glysters; fomentations to be employed on the general principles of treatment for inflammatory symptoms.

Poisons.	Symptoms.	Treatment.
COPPER. *Copper Sulphate (Blue Vitriol).* *Copper Acetate.* *Copper Subacetate (Verdigris).* *Carbonate of Copper (Blue Verditer).* *Arsenite of Copper (Scheele's Green).* *Food cooked in dirty copper vessels; or pickles or other articles made green by copper.*	Very similar to those produced by arsenic. Coppery eructations and taste. Epileptiform convulsions, delirium; jaundice; suppression of urine. Fatal cases are generally terminated by convulsions, palsy, insensibility.	Emetics and the stomach-pump should be employed. Yellow prussiate of potash is an antidote. Albumen to be administered in either of its forms which can be most readily obtained, as milk or whites of eggs, with demulcent drinks, oils, milk, etc.; opium may be given to relieve pain. Vinegar should *not* be given. The inflammatory and nervous symptoms are to be treated on general principles.
GOLD. *Chloride of Gold.* *Fulminating Gold.* *Other Preparations of Gold.*	Very analogous to those of other irritant poisons. This substance communicates a pink stain to the flesh, and patches of that color may be found about the lips and inside the mouth.	The salts of gold are decomposed by sulphate of iron, and this has therefore been recommended as an antidote. Inflammatory symptoms to be treated on general principles.
IRON. *Sulphate of Iron, Copperas, Green Vitriol.* *Chloride of Iron and the Tincture of the Chloride of Iron.*	Analogous to those of other irritant poisons; colicky pains, constant vomiting and purging. Violent pain in the throat, tension of the epigastrium, coldness of the skin, and feebleness of the pulse.	Carbonate of soda would be a most excellent antidote to either of these substances. Mucilaginous drinks might also be employed, and particular symptoms relieved by general treatment.
LEAD. *Acetate of Lead (Sugar of Lead), Subacetate of Lead (Goulard's Extract). Carbonate of Lead (White Lead, etc.). Red Oxide or Red Lead. Litharge.* *Wines sweetened by Lead. Water which has been kept in leaden vessels. Acid food, cooked or left standing for any length of time in vessels glazed with lead.*	Irritation of the alimentary canal; spasm; epigastric pain; nervous symptoms; paralysis, either partial or complete. When taken for some time in small quantity, violent and obstinate colic; rigidity of abdominal muscles, cramps; remission of pain; obstinate constipation, urine diminished, saliva increased; sweet taste in the mouth; countenance anxious and gloomy; pulse quick and weak; great thirst; subsultus. If relief be not promptly obtained, giddiness, debility, coma, convulsions, and death. The paralysis affects generally the upper extremities.	Emetics and stomach-pump; mucilaginous or other thick drinks; soluble sulphates, as of magnesium and sodium, and phosphate of soda, are good antidotes for the soluble salts of lead. Opium may be needed to relieve pain. For the solid forms dilute sulphuric acid may be drunk. These are applicable to the irritant forms of poisoning by lead. In the chronic form, or colica pictonum, purgatives and anodynes are resorted to, and external applications to relieve the cramps. The use of strychnia is recommended for the paralysis, and iodide of potassium for the chronic form generally.
MERCURY. *Corrosive Sublimate.* *Cyanide of Mercury.* *Nitrate of Mercury.* *Ammonio-chloride of Mercury (White Precipitate).* *Red Oxide or Red Precipitate.* *Sulphate or Turbith Mineral.* *Vermilion, or Red Sulphuret.*	Similar to those of irritant poisons; harsh metallic astringent taste; burning pain in the stomach; vomiting and purging, frequently of bloody matter; often irritation of the urinary organs, and sometimes suppression; tightness and burning in the throat, occasionally so great as to prevent speech; fetor of the breath; pulse small and irregular; countenance not always pale, but sometimes flushed; tendency to doze; sometimes eruption on the skin; coma, convulsions, and death.	The stomach-pump. Albumen, in some form, must be promptly administered—either whites of eggs beaten up with water, milk, or wheat flour beaten up. The inflammatory symptoms to be counteracted by the usual means. Stimulation externally and internally on the heart and respiratory organs. In the chronic form iodide of potassium has been given.
Mercuric Methide, or Methyl.	As a result of exposure to the vapors of mercuric methide (which is a heavy colorless liquid containing 87 per cent. of mercury), dimness of vision, numbness of the hands, deafness, debility, swelling and tenderness of the gums, general impairment of the senses.	Same as for other mercurials, and treatment of symptoms on general principles.
Mild Chloride of Mercury (Calomel). *Other Preparations of Mercury.*	Calomel is an irritant poison, when administered in large doses producing excessive salivation, and, at times, death.	
SILVER. *Nitrate of Silver (Lunar Caustic).*	Those of other irritant poisons.	Chloride of sodium, or common salt, immediately decomposes this substance and destroys its activity. Antiphlogistic treatment is to be employed for the inflammatory symptoms, to counteract the irritating effects of the nitrate.

Poisons.	Symptoms.	Treatment.
TIN. *Chloride of Tin.* *Solution of Tin, used by Dyers.* *Oxide of Tin*, or *Putty Powder.* *Other Preparations of Tin.*	The same as those from other irritant poisons, and a peculiar tanned appearance of the villous coat of the stomach.	Milk to be given copiously, and the subsequent treatment to be regulated by the symptoms.
ZINC. *Sulphate of Zinc* (*White Vitriol*). *Acetate of Zinc.*	Violent vomiting; astringent taste, burning pain in the stomach; pale countenance; cold extremities; dull eyes; fluttering pulse. Death seldom ensues, in consequence of the emetic effects.	The vomiting may be relieved by copious draughts of warm water. Carbonate of sodium, administered in solution, will decompose the sulphate of zinc. Milk and albumen also act as antidotes. General principles are to be observed in the subsequent treatment, attention being paid to its effects as an irritant.
PREPARATIONS OF CHROMIUM.	The preparations of chromium belong to the class of irritants. The bichromate of potassium, used as a dye, has caused death. It produces also sloughing sores and foul intractable ulcers on the hands of those employed in its manufacture.	Emetics and magnesia or chalk.
PHOSPHORUS.	Those of other irritant poisons; burning pain in the stomach and bowels; gastro-enteritis; vomiting sometimes of coffee-grounds; delirium, vertigo; deficient and albuminous urine, coma, etc. The symptoms of phosphorus-poisoning resemble those of yellow atrophy of the liver. Diarrhœa, tenderness and tension of the abdomen are often prominent symptoms of this form of poisoning. Phosphorous taste.	An emetic to be promptly administered; copious draughts containing magnesia in suspension; mucilaginous drinks; purgatives, opium to relieve pain; general treatment for inflammatory symptoms. Sulphate of copper is an antidote; solution of potassium permanganate more positively so (¼ to ⅓ per cent.) Do not prescribe oils or fats.
GLASS OR ENAMEL.	If taken in very coarse powder, it produces irritation and inflammation of the bowels.	Large quantities of crumbs of bread should be eaten, to envelop the particles. An emetic of sulphate of zinc should then be given, and vomiting be promoted by tepid demulcent drinks.

II. ORGANIC POISONS.

1. VEGETABLE POISONS.

Poisons.	Symptoms.	Treatment.
IRRITANT. Aloë spicata, A. vulgaris, etc. (*Cape, Socotrine*, etc.). *Aloes.* Anemone pulsatilla. *Wind Flower.* Arum maculatum. *Wake Robin.* Bryonia dioica. *Bryony.* Calla palustris. *Water Arum.* Chelidonium majus. *Celandine.* Clematis vitalba. *Virgin Bower.* Convolvulus jalapa. *Jalap.* Convolvulus scammonia. *Scammony.* Croton tiglium. *Purging Croton* (*Croton Oil*). Cucumis colocynthis. *Colocynth.* Daphne gnidium. *Spurge Flax.* Daphne mezereon. *Mezereon.* Delphinium staphisagria. *Stavesacre.* Dioica palustris. *Swamp Leather-wood.* Euphorbia officinarum. *Euphorbium Spurge.* Gratiola officinalis. *Hedge Hyssop.* Jatropha curcas. *Indian Nut.* Jatropha manihot. *Cassada.* Juniperus sabina. *Savin* (*Oil of*). Momordica elaterium. *Squirting Cucumber.* Narcissus pseudonarcissus. *Daffodil.* Pastinax sativa. *Common Parsnip.* Phytolacca decandra. *Poke.* Piper cubeba. *Cubebs.* Ranunculus acris and other species. *Crowfoot.* Rhododendron chrysanthemum. *Oleander.* Ricinis communis. *Castor Oil Plant.* Sambucus ebulus. *Elder.* Sedum acre. *Stone Crop.* Stalagmitis cambogioides. *Gamboge.* Tanacetum vulgare. Especially the oil (*Oil of Tansy*).	The general effects of this class of vegetable poisons are: an acrid pungent taste, with more or less of bitterness, excessive heat, great dryness of the mouth and throat, with sense of tightness there; violent vomiting, the efforts being continued even after the stomach is emptied; purging, with great pain in the stomach and bowels; pulse strong, frequent, and regular; breathing often quick and difficult; appearances of intoxication; the pupil of the eye frequently dilated, insensibility resembling death; the pulse becomes slow and loses its force, and death closes the scene. If applied externally, many of them produce violent inflammation of the skin, with vesications or eruptions of pustules.	If vomiting has been occasioned by the poison, and the efforts are still continued, they may be rendered easier by large draughts of warm water or thin gruel; but if symptoms of insensibility have come on without vomiting, it ought to be immediately excited by the sulphate of zinc or some other active emetic substance, and after its operation a sharp purgative should be given. After as much as possible of the poison is got rid of, a very strong infusion of coffee, or vinegar diluted with water, may be given with advantage. Camphor mixture with ether may be taken frequently, and if insensibility be considerable, warmth, frictions, and blisters may be employed. Mucilaginous drinks and demulcents should be freely given; also opium, and all methods practicable for stimulation. If inflammation or other dangerous consequences have been induced, they are to be treated upon general principles. The fruit of Feuillea cordifolia has been recommended as a powerful antidote against vegetable poisons; (?) it is to be used in as recent a state as possible. N. B. Bromine, chlorine, and iodine are said to be antidotes to the alkaloids generally, and so are tannic acid and animal charcoal.

Poisons.	Symptoms.	Treatment.
ACRONARCOTIC.		
Æthusa cynapium. *Common Fool's Parsley.* Aconitum napellus. *Monkshood.* Agaricus, five species. *Mushrooms (poisonous).* Amanita muscaria. *Truffles (poisonous).* Anagallis arvensis. *Meadow Pimpernel.* Apocynum androsæmifolium. *Dogsbane.* Aristolochia clematis. *Birthwort.* Arnica montana. *Leopard's Bane.* Asclepias Syriaca. *Swallowwort.* Atropa belladonna. *Deadly Nightshade.* Æsculus Ohioensis. *Buckeye.* Brucea antidysenterica. *False Angustura Bark.* Calabar bean. See *Physostigma venenosum.*	The narcotic vegetable poisons, if taken into the stomach or applied to a wound, occasion the following effects: stupor, numbness, heaviness in the head; desire to vomit, slight at first, but afterward insupportable; a sort of intoxication, stupid air, pupil of the eye generally dilated; diplopia; furious or lively delirium, sometimes pain; convulsions of different parts of the body or palsy of the limbs. The pulse is variable, at first generally strong and full, but sometimes feeble and slow, as after aconite; the breathing is quick, and there is great anxiety and dejection, which, if not speedily relieved, soon ends in death. With atropia belladonna there is dryness of the mouth and fauces; flushed face, dilated pupil; delirium, scarlatinal rash; retention of urine; stupor, etc.	In treating this class of poisons the stomach must be effectually evacuated, the emetic to be repeated every quarter of an hour till the full effect is produced. These means may be assisted by tickling the throat with a feather or the finger. Large and strong glysters of soap dissolved in water, or of salt and gruel, should be speedily administered, to clear the bowels and assist in getting rid of the poison; and active purgatives may be given after the vomiting has ceased. When as much as possible of the poison has been expelled, the patient may drink, alternately, a teacupful of strong hot infusion of coffee and vinegar diluted with water. The drowsiness is sometimes extreme, and the insensibility bordering on apoplexy. If the heat declines, warmth and frictions must be perseveringly used. Vegetable acids are on no account to be given *before* the poison is expelled, and it is desirable that but little fluid of any kind should be administered. Tannic acid is used in poisoning by conium, digitalis, colchicum, etc. Bromine, chlorine, and iodine are said to be antidotes to the alkaloids generally. Electro-magnetism has been found efficacious in the drowsiness and sleep of narcotic poisoning. Where myositic narcotic poisons, as opium, have been taken, mydriatics, as belladonna and stramonium, have been recommended. In aconite and other active poisoning of this class digitalis, ether, or alcohol may be given hypodermically. Better wash out the stomach than administer direct emetics. Apply heat externally; use atropine, ammonia, etc. Tannic acid is given as an antidote to belladonna or atropia, and also pilocarpine, on account of its physiological antagonism, a matter worthy remembering in poisoning by other substances.
Cannabis Indica.	Feeling of excitement and exhilaration, succeeded by drowsiness and sleepiness; loss of muscular power; dilated pupils; quick pulse; perhaps convulsions.	Stimulation; atropia; artificial respiration.
Chenopodium. *Wormseed.* Cicuta maculata. *American Hemlock.* Cicuta virosa. *Water Hemlock.* Cocculus Indicus. *Fish Berries.* Colchicum autumnale. *Meadow Saffron.* Conium maculatum. *Hemlock.* Curare. *Indian War Poison.* Cystisus laburnum. *Laburnum.* Datura stramonium. *Thorn Apple.* Digitalis purpurea. *Foxglove.*	Vomiting; headache; disturbance of vision; giddiness; full pulse, sometimes dicrotic; pallor; diarrhœa; syncope; stupor; convulsions, etc.	
Ergot. See *Secale.* Gaultheria procumbens. *Wintergreen (Oil of).* Gelsemium sempervivens. *Yellow Jessamine.* Helleborus niger. *Black Hellebore.* Ipecacuanha. *Ipecacuanha.* Laurus camphora. *Camphor.* Lobelia inflata. *Indian Tobacco.* Lolium temulentum. *Darnel.* Melia azedarach. *Pride of China.* Nerium oleander. *Common Oleander.* Nicotiana tabacum. *Tobacco.*	Great depression, vertigo, cold skin, and the usual symptoms of intense sedation.	
Œnanthe crocata. *Hemlock Dropwort.* Phelandrium aquaticum. Physostigma venenosum. *Calabar Bean.*	Muscular tremor; contraction of the pupils; slow irregular breathing; absence of various forms of reflexes, etc.	Stimulants; atropine; chloral; strychnine; artificial respiration.
Picrotoxin.	Epileptiform or circular spasms, slowness of pulse, stoppage of the motion of the diaphragm are the chief symptoms observed.	Chloral; bromide of potassium.

Poisons.	Symptoms.	Treatment.
Pilocarpine.	Dimness of vision; vomiting; sudden collapse; swelling of the salivary glands and tonsils; hiccough; diminution in quantity of urine; albuminuria, strangury, etc.	Atropine, by subcutaneous injection.
Piscidia erythrina. *Jamaica Dogwood.* Polygala venenosa (of Java). Rhus radicans. *Poison Vine.* Rhus toxicodendron. *Poison Oak.* Ruta graveolens. *Rue.* Sanguinaria Canadensis. *Bloodroot.* Scilla maritima. *Squill. Sea Onion.* Secale cornutum. *Ergot. Spurred Rye.* Sium latifolium. *Procumbent Water Parsnep.* Spigelia Marilandica. *Pink Root.* Strychnos Ignatii. *St. Ignatius's Bean.* Strychnos nux vomica. *Nux vomica.*	In addition to other symptoms of this class, there is tetanic rigidity or spasm, with convulsions, opisthotonos, fixation of the eyes, cramps, pallor, involuntary evacuations of the bowels and bladder, accompanied with tetanus, etc.	
Symplocarpus fœtida. *Skunk Cabbage.* Veratrum album. *White Hellebore.* Veratrum sabadilla.	Loss of muscular power, coldness of the surface, vomiting, thin rapid pulse, tetanic convulsions; depression of temperature; evidences of intense sedation.	General stimulation, externally and internally.
Veratrum viride. *Green Hellebore.*	Symptoms similar to those of veratrum sabadilla.	All the means suggested for external and internal stimulation should be employed, such as hypodermic injections of ammonia, digitalis, strychnia, etc.
Woorara. *War Poison of Guiana.* Zea mays. *Maize (diseased).*		
NARCOTIC.		
Actæa spicata. *Baneberry.* Amygdalus communis. *Bitter Almond.* Amygdalus Persica. *Peach.* Hyoscyamus albus. *White Henbane.* Hyoscyamus niger. *Black Henbane.* Kalmia latifolia. *Mountain Ivy.* Lactuca virosa. *Strong-scented Lettuce.* Opium (and its proximate principles).	Drowsiness; somnolency, full slow pulse, contraction of the pupils, followed by stertorous breathing; blueness of the surface; slow respiration, cold sweat, and symptoms of approaching death from narcotism.	Empty the stomach; give warm coffee; stimulate with ammonia; arouse the patient by flagellation with a towel; apply the galvanic battery; keep him walking about; administer atropine subcutaneously; and practise artificial respiration if the conditions are such as to render this procedure necessary.
Papaver somniferum. *Poppy.* Prunus laurocerasus. *Cherry-laurel.* Prunus Virginiana. *Wild Cherry.* Solanum dulcamara. *Bittersweet.* Sorbus aucuparia. *Mountain Ash.*	Same symptoms.	Same treatment.
POISONOUS MUSHROOMS (FUNGI). Agaricus.	Nausea, heat, and pain in the stomach and bowels, with vomiting and purging, thirst; convulsions and faintings; pulse small and frequent; delirium, dilated pupil, and stupor; cold sweats and death. Poisonous mushrooms may be distinguished from the edible by their botanical characters, and by the following criteria: the former grow in wet, shady places, have a nauseous odor; are softer, more open and porous; have a dirty-looking surface, sometimes a gaudy color, or many very distinct hues, particularly if they have been covered with an envelope; they have soft, bulbous stalks, grow rapidly, and corrupt quickly.	The stomach and bowels to be cleared by an emetic of tartarized antimony, followed by frequent doses of Glauber's or Epsom salt, and large, stimulating glysters. After the poison is evacuated ether may be administered, with small quantities of brandy and water; but if inflammatory symptoms manifest themselves, such stimuli should be omitted and other appropriate means be had recourse to.

2. ANIMAL POISONS.*

POISONOUS FISH. Balistes monoceros. *Old Wife.* Cancer astacus. *Crawfish.* Cancer ruricolus. *Land Crab.* Clupea thryssa. *Yellow-billed Sprat.* Coracinus fuscus major. *Gray Snapper.* Coracinus minor. *Hyne.* Coryphæna splendens. *Dolphin.*	In an hour or two, or often in a much shorter time, after the fish has been eaten, a weight at the stomach comes on, with slight vertigo and headache, sense of heat about the head and eyes, considerable thirst, and often an eruption of the skin (urticaria), and in many cases death.	An emetic should be speedily administered, or, in the absence of it, vomiting may be excited by tickling the throat with the finger and taking large draughts of warm water. After full vomiting an active purgative should be given to remove any of the noxious matter that may have found

* In addition to the animal poisons here enumerated may be mentioned narcotico-irritant poisoning from sausage-meat, poisoning from diseased pork, from trichinæ (see *Trichiniasis*), from putrescent food, poisoned game, etc.

Poisons.	Symptoms.	Treatment.
Mormyra. *Blue Parrot Fish.* Muræna major. *Conger Eel.* Mytilus edulis. *Mussel.* Ostracion globellum. *Smooth Bottle Fish.* Perca major. *Barracuda.* Perca venenosa. *Grooper.* Perca venenata. *Rock Fish.* Physalia. *Portuguese Man-of-War.* Scomber cœruleus. *Spanish Mackerel.* Scomber maximus. *King Fish.* Scomber thynnus. *Bonetta.* Sparus chrysops. *Porgee.* Tetrodon sceleratus. *Tunny.* Tetrodon ocellatus. *Blower.*		its way into the intestines. Vinegar and water may be drunk after the above remedies have operated, and the body sponged with the same. Water, made very sweet with sugar, to which ether may be added, may be drunk freely, and a very weak solution of alkali to obviate the poisonous effects. If spasm ensue after evacuations, laudanum in considerable doses is necessary. If inflammation occur, the usual means of combating it must be employed.
POISONOUS SERPENTS. Boa crotaloides. *Copperhead.* Cenchris mockeson. *Mockeson.* Cerastes nasicornis. *Horned Viper of Western Africa.* Coluber berus. *Viper.* Coluber prester. *Black Viper.* Crotalus (5 species). *Rattlesnake.* Scytale piscivorus. *Water Viper.* Naja tripudians. *Cobra di Capella.*	A sharp pain in the wounded part which soon extends over the limb or body; great swelling, at first hard and pale, then reddish, livid, and gangrenous in appearance; faintings, vomitings, convulsions, and sometimes jaundice; pulse small, frequent, and irregular; breathing difficult, cold sweats, the sight fails, and the intellectual faculties are deranged. Inflammation, and often extensive suppuration and gangrene, followed by death.	A cupping-glass to be applied over the wound, or a moderately tight ligature above the bites, and the wound left to bleed after being well washed with warm water; the actual cautery, lunar caustic, or butter of antimony to be then applied freely to it, and afterward covered with lint dipped in equal parts of olive oil and spirit of hartshorn. The ligature to be removed if the inflammation be considerable. Warm, diluting drinks and small doses of ammonia or hartshorn to cause perspiration; the patient to be well covered in bed, and a little warm wine given occasionally. In some cases alcoholic drinks must be very liberally administered. Arsenic has been recommended, also Bibron's antidote, but neither is reliable. Prof. Halford of Australia recommends hypodermic injection into a vein of 20–30 ♏ of a solution of one part of strong solution of ammonia to two parts of distilled water.
CANTHARIS VESICATORIA. Spanish or Blistering Fly. Lytta vittata. *Potato Fly.*	Gastro-enteritis; the stomach should be emptied; mucilaginous or other thick drinks given, oils being avoided. Nauseous odor of the breath; acrid taste; burning heat in the throat, stomach, and abdomen; frequent vomitings, often bloody, with copious bloody stools; excruciating pain in the stomach; painful and obstinate priapism, with burning pain and heat in the bladder, and strangury or retention of urine; stupor, frightful convulsions, delirium, and, in some instances, death.	Vomiting to be excited by drinking sweet oil, sugar and water, milk, or linseed tea, very freely. Emollient glysters should be administered, and if symptoms of inflammation of the stomach, kidney, or bladder supervene, they must be subdued by appropriate treatment. Opium may be necessary to relieve pain, and leeches applied to the abdomen.
VENOMOUS INSECTS. Tarantula. Scorpio. *Scorpion.* Vespa crabro. *Hornet.* Vespa vulgaris. *Wasp.* Apis mellifica. *Bee.* Culex pipiens. *Gnat.* Œstrus bovis. *Gad-fly.*	In general, the sting of these insects produces only a slight degree of pain and swelling; but occasionally the symptoms are more violent, and sickness and fever are produced by the intensity of the pain.	Hartshorn and oil may be rubbed on the affected part, and a piece of rag moistened in the same, or in salt and water, kept upon it till the pain is removed. A few drops of hartshorn may be given frequently in a little water, and a glass or two of wine may be taken. The sting may be removed by strong pressure made around it with the barrel of a small watch-key.
SALIVA OF THE RABID DOG.	At an uncertain interval after the bite, generally, however, between the twentieth day and three or four months, pain or uneasiness occurs in the bitten part, though the wound may have been long healed. Anxiety, uneasiness, languor, spasms, horror, disturbed sleep, difficult respiration succeed, and are soon very much increased; violent convulsions affect the whole body, hideously distorting the muscles of the face; the eyes are red and protruded, the tongue swells and often hangs out, and viscid saliva flows from the mouth; there is pain in the stomach, with bilious vomitings, a horror of fluids, and impossibility of drinking them. All these symptoms are aggravated till the sufferer is relieved by death.	The only treatment of any service at all is the inoculation plan, discovby Pasteur. Hydrophobia is more easily prevented than cured; indeed, it is doubted whether it ever has been cured. Mercury, arsenic, opium, musk, camphor, acids, wine, vegetable and mineral alkalies, oil, various herbs, and many other remedies whose effects are quite opposite, have been employed, but none can be relied on. Large bloodlettings, the warm and cold bath, and almost every other remedial agent have been tried without success. The bitten part should be completely cut out, even if healed, if the symptoms have not come on; the part should then be immersed in warm water, or washed with it as long as it will bleed, and after persevering ablution caustic applied to every part of the surface, and the wound covered with a poultice, to heal by granulation. No milder discipline can ensure safety. There is danger that under the delusion that hydrophobia is only a neurosis the proper treatment may be neglected.

The most energetic poisons are used therapeutically, and often with considerable advantage. They have, of course, to be administered in extremely small doses to avoid the production of true poisoning.

Poison, a'gue. See *Intermittent fever.* **P., ar'row,** see *Arrow-poison.* **P., hem'lock,** conium. **P., Ital'ian,** liquor arsenicalis. **P., mor'bid,** virus. **P. oak,** Rhus toxicodendron. **P. root,** Cicuta maculata. **P., saus'age,** allantotoxicum. **P., veg'etable,** upas. **P. vine,** Rhus radicans.

Poisonberry (poi'zn-ber-re) **tree.** Melia azedarach.

Poisoning, poi'zn-ing. *Venenation.* Art of applying a poisonous substance to any of the textures in a dose capable of occasioning more or less serious symptoms. The term is generally restricted to poisoning by design. The term has also been used to denote the series of symptoms resembling those produced by certain poisons which occasionally follow the use of substances that are generally innoxious. Overloading the stomach with indigestible food has, for example, given occasion to symptoms resembling those produced by a narcotic poison, and the effect has been termed poisoning. Secret poisoning, at one time practised as an art, consisted in administering medicines which should act as slow poisons and gradually undermine the strength and life. Its agency was far from being so extensive as was imagined. **P., blood,** see *Blood-poisoning.* **P., crowd,** ochlesis.

Poisonous, poi'zn-us. *Toxical, Toxic.* Having the qualities of a poison.

Poisons, acronarcotic, poi'zns, ak-ro-nar-kot'ik. P., narcotico-acrid. **P., corro'sive,** P., acrid. **P., escharot'ic,** P., acrid. **P., ir'ritating,** P., acrid. **P., putres'cent,** P., septic; see *Poison.*

Poke. Phytolacca decandra. **P., In'dian,** Veratrum viride. **P. root,** Phytolacca root. **P., stink,** Dracontium fœtidum. **P. weed,** Phytolacca decandra; Veratrum viride.

Polanis'ia (*polus,* many, *anisos,* unequal, in reference to its stamens) **feli'na.** See *Cleome felina.* **P. grave'olens,** *Clammyweed, Stinkweed, Wormweed, Clammy mustard, False mustard;* indigenous plant, ord. Capparidaceæ, found in every part of North America; anthelmintic.

Po'lar. Relating to a pole. **P. cat'aract,** form of capsular cataract with a central dead-white opaque spot projecting forward from the surface. **P. cells,** term applied to ovum-cells and nerve-cells. **P. glob'ule** or **ves'icle,** small globular mass separated in the maturation of the ovum. **P. mi'croscope,** instrument consisting of a combination of a microscope and polariscope. **P. plant** (so called from its leaves pointing quite uniformly north and south), Silphium laciniatum.

Polarimeter, po-lar-im'et-ur (*polaris,* polar, *metron,* measure). Polariscope.

Polariscope, po-lar'i-skope (*polar, skopeo,* to view). Instrument consisting essentially of a polarizer and an analyzer, employed for polarizing and analyzing light.

Polarity, po-lar'it-e. The quality of a body having poles or possessing in itself opposite properties or powers.

Polarization (po-lar-i-za'shun) **of light.** Separation of a ray of light by reflection from or transmission through certain media whose planes of vibration are at right angles to each other.

Polarizer, po'lar-i-zur. That part of a polariscope which receives and polarizes light.

Pole. One of the opposite directions in which a polar force manifests itself, as the poles of a magnet, the poles of a battery.

Pole'cat weed. Dracontium fœtidum.

Polemici (po-lem'is-e) (*polemos,* war) **mor'bi.** See *Wounds, gunshot.*

Polemocacophthalmia, pol-em-o-kak-of-thal'me-ah (*polemos,* war, *kakos,* evil, *ophthalmos,* eye). Polemophthalmia.

Polemo'nii ra'dix. Root of Valeriana officinalis.

Polemonium reptans, pol-e-mo'ne-um rep'tans. *False Jacob's ladder, Greek valerian, Sweatroot;* ord. Polemoniaceæ; indigenous; has been used as a diaphoretic and expectorant.

Polemophthalmia, pol-em-of-thal'me-ah (*polemos,* war, *ophthalmos,* eye). Conjunctivitis in an epidemic form among soldiers.

Polenta, po-len'tah (*pollen,* fine flour). Alphiton.

Poleoprophylaxis, pol-e-o-prof-il-aks'is (*polis,* city, *prophulaxis,* prevention). Hygienic precautions in cities.

Poles (*polos,* pole, axis). Chalazæ. **P. of the eye,** summit of cornea and point exactly opposite. **P. of ret'ina,** point of retina seen in direct vision.

Po'ley moun'tain of Can'dy. Teucrium Creticum. **P. m. of Montpel'lier,** Teucrium capitatum.

Polianthes tuberosa, pol-e-an'thees tu-ber-o'sah (*polis,* town, *anthos,* flower). Ord. Liliaceæ. Root is cut into slips and laid upon the bites of serpents by the Peruvian Indians.

Poliater, po-le-ah'ter (*polis,* town, *iatros,* physician). Physician exercising his profession in a town by the appointment of the government.

Police, medical, po-lease', med'i-kal (*politeia,* administration of a state or town). *Political medicine.* Hygienic rules established, or which ought to be established, for the prevention of disease and to contribute to the progress of medicine. Salubrity of districts, especially during the existence of spreading disease, is greatly ensured by an efficient medical police.

Policlinica, pol-e-klin'ik-ah (*polis,* town, *kline,* bed). Treatment of diseases in a town; city or town clinic or hospital.

Poliencephalitis (pol-e-en-sef-al-e'tis) or **Polio-encephalitis** (*polios,* gray, *enkephalos,* brain). Inflammation of gray brain matter; applied to inflammation of cortex and of nuclei of cranial nerves. **P. infe'rior,** progressive bulbar paralysis. **P. supe'rior,** ophthalmoplegia progressiva.

Poliomyelencephalitis, pol-e-o-me-el-en-sef-al-e'tis (*polios,* gray, *muelos,* marrow, *enkephalos,* brain). Poliomyelitis coexisting with poliencephalitis.

Poliomyelitis, pol-e-o-me-el-e'tis (*polios,* gray, *muelos,* marrow). Inflammation of gray matter of spinal cord. **P. ante'rior,** inflammation of cornua anteriora of gray matter of spinal cord; infantile paralysis in children. **P., chron'ic,** progressive muscular atrophy.

Poliomyelopathy (*polios, muelos,* marrow, *pathos,* disease). Disease of gray matter of the medulla spinalis.

Polioplasma, pol-e-o-plaz'mah. See *Protoplasm.*

Poliosis, pol-e-o'sis (*polios,* hoary, gray). Absence of pigment, accompanied with a deposit in the cells of the hair of calcareous matter, or a corneous transformation of the fibres of the hair; hair prematurely gray or hoary; state of becoming gray.

Poliotes (pol'e-o-tees) or **Poliothrix,** pol'e-oh-thriks (*polios,* gray, *thrix,* hair). Poliosis.

Poliotrichos, pol-e-ot'rik-os (*polios, thrix,* hair). Gray-haired. See *Poliosis.*

Politia (pol-ish'e-ah) **med'ica.** Police, medical.

Politobiotherapia, pol-it-o-be-o-ther-ap-e'ah (*polites,* a citizen, *bios,* life, *therapeia,* medical treatment). Police, medical.

Polity, pol'it-e (*politeia,* policy). Medico-hygienic regulations of a city or town.

Politzeration (pol-its-ur-a'shun) or **Politzeriza'tion.** Treatment with Politzer's method.

Politzer's bag. See *Politzer's method.* **P.'s meth'od,** method for rendering the Eustachian tube pervious, used by Professor Politzer of Vienna, which consists in blowing air into one nostril from a gutta-percha bag, the other nostril and the mouth being closed, and the patient exerting an act of deglutition at the moment the air is blown in; the middle ear being thus inflated.

Polium (po'le-um) **angustifo'lium** (*polios,* gray, whitish). Teucrium Creticum. **P. capita'tum,** Teucrium capitatum. **P. cre'ticum,** Teucrium creticum. **P. monta'num,** Teucrium capitatum. **P. monta'num Anglo'rum,** Teucrium capitatum. **P. monta'num Germano'rum,** Teucrium montanum.

Poll. Head.

Pollakiu'ria (*pollakis*, often, *ouron*, urine). Frequent micturition.

Pollemphytusis, pol-lem-fit-u'sis (*pollos*, many, *emphuteuo*, to ingraft). Revaccination in various parts of the body.

Pol'len (fine dust). Fecundating dust contained in the anthers of flowers, which is dispersed on the stigma. It is conveyed to the ovary through the stigma by the pollen tube.

Poll-evil, pole-e'vil. Deep abscess ending in ulcerous sore, with numerous sinuses in the forward part of the neck, in horses and cattle.

Pollex, pol'leks (*polleo*, to have much strength). *Thumb.* First of the fingers in size and strength. It is asserted that the term poltroon is derived from *pollice truncato*—the Romans who were desirous of being exempted from military service being accustomed to cut off the thumb, and thus render themselves unfit to handle arms. See *Digitus.* **P. pe'dis**, great toe.

Pollicar (pol'e-kar) **ar'tery.** Arteria princeps pollicis.

Pollinctor (pol-link'tor) or **Pollinc'ter** (*pollincio*, to lay out a corpse). In antiquity, an anointer, dresser, or embalmer of the dead.

Pollinctura, pol-link-tu'rah. Embalming.

Pol'lis. Pollen.

Pol'lock. See *Oleum morrhuæ.*

Pollodic, pol-lod'ik (*pollos*, many, *hodos*, way). An epithet proposed by Dr. Marshall Hall for a course of nervous action proceeding from one point and passing, in many directions, to every other.

Pol'lom, lit'tle. Polygala paucifolia.

Pollution, pol-lu'shun (*polluo*, to profane). Excretion of the seminal liquor or sperm, or the production of orgasm in male or female, at other times than during coition. When occasioned by a voluntary act, it is called simply pollution or masturbation; when excited during sleep by lascivious dreams, it takes the name nocturnal or night pollution.

Polonica, po-lon'ik-ah. Plica Polonica.

Polonychia (pol-o-nik'e-ah) or **Polyonych'ia** (*poly*, *onux*, nail). Condition of having supernumerary nails —rare congenital monstrosity.

Polt'foot. See *Kyllosis.*

Poluria, pol-u're-ah. Polyuria.

Po'lus. Pole; also the patella.

Poly, pol'e. Teucrium polium.

Pol'y (*polus*, many, much, full). In composition, many, much, full.

Polyactium (pol-e-ak'te-um) **tris'te.** Pelargonium triste.

Polyadenia, pol-e-ad-en'e-ah (*polus*, *aden*, gland). Pseudo-leucæmia.

Polyadenitis, pol-e-ad-en-e'tis. Inflammation of several glands.

Polyadenoma, pol-e-ad-en-o'mah (*poly*, *aden*, gland). *Multiglandular adenoma.* Tumor mainly formed by the simultaneous hypertrophy of a large number of small glands of the same nature in the immediate vicinity.

Polyadenopathy, pol-e-ad-en-op'ath-e (*polus*, *aden*, *pathos*, disease). Disease of several glands.

Polyæmatus, pol-e-e'mat-us. Plethoric.

Polyæmia, pol-e-e'me-ah (*poly*, *haima*, blood). Plethora.

Polyæmic, pol-e-e'mik. Plethoric.

Polyæsthesia, pol-e-ees-the'ze-ah (*poly*, *aisthesis*, sensation). Abnormity of sensation in which one point of the compass, placed on the skin, is felt as two, three, or more points, as in tabes dorsalis, in which stimulation of the skin at a single point produces a sensation as if several points were touched.

Polyalthia (pol-e-al'the-ah) **corin'ti.** Plant growing in the East Indies. Bark is employed as a febrifuge, given in diarrhœa, etc. **P. macrophyl'la**, plant of Java; bark is employed in typhoid and exanthematous fevers.

Polyan'dria or **Polyandry**, pol-e-an'dre. Condition of one woman having several husbands.

Polyanhæmia, pol-e-an-he'me-ah. Anæmia.

Polyarthri'tis (*poly*, *arthritis*, inflammation of a joint). Inflammation of many joints. **P. defor'mans**, rheumatism, nodular. **P., ver'tebral**, name given to a malady which attacks the intervertebral substance without causing caries of the bodies of the vertebræ.

Polyatomic, pol-e-a-tom'ik. Containing several atoms of replaceable hydrogen.

Polyblennia, pol-e-blen'ne-ah (*poly*, *blenna*, mucus). Excessive secretion of mucus.

Polybrachia, pol-e-brak'e-ah (*poly*, *brachion*, arm). Monstrosity characterized by one or more supernumerary arms.

Polybrephia, pol-e-bref'e-ah (*poly*, *brephos*, fœtus, child). Pregnancy, compound.

Polycarpæ, pol-e-kar'pe (*poly*, *karpos*, fruit). A division of cutaneous diseases including psoriasis, lichen, herpes, and impetigo.

Polycarpæa corymbosa, pol-e-kar-pe'ah ko-rim-bo'sah. Plant, native of East India and Malabar, employed in treatment of hypochondriasis and bites of serpents.

Polycarpon tetraphyllum, pol-e-kar'pon tet-rah-fil'lum. All-seed; herb employed in treatment of paronychia and œdematous indurated conditions.

Polycephalus, pol-e-sef'al-us. Genus of Tæniadæ in the larval condition. **P. cerebra'lis**, cœnurus cerebralis. **P. echinococ'cus**, echinococcus hominis. **P. ovi'nus**, cœnurus cerebralis.

Polyceras, pol-is'er-as (*poly*, *keras*, horn). Monstrous animal having many horns.

Polychezia, pol-e-ke'ze-ah (*polus*, *chezo*, to defecate). Chronic diarrhœa.

Polycholia, pol-e-kol'e-ah (*poly*, *chole*, bile). Superabundance of bile.

Polychrestus, pol-e-kres'tus (*poly*, *chrestos*, useful). Having many virtues, as a medicine.

Polychroism, pol'ik-ro-izm (*poluchroos*, many-colored). Property of some bodies of showing different colors when viewed in direction of different axes.

Polychroite, pol-e-kro'ite. Substance of an orange-red color derived from saffron.

Polychromatic, pol-e-kro-mat'ik. Having many colors.

Polychromic acid, pol-e-kro'mik as'id. Aloetic acid.

Polychronius, pol-e-kron'e-us (*poly*, *chronos*, time). Chronic.

Polychylia, pol-e-kil'e-ah (*poly*, *chulos*, juice). *Polychymia.* Fulness of juices.

Polychymia, pol-e-kim'e-ah. Polychylia. **P. sanguin'ea**, plethora.

Polyclin'ic (*poly*, *kline*, bed). A hospital or place at which practical clinical teaching is imparted, usually to advanced students or graduates.

Polyclinica, pol-e-clin'ik-ah (*poly*, *kline*, bed). Provided with many beds, as a hospital.

Polycopria, pol-e-kop're-ah (*poly*, *kopros*, excrement). Excessive defecation.

Polycoria, pol-e-kor'e-ah (*poly*, *kore*, pupil). State in which more than one pupil exists.

Polycrinoses, pol-e-krin-o'sees (*poly*, *krino*, to separate). See *Profluvium.*

Pol'ycrome (many colors). Æsculin.

Polycrotic, pol-e-krot'ik (*poly*, *krotos*, beat). Said of pulse possessing more than two rhythms for each impulse of heart.

Polycruria, pol-e-kru're-ah. Condition of having supernumerary inferior extremities.

Polycyesia, pol-e-se-a'ze-ah (*poly*, *kuesis*, pregnancy). Frequent or quickly-recurring pregnancies. Also compound pregnancy.

Polycystic, pol-e-sis'tik (*poly*, *cyst*). Consisting of many cysts or parts, as a polycystic tumor.

Polycythæmia, pol-e-sith-e'me-ah (*poly*, *kutos*, cell, *haima*, blood). Increase of the red corpuscles in the blood.

Polydacrya pol-e-dak're-ah (*poly*, *dakruon*, tear). Excessive lacrymation.

Polydactylism, pol-e-dak'til-izm (*poly*, *daktulos*, finger). Condition of having supernumerary fingers or toes.

Polydactylus, pol-e-dak'til-us (*poly, daktulos,* finger). One who has a supernumerary finger or fingers, or toes.

Polydipsia, pol-e-dip'se-ah (*poly, dipse,* thirst). *Excessive thirst.* Constant desire for drinking, with a sense of dryness in the mouth and throat. Mostly symptomatic of fever, inflammation, dropsy, excessive discharges, etc., and is so much a part of diabetes that it has been called *Polydipsia.*

Polydissolvant, pol-e-dis-sol'vant. See *Sulpholeic acid.*

Polyethylenic, pol-e-eth-il-en'ik. Containing numerous molecules of ethylene.

Polygala, pol-ig'al-ah (*poly, gala,* milk). *P. vulgaris, Common milkwort;* ord. Polygalaceæ. Leaves are bitter, and are used in the same cases as the Polygala amara. **P. ama'ra,** *P. amarella, Bitter milkwort.* Powerful bitter and tonic. Its reputed virtues are balsamic, demulcent, and corroborant. The *Polygala rubella* or *Bitter polygala* of the United States has the same virtues. **P. amarel'la,** P. amara. **P., bit'ter,** see *P. amara.* **P. grandiflo'ra,** P. senega. **P. paucifo'lia,** *Dwarf milkwort, Little pollom, Evergreen snakeroot,* has the same properties as P. senega. **P. rubel'la,** see *Polygala amara.* **P. sen'ega,** *P. Virginiana, Seneka, Rattlesnake milkwort, Senega* or *Rattlesnake root;* bark is the active part of the root *Senega* (Ph. U. S.), *Senegæ radix* (Ph. Br.); taste is at first acrid, and afterward very hot and pungent. Used in pleurisy, pneumonia, etc. after the inflammatory action has been gotten under. Has been used also in humoral asthma, chronic rheumatism, dropsy, croup, amenorrhœa, etc. It contains several principles—polygalin or senegin, isolusin, and polygalic acid. **P. serpenta'ria,** shrub of Caffraria; the root is considered by the natives as a sure antidote against the bites of venomous serpents. **P. venena'ta,** flower called kakulutun in Java; regarded by the natives as highly poisonous. **P. Virginia'na,** P. senega. **P. vulga'ris,** P. amara.

Polygalactia, pol-e-gal-ak'te-ah (*poly, gala,* milk). Superabundant secretion of milk; galactia; galactorrhœa.

Polygalic (pol-ig'a-lik) **ac'id.** See *Polygala senega.*

Polygalin, pol-ig'al-in. See *Polygala senega.*

Polygamarin, pol-ig-am-ar'in. Bitter, crystallizable principle of Polygala amara.

Polygamous, pol-ig'am-us (*poly, gamos,* marriage). Said of animals mating with several of the opposite sex.

Polygamy, pol-ig'a-me (*poly, gamos,* marriage). Plurality of husbands or wives at the same time; usually, the condition of a man having more than one wife.

Polyganglionic, pol-e-gan-gle-on'ik (*poly, ganglion,* knot). Having a number of lymphatic glands.

Polygastric, pol-e-gas'trik. Possessing numerous stomachs. Relating to the Polygastrica.

Polygenesis, pol-e-jen'es-is (*poly, genesis,* origin). Fecundity.

Polygenism (pol-ig'en-izm) or **Polyg'eny.** View according to which the various human races take their descent from an independent species.

Polygnathus, pol-ig-nath'us (*poly, gnathus,* jaw). See *Paragnathus.*

Polygonatum, pol-e-gon'at-um (*poly, gonu,* knee or joint). Convallaria polygonatum. **P. an'ceps,** Convallaria polygonatum. **P. canicula'tum,** Convallaria canaliculata. **P. latifo'lium,** Convallaria canaliculata. **P. multiflo'rum,** Convallaria multiflora. **P. pubes'cens,** Convallaria pubescens. **P. uniflo'rum,** Convallaria polygonatum. **P. vulga're,** Convallaria polygonatum.

Polygonia, pol-e-gon'e-ah (*poly, gennao,* to produce). Fecundity.

Polyg'onic ac'id. Acrid insoluble principle found in polygonum.

Polygonius, pol-ig-o'ne-us. Polygonus.

Polygonum, pol-ig'o-num (*poly, gonu,* knee or joint). *P. aviculare, Sanguinaria, Knotgrass, Knotweed, Bindweed, Doorweed.* Ord. Polygonaceæ. It is said to be a feeble astringent. **P. a'cre,** P. hydropiper. **P. amphib'ium,** *Water Persicaria* of Europe and this country. The roots have been used like sarsaparilla, especially in skin diseases. **P. bistor'ta,** *Officinal bistort, Great bistort,* or *Snakeweed.* The root is a powerful astringent and tonic, and has been used in internal hemorrhage, atonic diarrhœa, ague, etc. **P. centino'dium,** P. aviculare. **P. coccin'eum,** P. amphibium. **P. divarica'tum,** *Eastern buckwheat plant.* The roots, reduced to a coarse meal, are said to be much used as an article of diet by the Siberians. **P. erec'tum,** P. aviculare. **P. fagop'yrum,** *Buckwheat.* The grain of this plant constitutes a principal article of food with the inhabitants of Russia, Germany, and Switzerland; it is much used in the United States. **P. gla'brum,** the leaves have diuretic and the root purgative properties; the plant is also used externally in gout. **P. hydrop'iper,** *Poor man's pepper, Biting arsemart, Smartweed, Lake weed, Water pepper.* The leaves have an acrid, burning taste, and resemble those of the arum; they are antiseptic, aperient, and diuretic. The fresh leaves have been applied externally as a stimulating cataplasm. **P. hydropiperoï'des,** P. hydropiper, P. punctatum. P. hydropiperoïdes of Michaux, mild water pepper; indigenous; has no acrid properties. **P. persica'ria,** *Lady's thumb, Heart's-ease,* is said to possess vulnerary and antiseptic qualities; it has been given in wine to arrest gangrene. **P. puncta'tum,** *P. hydropiperoïdes, Water pepper* of America, *Smartweed,* possesses similar properties to Polygonum hydropiper, and is occasionally used internally in gravel and in amenorrhœa; externally in chronic ulcers. See *Polygonum hydropiper.* **P. Virginia'num,** *Wandspiked persicaria, Virginia bistort;* indigenous; astringent, diuretic, and tonic.

Polygonus (pol-ig-o'nus) or **Polygo'nius** (*poly, gonia,* angle). Polygonal; multangular.

Polygraph, pol'e-graf (*poly, grapho,* to write). Myograph.

Polygroma, pol-e-gro'mah (*poly, hygroma*). Staphyloma.

Polygyny, pol-ij'en-e (*poly, gune,* woman). Condition in which a man has more than one wife.

Polygyria, pol-e-jir'e-ah (*poly, gyrus,* convolution). Condition in which the brain possesses more numerous and intricate convolutions than common.

Polyhæmia, pol-e-he'me-ah. Polyæmia.

Polyhe'dron (*poly, hedra,* base). Polyscope or multiplying glass.

Polyhidria, pol-e-hid're-ah (*poly, hidros,* sweat). Excessive sweating.

Polyhydramnios, pol-e-hid-ram'ne-os (*poly, hudor,* water, *amnion*). Diseased condition of amnion, characterized by excessive production of liquor amnii.

Polyhydrate, pol-e-hi'drate. Hydrate in which several molecules of hydroxyl are contained.

Polyhy'dria (*poly, hudor,* water). Dropsy.

Polyhyperhæmia, pol-e-hip-er-he'me-ah. Plethora.

Polyid'ria or **Polyidro'sis.** Excessive sweating.

Polyleucocythæmia, pol-e-lu-ko-sith-e'me-ah. Leucocythæmia.

Polylymphia, pol-e-limf'e-ah. Anasarca.

Polymasthus, pol-e-mas'thus (*poly, masthos,* breast). Monster having several breasts. The condition has been called *Polymazia, Pleiomazia,* and *Pleomazia.*

Polymas'tia (*poly, mastos,* breast). Condition of a polymasthus.

Polymelia, pol-e-mel'e-ah. State of possessing supernumerary members.

Polymelian, pol-e-me'le-an (*poly, melos,* limb). Epithet given to monsters characterized by the insertion, in a well-formed subject, of one or more accessory limbs, accompanied at times by the rudiments of certain other parts.

Polym'elus (same etymon). Polymelian.

Polymenia (pol-e-men'e-ah) or **Polymenorrhœa,** pol-e-men-or-rhe'ah (*poly, men,* month, *rheo,* to flow). Excessive flow of menses.

Polymer'ia. Polymerism. **P. promis'cua transla'ti'va,** transposition of the viscera.

Polymeric, pol-im'er-ik. Appertaining to polymerism.

Polymerism, pol-im'er-izm (*poly*, *meros*, part). Condition of being made up of numerous component parts. Monstrosity consisting in the existence of supernumerary organs, as a sixth finger of the hand.

Polymerization, pol-im-er-iz-a'zhun (*poly*, *merizo*, to divide). Process of making modifications which are isomeric.

Polymetameric, pol-e-met-am'er-ik. Appertaining to several metameres; where a muscle receives its nerve-supply from different spinal nerves.

Polymicrotome, pol-e-mik'ro-tome (*poly*, *mikros*, small, *tome*, a cut). Instrument used to obtain quickly numerous sections for microscopical examination.

Polymitus, pol-im'it-us (*poly*, *mitos*, thread). Organism of a round shape, provided with filaments, occurring in blood of individual affected with intermittent fever.

Polymnia, pol-im'ne-ah. *Uvedalia.* Bear's-foot; root of this plant is reputed to aid secretion.

Polymorphic, pol-e-mor'fik. Having different structure and appearance.

Polymorphism, pol-e-mor'fizm (*poly*, *morphe*, form). Power of certain fungi and other organisms to assume various shapes.

Polymorphous, pol-e-mor'fus. Polymorphic.

Polymyositis, pol-e-me-o-se'tis (*polus*, *mus*, muscle). Inflammation of several muscles. **P. acu'ta progressi'va**, acute inflammation of muscles, which generally terminates fatally in a short time.

Polyneural (pol-e-nu'ral) **mus'cles.** Muscles which are innervated by more than one nerve.

Polyneuritis, pol-e-nu-re'tis (*poly*, *neuron*, nerve). Multiple neuritis.

Polyneuron, pol-e-nu'ron. Plantago.

Polynu'cleate. Having several nuclei.

Polyodontia, pol-e-od-on'she-ah (*poly*, *odous*, tooth). Condition in which supernumerary teeth exist.

Polyonych'ia. Polonychia.

Polyophthalmia, pol-e-of-thal'me-ah (*poly*, *ophthalmos*, eye). Monstrosity having more than two eyes.

Polyo'pia. Polyopsia.

Polyopsia, pol-ee-op'se-ah (*poly*, *opsis*, sight). *Polyopsy*, *Polyopia*, *Polyopy.* Vision is so called when multiple or manifold.

Polyorchis, pol-e-or'kis (*poly*, *orchis*, testicle). One who has more than two testicles.

Polyorexia, pol-e-o-reks'e-ah (*poly*, *orexis*, appetite). Excessive appetite or hunger.

Polyorrhymenitis, pol-e-or-rhim-en-e'tis (*poly*, *humen*, membrane). Inflammation involving serous membranes, progressive and malignant in character.

Polyosteon (pol-e-os'te-on) or **Polyos'teum** (*poly*, *osteon*, bone). Tarsus and metatarsus taken as a whole.

Polyotia, pol-e-o'she-ah (*poly*, *ous*, ear). Condition in which two or more ears exist laterally.

Polyp, pol'ip. See *Polypus.*

Polypædia, pol-ip-e'de-ah (*poly*, *paidion*, small child). See *Superfœtation.*

Polypanarthritis, pol-e-pan-ar-thre'tis (*poly*, *pan*, all, *arthron*, joint). Arthritis deformans.

Polypapilloma, pol-e-pap-il-lo'mah (*poly*, *papilla*, nipple). Affection of skin characterized by presence of multiple papillomata. **P. trop'icum**, frambœsia.

Polyparesis, pol-e-par'es-is (*poly*, *paresis*, relaxation). Paralytic dementia.

Polypathia, pol-e-path-e'ah. A multiplicity of diseases.

Polypathic, pol-e-path'ik (*poly*, *pathos*, disease). Appertaining to several diseases in one person, or disease affecting several parts.

Polyperdemia, pol-ip-ur-dem'e-ah (*poly*, *huper*, *haima*, blood). Condition in which universal plethora exists.

Polyperia, pol-e-per'e-ah (*poly*, *peros*, mutilated). Congenital misconstruction of various parts of organs.

Polyphagia, pol-e-faj'e-ah (*poly*, *phago*, to eat). Voracity; faculty of eating or subsisting on many kinds of food. See *Boulimia.*

Polyphagous, pol-if'a-gus. Relating or appertaining to polyphagia.

Polypharmacia, pol-e-far-mah-se'ah (*poly*, *pharmakon*, medicine). Prescribing of too many medicines. Prescription consisting of a number of medicines; hence the name *Polypharmacus* given to one who is in the habit of prescribing a number of medicines, and whose prescriptions are loaded with ingredients.

Polypharmacon, pol-e-far'mak-on (*poly*, *pharmakon*, drug). Remedy containing numerous ingredients; also a panacea.

Polypharmacy, pol-e-far'mas-e. Polypharmacia.

Polyphobia, pol-e-fo'be-ah (*poly*, *phobos*, fear). Morbid fear of numerous things.

Polyphrasia, pol-e-fraz'e-ah (*poly*, *phrasis*, speech). Rambling speech.

Polyphypodesmeus, pol-if-ip-o-dez'me-us (*polypus*, *hupo*, below, *desmos*, band). Instrument employed in ligation of a polyp.

Polyphysia, pol-e-fis'e-ah (*poly*, *phusa*, wind). Flatulence.

Polypiarius, pol-ip-e-ar'e-us. Polypoid.

Polypif'erous (*poly*, *ferro*, to carry). Carrying or producing polypus.

Polypiform (pol'ip-e-form) **concre'tions** (*polypus*, *forma*, form). See *Polypus.*

Polypionia, pol-e-pe-on'e-ah (*poly*, *pion*, fat). See *Polysarcia.* **P. infan'tum**, see *Polysarcia.*

Polypiosis, pol-ip-e-o'sis (*poly*, *pion*, fat). See *Polysarcia.*

Polyplast (*poly*, *plasso*, to form). Made up of numerous cells.

Polyplastic, pol-e-plas'tik (*poly*, *plasso*, to form). That which has many shapes. **P. el'ement**, in histology, is one which does not retain its primary shape, but undergoes transformation into others.

Polypodia, pol-e-pod'e-ah (*poly*, *pous*, foot). Monstrosity having more than two feet.

Polypodites, pol-e-po-de'tees. Wine impregnated with polypodium.

Polypodium, pol-e-po'de-um (*poly*, *pous*, foot, owing to its many roots). *P. vulgare*, *Common polypody*, *Fern root*, *Rock brake* or *bracken*, *Brake* or *Bracken root.* Ord. Filices. Grows in the clefts of rocks, walls, etc. in both hemispheres. **P. adiantifor'me**, see *Calagualæ radix.* **P. ammifo'lium**, see *Calagualæ radix.* **P. argente'um**, see *Calagualæ radix.* **P. calagua'la**, Calagualæ radix. **P. cetaræ'cinum**, P. incanum. **P. coria'ceum**, see *Calagualæ radix.* **P. denta'tum**, Asplenium filix fœmina. **P. fi'lix fœ'mina**, Asplenium filix fœmina. **P. fi'lix mas**, *Aspidium*, *Male polypody* or *fern;* rhizome of this plant (*Filix mas*, Ph. U. S.; *Filix*, Ph. B.) has been much extolled as an anthelmintic and in cases of tænia, and has, by many, been placed above all tæniafuges. Therapeutic properties reside in the oleoresin (*Oleoresina filicis*). Dose, ℥xxx–℥j. Patient should diet for one day, and next morning take fʒss–fʒj, repeated in two hours. *Extractum filicis liquidum* is officinal in the Ph. B. Dose, ℥xxx to fʒj. **P. inca'num**, *Polypody*, *Rock brake* or *bracken;* indigenous; has been considered demulcent, cathartic, and anthelmintic. **P. inci'sum**, Asplenium filix fœmina. **P. mol'le**, Asplenium filix fœmina. **P. pennatif'idum**, P. vulgare. **P. po'litum**, see *Calagualæ radix.* **P. trif'idum**, Asplenium filix fœmina. **P. Virginia'num**, polypodium. **P. vulga're**, polypodium.

Pol'ypody. Polypodium, P. incanum. **P., com'mon**, polypodium. **P., male**, Polypodium filix mas.

Polypoid (pol'ip-oid) or **Polypoi'des** (*polypus*, *eidos*, resemblance). Having the shape of, or resembling, a polypus.

Polyporus igniarius, pol-ip'o-rus ig-ne-ar'e-us (*poly*, *poros*, pore). Boletus igniarius. **P. officina'lis**, Boletus laricis.

Polyposia, pol-e-po'ze-ah (*poly*, *posis*, drink). Great thirst; desire for drink. Polydipsia.

Polyposis ventriculi, pol-ip-o'sis ven-trik'u-le. Condition of the stomach characterized by polypous projections of the mucous membrane.

Polypotome (pol'ip-o-tome) or **Polyptome** pol'ip-

tome (*polypus, tome,* incision). *Polypus knife.* Instrument for the removal of polypus by excision.

Polypous, pol'ip-us. Relating or belonging to, or resembling, polypus.

Pol'yptome. Polypotome.

Polyptrite, pol'ip-trite (*polypus, tribo,* to crush). Instrument used for crushing polypi.

Polypus, pol'ip-us (*poly, pous,* foot). Name given to tumors which occur in mucous membranes especially, and which have been compared to certain zoophytes. Polypi may form on every mucous membrane, but are most commonly observed in the nasal fossæ (*rhinopolypi*), pharynx, and uterus; more rarely in the stomach, intestines, bronchial tubes, bladder, vagina, and meatus auditorius externus. They vary much in size, number, mode of adhesion, and intimate nature. Accordingly, they have received various appellations: myxoma (soft mucous polyp), mucous, soft, vesicular. Others have been called hard fibroma (hard fibrous polyp), and these have been distinguished into fibrous or fleshy and scirrhous or cancerous. *Fibrous polypi* are of a dense, compact texture and whitish color. They contain few vessels, and do not degenerate into cancer. The *scirrhous* or *carcinomatous* are true cancerous tumors, painful and bleeding. They present all the pathological changes which belong to cancerous affections, and the prognosis is of course unfavorable.

The mode of treating polypi must differ according to their character. The means used to destroy them have been—1. To subject them to the action of certain astringent powders or solutions to obtain their resolution; 2. Cauterization, or the application of the actual cautery or caustics; 3. Excision, or ablation with a cutting instrument; 4. Extirpation with the fingers or with the polypus forceps; 5. A ligature put around them so as to prevent their nutrition; a seton has also been sometimes used to gradually destroy the pedicle; 6. Evulsion by means of the galvano-cautery snare or the cold-iron snare.

The term polypi—*Pseudopolypi, Carditis polyposa, Polypiform concretions*—has likewise been applied to collections of blood—fibrinous concretions—found in the heart—*Heart clots, Coagula cordis fibrinosa*—or great vessels after dissolution. The presence of these concretions during life may be suspected when in the course of an acute or chronic affection of the heart or at the close of chronic diseases in general—especially those of the lungs—the heart's action becomes suddenly tumultuous, obscure, and accompanied with a soft bellows murmur, while the general symptoms indicate the effects of obstructed circulation. The right cavities are most frequently affected. See *Thrombus* and *Embolia.*

Pol'ypus, a'nal. Polypi of the rectum are usually fibrous, but are sometimes cancerous. **P. bronchia'lis,** *Plastic bronchitis, Bronchial croup, Chronic croup, Pseudo-membranous bronchitis;* a membraniform secretion in the bronchial tubes of a diphtheritic character, having the shape, when expectorated, of the bronchia; the result of inflammation of the lining membrane of those tubes. **P. carno'sus,** sarcoma. **P. fibro'sus,** see *Polypus.* **P. for'ceps,** forceps for grasping and removing polypi. **P., na'sal,** polypi of the nasal passages are either mucous or fibrous, the former being more common. The mucous polypi are soft and almost jelly-like, but composed of fibrous tissue like the embryonic form. The fibrous form, growing from the periosteum, is firmer and still more vascular and more hemorrhagic than the mucous; it is probably a variety of fibro-sarcoma. **P. u'teri,** polypus of the uterus.

Polyrrhizon, pol-ir-rhe'zon (*poly, rhiza,* root). Polypodium filix mas.

Polyrrhœa, pol-ir-rhe'ah (*poly, rheo,* to flow). Profluvium.

Polysalicylic (pol-e-sal-e-sil'ik) **acids.** Anhydrous salicylic compounds obtained by treating phosphoric oxychloride with sodium salicylate.

Polysarcia, pol-e-sar'ke-ah (*poly, sarx,* flesh). *Polysarcosis, Carnositas.* Excessive corpulency. Authors have distinguished two varieties: *Polysarcia carnosa* or *Corpulency,* and *P. adiposa, Pinguitude* or *Obesity.* Severe regimen and exercise are the best preventives. Children are occasionally met with of unusual fatness, in spite of every care. This morbid disposition has been termed *Polypionia infantum* and *Chlorosis gigantea.* See *Bantingism.* **P. cor'dis,** fatty heart. **P. vis'cerum,** physconia adiposa.

Polysarcous, pol-e-sar'kus (*poly, sarx,* flesh). Pertaining to polysarcia; obese.

Polyscellia, pol-e-sel'le-ah (*poly, skelos,* leg. Monstrosity characterized by the presence of one or more supernumerary legs.

Polyschidia, pol-is-kid'e-ah (*poly, schidion,* splinter). Exaggerated tendency to subdivide and classify.

Polyscope, pol'e-skope (*poly, skopeo,* to see). Apparatus devised by Trouvé, combining all the instruments necessary for exploration, by light, of the larynx, the ear, eye, urethra, etc. Electric light is also employed in this apparatus for illuminating body-cavities.

Polysialia, pol-e-se-al'e-ah (*poly, sialon,* saliva). Excessive discharge of saliva.

Polyskelus, pol-is'kel-us (*poly, skelos,* leg). Monster with supernumerary limbs.

Polysomatia, pol-e-so-mash'e-ah (*poly, soma,* body). Polysarcia.

Polysomia, pol-e-so'me-ah (*poly, soma,* body). Monstrosity characterized by the existence of more bodies than one.

Polyspaston, pol-e-spas'ton (*poly, spao,* to draw). Powerful instrument for reducing luxations.

Polyspermia, pol-e-spur'me-ah (*poly, sperma,* sperm). Richness or fulness of sperm or seed.

Polysthenic, pol-e-sthen'ik (*poly, sthenos,* strength). Having much strength.

Polystichia, pol-e-stik'e-ah (*poly, stichos,* row). Condition in which two or more rows of eyelashes are present.

Polysticum callipteris, pol-is'tik-um kal-lip'ter-is. Polypodium filix mas. **P. fi'lix mas,** Polypodium filix mas.

Polystoma pinguicola, pol-is'to-mah pin-gwik'o-lah (*poly, stoma,* mouth). See *Parasites.* **P. sanguic'ola,** see *Parasites.* **P. vena'rum,** see *Parasites.*

Polysulphide (pol-e-sul'fid) or **Polysul'phuret.** Element combined with numerous atoms of sulphur.

Polysymmetria, pol-e-sim-met're-ah (*poly, summetria,* symmetry). Symmetry of the two sides of the body at many points.

Polythelia (pol-e-the'le-ah) or **Polythe'lism** (*poly, thele,* nipple). State in which supernumerary nipples exist.

Polytocia, pol-e-to'se-ah (*poly, tokos,* child). Fecundity.

Polytocous, pol-it'o-kus (*poly, tikto,* to bring forth). Multiparous.

Polytrich'ia or **Polytricho'sis.** See *Polytrichus.*

Polytrichum, pol-it'rik-um (*poly, thrix,* hair). *P. vulgare, Polytrichon, Adiantum aureum, Golden maidenhair;* ord. Musci; astringent in lung diseases. **P. commu'ne,** Asplenium trichomanoides. **P. juniperi'num,** *Haircap moss, Robin's rye;* common in New England; said to be a powerful diuretic.

Polytrichus, pol-it'rik-us (*poly,* many, *thrix,* hair). Very hairy; the condition is termed *Polytrichia,* although this term is at times employed for the growth of hair on parts not usually having it.

Polytroph'ia. Polytrophy.

Polytrophy, pol-it'ro-fe (*poly, trophe,* nourishment). Abundant or excessive nutrition.

Polyure'sia, Polyuresis (pol-e-u-re'sis) (*poly, ouresis,* urination), or **Polyuria,** pol-e-u're-ah (*poly, ouron,* urine). Diabetes. Excessive secretion of urine.

Polyuricus, pol-e-u'rik-us. Relating to excess of urinary secretion. *Ischuria polyurica* is ischuria caused by accumulation of urine in the bladder.

Poma, po'mah. Drink. **P. Chinen'sia,** see *Citrus aurantium.*

Pomaceous, po-ma'shus. Relating to apples.

Pomaceum, pom-ah'se-um (*pomum,* apple). Cider.

Pomade, pom'ade. Ointment.

Pomatum, pom-ah'tum (*poma*, apples). *Pommatum.* Pharmaceutical preparation, employed only externally; is usually scented and colored. *Pommade* is often used synonymously with ointment. *Common pomatum* is made of lard, 12lbs.; suet, 4lbs.; essence of lemon, ℥viij. **P. epispas'ticum fla'vum**, unguentum lyttæ medicatum aliud. **P. epispas'ticum vir'ide**, unguentum lyttæ medicatum. **P. ad la'bia demulcen'da**, cerate for the lips. **P. for the lips**, cerate for the lips. **P. ni'tricum** or **oxygena'tum**, unguentum acidi nitrosi. **P. satur'ni**, unguentum plumbi superacetatis.

Pombalea ipecacuanha, pom-bah'le-ah ip-e-kak-u-an'hah. See *Ipecacuanha.*

Pomegranate, pom'gran-et. Punica granatum.

Pom'melfoot (knobfoot). Kyllosis. **P. joint**, condyloid joint.

Pompholyg'mus. Eruption of bullæ.

Pompholygodermatitis, pom-fo-lig-o-dur-mat-e'tis (*pompholux*, *derma*, skin). Pemphigus.

Pompholygodes, pom-fo-lig-o'dees (*pompholux*, *eidos*, resemblance). Bullous; suffering from or resembling pemphigus or pompholyx.

Pompholyx, pom'fo-liks (*pomphos*, blister). Small vesicle on the skin. Eruption of bullæ or blebs, appearing without any inflammation around them, and without fever. Eruption of deep-seated vesicles on the palms is called chiropompholyx, and on the soles of the feet and elsewhere, dysidrosis; a species of pemphigus. See *Pemphigus.* **P. tu'tia**, zinci oxidum.

Pomphus, pom'fus (*pomphos*). Vesicula; wheal.

Pompion, pom'pe-on. Cucurbita pepo.

Pomum, po'mum. See *Pyrus malus.* **P. Ada'mi**, projection formed by the thyroid cartilage in the neck—of males particularly. Is so called from a notion that it was caused by the apple sticking in the throat of our first parent. **P. amo'ris**, apple of love; testicle. **P. Hierosolymita'num**, Momordica balsamina. **P. melon'gena**, see *Solanum melongena.* **P. mira'bile**, Momordica balsamina. **P. spino'sum**, Datura stramonium.

Pond-dog'wood. Cephalanthus occidentalis.

Pondera et mensuræ, pon'der-ah et men'su-re. Weights and measures (which see).

Pondshov'el. Unisema deltifolia.

Pondus pharmaceuticum, pon'dus far-mah-su'tik-um (pharmaceutical weight). See *Weights and Measures.*

Ponga'mia gla'bra. Tree, native of India, China, Australia, and Fiji Islands. Seeds yield poonga or Kurung oil, employed in parasitic cutaneous affections.

Po'nos. Endemic disease of the Greek islands Hydra and Spezzia.

Pons (bridge). Name given in anatomy to a part which connects others—by a bridge, as it were. **P. cerebel'li**, pons Varolii. **P. hep'atis**, see *Lobulus anonymus.* **P. Syl'vii**, quadrigemina tubercula. **P. Tari'ni**, Tarini pons. **P. Varo'lii**, *Varoli's bridge, Cerebral protuberance, Annular protuberance, Mesocephalon.* An eminence at the upper part of the medulla oblongata, first described by Varoli, and formed by the union of the crura cerebri and crura cerebelli. **P. zygomat'icus**, zygomatic arch.

Pontederia cordata, pon-te-der'e-ah kor-dat'ah. Unisema deltifolia.

Pontibrachium, pon-te-brak'e-um. Middle peduncle of cerebellum.

Ponticulus hepaticus, pon-tik'u-lus hep-at'ik-us (dim. of **Pons**, *hepar*, liver). Arch of tissue, embracing blood-vessels, which reaches from lobus Spigelii to right lobe of liver.

Ponticum absinthium, pon'tik-um ab-sin'the-um. Artemisia pontica.

Pook. Abdomen.

Pool'root. Eupatorium ageratoïdes.

Pool'wort. Eupatorium aromaticum.

Poon'ga oil. See *Pongamia glabra.*

Poop. Term used in England for rupture of muscle resulting from tennis- or ball-playing.

Poor man's plas'ter. Plaster composed of resin, tar, and yellow wax.

Pop'lar, Amer'ican. *Populus.* Liriodendron. **P., Balm of Gil'ead**, Populus candicans. **P., black**, populus. **P. tree**, liriodendron. **P., tu'lip-bear'ing**, liriodendron.

Poples, pop'lees. *Ham, Hough, Huff, Hock.* The posterior part of the knee-joint, forming the popliteal region or space.

Poplesy, pop'le-se. Apoplexy.

Poplitæus, pop-lit-e'us (*poples*). Popliteal muscle. **P. accesso'rius** or **bi'ceps** or **ger'minus**, popliteus minor. **P. mi'nor** or **supe'rior**, plantaris minor.

Poplitead, pop-lit-e'ad. See *Popliteal aspect.*

Popliteal (pop-lit-e'al) or **Poplit'ic** (*poples*). That which relates to the ham; name given to various parts. **P. ar'tery**, *Popliteal portion of the crural*, is really a continuation of the femoral, which changes its name on passing through the abductor magnus muscle. It descends a little obliquely outward into the hollow of the ham, and extends from the commencement of the lower third of the thigh to the end of the upper quarter of the leg, where it terminates by dividing into the posterior tibial and peroneal arteries. In the ham it gives off the three superior articular arteries, and at the top of the leg the arteries of the gemelli or gemini muscles, gemini branches, the two inferior articular arteries, and the tibialis antica. **P. as'pect**, aspect toward the poples or ham (Barclay). *Poplitead* is used by the same writer adverbially, and signifies "toward the popliteal aspect." **P. bur'sa**, bursa poplitea. **P. fos'sa**, poples. **P. glands**, lymphatic glands, four in number, seated in the popliteal region or space. **P. line**, linea poplitea; intercondyloid line. **P. mus'cle** is seated in the popliteal region. It is triangular, long, flat, and inserted on the one hand by means of a strong tendon into the tuberosity at the outer condyle of the femur, terminating below at the upper part of the posterior surface of the tibia. It bends the leg on the thigh, and, reciprocally, the thigh on the leg. When the leg is bent, it causes it to turn in rotation inward. **P. nerves** result from the bifurcation of the sciatic, and are two in number, viz.: 1, the external popliteal, peroneal nerve, is smaller than the internal, turns to the outside of the fibula at the upper part of the leg, and divides into the musculocutaneous branch and the anterior tibial; 2, the internal popliteal nerve is larger than the other, and seems to be the real continuation of the sciatic nerve. It descends vertically into the hollow of the ham, and passes beneath the aponeurotic arch of the solaris muscle, beyond which it takes the name tibial nerve. It furnishes the external saphena nerve and a number of branches that are distributed to the posterior muscles of the leg; it then passes to the sole of the foot, to be divided into two branches called plantar nerves. **P. notch**, posterior intercondyloid fossa. **P. plex'us**, plexus popliteus, formed by fine branches from external and internal popliteal nerves around the popliteal artery. **P. re'gion**, poples. **P. space**, poples. **P. vein** has the same arrangement as the artery behind which it is situate.

Poplitic, pop-lit'ik. Popliteal.

Poponax, pop'o-naks. See *Pastinaca opoponax.*

Poppy, pop'pe. See *Papaver.* **P. cel'andine**, Stylophorum diphyllum. **P. corn, red**, Papaver rhœas. **P. heads**, see *Papaver.* **P. horn**, Stylophorum diphyllum. **P. juice**, meconium. **P. pill**, opium. **P., prick'ly**, Argemone Mexicana. **P., spat'ling**, Cucubalus behen. **P., thorn**, Argemone Mexicana. **P., white**, papaver. **P., white, cap'sule**, see *Papaver.*

Pop'ulin. A bitter principle, resembling quinine or cinchonine, contained in Populus tremuloïdes.

Populus, pop'u-lus. *P. nigra, Black poplar.* The leaf-buds are officinal. Poplar wood is used in the manufacture of paper. The bark of Populus tremuloïdes, *American aspen*, of P. tremula, *European aspen*, and of Populus candicans, *Balm of Gilead poplar*, is antiperiodic and furnishes salicylin and populin. **P. balsamif'era**, see *Fagara octandra.* **P. can'dicans,**

see *Populus*. **P. pe'nula**, P. tremula. **P. tacamaha'ca**, see *Fagara octandra*. **P. trem'ula**, see *Populus*. **P. tremuloï'des**, see *Populus*.

Porcelia triloba, por-sel'e-ah tril'o-bah. See *Carica payaya*.

Porcel'lus or **Porculus**, pork'u-lus. Oniscus. Disease in which the skin becomes scaly and thickened.

Porcupine (pork'u-pine) **disease.** Ichthyosis; hystriciasis. **P. men**, persons in whom the cuticle is produced in the form of pointed prolongations, as if moulded on the papillæ, like the shorter and blunter quills of the porcupine.

Porcus, por'kus (*porkos*, a net). Vulva.

Porde, por'de. Crepitation.

Pore, (*poros*, passage). *Interstice*. Pores are the excessively minute spaces or interstices which separate the integrant molecules of bodies and render those bodies permeable. Pores have also been called *spiracula*. *Sweat-pores* are conically-dilated orifices of the ducts of the sweat-glands, visible to the naked eye in some portions of the body. A body possessing pores is said to be *porous*.

Pore'blind. Myopic.

Pored milk. Colostrum.

Porencephalia (po-ren-sef-al'e-ah) or **Porenceph'aly** (*poros*, pore, *enkephalos*, brain). Depression in the cerebral hemisphere which may form connections with the ventricle. It is generally congenital; may be also due to inflammation, embolus, or hemorrhage. This term denotes also congenital absence of part of the cerebrum.

Porencephalous, po-ren-sef'al-us. Relating to porencephalia.

Pori (po'reh) (pl. of **Porus**, passage) **bilia'rii.** Ducts which receive the bile from the penicilli of the liver and convey it to the hepatic duct. **P. cuta'nei**, pores of the skin. **P. exhalan'tes**, P. cutanei. **P. pulmo'num**, bronchic cellules. **P. resorben'tes**, P. cutanei.

Porne'um (*porneion*, house of prostitution). Brothel.

Pornia, por-ne'ah (*porneia*). Prostitution.

Pornography, por-nog'raf-e (*porneia*, prostitution, *grapho*, to describe). Description of prostitutes or of prostitution as a matter of public hygiene.

Porocele, po-ro-se'le (Eng. por'o-seel) (*poros*, callus, *kele*, tumor). Hard tumor of the testicles or its envelopes.

Poroma, por-o'mah. Induration.

Poromphalon (por-om'fa-lon), **Porom'phalus**, or **Porom'phalocele** (*poros*, callus, *omphalos*, navel). Umbilical hernia with hard and thickened parietes.

Po'ros. Canal, meatus; callosity.

Porosis, po-ro'sis (*poroo*, to harden). Chalaza; induration.

Poros'ity. State of being porous or containing pores.

Porosus, po-ro'sus (*poros*, pore). Porous.

Porotic, po-rot'ik (*poros*, callus). Remedy capable of assisting the formation of callus.

Porotomy, po-rot'o-me (*poros*, *tome*, incision). Operation of enlarging the meatus of the urethra by incision.

Po'rous plas'ter. Spread plaster, with small holes to prevent wrinkling.

Porphyra, por'fir-ah (*porphura*, purple). Purple. **P. Græco'rum**, petechiæ. **P. hæmorrhag'ica**, purpura hæmorrhagica. **P. lacinia'ta**, ulva umbilicalis. **P. umbilica'lis**, ulva umbilicalis.

Porphyrisma, por-fir-iz'mah (*porphura*, purple). Scarlatina.

Porphyrismus, por-fir-iz'mus. Scarlatina.

Porphyrization, por-fir-iz-a'shun. See *Levigation*.

Porphyrotyphus, por-fir-o-ti'fus. See *Typhus*.

Porphyroxin, por-fir-oks'in. Alkaloidal substance found in the rhizome of Sanguinaria Canadensis. Neutral crystallizable substance obtained from aqueous solution of opium by precipitation and the action of ether and dilute sulphuric acid.

Porphyruria (por-fir-u're-ah) or **Porphyu'ria** (*porphura*, purple, *ouron*, urine). State of the urine—purpuric urine—in which it deposits coloring matter—purpurin, urrosacin or urosacin, rosacic acid, uroërythrin, urorhodin, urrhodin—in association with urate of ammonium. It is considered a modification of urohæmatin, *Hæmaphæin*.

Porphyry, por'fir-e (*porphura*, purple). *Porphyrites*. Species of very hard, compound rock, susceptible of considerable polish, and used in the fabrication of mortars and slabs for the apothecary. **P., black**, ophites.

Porpoise (por'pus) **oil.** Oleum delphini; made from the porpoise.

Porraceous, por-ra'she-us (*porrum*, leek). Having the green color of the leek. Epithet given to certain excreted matters—the sputa, bile, and fæces particularly.

Porrectum, por-rek'tum (*porrigo*, to stretch). Lever.

Por'ret. Allium porrum.

Por'ret's phenom'enon of mus'cle. Swelling of muscular fibres occurring at the negative pole when a galvanic current is conducted through living muscle.

Porridge, por'ij. A mixture of meal or flour and water boiled. **P., ath'ol**, a mixture of whiskey and honey used in the highlands of Scotland; see *Mahogany*.

Porriginous, por-rij'in-us. Appertaining to porrigo.

Porrigo, por-re'go (*porrigo*, to spread, *porrum*, leek, from the odor of the discharge). *Tinea, T. capitis, Favus, Scalled head* in general, *Scallard*. Some of the varieties are communicable; often used like tinea for scalled head in general, and by some writers for disease of the hairy scalp, principally characterized by an eruption of the pustules, called favi and achores, unaccompanied by fever. Mr. Erasmus Wilson, who, with others, considers tinea to be owing to a vegetable parasite, suggested the name *Phytosis* for it. See *Phytosis*. **P. confer'ta**, P. scutulata. **P. decal'vans**, *Alopecia areata*, limited or partial baldness, consists of patches of baldness without decay or change of color in the surrounding hair, the exposed parts of the scalp being glabrous, white, and shining. The morbid condition sometimes spreads, so that the patches coalesce, rendering the baldness extensive. To a vegetable growth, forming a tube around the roots of the hair in tinea tondens, the name *Microsporon* (or *Microsporum*) *Audouini* was given; also called *Trichophyton* or *Trichomyces decalvans*. Another vegetable parasite, called *Trichophyton* (or *Trichomyces*) *tonsurans*, is developed in the root of the hair. **P. favo'sa**, *Favus* or *Tinea favosa;* contagious vegetable parasitic disease due to the achorion Schönleinii. *Honeycomb scall* or *tetter*. It consists of an eruption of pustules common to the head, trunk, and extremities, pea-sized, flattened at the top, in clusters, often uniting; discharge, fetid; scabs, honeycombed; the cells filled with fluid. It occurs both in early and adult life. The crusts of favus are of vegetable nature, and believed at one time to be formed of a parasitic plant, *Fungus porriginis*, belonging to the genus *Mycoderma*. It is now referred to a new genus under the name *Achorion Schönleinii*. The name *Puccinia favi* has also been given to it. Eczema of the hairy scalp is often confounded with porrigo. **P. fur'furans**, *Tinea tonsurans, Pityriasis*, commences with an eruption of small achores, the fluid of which soon concretes and separates in innumerable thin, laminated scabs or scale-like exfoliations. It is attended with much itching and some soreness of the scalp, to which the disease is confined. Occurs chiefly in adults. **P. larva'lis**, *Milky scall* or *tetter*, *Milkblotch*, is almost exclusively a disease of infancy. It commonly appears first in the forehead and cheeks in an eruption of numerous minute whitish achores on a red surface. These break and discharge a viscid fluid, which becomes incrusted in thin yellowish or greenish scabs. The patches spread until the whole face becomes, as it were, enveloped in a mask; hence the epithet *larvalis* (like a mask). The disease is rather a variety of eczema. Sometimes the eruption appears on the neck and breast, and, occasionally, on the extremities. In general, the health of the child does not suffer, but the eruption is always attended with much itching

and irritation. See *Porrigo lupinosa.* **P. lupino'sa,** *Favus dispersus,* consists of minute pustules in small patches, mostly commencing on the scalp; the patches terminate in dry, delving scabs, resembling lupine seeds, the interstices often covered with a thin, whitish and exfoliating incrustation. It occurs chiefly in early life. **P. scutula'ta,** *Ringworm of the scalp, Scalled head;* vegetable parasitic contagious disease due to the trichophyton. Commences with clusters of small, light-yellow pustules, which soon scab off, and, if neglected, become hard by accumulation. If the scabs be removed, the surface is left red and shining, but studded with slightly elevated points. If not attended to, it involves the whole head. It usually occurs in children three or four years of age.

Porrigophyte, por're-go-fite (*porrigo, phuton,* vegetable). Parasitic vegetation causing favus or porrigo favosa.

Porro-Mül'ler opera'tion. An incision is made into the abdomen and the uterus is drawn out; after applying a ligature around the cervix the uterus is opened and the fœtus delivered.

Porro's opera'tion. Consists in amputation of the uterus and ovaries directly after Cæsarean section; the stump is attached to the inferior angle of the abdominal wound.

Porro-Veit opera'tion. Modification of Porro's operation, which allows the stump to fall into the pelvis.

Porrum, por'rum. Allium porrum; thymion. **P. sati'vum,** Allium porrum.

Porrus, por'rus. Thymion.

Port wine. Vinum Portugallicum. **P.-w. stain,** nævus.

Porta, por'tah. Gate. The part of the liver or other organ—*hilus*—where its vessels enter as by a gate. See *Liver.* Also the vulva. **P. hep'atis,** see *Liver.* **P. jec'oris,** see *Liver.* **P. labyrin'thi,** fenestra rotunda. **P. lie'nis,** see *Spleen.* **P. omento'rum,** foramen Winslowii. **P. pulmo'nis,** root of lung. **P. re'num,** hilus of kidney. **P. spa'tii,** intra-aponeuroticæ suprasternalis, opening between suprasternal and intra-aponeurotic space and blind sac back of sternocleidoid muscle. **P. ve'na,** *Vena portæ,* or *Vena portarum,* the system of the vena porta, or the abdominal venous system or portal system, is a vascular apparatus of black blood, situate in the abdomen, and resulting from two distinct orders of vessels united into one common trunk. 1. One of these orders, much more extensive than the other, is called *Vena porta abdominalis,* because it arises from all the organs enclosed in the cavity of the abdomen, except the kidneys and bladder, and, in the female, the uterus. The abdominal vena porta has two principal roots, the splenic vein and the superior mesenteric, which have their ramifications in all the digestive organs. 2. The other set of vessels, distributed solely to the liver, has been called the hepatic vena porta. Appears to be a continuation of the abdominal vena porta, and proceeds toward the inferior surface of the liver. Opposite the transverse fissure of that organ it divides, like an artery, into two branches, which, at their union, seem to form a canal or duct, called by some the sinus of the vena porta or of the portal vein. These branches are distributed in the substance of the liver, whither they are accompanied by a prolongation of the fibrous capsule of that organ—the capsule of Glisson. The different branches of the vena porta are devoid of valves. See *Liver.*

Por'tal. Relating to the porta of the liver, as the portal system or system of the vena porta. By extension, the term has been applied to an analogous system of vessels in the kidney. See *Kidney.* **P. circula'tion,** circulation through the portal vein and its hepatic branches. **P. fis'sure,** see *Liver.* **P. fos'sa,** see *Liver.* **P. sys'tem,** see *Porta vena.* **P. sys'tem of the kid'ney,** see *Kidney.* **P. vein,** porta vena. **P. veins of the kid'ney,** see *Kidney.*

Porte-bougie (F.), port-boo-zhe'. Silver canula similar to that of a trocar, except that it is longer; used for conducting bougies into the urethra.

Porte-caustique (F.), port-kaw-steek'. Instrument similar to a porte-crayon or pencil-holder for carrying lunar caustic.

Porte-ligature (F.) (*porter,* to carry, *ligature*). An instrument for conveying a ligature to deep-seated parts.

Porte-moxa (F.). Small instrument for keeping the moxa applied to a part to be cauterized.

Portentum, por-ten'tum. Monster.

Por'ter. Dark-brown malt liquor made of malt and hops; color is due to high-dried malt. See *Cerevisia.*

Porte-sonde (F.). An instrument resembling a porte-crayon, employed for holding the style or *sonde,* and inserting it more readily into the nasal duct, during the operation for fistula lacrymalis.

Portio (por'shc-oh) **axilla'ris.** Second portion of axillary artery. **P. brachia'lis,** third part of brachial artery. **P. cervica'lis,** third portion of subclavian artery. **P. du'ra,** hard portion of facial nerve. **P. inter du'ram et mol'lem,** Portio Wrisbergii. **P. interme'dia,** intermediary nerve; middle portion of cervix uteri; see *Portio Wrisbergii.* **P. ma'jor trigem'ini,** sensory root of trifacial nerve. **P. me'dia inter portio'nem duram et portio'nem mol'lem,** Portio Wrisbergii. **P. mi'nor trigem'ini,** motor root of trifacial. **P. mol'lis,** soft portion of auditory nerve. **P. muscula'ris,** second portion of subclavian artery. **P. pectina'ta,** see *Lamina spiralis.* **P. pectora'lis,** first portion of subclavian artery. **P. supravagina'lis,** supravaginal part of neck of uterus. **P. thorac'ica,** first part of axillary artery. **P. vagina'lis,** part of cervix uteri within the vagina. **P. Wrisberg'ii,** small white fasciculus, intermediate between the portio mollis and portio dura of the seventh pair of nerves, first described by Wrisberg. The chorda tympani is a branch of the facial nerve.

Port'land ar'row root. Starch made from rhizome of Arum maculatum.

Portonarium, por-to-nar'e-um (*porta,* gate). Pylorus; duodenum.

Portulaca, por-tu-lak'ah. *Purslane, Purslain.* This plant has a watery and somewhat acid juice; regarded as antiseptic and aperient. Belongs to the Portulaceæ or Portulaceæ, natural order of plants found in S. America and S. Africa.

Po'rus. Pore; callosity; canal, meatus. **P. acust'icus,** auditory canal, internal. **P. acust'icus exter'nus,** auditory canal, external. **P. bilia'rius,** choledoch duct. **P. carot'icus exter'nus,** carotid foramen. **P. cra'nio-nasa'lis,** foramen cæcum. **P. Meckel'ii,** opening in dura mater for trifacial nerve. **P. op'ticus,** opening in the centre of the cribriform lamella of the sclerotic, through which the central artery of the retina enters the eyeball.

Posca, pos'ka. Mixture of vinegar and water, used chiefly as a refrigerant.

Posimos, pos'e-mos. Potable.

Posi'tion, false. False position. **P. of fœ'tus,** see *Parturition* and *Presentation.* **P. of a mus'cle,** period of rest; term used to denote the lapse of time between stimulation and contraction of muscle-fibre, as indicated by the myograph.

Positive. Term applied in electricity to the point at which the electric current enters—the *positive pole* or the *anode.*

Pos'itor, u'terine. Instrument for adjusting displacements of the uterus.

Posological, po-zo-loj'ik-al. Relating to posology. **P. ta'ble,** table of doses of the articles of the materia medica. See *Doses* (table of).

Posology, po-zol'o-je (*posos,* quantity, *logos,* discourse). Indication of the doses of the different articles of the materia medica. See *Doses.*

Posoqueria dumetorum, po-so-kwe're-ah du-me-to'rum. Randia dumetorum.

Possessed, poz-zest'. One affected with epilepsy or other strange neurotic affection was formerly supposed to be possessed by a demon. Hence, exorcism and various religious ceremonies were at one time employed to drive off the intruder.

Pos'set (*posca*, sour wine and water). Milk curdled with wine or any acid, or treacle. Preparation of beer and milk. **P. sack**, see *Sack*. **P. sa'go**, see *Sago*.

Possetting, pos'set-ting. Regurgitation (of infants).

Post. Latin preposition used as a prefix, and meaning after or behind.

Postarytænoï'deus. Crico-arytænoïdeus posticus muscle.

Post-axial, post-aks'e-al (*post, axis*). See *Pre-axial*.

Postbrachiale, post-brak-e-al'e (*post*, after, *brachium*, arm). Metacarpus.

Postcarpium, post-kar'pe-um (*post*, after, *carpus*, wrist). Metacarpus.

Postci'bal (*post, cibus*, food). Occurring after a meal.

Posterior (pos-te're-or) **annula'ris.** An external interosseous muscle, arising from the corresponding sides of the metacarpal bones of the ring finger and little finger, and inserted into the inside of the tendon on the back of the ring finger. It draws the ring finger inward. **P. aud'itory fos'sa**, semilunar notch in the temporal bone dividing auditory plate from temporal ridge. **P. aur'is**, retrahens auris. **P. cen'tral convolu'tion**, ascending parietal convolution of the brain. **P. cen'tral sul'cus**, sulcus post-centralis cerebri. **P. cerebel'lar ar'tery**, posterior inferior cerebellar artery. **P. cer'ebral ar'tery**, posterior cerebral artery. **P. cham'ber**, cavity of eye back of lens. **P. cho'rioid** or **cho'roid ar'tery**, see *Choroid artery*. **P. col'umns**, see *Spinal cord*. **P. commissu'ra**, posterior cerebral commissure. **P. commu'nicant ar'tery**, posterior communicating artery. **P. cor'nu**, posterior horn of lateral ventricle. **P. cor'nual bulb**, bulbus cornu posterioris. **P. digas'tricus**, posterior belly of digastric muscle. **P. dilata'tor**, dilatator naris posterior. **P. in'dicis ma'nûs**, internal interosseous muscle, which arises from the inner or ulnar side of the metacarpal bone of the fore finger, and is inserted into the inside of the tendon on the back of the fore finger. It draws the fore finger inward. **P. in'dicis pe'dis**, external interosseous muscle, which arises from the contiguous sides of the metacarpal bones of the fore toe and second of the small toes, and is inserted into the outside of the root of the first bone of the fore toe. It pulls the fore toe outward. **P. me'dii dig'iti ma'nûs**, external interosseous muscle, which arises from the corresponding sides of the metacarpal bones of the middle and ring fingers, and is inserted into the inside of the tendon on the back of the middle finger. It draws the middle finger inward. **P. me'dii dig'iti pe'dis**, external interosseous muscle, which originates from the contiguous sides of the metacarpal bones of the second and third of the small toes, and is inserted into the outside of the root of the first bone of the second of the small toes. It pulls the toe outward. **P. ter'tii dig'iti**, external interosseous muscle, which arises from the contiguous sides of the metacarpal bones of the third and fourth of the small toes, and is inserted into the outside of the root of the first bone of the third of the small toes. It pulls the toe outward.

Pos'tero-lat'eral groove. Sulcus intermedius posticus; groove along spinal cord where posterior nerve-roots issue.

Pos'tero-pari'etal gy'rus. Post-central convolution of brain. **P.-p. lob'ule**, superior parietal lobule. **P.-p. sul'cus**, sulcus centralis.

Pos'tero-tem'poral sul'cus. Sulcus temporalis cerebri medius.

Poster'ula. Portion of posterior parts of turbinated bones of nose.

Postfrontal, post-fron'tal (*post, frons*, frontal bone). Distinct bone, temporary in birds, permanent in reptiles, extending downward from the postero-external part of the frontal bone.

Postgenera'tion. Latter development.

Postgeniculatum, post-jen-ik-u-lat'um (*post, geniculatum*). Internal corpus geniculatum of brain between optic tract and cimbia.

Postglenoid (post-gle'noid) (*post, glenoid*) **pro'cess.** Tubercle in front of the outer part of the fissura Glaseri; much more largely developed in some of the other mammals.

Postgrad'uate. Relating to studies pursued after graduation.

Posthal'gia (*posthe, algos*, pain). Pain in the penis or prepuce.

Posthe, pos'the. Penis; prepuce.

Posthetomist, pos-thet'o-mist (*posthe*, prepuce, *tome*, incision). *Posthetomus*. One who performs the operation of circumcision.

Posthetomy, pos-thet'o-me (same etymon). Circumcision.

Posthia, pos-the'ah (*posthia*). Hordeolum.

Posthioplastic, pos-the-o-plas'tik (*posthe, plasso*, to form). *Posthoplastic*. An epithet applied to the operation for restoring the prepuce.

Posthitis, pos-the'tis (*posthe*, prepuce, *itis*). Inflammation of the prepuce.

Posthium, pos'the-um (*posthion*). Penis; prepuce.

Posthocalyptron (pos-tho-kal-ip'tron) or **Posthocalym'ma** (*posthe*, penis, *kaluptra*, covering). Condom.

Posthoncus, pos-thon'kus (*posthe, onkos*, tumor). Swelling of the prepuce or penis.

Posthumous, post'u-mus (*post*, after, *humus*, ground). Occurring after death. **P. child**, one born after the death of its father or taken from the dead body of its mother, as by the Cæsarean section.

Postmortem, post-mor'tem. After death, as post-mortem or necroscopic examination; examination of a dead body with the view of determining the cause of death or of establishing some interesting fact in pathology.

Postnatus, post-nat'us. Born after; in the old law writers, the second son.

Post-o'ral (*post, os*, mouth). Situated behind the mouth; applied to certain visceral arches and clefts of the vertebrate embryo.

Postpartum, post-par'tum. After delivery, as post-partum hemorrhage.

Postpedun'culus. Inferior peduncle of cerebellum.

Postperfora'tus. Posterior perforated space.

Postpharyngeal, post-far-in-je'al. Behind the pharynx, as **P. ab'scess**, an abscess seated in the areolar tissue behind the pharynx.

Postpitu'itary. Situate behind the pituitary body.

Post-plexus. Term for plexus in vertebrates corresponding to lumbo-sacral plexus in man.

Postpositio, post-po-zish'e-o (*post*, after, *pono*, to place). A postponement. Delay in the return of a paroxysm. It is opposed to *anticipatio*, which means the return of a paroxysm earlier than its accustomed hour. In this sense we speak of an *anticipating* and a *postponing* intermittent (*febris hysterica*).

Postpyram'idal nu'cleus. Nucleus funiculi gracilis.

Postscale'nus. Posterior scalene muscle of neck.

Postscap'ula. Infraspinous portion of scapula.

Postscap'ular fos'sa. Infraspinous fossa.

Postscapula'ris. Infraspinatus muscle.

Post sing. sed. liq. Abbreviation of post singulas sedes liquidas, after every loose stool.

Postsphenoid (post-sfe'noid) **bone.** Posterior portion of the sphenoid bone in infancy; it includes the sella turcica and great wings. In animals this division of the sphenoid sometimes persists through life.

Postural, pos'tu-ral (*pono, positum*, to place). Relating or appertaining to posture or position—as postural treatment, the treatment by position—of a fractured limb, for example. **P. respira'tion**, see *Ready method* and *Drowning, resuscitation from*.

Postzygapophysis, post-zig-ap-of'is-is (*post, zugos*, yoke, *apophusis*, process). The inferior articular processes of the vertebræ, two to each dorsal vertebra. The superior articular processes, also two in number, are called *prezygapophyses*.

Pot. Abbreviation for potio, potion.

Potable, po'ta'bl (*poto*, to drink, *habilis*, able). Water is said to be potable when it contains atmo-

spheric air, is not brackish, and has no mineral impregnation of consequence.

Potage, pot-azh' (F.). Broth; soup.

Potamopyra, pot-am-op'ir-ah (*potamos*, river, *pur*, fever). Marsh fever; malarial fever.

Pot'ash. So called from the pots or vessels in which it was made—*Vegetable alkali;* also potass. **P. of com'merce,** impure potassa, pearlash of commerce; it is prepared from the ashes of land-plants by calcination, solution in water, filtration, and evaporation; usually consists of potassium subcarbonate, potassium sulphate, potassium chloride, silex, oxide of iron, etc. Another variety of the alkali is afforded by burning argol in a crucible; is called *Salt of tartar.* Wormwood burnt to ashes, dissolved in water, filtered, and evaporated to dryness affords another variety of vegetable alkali, *Salt of wormwood.* Impure potash is used for preparing the subcarbonate for medicinal use. **P. water,** liquor potassæ effervescens.

(For convenience of reference, the compounds of potassium are retained under *Potassa* and *Potassæ*, while also introduced, according to more modern nomenclature, under *Potassium* and *Potassii.* For example, acetate of potassium will be mentioned under potassa, acetate of; potassæ acetas; potassium acetate; and potassii acetas).

Pot'ass. Potassa; potassa fusa; potash; protoxide of potassium.

Potassa, po-tas'sah. Potassa fusa. **P., ac'etate of,** potassii acetas. **P. antimo'niate,** diaphoretic preparation too variable for use. **P., azo'tate of,** potassii nitras. **P., bichro'mate of,** potassii bichromas. **P., bisul'phate of,** potassii supersulphas. **P., bitar'trate of,** potassii supertartras. **P. cum cal'ce,** *Potassa with lime* (potassæ, calcis, āā ℥j; rub together and keep in a well-stopped bottle; Ph. U. S.); used for the same purposes as potassa fusa, but more manageable, being less deliquescent. **P., carbazo'tate of,** potassii picras. **P., car'bonate of,** potassii carbonas. **P., car'bonate of, pure,** see *Potassii subcarbonas.* **P. caus'tica cum cal'ce,** potassa cum calce. **P., chlo'rate of,** potassii chloras. **P., chro'mate of,** potassii chromas. **P., chro'mate of, neu'tral,** potassii chromas. **P., chro'mate of, yel'low,** potassii chromas. **P., ci'trate of,** potassii citras. **P., euchlo'rate of,** potassii chloras. **P., ferrocy'anate of,** potassii ferrocyanuretum. **P., ferroprus'siate of,** potassii cyanuretum. **P. fu'sa,** *Potassa* (Ph. U. S.), *Lapis infernalis, Fused potassa, Potassa, Fixed vegetable alkali, Hydrate of potassa, Caustic potash.* It is powerfully escharotic, and used for forming issues, curing strictures, etc. **P., fused,** potassa fusa. **P., hy'drate of,** potassa fusa. **P., hydri'odate of,** potassii iodidum. **P., hydrobro'mate of,** see *Bromine.* **P., hydrocy'anate of,** potassii cyanuretum. **P., hyperman'ganate of,** potassii hypermanganas. **P. hyperox'alas,** potassium oxalate. **P. hypertar'tras,** P. supertartras. **P., hypophos'phite of,** potassii hypophosphis. **P. impu'ra,** potash of commerce. **P., i'odate of,** potassii iodas. **P. and i'ron, tar'trate of,** ferrum tartarizatum. **P. with lime,** potassa cum calce. **P. liq'uida,** liquor potassæ. **P., meph'ite of,** potassii subcarbonas. **P., monochro'mate of,** potassii chromas. **P., mu'riate of,** potassii chloridum. **P., ni'trate of,** potassii nitras. **P. ope cal'cis para'ta et ig'ne fu'sa,** potassa cum calce. **P., oxymu'riate of,** potassii chloras. **P., perman'ganate of,** potassii permanganas. **P., phos'phate of,** potassii phosphas. **P., prus'siate of,** potassii ferrocyanuretum. **P., sil'icate of,** *Liquid* or *Soluble glass;* substitute for starch in immovable dressings, applied in syrupy consistence with a brush, drying rapidly, and easily softened by hot water for removal. **P. and so'da, tar'trate of,** sodium tartrate. **P., subcar'bonate of,** potassii subcarbonas. **P., sul'phate of,** potassii sulphas. **P., sul'phate of, ac'id,** potassii supersulphas. **P., sul'phite of,** potassii sulphis. **P., sulphocar'bolate of,** see *Sulphocarbolate.* **P. sulphura'ta,** potassii sulphuretum. **P., sul'phuret of,** potassii sulphuretum. **P., supercar'bonate of,** potassii carbonas. **P., supersul'phate of,** potassii supersulphas. **P., supertar'trate of,** potassii supertartras. **P., tar'trate of,** potassii tartras.

Potas'sæ ace'tas. Potassii acetas, $KC_2H_3O_2$. **P. et alu'minæ sul'phas,** alumen. **P. azo'tas,** potassii nitras. **P. biantimo'nias,** antimonium diaphoreticum. **P. bicarbo'nas,** potassii carbonas. **P. bisul'phas,** P. supersulphas. **P. bitar'tras,** P. supertartras. **P. hy'dras,** potassa fusa. **P. hydri'odas,** *Hydriodate of potassium,* potassii iodidum. **P. ox'alas acid'ulum,** potassium oxalate. **P. oxymu'rias,** P. chloras. **P. perchlo'ras,** *Perchlorate of potassium,* has been employed in intermittents, etc. **P. phos'phas,** potassii phosphas. **P. pic'ras,** potassii picras. **P. protohydri'odas,** P. iodidum. **P. prus'sias fla'va,** potassii ferrocyanuretum. **P. pu'ræ fu'sæ hy'dras,** potassa fusa. **P. et so'dæ tar'tras,** soda, tartrate of. **P. subcarbo'nas,** potassii carbonas.

Potas'sii ace'tas (Ph. U. S.). Acetate of potassium, acetate of potassa. Makes blood alkaline, and is diuretic in small doses; purgative in large doses; dose, gr. xv–℥j or more. Used in dropsy, rheumatism, and gonorrhœa. **P. bicarbo'nas,** potassii carbonas. **P. bichro'mas** (Ph. U. S. and Br.), potassii bichromas, bichromate of potassa, bichromate of potassium. $K_2Cr_2O_7$. (Procured by treating potassium chromate with sulphuric, nitric, or acetic acid, evaporating, and crystallizing.) Violent irritant poison, used as caustic in cases of morbid growths, in the proportion of from half a drachm to a drachm of the salt to from an ounce to an ounce and a half of water. Not used internally. **P. bitar'tras,** potassii supertartras. **P. bro'midum,** *Bromide of potassium;* a colorless crystalline salt, soluble in water; has the virtues of the iodide with the characteristic action of the bromides, and is therefore employed in the treatment of epilepsy, hysteria, mania, venereal excitement, chordee, insomnia, and restlessness accompanied by and dependent upon nervous excitement. Is an anæsthetic, and apt, after long use, to produce an acneiform rash; a combination of a saturated solution of salicylic acid (gr. j to each ℥j of water) or liquor arsenicalis prevents this rash. Large doses are said to occasion drowsiness and to be antaphrodisiac. Dose, gr. x–xv, three times daily; see *Bromine.* **P. carbo'nas** is antacid, antilithic, diuretic. Used internally in skin diseases; dose, gr. ij–xx. Potassæ carbonas, *Carbonate, Bicarbonate,* or *Supercarbonate of potassa, Bicarbonate of potassium.* $KHCO_3$. Is not caustic like the potassium subcarbonate, and hence has been preferred to relieve acidity. (Potass. carbon., ℥iv; aquæ destillat., Ox.). Carbonic acid is obtained from marble by the addition of dilute sulphuric acid; Ph. U. S. Dose, gr. x–℥ss. Used in forming soda powders, as well as for its antacid properties. The salt in powder is called sal aëratus. Its composition is between that of a carbonate and a bicarbonate; see *Potassii subcarbonas.* **P. carbo'nas im'pura,** P. subcarbonas; see *Potassii subcarbonas.* **P. carbo'nas e lixi'vo cin'ere,** P. subcarbonas. **P. carbo'nas pu'ra** or **pu'rus,** see *Potassii subcarbonas.* **P. chlo'ras,** potassii chloras. *P. murias oxygenatus, Potassæ chloras, Potassii chloras* (Ph. U. S. and Br.), *Oxymuriate, Hyperoxymuriate, Chlorate,* or *Eu-chlorate of potassa, Chlorate of potassium, Protochlorate of potassium, Kali chloricum.* Alterative purifier of the blood and humors, and as such is prescribed internally in diphtheritic and other morbid conditions, or in the form of troches gradually dissolved in the mouth. Used externally as an application to irritable and spongy gums; as a gargle in diphtheria and in the various forms of stomatitis and in mercurial sore mouth; dose, 5 to 10 grains or more. *P. chloratis trochisci,* each contains gr. v of the salt. **P. chlo'ridum,** chloride of potassium; bitter and refrigerant. **P. chlorure'tum oxyda'tum,** potassii chloras. **P. chro'mas,** potassii chromas, *Neutral yellow chromate* or *monochromate of potassium.* **P. ci'tras,** potassii citras. $K_3C_6H_5O_7H_2O$. *Citrate of potassium, Citrate of potassa* (acid. citric., ℥x; potass. bicarb., ℥xiv; aquæ, q. s. The salt is deliquescent, and must be kept in well-stopped bottles; Ph. U. S.). Refrigerant, diaphoretic, and a mild alkaline laxative, and may be

given in fever when to do little or nothing is the most advisable course. **P. citra'tis li'quor**, see *Liquor potassii citratis*. **P. citra'tis mistu'ra**, see *Liquor potassii citratis*. **P. cyan'idum**, P. cyanuretum. **P. cyanure'tum**, P. cyanidum (Ph. U. S. and Br.), *Cyanuret* or *Cyanide of potassium, Hydrocyanate of potassa*. Used in the same cases as the hydrocyanic acid; dose, gr. $\frac{1}{16}$ to $\frac{1}{8}$. Five grains have caused death. **P. deutocarbo'nas**, potassii carbonas. **P. et fer'ri tar'tras**, ferri tartarizatum. **P. ferrocyanure'tum** or **ferrocyan'idum** (Ph. U. S. and Br.), $K_4Fe(CN)_6,3H_2O$. *Ferrocyanide* or *Ferrocyanuret of potassium, Ferrocyanate* or *Ferroprussiate* or *Prussiate of potash*. Yellow double cyanuret of potassium and iron, tbe salt from which the cyanuret of potassium is obtained by calcination. Rarely employed in medicine. **P. hydrar'gyro-io'didum**, *Iodhydrargyrate* or *Hydrargyro-iodide of potassium*. (This salt is made by the combination of iodide of potassium with red iodide of mercury.) In fractional doses its properties are similar to those of the iodides of mercury, but in a less degree. **P. hypophos'phis** (Ph. U. S.), KH_2PO_2, *Potassæ hypophosphis, Hypophosphite of potassa* or *of potassium*, is prepared by a method similar to that for hypophosphite of sodium, and is similarly employed. **P. i'odas**, *Iodate of potassium*. This salt, prepared by the action of iodine on chlorate of potassium, has been proposed as a substitute for the latter in affections of the mucous membrane of the mouth and fauces. **P. io'didum**, *Potassii hydriodas*. If a solution of potassa be poured on iodine, an iodate and hydriodate are formed. These may be separated by means of alcohol, which only dissolves the latter of these salts. The hydriodate—or rather the iodide of potassium, kalium iodatum, potassi ioduretum or iodidum—may be obtained by evaporation. It may be procured by treating solution of potassa with iodine, evaporating to dryness, and treating with charcoal. Virtues, those of iodine; it acts as a specific in secondary and tertiary syphilis; very useful in certain forms of rheumatism, in chronic pleuritis with effusion, and in pericarditis, also in lead-poisoning. Dose, gr. x to xx. Large doses are apt to produce frontal pain, coryza, and nervous irritability, which condition is termed iodism. **P. iodure'tum**, potassii iodidum. **P. ni'tras**, potassii nitras, *Nitrate* or *Azotate of potassa, Nitrum, Nitre, Saltpetre, Protonitrate of potassium, Nitrate of protoxide of potassium, Nitrate of potassium*. KNO_3. It is diuretic, refrigerant, diaphoretic, and, in large doses, purgative; externally, cooling and detergent. Dose, gr. x to ʒj. In large doses it is an acrid poison. Given in acute inflammatory diseases, as rheumatism, in dropsies, scurvy, hæmoptysis, and menorrhagia. Largely used in making gunpowder. Paper impregnated with nitre and burnt in the chamber has occasionally afforded relief in asthma. Nitrous powder is a combination of nitre with calomel and tartar emetic. **P. ni'tras fu'sus sulpha'tis paucil'lo mix'tus**, *Sal prunelle, Sore-throat salt, Mineral crystal;* nitrate of potassium mixed with a little sulphate of potassium and run into moulds; its properties are those of nitre. **P. ox'alas**, *Superoxalate of protoxide of potassium, Oxalate of potassium, Salt of sorrel*, is prepared from the juice of wood sorrel. It is refrigerant, and is used to make lemonade, etc. A mixture of two parts of salt of sorrel with one part of cream of tartar bears the name of salt of lemons. **P. oxygenochlorure'tum**, potassii chloras. **P. perman'ganas**, *Potassæ permanganas* (Ph. U. S.), *Permanganate of potassa, Hypermanganate of potassa, Permanganate of potassium*. Given in cases of diabetes (dose, from gr. ij to gr. v, three times a day); also in obstinate dyspepsia. Its external applications are, however, far more important. Recommended as a caustic, being less painful and of more intense action than others; for this purpose the powder is made into a paste with water. As an antibromic and escharotic combined, in the quantity of twenty grains to the pint of water, it, as well as manganic acid, is used as a wash to gangrenous, diphtheritic, and other ulcers. It has been extensively employed in hospital gangrene, and in various strengths, from one grain to ten grains to the fluidounce, as a disinfectant. *Liquor potassii permanganatis, Liquor potassæ permanganatis*, solution of permanganate of potash, solution of permanganate of potassium (88 grains of the permanganate to Oj (Imp.) of distilled water), is officinal (Ph. Br.). **P. phos'phas**, *Phosphate of potassium, Potassium phosphate;* white amorphous salt; alterative in scrofula and phthisis. **P. pi'cras**, *Picrate* or *Carbazotate of potassium;* potassium picrate or carbazotate; has been used as an antiperiodic. **P. protox'idi hydri'odas**, potassii iodidum. **P. et so'dæ** or **so'dii tar'tras**, $KaNC_4H_4O_6,4H_2O$, sodium tartrate, *Calcareous tartar;* see *Sodii tartras*. **P. et so'dii tar'tras**, Rochelle salt. Mild saline purgative. Dose, ʒss–ʒij, properly diluted. **P. subcarbo'nas**, *Carbonate of potassium, Subcarbonate* or *Mephite of potassa*, etc. (See *Potash*.) A filtered solution of the impure subcarbonate, potassæ carbonas impura, potassii carbonas impura, pearlash (see *Potash*), evaporated to dryness. This deliquescent salt is given in the same cases as the potassii carbonas, than which it is more caustic and disagreeable. The Parisian Codex had two subcarbonates, one of which is salt of tartar; it is the potassæ carbonas purus or pura, potassii carbonas pura, pure carbonate of potassium. They are all used like the preceding. **P. subcarbo'nas impu'rus**, potash of commerce. **P. sul'phas**, *Potassæ sulphas, Sulphate of potassium* or *of potassa*, K_2SO_4. (The salt that remains after the distillation of nitric acid, dissolved; the excess of acid saturated with subcarbonate of potassium and crystallized.) Purgative, diuretic, and hepatic stimulant. Dose, ʒss to ʒij, as a laxative. In large doses it is an irritant poison. **P. sul'phas cum sul'phure** (formed by deflagrating nitrate of potassium with sublimed sulphur). Same virtues as the last. Dose, gr. xv to xxx. **P. sul'phis** (Ph. U. S.), *Potassæ sulphis, Sulphite of potassium, S. of potash, Potassium* or *Potassa sulphite*, $K_2SO_3,2H_2O$. White soluble substance; dose and uses the same as those of sulphite of sodium; see *Sodii sulphis*. **P. sulphocyanure'tum** or **sulphocyan'idum**, *Sulphocyanuret of potassium*. This salt has been prepared as a substitute for hydrocyanic acid and cyanuret of potassium, on the ground of its possessing their advantages without their inconveniences. **P. sulphure'tum**, *Potassæ sulphuretum, Kali sulphuretum, Liver of sulphur, Sulphuret of potassium, Sulphurated* or *Sulphuretted potassa* or *potash* (sulphur, ʒj; potassii carb., ʒij). Has been employed as an expectorant, but is chiefly used as a bath or wash in cases of itch, tinea capitis, and other cutaneous affections. **P. superox'alas**, potassii oxalas. **P. supersul'phas**, potassii supersulphas, *Supersulphate of potassium* or *potassa, Acid sulphate* or *bisulphate of potassium* or *potassa, Superprotosulphate of potassium* (the salt remaining after the distillation of nitric acid, dissolved, strained, and crystallized). Refrigerant and purgative. Dose, ʒss to ʒij. **P. supertar'tras**, *Potassii bitartras* (Ph. U. S.), *Bitartrate of potassium, Supertartrate of protoxide of potassium, Bitartrate* or *Supertartrate of potassa, Crystals of tartar, Cream of tartar* (when in powder), *Supertartrate of potassium*, $KHC_4H_4O_6$. (Tartar of wine purified.) It is mildly purgative, refrigerant, diuretic, and, in large doses, a hydragogue cathartic. Dissolved in water, with a small quantity of white wine, some sugar, and lemon-peel, it forms an agreeable beverage in febrile diseases, under the name of *imperial*. Two drachms of cream of tartar added to a pint of milk constitute cream-of-tartar whey. Dose, as a diuretic, ʒj to ʒij; as a purgative, ʒss to ʒj. **P. supertar'tras impu'rus**, *Tartar*. It is also called tartarum rubrum and red argol when obtained from red wines, tartarum album when from white wines. Tartar is the saline deposit from wines as they become aged, which attaches itself to the sides of the casks and bottles in which they are kept. It consists of a considerable quantity of acidulous tartrate of potassium, tartrate of lime, silica, alumen, oxide of iron, manganese, and red coloring matter, if the wine be red. Chiefly used for the preparation of cream of tartar.

P. tar'tras, *Potassii tartras* (Ph. U. S.), *Tartrate of potassium* or *potassa, Soluble tartar,* $(K_2C_4H_4O_6)_2,H_2O$. Saline cathartic in the dose of ʒij to ʒj. **P. tar'tras acid'ulus pu'rus,** P. supertartras. **P. tar'tras ac'idus,** P. supertartras. **P. tar'tras stibia'lis** or **stibio'sus,** antimonium tartarizatum. **P. tersulphure'tum,** potassii sulphuretum.

Potas'sio-fer'ric sul'phate. Ferri et ammonii sulphas. Made by adding ammonium sulphate to a solution of tersulphate of iron. If potassium sulphate be used instead of ammonium sulphate, potassio-ferric alum results.

Potassium, po-tas'se-um (same etymon as **Potash**). Lightest of all metals except lithium, discovered by Davy in 1807. It is very soft, and may be cut with a knife. Only the salts and oxides are employed in medicine. Large doses of the compounds of potassium act as poisons on the heart, paralyzing the muscles, especially the nerve-tissues, and produce a condition of dyscrasia. The metallic base of potassa. **P. ac'etate,** potassii acetas. **P. al'coholate,** potassium ethylate. **P. arsen'iate,** arsenias kalicus. **P. aurocy'anide** ($KAuCy_4$), white crystals; in dilution of 1 to 25,000 of serum of blood it is destructive to bacilli anthracis. **P. bicar'bonate,** potassii bicarbonas. **P. bichro'mate,** potassii bichromas. **P. binox'alate,** potassii binoxalas. **P. bitar'tras,** potassii supertartras. **P. bo'ro-tar'trate,** tartras borico-potassicus. **P. bro'mide,** potassii bromidum. **P. canthar'idate,** used subcutaneously in tuberculosis. **P. car'bonate,** potassii subcarbonas. **P. car'bonate, pure,** see *Potassii subcarbonas.* **P. chlo'rate,** potassii chloras. **P. chlo'ride,** potassii chloridum. **P. ci'trate,** potassii citras. **P. cyan'uret,** potassii cyanuretum. **P. dithiocar'bonate,** K_2CoS_2, deliquescent salt, employed in eczema, psoriasis, tinea tonsurans, etc. **P. eth'ylate,** potassium alcoholate. **P. ferridcy'anide,** potassium ferricyanide. **P. ferrocy'anide,** potassii ferrocyanuretum. **P. ferrocyanu'ret,** potassii ferrocyanuretum. **P. i'odide,** potassii iodidum. **P. iodohydrar'gyrate,** potassii hydrargyroiodidum. **P. mercurocy'anide,** P. aurocyanide. **P. my'ronate,** sinigrin. **P. ni'trate,** potassii nitras. **P. os'mate,** red soluble powder, used in epilepsy, neuralgia, etc. **P. ox'ide,** potassa. **P. perman'ganate,** potassii permanganas. **P. protoar'senite,** arsenite of protoxide of potassium. **P. protochlo'rate,** potassii chloras. **P. protoni'trate,** potassii nitras. **P. protox'ide,** potassa. **P. protox'ide, ni'trate of,** potassii nitras. **P. protox'ide, superox'alate of,** potassa, oxalate of. **P. protox'ide, supertar'trate of,** potassii supertartras. **P. so'dium borotar'trate,** tartarus boraxatus. **P. and so'dium tar'trate,** see *Sodii tartras.* **P. sozoi'odol,** see *Sozoiodol.* **P. sul'phate,** potassii sulphas. **P., sul'phite of,** potassii sulphis. **P. sulphocar'bonate,** P. thiocarbonate. **P., sul'phuret of,** potassii sulphuretum. **P., superprotosul'phate of,** potassi supersulphas. **P., tar'trate of,** potassii tartras. **P. tel'lurate,** white soluble salt, used in night-sweats of pulmonary tuberculosis.

Pota'to. Solanum tuberosum. **P. bacil'lus,** bacillus mesentericus vulgatus. **P., Caroli'na,** Convolvulus batatas. **P. fly,** lytta vitata. **P., hog,** Convolvulus panduratus. **P. oil,** see *Oil, fusel.* By distilling potato oil with anhydrous phosphoric acid a volatile, colorless, oily liquid is procured which is lighter than water and boils at 102°, called *amylene* or amylen. It is best prepared from fusel oil by the action of chloride of zinc. The vapor has been employed as an anæsthetic; but it is seldom resorted to, on account of the danger of administering it. **P. paste,** paste made from boiled potatoes for the culture of bacteria. **P. poul'tice,** cataplasma fæculosum. **P., Span'ish,** Convolvulus batatas. **P. starch,** a fecula from the potato; also called English arrow root. **P. vine, wild,** Convolvulus panduratus. **P., wild,** Convolvulus panduratus.

Pot'belly. Physconia.

Potecary, pot'e-ka-re. Apothecary.

Potency, po'ten-se (*potens,* having power). Faculty.

Potentia, po'ten-she-ah (*potens,* able). Force. **P. or Potes'tas coëun'di,** capability of copulation. **P. or Potes'tas generan'di,** power of procreation. **P. irri'tans,** stimulus; anything which excites the animal economy.

Potential, po-ten'shal (*potentia*). Epithet for remedies which, although energetic, do not act till some time after their application; caustic alkalies, for instance, are called potential cauteries, in contradistinction to the hot iron, which is termed actual cautery.

Potentilla, po-ten-til'lah (*potentia*). P. reptans. **P. anseri'na,** *Argentine, Silverweed, Wild tansy, Moorgrass,* ord. Rosaceæ; the leaves are mildly astringent and tonic. **P. argenti'na,** P. anserina. **P. impo'lita,** P. anserina. **P. neglec'ta,** P. anserina. **P. Norveg'ica,** *Norway cinquefoil,* an indigenous plant possessed of similar properties to Potentilla anserina. **P. palus'tris,** Comarum palustre. **P. rep'tans,** *Common cinquefoil;* the roots are possessed of astringent properties. **P. tormentil'la,** tormentilla.

Potentizing, po'ten-ti-zing (*potentia*). See *Dynamic.*

Poterium sanguisorba, po-ta're-um san-gwe-sor'bah (*potcrion*). Pimpinella saxifraga.

Potestas coëundi, po-tes'tas ko-e-un'de (power of copulating). Capability of copulation.

Potex, po'teks (*podex*). Anus.

Pothomorpha peltata, po-tho-mor'fah pel-tat'ah. *Caapeba.* Brazilian plant, ord. Piperaceæ, possessed of diuretic properties, and given in strangury. **P. umbella'ta,** also called *Caapeba,* given in Brazil to modify nutrition, as in glandular affections, in which it is also used externally in the form of decoction.

Pothopatridalgia, po-tho-pat-rid-al'je-ah (*pothos,* longing, *patris,* native land, *algos,* pain). Nostalgia.

Pothos fœtida, po'thos fe'tid-ah. Dracontium fœtidum. **P. puto'rii,** Dracontium fœtidum.

Potimos, pot'e-mos. Potable.

Po'tio. Drink; haustus; potion. **P. cal'cis carbona'tis,** mistura cretæ. **P. efferves'cens antiemet'ica,** potion of Riverius. **P. le'niens,** looch ex ovo. **P. oleo'sa,** looch ex ovo. **P. pice'a,** see *Pinus sylvestris.* **P. Rive'rii citra'ta,** potion of Riverius.

Potio'nis deside'rium (desire for drink). Thirst.

Potiuncula, po-she-un'ku-lah (dim. of **Potio**). A draught.

Potomania, po-to-man'e-ah (drink-madness) (*potos,* drink, *mania*). Delirium tremens.

Potoparanœ'a. Pototromoparanoia.

Po'tos. Potable.

Pototroman'ia. Pototromoparanoia.

Pototromoparanoia, po-to-tro-mo-par-an-oi'ah (*potos,* drink, *tromos,* trembling, *paranoia,* insanity). Delirium tremens.

Pot'ter's bronchitis, bron-ke'tis. Consumption, potter's. **P.'s consumption,** see *Consumption, potter's.*

Pot'tingar. Apothecary.

Pott's an'eurism. Aneurismal varix; anastomotic aneurism. **P.'s boss,** see *Vertebral disease.* **P.'s cur'vature,** see *Vertebral disease.* **P.'s disease,** vertebral osteitis; see *Vertebral disease.* **P.'s frac'ture,** see *Fracture, Pott's.* **P.'s gan'grene,** gangræna senilis.

Po'tus (*potos*). Drink. **P. Hippocrat'icus,** claret. **P. imperi'alis,** imperial.

Pouch of Doug'las. Recto-vaginal pouch; see *Uterus.* **P., il'eo cæ'cal,** peritoneal folds at the terminal extremity of the ileum. **P., in'guinal,** peritoneal fold behind the inguinal ring. **P., subcæ'cal,** peritoneal fold behind and beneath the cæcum. **P., u'tero-ves'ical,** recess in the peritoneum between the uterus and bladder. **P. of Web'er,** vesicula prostatica.

Pouched. Encysted.

Pouch'es, larynge'al. See *Laryngeal.* **P. of peritone'um,** peritoneal depressions; see *Peritoneum.* **P., rectal,** see *Rectum.* **P., subcæ'cal,** fold of peritoneum behind and below the cæcum.

Poultice, pole'tis (*poltos,* porridge, pottage, pap). Cataplasm. See *Cataplasm* and *Cataplasma.*

Pounce, pownce. Sandarac.

Pound (of twelve oz.) (*pondus,* weight). Libra. **A**

weight, twelve ounces troy, sixteen ounces avoirdupois. See *Weights and Measures.*

Poupart's (poo'par's) **lig'ament.** Crural arch.

Pous. Foot.

Pow'der. Pulvis. **P. of al'oes with canel'la,** pulvis aloës cum canellâ. **P. of al'oes, com'pound,** pulvis aloës compositus; pulvis sulphatis aluminæ compositus. **P., alum, com'pound,** pulvis sulphatis aluminæ compositus. **P., antimo'nial, Chenevix's,** antimonial powder. **P., aromat'ic,** pulvis cinnamomi compositus. **P., aromat'ic, of chalk,** see *Confectio aromatica.* **P., arsen'ical, of Côme** or **Frère Côme,** *Côme's powder* —a caustic—arsenious acid, gr. x; red sulphuret of mercury, gr. xl; powdered animal charcoal, gr. x; made into a paste with mucilage. **P. of a'rum, com'pound,** pulvis de aro compositus. **P. of as'arabacca, com'pound,** pulvis asari compositus. **P. of blad'derwrack, yellow,** pulvis quercûs marinæ. **P., bleach'ing,** calcis chloridum. **P., botan'ical, Chinese,** see *Falsifications, table of.* **P., camboge',** pulvis e gummi guttâ. **P., Car'dinal del Lu'go's,** cinchona. **P., Castil'lon** or **Castil'hon,** so called from the name of the physician who first proposed it. It is formed of sago, in powder, salep, in powder, tragacanth, in powder, each four parts, prepared oyster-shells, one part, cochineal, half a part, divided into powders of one drachm each, one of which is boiled in a pint of milk, and the decoction used *ad libitum;* demulcent in diarrhœa and dysentery. **P. of cat'echu, com'pound,** pulvis catechu compositus. **P. of chalk, com'pound,** pulvis cretæ compositus. **P. of chalk with o'pium, com'pound,** pulvis cretæ compositus cum opio. **P. of cin'namon, com'pound,** pulvis cinnamomi compositus. **P., Côme's,** powder, arsenical, of Côme. **P. of contrayer'va, com'pound,** pulvis contrayervæ compositus. **P., Countess of Kent's,** cantianus pulvis. **P., Coun'tess's,** cinchona. **P., Cy'prus,** Hibiscus abelmoschus. **P., Do'ver's,** pulvis ipecacuanhæ compositus. **P. of Dupuy'tren, caus'tic,** formed of 1 part of *Arsenious acid* and 200 parts of *Mild chloride of mercury.* Mild and manageable caustic for causing an eschar on exposed surfaces and in lupus, etc. **P., efferves'cing,** powder, soda. **P., efferves'cing, ape'rient,** powder, Seidlitz. **P., gin'ger-beer,** see *Amomum zingiber.* **P., gout, Duke of Port'land's,** pulvis ducis Portlandiæ. **P., gray,** hydrargyrum cum cretâ. **P. of harts'horn with o'pium,** pulvis cornu cervi cum opio. **P., in'sect,** Caucasian or Persian; see *Anthemis pyrethrum.* **P. of ipecacuan'ha, com'pound,** pulvis ipecacuanhæ compositus. **P. of jal'ap, com'pound,** pulvis jalapæ compositus. **P., James's,** see *Antimonial powder.* **P., James's, facti'tious,** antimonial powder. **P., Jes'uits',** cinchona. **P. of ki'no, com'pound,** pulvis kino compositus. **P. of ki'no and o'pium,** pulvis kino compositus. **P. of lemonade',** see *Lemonade.* **P. of lic'orice, com'pound,** pulvis glycyrrhizæ compositus. **P. of magne'sia, com'pound,** pulvis de magnesiâ compositus. **P., myrrh, com'pound,** pulvis myrrhæ compositus. **P., ni'trous,** see *Potassii nitras.* **P. of rhu'barb, com'pound,** pulvis rhei compositus. **P., Rochelle',** see *Powder, soda,* and *Sedlitz, mineral waters of.* **P., saline', com'pound,** pulvis salinus compositus. **P. of scam'mony and al'oes,** pulvis scammonii cum aloë. **P., scam'mony, com'pound,** pulvis scammoneæ compositus. **P., Seid'litz,** Seidlitz or Sedlitz powder. **P. of sen'na, com'pound,** pulvis sennæ compositus. **P., sneez'ing,** see *Veratrum album.* **P., so'da,** *Effervescing powder* (sodæ bicarb., ℥vj, in tartaric acid, ℥v; divide each powder into 12 equal parts, and keep the parts, severally, of the bicarbonate and acid in papers of different colors). Pleasant cooling drink, taken during effervescence. *Sedlitz* or *Seidlitz powder, Rochelle powder, Aperient effervescing powder, Pulvis effervescens compositus* (Ph. U. S.) (sodæ bicarb. in pulv., ℥j; potassæ et sodæ tartrat. in pulv., ℥iij; acid. tartar. in pulv., ℥vij. Mix the bicarbonate with the tartrate and divide into 12 parts. Divide, also, the tartaric acid into 12 parts. Keep the parts, severally, of the mixture and of the acid in separate papers of different colors). See *Sedlitz, mineral waters of.* **P., spruce beer,** see *Spruce beer.* **P. of sym'pathy,** sympathetic powder. **P., tooth,** dentifrice. **P., trag'acanth, com'pound,** pulvis tragacanthæ compositus. **P., Vich'y water,** see *Vichy, mineral waters of.* **P., Vien'na** (equal parts of quicklime and potassa). In using it, it is made into a paste—*Vienna paste, Pasta caustica Viennensis*—with spirits of wine, and applied on the diseased part, previously circumscribed by a hole cut in sticking plaster; to be left on from 10 to 20 minutes, according to the depth of the eschar required. Used in cases of lupous ulceration. By fusing the potassa and lime, and raising the heat so as to cause ebullition, the caustic may be run into cylinders, when it is called *Caustique Filhos, Causticum Viennense fusum Filhos,* from the name of the author of the process.

Power (*posse,* to be able). Faculty. **P., inhe'rent,** irritability. **P., senso'rial,** see *Sensorial.* **P., ton'ic,** irritability.

Pox, poks. Syphilis; variola. **P., black,** see *Variola.* **P., chicken,** varicella. **P. doc'tor,** syphilidiater. **P., French,** syphilis. **P., grease,** see *Grease.* **P., horn,** see *Varicella.* **P., horse,** see *Horse.* **P., nod'dle,** syphilomania. **P., small,** variola. **P., swine,** see *Varicella.* **P., water,** see *Varicella.*

P. p. Abbv. signifying punctum proximum, near point.

P. r. Abbv. signifying punctum remotum, far point.

Practice (prak'tis) **of phys'ic.** Therapeutics.

Practitioner (prak-tish'un-er), **gen'eral.** Surgeon apothecary. **P., irreg'ular,** see *Irregular.* **P., reg'ular,** see *Regular.* **P., routine',** routinist. **P., spe'cial,** see *Specialist.*

Præ. In composition, before.

Præbium, pre'be-um (*præbo,* contracted from *præhibeo,* to offer, to allow). Dose.

Præcautio, pre-kaw'she-o (*præ, caveo, cautum,* to guard against). Prophylaxis.

Præcen'tral convolu'tion. Ascending frontal convolution of brain.

Præcipitans, pre-sip'it-ans (*præcipito,* to throw down). Absorbent. **P. mag'num,** sepia.

Præcipitatum album, pre-sip-it-at'um al'bum (white precipitate). Hydrargyrum præcipitatum. **P. ru'brum** (red precipitate), hydrargyri nitrico-oxidum.

Præcisio præputii, pre-siz'e-o pre-pu'she-e (*præcido, præcisum,* to cut off). Circumcision.

Præclavicularis lateralis, pre-klav-ik-u-lar'is later-al'is). Acromio-clavicularis muscle. **P. me'dius,** sterno-clavicularis muscle. **P. subcuta'neus,** muscular fascicle, seldom met with, running from internal to external clavicular extremities in a fold of the fascia of the neck.

Præcocia, pre-ko'she-ah (*præcox,* ripening early). Prunus Armeniaca.

Præcocity, pre-kos'it-e. Precocity.

Præcognitio, pre-kog-nish'e-o (*præ, cognitio,* knowledge). Prognosis.

Præcommissura, pre-kom-mis-shu'rah. Anterior commissure of brain.

Præcordia, pre-kor'de-ah (*præ, cor,* heart). Diaphragm; thoracic viscera; epigastrium.

Præcordial (pre-kor'de-al). In front of the heart. **P. pain,** described by patients as heart-burn, and referred to that region, but it does not have its origin in the heart. **P. re'gion,** the epigastric region. More properly, the region of the heart. A line drawn from the inferior margins of the third ribs across the sternum passes over the valves of the pulmonary artery a little to the left of the mesial line, and those of the aorta are behind them, but about half an inch lower down. A vertical line coinciding with the left margin of the sternum has about one-third of the heart, comprising the upper portion of the right ventricle, on the right, and two-thirds, comprising the lower portion of the right ventricle and the whole of the left, on the left. This is the præcordial region.

Præcor'dium. Region in front of the heart. **P. pe'dis,** metatarsus.

Præcornu, pre-kor'nu (*præ, cornu,* horn). Anterior horn of lateral ventricle of brain.

Præcox maturitas, pre'koks mat-u'rit-as. Precocity.

Præcuneus, pre-ku'ne-us (*præ*, *cuneus*, wedge.) Quadrate lobule on the middle surface of the cerebral hemisphere.

Præcustodia, pre-kus-to'de-ah (*præ*, *custodio*, to watch). Prophylaxis.

Prædiastolicus, pre-de-as-tol'ik-us. Prediastolic.

Prædictio, pre-dik'she-o (*præ*, *dico*, *dictum*, to say). Prognosis.

Prædispositio, pre-dis-po-zish'e-o. Predisposition.

Prædivinatio, pre-div-in-ah'she-o (*præ*, *divino*, to divine). Mantia.

Prædominium, pre-do-min'e-um (*præ*, *domo*, to subdue). Predominance of one thing over another. **P. a'quæ**, predominance of watery fluid. **P. san'guinis arterio'si**, predominance of arterial blood. **P. san'guinis veno'si**, predominance of venous blood.

Præfoca'tio (*præfoco*, to strangle). Orthopnœa; suffocation. **P. fau'cium**, see *Angone*. **P. matri'cis**, angone. **P. uteri'na**, see *Angone*.

Præfocation, pre-fo-ka'shun. Strangulation. **P., u'terine**, see *Angone*.

Præformatio, pre-for-mah'she-o. Preformation.

Prægeniculatum, pre-jen-ik-u-lat'um. External corpus geniculatum.

Prægnans (preg'nans) or **Præg'nas**. Pregnant.

Prægnatio (preg-nash'e-o) or **Prægnatus**, preg-nat'us. Fecundation; pregnancy.

Prægnax, preg'naks. Pregnant.

Prægustatio, pre-gus-tah'she-o (*præ*, *gusto*, to taste). Foretaste.

Præhensio, pre-hen'se-o. Prehension.

Prælingua, pre-lin'gwah. The anterior part or tip of the tongue.

Prælium, pre'le-um (contest). Coition.

Prælum, pre'lum. Press; tourniquet. **P. arteria'le**, tourniquet.

Prælumbaris, pre-lum-bar'is. Prelumbar.

Prælumbo-suprapubianus, pre-lum'bo-su-prah-pu-be-an'us. Psoas minor muscle.

Præmedulla, pre-med-ul'lah. Medulla oblongata.

Præmonitorius, pre-mon-e-to're-us (*præ*, *moneo*, to admonish). Precursory.

Præmorphismus, pre-mor-fiz'mus. Premorphism.

Prænaris, pre-nah'ris. Anterior opening of nasal chamber.

Prænotio, pre-no'she-o (*præ*, *nosco*, to know). Prognosis.

Prænuntiatio, pre-nun-she-ah'she-o (*præ*, *nuntio*, to announce). Prognosis.

Præ-occipital (pre-ok-sip'it-al) **notch**. Notch indicating division between occipital and temporal lobes of brain.

Præparantes (prep-ar-an'tees) **arte'riæ** (from being presumed to prepare the sperm). Spermatic arteries.

Præparata (prep-ar-ah'tah) **ve'na**. See *Facial vein*.

Præparatio, prep-ar-ah'she-o (*præ*, *paro*, to prepare). Preparation. **P. chy'li**, chylification.

Præparatum, prep-ar-at'um. Preparation.

Præpedunculus, pre-pe-dun'ku-lus. Superior peduncle of cerebellum.

Præperforatus, pre-per-fo-rah'tus. Anterior perforated space at base of brain.

Præperitoneal, pre-per-e-to-ne'al. Situated anterior to the peritoneum.

Præpotentia, pre-po-ten'she-ah (*præ*, *potens*, powerful). Great power or strength. **P. viri'lis**, great or too great procreative power on the part of the male.

Præpotio, pre-po'she-o (*præ*, *potio*, drink). Propotismus.

Præpubic (pre-pu'bik) **an'gle**. Bend in urethra anterior to pubis when the penis is in a flaccid condition.

Præputialis, pre-pu-she-ah'lis. Preputial.

Præputii ductio, pre-pu'she-e duk'she-o. Masturbation.

Præputium, pre-pu'she-um. Prepuce. **P. clitor'idis**, see *Prepuce*.

Prærectalis, pre-rek-tal'is. Prerectal.

Præsagium, pre-saj'e-um (*præ*, *sagio*, to perceive quickly). Mantia.

Præscapula, pre-skap'u-lah. Part of scapula above the spine.

Præscapular (pre-skap'u-lar) **fos'sa**. Fossa supraspinalis.

Præscientia, pre-se-en'she-ah (*præ*, *scio*, to know). Prognosis.

Præscitio, pre-sizh'e-o (*præ*, *scio*, to know). Prognosis.

Præscriptio, pre-skrip'she-o. Prescription.

Præscriptum, pre-skrip'tum. Prescription.

Præsepiolum, pre-sep-e'o-lum (dim. of **Præsepium**). Alveolus.

Præsepium, pre-se'pe-um (*præ*, *sepes*, enclosure). Alveolus.

Præservatio, pre-ser-vah'she-o (*præ*, *servo*, to save). Prophylaxis.

Præservativum, pre-ser-vat-e'vum. Amuletum.

Præservatoria indicatio, pre-ser-vat-o're-ah in-dik-ah'she-o. Preservative indication; one proper for preventing the development of disease.

Præservatorius, pre-ser-vat-o're-us. Prophylactic.

Præspinalis, pre-spin-al'is. Prespinal.

Præ-Syl'vian sul'cus. Sulcus præ-Sylvius cerebri.

Prætibialis, pre-tib-e-al'is. Pretibial.

Prævia, pre've-ah (*præ*, *via*, way). See *Placenta*.

Prai'rie bush, stink'ing. Ptelea trifoliata. **P. dock**, Parthenium integrifolium. **P. hys'sop**, Pycnanthemum lanceolatum; indigenous; plant possessing stimulating, diaphoretic, and carminative properties. **P. in'digo**, reputed to possess emetic, purgative, and, externally, stimulating qualities. **P. itch**, see *Itch*. **P. pines**, Liatris scabiosa.

Prasinum viride, pras'in-um vir'id-e (leek green). Cupri subacetas.

Prasinus, pras'in-us (*prasinos*, green as a leek). Porraceous.

Prasium, prah'se-um. Marrubium.

Prasum, prah'sum. Allium porrum.

P. rat. æt. Abbr. for pro ratione ætatis, according to age of patient.

Pravaz's syringe. Syringe for hypodermatic injections.

Praxis, praks'is. Action. **P. med'ica**, the practical exercise of the healing art.

Pre-aortic, pre-a-or'tik (*præ*, *aorta*). Situate in front of the aorta; the pre-aortic plexuses of the great sympathetic, for example.

Pre-arytenoïdeus, pre-ar-it-en-o-id'e-us. Cricoarytenoïdeus lateralis muscle.

Pre-ataxic, pre-a-taks'ik (*pre*, *a*, *taxis*, order). Referring to time previous to development of ataxia.

Pre-axial, pre-aks'e-al (*pre*, *axis*). In the study of the spinal skeleton of man and animals, all parts in man which are relatively superior, and in beast anterior to an imaginary axis drawn at right angles to the general direction of the backbone, are called preaxial. Parts relatively inferior in man and posterior in other animals are called post-axial.

Precava, pre-kav'ah. Vena cava superior.

Precerebellar (pre-ser-e-bel'lar) **ar'tery**. Superior cerebellar artery.

Precerebral (pre-ser'e-bral) **ar'tery**. Anterior cerebral artery.

Precho'rioid or **Prechoroid** (pre-ko'roid) **ar'teries**. Anterior choroid arteries.

Precommunicant (pre-kom-mu'ne-kant) **ar'tery**. Anterior communicating artery.

Precipitate, pre-sip'it-ate. See *Precipitation*. **P., red**, hydrargyri nitrico-oxydum. **P., white**, hydrargyrum præcipitatum.

Precipitated (pre-sip'it-a-ted) **cal'cium ca'rbonate**. *Calcii carbonas præcipitatus*. Powder having astringent and antacid properties. **P. cal'cium phos'phate**, calcii phosphas præcipitatus; bone phosphate. **P. car'bonate of iron**, ferri carbonas præcipitatus or sesquioxide of iron. **P. car'bonate of zinc**, zinci carbonas præcipitatus; white powder derived from solution of zinc sulphate by precipitating with sodium carbonate; absorbent and protective.

P. fer'rous sul'phate, ferri sulphas præcipitatus. **P. sul'phur**, sulphur præcipitatum.

Precipitation, pre-sip-it-a'shun (*præcipito*, to throw headlong). The action by which a body abandons a liquid in which it is dissolved and becomes deposited at the bottom of the vessel. The matter so thrown down or precipitated is called a *precipitate*.

Precocity, pre-kos'it-e (*præcox*, ripening early). *Precociousness*, *Precocious maturity*. Rapid development before the usual time. See *Præotia*.

Precoracoid, pre-kor'a-koid (*pre*, *coracoid*). The sternal epiphysis of the clavicle.

Precordial, pre-kor'de-al. Præcordial.

Precuneus, pre-ku'ne-us (*præ*, *cuneus*, wedge). Lobus quadratus of brain.

Precursory, pre-kur'so-re (*præ*, *curro*, to run). *Premonitory*. That which precedes or foretells. **P.** or **Premon'itory signs** or **symp'toms**, those indicating an approaching disease.

Prediastolic, pre-de-a-stol'ik (*præ*, *diastole*). That which precedes the diastole of the heart—as prediastolic friction sound.

Predicrotic (pre-di-krot'ik) **wave.** Wave preceding dicrotic wave, as indicated by sphygmogram.

Predigastricus, pre-de-gas'trik-us. Anterior belly of the digastricus.

Predilata'tor. Anterior dilatator naris.

Predisponent (pre-dis-po'nent) or **Predispo'sing causes.** See *Causes, predisponent.*

Predisposing, pre-dis-po'zing (*præ*, *dispono*, to put in order). Making liable or susceptible, as predisposing cause of disease.

Predisposition, pre-dis-po-zish'un (*præ*, *dispono*, to dispose). Constitution or condition of the body which disposes it to the action of disease under the application of an exciting cause. Thus, in hereditary diseases the conformation is such that but a slight exciting cause may be required to produce them. When the disease arises solely from the predisposition, or under the additional influence of an extremely slight exciting cause, it is by some termed a disposition.

Predorsal, pre-dor'sal (*præ*, *dorsum*, back). That which is in front of the back. **P. re'gion** of the vertebral column is the anterior surface of the dorsal region.

Pre-existence (pre-eks-ist'ence) **of germs.** See *Preformation.*

Preformation, pre-for-ma'shun (*præ*, before, *formation*, the act of forming). Ancient theory of generation which maintained that the germs of every part exist, but not visibly, before fecundation, and that fecundation occasions their development. It was the doctrine of *pre-existence of germs.*

Preformative (pre-for'ma-tiv) **mem'brane.** See *Membrana præformativa.*

Prefrontal, pre-fron'tal (*præ*, *frontalis*, frontal). Term applied by Owen to the middle part of the ethmoid bone. **P. lobe**, that portion of frontal lobe situate anterior to the ascending convolution.

Pregnancy, preg'nan-see (*prægnans*, pregnant). *Gestation*, *Fœtation*, *Ingravidation*, *Gravidity*, *Utero-gestation*. State of a female who has within her a fecundated germ, which gradually becomes developed in or out of the uterus. When placed in the cavity of the uterus, by virtue of the vital force by which it is animated it becomes attached to the inner surface of that viscus, and obtains from it indirectly the nutriment necessary for its gradual development, during the space of ten lunar months or two hundred and eighty days—the ordinary *term* or *duration of gestation*, although the period may be protracted to three hundred days or upward—at the expiration of which parturition occurs. Pregnancy is commonly limited to a single fœtus; at times the uterus contains two or three. See *Reproduction*. Occasionally, one or two moles—the degenerated products of conception—alone occupy the uterus; at other times a fœtus likewise exists. In certain cases, and owing to accidental circumstances, the fecundated ovum remains in the ovarium or is arrested in the Fallopian tube. Pregnancy has, accordingly, been distinguished into natural or uterine, when the fœtus is carried in the cavity of the womb; preternatural or extra-uterine, when it occurs in the ovarium, tube, or cavity of the abdomen.

During pregnancy the female experiences remarkable changes in the condition of her organs and functions. The genital apparatus is, of course, most affected. The uterus changes its shape, situation, size, and texture. The usual *signs of pregnancy* are: Suppression of the catamenia; the abdomen gradually enlarging and forming a hard tumor; the umbilicus prominent in the latter months; the breasts increasing in size; the areola around the nipple becoming darker, and the follicles more developed; kyestein in the urine from an early period; a bluish tint of the vagina after the fourth week; about the fifth month the evidence by *ballottement*, the placental *souffle*, and the sound of the fœtal heart heard on auscultation; the motion of the fœtus perceptible, and the neck of the uterus diminishing in length at the advanced periods. **P., abdom'inal**, that in which the ovum has escaped into the cavity of the abdomen. **P., afœ'tal**, *Pregnancy without a fœtus;* produced by a false or degenerate conception or any other affection which has given place to unusual development of the uterus. Included in this class are *sarcohysteric*, *hydrohysteric*, *gazohysteric*, and *hæmatohysteric pregnancies*, according to the contents, whether flesh, water (cystic), gas, or blood. **P., bigem'inal**, *Double pregnancy;* twins in utero. **P., cer'vical**, when the development of the ovum takes place in the canal of the cervix uteri. **P., com'plex**, when the womb, besides the fœtus, contains much water, hydatids, a mole, etc. **P., com'pound**, when there are two or three fœtuses in the cavity of the uterus. **P., doub'le**, pregnancy, bigeminal. **P., dura'tion of**, see *Pregnancy.* **P., extra-u'terine**, see *Pregnancy.* **P., false**, different affections of a more or less serious character which resemble pregnancy. Seated in the uterus or its dependencies, in the intestines or some other part of the abdomen, there may be a mole, hydatids, water, blood, or polypus distending the parietes of the uterus—chronic enlargement of the uterus; development of tumors, etc. in its substance; scirrhus; dropsy of the ovaria; ascites; tympanites, etc. **P., fœ'tal**, in which there is a fœtus, or more than one, in the uterus or out of it. **P., gazohyster'ic**, fœtal pregnancy caused by development of air or gas in the cavity of the womb. **P., hæmohyster'ic**, fœtal pregnancy caused by accumulation of blood in the uterus. **P., hydrohyster'ic**, fœtal pregnancy occasioned by the secretion and accumulation of serous fluid in the uterus. **P., intermu'ral** or **intramu'ral**, P., interstitial. **P., interstit'ial**, *Intermural* or *Intramural pregnancy* or *fœtation;* the development of the embryo in the proper substance of the uterus. The case generally terminates fatally at an early period of gestation; the thin external paries of the uterus being ruptured, and the ovum passing into the abdominal cavity. **P., mole**, see *Mole.* **P., mor'bid**, the progress of pregnancy disturbed or endangered by the supervention of general or local disorder. **P., mul'tiple**, when the uterus contains several fœtuses. **P., ova'rian**, pregnancy in which the fœtus is developed in the interior of the ovary. **P., plea of**, a plea which a woman, capitally convicted, may set up in arrest of execution until she is delivered; see *Jury of matrons* and *De ventre inspiciendo.* **P., plu'ral**, when more than one fœtus is developed in the uterus at the same time. **P., pretend'ed**, criminal act of a female who, not having been delivered, presents an infant as having been born of her. This term, in French, likewise includes the case of a female who, having been delivered of a dead child, substitutes for it a living child which is not hers. **P., sarcofœ'tal**, in which there are one or more fœtuses and one or more moles. **P., sarcohyster'ic**, fœtal pregnancy formed by moles, hydatids, or a false conception. **P., sol'itary**, in this there is a single fœtus. **P., trigem'inal**, in which there are three fœtuses in the cavity of the uterus.

P., tu'bal, the fœtus remains and is developed in the Fallopian tube. **P., tu'bo-abdom'inal,** when the fœtus is developed in the Fallopian tube and extends into the cavity of the abdomen. **P., tu'bo-u'terine,** P., interstitial. **P., u'terine,** see *Pregnancy.* **P., u'tero-abdom'inal,** pregnancy consisting of two fœtuses—one in the uterus, the other in the abdominal cavity. **P., u'tero-ova'rial,** pregnancy with two fœtuses—one in the womb, the other in the ovary. **P., uterotu'bal,** there is at the same time a fœtus in the womb and another in the Fallopian tube.

Preg'nant. *Gravid, Breeding.* One in a state of pregnancy; one with child.

Prehensile, pre-hen'sil. Parts capable of seizing or grasping, as the hands.

Prehensio, pre-hen'se-o (*prehendo, prehensum,* to lay hold of). Prehension, catalepsy; epilepsy. Act of laying hold of. *Prehension of food* is the act of seizing and carrying it to the mouth and introducing it into that cavity.

Pre'lum. Press. **P. abdomina'le,** abdominal pressure; expulsive force exercised by contraction of muscles on contents of abdomen and pelvic cavities. **P. arteria'le,** tourniquet.

Prelumbar, pre-lum'bar (*præ, lumbi,* the loins). That which is placed before the loins. Prelumbar surface of the spinal column is the anterior surface of the lumbar portion.

Premature (pre'ma-ture) **la'bor.** See *Parturition.* **P. respira'tion,** respiration occurring before fœtus is completely born.

Premaxilla (pre-maks-il'lah) or **Premaxillary** (pre-maks'il-la-re) **bone.** Intermaxillary bone of the mammalia (except man). See *Intermaxillary.*

Prem'na Taiten'sis (*premnon,* a stump). Nat. ord. Verbenaceæ. Shrub or tree of the Fiji Islands; bark is used in preparing the drug tonga.

Premolar, pre-mo'lar (*præ, molares*). See *Molar teeth.*

Premonitory, pre-mon'it-o-re (*præ, moneo,* to admonish). See *Precursory.*

Premorphism, pre-morf'izm (*præ, morphe,* shape). The aggregate of laws by which a new formation is developed from the primordial cell.

Prenanthes, pre-nan'thees (*prenes,* bending downward, *anthos,* flower). *Gall of the earth, Dewitt snakeroot, Lion's foot.* Indigenous plant, whose root and milky juice are very bitter. Used in popular practice in dysentery, and in the form of cataplasm to bites of serpents. **P. al'ba,** Nabalus albus. **P. serpenta'ria,** Nabalus albus.

Pre-occupa'tion. Condition of mind symptomatic of some forms of insanity, in which the patient is thoroughly absorbed in his own thoughts, so that he cannot be roused.

Pre-operculum, pre-o-per'ku-lum (*pre, operculum,* cover or lid, the gill-cover). Part of the squamous portion of the temporal bone which, as it descends from the cranium in bony fishes, becomes merely part of the gill-cover flap.

Pre-osseous, pre-os'se-us (*præ, os,* bone). Term applied to substance possessing properties of osseine, from which bone is formed.

Preparation, prep-ar-a'shun (*præ, paro, paratum,* to get ready). Act of making ready any substance whatever that has to be employed for any purpose. Also the product of any pharmaceutical operation. *Præparatum.* Any part of a body preserved for the use of the anatomist, or others, is also so called.

Prepared'. Ready for use. **P. bar'ley flour,** farina hordei præparata. Barley flour subjected to steam bath. **P. cal'amine,** calamina præparata; see *Calamina.* **P. chalk,** creta præparata. Chalk freed from impurities by pulverization, levigation, and elutriation, forming white powder. **P. oys'ter-shell,** testa præparata; the inner powdered shell of ostrea edulis or oyster. **P. sto'rax,** styrax præparatus; see *Styrax.* **P. su'et,** sevum præparatum; see *Sevum præparatum.*

Pre'puce (said to be from *præ, puto,* to cut off, or from *puteo,* to smell, or from *præ, pudendum;* perhaps from *pro* or *præ, posthion,* penis). *Foreskin.* The prolongation of the integuments of the penis which cover the glans. It is composed of two membranous layers: one external or cutaneous; the other internal or mucous, separated by areolar membrane. The mucous membrane lines the inner surface of the cutaneous layer till beyond the glans, when it is reflected over the latter, forming, behind the corona, a small cul-de-sac, above the corpora cavernosa, which is interrupted by a triangular duplicature of the mucous membrane, called the *frænum,* fixed in the furrows at the inferior part of the glans, and terminating at a little distance from the orifice of the urethra. The clitoris is covered by a semilunar fold formed by a continuation of the skin of the labia. It is called *Præputium clitoridis.* **P. of the clit'oris,** see *Prepuce* and *Clitoris.*

Preputial, pre-pu'shal. Belonging or relating to the prepuce; as the preputial secretion, or that which takes place from the lining of the prepuce covering the glans. **P. her'pes,** herpes præputialis.

Prepyramid, pre-pir'a-mid. Anterior pyramid of medulla oblongata.

Prerectal, pre-rek'tal (*præ, rectum*). Term applied to that which is in front of the rectum. *Prerectal lithotomy* is Nélaton's modification of the bilateral operation, a careful dissection being made in front of the rectum, so as to open the urethra at the apex of the prostate without coming in contact with the bulb.

Presbycousis (pres-be-ku'sis) or **Presbykou'sis** (*presbus,* old, *akouo,* to hear). Decrease of hearing power due to old age.

Presbyodochium, pres-be-o-dok-e'um (*presbus,* old, *dechomai,* to receive). Hospital for the aged. Hygiene of old people.

Presbyonosi, pres-be-on'o-se (*presbus,* old, *nosos,* disease). Diseases of old age.

Presbyope, pres'be-ope (*presbus,* old, *ops,* eye). One who is long-sighted or affected with presbyopia.

Presbyopia, pres-be-o'pe-ah. Presbytia.

Presbyopic, pres-be-op'ik. *Presbytic.* Relating or belonging to presbyopia or long-sightedness.

Presbysphacelus, pres-be-sfas'el-us (*presbus,* old, *sphakelus,* gangrene), Gangrene of old people.

Presbytia, pres-bish'e-ah (*presbutes,* old person). *Presbyopy.* Condition of vision, common in old persons, which consists in the circumstance of near objects being confusedly seen, while those at a greater distance are clearly distinguished. It depends generally on diminution of the convexity of the cornea, whence results an alteration in the convergency of the rays, so that they form a focus behind the retina. This defect is remedied by the use of convex glasses, which augment the convergence of the luminous rays. Also called *Long-sightedness, Far-sightedness.* A very high degree is termed *Hyperpresbytia.* The term presbyopia is sometimes limited to the condition in which—as the result of increase of years—the range of accommodation is diminished and the range of near objects interfered with. See *Hypermetropia.*

Prescapular fossa, pre-skap'u-lar fos'sah. Supraspinous fossa.

Prescapularis, pre-skap-u-lar'is. Supraspinatus muscle.

Prescription, pre-skrip'shun (*præ, scribo, scriptum,* to write). *Receipt.* Formula which the physician writes for the composition of medicines adapted to any case of disease. A prescription should be as simple as possible, and should bear upon its face the evidence of the objects to be fulfilled by it. No article should form part of it unless adapted for serving some useful purpose. A compound prescription has been divided into four parts: the basis, or principal ingredient of the prescription; the adjuvant, or that which is designed to promote the action of the former; the corrigent, or that intended to correct its operation or obviate any unpleasant symptom which it may be apt to produce; and the constituent, excipient, or vehicle, the substance which gives to the

other ingredients consistence or form. All these are seen in the following formula for cathartic pills:

℞—Aloës,	ʒj . . .	Basis.
Hydrarg. chlorid. mit,	gr. x . .	Adjuvant.
Olei carui,	gtt. v . .	Corrigent.
Syrupi,	q. s. . .	Constituent.

M. et fiant pilulæ xx.

It is obvious, however, that most prescriptions are more simple than this. The basis, for example, may require neither adjuvant, corrigent, nor constituent. See *Symbol.*

Presentation, pres-en-ta'shun (*præ,* before, *ens, entis,* being). Part of a fœtus which is felt presenting on examination *per vaginam.* When the head presents, and especially the vertex, or the feet, knees, or breech, the presentation is said to be natural; when any other part, preternatural, and the labor is styled perverse or preternatural cross-birth. When any part besides the head, feet, knees, or breech presents, the operation of *turning* becomes necessary. When a portion of the presenting mass of the fœtus becomes changed for another in complicated presentations, the case has been termed one of substituted presentation.

The six positions of the cranium, in a presentation of the head, usually recognized are three occipito-anterior and three occipito-posterior:

- Occipito-anterior
  - First position — Head in right oblique diameter; forehead backward.
  - Second position — Head in left oblique diameter; forehead backward.
  - Third position — Head in antero-posterior diameter; forehead backward.
- Occipito-posterior
  - Fourth position — Head in right oblique diameter; forehead forward.
  - Fifth position — Head in left oblique diameter; forehead forward.
  - Sixth position — Head in antero-posterior diameter; forehead forward.

Preservative, pre-zur'va-tiv (*pre, servo,* to serve). Prophylactic.

Pre'sis. Swelling.

Presma, pres'mah. Swelling.

Presphenoid (pre-sfe'noid) **bone.** Anterior portion of the sphenoid bone in infancy, including the body in front of the olivary processes and the small wings. In animals this division sometimes persists through life.

Prespinal, pre-spi'nal (*pre, spina,* the spine). Situate before the spine; the prespinal surface of the vertebral column is the anterior surface.

Press (*premo, pressum,* to squeeze). Instrument for subjecting matters to considerable pressure for separation of the liquid from the solid portion. **P. of Heroph'ilus,** torcular Herophili.

Presse-artère (F.), press-ar-tair'. Instrument invented by Deschamps for the immediate compression of arteries.

Pres'sio (*premo, pressum,* to press). Pressure.

Pres'sor fibres. Nerve-fibres capable of stimulating the vasomotor centres and increasing arterial tension.

Pressorium, pres-so're-um. Press.

Pressure, presh'ur. Action of pressing. Evidences of the effects produced on the walls of the thorax or its contents by pressure from within the chest, such as bulging, protrusion of the intercostal spaces, or pressure of fluid on the heart, lungs, etc., are called *pressure signs.* **P., abdom'inal,** mode of examination as to sensibility, size, suppleness, or hardness of any morbid abdominal viscus by exerting a pressure from below upward on the abdominal organs so as to crowd them upon the diaphragm, and thus to iminish the dimensions of the cavity of the chest, noticing to what extent respiration is affected; see *Prelum abdominale.* **P. arrest'ing points,** certain points pressure on which in spasmodic affections causes the spasm or convulsion to cease, as in facial spasm. **P. excit'ing points,** points pressure on which produces spasm or convulsion. **P. myeli'tis,** see *Myelitis.* **P. phos'phenes,** see *Phosphenes.* **P. points,** see *P. arresting* and *P. exciting points.* **P. signs,** see *Pressure.*

Presternum, pre-ster'num. Broad upper part of the sternum, usually called the manubrium. See *Sternum.*

Presystolic, pre-sis-tol'ik (*pre, systole*). Preceding the contraction of the heart—as presystolic friction sound.

Pretend'ed diseases. See *Feigned diseases.*

Pretibial, pre-tib'e-al (*pre, tibia,* tibia). Situate before the tibia, as the ilio-pretibial and ischio-pretibial muscles.

Preventive, pre-ven'tiv (*prævenio, præventum,* to come before). Prophylactic.

Prevertebral, pre-vur'te-bral (*pre, vertebra*). Situate in front of the vertebræ. **P. aponeuro'sis,** the aponeurosis covering the muscles of the prevertebral region. **P. ar'tery,** ramus of the meningeal branch, and sometimes even of the trunk, of the pharyngeal artery, which is distributed to the prevertebral region. **P. fas'cia,** the layer of fascia descending on the prevertebral muscles and lying between the pharynx and œsophagus. **P. mus'cles,** see *Cervical region, anterior.* **P. plex'uses,** the cardiac, solar, and hypogastric plexuses, lying in front of the spine, in the thorax, abdomen, and pelvis. **P. re'gion,** anterior cervical region.

Prezygapophysis, pre-zig-ap-of'is-is. See *Postzygapophysis.*

Priapeia, pre-ap-ei'ah (after Priapus). Nicotiana rustica.

Priapiscus, pre-ap-is'kus. Tent of linen shaped like a penis.

Priapism, pri'ap-izm (after Priapus). A condition of constant and distressing erection, with or without any voluptuous idea or desire for venery; often symptomatic, and sometimes the immediate result of morbific causes—of the action of cantharides, for example.

Priapitis, pre-ap-e'tis (*priapos,* penis, *itis*). Inflammation of the penis; phallitis.

Priapus, pre'ap-us (*Priapos*). In ancient mythology, the deity who presided over gardens and the parts of generation; see *Penis.* **P. cer'vi,** see *Cervus.* **P. ce'ti,** leviathan penis.

Prick'et. Sedum acre.

Prick'ing. A variety of pain compared to that which pointed bodies would occasion.

Prick'le cells. Certain cells found in the rete Malpighii of the skin. **P. lay'er,** inner layer of epidermis.

Prick'ly ash. See *Xanthoxylum.* **P. heat,** lichen tropicus; miliaria. **P. el'der,** see *Aralia spinosa.* **P. let'tuce,** Lactuca virosa. **P. pear,** see *Cactus opuntia.* **P. pop'py,** see *Argemone Mexicana.*

Pride of Chi'na. Melia azedarach. **P. of In'dia,** Melia azedarach. **P. tree,** Melia azedarach.

Pride'weed. Erigeron Canadense.

Priest physic'ians. See *Asclepiadæ.*

Priest's crown. Taraxacum. **P.'s pin'tle,** Arum maculatum.

Prim. Ligustrum vulgare.

Prima cella coli, pre'mah sel'lah ko'le (first cell of the colon). Cæcum.

Primæ viæ, pre'mah ve'e (the first passages). The stomach and intestinal canal; the lacteals being the *secundæ viæ* or *second passages.*

Primaries, pri'ma-ries. Term applied to syphilitic lesions resulting from contact or infection.

Pri'mary (*primus*, first). First in place, time, or character; as primary symptoms in contradistinction to secondary. **P. cell**, see *Cell*. **P. joint**, amphiarthrosis. **P. lat'eral sclero'sis**, sclerosis of lateral column of spinal cord, causing spastic paralysis. **P. mus'cular at'rophy**, myopathic atrophy. **P. spas'tic paral'ysis**, condition similar to that due to myelitis transversalis; generally considered to be due to primary degeneration of pyramidal tract. **P. sul'ci**, those appearing first upon brain of embryo. **P. ver'tebra**, first rudiment of a vertebra formed in the embryo.

Primigravida, prim-e-grav'id-ah. Woman in her first pregnancy.

Primipara, prim-ip'ar-ah (*primus*, first, *pario*, to bring forth). Female who brings forth for the first time, who is thus said to be *primiparous*.

Primipartu'riens (*primus*, first, *parturio*, to bring forth). Primipara.

Primister'nal (*primus*, first, *sternon*, sternum). The bony portion of the sternum.

Primitiæ, prim-ish'e-e (*primus*, first). First waters, or the waters discharged before the extrusion of the fœtus.

Primitive, prim'i-tiv. Primary. **P. ax'is**, see *Nerve-fibres*. **P. band**, see *Nerve-fibres*. **P. carot'id ar'tery**, common carotid artery. **P. cho'rion**, see *Chorion*. **P. groove**, primitive groove. **P. il'iac ar'tery**, common iliac artery. **P. streak**, primitive groove. **P. trace**, primitive groove.

Primordial (pri-mor'de-al) **cell**. See *Cell*. **P. cra'nium**, membranous skull of embryo. **P. kid'ney**, corpus Wolffianum. **P. o'va**, cells situate between germinal epithelium of embryological ovary, which later becomes an egg-shell. **P. u'tricle**, see *Utricle*. **P. ver'tebræ**, protovertebræ.

Primordium, prim-or'de-um (*primus*, *ordior*, *orsus*, to begin). First attack of a disease.

Prim'rose, evening. Œnothera biennis. **P. tree**, Œnothera biennis.

Primula officinalis, prim'u-lah of-fis-in-al'is (*primulus*, first, so called because it flowers in the beginning of the spring). P. veris. **P. varia'bilis**, P. veris. **P. ve'ris**, *Cowslip*, *Paigil* or *Peagle*, *Herb Peter*, *Palsywort*; ord. Primulaceæ. Flowers have been considered to be mildly tonic, antispasmodic, and anodyne. **P. vulga'ris**, leaves and roots of this plant have been used as sternutatories.

Primum vivens, pre'mum ve'vens (the first living). See *Punctum saliens*.

Primus quadrigeminus, pre'mus kwad-re-jem'in-us. Pyramidalis muscle.

Princeps, prin'seps. Rectum. **P. cervi'cis (arte'ria)**, *Cervical artery*; branch of the occipital artery which descends between the splenius and complexus muscles, and may be followed down to the lower part of the neck. **P. pol'licis (arte'ria)**, when the two collateral arteries of the thumb take origin from a common trunk, the trunk is the princeps pollicis.

Prince's feath'er. Amaranthus hypochondriacus. **P.'s pine**, Chimaphila umbellata.

Prin'cipal fo'ci. Two points in every refractory system. **P. planes of space** consist of median plane, the main horizontal, and frontal planes of space. **P. points**, in optics a lens or combination of lenses.

Principium, prin-sip'e-um (beginning, *princeps*, first). First attack of a disease; element; principle. **P. acid'ificans**, oxygen. **P. adstrin'gens**, tannin. **P. byrsodep'sicum**, tannin. **P. coria'ceum**, tannin. **P. hydrogenet'icum**, hydrogen. **P. hydrot'icum**, hydrogen. **P. oxyg'enans**, oxygen. **P. saliva'le**, see *Saliva*. **P. scytodep'sicum**, tannin. **P. urino'sum**, urea.

Principle, prin'si-p'l (*princeps*, first). Element; principium. **P., col'oring, of the blood**, see *Hæmaphæin* and *Hæmatin*. **P., diges'tive**, pepsin. **P., vi'tal**, see *Vital principle*.

Prin'ciples, imme'diate. Name given to a considerable number of substances composed of at least three elements, and obtained from animals and vegetables without alteration by simple processes, and in some measure immediately. **P., imme'diate, of animals**, *Proximate principles*, *Organic elements*, *Compounds of organization*, are divided into acid principles, fatty principles, and principles which are neither fat nor acid. The first include the uric, rosacic, purpuric, allantoic, caseic, butyric, etc.; the fatty principles are stearin, elain, cholesterin, etc. The third division includes the most important compounds of organization—fibrin, gelatin, albumin, casein. See *Organic*. **P., prox'imate**, P., immediate. **P., zymot'ic**, zymotic principles. See *Ferments* and *Enzymes*.

Pringlea antiscorbutica, pring-le'ah an-te-skor-bu'tik-ah). Plant of ord. Cruciferæ, native of Kerguelen's Land; has antiscorbutic properties.

Prinos, pre'nos (of the ancients). Ilex aquifolium. **P. gla'ber**, see *P. lævigatus*. **P. Grono'vii**, prinos. **P. lævigat'us**, *Smooth winterberry*, and **P. gla'ber**, *Inkberry*, indigenous, have the same properties as prinos. **P. padifo'lius**, prinos. **P. verticilla'ta**, *Black alder*, *Virginia* or *Whorled winterberry*, *Feverbush*; ord. Aquifoliaceæ; bark of this common shrub of the United States—*Prinos* (Ph. U. S.)—is astringent, bitter, and pungent. Berries are likewise bitter. Bark has been used as a substitute for cinchona in intermittents and as a tonic.

Prion, pre'on. Saw.

Prionodes, pre-on-o'dees (*prion*, saw). *Serrated*. Term applied to the sutures of the head.

Prior, pre'or. First, foremost. **P. annula'ris**, internal interosseous muscle, arising from the outside of the metacarpal bone of the ring finger, and inserted into the outside of the tendon on the back of the ring finger. It draws the ring finger outward. **P. in'dicis** arises from the outer or radial side of the metacarpal bone of the fore finger, and is inserted into the outside of the tendon on the back of the fore finger. It draws the finger outward toward the thumb. **P. in'dicis pe'dis**, external interosseous muscle of the foot; arises from the contiguous sides of the metatarsal bones of the great and fore toes, and is inserted into the inside of the root of the first bone of the fore toe. It pulls the fore toe inward. **P. me'dii**, prior medii digiti. **P. me'dii dig'iti**, *Second interosseous* of Douglas; external interosseous muscle of the hand; arises from the corresponding sides of the metacarpal bones of the fore and middle fingers, and is inserted into the outside of the tendon on the back of the middle finger. It draws the middle finger outward. **P. me'dii dig'iti pe'dis**, internal interosseous muscle of the foot; arises from the inside of the metatarsal bone of the middle toe, and is inserted into the inside of the root of the first bone of the middle toe. Pulls the middle toe inward or toward the inner side of the foot. **P. min'imi dig'iti**, internal interosseous muscle of the foot; originates from the inside of the metatarsal bone of the little toe, and is inserted into the inside of the root of the first bone of the little toe. It pulls the middle toe inward. **P. ter'tii dig'iti pe'dis**, internal interosseous muscle of the foot; arises from the inner and under part of the metatarsal bone of the third of the small toes, and is inserted into the side of the root of the first bone of the third of the small toes. It pulls the third of the small toes inward.

Prisis, pre'sis. Grinding of the teeth; trepanning.

Prisma, priz'mah. A shaving; an alkali.

Prismatic, pris-mat'ik. Decomposed or separated by a prism. **P. anal'ysis**, spectrum analysis.

Pris'mus (*prio*, to saw). Prisis.

Prisoptometer, pris-op-tom'e-tur. Prismatic instrument for determining ametropia.

Pri'vate parts or **Pri'vates.** Genital organs.

Priv'et. Ligustrum vulgare.

Priv'ities. Genital organs.

Priv'y. Ligustrum vulgare. **P. mem'bers**, genital organs. **P. parts**, genital organs.

P. r. n. Abbreviation for pro re nata. Phrase added to prescriptions, signifying "According as symptoms may require."

Pro (for, before). Common prefix to words, and meaning for or before.

Pro-agoreusis, pro-ag-o-ru'sis (*pro, agoreuo*, to announce). Prognosis.

Pro-amnion, pro-am'ne-on (*pro, amnion*) Primitive amnion of the fœtal enslosure around the head of some animals, which is followed later by the definitive amnion.

Prob'able dura'tion of life. The time that a person at a certain age may live, taking statistics as a guide.

Pro'bang (allied to **Probe**). *Sponge probang.* Long slender rod of whalebone, with a piece of sponge at its extremity, intended to push down extraneous bodies, arrested in the œsophagus, into the stomach.

Probarbium, pro-bar'be-um (*pro, barba*, beard). The first beard.

Probascanium, pro-bas-kan'e-um (*pro, baskaino*, to cast a spell upon). Amuletum.

Probascantium, pro-bas-kan'shee-um. Amuletum.

Probe (*probo*, to try). To catheterize. Specillum. See *Sound*. **P., elec'tric**, probe provided with two insulated wires which, when metal or bullet is touched, indicate its presence. **P., eyed**, see *Specillum*. **P., Nélaton's**, sound, porcelain. **P., por'celain**, see *Sound*. **P., u'terine**, sound, uterine.

Pro'bing. Catheterism; act of introducing a probe into a wound, ulcer, etc.

Probole, prob'o-le (*pro, ballo*, to throw). Process.

Procardium, pro-kar'de-um (*pro, kardia*, heart). Pit of the stomach; scrobiculus cordis.

Proce'dure. Process.

Procellaria obscura palagica, pros-e-lah're-ah ob-sku'rah pal-aj'ik-ah. Mutton bird of New Zealand, etc. When the body is pressed, oil runs from the mouth. This has been used as a liniment in rheumatism.

Procephali, pro-sef'al-e (*pro, kephale*, head). Fœtuses whose heads are so large as to render labor difficult.

Procerus (pros'er-us) **nasi.** Pyramidalis nasi.

Pro'cess (*procedo, processum*, to go forward). Apophysis; processus; procedure; method of performing any operation, chemical, pharmaceutical, or surgical. **P., aud'itory**, curved plate constituting the posterior half of the glenoid cavity. **P., bas'ilar**, see *Basilar*. **P., cochlear'iform**, see *Cochleariformis* and *Tympanum*. **P., cu'neiform**, basilary process. **P., en'siform**, see *Sternum* and *Ensiform*. **P., fal'ciform** (generally described as Hey's ligament), see *Fascia lata*. **P., ham'ular**, see *Hamulus*. **P. of he'lix**, small conical projection of cartilage opposite the first curve of the helix of the ear. **P., ma'lar**, zygomatic process. **P., mam'millary**, see *Mammillary*. **P., mod'elling**, see *Modelling process*. **P., na'sal**, see *Maxillary bone, superior*. **P., odon'toid**, see *Axis*. **P. of Rau**, see *Malleus*. **P., sphe'noid**, see *Palate-bone*. **P., un'cinate**, see *Unciform*. **P., vagi'nal**, see *Vaginal*. **P., ver'miform**, see *Vermiform*. **P., ver'tical**, superior longitudinal, falx cerebri. **P., xi'phoid**, see *Xiphoid*. **P., zygomat'ic**, see *Zygomatic*.

(For other processes as Acromion, Basilar, Clinoid, etc., see *Acromion, Basilar, Clinoid*, etc.)

Pro'cesses of Die'ters. Potoplasmic processes. **P. of Ingras'sias**, see *Ingrassias*. **P., protoplas'mic**, see *Protoplasmic*. **P., ram'ifying**, see *Protoplasmic*.

Processus, pro-ses'sus. *Process.* An apophysis or eminence of a bone. See *Apophysis*. Also any part which seems prolonged beyond others with which it is connected, as the ciliary processes. **P. abdomina'lis os'sis il'ii**, broad part of the ilium. **P. accesso'rius**, accessory process of lumbar vertebræ. **P. accesso'rius spu'rius**, embryonic transverse process of sacrum. **P. acromia'lis**, acromion process. **P. acu'tus hel'icis**, crus or process of helix. **P. alæfor'mes**, alar ligaments. **P. ala'ris**, alar process. **P. alifor'mes**, pterygoid processes. **P. anconæ'us**, olecranon. **P. annula'ris**, pons Varolii. **P. anon'ymus**, jugular tubercle. **P. ante'rior mal'lei**, processus gracilis malleus. **P. arcifor'mes**, arciform fibres. **P. ascen'dens**, upper jaw-bone. **P. ascenden'tes**, superior articular processes of vertebræ. **P. basila'ris**, delicate process of bone from posterior portion of body of sphenoid, and forming a part of lateral wall of inferior petrosal sinus. **P. belonoï'des**, see *Belenoid*. **P. Blumenbach'ii**, unciform process. **P. bre'vis incu'dis**, short process of incus. **P. bre'vis mal'lei**, short process on the malleus to which the tensor tympani is attached. **P. bul'bi olfacto'rii**, filaments of olfactory nerve. **P. calcari'nus**, bony extension of septum narium. **P. cartilagin'ei**, sesamoid cartilaginous nodules in cartilaginous portion of Eustachian tube. **P. cartilagin'eus hel'icis**, process of the helix. **P. cauda'tus**, lobulus caudatus. **P. cerebel'li ad cer'ebrum**, superior peduncles of cerebellum. **P. cerebel'li ad medul'lam oblonga'tam**, inferior peduncle of cerebellum. **P. cerebel'li ad pon'tem**, middle peduncle of cerebellum. **P. cerebel'li ad tes'tes**, superior peduncle of cerebellum. **P. e cerebel'lo ad medul'lam oblonga'tam**, inferior peduncles of cerebellum; corpora restiformia. **P. e cerebel'lo ad pon'tem**, middle peduncle of cerebellum. **P. e cerebel'lo ad tes'tes**, superior peduncles of cerebellum. **P. cer'ebri latera'lis**, hippocampus major; cornu Ammonis. **P. cer'ebri ma'jor**, falx cerebri. **P. cilia'res**, ciliary processes. **P. clava'tus**, enlargement of funiculus at calamus scriptorius. **P. clinoï'dei**, clinoid process. **P. cochlea'ris**, cochleariform process; see *Tympanum*. **P. costa'rii**, transverse processes of lumbar vertebræ, apparently ribs massed together. **P. cricoï'deus**, slight eminence on inferior border of thyroid cartilage. **P. crucia'tus**, crucial appearance of tentorium, falx cerebelli, and falx cerebri, near the internal occipital protuberance. **P. cubita'lis**, lower and articular extremity of humerus. **P. cuneifor'mis**, unciform process. **P. cuneifor'mis os'sis occip'itis**, basilary process. **P. denta'lis**, alveolar process. **P. denta'tus**, odontoid process. **P. descen'dens**, process of recto-vesical fascia, between rectum and bladder. **P. descenden'tes**, inferior articular processes of vertebræ. **P. du'ræ ma'tris**, falx cerebri and tentorium. **P. ensifor'mes**, lesser wings of the sphenoid; see *Sternum*. **P. enteroï'dei cer'ebri**, cerebral convolutions. **P. excep'ti**, inferior articular processes of lumbar vertebræ. **P. excipien'tes**, superior articular processes of lumbar vertebræ. **P. falcifor'mis cerebel'li**, falx cerebelli. **P. falcifor'mis du'ræ ma'tris**, falx cerebri. **P. falcifor'mis ma'jor**, falx cerebri. **P. falcifor'mis mi'nor**, falx cerebelli. **P. folia'ceus**, process of the ethmoid bone projecting into the frontal cells. **P. Folia'nus** or **Fo'lii**, processus gracilis of malleus. **P. fronta'lis**, nasal process; frontal process; see *Maxillary bone, superior*. **P. fron'to-sphenoïda'lis**, frontal process. **P. glot'tidis**, projection of arytenoid cartilage for attachment of vocal cord. **P. grac'ilis mal'lei**, delicate process of bone from the body of the malleus inserted in the Glaserian fissure; see *Malleus*. **P. hama'tus**, unciform process. **P. hel'icis** or **hel'icis cauda'tus**, a tail-like process at the posterior and inferior extremity of the helix. **P. horizonta'lis incu'di**, short process of the incus. **P. incisu'ræ trigem'ini**, occasional projections on side of impression for Gasserian ganglion, at apex of petrous portion of temporal bone. **P. infe'rior**, a wedge-like plate from tegmen tympani to internal extremity of Glaserian fissure. **P. infe'rior incu'di**, long process of incus. **P. inframalleola'ris**, ridge between grooves for peroneal muscles on exterior of calcaneum. **P. innomina'tus**, jugular tubercle. **P. inter'nus calca'nei**, sustentaculum tali. **P. intrajugula'ris**, spine passing across the jugular foramen from petrous portion of temporal bone, or even from occipital bone. **P. juga'lis**, malar process; zygoma; external angular process. **P. jugula'ris accesso'rius** or **jugula'ris ante'rior**, prominence on occipital bone, forming anterior boundary of jugular notch. **P. jugula'ris me'dius**, intrajugular process. **P. lacryma'lis**, nasal process. **P. lacryma'lis ante'rior**, anterior lacrymal crest. **P. lacryma'lis con'chæ inferio'ris**, lacrymal process. **P. latera'les u'teri**, Fallopian tubes. **P. latera'lis**, portion of transverse process of a lumbar vertebra representing a rib. **P. latera'lis calca'nei**, sustentaculum tali. **P. latera'lis spu'rius**, occa-

sional process above outer condyle of femur; eminence above inner condyle of femur for insertion of internal head of gastrocnemius muscle. **P. lenticula'ris**, orbicularis bone. **P. lon'gus incu'dis**, long process of the incus. **P. lon'gus mal'lei**, processus gracilis of malleus. **P. mala'ris**, zygoma; external angular process. **P. mammilla'res**, mammillary tubercles of the cerebrum; olfactory nerves; papillæ of kidney. **P. mammilla'ris os'sis tem'poris**, mastoid process. **P. mammilla'ris vertebra'rum**, mammillary process. **P. margina'lis**, elevated ridge in the posterior border of frontal process of malar bone. **P. mastoï'deus**, mastoid process. **P. maxilla'ris con'chæ inferio'ris**, maxillary process of inferior turbinate bone. **P. maxilla'ris os'sis zygomat'ici**, maxillary process of malar bone. **P. muscula'res vertebra'rum**, secondary processes upon the vertebræ for the insertion of muscles. **P. muscula'ris**, muscular process. **P. nasa'lis**, maxillary process of palate-bone; lacrymal process; nasal spine. **P. na'si**, pyramidalis nasi. **P. obli'quo-mammilla'res**, rudimentary articular processes of the vertebræ forming the sacrum. **P. obli'quus**, articular process. **P. obtu'sus**, short process of malleus. **P. occipita'lis**, basilar process. **P. occul'tus**, small denticulate border of upper orbital plate of the superior maxillary bone. **P. odontoï'deus**, see *Axis*. **P. oliva'ris**, olivary process. **P. orbicula'ris**, orbicular bone. **P. orbicula'ris cer'ebri**, infundibulum of the brain. **P. papilla'res** or **papilla'rum**, olfactory nerves. **P. paracondyloï'deus** or **paramastoï'deus**, paracondyloid process. **P. petro'sus anti'cus**, delicate lamellated portion of the petrous portion of the temporal bone. **P. petro'sus os'sis sphenoï'dei me'dius**, basilar process. **P. petro'sus poste'rior** or **supe'rior os'sis sphenoï'dei**, posterior clinoid processes. **P. pneumat'icus**, process between auricular process of occipital and mastoid process of temporal bone, consisting of cells in direct communication with cells of mastoid process which contain air; process which contains air. **P. ad pon'tem**, middle peduncle of cerebellum. **P. pri'mus**, handle of the malleus. **P. pyramida'lis**, pyramidal process of palate-bone; pyramid of the thyroid. **P. Rav'ii**, processus gracilis of malleus. **P. rhachidia'nus**, spinal cord. **P. rostrifor'mis**, coracoid process. **P. Sömmering'ii**, marginal process. **P. spelæ'us**, process of ethmoid bone projecting into the sphenoidal sinuses. **P. sphenoïda'lis**, prolongation from posterior inferior angle of cartilage of septum narium. **P. sphe'no-maxilla'ris**, occasional projection of the lower extremity of anterior border of great wing of the sphenoid. **P. spino'sus mal'lei**, processus longus of malleus. **P. spino'sus sphenoïda'lis**, spine of the sphenoid. **P. ster'ni xiphoï'des**, xiphoid process. **P. sulca'tus**, process of the palate-bone uniting the orbital and sphenoidal processes. **P. supe'rior incu'dis**, short process of the incus. **P. supracondyloï'deus fem'oris latera'lis**, occasional process above the outer condyle of the femur. **P. supracondyloï'deus fem'oris media'lis**, eminence above the inner condyle of the femur for insertion of the internal head of the gastrocnemius muscle. **P. supracondyloï'deus hu'meri**, occasional unciform process above the inner condyle of the humerus. **P. ta'li exter'nus**, prominence for reception of articular facet of astragalus. **P. ta'li inter'nus**, process at the posterior internal aspect of the astragalus. **P. tegmen'ti tym'pani pro'prius**, plate-like portion of tegmen covering cavities of the ear. **P. tempora'lis**, occasional process of frontal bone articulating with the temporal. **P. tere'tes**, two slightly convex bodies forming the anterior wall or floor of the fourth ventricle of the brain. They are separated by a longitudinal groove continuous, inferiorly, with the sulcus longitudinalis posterior of the spinal cord. They are crossed transversely by several white and gray fasciculi—*lineæ transversæ*, *striæ medullares*—the origin of the auditory nerves. **P. ad tes'tes**, see *Valvula Vieussenii*. **P. transver'sus accesso'rius**, accessory process of lumbar vertebræ. **P. transver'sus duræ ma'tris**, tentorium. **P. transver'sus occipita'lis**, jugular process. **P. trochlearifor'mis**, processus cochleariformis. **P. trochlea'ris**, groove in a bone for a tendon. **P. trochlea'ris calca'nei**, P. inframalleolaris. **P. tuba'rius**, projection from internal pterygoid plate of sphenoid, on which cartilaginous portion of Eustachian tube rests. **P. tuberosita'tis navicula'ris**, process from the tuberosity of the scaphoid bone of the foot. **P. tym'pani**, tegmen or roof of the tympanum. **P. uncifor'mis**, coracoid process. **P. uncina'tus**, uncinate process; unciform process; olecranon. **P. uncina'tus mi'nor**, lamina of the ethmoid bone covering the lacrymal or maxillary cells. **P. u'vifer**, uvula. **P. vagina'lis**, projection of male embryonic cavity to form cavity of scrotum; see *Gubernaculum testis*. **P. vagina'lis fas'ciæ transver'sæ**, infundibuliform fascia. **P. ventric'uli**, duodenum. **P. vermifor'mis**, vermiform appendix. **P. voca'lis**, projection of arytenoid cartilage for attachment of vocal cord. **P. voca'lis ante'rior**, slight protrusion on internal surface of thyroid cartilage, to which the vocal cords are attached. **P. ad vo'merem**, vaginal process of sphenoid. **P. vo'mero-sphenoïda'lis**, sphenoidal process. **P. xiphoï'des**, ensiform process. **P. xiphosterna'lis**, ensiform cartilage. **P. zygomat'ico-orbita'lis**, malar process. **P. zygomat'icus**, zygoma; malar process; external angular process.

Procheila, pro-ki'lah (pl. of **Procheilon**). Extremity of the lips.

Procheilidion, pro-ki-lid'e-on. Procheilon.

Procheil'on or **Procheilid'ion** (*pro*, *cheilos*, a lip). The extreme projecting part or margin of the lips; or a similar portion of the labia.

Procheuma, pro-ku'mah (*pro*, *chuo*, to pour). Parenchyma.

Procidentia, pros-id-en'she-ah. Prolapsus. **P. a'ni**, proctocele. **P. intesti'ni rec'ti**, proctocele. **P. ir'idis**, ptosis iridis. **P. oc'uli**, exophthalmia. **P. se'dis**, proctocele. **P. testic'uli tubulo'rum**, hernia testis. **P. u'teri**, prolapsus uteri.

Procnemium, prok-na'me-um (*pro*, *kneme*, leg). Tibia.

Procœ'lia. Lateral ventricles.

Procœlius, pro-se'le-us (*pro*, *koilia*, belly). One who has a large pendulous abdomen.

Procœ'lus. Procœlius.

Procondylus, pro-kon'dil-us (*pro*, *kondulos*, a condyle). The first joint of the fingers; the second being called condylos; the third, metacondylos.

Procreatio, pro-kre-ah'she-o (*pro*, *creo*, to beget). Fecundation; generation. **P. san'guinis**, hæmatosis.

Procrea'tion. Fecundation; generation.

Proctagra, prok'tag-rah (*proktos*, anus, *agra*, seizure). Gout in the rectum. Proctalgia.

Proctalgia, prok-tal'je-ah (*proctos*, *algos*, pain). Pain in the anus; generally symptomatic of disease, as of hemorrhoids, scirrhus, etc. **P. hæmorrhoïda'lis**, hemorrhoids. **P. inflammato'ria**, rectitis. **P. intertrigino'sa**, chafing in the vicinity of the anus. **P. rheumat'ica**, rheumatism of the anus.

Proctatresia, prok-tah-tre'zhe-ah (*proctos*, *atresia*, imperforation). Imperforate state of the anus.

Proctec'tomy (*proctos*, *ektome*, excision). Excision of portion of the rectum.

Proctenclisis, prok-ten'klis-is (*proctos*, *enkleio*, to lock up). Constriction of the anus.

Procteurynter, prok-tu-rin'ter (*proctos*, *euruno*, to make broad). Instrument for dilating the anus.

Procthæmorrhagia, prokt-he-mor-rhaj'e-ah (*proctos*, *hæmorrhagia*). Hemorrhage from the rectum.

Proctica, prok'tik-ah (*proctos*). Pain or derangement around the anus, without primary inflammation. **P. exa'nia**, proctocele. **P. maris'ca**, hemorrhoids. **P. sim'plex**, proctalgia. **P. tenes'mus**, tenesmus.

Proctisis (prok'tis-is) or **Procti'tis** (*proctos*, *itis*). Inflammation of the anus and rectum. **P. gangræno'sa**, proctocace.

Proctocace, prok-tok'as-e (*proctos*, *kakos*, evil). Disease of the rectum, said to be common in Peru near Lima, on the Honduras and Mosquito coasts, in Brazil, etc. It is called by the Portuguese *Bicho* and

Bicho di Culo; by the people of Quito, *Mal del Valle*, from its prevalence in the valleys; and in Africa, *Bitios de Kis*. An adynamic, inflammatory condition, frequently ending in gangrene. It has been attributed to bad food and the use of spices.

Proctocele, prok-to-se'le (Eng. prok'to-seel) (*proctos, kele*, hernia). *Falling down of the fundament; Coming down of the body.* Inversion and prolapse of the mucous coat of the rectum, from relaxation of the sphincter, with more or less swelling.

Proctocystotomy, prok-to-sis-tot'o-me (*proctos, kuste*, bladder, *tome*, section). See *Lithotomy*.

Proctodæum, prok-to-de'um (*proctos, hodos*, way, by the way). Posterior part of alimentary canal in embryo.

Proctodynia, prok-to-din'e-ah (*proctos, odune*, pain). Pain in the anus or rectum.

Proctomenia, prok-to-men'e-ah (*proctos, men*, month). Menstruation occurring by the rectum.

Proctoncus, prok-ton'kus (*proctos, onkos*, swelling). Swelling of the anus.

Proctoparalysis, prok-to-par-al'is-is (*proctos, paralysis*). Paralysis of the muscles of the rectum.

Proctoplasty, prok'to-plas-te (*proctos, plasso*, to form). Plastic operation upon the anus.

Proctoplegia, prok-to-plej'e-ah (*proctos, plege*, stroke). Proctoparalysis.

Proctoptoma, prok-to-to'mah (*proctos, ptoma*, fall). Proctocele.

Proctoptosis, prok-top-to'sis (*proctos, ptosis*, falling). Proctocele.

Proctorrhagia, prok-tor-rhaj'e-ah (*proctos, rhage*, breaking forth). Hemorrhoidal flux.

Proctorrhaphy, prok-tor'rhaf-e (*proctos, rhaphe*, suture). Suture of the rectal wall; resorted to in lacerated perineum.

Proctorrheuma, prok-tor-rhu'mah (*proctos, rheuma*, defluxion). Rheumatism of the anus.

Proctorrhœa, prok-tor-rhe'ah (*proctos, rheo*, to flow). Discharge of mucus from the anus.

Proctorrhois, prok-tor'rho-is (*proctos, rheo*, to flow). See *Hæmorrhois*.

Proctos, prok'tos (*proktos*). Anus.

Proctoscirrhus, prok-to-skir'rhus (*proctos, skirrhos*, hard). Scirrhus of the anus.

Proctospasmus, prok-to-spaz'mus. Tenesmus.

Proctostenosis organica, prok-to-sten-o'sis or-gan'-ik-ah (*proctos, stenos*, narrow). Stricture of rectum.

Proctotoreusis, prok-to-to-ru'sis (*proctos, toreuo*, to perforate). Perforation of a closed anus.

Proctotome, prok'to-tome (*proctos, tome*, incision). Instrument for dividing rectal stricture.

Proctotomy, prok-tot'o-me. Operation on the rectum for removal of stricture by incision, or for fistula in ano, etc.

Proctus, prok'tus (*proktos*). Anus.

Procumbent, pro-kum'bent (*procumbo*, to lie down flat). Prostrate with the head forward.

Procuratio abortûs, pro-ku-rah'she-o ab-or'tus. Promotion of abortion.

Prodiagnosis, pro-di-ag-no'sis (*pro, diagnosis*). Prognostication of a disease to come; diagnosis by anticipation.

Pro'drome. Symptom in anticipation of disease.

Prodromic (pro-drom'ik) or **Prod'romal.** Relating or belonging to the invasion of a disease.

Prodromus, prod-ro'mus (*pro, dromos*, course). In contagious diseases, the period immediately preceding an attack of disease, in which the precursory signs occur.

Prod'uct (*produco, productum*, to bring forth). Result sought to be attained by any pharmaceutical or other operation.

Productio, pro-duk'she-o. Production; prolapsus. **P. u'vulæ à pitu'ità**, staphylœdema.

Production, pro-duk'shun. Act of producing; the thing produced.

Productivitas, pro-duk-tiv'it-as. Fecundity.

Productum, pro-duk'tum. Product.

Pro-egumenæ causæ, pro-e-gu-men'e kaws'e (*pro, egeomai*, to lead). Predisponent causes.

Præ'lum. Press; tourniquet.

Pro-em'inent (*pro, emineo*, to project). Some anatomists call the seventh cervical vertebra the proeminent vertebra, on account of the length of its spinous process, which passes the level of that of the neighboring vertebra.

Pro-encephalus, pro-en-sef'al-us (*pro, enkephalos*, encephalon). Monster whose encephalon is situate, in a great measure, out of, and in advance of, the cranium, which is open in the frontal region.

Præotia, pre-o'she-ah (*præonta*, preceding). Premature development of sexual organization or power.

Profer'ment. Zymogen.

Professional neurosis, pro-fesh'un-al nu-ro'sis. Neurosis due to continuous use of certain groups of muscles, as seen in writer's cramp, etc.

Profile (pro'feel) **line.** Line for measuring the general facial contour.

Profluvii cortex, pro-flu've-e kor'teks. Nerium antidysentericum.

Profluvium, pro-flu've-um (*profluo*, to flow forth). *Flux, Discharge.* A term under which—in the plural, *Profluvia*—some nosologists have comprised all morbid discharges or fluxes; others, increased excretions attended by fever. **P. al'vi**, diarrhœa. **P. genita'le mulie'bre**, menses. **P. muco'sum ure'thræ**, gonorrhœa. **P. mulie'bre**, leucorrhœa; menses. **P. san'guinis**, hemorrhage. **P. san'guinis ex o're**, hemorrhage from the mouth. **P. san'guinis ex u'tero**, hemorrhage from the uterus. **P. sem'inis**, pollution. **P. ven'tris**, diarrhœa.

Profunda, pro-fun'dah (fem. of **Profundus**). **P. arte'ria fem'oris**, this large branch arises commonly from the posterior part of the crural, between the pubis and lesser trochanter. It descends deeply, situate before the abductors, passes through the third abductor above the opening in it for the trunk of the femoral, and terminates in the short portion of the biceps. The muscularis profunda gives off the external circumflex, the internal circumflex, and the three perforantes. **P. arte'ria hu'meri**, origin variable. When it arises from the brachial artery it is given off opposite the groove of the humerus destined for the radial nerve, and descends backward between the three portions of the triceps, accompanied by the nerve, giving branches to that muscle and to the humerus. When it reaches the posterior part of the bone it divides into two branches, which are distributed to the triceps, supinator longus, etc. **P. arte'ria infe'rior** or **mi'nor** is often a branch of the last, but commonly is given off from the brachial, near the middle of the arm; gives off branches to the muscles, etc. about the inner side of the os humeri. Also called large communicating ulnar or profundo-ulnar. **P. arte'ria pe'nis**, the cavernous artery which arises from the artery of the penis, furnished by the internal pudic. **P. arte'ria supe'rior**, profunda humeri. **P. vein**, distribution similar to that of the femoris profunda arteria.

Profundus, pro-fun'dus (*pro, fundus*, bottom, having a deep base). Name given to different parts which are seated deeply as regards others. Certain muscles are distinguished by the names profound or deep-seated and superficial. Thus, we speak of the superficial and deep-seated muscles of the neck, etc.; the flexor profundus perforans, etc.

Profusio, pro-fu'ze-o (*pro, fundo, fusum*, to pour). Pouring out, shedding; see *Hemorrhage*. **P. a'quæ**, discharge or breaking of the waters at birth. **P. san'guinis**, hemorrhage. **P. sem'inis**, ejaculation. **P. se'ri**, see *Effusion*. **P. se'ri in cer'ebro**, see *Apoplexy*. **P. subcuta'nea**, purpura simplex.

Progastor, pro-gas'tor (*pro, gaster*, belly). Having a pendulous belly.

Progenies, pro-jen'e-ees (*pro, gigno*, to bring forth). Offspring; progeny; superfœtation.

Progeny, proj'e-ne. See *Progenies*.

Proglossis, pro-glos'sis (*pro, glossa*, tongue). The extremity or tip of the tongue.

Proglottis, pro-glot'tis (*pro, glottis*). Each segment, separate joint, or sexual zooid of a tapeworm.

Prognathism, prog-nath'izm (*pro, gnathos,* jaw). Condition relating to being prognathous.

Prognathous, prog-nath'us (*pro, gnathos,* jaw). Having a projecting jaw. Term applied to the form of the head in which there is a prolongation or forward extension of the jaws, as in the negro.

Prognosis, prog-no'sis (*pro, gnosis,* knowledge). Judgment formed by the physician regarding the future progress and termination of any disease. **P., gen'eral,** opinion formed of a disease in the abstract; thus, the general prognosis of cynanche tonsillaris is favorable; of phthisis pulmonalis, unfavorable. **P. ex lin'guâ,** glossomantia. **P., partic'ular,** opinion formed of any particular case of disease. The particular or special prognosis of one case of typhus may be favorable, while that of another may be unfavorable.

Prognostic, prog-nos'tic. Relating or appertaining to prognosis, as prognostic signs.

Prognostice, prog-nos'tis-e (*techne,* art). Art of prognosticating; prognosis.

Progressio, pro-gres'se-o (*pro, gradior, gressus,* to step). Augmentation.

Progres'sion (same etymon). Forward movement or advance.

Progres'sive bul'bar paral'ysis. Paralysis of the tongue, tips, and pharynx. **P. locomo'tor a'taxy,** see *Ataxia.* **P. mus'cular at'rophy,** see *Atrophy.* **P. paral'ysis,** general paralysis.

Progressus, pro-gres'sus. Augmentation.

Proï'otes (*proiotes,* early in season). Præotia.

Projection, pro-jek'shun. Image or figure resulting from an impression on the sensorium. **P. sys'tems of Mey'nert,** arrangement of apparatus by means of which the impressions of the exterior surroundings are projected upon consciousness.

Projector urethræ, pro-jek'tor u-re'thre. Levator prostatæ muscle.

Projectura, pro-jek-tu'rah (*pro, jacio, jactum,* to throw). Process.

Prolabium, pro-lab'e-um (*pro, labium,* lip). Procheilon.

Prolapsus, pro-lap'sus (*prolabor, prolapsus,* to slip down). Protrusion; a falling down. Falling down of a part through the orifice with which it is naturally connected. **P. a'ni,** proctocele. **P. bul'bi oc'uli,** exophthalmia. **P. cor'neæ,** staphyloma of the cornea. **P. ir'idis,** iridauxesis, staphyloma iridis, and ptosis iridis. **P. lin'guæ,** glossocele, paraglossa. **P. œsoph'agi,** pharyngocele. **P. of the o'vary,** prolapse of ovary. **P. pal'pebræ,** blepharoptosis. **P. pharyn'gis,** pharyngocele. **P. umbili'ci,** exomphalus. **P. u'teri,** some use the term *procidentia uteri* for a less degree than prolapsus—*relaxatio uteri* expressing the slightest state of all. A falling down of the uterus, owing to relaxation of the parts about the uterovaginal region. The horizontal position must be insisted upon, and the injection of astringent substances per vaginam. If the affection be not remedied by these means, a pessary may be employed as a palliative, or the operation of episiorraphy performed. Prolapsus uteri without inversion has been termed *orthysteroptoma* and *orthysteroptosis.* **P. u'vulæ,** staphylœdema. **P. vagi'næ,** protrusion of the upper part of the vagina into the lower; this, like the descent of the uterus, may be relaxation, procidentia, prolapsus, or complete inversion. **P. vesi'cæ,** prolapsus of the bladder into the urethra.

Prolectatio, pro-lek-tah'she-o (*prolecto,* to entice). Action of separating the finer parts of a body from the grosser.

Prolepsis, pro-lep'sis. Prognosis; prediction.

Proleptics, pro-lep'tiks (*pro, lambano,* to seize hold of). The art and science of predicting in medicine.

Prolepticus, pro-lep'tik-us. Anticipating; prognosticating,

Proles, pro'lees (*proles,* offspring). Progeny. See *Progenies.*

Prolicide, pro'le-side (*proles,* offspring, *cædo,* to kill). Destruction of offspring; fœticide as well as infanticide.

Proliferation, pro-lif-e-ra'shun (*proles,* offspring, *fero,* to carry). See *Cytogeny.*

Proliferous, pro-lif'er-us (*proles,* offspring, *fero,* to carry). Term especially applied to cysts, *proliferous cysts,* which appear to have the power of producing more highly organized and even vascular structures, as complex ovarian cysts, mammary cysts, etc.

Prolific, pro-lif'ik (*proles,* offspring, *facio,* to make). That which has the faculty of engendering; applied to man and animals, and to their sperm or seed, as well as to remedies which, by strengthening the genital organs, increase the secretion of sperm.

Proligerous, pro-lij'er-us (*proles,* offspring, *gero,* to carry). That which is connected with carrying the offspring. **P. disk** or **lay'er,** *Germ disk* or *hill.* Granular layer, situate generally toward the most prominent part of the ovarian vesicle, in the centre of which the true ovum or ovule exists.

Promalacterium, pro-mal-ak-ta're-um (*pro, malasso,* to soften). The room in the ancient gymnasium in which the body was softened and anointed, one of the operations in bathing.

Promanus, pro-man'us (*pro, manus,* hand). See *Digitus* and *Pollex.*

Prometopidia, pro-me-to-pid'e-ah. Frontal bandages.

Prometo'pis (*pro, metopon,* forehead), The skin of the forehead in which are wrinkles.

Prominentia, prom-in-en'she-ah (*promineo,* to jut out). Prolapsus; protuberance. **P. annula'ris cer'ebri,** pons Varolii **P. cana'lis facia'lis,** prominence of aqueduct of Fallopius on inner wall of tympanum. **P. cor'neæ,** see *Ceratocele.* **P. laryn'gis,** pomum Adami. **P. os'sis contin'ua,** apophysis.

Prominentiæ albicantes, prom-in-en'she-e al-be-kan'tees. Mammillary tubercles. **P. semiova'les medul'læ oblonga'tæ,** corpora olivaria. **P. tuba'ria pharyn'gis,** prominence at opening of Eustachian tube into the pharynx.

Promonto'rium. Promontory. **P. facie'i,** nose. **P. os'sis sac'ri,** see *Sacrum.*

Promontory, prom'on-to-re (*pro, mons,* mountain). Small projection at the inner paries of the cavity of the tympanum, corresponding to the external scala of the cochlea, and especially to the outer side of the vestibule. **P. of sa'crum,** see *Sacrum.*

Pronation, pro-na'shun (*pronus,* inclined forward). Anatomists understand by pronation the motion by which the inferior extremity of the radius passes before the ulna, and thus causes the hand to execute a kind of rotation from without inward.

Prona'to-flex'or mass. Mass of pronator and flexor muscles at medial and palmar surface of forearm.

Pronator, pro-nah'tor. That which produces the motion of pronation. This name has been given to muscles of the forearm. **P. obli'quus,** P. radii teres. **P. quadra'tus,** this muscle is situate at the anterior, inferior, and profound part of the forearm, is flat and square, and is attached, within, to the inferior quarter of the anterior surface of the ulna, and without to the inferior quarter of the anterior surface of the radius. It produces the motion of pronation. **P. ra'dii te'res,** muscle seated at the upper and anterior part of the forearm; is long, flat, and larger above than below; is attached, above, to the inner tuberosity of the humerus and to the coronoid process of the ulna; thence it passes obliquely downward and outward, and terminates at the middle of the outer surface of the radius. It causes the radius to turn on the ulna, to produce the motion of pronation; can also bend the forearm on the arm, and conversely. **P. rotun'dus,** P. radii teres. **P. te'res,** P. radii teres. **P. tib'iæ,** peroneo-tibialis.

Pronaus, pro-nah'us (*pro, naos,* temple). Vestibulum.

Pronephric (pro-nef'rik) **duct.** Duct of the primordial or head kidney.

Pronephros, pro-nef'ros (*pro, nephros,* kidney). Primordial or head kidney.

Pronervatio, pro-nur-vah'she-o (*pro, nervus,* tendon). Aponeurosis; tendon.

Pronœa, pro-ne'ah (*pro, noeo*, to know). Prognosis.

Pronucleus, pro-nu'kle-us. Primitive nucleus of an ovum or spermatozoon.

Pronunciation, pro-nun-se-a'shun (*pro, nuncio*, to tell). Mode of articulating or giving accent or utterance to words.

Pro-odontus, pro-o-don'tus (*pro, odous*, tooth). Term relating to skulls in which a line between the subnasal and alveolar points makes an angle of from 23° to 50° with radius fixus.

Proof spirit. See *Spiritus tenuior*.

Pro-otic, pro-o'tik (*pro, ous*, ear). Term applied to that form of ossification which gives rise to the upper part of the petrous bone and to part of the mastoid.

Pro-ovarium, pro-o-vah're-um. See *Parovarium*.

Prop cells, Hen'sen's. The outer layer of the organ of Corti consists of outer hair-cells and cylindroid epithelial cells, which last have received this name.

Propagation, prop-a-ga'shun (*propago, propagatum*, to multiply). Reproduction; increase.

Proparateresis, pro-par-at-er-a'sis. Prophylaxis.

Propathia, pro-path-e'ah (*pro, pathos*, disease). Prodromus.

Propendentia, pro-pen-den'she-ah (*pro, pendo*, to hang). Prolapsus.

Propenyl (prop'en-il), **hy'drate of.** Glycerin.

Propep'sin. Zymogen already existing in cell-granules convertible into pepsin.

Propeptone, pro-pep'tone (*pro, peptone*). Result of digestion in the stomach and pancreas; same as hemialbumose.

Propeptonuria, pro-pep-to-nu're-ah (*pro, peptone, ouron*, urine). Urine voided containing propeptone.

Proper light of ret'ina. Light noticed by the retina after exclusion of external light.

Properitone'al. Situate anterior to the peritoneum.

Prop'erties, phys'ical, of tis'sues. These are flexibility, extensibility, elasticity, contractility with power of corrugation, imbibition, and osmose. **P., vi'tal**, those depending upon the vital force, as contractility.

Prop'erty (*proprius*, proper). That which belongs distinctively to a thing. See *Properties*.

Prophasis, prof'as-is (*prophaino*, to announce). Cause, especially remote cause; prognosis.

Prophetin, prof'et-in. Bitter principle derived from Cucumis prophetarum and Ecballium elaterium.

Prophthalmus, prof-thal'mus (*pro, ophthalmos*, eye). Exophthalmus.

Prophylactic, prof-il-ak'tik (*pro, phulasso*, to defend). Preservative or preventive. **P. med'icine**, hygiene.

Prophylaxis, prof-il-aks'is. Preservative or preventive treatment.

Prophysis, prof'is-is (*prophusis*, germination; growing together). Symblepharon.

Propionitrite, pro-pe-o-ni'trite. Hydrocyanic ether.

Proplexus, pro-pleks'us. Choroid plexus of lateral ventricles of the brain.

Propodialia, pro-pod-e-al'e-ah (*propodon*, before the feet). Proximal segment of humerus and tibialis.

Propolis, prop'o-lis (*pro, polis*, city; literally, that which is before the city). *Beebread.* Red resinous matter with which the bees cover the bottom of the hive. Has been employed in simple mucous diarrhœa and dysentery; smelling of it has been esteemed antiasthmatic.

Propoma, prop'o-mah (*pro, poma*, drink). Ancient name of a medicine composed of seven parts of honey and four of wine, taken before a meal.

Proportio, pro-por'she-o (*pro, portio*). Symmetry.

Propositum, pro-poz'it-um (*pro, pono, positum*, to place). Intention.

Propotisma, pro-po-tiz'mah. Mixture.

Propotismus, pro-po-tiz'mus (*pro, potizo*, to give to drink). Ancient name for medicines given to the patients before purging them, and, in some sort, to prepare them.

Proprietas, pro-pre'et-as. Property.

Proprius auris externæ, pro'pre-us aw'ris eks-tur'na. Retrahens auris.

Proptoma, prop-to'mah (*pro, pipto*, to fall). Prolapsus. **P. auricula'rum**, *Flap ear;* lobe of the ear broad, loose, and pendent from birth. **P. scro'ti**, relaxation of the scrotum.

Proptosis, prop-to'sis (*pro, ptosis*, falling down). Prolapsus. **P. oc'uli**, exophthalmia. **P. pal'pebræ**, blepharoptosis. **P. u'vulæ**, staphylœdema.

Proptysis, prop'tis-is (*pro, ptuo*, to spit). Expectoration.

Propyl, pro'pil. Radical of propylic acid.

Propylamine, prop-il'am-in. $C_3H_7NH_2$. Occurs in Chenopodium vulvaria, in the flowers of Cratægus oxyacantha, the fruit of Sorbus aucuparia, in Secale cornutum, herring pickle, cod-liver oil, urine, etc., and in cultures of bacteria of human fæces on gelatin. Two compounds of this name are known, both having ammoniacal and fish-like odor. Propylamine has been used in acute and chronic rheumatism, but its virtues have been greatly exaggerated. The chloride and iodide have been given in like cases. See *Ptomaïnes* (table).

Prora, pro'rah. Occiput.

Prorrhesis, pror-rha'sis. Prognosis.

Proruptio sanguinis, pro-rup'she-o san'gwin-is (*pro, rumpo, ruptum*, to break). Hemorrhage.

Pros. In composition, generally signifies in addition to, over and above, besides.

Prosarthrosis, pros-ar-thro'sis (*pros, arthroo*, to attach by joints). Diarthrosis.

Prosbole, pros'bo-la (*pros, ballo*, to strike). Impression.

Proschysis, pros'kis-is (*pros, chuo*, to pour). Affusion.

Proscolex, pros-ko'leks (*pro*, before, *scolex*, worm). First embryonic stage of scolex after leaving the egg.

Proscollesis, pros-col-la'sis (*pros, kolla*, glue). Adherence; agglutination.

Prosectio, pro-sek'she-o (*pro, seco*, to cut). Anatomy.

Prosector, pro-sek'tor (*pro, seco*, to cut). Dissector. One who dissects cadavers for anatomical lectures.

Prosencephalic (pros-en-sef-al'ik) **arch.** Neural arch of frontal vertebra.

Prosencephalon, pros-en-sef'al-on (*pros, encephalos*). *Fore-brain.* One of the principal secondary divisions of the primordial medullary tube. From it are developed the cerebral hemispheres, corpus callosum, corpora striata, fornix, lateral ventricles, and olfactory nerve.

Proslepsis, pros-lep'sis (*pros, lambano*, to seize hold of). Prehension.

Proslysis, pros'lis-is. Catalysis.

Prosodos, pros'o-dos (*pros, hodos*, a way). Entrance to a canal or duct.

Prosopalgia, pros-o-pal'je-ah (*prosopon, algos*, pain). Facial neuralgia.

Prosopantra, pros-o-pan'trah (*prosopon, antron*, cavity). Frontal sinuses.

Prosopantritis, pros-o-pan-tre'tis (*prosopantra, itis*). Inflammation of the frontal sinuses.

Prosopecta'sia (*prosopon*, face, *ektasis*, enlargement). Enlargement of the face due to disease.

Prosopis dulcis, pros-o'pis dul'sis. Ord. Leguminosæ. Tree of rather large size, native of Peru; fruit —*Pacay*—is a pod from 20 to 24 inches long, containing black seeds imbedded in a white, soft, flaky substance, which last is eaten by the Limenos.

Prosopocarcinoma, pros-o-po-kar-sin-o'mah (*prosopon*, face, *carcinoma*). Cancerous ulcer of the face.

Prosopodidymus, pros-o-po-did'im-us (*prosopon, didumos*). Diprosopus.

Prosopodynia, pros-o-po-din'e-ah (*prosopon, odune*, pain). Neuralgia, facial.

Prosopodysmorphia, pros-o-po-dis-morf'e-ah (*prosopon, dus*, with difficulty, *morphe*, shape). Malformation or atrophy of the face, as where the process of nutrition suffers from diminished nervous influence.

Prosopology, pros-o-pol'o-je (*prosopon, logos*, discourse). Physiognomy.

Prosopomantia, pros-o-po-man-te'ah (*prosopon, manteia,* divination). Physiognomy.

Prosopon, pros-o'pon. Face.

Prosoponeuralgia, pros-o-po-nu-ral'je-ah (*prosopon, neuralgia*). Facial neuralgia.

Prosopoparalysis, pros-o-po-par-al'is-is (*prosopon, paralysis*). Palsy, Bell's.

Prosoporrheu'ma (*prosopon, rheuma,* defluxion, rheumatism). Rheumatism affecting the face.

Prosoposalgia, pros-o-po-sal'je-ah (*prosopon, algos,* pain). Neuralgia of the face.

Prosoposis, pros-o-po'sis (*prosopon*). Physiognomy.

Prosopospasmus, pros-o-po-spaz'mus (*prosopon, spasmus*). Canine laugh.

Prosoposternodymia, pro-so-po-stur-no-dim'e-ah (*prosopon, sternum, duo,* to mingle). See *Cephalosomatodymia.*

Prosopothoracop'agus. Thoracopagus with coalescence of head, chest, and abdomen.

Prosopotocia, pro-so-po-to'se-ah (*prosopon, tokos,* parturition). Labor with face presentation.

Prosoprosopus, pros-o-pros-o'pus (*proso,* forward, *prosopon,* face). Name given to skulls in which the line from nasion to alveolar point forms an angle of from 66.5° to 78° with the fixed radius (Lissauer).

Prosorhinus, pros-o-rhe'nus (*proso,* forward, *rhis,* nose). Name given to skulls in which the line drawn from nasion to subnasal point makes with the radius fixus an angle of from 66.5° to 77° (Lissauer).

Prosperitas valetudinis, pros-per'it-as val-e-tu'dinis (*prosper,* favorable, *valetudo,* health). A condition of perfect health.

Prosphora, pros'fo-rah (*pros, phero,* to bring). Prehension.

Prosphysis, pros'fis-is (*pros, phuo,* to grow). Adhesion, adherence, connection. In a more limited sense this word means morbid adhesion of the eyelids, either between themselves or with the globe of the eye. See *Ankyloblepharon.*

Prostasis, pros'tas-is (*pro, stasis,* station). Superiority, preponderance, or abundance, as of excrementitious humors.

Prostata, pros'tat-ah. Prostate. **P. adenoï'des,** prostate. **P. Bartholi'ni,** Cowper's glands in the female. **P. glan'dula,** prostate. **P. mulie'bris,** Cowper's glands in the female.

Prostatæ, pros'ta-te. Prostate. **P. adenoï'des,** prostate. **P. glandulo'sæ,** prostate.

Prostatal, pros'ta-tal. Prostatic.

Prostatalgia, pros-tat-al'je-ah (*prostate, algos,* pain). Pain in the prostate.

Prostatauxe, pros-tat-awks'e (*prostate, auxe,* increase). Enlargement of the prostate.

Prostate, pros'tat (*pro, istemi,* to stand). *Prostate gland.* Glandular, cordiform body, the size of a chestnut, situate before the neck of the bladder, behind the symphysis pubis, and surrounding the first portion of the urethra. Its excretory outlets, to the number of 10 or 12, open into the part of the urethra that traverses it, and pour into it a whitish viscid humor —*Liquor prostaticus*—intended to lubricate the interior of the urethra and to serve as a vehicle for the sperm in its ejaculation. It is usually described as consisting of three lobes, two *lateral,* and one *middle* fitted in between them on the under side, and lying beneath the neck of the bladder and the immediately adjacent part of the urethra. This is the *Lobus medius, Caruncula* or *Tuberculum Morgagnii, Isthmus prostatæ, Lobus pathologicus* or *inferior.* **P., ante'rior,** see *Cowper's glands.*

Prostatectomy, pros-tat-ek'to-me (*prostata, ektome,* cutting out). Excision of more or less of the prostate gland.

Prostatelcosis (pros-tat-el-ko'sis) or **Prostathelco'sis** (*prostate, helkos,* ulcer). Ulceration of the prostate.

Prostatic, pros-tat'ik. *Prostatal.* Belonging or relating to the prostate. The *superior prostatic muscles* pass from the pubis to the lateral parts of the prostate. The *inferior prostatic muscles* are fleshy fibres which, from the lateral parts of the urethra, near its membranous portion, pass to be inserted into the pubis. **P. bisec'tor,** an instrument at one time used in bilateral lithotomy; resembling a large olive, with a beak at the extremity, cutting edges at the sides parallel to its longest axis, and with a straight handle. **P. liq'uor,** the fluid secreted by the prostate, which mixes with the sperm during emission. **P. plex'us of nerves,** continuation of pelvic plexus anteriorly between the prostate and levator ani. **P. plex'us of veins,** pudendal plexus. **P. por'tion of the ure'thra,** the part of the canal of the urethra included by the prostate; about 15 lines long. **P. si'nus,** see *Sinus.*

Prostat'icus inter'nus. Superior transverse fibres of ischio-urethralis. **P. supe'rior,** compressor prostatæ.

Prostatitis, pros-tat-e'tis (*prostate, itis*). Inflammation of the prostate; when accompanying gonorrhœa, *gonorrheo-prostatitis.*

Prostatocele, pros-tat-o-se'le (Eng. pros'tat-o-seel) (*prostate, kele,* tumor). Swelling or tumor of the prostate.

Prostatocystitis, pros-tat-o-sis-te'tis (*prostata, kustis,* bladder). Inflammation of prostate and bladder.

Prostatolithi, pros-tat-ol'ith-e (pl. of **Prostatolithus**) (*prostate, lithos,* stone). See *Calculi, urethral.*

Prostatoncus, pros-tat-on'kus (*prostate, onkos,* tumor). Swelling of the prostate.

Prostatoparectasis, pros-tat-o-par-ek'tas-is (*prostate, parekteino,* to extend). Enlargement of the prostate, *Prostatauxe;* also induration of the same, *Prostatoscirrhus.*

Prostatorrhœa, pros-tat-or-rhe'ah (*prostate, rheo,* to flow). Morbidly increased discharge from the prostate.

Prostatoscirrhus, pros-tat-o-skir'rhus. See *Prostatoparectasis.*

Prostatotomy, pros-tat-ot'o-me (*prostate, tome,* incision). Incision into the prostate.

Prosternidium, pro-stur-nid'e-um (*pro, sternum,* the sternum). Any agent applied to the anterior part of the chest; a plaster to the breast.

Prosternum, pro-stur'num (*pro,* before, *sternum*). Manubrium.

Prosthesis, pros'thes-is (*pros, tithemi,* to put). Addition; application. That part of surgery whose object is to add to the human body some artificial part in place of one that may be wanting, as a wooden leg, an artificial eye, artificial teeth, etc.—*Prosthetic apparatus.* Sometimes written *Prothesis.* See *Anaplerosis.*

Prostheta, pros'thet-ah (same etymon). Medicines introduced into some one of the natural cavities.

Prosthet'ic. Relating to prosthesis.

Prosthion, pros'the-on. Alveolar point.

Prosthium, pros'the-um (*prosthion*). Penis.

Prostitution, pros-te-tu'shun (*prosto, pro,* before, *sto,* to stand—to stand to be hired). *Social evil.* The condition and practice of a prostitute. In many countries of Europe prostitution is a matter of public hygiene, the prostitutes being regularly examined medically, and licensed. In Great Britain and in this country, as a general rule, it is not subjected to any regulation.

Prostomia, pro-stom'e-ah (*pro, stoma,* mouth). The commissure of the lips.

Prostration, pros-tra'shun (*pro, sterno, stratum,* to throw down). Great depression of strength; almost total loss of power over the muscles of locomotion. **P., ner'vous,** neurasthenia.

Protagon, pro'ta-gon (*protos,* first, *ago,* to lead). A nitrogenous proximate principle which, when combined with albuminous matter (paraglobulin or fibrinoplastin), fatty matters, and salts, makes up the stroma of the red blood-corpuscles. See *Fibrinoplastin.* The name is also given to a mixture of lecithin and cerebrin, *myelin,* which is considered by Liebreich the chief constituent of nervous tissue. When broken down with water, glycerin, etc., it assumes the shape of nerve-tubes, granules, nucleated cells, etc.

Protea mellifera, pro'te-ah mel-lif'er-ah (after Proteus). A South African plant, ord. Proteaceæ, whose

involucra and flowers contain a great deal of honey. By inspissation it forms a delicious syrup, *Syrupus proteus*, which is much used in pulmonary affections. *P. lepidocarpon* and some other Proteæ supply the same kind of juice.

Protean, pro'te-an (from *Proteus*, who could assume various shapes). Assuming different forms.

Protective (pro-tek'tiv) **dress'ing.** Carbolized oiled silk used in antiseptic surgery, placed over the wound to exclude bacteria. Other substances, similarly employed, may be called protectives. See *Antiseptic*.

Proteic, pro'te-ik. Proteinous. **P. sub'stances**, proteids.

Proteids, pro'te-ids. *Proteic substances.* In the classification of aliments, such as are made up of albumen, casein, gluten, and their allies, and gelatin, and which contain carbon, hydrogen, oxygen, and nitrogen, and some of them sulphur and phosphorus, have been called by Kirkes *Proteids.* **P., bacte'rial**, albuminous, peptonoid, or other substances formed by fermentative action of germs. **P., bacte'rial cell'ular**, similar substances forming an integral part of the bacterial cells.

Proteiformis, pro-te-e-for'mis. Protean. **P. mor'bus**, disease assuming various characters.

Protein, pro'te-in (*proteia*, first rank or place). *Proteïne, Proteïna.* A product of the decomposition of albumen, etc. by potassa. When, according to Mulder, animal albumen, fibrin, or casein is dissolved in a moderately strong solution of caustic potassa, and the solution is exposed for some time to a high temperature, these substances are decomposed. The addition of acetic acid causes, in all three, the separation of a gelatinous translucent precipitate which has exactly the same characters and composition. This is protein. Protein having been regarded as the basis of animal and vegetable fibrin, albumen, casein, and gluten, they have been entitled the proteïnaceous alimentary principles.

Proteïnaceous, pro-te-in-a'she-us. Proteïnous.

Proteïnous, pro'te-in-us. *Proteïnaceous, Proteïc.* Of or belonging to proteïn—as a proteïnous alimentary principle. For proteïnous the word *albuminous* is now generally substituted.

Protensiones glandulares, pro-ten-se-o'nees glandu-la'rees (*pro, tendo, tensum*, to stretch). Mammillary eminences.

Proteolysis, pro-te-ol'is-is (*lusis*, dissolving). Change brought about in proteids during digestion.

Proteolytic, pro-te-o-lit'ik. Referring to proteolysis or digestion of proteids. See *Ferments* and *Enzymes.*

Proteo'ses. Intermediate products formed in digestion of proteids, as hemipeptone, etc.

Proteus, pro'te-us (Proteus, name of sea-god). Genus of Schizomycetes, forming cocci and rods—P. mirabilis, P. vulgaris, P. Zenkeri, P. capsulatus septicus, P. hominis capsulatus.

Prothesis, proth'es-is. Prosthesis.

Prothet'ic. Prosthetic.

Protista, pro-tis'tah (*protistos*, the very first). According to Hæckel, unicellular organisms between the animal and vegetable; first forms of living matter.

Protmesis, prot-ma'sis (*pro, temno*, to cut). Umbilicus.

Pro'to (*protos*, first). In composition, first.

Protoalbumose, pro-to-al'bu-moze. Form of albumose, soluble in water, and convertible into deuteroalbumose and peptone.

Protoblast, pro'to-blast (*protos, blastos*, germ). Protoplasm.

Protocaseose, pro-to-kas'e-oze. First product formed in digestion of casein.

Protochlo'ride of mer'cury. Mercurous chloride.

Protococcus dentalis, pro-to-kok'kus den-tal'is. A fungus occurring in connection with vegetable decay or caries of the teeth.

Protoëlastose, pro-to-e-las'toze. Primary product of elastin by cleavage.

Protogala, pro-tog'al-ah (*proto, gala*, milk). Colostrum.

Protoglobulose, pro-to-glob'u-loze. Product of globulin, formed by action of gastric juice.

Protoïatros, pro-to-e-at'ros (*proto, iatros*, physician). The chief physician. See *Archiater.*

Protomedicus, pro-to-med'ik-us. The chief physician. See *Archiater.*

Protomus, pro'to-mus (*pro, tome*, section). Dissector.

Protomyosinose, pro-to-me'o-sin-oze. Primary product formed in digestion of myosin with gastric juice, convertible into deuteromyosinose by being subjected to further action of pepsin.

Protonephrium, pro-to-nef're-um (*proto, nephros*, kidney). Corpus Wolffianum.

Protoni'trate of mer'cury. Mercurous nitrate.

Proto-organism, pro-to-or'gan-izm. Being whose animal or vegetable nature is so difficult of determination that it might be referred to either one or the other division of organized bodies. See *Zoophyte.*

Protopathia, pro-to-path-e'ah (*proto, pathos*, affection). Idiopathia.

Protopepsia, pro-to-pep'se-ah (*protos*, first, *pepsis*, digestion). Primary digestion occurring in the alimentary tract independent of the products of the walls of the intestine, the liver, or other organs.

Protophyte, pro'to-fite (*proto, phuton*, plant). Vegetable production at the foot of the scale, as a cryptogamous plant—a fungus. Various diseases have been ascribed to the reception of protophytes into the blood.

Protopia (pro-to'pe-ah) or **Proto'pine.** $C_{20}H_{19}NO_5$. Derivative from opium and one or two other plants of same order; similar to cryptopia.

Protopla'sis. First stage in formation of tissue. Formation of protoplasmic tissue.

Protoplasm, pro'to-plazm (*proto, plasso*, to form). The blastema in the sense of cytoblastema; the cell-sap or cell-contents. Also the liquid contained in the cavities of vegetable cells, or in the embryonic cells, when the embryo has as yet no blood, which liquid is capable, like the liquor sanguinis, of furnishing materials for the origin of other anatomical elements.

Protoplasmic, pro-to-plaz'mik. Relating to the protoplasm. **P. pro'cesses of Die'ters**, the thick-branched processes of the large centric ganglion cells.

Protoplast, pro'to-plast (*proto, plasso*, to form). Primary formation; first-formed organized body, the parent of all others.

Protosomites, pro-to-so'mit-ees (*proto, soma*, body). Primitive segments of an embryonic worm.

Pro'tospasm, cru'ral. See *Crural.*

Protosporos, pro-tos'po-ros (*proto, speiro*, to sow). Os uteri.

Protover'tebræ. Primitive vertebræ in embryo.

Protover'tebral col'umn or **plate.** Column of cells situate along the medullary groove, from which the protovertebræ originate.

Protovitel'lose. Product of phytovitellin by the gastric juice, convertible into deuterovitellose when subjected to further action of pepsin and acid.

Protoxide, pro-toks'id (*proto, oxide*). That member of a series of oxides containing a single atom of oxygen combined with a single bivalent atom.

Protozo'a or **Protozoids**, pro-to-zo'ids (*proto, zoon*, animal, *eidos*, resemblance). Spermatozoa.

Protozoon, pro-to-zo'on (*proto, zoon*, animal). An animal lowest in the scale, as infusoria, sponges, etc.

Protractor, pro-trak'tor. Name given to several muscles. Also a surgical instrument.

Protractores anguli oris, pro-trak-to'rees an'gu-le o'ris. Accessorii orbicularis oris.

Protrahens lentis, pro'trah-hens len'tis (*pro, traho*, to draw). Ciliary muscle.

Protrusion, pro-tru'zhun (*pro, trudo, trusum*, to thrust). Prolapsus.

Protrusor, pro-tru'sor. Detrusor urinæ.

Protuberance, pro-tu'ber-ance (*pro*, before, *tuber*, projection). *Boss.* Name given to rough, unequal protuberances seen at the surface of certain organs: parietal protuberances, for example. **P., an'nular,**

pons Varolii. **P., cer'ebral,** medulla oblongata; pons Varolii.

Protuberantia, pro-tu-ber-an'she-ah. Eminence; protuberance. **P. annula'ris Willis'ii,** pons Varolii. **P. basila'ris,** pons Varolii. **P. cylin'drica,** cornu ammonis.

Proud flesh. See *Fungosity.*

Proventriculus, pro-ven-trik'u-lus (*pro, ventriculus,* stomach). Second stomach. Bulbous expansion at the termination of the œsophagus, immediately above the gizzard, of birds, the walls of which are thickly studded with a layer of glands or follicles which secrete a digestive fluid.

Prov'erb, med'ical. A proverbial expression frequently contains sound sense in its directions. In medicine the greatest collection is in the *Regimen of Health of the School of Salernum,* composed in the 11th century by John of Milan. Yet, although good sense is often inculcated, we frequently meet with the reverse. Most of the proverbs are hygienic.

Proversio, pro-vur'she-o (*pro, verto, versum,* to turn). Anteversion.

Provocatorius, pro-vo-cat-o're-us (*pro, voco, vocatum,* to call). Intercalary.

Proximad, proks'im-ad. See *Proximal aspect.*

Proximal, proks'im-al (*proximus,* next). Proximate, nearest, next. **P. as'pect,** aspect toward the trunk in the course of an extremity (Barclay). *Proximad* is used by the same writer adverbially to signify toward the trunk.

Proximate (proks'im-at) **prin'ciples.** See *Principles* and *Organic.*

Pruna, pru'nah. Anthrax.

Prune. Prunum.

Prune-juice expectora'tion or **spu'ta.** Sputa resembling prune-juice occurring in the third or purulent stage of pneumonia.

Prunella, pru-nel'lah (dim. of **Prunum**). Angina pectoris; aphthæ; cynanche; pupil; P. officinalis. **P. officina'lis,** *Self heal, Healall, Bugle;* ord. Labiatæ. This plant has been recommended as an astringent in hemorrhages and fluxes, and also in gargles against aphthæ, and in inflammation of the fauces; hence its name (from G. *bräune,* sore throat). **P. vulga'ris,** P. officinalis.

Prunellæ (pru-nel'le) **sal.** Potassæ nitras fusus sulphatis paucillo mixtus.

Prunel'loe. Prunum Brignolense.

Pruneola sylvestris, pru-ne'o-lah syl-ves'tris. Prunus spinosa.

Prunes. See *Prunum.* **P., med'icated,** see *Prunum.*

Pruni pulpa, pru'ne pul'pah. Pulp of prunes.

Pru'nin. Cerasin.

Pru'num. *Dried plum, Prune.* Three sorts of prunes have been usually ranked among the articles of the materia medica: 1. Prunum Brignolense, Brignoli plum, or prunelloe, from Brignole in Provence, is of a reddish-yellow color, and has a very grateful, sweet, subacid taste; 2. Prunum Gallicum, French prune; 3. Prunum Damascenum, Damson, formerly Damascene, Babylon. All these possess the same general properties as the other summer fruits, and are emollient and laxative. *Prunum* (Ph. U. S. and Br.) is the fruit of Prunus domestica. Under the name of *Medicated prunes* a confection is made by adding prunes to concentrated infusion of senna, and evaporating with a gentle heat, adding sugar. **P. stella'tum,** Averrhoa carambola.

Prunus acacia, pru'nus ak-ah'se-ah. Prunus padus. **P. Armeni'aca,** *Apricot;* ord. Rosaceæ; the apricot, Melum Armeniacum, when ripe, is easily digested, and considered a great delicacy. **P. a'vium,** *Black cherry tree;* the fruit is eaten, and a gum exudes from the tree, the properties of which are like those of gum arabic. **P. Cap'ulin,** *Capuli,* grows in the open fields of Peru; is cultivated in gardens in towns; fruit is acid, and not often eaten; on account of its agreeable odor it is used in making *Pucheros de flores,* or with odoriferous flowers to perfume linen. **P. cer'asus,** *Red cherry tree;* fruit, *Cerasum, Cerasion,* has a pleasant, acidulous, sweet flavor; see *Prunus avium.* **P. cocomil'ia,** tree native of Italy, where it is used as a febrifuge. **P. domes'tica,** *Plum* or *Damson tree.* The damson when perfectly ripe affords a wholesome fruit for pies, tarts, etc.; gently laxative; see *Prunum.* **P. horten'sis,** P. cerasus. **P. insit'ia,** *Bullace plum tree.* Fruit of this tree is used like the damson. **P. laurocer'asus,** *Poison laurel, Cherry laurel, Common laurel.* The leaves, *Laurocerasi folia* (Ph. Br.), have a bitter, styptic taste, with the flavor of bitter almonds; the powdered leaves applied to the nostrils excite sneezing; the flavor of the leaves has given occasion to their being employed in tarts, custards, etc., but in large quantities they are poisonous. The poisonous principle is the prussic acid. Distilled water, called *Laurel-water,* is poisonous; see *Poisons, table of.* An Aqua laurocerasi, *Cherry-laurel water,* has been officinal in various pharmacopœias. **P. macrophyl'la,** P. avium. **P. pa'dus,** *Wild cluster* or *Bird cherry tree;* bark of the tree has a fragrant smell and a bitter, subastringent taste, somewhat similar to that of bitter almonds; has been recommended in intermittents, etc. in the form of decoction; berries have been used in dysentery. **P. sebeste'na,** sebestena. **P. seroti'na,** Cerasus serotina. **P. spino'sa,** *Sloe tree.* The fruit—sloe—is sometimes employed in gargles, and was formerly much used in hemorrhage, owing to its astringent properties. The Acacia nostras, Pruneola sylvestris, is obtained from this. **P. sylves'tris,** P. avium, P. spinosa. **P. Virginia'na,** *Choke cherry, Wild cherry tree.* P. Virginiana (Ph. U. S.) is the bark of P. serotina, collected in autumn. Bark of this tree has been found useful in intermittents; leaves are poisonous to certain animals, and the berries intoxicate different kinds of birds. The Indians use the bark in the cure of syphilis; it is bitter and astringent, and possesses some aromatic warmth, and likewise a sedative quality; is stimulant and tonic; the leaves and bark yield prussic acid. Distilled oil of the bark is very nearly identical with that of the bitter almond; a strong decoction of the bark is anthelmintic. **P. vulga'ris,** P. padus.

Pruriginous, pru-rij'in-us. Relating, belonging to, or resembling prurigo.

Prurigo, pru-re'go (*prurio, pruritum,* to itch). *Pruritus, Cnesmus, Scabies papuliformis, Exormia.* The word is often used synonymously with itching. The term has been used for a genus of cutaneous diseases, the characteristic symptoms of which are a severe itching, accompanied by an eruption of papulæ of nearly the same color as the adjoining cuticle. Affects the whole surface of the skin, under three varieties of form—the P. mitis, P. formicans, P. senilis, etc.—as well as some parts of the body, as the P. podicis and P. pudendi muliebris, pudendagra pruriens, pruritus vulvæ. **P. pedicula'ris,** phtheiriasis.

Pruritus, pru-re'tus (*prurio,* to itch). Gargalus; heat; itching; prurigo. **P. a'ni,** itching of the anus; usually a symptom of rectal or intestinal irritation, disease of the rectum, constipation, etc.; symptoms may be relieved by external applications, but the cause must also be sought for and treated. **P. hiema'lis,** form occurring in winter. **P. vul'va,** see *Prurigo.*

Prussian (proo'shun) **blue.** *Tritohydroferrocyanate, Ferrocyanide, Ferrocyanuret,* or *Ferroprussiate of iron, Pure Prussian blue.* It is chiefly used in the preparation of hydrocyanic acid and the cyanide of mercury; has been advised in the treatment of intermittents and in epilepsy and scrofulosis. Externally, it has been applied to ill-conditioned ulcers (℥j to ℥j of cerate).

Prussiate (prush'e-ate) **of pot'ash.** Potassium ferrocyanide.

Prussic (proos'ik) **ac'id.** Hydrocyanic acid.

Prus'sin. Cyanogen.

Psalidium, sal-id'e-um (*psalidion,* dim. of *psalis*). Fornix.

Psalis, sal'is (*psalis*). Fornix; scissors.

Psalterium, sal-ta're-um (*psalterion,* dim. of *psalter,* a psaltery) Lyre; omasum.

Psamma, sam'mah (*psamme*). See *Gravel.*

Psammismus, sam-mis'mus (*psammos,* sand). The

application of sand to any part of the body for the cure of disease, as by a means of a hot sand-bath.

Psammocarcinoma, sam-mo-kar-sin-o'mah (*psammos,* sand, *carcinoma*). Carcinoma containing calcareous deposits.

Psammo'des (*psammos, odes*). Sabulous.

Psammo'ma (*psammos,* sand, *oma*). Tumor which consists of globular lime-concretions, or sand-bodies, corpora chalcedonica, limited to the choroid plexuses and dura mater.

Psammus, sam'mus (*psammos*) See *Gravel.*

Pselaphia (sel-af'e-ah) or **Pselaphesis,** sel-af-a'sis (*psallo,* to pluck, *haphe,* touch). Palpation; touch. Searching around with the fingers, as in cases of delirium.

Psellismus, sel-lis'mus (*psellizo,* to stutter). Imperfect or depraved state of the articulation. **P. na'sitas,** speaking through the nose; a nasal voice. **P. rhotacis'mus,** rotacism or vicious pronunciation of the letter *r.*

Psellotes, sel'lo-tees (*psellotes*). Balbuties; psellismus.

Pseudacacia odorata, su-dak-ash'e-ah o-do-rat'ah (*pseudo, acacia*). Robinia pseudacacia.

Pseudacoe, su-dak'o-a (*pseudo, akoe,* audition). False or illusional hearing.

Pseudaconine, su-dak'o-neen. Amorphous alkaloid derived from pseudaconitine.

Pseudaconitine, su-dak-on'it-een. Crystallizable alkaloid obtained from Aconitum ferox; very poisonous.

Pseudacorus, su-dak'o-rus (*pseudo, acorus*). Iris pseudacorus.

Pseudacu'sis. Pseudacoe.

Pseudæsthesia (su-dees-the'ze-ah) or **Pseudæsthe'sis** (*pseudo, aisthesis,* feeling or sensation). Depraved feeling. Sensation or perception experienced in absence of any great irritation of the peripheral end-organs or of the connecting parts. Imaginary sense of touch or general feeling in organs that have no existence; common to those who have suffered amputation, and to hypochondriacs and the insane.

Pseudalei morbi, su-dal'e-e mor'be (*pseudaleos,* counterfeit). Feigned diseases.

Pseudalius trichina, su-dal'e-us trik-e'nah. Trichina spiralis.

Pseudamnesia, su-dam-na'se-ah (*pseudo, amnesia,* memory). False memory.

Pseudangusturinum, su-dan-gus-tu-re'num (*pseudo, angustura,* false angustura). Brucine.

Pseudaphe (su'daf-e) or **Pseudaph'ia** (*pseudo, haphe,* touch, feeling). Pseudæsthesia.

Pseudargomorphosis, su-dar-go-mor-fo'sis (*pseudo, argos,* active, *morphosis,* formation). Membranous enteritis.

Pseudarthritis, su-dar-thre'tis (*pseudo, arthritis*). Supposed affection of a joint resembling arthritis.

Pseudarthrosis, su-dar-thro'sis (*pseudo, arthron,* a joint). False joint or articulation.

Pseudarticulatio, su-dar-tik-u-lah'she-o. Pseudarthrosis.

Pseudecoïa, su-de-ko'e-ah. False hearing.

Pseudelminthes, su-del-min'thees (*pseudo, helmins,* worm). Ectozoa.

Pseudencephalus, su-den-sef'al-us (*pseudo, enkephalos,* the encephalon). *Paracephalus.* Monster whose cranium is open in its whole extent, from before to behind, its base supporting a vascular tumor. The vertebræ may also be seriously implicated.

Pseudinoma, su-din-o'mah (*pseudo, is, inos,* fibre, *oma*). Scirrhus.

Pseudo, su'do (*pseudes,* false). Dyspnœa.

Pseudo-æsthe'sia. See *Pseudæsthesia.*

Pseudo-angina, su'do-an-je'nah. Hysterical or false angina, emotional in character, and not associated with cardiac disease.

Pseudoblepsia, su-do-blep'se-ah (*pseudo, blepsis,* sight). *False sight.* Perversion or illusion of vision. See *Metamorphopsia.*

Pseudoblepsis, su-do-blep'sis. See *Pseudoblepsia.*

Pseudobulbar paralysis, su-do-bul'bar par-al'is-is. Disease resembling bulbar paralysis, but in reality due to disease of both cerebral hemispheres.

Pseudocalculi, su-do-kal'ku-le (false calculi). Coagulated blood, fibrin, urostealith, etc. may assume such a shape as to resemble calculi and be mistaken for them.

Pseudocarcinoma (su-do-kar-sin-o'mah) **la'bii.** Cancer aquaticus.

Pseudocataracta, su-do-kat-ar-ak'tah. See *Cataract.*

Pseudochorea, su-do-ko-re'ah. Under this head—false chorea—may be included tic de salaam, chorea of the diaphragm, c. of the larynx, etc.

Pseudochromæsthesia, su-do-krome-ees-the'ze-ah. Illusional perception of things seen, words or letters appearing of different colors.

Pseudochromia, su-do-kro'me-ah (*pseudo, chroma,* color). Faulty perception of colors.

Pseudocœlia, su-do-se'le-ah. Fifth ventricle.

Pseudocroup, su'do-kroop. Asthma thymicum.

Pseudocurarine, su-do-ku-rar'een. Alkaloid found in Nerium oleander.

Pseudocyesis, su-do-se-a'sis (*pseudo, kuesis,* pregnancy). Pregnancy, false. **P. mola'ris,** mole.

Pseudodesma, su-do-dez'mah. False ligament.

Pseudo-encephali'tis (*pseudo, encephalus, itis*). Hydrencephaloid disease.

Pseudo-erysipelas, su'do-er-e-sip'e-las (*pseudo, erysipelas*). Diffuse phlegmonous inflammation of the skin, red and painful, with fever, and generally ending in suppuration.

Pseudofever, su-do-fe'ver. Morbid irritation.

Pseudoganglion, su-do-gan'gle-on. False ganglion; thickening of a nerve. **P. of Boch'dalek,** enlargement of branch of middle alveolar nerve. **P. of cir'cumflex nerve,** expansion of branch of nerve which goes to the teres major. **P. of Cloquet** (klo-ka'), thickening of palatine rami of naso-palatine nerve. **P., Val'entin's,** thickening at junction of divisions of middle alveolar ramus of nervus maxillaris.

Pseudogeusia (su-do-gu'se-ah) or **Pseudogeus'tia** (*pseudo, geusis,* taste). False taste.

Pseudogeus'tia. Pseudogeusia.

Pseudogonorrhœa, su-do-gon-or-rhe'ah (*pseudo, gonorrhœa*): See *Gonorrhœa.*

Pseudohelminthes, su-do-hel-min'thees (*pseudo, helmins*). Ectozoa.

Pseudohermaph'roditism (*pseudo,* false). Condition in which the glands of one sex are present, usually those of the male, with other portions of the genital apparatus mixed or intermediate. See *Hermaphrodite.*

Pseudohydropho'bia. Convulsive actions, of a hysterical kind, in one who thinks he has been bitten by a mad dog.

Pseudohypertrophic muscular paralysis (su-do-hi-per-trof'ik mus'ku-lar par-al'is-is) or **pal'sy.** See *Paralysis, pseudohypertrophic.*

Pseudohypertrophy, su-do-hi'per-trof-e (*huper, trepho,* to nourish). Enlargement without increase of substance. *Pseudohypertrophy of the muscles* is not associated with any lesion of the central or peripheral nervous system, but is a marked atrophy of the muscles in young persons, which is hidden by a decided increase in adipose tissue.

Pseudojervine, su-do-jur'veen. Alkaloid obtained from white hellebore.

Pseudoleukæmia, su-do-lu-ke'me-ah (*pseudo, leukos, haima,* blood). Affection generally described as Hodgkin's disease. See *Hodgkin.*

Pseudolien, su-do-le'en (*pseudo, lien,* spleen). Glands situate in the neighborhood of the spleen; probably lymphatic glands.

Pseudomania, su-do-man'e-ah (*pseudo, mania*). Hysterical form of insanity in which an innocent person accuses himself of a crime he did not commit.

Pseudomechoacana, su-do-mek-o-ak-an'ah. Convolvulus panduratus.

Pseudomedicus, su-do-med'ik-us (*pseudo, medicus,* physician). Charlatan.

Pseudomelanotic (su-do-mel-an-ot'ik) **forma'tion** (*pseudo, melas,* black). See *Anthracosis.*

Pseudomembrana, su-do-mem-bran'ah (*pseudo*, *membrane*). False membrane.

Pseudomembrane, su-do-mem'bran. False membrane.

Pseudomembranous, su-do-mem'bra-nus. Relating or appertaining to false membranes.

Pseudomeningitis, su-do-men-in-je'tis (*pseudo*, *meningitis*). Morbid state of functional disturbance of the brain and meninges.

Pseudomen'inx. False membrane.

Pseudomenstruation, su-do-men-stru-a'shun. Flow of blood from the uterus resembling the menstrual flow, due to a pathological cause.

Pseudometamorpho'sis polypo'sa. Polypus.

Pseudomorphia (su-do-mor'fe-ah) or **Pseudomor'phine**. $C_{17}H_{19}NO_4$. An alkaloid of opium, seldom used medicinally.

Pseudomorphosis, su-do-mor-fo'sis (*pseudo*, *morphosis*, shaping). Formation of diseased or abnormal structure.

Pseudomyxoma peritonei, su-do-miks-o'mah per-e-to-ne'e. Peritonitis arising from colloid contents of cysts of the ovaries.

Pseudonarcissus, su-do-nar-sis'sus. Narcissus pseudonarcissus.

Pseudonarcotism, su-do-nar'ko-tizm. Nervous condition having the appearance of narcosis, sometimes met with at the menstrual periods or at the change of life.

Pseudonavicella, su-do-nav-is-el'lah (*pseudo*, *navicella*, small boat). Embryonic shape of a gregarine.

Pseudonomania, su-don-o-man'e-ah (*pseudo*, *mania*). Form of insanity which is characterized by a morbid propensity for lying.

Pseudo-osteomalacic pelvis, su'do-os-te-o-mal-as'ik pel'vis. Pelvis triloba due to rickets.

Pseudoparalysis, su-do-par-al'is-is (false paralysis). See *Dystaxia*. **P. ag'itans**, dystaxia.

Pseudoparasites, su-do-par'as-ites. Ectozoa.

Pseudopelletierine, su-do-pel'le-teer-een. Alkaloid discovered by Tanret in bark of pomegranate.

Pseudoperipneumonia, su-do-per-e-nu-mo'ne-ah. Peripneumonia notha.

Pseudophlogo'sis ventric'uli resoluti'va et colliquati'va (*pseudo*, *phlogosis*, inflammation). Gastromalacia.

Pseudophthisis, su-do-te'sis (false phthisis). Emaciation occasioned by other causes than organic lesion of the lungs.

Pseudoplasm, su'do-plazm. See *Pseudoplasmata*.

Pseudoplasmata, su-do-plaz'mat-ah (pl. of **Pseudoplasma**) (*pseudo*, *plasso*, to form). Term applied to malignant heterologous tumors.

Pseudopleuritis, su-do-plu-re'tis. Pleurodynia.

Pseudopneumonia, su-do-nu-mo'ne-ah. Peripneumonia notha.

Pseudopneumonitis, su-do-nu-mo-ne'tis. Peripneumonia notha.

Pseudopodia, su-do-po'de-ah (*pseudo*, *pous*, foot). Protrusion of protoplasm in mycetozoa by which the body may move.

Pseudopol'ypi. See *Polypi*.

Pseudopsia, su-dop'se-ah (*pseudo*, *opsis*, vision). Pseudoblepsia.

Pseudopyr'ethrum. Achillea ptarmica.

Pseudoraphæ, su-dor'ah-fe (*pseudo*, *rhaphe*, suture). False sutures, as the transverse fissures running into the lambdoidal suture on each side.

Pseudorasis, su-do-ra'sis (*pseudo*, *orao*, I see). Pseudoblepsia.

Pseudorexia, su-do-reks'e-ah (*pseudo*, *orexis*, appetite). False appetite. See *Malaxia*.

Pseudorrhoncus, su-dor-rhon'kus (*pseudo*, *rhonchos*, rattle). Sound heard during respiration which appears to be produced like the ordinary rhonchi in the air-tubes, but is exterior to them—as in the case of pleural pseudorrhonchi. See *Rattle* and *Râle*.

Pseudosclerosis, su-do-skler-o'sis. Disease resembling sclerosis, but not presenting the anatomical lesions.

Pseudoscopic, su-do-skop'ik (*pseudo*, *skopeo*, to view). Conveying false impressions to the eye, as where projecting surfaces are seen depressed, and conversely.

Pseudosmia, su-dos'me-ah (*pseudo*, *osme*, smell). False sense of smell.

Pseudosphresia, su-dos-fra'ze-ah (*pseudo*, *osphresis*, smell). False sense of smell.

Pseu'dospleen. See *Pseudolien*.

Pseudostomata, su-do-stom'at-ah (*pseudo*, *stoma*, mouth). Supposed outlets on surface of a serous membrane, considered to be the mouths of lymphatic vessels.

Pseudosyphilis, su-do-sif'il-is. Syphilis pseudosyphilis.

Pseudothan'atus (*pseudo*, *thanatos*, death). Asphyxia.

Pseudotoxin, su-do-toks'in (*pseudo*, *toxicum*, poison). Extractive matter obtained from belladonna.

Pseudotrichinosis, su-do-trik-in-o'sis (*pseudo*, *thrix*, hair). Variety of acute parenchymatous polymyositis, in which the muscles generally are inflamed, but not dependent, as in trichinosis, on presence of trichina spiralis.

Pseudovariolæ, su-do-var-e'o-le. Varicella.

Pseudoxanthin, su-doks-an'thin (*pseudo*, *xanthos*, yellow). Leucomaïne found in fresh muscle-tissue in beef.

Pseudymen, su'dim-en (*pseudo*, *hymen*, membrane). False membrane.

Psidium pomiferum, sid'e-um po-mif'er-um. *Apple guava*, *Guava*, *Guayava*; ord. Myrtaceæ. This plant and *P. pyriferum* bear fruits; those of the former like apples, of the latter like pears. The apple kind has an acid flavor, the other is sweet. Of the inner pulp of either the natives of the Indies make jellies, and of the outer rind, tarts, marmalades, etc. They are somewhat astringent; this quality, indeed, exists in every part of the tree, and abundantly in the leaf-buds, which are occasionally boiled with barley and licorice as an excellent drink in diarrhœa. Simple decoction of the leaves is said to be useful in itch and most cutaneous eruptions.

Psilosis, sil-o'sis (*psiloo*, to remove the hair). Depilation.

Psilothrum, sil-o'thrum (*psiloo*, to remove the hair). Bryonia alba. Depilatory.

Psimythion, sim-ith'e-on (*psimuthion*). Plumbi subcarbonas.

Psimythus, sim-ith'us (*psimuthos*. Plumbi subcarbonas.

Psoa, so'ah. An offensive odor; a stench.

Psoadic, so-ad'ik. Relating to the loins or the psoas muscles.

Psoadotomia, so-ad-o-tom'e-ah (*psoas*, *tome*, incision). Incision into the psoas muscles.

Psoæ, so'e (*psoai*). Psoæ muscles. See *Lumbi* (loins).

Psoas abscess, so'as ab'sess (*psoai*, the loins). Lumbar abscess. **P. mag'nus**, muscle seated on the lateral parts of the lumbar portion of the vertebral column, and passing down to the superior and anterior part of the thigh. It is long, fusiform, and attached above to the body and transverse processes of the first four lumbar vertebræ and last dorsal. Below, it terminates by a very thick tendon, common to it and the iliacus muscle, which is inserted into the top of the lesser trochanter. This muscle bends the thigh upon the pelvis and carries it in rotation outward. It may also bend the pelvis on the thigh and the loins on the pelvis. It acts considerably in station and progression. **P. par'vus**, muscle situate anteriorly to the last; is long, thin, flat, and narrow, and is attached, above, to the body of the last dorsal vertebra, and, below, to the linea ileopectinea, by means of a slender tendon which furnishes two expansions—one to the iliac aponeurosis, and the other to the pelvis. This muscle bends the vertebral column on the pelvis and, reciprocally, the pelvis on the vertebral column.

Psodymus, sod'im-us (*psoai*, loins, *duo*, to mingle). Gastrodidymus.

Psoi'æ. Psoæ.

Psoïtis, so-e'tis (*psoai*, loins, psoæ muscles). Inflammation of the psoas muscles and of the parts situate before the lumbar vertebræ; accompanied, from its commencement, by considerable fever, violent pains in the affected part and in the thigh of the same side, which remains commonly half bent. Psoitis may terminate by suppuration, and form a lumbar abscess.

Psole, so'le (*psole*). Penis. Also the glans when uncovered.

Psolon, so'lon (*psole*, penis). Having the penis exposed or circumcised.

Psoloncus, so-lon'kus (*psole*, *onkos*, tumor). Swelling of the glans or of the penis generally.

Psolus, so'lus (*psolos*). One who has the glans uncovered. One who has been circumcised.

Psophometer, so-fom'e-tur (*psophos*, a sound, *metron*, a measure). Stethoscope.

Psophus, so'fus. A noise; a sound.

Psora, so'rah (*psoo*, to rub or scratch). *Itch, Scratch.* Contagious eruption of very minute pimples—pustular, vesicular, papular, intermixed, and alternating, itching intolerably and terminating in scabs. It is connected with an insect of the genus *Acarus*—the *Acarus* or *Sarcoptes* or *Sarcoptus* or *Sarcocoptes* or *Phthirium* or *Cheyletes scabiei*, *Acarus ciro*, *Itch insect*, *Itch animalcule*, *Itch mite*. The itch occupies, particularly, the spaces between the fingers, the back of the hands, wrists, elbows, axillæ, groins, hams, etc., and rarely affects the face. See *Parasites*. **P. a'gria**, psoriasis inveterata. **P. ebrio'rum**, *Drunkard's itch*, an eruption, attended by afflicting itching, to which elderly people who have been much addicted to drinking alcoholic liquors are liable. **P. lepro'sa**, psoriasis. **P. squamo'sa**, psoriasis.

Psoralea, so-ral'e-ah (*psoraleos*, scurfy or scaly, in reference to its scurfy glands or dots). Psoralea pentaphylla. **P. eglandulo'sa**, see *Psoralea glandulosa*. **P. esculen'ta**, *Breadroot*, *Indian turnip;* ord. Leguminosæ. Plant, resembling the beet in shape, which is found near the Rocky Mountains. It contains a white pulpy substance which is sweet and palatable. **P. glandulo'sa**, shrub used in Chili as a vulnerary; see *Ilex Paraguensis*. A leguminous plant called *Psoralea eglandulosa*, *P. mellitotoïdes*, growing in Ohio, Illinois, and Southern Virginia, is a gently stimulant tonic. **P. mellitotoï'des**, see *Psoralea glandulosa*. **P. pentaphyl'la**, *Mexican contrayerva;* root is little, if at all, inferior to the contrayerva in its medical properties, which are unimportant.

Psorelcoma, so-rel-ko'mah (*psora*, itch, *helkoma*, ulcer). Scabious ulcer.

Psorelcosis (*psora*, itch, *helkosis*, ulceration). Ulceration frequently occurring in scabies.

Psorenteria (so-ren-ter'e-ah) or **Psorentery**, so-ren'ter-e (*psora*, *enteron*, intestine). A peculiar condition of the solitary glands, in which they become smaller, yellowish, and prominent, the ileum appearing as if speckled with grains of sago. See *Cholera*.

Psoriasis, so-re'as-is (Eng. so-ri'as-is) (*psoriasis*). *Scaly tetter*, *Dry scale*, *Dry scall*. A cutaneous affection, consisting of patches of rough, amorphous scales; continuous or of indeterminate outline; skin often chappy. Psoriasis occurs under a considerable variety of forms. The surface under the scales is more tender and irritable than in lepra, which psoriasis, in some respects, resembles. There are many recognized varieties of psoriasis, the chief of which are *Psoriasis guttata*, *P. diffusa*, one form of which is the baker's itch, *Psoriasis pistorum* or *pistoris*, and another the washerwoman's scall or itch, *P. lotricum*, the *P. gyrata*, and *P. inveterata* or *Psora agria*. **P. annula'ris** or **circina'ta**, psoriasis extending to the periphery and disappearing in the centre. **P., buc'cal**, disease of the mucous membrane of the mouth, with white or whitish spots. **P. infan'tilis**, infantile psoriasis, affecting young infants. **P. nummula'ris**, psoriasis in patches resembling coin. **P. puncta'ta**, psoriasis in the early stage; eruptions are about the size of a pin-head. **P. rupioï'des** is nothing more than lepra alphoides, with the scales heaped up to form crusts.

Psoric, so'rik. That which has the nature of psora or itch. Medicine for curing the itch.

Psorocomium, so-ro-ko-me'um (*psora*, *komeo*, to take care of). A hospital for those affected with itch.

Psorodes, so-ro'dees. Psorous.

Psoroid, so'roid (*psora*, *eidos*, resemblance). Resembling psora.

Psorophthalmia, so-rof-thal'me-ah. Ophthalmia tarsi. **P. neonato'rum**, ophthalmia purulenta infantum.

Psorospermia, so-ro-spurm'e-ah (*psora*, *speiro*, to sow). *Rainey's capsules*, *Rainey's corpuscles* or *bodies*. Small, oval, transparent bodies found in the flesh of oxen, sheep, pigs, etc. They consist of granular matter and lie within the sarcolemma, and lead to paralysis of the hind legs and nodular eruption. Somewhat similar bodies—*psorosperms*—have been detected in the liver of rabbits, and even in that of man.

Psorospermosis follicularis, so-ro-spurm-o'sis follik-u-lah'ris. Cutaneous affection in which papules are scattered over the whole body, the condition being variously described as ichthyosis follicularis, keratosis follicularis, ichthyosis sebacea, cornea, etc., characterized by presence of unicellular parasitic organisms belonging to the animal kingdom.

Pso'rosperms. See *Psorospermia*.

Psorous, so'rus (*psora*). Appertaining or relating to itch; affected with the itch.

Psyæ, se'e. Psoæ.

Psychagoga, sik-ag-o'gah. Psychagogica.

Psychagogica, sik-ag-o'gik-ah (*psycho*, *ago*, to lead). Medicines which resuscitate when life seems extinct, as in syncope and apoplexy.

Psychal, si'kal. Psychical.

Psychalgia, sik-al'je-ah (*psycho*, *algos*, pain). Painful mental feeling in melancholia.

Psyche, sik'e. The mind; the breath.

Psycheism, sik'e-izm (*psyche*). Animal magnetism; somnolence caused by massage or manipulation.

Psychentonia, sik-en-ton'e-ah (*psycho*, *entonia*, tension). Undue mental strain or tension.

Psychiater, sik-e-at'ur. One who treats diseases of the mind—*Mad-doctor*, *Alienist physician*.

Psychiatrei'a or **Psychiatria**, sik-e-at-re'ah (*psycho*, *iatreia*, healing). Treatment of diseases of the mind.

Psychiatric, sik-e-at'rik. Relating to the treatment of diseases of the mind.

Psychi'atry. Psychiatria.

Psy'chic or **Psychical**, si'ke-kal (*psyche*, mind). *Psychal.* Relating to the mind or mental endowments. *Psychological* is not unfrequently used with the like signification. **P. or Psycholog'ical med'icine** includes the history, pathology, treatment, etc. of mental affections. **P. pal'sy** or **paral'ysis**, palsy, hysterical.

Psychlamp'sia (*psycho*, *eklampo*, to shine). Mania, so named under the view that it is a form of mental chorea.

Psycho, se'ko (*psuche*, mind, soul). In composition, the mind, the soul.

Psychocoma, sik-o-ko'mah (*psycho*, *koma*). Stupor of mind.

Psychodynamy, si-ko-di'nam-e (*psycho*, *dunamis*). Magnetism of animals.

Psychogenesis, sik-o-jen'es-is (*psycho*, *genesis*, origin). Origination and development of soul.

Psychokine'sia (*psycho*, *kinesis*, motion). Impulsive form of insanity.

Psychological, si-ko-loj'e-kal. See *Psychical*.

Psychology, si-kol'o-je (*psycho*, *logos*, discourse). A treatise on the intellectual and moral faculties. Also the intellectual and moral faculties or sphere.

Psychomotor, si-ko-mo'tor (*psycho*, *motor*, mover). Pertaining to such mental action as induces muscular action, or to cortical nerve-centres to which were assigned the production of voluntary movement. **P. cen'tres**, brain-centres immediately connected with voluntary contractions. **P. nerve'-fibres**, nerve-fibres from psychomotor centres to place of origin of motor nerves.

Psychoneuro'ses. Mental diseases.

Psychonosema, sik-on-o-se'mah (*psycho*, *nosema*, disease). See *Psychoses*.

Psychonosology, sik-o-no-zol'o-je (*psycho, nosos*, disease, *logos*, description). The doctrine of, or a treatise on, or a classification of, diseases of the mind.

Psychoösmic centre, si-ko-os'mik sen'ter. Olfactory centre.

Psychoparesis, sik-o-par'es-is (*psycho, paresis*, paralysis). Mental weakness.

Psychopathia, sik-o-path-e'ah (*psycho, pathos*, affection). Disease of the mind.

Psychopathies, si-kop'ath-ees. Psychoses.

Psychopathist (si-kop'a-thist) or **Psychopathis'ta**. One versed in diseases or affections of the mind. Alienist.

Psychop'athy. Mental disease.

Psychophysic (si-ko-fiz'ik) **law** (*psycho, phusikos*, physical). Fechner's psychophysical law. See *Law*.

Psychophysical (si-ko-fiz'ik-al) **meth'ods**. Methodical experiments for estimating the sensibility for small variations of sensation.

Psychophysics, si-ko-fiz'iks. Science of relation existing between physical stimuli and the sensations which they cause. The application of physical laws to the study of mental phenomena.

Psychophysiology, si-ko-fiz-e-ol'o-je (*psycho, physiologia*). Physical psychology. Mental physiology.

Psychorhages, sik-or-rhaj'ees (*psycho, rhage*, rupture). *Moribund.* Dying; *in articulo mortis*, "in the article of death;" *in extremis.* Also one who is dying.

Psychorhagia (si-ko-rhaj'e-ah) or **Psychorrhag'ia**. Death agony.

Psych'orrhythm. Varying mental conditions in the same individual.

Psychosensory, si-ko-sen'so-re (*psycho, sensory*). Relating to perception in one who perceives an object which is not really present.

Psycho'ses. Diseases of the mind.

Psychosin, si-ko'sin. Cerebroside found in brain-tissue.

Psychosis, sik-o'sis (*psycho, osis*). *Psychopathy.* Neurosis of the intellect; disease of the mind.

Psychotherapeia, sik-o-ther-ap-i'ah (*psycho, therapeuo*, to attend upon the sick). *Psychotherapeutics.* Protracted application of the influence of the mind on the body to the treatment of disease.

Psychotherapeutics, sik-o-ther-ap-u'tiks (same etymon). Psychotherapeia.

Psychotica, sik-o'tik-ah (*psuchoo*, to animate). Restoratives.

Psychotria crocea, sik-o'tre-ah kro'se-ah. Palicourea crocea. **P. emet'ica**, ipecacuanha.

Psychotrophum, sik-ot'ro-fum (*psycho, trepho*, to nourish). Betonica officinalis.

Psychrolusia, sik-ro-lu'se-ah (*psuchros*, cold, *louo*, to wash). Cold bath.

Psychrometer, sik-rom'et-ur (*psuchros*, cold, *metron*, measure). Hygrometer.

Psychrophobia, sik-ro-fo'be-ah (*psuchros*, cold, *phobos*, fear). Dread of cold, especially of cold water; impressibility to cold.

Psychrophore, si'kro-for (*psuchros*, cold, *phero*, to bear). Surgical instrument for applying current of cold water to the urethra.

Psychtica, sik'tik-ah (*psuchros*, cold). Refrigerants.

Psychus, sik'us (*psuchos*). Cold.

Psyclampsia, sik-lamp'se-ah. Condition in which the mind is exalted and over-active.

Psydracia, sid-rah'se-ah (*psudrax*, small blister or pustule.). The ancients sometimes used this term for pimples; at other times for vesicles. A small pustule, often irregularly circumscribed, producing but a slight elevation of the cuticle, and terminating in a laminated scab. Many of the psydracia usually appear together and become confluent, and, after the discharge of pus, they pour out a thin, watery humor, which frequently forms an irregular incrustation. Sometimes the term is limited to a psoriform eruption, which differs from itch in not originating from an insect, and is not contagious—perhaps the lichen. Authors have differed regarding its acceptation. **P. ac'ne**, acne. **P. therma'lis**, an eruption on the surface of the skin following profuse warm and hot bathing.

Psydracium, sid-ras'e-um (sing. of **Psydracia**). See *Psydracia.*

Psyllium, sil'le-um (*psulla* or *psullos*, a flea, from the likeness of the seeds). Plantago psyllium. **P. erec'tum**, Plantago psyllium.

Ptarmica, tar'mik-ah (*ptarmos*, sneezing). Achillea ptarmica. **P. monta'na**, Arnica montana. **P. vulga'ris**, Achillea ptarmica.

Ptarmicum, tar'mik-um. Errhine; sternutatory.

Ptarmus, tar'mus. Sneezing.

Ptelea, tel'e-ah. Ulmus. **P. trifolia'ta**, *Shrubby trefoil, Swamp dogwood, Stinking ash, Stinking prairie bush, Wingseed, Wafer ash, Hop tree;* indigenous; ord. Xanthoxylaceæ. Said to be possessed of antiperiodic virtues and to be anthelmintic.

Pteleorrhine, tel-e-or'rheen (*ptelea*, elm, *rhis*, nose). Condition of anterior nares when asymmetry of apertures exists.

Pterion, ter'e-on (*pteron*, feather). In craniometry, that region where the end of ala magna of the sphenoid approaches the frontal, parietal, and temporal bones.

Pteris, ter'is (*pterux*, wing, from the shape of the leaves). Polypodium filix mas. **P. aquili'na**, *Common brake* or *bracken, Female fern, Eagle fern, Bracken;* ord. Filices. Root is considered to be anthelmintic, and as efficacious as that of the male fern in cases of tapeworm. **P. palus'tris**, Asplenium filix fœmina.

Pterna, tur'nah. Calcaneum.

Pternium, tur'ne-um (*pternion*, dim. of *pterna*, the heel). Calcaneum.

Pternobates, ter-nob'at-ees (*pterna, baino*, to walk). One who walks on his heels.

Pterocarpus (ter-o-kar'pus) (*pteron*, wing, *karpos*, fruit) **erina'cea**. See *Kino.* **P. marsu'pium**, see *Kino.* **P. sandali'nus**, P. santalinus. **P. santali'nus**, *Red sanders* or *saunders tree;* ord. Leguminosæ. Red saunders wood. *Santalum* (Ph. U. S.), *Pterocarpi lignum* (Ph. Br.), *Lignum sandalinum*, is used only as a coloring matter; it gives to rectified spirit a fine deep red. The juice of this tree, like that of P. draco, affords a species of *Dragon's blood.*

Pterocaulon pycnostachyum, ter-o-kawl'on pik-no-stak'e-um (*pteron*, wing, *kaulos*, stalk, *puknos*, thick, *stachus*, ear or spike). *Blackroot.* Indigenous. Order, Compositæ. Root is used as an alterative in the form of decoction; said to possess cathartic properties.

Pterospora Andromedea, ter-o-spo'rah an-drom-e-de'ah (*pteron*, wing, *spora*, seed, in allusion to the singular wing borne by the seeds). *Scaly dragonclaw, Dragonroot, Feverroot, Albany beechdrop.* Indigenous plant, ord. Monotropeæ, found in the State of New York. The root has been regarded as an anthelmintic, diuretic, emmenagogue, etc.; is not used.

Pterygion, ter-ij'e-on (*pterugion*, dim. of *pteryx*, wing). *Ala, Web, Web eye, Pin and web.* Varicose excrescence of the conjunctiva, of a triangular shape, and commonly occurring at the inner angle of the eye, whence it extends over the cornea. Sometimes two or three pterygia occur on the same eye, and cover the whole cornea with a thick veil, which totally prevents vision. According to Scarpa, the ancients gave the name *Panniculus* to this last complication. If the pterygion cannot be dispelled by means of discutient collyria, it must be removed by the surgeon.

Pterygium, ter-ij'e-um. Pterygion; scapula. **P. dig'iti**, paronychia. **P. larda'ceum**, pinguecula. **P. pin'gue**, pinguecula. **P. un'guis**, condition in which the epidermis coats, as it were, the nail with a thin transparent layer, that might be compared to the wing of a bat.

Pterygo, ter'ig-o. In the composition of anatomical terms, relating to or appertaining to the pterygoid processes.

Pterygodes, ter-e-go'dees (*pteryx, odes*). Like a wing; alatus.

Pterygoid, ter'e-goid (*pteryx, eidos*, form). Name given to two processes at the inferior surface of the

sphenoid bone, the two laminæ which form them having been compared to wings. *Alæ* or *wings* or *processes—Processus aliformes*—have been distinguished, according to their position, into internal or entopterygoid and external. **P. ar'tery**, *Vidian artery*, arises from the internal maxillary artery, at the bottom of the zygomatic fossa, and enters the pterygoid canal with the nerve of the same name, to proceed to be distributed on the Eustachian tube and velum palati. The name pterygoid arteries is likewise given to the branches which the internal maxillary and some of its divisions, as the meningea media and posterior temporalis profunda, furnish to the pterygoid muscles behind the neck of the lower jaw. **P. bone**, sphenoid. **P. canal'**, *Vidian canal, Pterygopalatine canal*, is a narrow channel which traverses, in a direction from before to behind, the base of the pterygoid process, and gives passage to the pterygoid nerve. The foramina of the sphenoid, which terminate the canals, have the same epithets applied to them. **P. fos'sa**, depression separating the two laminæ or alæ of the pterygoid process. **P. mus'cles** are two in number: 1. *Pterygoïdeus externus* is a thick, short muscle which arises, by short aponeuroses, from the outer surface of the external ala of the pterygoid process and from the outer surface of the great ala of the sphenoid bone, and is inserted at the anterior part of the neck of the lower jaw-bone and the corresponding part of the interarticular fibrocartilage. This muscle draws the condyle of the lower jaw and the interarticular ligament forward; carries the chin forward and to the opposite side. If the two external pterygoids act together, the jaw is carried directly forward. 2. *Pterygoïdeus internus*, thick quadrilateral muscle which is attached, by short and very strong aponeuroses, above to the pterygoid fossa, whence it proceeds downward, backward, and outward, to be inserted into the inner surface of the ramus of the lower jaw, near its angle. It raises the lower jaw and carries it a little forward. It also performs the grinding motion. **P. nerves**, two in number: I. *Pterygoid* or *Vidian nerve* arises from the posterior part of the spheno-palatine ganglion, traverses the Vidian canal of the sphenoid, and, beyond, divides into two filaments: 1. *Superior cranial, Nervus superficialis* or *petrosus*, which ascends into the cranium, and enters the hiatus of Fallopius to unite with the facial nerve. 2. *Inferior* or *Carotid, Nervus profundus* or *major*, which traverses the carotid canal, and unites with the ascending branches of the superior cervical ganglion of the trisplanchnic. II. *Pterygoid nerve*, properly so called, *Nervus musculi pterygoïdei*, is given off by the inferior maxillary branch of the fifth pair. **P. notch**, incisura pterygoidea in sphenoid bone, into which the processus pyramidalis of the palate-bone is inserted. **P. pro'cesses**, see *Pterygoid*. **P. ridge**, infratemporal ridge on outer surface of alisphenoid. **P. tu'bercle**, tubercle on inner surface of inferior maxillary, to which internal pterygoid muscle is attached.

Pterygoï'deus. Pterygoid. **P. pro'prius**, occasional muscle running from alisphenoid to tuberosity of palate. **P. ter'tius**, occasional muscular band running from interarticular cartilage to temporomaxillary articulation.

Pterygoma, ter-e-go'mah (*pteryx, oma*, projecting or pendulous body). Swelling of the vulva, preventing coition.

Pterygomaxillary, ter-ig-o-maks'il-la-re. Relating to pterygoid processes and to maxillary bones. **P. fis'sure**, fissura spheno-palatina. **P. fold**, formed in the mouth by the pterygomaxillary ligament, behind the last molar tooth. **P. lig'ament**, tendinous band of bucco-pharyngeal fascia, extending from apex of internal pterygoid plate to posterior end of internal oblique line of lower jaw. **P. mus'cles**, pterygoid muscles.

Pterygopalatal (ter-ig-o-pal'a-tal) **pro'cess.** Palatal process.

Pterygopalatine, ter-ig-o-pal'a-teen. That which belongs to the pterygoid process and palate. **P. ar'tery**, see *Pharyngeal artery*. **P. canal'**, a small canal formed by the internal ala of the pterygoid process and the palate-bone; gives passage to the vessels of the same name.

Pterygopharyngeus, ter-e-go-far-in-ja'us. Constrictor pharyngis.

Pterygosalpingo-hyoïdeus, ter-e-go-sal-pin'go-he-o-e'da-us. Petrohyoid muscle.

Pterygosalpingoï'deus. Occasional muscular band of tensor palati, attached to a process of sphenoid bone.

Pterygosalpingo-staphylinus internus, ter-e-go-sal-pin'go-staf-el-e'nus in-ter'nus. Levator palati.

Pterygospinosus, ter-e-go-spin-o'sus. Muscular fascicle, occasionally met with, running between spine of sphenoid and posterior edge of external pterygoid plate.

Pterygospi'nous ligament. Fibrous band extending from spine of sphenoid to outer pterygoid plate.

Pterygostaphilinus, ter-e-go-staf-il-e'nus (*pteryx, staphule*, uvula). Tensor palati; circumflexus. **P. externus**, circumflex muscle of the palate. **P. inter'nus**, levator palati.

Pteryx, ter'iks (*pterux*). Wing. See *Ala*.

Ptilos (til'os) or **Ptilosis**, til-o'sis (*ptilos, ptilosis*). Falling out of the eyelashes.

Ptisana, tiz'an-ah (*ptisane*, peeled barley and decoction of the same). See *Tisane*. **P. commu'nis**, decoctum hordei compositum. **P. Hippocrat'ica**, decoctum hordei.

Ptis'sana (*ptissane*). Tisane.

Ptochiater, tok-e-at'ur (*ptochos*, poor, *iatros*, physician). Physician to the poor or to an establishment for the poor.

Ptochiatria, tok-e-at-re'ah. Practice among the poor. Also an institution for the treatment of the diseases of the poor.

Ptochocomium, to-ko-ko-me'um (*ptochos*, poor, *komeo*, to take care of). Almshouse; hospital for the poor.

Ptochodochium, to-ko-do-ke'um (*ptochos*, poor, *dechomai*, to receive). Ptochocomium.

Ptochotropheum, to-ko-tro-fe'um (*ptochos*, poor, *trepho*, to nourish). Ptochocomium.

Ptoma, to'mah (*ptoma*). Cadaver.

Ptomaïnæmia, to-mah-in-e'me-ah (*ptoma*, corpse, *haima*, blood). Blood containing ptomaïnes.

Ptomaïnes, to'ma-eens (*ptoma*, a corpse). Putrefactive alkaloids; name given to certain chemical compounds—alkaloid bodies which are produced from animal or vegetable substances during putrefaction; that is, formed by action of bacteria on organic matter. Ptomaïnes constitute a transition stage between an organic and an inorganic condition of matter in process of putrefaction. The greater number of ptomaïnes contain only C, H, and N. Most of them exert little or no poisonous influence. The following table by Vaughan and Novy presents a complete list of the ptomaïnes described up to the present date.

TABLE OF PTOMAINES.

Formula.	Name.	Discoverer.	Physiological action.*
$C\ H_5\ N$	Methylamine.	Bocklisch.	Non-poisonous.
$C_2\ H_7\ N$	Dimethylamine.	Brieger.	" "
$C_3\ H_9\ N$	Trimethylamine.	Dessaignes.	" "
$C_2\ H_5\ N$	Spermine (?)	Kunz.	" "
$C_2\ H_7\ N$	Ethylamine.	Hesse.	" "
$C_4\ H_{11}N$	Diethylamine.	Bocklisch.	" "
$C_6\ H_{15}N$	Triethylamine.	Brieger.	" "
$C_3\ H_9\ N$	Propylamine.	"	
$C_4\ H_{11}N$	Butylamine.	Gautier and Mourgues.	Poisonous (?).
$C_5\ H_{11}N$ (?)	Tetanotoxine.	Brieger.	Poisonous.
$C_5\ H_{13}N$	Amylamine,	Hesse.	"
$C_6\ H_{15}N$	Hexylamine.	"	"
$C_7\ H_{11}N$	Di-hydrolutidine.	Gautier and Mourgues.	"
$C_8\ H_{11}N$	Collidine (?).	Nencki.	

* Only those bases are here denoted as poisonous which possess decided toxicity.

TABLE OF PTOMAINES (*Continued*).

Formula.	Name.	Discoverer.	Physiological action.*
$C_8H_{11}N$	Pyridine base (?).	O. de Coninck.	
$C_8H_{13}N$	Hydrocollidine(?).	Gautier and Etard.	Poisonous.
$C_9H_{13}N$	Parvoline (?).	Gautier and Etard.	
$C_{10}H_{15}N$	Unnamed.	Guareschi and Mosso.	Poisonous.
$C_{10}H_{15}N$	Pyridine base (?).	O. de Coninck.	
$C_{10}H_{17}N$	Hydrocoridine (?).	Griffiths.	
$C_{32}H_{31}N$	Unnamed.	Delézinier.	
$C_2H_8N_2$	Ethylidenediamine (?).	Brieger.	Poisonous.
$C_3H_8N_2$	Trimethylenediamine (?).	"	"
$C_4H_{12}N_2$	Putrescine.	"	Not very poisonous.
$C_5H_{14}N_2$	Cadaverine.	"	Not very poisonous.
$C_5H_{14}N_2$	Neuridine.	"	Non-poisonous.
$C_5H_{14}N_2$	Saprine.	"	" "
$C_7H_{10}N_2$	Unnamed.	Morin.	" "
$C_{10}H_{26}N_2$(?)	Susotoxine.	Novy.	Poisonous.
$C_2H_7N_3$	Methyl-guanidine.	Brieger.	"
$C_{19}H_{27}N_3$	Morrhuine.	Gautier and Mourgues.	Diuretic, etc.
$C_{12}H_{20}N_4$	Unnamed.	Oser.	
$C_{17}H_{38}N_4$	"	Gautier and Etard.	
$C_{25}H_{32}N_4$	Aselline.	Gautier and Mourgues.	Poisonous.
$C_5H_{13}NO$	Neurine.	Brieger.	"
$C_8H_{11}NO$	Mydine.	"	Non-poisonous.
$C_6H_{11}NO_2$	δ-amido-valerianic acid.	E. and H. Salkowski.	" "
$C_5H_{15}NO_2$	Choline.	Brieger.	Poisonous.
$C_6H_{13}NO_2$	Mydatoxine.	"	"
$C_6H_{13}NO_2$	Unnamed.	Brieger, 1888. (tetanus cult).	Non-poisonous.
$C_6H_{15}NO_2$	Mytilotoxine.	Brieger.	Poisonous.
$C_7H_{17}NO_2$	Gadinine.	"	"
$C_7H_{17}NO_2$	Typhotoxine.	"	"
$C_7H_{17}NO_2$	Unnamed.	"	"
$C_{14}H_{14}NO_2$	Pyocyanine.	Ledderhose.	Non-poisonous.
$C_5H_{13}NO_3$	Betaine.	Brieger.	" "
$C_5H_{15}NO_3$	Muscarine.	"	Poisonous.
$C_9H_{13}NO_3$	Morrhuic acid.	Gautier and Mourgues.	
$C_5H_{12}N_2O_4$	Unnamed.	Pouchet.	Poisonous.
$C_{13}H_{30}N_2O_4$	Tetanine.	Brieger.	"
$C_{14}H_{20}N_2O_4$	Unnamed.	Gaureschi.	
$C_7H_{18}N_2O_6$	"	Pouchet.	Poisonous.
	"	"	"
	Tyrotoxicon.	Vaughan.	"
	Mydaleine.	Brieger.	"
	Spasmotoxine.	"	"
	A diamine (?).	" (tetanus cult).	"
	Peptotoxine.	Brieger.	Poisonous.
	Phlogosine.	Leber.	Inflammatory.

* Only those bases are here denoted as poisonous which possess decided toxicity.

Some of these products are narcotic, others resemble strychnine in their action. The former have been called *Toxines*.

Ptomat'ropines. Cadaveric ptomaïnes.

Ptosis, to'sis (*ptosis*). Prolapsus. **P. bul'bi oc'uli**, exophthalmia. **P. diplo'pia**, synechia posterior. **P. i'ridis**, prolapsus of the iris through a wound of the cornea; known by a blackish tubercle, which projects a little from the cornea in various forms, and which, owing to its supposed resemblance to the head of a fly, has been called *Myiocephalon* and *Myocephalon* (*muia*, fly, *kephale*, head). **P. pal'pebræ**, falling down of the upper eyelid over the eye.

Ptotostereoscope, to-to-ste're-o-skope (*ptotos*, fallen, *stereos*, solid, *skopeo*, to see). Apparatus for ascertaining the presence of binocular vision.

Ptyal'agogue (*ptyalum, ago*, to lead). Sialogogue.

Ptyalin, ti'a-lin (*ptyalum*). Ferment found in saliva, exerting a special action on starchy and saccharine matters. See *Saliva, Ferments*, and *Enzymes*.

Ptyalism, ti'al-izm. Salivation.

Ptyalismus, te-al-iz'mus. Salivation. **P. acu'tus melli'tus**, see *Salivation*. **P. acu'tus sympathet'icus**, see *Salivation*. **P. hydrargyra'tus**, salivation, mercurial. **P. iners'**, slavering. **P. melli'tus**, secretion of sweet-tasted saliva. **P. mercuria'lis**, salivation, mercurial. **P. pyros'icus**, pyrosis.

Pty'alized. Salivated.

Ptyalocele, ti-al-o-se'le (Eng. ti'al-o-seel) (*ptualon*, saliva, *kele*, tumor). See *Ranula*.

Ptyalogogue, ti-al'o-gog (*ptyalum, ago*, to drive). Sialogogue. A medicine that produces increased flow of saliva.

Ptyalum, te'al-um (*ptualon*). Saliva.

Ptyelum, te'a-lum (*ptualon*). Saliva; sputum.

Ptysis, te'sis (*ptusis*). Exspuition.

Ptysma, tis'mah. Saliva; sputum.

Ptysmagogue, tis'ma-gog (*ptysma, ago*, to drive). Sialogogue.

Ptysmatischesis (tis-mat-is'kes-is) or **Ptysmatos'chesis** (*ptysma, ischo*, to retain or restrain). Suppression of pulmonary expectoration.

Pu'bens or **Pu'ber.** At the age of puberty.

Pubeot'omy. Pubiotomy.

Puberal, pu'be-ral. *Puberic.* Relating or appertaining to the age of puberty, as puberal disease.

Puberic, pu'ber-ik. Puberal.

Pubertas, pu'ber-tas. Puberty.

Puberty, pu'ber-te (*pubesco*, to begin to have hair on the chin and sexual organs). *Pubescence.* Period of life at which young people of both sexes are pubescent or nubile. The period varies somewhat in different climates and in different individuals in the same climate. See *Nubile*.

Pubes, pu'bees. *Pubic region.* The middle part of the hypogastric region; so called because it is covered with hair, in both sexes, at the period of puberty. The hair is also called *Pubes, Lanugo*, or *Pili pudendorum, Plantarium*, and *Feminal*. Of old, *Epictenion* and *Pubertas* signified the same. Puberty. The pubic bone. See *Tressoria* and *Pubis os*.

Pubescence, pu-bes'sence. Puberty.

Pubescent, pu-bes'sent. See *Puberty*.

Pubiæus, pu-be-e'us. Pubic.

Pubic, pu'bik. *Pubian.* Belonging to or concerning the pubis. **P. arch**, *Arch of the pubis.* The arch at the anterior part of the inferior circumference of the pelvis. It is more expanded in the female than in the male, to correspond with the additional functions which she has to execute. **P. ar'tery**, branch from pubic artery anastomosing with branch from obturator. **P. articula'tion** results from the junction of the ossa pubis. The medium of union is cartilage. **P. bone**, pubis os. **P. lig'aments** are two very solid fibrous fasciæ situate before and beneath the symphysis pubis, which they strengthen. The one is called the anterior pubic ligament, the other the inferior or subpubic. **P. re'gion**, region of the pubes. **P. vein**, anastomotic branch to external iliac vein from obturator vein.

Pubiococcygeo-annularis, pu-be-o-kok-se-ge'o-annu-lah'ris (*pubis, coccyx, annularis*, ring-shaped). Levatores ani and ischio-coccygei muscles.

Pubio-infra-umbilicalis, pu'be-o-in'frah-um-bil-e-kal'is. Pyramidalis abdominis.

Pubiosternalis, pu-be-o-stur-nal'is. Rectus abdominis.

Pubiotomy, pu-be-ot'o-me (*pubes, tome*, incision). Operation of division of the pubis in order to increase the diameter of the pelvis at time of delivery. Modification of the operation of symphyseotomy.

Pu'bio-umbilical'is. Pyramidalis abdominis.

Pu'bis. Pubes, pubis os. **P. os**, *Pubic bone, Sharebone, Barbone.* The anterior part of the os innominatum; so called because it corresponds to the genital organs and pubic region.

Publicæ (pub'le-se) **par'tes** (public parts). Those organs are so called the object of whose functions is the nutrition of all the others. Such are the digestive and respiratory organs.

Pubocavernosus, pu-bo-kav-ur-no'sus. Separate slip of ischio-cavernosus arising from pubic arch.

Pubococcygeal rhaphe, pu-bo-kok-se-ge'al rhaf'e. Rhaphe due to union of levatores ani.

Pubococcygeus, pu-bo-kok-se-je'us (*pubis, coccyx*). Relating to pubic bone and coccyx; muscle so called.

Pubofemoral (pu-bo-fem'o-ral) **lig'ament.** Accessory bundle of fibres which help to form the hip-joint capsule.

Pubo-ischiatic (pu'bo-is-ke-at'ik) **bone** (*pubis, ischium*). Ischium and pubis as one.

Puboperinea'lis. Occasional muscular strip extending from pubis to deep perineal fascia.

Puboperitonealis, pu-bo-per-e-to-ne-al'is. Pubotransversalis.

Puboprostatic (pu-bo-pros-tat'ik) **lig'aments.** Ligaments running from back of pubis to prostate gland and neck of bladder.

Pubopudendus, pu-bo-pu-den'dus. Occasional muscular slip running from pubis and combining with ischiopubicus.

Puborectalis, pu-bo-rek-tal'is. Anterior fibres of sustentator recti.

Pubotransversalis, pu-bo-trans-ver-sal'is. Thin muscular slip arising from upper edge of superior pubic ramus and inserted into transversalis fascia.

Pubo-ure'thral mus'cle. Fibres from posterior part of pubis to prostate, or to base of bladder in female.

Pubo-urethralis, pu'bo-u-re-thral'is. Occasional muscle passing from pubis to urethra.

Puboves'ical fos'sa. Abdominovesical pouch. **P. lig'aments,** puboprostatic ligaments. **P. mus'cles,** fibres of external longitudinal muscular layer of bladder, arising from posterior surface of pubis.

Puccine, puk-seen'. Alkaloid in sanguinaria.

Puccinia favi, puk-sin'e-ah fav'e (after Th. Puccini, professor of anatomy in Florence). See *Fungus, Porrigo favosa,* and *Parasites.*

Puccin'ic acid. Acid in sanguinaria.

Puccoon, puk-ko-on'. Sanguinaria Canadensis. **P., red,** Sanguinaria Canadensis. **P., yel'low,** Hydrastis Canadensis.

Pucella, pu-sel'lah. Virgin.

Pucha-pat. Pogostemon patchouli.

Puchu'ry. See *Pichurim beans.*

Puchy'ry. See *Pichurim beans.*

Pud'dinggrass. Mentha pulegium.

Pud'dingpipe tree. Cassia fistula.

Pudenda, pu-den'dah (pl. of **Pudendum**) (*pudeo,* to be ashamed). Genital organs. **P. mulieb'ria,** external genital organs of woman; vulva. **P. viro'rum,** male genital organs.

Pudendagra, pu-dend'ag-rah (*pudenda, agra,* seizure). According to some, this term means pain in the genital parts, *Dolor pudendorum, Ædœodynia;* according to others, it is synonymous with syphilis. **P. pru'riens,** prurigo of the female genital organs.

Pudendal (pu-den'dal). Relating or appertaining to the pudenda. **P. hæmat'ocele,** tumor consisting of collection of clotted blood in one labium or into tissue in immediate vicinity of vaginal wall. **P. her'nia,** hernia which descends between the vagina and ramus ischii, and forms an oblong tumor in the labium; traceable in the pelvis as far as the os uteri. **P. lon'gus infe'rior,** see *Sciatic nerve, lesser.* **P. nerve, infe'rior,** nervus cutaneus perinei; branch of small sciatic. **P. plex'us of nerves,** inferior part of sacral plexus. **P. plex'us of veins,** situate behind pubis, around urethra and neck of bladder.

Pudenda'lis. Relating to the pudendum.

Pudendum (pu-den'dum), **fe'male.** Vulva. **P. mulieb're,** vulva.

Pudendus, pu-den'dus. Pudic.

Pudibil'ia. Male genital organs.

Pudic, pu'dik (*pudeo,* to be ashamed). That which causes shame. Name given to the genital organs, as well as to different other parts. **P. ar'teries** are distributed to the organs of generation. They are: 1. *Internal pudic, Genital artery,* which is furnished by the hypogastric, and divides into two branches: the one —the inferior or perineal—which gives off the inferior hemorrhoidal and the artery of the septum; the other—the superior—which furnishes the transverse perineal artery, and divides into two branches—the artery of the corpus cavernosum and the dorsalis pedis. This latter, in the female, has the name dorsalis clitoridis. 2. The *External pudic arteries* are two in number. The one is superficial or subcutaneous, and the other deep-seated or subaponeurotic. They are given off from the femoral artery or some one of its branches, and are distributed to the external parts of generation. **P. nerve,** branch furnished by the sacral plexus, which is distributed to the genital organs, and especially to the penis in man and the clitoris in woman. **P. vein, inter'nal,** similar distribution as internal pudic artery. **P. vein, superfic'ial exter'nal,** tributary of external saphenous, collecting blood from the genitals and inner part of thigh.

Puella, pu-el'lah. Girl.

Puellus, pu-el'lus (modified from *puerulus*). Little boy.

Pu'er. Boy; child; infant.

Puera, pu'er-ah. Girl.

Puerile, pu'er-il (*puer,* child). Appertaining or relating to childhood. **P. respira'tion,** term applied to the respiration when it is heard loud through the stethoscope, as in healthy children.

Puerilitas, pu-er-il'it-as. Dementia of the aged.

Pueritia, pu-er-ish'e-ah. See *Age.*

Puerpera, pu-ur'per-ah (*puer, pario,* to bring forth). *Lying-in woman;* female in childbed; one recently delivered.

Puerperal, pu-ur'pe-ral. Relating to parturition and its consequences. **P. colpi'tis,** vaginitis of lying-in women. **P. convul'sions,** eclampsia gravidarum et parturientium. **P. diabe'tes,** d. occurring sometimes in pregnancy and ceasing after delivery. **P. fe'ver,** any fever occurring during the puerperal state. *Childbed fever.* Most commonly restricted to a malignant variety of peritonitis. **P. ma'nia,** delirious condition of females near the end of pregnancy. **P. peritoni'tis,** peritonitis occurring during the childbed state; see *P. fever.* **P. septicæ'mia,** puerperal fever. **P. state,** state of a female in and directly after childbirth. **P. tet'anus,** dangerous tetanic state of the body, not often happening in the puerperium.

Puerperium, pu-ur-per'e-um. Childbed state.

Puerperogonorrhœal salpingitis, pu-ur-pe-ro-gon-or-rhe'al sal-pin-je'tis. Inflammation of Fallopian tubes with gonorrhœal matter, happening during the puerperal state.

Puerperopyra, pu-er-pur-op'ir-ah (*puerperium,* childbirth, *pur,* fever). Puerperal fever.

Puerperous, pu-er'per-us. Parturient.

Puerpery, pu-er'pe-re (*puerperium,* childbirth). Puerperal state.

Puff ([D.] *poffen,* to blow). Lycoperdon. **P., veiled,** see *Cavernous respiration.*

Puff'ball. Lycoperdon; Leontodon taraxacum.

Puffiness, puff'e-ness. Soft intumescence without redness, which may be partial or general, and be produced by accumulation of serous fluid, extravasation of blood, effusion of air into the subcutaneous areolar tissue, etc. Puffiness is most frequently seen in the face and legs, and sometimes appears around a wound.

Pugillus, pu-jil'lus (dim. of **Pugnus,** fist). The quantity of any substance which may be taken with the ends of two or three fingers. The eighth part of a handful.

Pug'nus. Manipulus; a handful.

Pug'teeth. Canine teeth.

Puke. Emetic.

Puke'weed. Lobelia inflata.

Pu'king. Vomiting; regurgitation. **P. fe'ver,** milk sickness.

Pulegium, pu-le'je-um (*pulex,* flea, to which the odor is disagreeable). Mentha pulegium. **P. cervi'num,** Mentha cervina.

Pulex, pu'leks. *P. irritans* or *Common flea.* Parasitic insect found on the bodies of man and animals. See *Parasites.* **P. pen'etrans,** chique. **P. vulga'ris,** pulex.

Pulicaria dysenterica, pu-lik-ah're-ah dis-en-ter'-

ik-ah (*pulex*, flea, to which the odor is disagreeable). Inula dysenterica.

Pulicaris, pu-le-kah'ris. Epithet given to cutaneous eruptions resembling flea-bites, and also to diseases in which such eruptions occur. **P. her'nia**, Plantago psyllium.

Pul'ley. Trochlea.

Pullulation, pul-u-la'shun (*pullulo*, *pullulatum*, to bud), Budding. Morbid production which buds, as it were—condyloma, for example.

Pul'mo (by transposition of the letter *l* from *pleumon*). The lung. See *Lung*.

Pulmocardiac region, pul-mo-kar'de-ak re'jun (*pulmo*, lung, *kardia*). That part of the thorax where the heart is covered by a thin layer of lung.

Pulmogas'tric re'gion (*pulmo*, lung, *gaster*, stomach). That region of the thorax where the edge of the left lung projects over the stomach and spleen.

Pulmohepat'ic re'gion. That part of the thorax where an edge of lung is covered by liver.

Pulmometer, pul-mom'e-tur (*pulmo*, *metron*, measure). Spirometer.

Pulmometry, pul-mom'e-tre. See *Spirometer*.

Pulmonaria, pul-mon-ah're-ah. *Lungwort, Spotted Lungwort, Jerusalem cowslip, Jerusalem sage, Spotted comfrey;* ord. Boraginaceæ. Leaves of this plant have been used as demulcents and pectorals, partly from their resemblance to lungs—hence the name, from pulmo, lung—and partly because they have a slightly mucilaginous taste; pneumonia. **P. arbo'rea**, Lichen pulmonaris. **P. Gal'lica**, Hieracium murorum. **P. officina'lis**, pulmonaria. **P. Virgin'ica**, Mertersia Virginica.

Pul'monary (*pulmo*, lung). Relating or belonging to the lungs. **P. ar'tery** arises from upper and left part of the right ventricle of the heart, whence it passes obliquely upward and to the left side, dividing into two trunks opposite the second dorsal vertebra, one passing to each lung. At its origin it is furnished with three sigmoid or semilunar valves. It carries the blood to the lungs for aëration. **P. car'tilage**, second costal cartilage of left side. **P. consump'tion**, phthisis pulmonalis. **P. glands**, lymphatic glands on bronchioles in lung-substance. **P. groove**, groove inside of thorax on both sides of spinal column. **P. lob'ules**, see *Lung*. **P. mat'ter, black**, see *Lung*. **P. mur'rain**, contagious pleuro-pneumonia. **P. nerves**, branches from pneumogastric and sympathetic nerves going to root of lungs. **P. pleu'ra**, pleura pulmonalis. **P. plex'us**, considerable nervous network, situate behind the bronchia, which is formed by the filaments of the pneumogastric nerve or par vagum, and by other filaments from the inferior cervical ganglion and the first thoracic ganglia. This plexus forms a kind of areolar web, with numerous meshes of different sizes, in which vessels are lodged, surrounded by much areolar tissue. The plexus sends filaments to the bronchia, which they accompany to their extremities. **P. si'nuses**, sinuses of Valsalva in pulmonary artery. **P. valves**, the three semilunar valves at opening of pulmonary artery. **P. veins**, these arise in the lungs from the final terminations of the arteries of the same name, collect in ramusculi and rami of greater and greater size, and ultimately unite in four trunks, two of which issue from each lung to open into the left auricle of the heart. The pulmonary veins have the same structure as the other veins of the body, from which they differ in conveying arterial blood, as the pulmonary artery differs from the others in conveying venous blood. They carry the blood back to the heart after aëration. **P. ves'icles**, see *Pulmo*.

Pulmones tartarizati, pul-mo'nees tar-tar-iz-at'e. Lithiasis pulmonum.

Pulmonia, pul-mo'ne-ah. Phthisis pulmonalis; pneumonia.

Pulmonic, pul-mon'ik. *Pneumonic.* Affected with phthisis; one laboring under disease of the lungs; anything relating to or belonging to the lungs; medicine for the lungs. **P. circula'tion**, pulmonary circulation.

Pulmonitis, pul-mon-e'tis (*pulmo*, *itis*). Pneumonia.

Pulp. Soft and parenchymatous parts of vegetables reduced to paste. Applied, also, to parts of the human body which have the characters of, or resemble, pulp. **P., atherom'atous**, see *Atheroma*. **P., bran'-like**, see *Atheroma*. **P. of the fin'gers**, fleshy extremity of the fingers. **P. of the tooth**, dental pulp.

Pul'pa. Pulp. See *Spleen*. **P. cas'siæ**, see *Cassia fistula*. **P. cerebra'lis**, substance of brain. **P. den'tis**, dental pulp. **P. ex fo'liis coni'i macula'ti**, pulp of conium. **P. pi'li**, see *Hair*. **P. pru'ni**, see *Pruni pulpa*. **P. pruno'rum sylves'trium con'dita**, conserva pruni sylvestris. **P. tamarin'di**, see *Tamarindi pulpa*. **P. tes'tis**, parenchyma of the testis; see *Testicle*.

Pulpamen, pul-pah'men. Pulp.

Pulpation, pul-pa'shun. Pulping.

Pulpefac'tion. Pulpy degeneration. See *Pulpy*.

Pulpezia, pul-pe'ze-ah. Apoplexy.

Pulp'ing (*pulp*). *Pulpation.* Operation of reducing certain vegetable substances to a pulp. They are bruised in a mortar, and then passed through a hair sieve by the aid of a wooden spatula called a *Pulper*.

Pulpitis, pulp-e'tis. Inflammation of the pulp of a tooth.

Pulpy, pul'pe (*pulpa*). Full of pulp. **P. degenera'tion or disease**, *Pulpefaction;* affection of the synovial membrane, in which the different points of bone, usually distinguishable, are obscured, and a doughy or pulpy sensation is detected by palpation over the articular ends of the bones, of the patella especially. When connected with syphilis—*syphilitic joint of Colles*—it is often complicated with periosteal thickening. Such pulpy or gelatinous degeneration was formerly described as *white swelling*.

Pulque, pool'ka. See *Agave Americana*.

Puls ex o'vis et lac'te (pulp of eggs and milk). Oögala.

Pulsatile, puls'at-il (*pulso*, to throb). Pulsating; beating.

Pulsatilla, pul-sat-il'lah (Ph. U. S.). Herb of Anemone pulsatilla, A. pratensis, and A. patens. Used in amenorrhœa, dysmenorrhœa, ophthalmia, and catarrh of nose, throat, and respiratory passages. **P. pa'tens**, Anemone patens. **P. praten'sis**, Anemone pratensis. **P. vulga'ris**, Anemone pulsatilla.

Pulsating (pul'sa-ting). Throbbing or beating like a pulse. **P. tu'mors.** See *Tumors, pulsating*.

Pulsatio, pul-sah'she-o (*pulso*, *pulsatum*, to agitate). Pulsation. **P. cor'dis**, palpitation.

Pulsation, pul-sa'shun (*pulso*, *pulsatum*, to beat). Beating of the heart and arteries. Also the beating felt in an inflamed part. **P., aor'tic**, peculiar functional affection, characterized by violent throbbing, in the abdominal portion of the aorta especially, which may be confounded with aneurism; occurring in uterine disease, structural gastroduodenal affections, etc. **P., ret'inal**, pulsation of vessels noticed in the eye, due to some interference with the relative pressure within and without the eye. **P., ve'nous**, see *Pulsus venarum*.

Pulsativus, pul-sat-e'vus. Throbbing.

Pulsatory, pul'sa-to-re. Throbbing.

Pulse (*pello*, *pulsum*, to beat). Beating of the arteries, produced by the afflux of the blood propelled by the heart in its contractions. For the sake of convenience we choose the radial artery at the wrist to detect the precise character of the pulse. These characters relate to the number of pulsations in a given time; to their degrees of quickness, hardness, and strength; to the equality or inequality either of the pulsations themselves or of their intervals; to the development or fulness of the artery; and to the different impressions it may produce on the finger. The following table exhibits the effect of age upon the number of pulsations per minute. It will be noticed that at birth and in early life the contractions and dilatations of the heart take

place with much greater rapidity than at later periods:

Ages.	Number of Pulsations per Minute.		
	Heberden.	Sömmering.	Müller.
In the embryo	. . . . .	. . . . .	150
At birth	130 to 140	. . . . .	150
One month	120		
One year	120 to 108	120	115 to 130
Two years	108 to 90	110	100 to 115
Three years	90 to 80	90	90 to 100
Seven years	72	. . . . .	85 to 90
Twelve years	70		
Puberty	. . . . .	80	80 to 85
Adult age	. . . . .	70	70 to 75
Old age	. . . . .	60	50 to 65

Various interesting facts may be mentioned in regard to the pulse (Vierordt): While sitting the pulse is about 3 beats faster than while lying down; while standing the pulse is about 9 beats faster than while sitting (Guy); and about 14 (2–34) faster than while lying down (Schapiro). Exceptions, even the reverse of this rule, are not infrequent. In six children from 5–14 years of age Heilbut found a middle difference between lying down and sitting of 18.6. Easy exercise increases the pulse 10–20 beats; rapid running, to 140 and more; the increase in rapidity can be noticed for ½ to 1 hour (Lichtenfels and Fröhlich). Ingestion of food increases frequency of pulse; dinner increases pulse from 8–20 beats. Dinner without wine increases the beats 13.1 (Vierordt); with wine, 17.5. Omission of dinner decreases the pulse 1–2 beats. After ten hours' fasting, early in the morning, Lichtenfels and Fröhlich observed 69.3 beats; eight hours afterward, 50; four hours later, 53.3. Rise of barometer 1½ ctm. increases the frequency of the pulse 1.3 per minute (Vierordt). In the morning the frequency of the pulse is increased after breakfast; decreases until dinner; increases then somewhat; decreases after 1½–2 hours until supper; finally increases a little. In the morning the pulse is 8 beats faster than at night (Guy, from observations on himself). In nine sick women (average age 25.4) Heilbut found a difference of 3.6 beats. The difference can also be observed in entirely healthy children (Knox, Guy). The pulse is slower during sleep, particularly in children. Vogel found the average in twenty-four sleeping children, raised at the breast, to be 109 beats. According to Trousseau:

	Sleeping.	Waking.
4–6 months	140	121
6–21 months	128	112

It does not appear that the pulse of the aged is less frequent, but the contrary. In general it is more frequent in females and in irritable persons than in males and those of an opposite temperament. In the healthy state the pulse, besides having the proper number of pulsations, is neither hard nor unusually soft; it is moderately developed, of a medium strength, and perfectly equal both as regards the pulsations and their intervals. In disease it wanders, more or less, from these physiological conditions. The different characters of the pulse that have been recorded are remarkably numerous.

Pulse, allorhyth'mic. Variation in the interval, or disturbance of the usual rhythmic regularity, of the pulse. **P., anacrot'ic,** first wave is not the highest, ascending limb of pulse-curve being notched. **P., ar'dent,** one in which the pulse seems to raise itself to a point in order to strike the finger. **P., bigem'inal,** two regular beats followed by a longer pause. **P. breath,** see *Breath, pulse.* **P., cap'illary,** observed in dilatation of capillaries and when blood-pressure is increased. **P., cap'rizant,** *Goatleap pulse,* seems to leap like a goat, an imperfect dilatation of the artery being succeeded by a fuller and a stronger one. **P., catacrot'ic,** elevation in line of descent in the sphygmographic tracing. **P. clock,** instrument which indicates tension, diameter of artery, and volume of pulse. **P., com'plex,** has the character of several critical pulses united. **P., contract'ed,** pulsations are narrow, deep, and slightly hard; see *Concentration.* **P., convul'sive,** unequally frequent or unequally hard; resembling the irregular pulsation of a muscular fibre in a state of convulsion. **P., cord'y,** pulse, tense. **P., Cor'rigan's,** P., water-hammer. This pulse indicates aortic regurgitation; large quick pulse, which collapses suddenly. **P., crit'ical,** pulse which, after having possessed the characters of irritation, becomes free, open, soft, etc. **P. curve,** sphygmographic or sphygmoscopic tracing of the pulse; see *Sphygmograph.* **P., de'curtate,** pulsus myurus; see also *Myurus.* **P., deep,** cannot be felt without difficulty, and without strong pressure by the finger. **P., defic'ient,** *Flickering pulse,* which seems every instant about to cease. **P., depressed',** deep and weak. **P., devel'oped,** is broad, full, strong, and frequent. **P., dicrot'ic** or **dicro'tal,** that in which the finger is struck twice at each pulsation—once lightly, the other time more strongly. **P., e'qual,** pulsations resemble each other, and return at equal intervals. **P., fe'brile,** very frequent. **P., fee'ble,** *Weak pulse;* strikes the finger feebly. **P., fil'iform,** *Thready pulse;* resembles a thread slightly vibrating. **P., flick'ering,** deficient pulse. **P., form'icant** resembles, by being small and scarcely perceptible, the motion of an ant; met with especially in fatty degeneration of the heart. **P., fre'quent,** strikes more frequently than usual in a given time. **P., full,** gives the notion of vascular depletion. **P., goat'leap,** P., caprizant. **P., gut'tural,** has been supposed to indicate the termination of affections of the throat. **P., hard,** the pulp of the finger seems to yield to the pulsation. **P., hec'tic,** weak, frequent pulse observed in hectic fever. **P., hemorrhoid'al,** critical pulse, announcing the appearance of the hemorrhoidal flux; is described as unequal, the pulsations not being alike in force, and still less the intervals. **P., high-ten'sion,** one in which the force of the pulsation is relatively increased, as in hypertrophy of the heart, apoplexy, tumors, certain neuroses, action of some medicines, etc. **P., hyperdic'rotous,** see *Hyperdicrotous.* **P., hypodic'rotous,** see *Hyperdicrotous.* **P., intercur'rent,** superfluous pulsation seems to occur from time to time. **P., intermit'tent,** pulsations fail from time to time. **P., in'tricate,** but little developed and unequally slow. **P., irreg'ular,** pulsations are unequal and return at unequal intervals. **P. of irrita'tion,** frequent, hard, and contracted. **P., jar'ring,** P., vibrating. **P., jerk'ing,** pulse, sharp. **P., lan'guid,** slow and feeble pulse. **P., large,** large and full pulse. **P., long,** strikes the finger to a great extent in length. **P., low,** pulsations are scarcely perceptible. **P., low-ten'sion,** condition of pulse opposite to that described under *Pulse, high-tension,* and noticed in certain degenerative cardiac conditions, debility, fevers, etc. **P., monocrot'ic,** pulse in which dicrotism is wholly absent. **P., nat'ural,** equal and regular in strength and frequency, compressible and devoid of hardness. **P., organ'ic,** indicates the affected organ, or the organ by which an evacuation will take place. **P., paradox'ical,** absence of the beat of the pulse during inspiration, due particularly to morbid conditions of the heart. **P., pec'toral,** critical pulse, announcing the termination of some pulmonary irritation. **P., quick,** strikes sharply, but not forcibly, against the finger. **P., ra'dial,** beat of radial artery, felt at the wrist. **P., recur'rent,** return of the pulse to the distal part of an artery after compression. **P., reg'ular,** pulsations are equal and succeed each other at equal intervals. **P., resist'ing,** a little tense, a little hard. **P., res'piratory,** the alternate condition of fulness and emptiness of the great vessels of the neck, synchronous with expiration and inspiration. **P., sharp,** strikes the finger sharply and rapidly. When to a greater extent, it is called a *jerking pulse.* **P., sharp'-tailed,** see *Myurus.* **P., sim'ple,** a critical pulse, indicating evacuation by one organ only. **P.,**

slow, strikes the finger slowly. **P., small**, pulsations are slender and weak. **P., soft**, yields under the finger. **P., strong**, strikes the finger strongly. **P., supe'rior**, a critical pulse, supervening on irritation of organs situate above the diaphragm. **P., sup'ple**, pulsations have strength without hardness. **P. of sweat**, a critical pulse, indicating an approaching perspiration. **P., tense**, *Cordy pulse;* the artery resembles a cord fixed at its two extremities. When resembling a wire it is called *wiry*. **P., thread'y**, P., filiform. **P. trace**, in the registration of the pulse by the sphygmograph a trace consists of a series of curves, each of which corresponds to a complete cardiac revolution; see *Sphygmograph*. **P., trem'ulous**, each pulsation oscillates. **P., tricrot'ic** or **tric'rotous** (*tri*, three, *krotea*, to strike), the normal pulse-trace is so called from possessing three principal waves. **P., trigem'inal**, three regular beats followed by a longer pause. **P., un'dulating**, resembles in its movements those of the waves. **P., une'qual**, pulsations are not alike, or return at unequal intervals. **P., u'terine**, indicates the flow of the menses or the occurrence of metrorrhagia. **P., vagi'nal**, pulsation of the vaginal artery, which is increased in pregnancy, during abortion, labor, etc. **P., ve'nous**, see *Pulsus venarum*. **P., vermic'ular**, imitates the movement of a worm. **P., vi'brating**, *Jarring pulse;* the artery seems to vibrate like a musical string. **P., wa'ter-ham'mer**, short strong beat of the pulse followed by collapse, due to aortic regurgitation and incompetency of valves. **P., wi'ry**, see *Pulse, tense*.

Pulseless, pulse'less. Devoid of pulsation.

Pulselessness, pulse'less-ness. Asphyxia.

Pulse-meas'urer. Instrument which conveys beats of pulse to a fluid and measures them.

Pul'sey. Cataplasm.

Pulsific, pul-sif'ik (*pulsus*, pulse, *facio*, to make). Causing or exciting pulsation.

Pulsilegium (pul-sil-lej'e-um) or **Pulsilo'gium** (*pulsus*, *lego*, to read). Pulsimeter; any instrument for measuring the quickness or force of the pulse.

Pulsimantia, pul-se-man-ti'ah (*pulsus*, *manteia*, divination). Art of predicting or prognosticating by the pulse.

Pulsimeter, pul-sim'et-ur (*pulsus*, *metron*, measure). See *Sphygmoscope* and *Sphygmomometer*.

Pul'sus. Pulse. **P. acrit'icus**, pulse of irritation. **P. æqua'lis**, pulse, equal. **P. an'nuens et circum'nuens**, pulse, deficient. **P. anorma'lis**, pulse, irregular. **P. bi'crotus**, pulse, dicrotic. **P. bifer'iens**, pulse, dicrotic. **P. capri'zans**, pulse, caprizant. **P. cor'dis**, see *Heart*. **P. cras'sus**, pulse, large. **P. deb'ilis**, pulse, feeble. **P. defic'iens**, pulse, deficient. **P. di'crotus**, pulse, dicrotic. **P. dorcadi'zans**, pulse, caprizant. **P. du'plex**, pulse, dicrotic. **P. du'rus**, pulse, hard. **P. elas'ticus**, pulse, supple. **P. fluctuo'sus**, pulse, undulating. **P. flu'ens**, pulse, undulating. **P. formi'cans**, pulse, formicant. **P. for'tis**, pulse, strong. **P. fusa'lis**, pulse, caprizant. **P. gazel'lans**, pulse, caprizant. **P. heterochron'icus**, see *Heterochronicus*. **P. hu'milis**, pulse, low. **P. in'cidens Sola'ni**, pulse, undulating. **P. inter'cidens**, pulse, intercurrent. **P. interci'sus**, pulse, dicrotic. **P. intercur'rens**, pulse, intercurrent. **P. intestina'lis**, pulse, dicrotic. **P. intrica'tus**, pulse, intricate. **P. mag'nus**, pulse, large. **P. mallea'ris**, pulse, dicrotic. **P. mol'lis**, pulse, soft. **P. monoc'rotus**, pulse in which dicrotic wave is absent. **P. myu'rus**, *Decurtate* or *Sharp-tailed pulse;* one which goes on diminishing; see *Myurus*. **P. nervi'nus**, pulse of irritation. **P. norma'lis**, pulse, regular. **P. paradox'us**, feeble beat during inspiration, due to pathological conditions of heart and large vessels. **P. par'vus**, pulse, small. **P. ple'nus**, pulse, full. **P. quadrigem'inus** and **trigem'inus**, pulse in which deviations are noticed after each third and fourth beat. **P. ra'rus**, pulse, slow. **P. serri'nus** strikes sometimes strongly, at others feebly, and recalls the idea of a saw. **P. stria'tus**, one that strikes the finger to a small extent in breadth. **P. sudora'lis**, pulse of sweat. **P. tar'dus**, pulse, slow. **P. urina'lis**, pulse, urinal. **P. uteri'nus**, pulse, uterine. **P. vac'uus** gives the idea of emptiness of the artery. **P. vagina'lis**, pulse, vaginal. **P. vena'rum**, *Venous pulse* or *pulsation;* pulsation occasionally noticed in the jugular veins, owing to some of the blood of the right ventricle reflowing into the right auricle, and communicating an impulse to the venous blood arriving in the auricle through the descending cava. Is often a sign of impediment to the flow of blood along the pulmonary artery.

Pultaceous, pul-ta'shus (*puls*, pap). Resembling pap. Having a softened, semifluid appearance.

Pultatio, pul-tah'she-o (*puls*, pap). Atheroma.

Pulticula, pul-tik'u-lah (dim. of **Puls**, pap). Bouillie.

Pul'tise. Cataplasm.

Pul'verable. Pulverizable.

Pulveratio, pul-ver-ah'she-o. Pulverization.

Pulveres aërophori, pul've-rees a-air-of'o-re. Powders, soda. **P. effervescen'tes**, powders, soda. **P. effervescen'tes aperien'tes**, see *Sedlitz*.

Pulverizable, pul'ver-i-za-ble (*pulvis*, powder, *habilis*, able). *Pulverable*. Capable of being reduced to powder.

Pulverization, pul-ver-i-za'shun. Operation of dividing substances so as to reduce them to powder. Most drugs are reduced to powder by persons who make it a special business, and who are called druggrinders. This is done on a large scale in drug-mills; the implements used are the grinding mill and the stamping mill. In the shop of the apothecary pulverization is effected by the pestle and mortar and the sieve. Where substances require the addition of other bodies to facilitate their reduction to powder—as where camphor needs a few drops of alcohol—the process is called *pulverization by mediation*.

The term *Pulverization*, as well as *Atomization* and *Nebulization*, has been applied to the dispersing of liquids into fine spray, to be projected on wounds or on morbid surfaces. The liquids, in the form of spray, are said to be *pulverized*, *nebulized*, or *atomized*, and the instruments to disperse them are called pulverizers, atomizers, nebulizers, spray-producers.

Atomized medicated fluids are employed in affections of the mucous membrane of the nose and fauces, in croup and diphtheria, asthma, laryngitis, etc. Under the name *Inhalatoria*, apartments have also been constructed for the introduction into them of mineral waters in the form of spray, for the purposes of inhalation, at some of the European springs especially.

Water alone may be employed, either hot or cold, for purposes of atomization. The following substances are some of those employed, the dose mentioned of each being an approximate guide as to the quantity to be added to an ounce of water:

Acidum carbolicum	gr. j–ij.
" sulphurosum	℥ss–viij.
" tannicum	gr. ij–xx.
Alumen	gr. v–xxx.
" exsiccatum	gr. iij–xx.
Ammonii chloridi	gr. v–lx.
Aqua laurocerasi	♏v–xx.
Argenti nitras	gr. j–x.
Borax	gr. v–xx.
Cupri sulphas	gr. j–x.
Extractum belladonnæ	gr. ¼–j.
" cannabis Indicæ	gr. ½–ij
" conii	gr. v–x.
" " fluidum	♏iij–viij.
" hyoscyami fluidum	♏iij–x.

Pul'verized i'ron. *Ferrum pulveratum.* Powder made from iron filings.

Pulverizers, pul'ver-i-zers. See *Pulverization.*

Pul'vermacher's chain bat'tery. See *Galvanism.*

Pulverulence, pul-ver'u-lence (*pulverulentus,* covered with dust). State of being pulverulent.

Pulverulent, pul-ver'u-lent (*pulvis*). Reduced to a fine powder. Covered, as it were, with dust. Epithet applied to the eyes when they appear dirty and, as it were, sprinkled with dust, due to granulations or grayish striæ, resulting from thickening of the mucous fluid of the conjunctiva.

Pulvil'lus. Pad; dossil of lint for surgical uses.

Pulvinar, pul-ve'nar. Pillow; posterior tubercle of thalamus opticus. **P. epiglot'tidis,** tubercle of epiglottis. **P. hu'muli,** hop pillow; see *Humulus lupulus.* **P. medica'tum,** medicated pillow, as of hops. **P. par'vum,** pad. **P. ventric'uli,** pancreas.

Pul'vis. *Powder.* A substance reduced to small particles by pulverization. *Simple powders* are those of a single substance; *compound,* those resulting from a mixture of several different powders. An impalpable powder is one which is so fine that it can scarcely be felt under the finger. Compound powders have been called *Species.* **P. absor'bens,** P. de magnesiâ compositus. **P. adsperso'rius,** catapasma. **P. aëroph'orus,** powders, soda. **P. alexite'rius,** P. contrayervæ compositus; P. ipecacuanhæ compositus. **P. algaro'thi,** algaroth. **P. al'oës cum canel'lâ,** *P. aloës et canellæ, Powder of aloes with canella, Hiera picra,* vulg. *Hikry pikry, Picra,* and *Pikry* (aloës, ℔j; canell., ℥iij); warm cathartic; dose, gr. x–xx. **P. al'oës compos'itus,** *Compound powder of aloes* (aloës, ℥iss; guaiac. res., ℥j; pulv. cinnam. comp., ℥ss); cathartic, stomachic, and sudorific; dose, gr. x–xx. **P. al'oës cum guai'aco,** P. aloës compositus. **P. aloët'icus,** P. aloës cum canellâ; Hiera picra. **P. alu'minis compos'itus,** P. sulphatis aluminæ compositus. **P. alu'minis kinosa'tus,** see *P. sulphatis aluminæ compositus.* **P. alumino'sus,** P. sulphatis aluminæ compositus. **P. de ama'ris compos'itus** (gentian., aristoloch. rotund., āā p. 3; flor. centaur. min., p. 4; fol. chamædr., chamæpit., manipul.—f. pulvis); in gouty affections, dyspepsia, etc.; dose, gr. xx. **P. amyg'dalæ compos'itus,** confectio amygdalarum. **P. angel'icus,** algaroth. **P. anod'ynus,** P. ipecacuanhæ compositus. **P. antiac'idus,** pulvis cretæ compositus, P. de magnesiâ compositus. **P. antiarthrit'icus pur'gans,** P. de sennâ, scammoneâ, et lignis. **P. antiasthmat'icus,** P. de sulphure et scillâ. **P. antilys'sus** (ash-colored liverwort, black pepper, p. æq.). **P. antimonia'lis,** antimonial powder. **P. antimo'nii compos'itus,** antimonial powder. **P. aromat'icus,** P. cinnamomi compositus. **P. arsenica'lis, Rous'selot's,** Rousselot's arsenical powder. **P. as'ari compos'itus,** cephalic snuff; compound powder of asarabacca (asar. Europ., p. 3; origan. majoranæ, lavand., sing., p. 1; rub into powder); sternutatory. **P. aur'i,** see *Gold.* **P. e bo'lo compos'itus cum o'pio,** P. cretæ compositus cum opio. **P. e bo'lo compos'itus si'ne o'pio,** see *P. cretæ compositus.* **P. cambo'giæ compos'itus,** P. e gummi guttâ. **P. capita'lis sanc'ti An'geli,** pulvis asari compositus. **P. carbona'tis cal'cis compos'itus,** P. cretæ compositus. **P. cardi'acus,** P. contrayervæ comp. **P. Carthusiano'rum,** antimonii sulphuretum rubrum. **P. cat'echu compos'itus,** *Compound powder of catechu* (catechu pulv., ℥iv; kino pulv., ℥ij; kramer. rad., ℥ij; cinnam., myrist., āā ℥j); dose, as an astringent, gr. xx–xl. **P. cathart'icus,** P. scammoneæ compositus. **P. caus'ticus Vindobonen'sis,** powder, Vienna. **P. cephal'icus,** P. asari compositus. **P. cinnamo'mi compos'itus,** *Compound powder of cinnamon, Aromatic powder* (cinnam., zingib., āā ℥ij; cardam., myrist., āā ℥j); stimulant and carminative; dose, gr. x–xx. **P. cum citra'te magne'sico et sac'charo,** granulated citrate of magnesium. **P. com'itis Warwicen'sis,** P. cornachini. **P. comitis'sæ,** cinchona. **P. contrayer'væ compos'itus,** *Contrayerva balis, Compound powder of contrayerva* (contrayerv. contrit., ℥v; test. præp., ℔iss); stimulant and sudorific; dose, gr. xv–xxx. **P. cor'nu us'ti cum o'pio,** *Powder of burnt hartshorn with opium* (opii duri, ℥j; corn. ust. præp., ℥j; coccor., ℥j). Ten grains contain one of opium. Anodyne. **P. Cos'mi,** powder, arsenical, of Côme. **P. creta'ceus,** P. cretæ compositus. **P. cre'tæ aromat'icus,** see *Confectio aromatica.* **P. cre'tæ aromat'icus cum o'pio** (aromatic powder of chalk, ℥ix, ℥vj; opium, ℥¼); used in diarrhœa; adult dose, gr. x–xx. **P. cre'tæ compos'itus** (Ph. U. S.), *Compound powder of chalk* (cretæ ppt., ℥iss; acaciæ, ℥j; sacchar., ℥iiss); antacid, stomachic, absorbent. **P. cre'tæ compos'itus cum o'pio,** *Compound powder of chalk with opium* (pulv. cretæ comp., ℥viss; opii duri, ℈iv); anodyne and absorbent; dose, gr. xx–xl. The British Pharmacopœia has *Pulvis cretæ aromaticus cum opio, Aromatic powder of chalk and opium* (aromatic powder of chalk, ℥ix¾; opium, ℥¼); dose, gr. x–xl. **P. diaphoret'icus,** P. ipecacuanhæ comp. **P. diapno'icus,** P. ipecacuanhæ comp. **P. diaro'maton,** P. cinnamomi compositus. **P. diase'næ,** P. sennæ compos. **P. diaturpe'thi compos'itus,** P. jalapæ compositus. **P. efferves'cens compos'itus,** compound effervescing powder; Seidlitz powder (sodii bicarb., gr. ccccIxxx; potassii et sodii tartrat., gr. ccccxl; mixed and divided into 12 powders (in blue paper); acid. tartaric., gr. ccccxx; divided into 12 powders (in white paper); a powder in a blue paper is then mixed with one in white paper, and drank while effervescing, as a laxative. **P. elateri'ni compos'itus,** compound powder of elaterin (elaterin, gr. v; sugar of milk, gr. cxcv); dose, gr. ¼–iv. **P. emmenago'gus,** P. myrrhæ compositus. **P. epilep'ticus marchio'num,** P. de magnesiâ compositus. **P. errhi'nus,** P. asari compositus. **P. febrif'ugus Jaco'bi,** antimonial powder. **P. galactopœ'us,** P. de magnesiâ compositus. **P. glycyrrhi'zæ compos'itus** (Ph. U. S.), *Compound licorice powder;* laxative, almost impalpable, employed in simple atonic constipation (senna in powder, gr. lxxxvj; licorice powder, gr. lxxvj; fennel, gr. xxxviij; sugar, gr. ccxl); dose, a teaspoonful at bed-time. **P. e gum'mi gut'tâ,** *Camboge powder* (rad. jalap., 24 p.; rad. Mechoacan., 12 p.; cinnam., rhei, āā 8 p.; gum. cambog., 3 p.; fol. soldanellæ sicc., 6 p.; semin. anisi, 12 p.); drastic cathartic, in anasarca and in worms; dose, gr. xv–xxx. **P. gummo'sus alkali'nus** (guaiac., 32 p.; potass. carb., 4 p.); antacid. **P. hæmostat'icus,** styptic powder. **P. helminthocort'o compos'itus** (fuc. helminthocort., semi. contra., summitat., absinth., tanaceti, fol. scordii, sennæ, rhei., āā p. æ); dose, ♏i to ℥j. **P. hydrago'gus,** P. e gummi gutta. **P. hydrar'gyri cine'reus,** see *Hydrargyri oxydum cinereum.* **P. hypnot'icus,** hydrargyri sulphuretum nigrum. **P. imperato'ris,** P. cinnamomi compositus. **P. incisi'vus,** P. de sulphure et scillâ. **P. pro infan'tibus,** P. de magnesiâ compositus. **P. infan'tum,** pulvis magnesiæ compositus. **P. infan'tum antac'idus,** P. de magnesiâ compositus. **P. ipecacuan'hæ compos'itus,** P. ipecacuanhæ et opii (Ph. U. S.), *Compound powder of ipecacuanha, Dover's powder* (ipecacuanhæ, opii, āā ℥j; sacchar. lactis, ℥j); diaphoretic; dose, gr. v–x. **P. ipecacuan'hæ et o'pii,** P. ipecacuanhæ compositus. **P. Jaco'bi,** antimonial powder. **P. jalap'æ compos'itus** (Ph. U. S.), *Compound powder of jalap* (pulv. jalap., gr. clxviij; potass. bitart., gr. cccxiij; cathartic; dose, gr. xx–℥j. **P. jalap'æ sali'nus,** P. jalapæ compositus. **P. de jalap'æ et scammo'nio compos'itus,** P. scammoneæ comp. **P. jalap'æ tartar'icus,** P. jalapæ compositus. **P. Jame'sii,** antimonial powder. **P. Jesuit'icus,** cinchona. **P. ki'no compos'itus,** *Compound powder of kino* (kino, pulv., ℥3¾; opii, pulv., ℥¼; cinnamon. cort. in pulv., ℥j; Ph. B.); astringent; dose, gr. v–xx. **P. lax'ans,** P. jalapæ compositus. **P. lax'ans cum sa'le,** P. jalapæ

compositus. **P. laxati'vus vegetab'ilis,** P. jalapæ compositus. **P. magne'siæ compos'itus,** *Compound powder of magnesia* (magnesiæ, sacchar., āā p. æ.). **P. Mantua'nus,** P. contrayervæ comp. **P. marchio'nis,** marchionis pulvis. **P. mercuria'lis cine'reus,** hydrargyri oxidum cinereum. **P. morphi'næ compos'itus** (Ph. U. S.), *Compound powder of morphine,* Tully's powder (morphin. sulph., gr. viij; camphor., glycyrrhizæ, calcis carbonat. præcipitat., āā gr. clx; alcohol, q. s.); one grain of the powder contains gr. $\frac{1}{10}$ of morphine; dose, gr. x. **P. ad mu'cum pulmona'lem libe'rius cien'dum,** P. de sulphure et scillâ. **P. myr'rhæ compos'itus,** *Compound myrrh powder* (myrrhæ, sabinæ, rutæ, castor. russ., āā ℥j); stimulant, antispasmodic, and emmenagogue; dose, gr. xv–xl. **P. nutri'cum,** P. de magnesiâ compositus. **P. opi'atus,** P. cornu usti cum opio. **P. o'pii compos'itus,** *Compound powder of opium* (opii, pulv., ℥iss; piper. nig., ℥ij; zingib., ℥v; carui, ℥vj; tragacanth, ℥ss; Ph. B.); dose, gr. ij–v. This powder nearly represents the dry ingredients of confectio opii of the Ph. B. **P. ox'idi antimo'nii compos'itus,** antimonial powder. **P. ox'ydi stib'ii compos'itus,** P. cornachini. **P. ad par'tum,** ergot. **P. partu'riens,** ergot. **P. pectora'lis kurel'læ,** pulvis glycyrrhizæ compositus. **P. de phos'phate cal'cis et stib'ii compos'itus,** antimonial powder. **P. prin'cipis,** hydrargyri nitrico-oxydum. **P. pur'gans,** P. jalapæ compositus. **P. querceta'nus,** hydrargyri submurias. **P. quer'cûs mari'næ,** *Powder of yellow bladderwrack;* virtues dependent on iodine; used, consequently, in bronchocele, etc.; dose, gr. x–xl; see *Fucus vesiculosus.* **P. rhe'i compos'itus** (Ph. U. S.), *Compound powder of rhubarb* (magnes., gr. cccxij; zingib., gr. xlvij; rhei, gr. cxx); antacid and laxative; dose, for adult, gr. xxx–℥j; for young child, gr. ij–v. **P. sali'nus compos'itus,** *Compound saline powder* (sodii chlorid., magnesiæ sulphat., āā ℥iv; potas. sulphat., ℥iij); dose, as an aperient, ℥ij–iij. **P. scammo'neæ compos'itus,** P. scammonii compositus. **P. scammo'nii cum aloë,** *Scammony and aloes powder* (scammon., ℥vj; ext. jalap. dur., aloës Socotr., āā ℥iss; zingib., ℥ss); cathartic; dose, gr. x–xv. **P. scammo'nii antimonia'lis,** P. cornachini. **P. scammo'nii compos'itus,** *Compound powder of scammony* (scammony resin, ℥iv; jalap, ℥iij; ginger, ℥j, Ph. Br.); dose, gr. x–xx; cathartic. **P. scarot'icus,** pulvis arsenicalis. **P. sem'inum li'ni,** linseed meal. **P. de sen'nâ, scammo'neo et lig'nis compos'itus,** dictus *antiarthriticus purgans* (gum arab., potass. supertart., fol. sennæ, Chinæ, āā 4 p.; scammon., rad. sarsapar., Chinæ, guaiac. lign., āā 2 p.); purgative; used to obviate gout; dose, ℥j. **P. sen'næ compos'itus,** *Compound powder of senna* (sennæ, potas. supertart., ℥ij; scammon., ℥ss; zingib., ℥ij); cathartic, hydragogue; dose, gr. xx–℥j. **P. stan'ni,** see *Tin.* **P. sternutato'rius,** P. asari compositus. **P. stibia'tus,** antimonial powder. **P. styp'ticus,** P. sulphatis aluminæ compositus. **P. sudorif'icus,** P. ipecacuanhæ compositus. **P. sudorif'icus Do'veri,** P. ipecacuanhæ compositus. **P. de sulphat'e potas'sæ compos'itus** (potass. sulph., P. nitrat., āā 9 p.; hydrarg. sulph. rubr., 2 p.); antiphlogistic, and used in acidity of the gastro-intestinal canal; dose, ℈j to ℈ij. **P. sulpha'tis alu'minæ compos'itus,** *Compound alum powder* (sulphatis aluminæ, 4 p.; kino, 1 p.); astringent in intestinal hemorrhage and diarrhœa; dose, gr. x–xv. **P. de sul'phure et scil'lâ** (sacchar., 3 p.; sulphur. lot., 2 p.; scillæ. siccat., 1 p.); dose, gr. v–xx. **P. sympathet'icus,** sympathetic powder. **P. tarac an'næ,** powdered cockroach. **P. tem'perans Stahl'ii,** P. de sulphate potassæ compositus. **P. terres'tris,** P. cretæ compositus. **P. Tonquinen'sis,** P. Cobbii. **P. tragacan'thæ compos'itus,** *Compound powder of tragacanth* (tragacanth., acaciæ, amyli, āā ℥j; sacch. purif., ℥iij; Ph. B.); demulcent, in coughs, etc.; dose, ℥ss to ℥iij. **P. de tri'bus,** P. cornachini. **P. ad ul'cera ten'dinum,** P. myrrhæ compositus. **P. vermif'ugus abs'que mercu'rio,** pulvis ex helminthocorto comp. **P. vermif'ugus mercuria'lis,** P. e sulphureto hydrargyri nigro et scammonio. **P. vi'tæ imperato'ris,** P. cinnamomi compositus.

Pumex, pu'meks. *Pumice.* Formerly employed as a desiccative and as a dentifrice.

Pumice, pum'is. Pumex.

Pumilio (pum-il'e-o) or **Pumilus,** pu'mil-us. One who is much below the usual stature.

Pum'melfoot (knobfoot). Kyllosis.

Pump, breast. Antlia lactea. **P., stom'ach,** stomach-pump.

Pump'kin. Cucurbita pepo.

Puna, pu'nah. *Mountain sickness.* Sickness common in the elevated districts of South America and elsewhere, attacking those unaccustomed to breathe the rarefied atmosphere. It strongly resembles seasickness, with acute and depressing throbbing in the head. It does not often affect the respiration greatly.

Punch (*pungo, punctum,* to prick). Surgical instrument. See *Lever.* Also an agreeable alcoholic drink, made of spirit, wine, sugar, lemon-juice, and water. Milk is sometimes substituted wholly or in part for the water, the lemon-juice being left out and nutmeg added: it then forms *Milk punch.* Punch, as a drink, is said to be of oriental origin, and to be derived from Persian *punji* or Sanscrit *pancha,* "five," from the number of ingredients that entered into its composition.

Puncta (pl. of **Punctum**), punk'tah (*pungo, punctum,* to prick, to dot). Point; prick; puncture. **P. doloro'sa,** tender or painful points along inflamed nerves. **P. lacrymal'ia,** orifices of lacrymal canals near inner canthus of the eye. **P. ossificatio'nis,** ossification, points of. **P. vasculo'sa,** numerous minute red spots studding the surface of the centrum ovale majus, produced by the escape of blood from divided blood-vessels.

Punctæ (punk'te) (pl. of **Puncta**) **muco'sæ.** See *Acne.*

Punctate, punk'tate. Pointed. Having many points.

Puncticula, punk-tik'u-lah (dim. of **Puncta,** point). Petechiæ.

Punctio, punk'she-o (*pungo, punctum,* to puncture). Paracentesis; puncture. **P. ner'vi,** puncture of a nerve.

Punc'tum (point). See *Puncta, Puncture,* and *Stitch.* **P. adhæsio'nis,** origin of a muscle. **P. alæ vom'eris,** hormion. **P. aur'eum,** formerly, when an intestinal hernia was reduced by an incision made through the integuments down to the upper part of the spermatic vessels, a golden wire was fixed and twisted, so as to prevent the descent of anything down the tunica vaginalis; hence the term. See also *Foramen centrale retinæ.* **P. cæ'cum,** blind spot; see *Optic nerve.* **P. fix'um,** origin of a muscle. **P. foram'inis mag'ni ante'rius,** basion. **P. foram'inis mag'ni poste'rius,** opisthion. **P. insertio'nis,** insertion of muscle. **P. lacryma'le,** lacrymal punctum. **P. mo'bile,** insertion of muscle. **P. nasa'le infe'rius,** rhinion. **P. naso-fronta'le,** nasion. **P. occipita'le,** lambda. **P. præmaxilla're,** alveolar point. **P. protuberan'tiæ occipita'lis,** inion. **P. prox'imum,** nearest point that can be focused by the eye on the retina. **P. remo'tum,** far-point; farthest point which can be focused by the eye on the retina. **P. sa'liens** (leaping point), first moving point which makes its appearance after the fecundation of the germ. It has been generally, but erroneously, applied to the heart of the embryo, which has been described as the first to live—*primum vivens*—the last to die—*ultimum moriens.* **P. spi'næ nasa'lis anterio'ris,** subnasal point. **P. spi'næ nasa'lis posterio'ris,** staphylion.

Punctura, punk-tu'rah. Paracentesis; puncture. **P. aur'ea,** punctum aureum.

Puncturation, punk-tu-ra'shun. Act of puncturing.

Puncture, punk'tchur. Wound made by a pointed instrument, as a sword, bayonet, needle, thorn, etc. A puncture is generally of trifling consequence; but sometimes it becomes important from the parts implicated and the after-consequences. **P. doc'tors,** (*F.* piqueurs médecins), a name at one time given in derision, in the hospitals of Paris, to those physicians who employed acupuncturation in almost all diseases.

Puncturing, punk'tchur-ing. Operation of opening, by means of a trocar, lancet, etc., any natural or accidental cavity, with the view of evacuating any fluid effused or accumulated therein.

Punc'tus ru'ber sa'liens. Punctum saliens.

Pungent, pun'jent. Pain is said to be pungent when it seems as if a pointed instrument was forced into the suffering part.

Punica granatum, pu'nik-ah gran-at'um (*Punica*, Punic or Carthaginian, whose colors were a deep red, *phoinix*). *Pomegranate*, ord. Myrtaceæ. The rind of the fruit, called *Malichorium, Malicorium, Granati, Fructûs Cortex*, and the flowers, called *Balaustine flowers*, are used in medicine; have been employed both internally and externally as astringents; seeds are called *Coccones*. The portion, however, that has attained most celebrity is the bark of the root, *Granatum* (Ph. U. S.), *Granati radicis cortex* (Ph. Br.), which appears to be very efficacious in tænia; is given in decoction. (Granat. rad. cort., ℥ij; aquæ, Oij boiled to Oiss). Dose, f℥ij every half hour. Three or four doses are usually sufficient to expel the worm). The bark contains a peculiar matter called *granatin*. An oleoresinous principle has also been obtained from the bark, called *punicine*. The latter is generally known as pelletierine, under which name it is prescribed. See *Pelletierine*.

Pu'nico-tan'nic acid. Tannic acid in bark of pomegranate.

Punk. Boletus igniarius.

Puntos. An epidemic contagious spotted fever which prevailed in Spain in the sixteenth century.

Puogenia, pu-o-jen'e-ah. Pyogenia.

Pu'pil (*pupa*, babe, *pupilla*, little babe; so called from the image seen in the eye). *Sight* or *Apple* or *Ball of the eye*. The aperture of the iris through which the rays of light pass that have to impress the image of an object on the retina. This aperture can be dilated or contracted so as to allow a greater or smaller quantity of luminous rays to penetrate. The pupil, in man, is round, and by it the anterior and posterior chambers of the eye communicate with each other. In the fœtus, during the first six months of gestation, it is closed by the pupillary membrane. The contraction of the pupil is an important symptom in diseases and injuries of the brain. Certain medicines always dilate the pupil, while others contract it. See *Mydriatics* and *Myotics*. **P., Argyll'-Rob'ertson's,** pupil which does not respond to action of light, but to accommodation for short distances; frequent symptom in tabes dorsalis. **P., artific'ial,** an operation is sometimes necessary to form a new pupil in lieu of the natural one, which has become obliterated by disease; see *Coretomia, Iridodesis, Corelysis, Iridodialysis*. **P., clo'sure of the,** synezizis. **P., contrac'tion of the,** mydriasis. **P., dilata'tion of the,** corectasis. **P., exclu'sion of the,** total posterior synechia; see *Synechia*. **P., occlu'sion of the,** see *Synechia*. **P., pin'hole,** a condition of the pupil in typhus in which it is so contracted as to resemble a pinhole. It indicates a dangerous form of brain affection.

Pupilla, pu-pil'lah. Pupil. **P. factit'ia,** pupil, artificial.

Pupillæ (pu-pil'le) **ve'lum** (curtain of the pupil). Pupillary membrane.

Pupillaris (pu-pil-lah'ris) **her'ba.** Lapsana.

Pupillary, pu'pil-la-re. That which belongs to the pupil. **P. mem'brane,** the central aperture of the iris is closed in the fœtus during a certain period of gestation by a very thin membrane. It disappears in the seventh month. The term *Membrana pupillaris perseverans* has been applied by Graefe to an adventitious membrane with holes or fissures in front of the iris, which he considers to be the remains of the anterior part of the vascular capsule of the lens.

Pupillometer, pu-pil-lom'e-tur (*pupilla, metron*, measure). A hybrid word for an instrument which indicates, by measurement, the size of the pupil.

Pupillos'copy (*pupilla, skopeo*, to see). Examination of the pupil.

Pup'pis os. Frontal bone.

Pup'pit root. Veratrum viride.

Pupula, pu'pu-lah. Pupil.

Pu'pulæ. The pulps or extremities of the fingers.

Pur'blind. (? Peerblind). Myopic.

Purblindness, pur'blind-ness. Myopia.

Purgament, pur'ga-ment (*purgo*, to cleanse). Purgative.

Purgamenta, pur-gam-en'tah. Excrement. **P. al'ba,** leucorrhœa. **P. infan'tis,** meconium. **P. puerpe'rii,** lochia. **P. u'teri,** lochia.

Purgans medicamentum, pur'gans med-ik-am-en'tum. Purging medicine; cathartic.

Purgatio, pur-gah'she-o (*purgo, purgatum*, to cleanse). Catharsis. **P. al'vi,** catharsis. **P. mulieb'ris al'ba,** leucorrhœa. **P. puerpe'rii,** lochia.

Purgation, pur-ga'shun. Catharsis.

Purgationes, pur-gah-she-o'nees (pl. of **Purgatio,** cleansing). Menses. **P. men'struæ,** menses.

Purgative, pur'ga-tiv. *Cathartic, Purgament, Purge*. Medicine which operates more powerfully on the bowels than a laxative, stimulating the muscular coat and exciting increased secretion from the mucous membrane. See *Cathartics*.

Purge, purj. Purgative. **P. root,** Euphorbia corollata.

Purging, pur'jing. Diarrhœa. **P. ag'aric,** white agaric, Polyporus officinalis. **P. ber'ries,** fruit of Rhamnus catharticus. **P. cas'sia,** fruit of Cassia fistula; pulp is slightly laxative. **P. flax,** Linum catharticum; decoction is cathartic and diuretic. **P. nut,** Jatropha curcas.

Purificans, pu'rif-ik-ans (*purus*, pure, *facio*, to make). Purifying.

Purificantia, pu-rif-ik-an'she-ah. Medicines that cleanse or purify the blood.

Purificus, pu-rif'ik-us. Purifying.

Pu'rified al'oes. See *Aloes*. **P. ammo'niac,** gummi ammoniacum expurgatum. **P. an'imal char'coal,** see *Carbo*. **P. an'timony sul'phide,** antimonii sulphidum purificatum. **P. bis'muth,** see *Bismuth*. **P. chlo'roform,** see *Chloroform*. **P. cot'ton,** cotton free from all foreign matter. **P. dig'italin,** digitalinum depuratum.

Puriform, pu're-form (*pus, forma*, form). Having the appearance of pus.

Puriloid, pu'ril-oid (*pus, eidos*, resemblance). Pyoid.

Purkinje (per-kin'je), **cells of.** Cells provided with processes in deep layers of cortex cerebelli. **P. fi'bres,** fibres resembling a net met with beneath the endocardial tissue lining the ventricles of the fœtal heart, sometimes seen in adults. **P. fig'ures,** figures made by shadows of retinal blood-vessels on the retina. **P. gran'ular lay'er,** interglobular spaces of Czermak in dentine. **P., im'ages of,** see *Image*. **P. ves'icle,** germinal vesicle.

Purl. Medicated malt liquor in which wormwood and aromatics are infused. Also boiled beer having gin, sugar, and spice mixed with it.

Purohepatitis, pu-ro-hep-at-e'tis (*pus, hepatitis*). See *Hepatitis*.

Puromucous, pu-ro-mu'kus (*pus, mucus*). Having the character or appearance of pus and mucus.

Pur'ple a'vens. Geum rivale. **P. of Cas'sius,** a precipitate obtained by adding the protochloride of tin to a dilute solution of gold, or by dipping rods of tin in a solution of gold in diluted chlorohydric acid. Used in syphilis. **P. fe'ver,** cerebrospinal fever. **P., vis'ual,** see *Rhodopsin*. **P. wil'low herb,** Lythrum salicaria.

Pur'ples. Purpura hæmorrhagica.

Purpura, pur'pu-rah. Purple color. This word has been employed in many senses. It generally means livid spots on the skin from extravasated blood, a hemorrhage into the cutis, with languor and loss of muscular strength, and pains in the limbs. The effusion of blood in purpura may have the appearance of bruises, ruptured vessels, bullæ, papules, petechiæ, vibices, etc. Purpura is sometimes used as a synonym of scarlatina. All the varieties of purpura consider-

ably resemble each other. In the simple and hemorrhagic forms of the disease, however, there seems at times to be some excitement, which has led to the employment of purgatives, and at one time of bleeding. They are dependent upon a peculiar diathesis, which has been termed *Scorbutic cachexia, Lues scorbutica,* and *Cacochymia scorbutica.* In addition to the numerous remedies suggested in these varied morbid conditions, much good will be accomplished by change from low to cheerful spirits, from filth to cleanliness, and from a cold and damp to a temperate and dry climate, with sufficiency and change of food, and especially the use of green vegetables. The general principles of management are the same in sea as in land scurvy, that is, in P. nautica as in P. hæmorrhagica. **P. al'ba benig'na et malig'na,** miliary fever. **P. ful'minans,** p. accompanied by rapid and large ecchymoses. **P. hæmorrhag'ica,** *Land scurvy, Purples.* The spots are circular and of different sizes, often in stripes or patches, irregularly scattered over the thighs, arms, and trunk, with occasional hemorrhage from the mouth, nostrils, or viscera, and great debility and depression of spirits. *Black leg* is one form of this disease. **P. malig'na,** petechiæ. **P. milia'ris,** miliary fever. **P. minera'lis Cas'sii,** purple of Cassius. **P. nau'tica,** *Sea scurvy.* There are spots of different hues intermixed with the livid, principally at the roots of the hair; the teeth are loose, the gums are spongy and bleeding, the breath is fetid, and the debility universal and extreme. This occurs chiefly at sea, after exposure to a moist, cold, foul atmosphere, with long use of one kind of food and of stagnant water. **P. neonato'rum,** purpura of the new-born child. **P. papulo'sa,** form of purpura in which the ecchymoses are interspersed with small papules. **P. puerpera'rum,** miliary fever. **P. rheumat'ica,** purpura characterized by eruption, beginning with fever and rheumatic pains in certain joints. **P. scorbu'tica,** scurvy. **P. seni'lis,** P. of old age. **P. sim'plex,** *Petechial scurvy.* The spots are numerous, small, and fleabite-shaped, chiefly on the breast, arms, and legs, with paleness of countenance. At times the affection is accompanied by severe pains in the extremities, constituting *Peliosis rheumatica.* **P. urtica'ta,** urticaria.

Purpuræmia, pur-pur-e'me-ah (*purpura, haima,* blood). Malarial fever accompanied with hemorrhage from the kidneys.

Purpuric, pur'pu-rik. Relating or appertaining to purpura, as purpuric fever; or to purpurine, as purpuric urine. **P. u'rine,** see *Porphyruria.*

Purpurine, pur'pu-reen. See *Porphyruria.*

Purpurissum, pur-pu-ris'sum. Hydrargyri sulphuretum rubrum.

Pur'ring thrill. Thrill in an aneurism perceptible to the touch. **P. tre'mor,** purring tremor sensible to the hand when applied over the precardial region, and supposed to be a sign of ossification or other contraction of the auriculoventricular openings.

Purse (*bursa*). Scrotum. **P., shep'herd's,** Thlaspi bursa.

Pursiness, pur'se-ness. Dyspnœa accompanied with oppressive fatness. The word is also applied to dyspnœa of every kind. One so affected is pursy or short-winded, short of wind (Prov. short of puff).

Purslain, purs'lane (*portulaca*). Portulaca.

Purs'lane. Portulaca. **P., milk,** Euphorbia corollata and E. maculata. **P., speed'well,** Veronica peregrina. **P., wa'ter,** Ludwigia palustris, Veronica beccabunga.

Pursy, pur'se. See *Pursiness.*

Purulence, pu'ru-lence (*pus*). Pus; suppuration.

Purulency, pu'ru-len-se. Pus; suppuration.

Purulent, pu'ru-lent. That which has the character of pus or consists of pus; as purulent matter, a purulent collection, purulent infiltration, etc. **P. depos'it,** pus. **P. diath'esis,** pyæmia. **P. infec'tion,** pyæmia.

Purulentia, pu-ru-len'she-ah. Suppuration.

Pu'ruloid (*pus, eidos,* resemblance). Pyoid.

Pur'vain. Verbena officinalis.

Pus (*puon*). *Matter, Purulent deposit, Purulence, Purulency.* Secretion from inflamed textures, and especially from the areolar membrane; almost always of the same nature, whatever may be the part it proceeds from. Pus of a good quality—*Healthy* or *Laudable pus, Pus bonum, P. laudabile, P. nutritivum, P. verum*—is of a yellowish-white color, opaque, inodorous, and of a creamy appearance; heat, acids, and alcohol coagulate it. When analyzed it affords albumen and water, a particular extractive substance, and a small quantity of soda, calcium phosphate, and other salts. Normal pus consists essentially of two distinct parts—*Pus-corpuscles* or *Pus-globules, Cytoid corpuscles* of Henle, and a colorless, aqueous fluid, *Liquor puris,* in which the corpuscles are suspended. See *Pyoid.* Fully-formed pus is aplastic. The chief microbes concerned in pyogenesis or pus-formation are the streptococcus pyogenes and forms of staphylococci. See *Suppuration, Bacillus pyogenicus, Streptococcus,* etc., and *Pyogenia.* **P. bo'num,** see *Pus.* **P. cor'puscles,** see *Pus.* **P. corrosi'vum,** sanies. **P., cur'dy,** pus having a cheesy appearance like the flakes of curds. **P. glob'ules,** see *Pus.* **P., health'y,** see *Pus.* **P., ich'orous,** so called when thin and acrid. **P., laud'able,** see *Pus.* **P. malig'num,** ichor; sanies. **P., muco-,** pus mixed with mucus. **P. nutriti'vum,** see *Pus.* **P., sa'nious,** greenish or reddish pus mixed with blood. **P., sero-,** pus mixed with serum. **P. ve'rum,** see *Pus.*

Pu'sa. Girl.

Push. Pustule.

Pusilla, pu-sil'lah (dim of **Pusa**). Girl.

Pusillatum (pu-sil-lat'um) or **Pusula'tum** (*pusillus,* small). Coarse powder.

Pusillus, pu-sil'lus (small). Dwarf.

Pus'kile. Pustule.

Pustula, pus'tu-lah (*pus*). Pustule. **P. Aleppen'sis,** P. ardens; eczema. **P. gangræno'sa,** see *Anthrax.* **P. o'ris,** aphthæ. **P. liv'ida Estho'niæ,** see *Anthrax.* **P. malig'na,** see *Anthrax.*

Pustulæ siccæ, pus'tu-le sik'ke (dry pustules). Lichen.

Pustulant, pus'tu-lant. Anything irritating the skin and causing pustules to form.

Pustular, pus'tu-lar. Of or belonging to pustules; affected with pustules.

Pustulate, pus'tu-late. Blistered.

Pustulation, pus-tu-la'shun (*pustulo, pustulatum,* to cause pustules). Formation of pustules.

Pustule, pus'tule. Elevation of the cuticle with an inflamed base. Several varieties of pustules are usually described—*Phlyzacium, Psydracium, Achor,* and *Favus.* The variolous pustule is called by the French, grain; English, pock. **P., malig'nant,** see *Anthrax.*

Pustulous, pus'tu-lus. Pustular.

Pusulatum, pu-su-lat'um. Coarse powder.

Pu'sus. Boy.

Put to bed. Deliver.

Putamen ovi, pu-ta'men o've (shell of an egg, *puto,* to cast off). See *Ovum, Membrana putaminis.*

Putium, pu'she-um (*posthion*). Prepuce.

Putredo, pu-tra'do (rottenness). Hospital gangrene; putrefaction.

Putrefaction, pu-tre-fak'shun (*putris,* rotten, *facio,* to make). *Putrid* or *Putrefactive fermentation.* Decomposition experienced by animal substances when deprived of life and placed under special circumstances. Such change is now, in the light of modern research, considered as resulting from the action of pathogenic micro-organisms. See *Bacillus* and *Bacteria.* Presence of water is indispensable; the temperature most favorable to it is from 60° to 90° of Fahrenheit. The most common products of putrefaction are water, carbonic acid, acetic acid, ammonia, carburetted hydrogen, and a semi-putrid substance which is volatilized and has an infected odor. It has been supposed that something like putrefaction may occur in the living body, as in cases of putrid fever. To this condition the name *Typhohæmia* has been given, under the view that it is owing to alteration of the blood by putrid animal matters. *Putrefaction* or *Putrescence*

properly signifies the state of becoming putrid; *Putridity, Putredo, Putriditas, Putridness,* the state of rottenness. See *Bacillus.*

Putres'cence. Tendency to, or incipient condition of, putrefaction.

Putrescent, pu-tres'sent (*putresco,* to grow rotten). Growing putrid; slightly putrid.

Putrescentia, pu-tres-sen'she-ah. Putrefaction. **P. u'teri grav'idi,** softness of the uterus during pregnancy.

Putrescibility, pu-tres-ib-il'it-e. Capacity for undergoing putrefaction.

Putres'cine (*putresco,* to rot). $C_4H_{12}N_2$. Ptomaïne which is not poisonous, and usually occurs with cadaverine, obtained from putrefying internal organs of man, from herring and other fish, from flesh of man and the horse, from cultures of fæces or gelatin, etc. It is a clear liquid with a spermatic odor. See *Ptomaïnes* (table).

Pu'trid (*putreo,* to rot). Epithet for affections in which the matters excreted and the transpiration itself exhale a smell of putridity. It is particularly applied to typhus. **P. infec'tion,** septæmia.

Putriditas, pu-trid'it-as. See *Putrefaction.*

Putridity, pu-trid'it-e. See *Putrefaction.*

Putrila'go (*putris,* rotten). Pultaceous matter or slough which forms in certain gangrenous and other ulcers, and is thrown off.

Pu'tror. Putrefaction.

Puttyroot, put'e-root. Aplectrum hiemale.

Put'zochill. See *Myroxylon Peruiferum.*

Puxiri. See *Pichurim beans.*

Puysegu'rian clair'voyance (after the Marquis Puysegur). See *Clairvoyance.*

Pyæmia, pe-a'me-ah (*pyo, haima,* blood). *Suppurative fever.* Purulent contamination of the blood, producing marked depression of the vital powers, the formation of abscesses in various regions of the body, etc., constituting the diathesis or infectio purulenta, purulent diathesis, purulent infection; supposed by some to be due to suppurative capillary phlebitis; by others to coagulation of the vitiated blood in the vessels—the veins especially—or the heart, and to the inflammation and suppuration developed by the clots when detached and carried into the capillaries of other parts. Chronic or relapsing pyæmia resembles the acute form, but is slower and attended with relapses. See *Septæmia* and *Ichorhæmia;* and *Pus* for the micro-organisms concerned in the production of pyæmia.

Py'ar (*puar*). Colostrum.

Pyarthrosis, pe-ar-thro'sis (*pyo, arthron,* joint, *osis*). Suppuration of a joint.

Pyarthrum, pe-ar'thrum (*pyo, arthron,* joint). A suppurated joint.

Pyaulacomele, pe-aw-lak-o-ma'la (*puon,* pus, *aulacomele,* grooved probe). Grooved probe for examining for pus.

Pycnanthemum incanum, pik-nan'them-um in-kan'um (*puknos,* dense, *anthemon,* blossom). *Common mountain mint, Wild basil.* Indigenous plant of the Mint family—ord. Labiatæ—having the aromatic properties of the mints. **P. linifo'lium,** *Virginia thyme,* has like virtues.

Pycnicmasia (pik-nik-mah'se-ah) or **Pycnic'masis** (*puknos,* thick, *ikmas,* moisture). A thickening of the juices.

Pycnicmastica, pik-nik-mas'tik-ah. Medicines which were formerly believed to possess the power of thickening the humors when too thin.

Pycnometer, pik-nom'e-tur (*puknos,* thick, *metron,* measure). Areometer.

Pycnosis, pik-no'sis (*puknos,* thick, *osis*). Act of rendering thick, as in the formation of an extract.

Pycnotica, pik-no'tik-ah. See *Pycnicmastica.*

Pyecchysis, pe-ek'kis-is (*puon, ekchusis,* effusion). Effusion of pus.

Pyelitis, pe-el-e'tis. Inflammation of the pelvis and calices of the kidney.

Pyelocystitis, pe-el-o-sis-te'tis (*puelos,* pelvis, *kustis,* bladder). Inflammation of renal pelvis and of the bladder.

Pyelometer, pe-el-om'e-tur (*pyelus, metron,* measure). Pelvimeter.

Pyelonephritis, pe-el-o-nef-re'tis (*pyelus, nephros,* kidney, *itis*). Inflammation of the kidney and of its pelvis and calices.

Pyelonephro'sis (*pyelus, nephros,* kidney). Surgical kidney; affection of kidney and its pelvis due to extension of inflammation from the lower urinary passages.

Pyelus, pe'el-us. Pelvis.

Pyemesis, pe-em'es-is. Vomiting of pus.

Pyesis, pe-a'sis. Suppuration.

Pyetia, pe-a'she-ah. Colostrum; rennet.

Pyge, pig'e (*puge,* nates). Nates.

Pygmæus, pig-me'us. Pygmy.

Pyg'me. Fist; forearm.

Pyg'my (*pugme,* as big as the fist or forearm). A dwarf. The Pygmæi were a fabulous nation of dwarfs in India, or, according to others, in Ethiopia.

Pygodidymus, pe-go-did'im-us (*pyge, didumos,* twin). Twins united by the sacrum and coccyx.

Pygomeles, pig-om'el-ees (*pyge, meleos,* unprofitable). A monster with excessive growth on the nates or rump.

Pygopages, pig-op-ah'gees (*pyge, pago,* to fix). Pygodidymus.

Pygoparasiticus, pig-o-par-ah-sit'ik-us (*puge,* rump, *parasitikos,* parasitic). Pygopagus, one fœtus being a parasite.

Pyicus, pe'ik-us (*puon,* pus). Purulent.

Py'in. A constituent of pus, in general characters resembling mucin.

Pylæma, pil-e'mah (*pule,* gate, *haima,* blood). Blood of portal vein.

Py'le (*pule,* gate). Porta.

Pylemphraxis, pil-em-fraks'is (*pule,* gate, *emphraxis,* obstruction). Obstruction of the vena porta.

Pylephlebitis, pil-e-fle-be'tis (*pyle, phleps,* vein, *itis*). Inflammation of the vena porta.

Pylethrombosis, pil-e-throm-bo'sis (*pule,* gate, *thrombosis*). Thrombosis of the portal vein.

Pylorectomy, pi-lo-rek'to-me (*pylorus, ektome,* excision). Excision or resection of the pylorus.

Pyloric, pi-lor'ik (*pylorus*). That which relates to the pylorus. Epithet given to different parts. **P. ar'tery** arises from the hepatic, and is distributed to the pylorus and to the lesser curvature of the stomach, anastomosing particularly with the A. coronaria ventriculi and A. gastro-epiploica dextra. **P. glands,** in the vicinity of pyloric orifice of the stomach. **P. plex'us,** branches from the hepaticus plexus upon the pyloric artery. **P. valve,** pylorus. **P. vein** is distributed like the artery.

Pylorocleisis, pil-o-ro-kli'sis (*kleisis,* closure). Condition in which the pylorus is obstructed.

Pyloroplasty, pil-or'o-plas-te (*pylorus, plasso,* to form). Plastic operation on the pylorus.

Pylorostenosis, pil-o-ro-sten-o'sis (*pylorus, stenosis,* narrowing). Morbid contraction of pyloric orifice.

Pylorus (*pule,* gate, *ouros,* guardian). *Janitor.* The lower or right orifice of the stomach is called pylorus because it closes the entrance into the intestinal canal, and is furnished with a circular, flattened, fibromucous ring which occasions the total closure of the stomach during digestion in that organ, called the valve of the pylorus, pyloric valve, sphincter pylori, pylorus (properly so called). It is a fold of the mucous and muscular membranes of the stomach—pyloric muscle of some authors.

Pyo (*puon,* pus). In composition, pus.

Pyoblennicus, pe-o-blen'nik-us (*pyo, blenna,* mucus). Mucopurulent.

Pyoblennorrhœa, pe-o-blen-nor-rhe'ah (*pyo, blenna,* mucus, *rheo,* to flow). Discharge of puriform mucus.

Pyocenosis, pe-o-sen-o'sis (*pyo, kenosis,* evacuation). Evacuation of pus.

Pyochezia, pe-o-kez'e-ah (*pyo, chezo,* to go to stool). Discharge of pus by stool; purulent diarrhœa.

Pyocœlia, pe-o-se'le-ah (*pyo, koilia,* belly). Pus in the abdominal cavity.

Pyocolpocele, pe-o-kol-po-se'le (Eng. pe-o-kol'po-seel)

(*puon*, pus, *kolpos*, vagina, *kele*, tumor). Suppurating tumor of the vagina.

Pyocolpos (pe-o-kol'pos) or **Pyokol'pos** (*pyo*, *kolpos*, vagina). Purulent collection in the walls of the vagina

Pyoctanin, pe-ok'tan-in (*puon*, pus, *kteino*, to destroy). Two substances have appeared under this name, one blue, the other yellow. The blue is methyl-violet, the yellow is an auramine dye. Solutions of the blue pyoctanin of various strengths, even as weak as one-half to four parts in 10,000, have been employed in surgery; of the yellow, in the treatment of eye diseases. Methyl-violet is used in powder, solution, ointment, pencil, or other form of application in croup, affections of the nose, gonorrhœa, diseases of the eye, ear, and throat, tumors, etc. Being odorless, it is preferable to iodoform in cases in which it may be substituted for it. It is antiseptic, disinfectant, and analgesic.

Pyocyanine, pe-o-se'an-een (*pyo*, *kuanos*, blue). $C_{14}H_{14}NO_2$. Bluish coloring matter or ptomaïne isolated from pus, produced by action of the bacillus pyocyaneus.

Pyocystis, pe-o-sis'tis (*pyo*, *kustis*, sac). Vomica.

Pyodes, pe-o'dees (*puodes*). Purulent.

Pyœdema, pe-e-da'mah (*pyo*, *oidema*, swelling). Tumefaction of a surface owing to effusion of pus.

Pyo-emesis, pe-o-em'es-is (*pyo*, *emesis*, the act of vomiting). Vomiting of pus.

Pyomele, pe-o-ma'la (*puon*, pus, *mele*, probe). See *Pyalacomele*.

Pyogenesis, pe-o-jen'es-is. Pyogenia.

Pyogenetic, pe-o-jen-et'ik. Pyogenic.

Pyogenia (pe-o-jen'e-ah) or **Puogen'ia** (*pyo*, *gennao*, to generate). Generation of pus. The theory or mechanism of the formation of pus. Some have believed that pus is formed by the arterial system, and is deposited, by way of excretion, in the inflamed parts; others, that it is formed by the destruction of solid parts. It seems to be owing to a degeneration of the liquor sanguinis and exudation corpuscles. Micro-organisms are concerned in its production. See *Pus*. **P. corrosi'va**, ulceration. **P. sim'plex**, suppuration.

Pyogenic, pe-o-jen'ik. *Pyogenetic*. Having relation to the formation of pus. **P. mem'brane**, term applied to a thin, yellowish, flaky layer on the interior of the wall of an abscess, under the idea that the pus is secreted by it.

Pyohæmia, pe-o-he'me-ah. Pyæmia.

Py'oid (*pyo*, *eidos*, resemblance). *Puriloid*, *Puruloid*. Resembling pus. See *Pus*. **P. cor'puscles** or **glob'ules**, see *Pus*.

Pyok'tanin. Pyoctanin.

Pyoma, pe-o'mah. Suppurating sore.

Pyometra (pe-o-me'trah) (*pyo*, *metra*) **purulen'ta**. Collection of pus in the uterus.

Py'on. Pus.

Pyonephrosis, pe-o-nef-ro'sis (*pyo*, *nephros*, *osis*). Renal abscess and ulceration.

Pyonoma, pe-o-no'mah (*pyon*, *oma*). Suppurating sore.

Pyo-otorrhœa, pe'o-o-tor-rhe'ah (*pyo*, *otorrhœa*). Purulent discharge from the ear.

Pyopericardia (pe-o-per-e-kar'de-ah) or **Pyopericar'dium**. Collection of pus in the pericardium.

Pyoperitonitis, pe-o-per-e-to-ne'tis (*pyo*, *peritonitis*). Suppurative inflammation of the peritoneum.

Pyophthalmia, pe-of-thal'me-ah (*pyo*, *ophthalmia*). Hypopyon. **P. neonato'rum**, see *Ophthalmia*.

Pyoplania, pe-o-plan'e-ah (*pyo*, *planos*, wandering). Extension of pus to other parts. Purulent infiltration.

Pyopneumothorax, pe-o-nu-mo-tho'raks (*pyo*, *pneumothorax*). Pneumothorax complicated with suppuration. **P., subphren'ic**, P. when pus is beneath the diaphragm; false pneumothorax.

Pyopoëtic, pe-o-po-et'ik. Suppurative.

Pyopoïesis, pe-o-poi-a'sis (*pyo*, *poieo*, to make). Pyogenia.

Pyoptysis, pe-op'tes-is (*pyo*, *ptuo*, to spit). Spitting of pus.

Pyorrhagia, pe-or-rhaj'e-ah (*pyo*, *rhage*, violent rupture). Sudden discharge of a collection of matter.

Pyorrhœa, pe-or-rhe'ah (*pyo*, *rheo*, to flow). Discharge of pus. **P. alveola'ris**, suppurative inflammation of the root-membrane of the tooth in relation with the connective tissue of the gums beneath the mucous membrane. **P. alvi'na**, pyochezia. **P. au'rium**, otirrhœa. **P. nasa'lis**, ozæna. **P. pal'pebræ**, secretion of pus from the eyelids. **P. urina'lis**, pyuria. **P. via'rum lacryma'lium**, discharge of tears mixed with purulent matter.

Py'os (*puros*). Pus. Also first milk, colostrum.

Pyosalpingitis, pe-o-sal-pin-je'tis (*pyo*, *salpinx*, tube, *itis*, inflammation). Suppurative inflammation of the Fallopian tube.

Pyosalpinx, pe-o-sal'pinks (*puon*, pus, *salpinx*, tube). Formation of pus in the Fallopian tube.

Pyosapræmia, pe-o-sap-re'me-ah (*puon*, pus, *sapros*, rotten, *haima*, blood). Infection of blood with pus.

Pyoscope, pe'o-skope (*puon*, pus, *skopeo*, to view). An apparatus for ascertaining the amount of fat in milk.

Pyosis, pe-o'sis (*puosis*). Hypopyon; pterygion; suppuration. **P. pec'toris**, empyema.

Pyothorax (pe-o-tho'raks) **ve'rus** (*pyo*, *thorax*). Empyema.

Pyoturia, pe-o-tu're-ah (*pyo*, *ouron*, urine). Pyuria.

Pyoxanthose, pe-o-zan'thoze (*puon*, *xanthos*, yellow). Yellow coloring matter in pus.

Pyr (*pur*). Fever.

Pyra, pir'ah (*pur*, fire). Anthrax.

Pyramid, pir'a-mid (*puramis*, *pur*, flame which has a conical shape). A small bony projection in the cavity of the tympanum, which is excavated to lodge the muscles of the stapes, *Eminentia papillaris* or *pyramidalis tympani*. The centre-pin of the trephine. A small, obtusely pointed eminence of the inferior vermiform process of the cerebellum. Third or middle lobe of the thyroid gland. See *Calumba*. **P. of Lalonette**, pyramid of thyroid gland. **P. of Mal'acarne**, inferior vermiform process. **P. of thy'roid gland**, third or middle lobe of thyroid gland.

Pyramidal, pir-am'id-al. Pertaining to a pyramid. **P. an'gle**, anterior parietal angle of Quatrefages. **P. cat'aract**, see *Pyramid*. **P. em'inence**, pyramis vestibuli. **P. lay'er, large**, third layer of cortex of brain. **P. lay'er, small**, second layer of cortex of brain. **P. nu'cleus**, nucleus olivæ accessorius medialis. **P. papil'læ**, conical papillæ. **P. pro'cess of cu'boid**, posterior inferior angle of cuboid bone. **P. pro'cess of pal'ate-bone**, processus pyramidalis ossis palatini. **P. si'nus of lar'ynx**, pyramidal space continuous with the pharynx, the *Laryngopharyngeal sinus*. **P. skull**, name given to skulls termed Mongolian. **P. tract**, tract of nerve-fibres, originating in the cortex, which connect the central convolutions of the brain and the spinal cord. At the decussation of the pyramids it divides into direct and pyramidal tracts.

Pyramidale (pir-am-id-al'e) **os**. Cuneiform bone.

Pyramidalis, pir-am-id-al'is. A flat, triangular muscle situate at the posterior part of the pelvis. By its base it is attached to the anterior surface of the sacrum, to the corresponding surface of the great sacrosciatic ligament, and to the posterior part of the ilium. It terminates by a tendon which is attached to the inner surface of the great trochanter. This muscle rotates the thigh outward or the pelvis inward. **P. abdom'inis**, a small, fleshy, pyramidal fasciculus whose existence is not constant, and which is inserted by its base into the upper part of the pubis, and terminates by its summit at the inferior part of the linea alba. When it contracts it stretches the linea alba. **P. fem'oris**, pyramidalis. **P. na'si**, a thin triangular muscle which has its summit upward. Above, it is continuous with the occipitofrontalis. It descends vertically before the root of the nose, on which it terminates, becoming confounded with the transversalis. It wrinkles the skin of the root of the nose transversely, and stretches that which covers the tip.

Pyramides, pir-am'id-ees (pl. of **Pyramis**). Corpora pyramidalia.

Pyr'amids of Ferrein. See *Ferrein.* **P. of Malpigh'i,** see *Papillæ of the kidneys.* **P. of medul'la oblonga'ta,** mass of fibres on each side of anterior median fissure of medulla oblongata. **P., poste'rior,** corpora restiformia. **P. of Wis'tar,** sphenoidal cornua.

Pyr'amis (*puramis*). Penis; pyramid. See *Thyroid gland.* **P. coch'leæ,** modiolus. **P. poste'rior,** fasciculus teres. **P. trigo'na,** see *Temporal bone.* **P. ver'mis accesso'ria,** accessory lobule of inferior vermiform process of the cerebellum, *P. vestibuli.*

Pyrcæa, pir-se'ah (*purkaia,* conflagration, *pur,* fire, *kaio,* to kindle). Burning fever or burning heat.

Pyrectic, pir-ek'tik. Febrile.

Pyrectica, pir-ek'tik-ah (*pyretus, echo,* to have). Febrile; fevers.

Pyrenæmata, pir-en-e'mat-ah (*puren,* nucleus, *haima,* blood). Vertebrata with nucleated colored corpuscles—as the oviparous.

Pyrenæmia, pir-en-e'me-ah (same etymon). A condition of the blood characterized by the presence of nucleated colored corpuscles.

Pyrenoïdes, pir-en-o-e'dees (*puren,* kernel, the stone of a fruit, *eidos,* resemblance). Odontoid. **P. auric'ulæ,** fibres of tragicus muscle going to process of helix. **P. jun'gii,** pyramidalis auriculæ. **P. men'ti,** depressor anguli oris. **P. na'rium,** levator labii superioris alæque nasi.

Pyrethrine, pi-re'threen. Alkaloid derived from pyrethrum.

Pyrethrotox'ic acid. Active principle recently discovered in the flowers of Pyrethrum roseum.

Pyrethrum, pir-e'thrum (*pur,* fire). Anthemis pyrethrum. Urticaria. **P. cor'neum,** see *Anthemis pyrethrum.* **P. partheni'um,** Matricaria parthenium. **P. ro'seum,** see *Anthemis pyrethrum.* **P. sylves'tre,** Achillea ptarmica. **P. tanace'tum,** Tanacetum balsamita.

Pyretic, pi-ret'ik. Febrile.

Pyreticosis, pir-et-ik-o'sis (*pyretus*). Febrile affection.

Pyreticus, pir-et'ik-us (*pyretus*). Febrifuge; febrile.

Pyre'tin. Name given to a combination of various empyreumatic resinous products which, combined with resin, constitute pitch.

Pyretogenesis (pir-et-o-jen'es-is) or **Pyretogen'ia** (*pyretus, genesis,* generation). Origin and formation of fever.

Pyretogenetic, pir-e-to-jen-et'ik (same etymon). Producing fever.

Pyretogenine, pir-e-toj'en-een. Substance formed by micro-organisms.

Pyretography, pi-re-tog'raf-e (*pyretus, graphe,* description). Description of fever.

Pyretology (pir-e-tol'o-je) or **Pyretolog'ia** (*pyretus, logos,* discourse). *Pyrology.* Treatise on fevers; title sometimes given to a monograph on fever.

Pyretotyposis, pir-e-to-tip-o'sis (*pyretus, tupos,* type, order, *osis*). Intermittent.

Pyretus, pir'et-us (*puretos*). Fever.

Pyrexia, pir-eks'e-ah (*purexis*). Fever; febrile condition. Also paroxysm of fever.

Pyrexiæ, pir-eks'e-e. *Febrile diseases.*

Pyrexial, pir-eks'e-al. Pertaining to pyrexia or fever.

Py'ri martia'les (pl. of **Pyrus,** pile or pear). Ferrum tartarizatum.

Pyria, pir'e-ah (*puria,* a vapor-bath). Fomentation. See *Stove.*

Pyriaterium, pir-e-at-a're-um (*puriaterion*). See *Stove.*

Pyricaustum, pir-e-kaus'tum (*purikaustos,* set on fire). Burn.

Pyridine, pir'id-een (*pur,* fire). C_5H_5N. Colorless liquid, with an empyreumatic odor, obtained from coal-tar; useful for inhalations in asthma. It has been given in doses of 3 or 4 drops three times a day as a cardiac stimulant. In diphtheria it has been applied in watery solution, being painted on the affected surface, and injections of it have been used in gonorrhœa.

Pyriform sinuses, pir'e-form si'nus-es. See *Sinuses.*

Pyriformis, pir-e-for'mis (*pyrus,* pear, *forma,* shape). Pyramidalis. **P. fas'cia,** part of pelvic fascia over inner surface of pyriform muscle.

Pyriphleges, pir-if'le-jees (*puriphlektos, pur, phlego,* to burn). One who has a burning fever.

Pyrites (pir-e'tees), **i'ron** (*pur,* fire). Ferri sulphuretum.

Pyro-acetic (pi'ro-as-e'tik) **e'ther** (*pur,* fire, *acetic*). Acetone. **P.-a. spir'it,** acetone.

Pyrocatechin, pir-o-kat'e-kin. *Oxyphenol.* Derived by dry distillation from catechu; a constituent of kino; antiperiodic.

Pyrocatechuic (pi-ro-kat-e-ku'ik) **ac'id.** An acid constituent of kino.

Pyrocome'nic ac'id. An acid derived from meconic acid.

Pyrodex'trin. Compound obtained by subjecting starch to heat at 220° to 230° C.

Pyrodine, pi'ro-deen (*pur,* fire, *eidos,* shape). White powder, sparingly soluble in water, antipyretic; also called phenacethydrazine. See *Hydracetine.*

Pyrœnus, pir-e'nus (*pur,* fire, *oinos,* wine). Spiritus rectificatus.

Pyrogallic acid, pi-ro-gal'lik as'id. White, soluble product obtained by action of heat on gallic acid; used externally in some forms of cutaneous affections.

Pyrogal'lol. Pyrogallic acid. Used in skin diseases. It results from the igneous decomposition of gallic acid.

Pyrogallopyrin, py-ro-gal-lo-py'rin. Crystalline compound resulting from action of pyrogallol on antipyrine.

Pyrogen, pi'ro-jen (*pur,* fire, *gennao,* to produce). The electric fluid.

Pyrogenous, pi-roj'e-nus (*pur,* fire or fever, *genesis,* production). Fever-exciting.

Pyroguaiacin, pir-o-gwi'as-in. $C_{19}H_{22}O_3$. Produced by dry distillation of guaiaretic acid.

Pyrola, pi'ro-lah (dim. of **Pyrus,** a pear tree, from a fancied resemblance of the foliage). *P. rotundifolia, Round-leaved pyrola* or *wintergreen, Shinleaf,* ord. Ericaceæ. The plant was once used as a gentle astringent and tonic. **P. macula'ta,** *Spotted pipsissewa, Spotted wintergreen, Whiteleaf, White pipsissewa, Kingcure, Ground holly, Rheumatism weed,* etc., has similar properties. **P., round'-leaved,** pyrola. **P. umbella'ta,** *Ground holly, Pipsissewa, Wintergreen, Rheumatism weed, Prince's pine.* This common American plant is allied to the uva ursi in botanical as well as medical qualities. Tonic and diuretic. The bruised leaves irritate the skin. From the decoction or infusion an agreeable beverage may be formed by adding sugar, ginger to flavor it, and yeast to produce fermentation. Under the name Pipsissewa beer it has been used in scrofulous affections.

Pyroleum (pir-o'le-um) (*pur,* fire, *oleum,* oil) **junip'eri.** Oil of cade. **P. os'sium rectificat'um,** oleum animale Dippelii. **P. pe'træ,** crude petroleum. **P. pi'ni,** tar. **P. suc'cini,** oil of amber.

Pyroligneous acid, pi-ro-lig'ne-us as'id (*pur, lignum,* wood). Acid obtained by distillation from wood, coal, etc., which was once believed to be of a peculiar character. Now known to be formed of acetic acid and an empyreumatic oil, from which it may be freed, and in this state is sold in commerce for acetum distillatum, acetic acid of commerce, acidum aceticum e ligno venale. Used for similar purposes as distilled vinegar and for preserving animal substances. It has also been used as an antiseptic in gangrene and sphacelus, and to foul ulcers—wherever, indeed, creasote is indicated. The dose of the impure pyroligneous acid internally is from five to thirty drops three or four times a day. See *Acetum acidum.* **P. al'cohol,** methyl alcohol. **P. spir'it,** methylic alcohol.

Pyrology, pi-rol'o-je (*pur,* fire, *logos,* discourse). The science of heat.

Pyrolusite, pi'ro-lu-site. Manganese, black oxide of.

Pyromania, pir-o-man'e-ah (*pur*, fire, *mania*). *Incendiary monomania.* Insanity, with an irresistible desire to destroy by fire.

Pyrometer, pi-rom'e-tur (*pur*, fire, *metron*, measure). Instrument for measuring higher temperatures which cannot be estimated by the thermometer.

Pyrophagus, pir-of'ag-us (*pur*, fire, *phago*, to eat). One who eats fire, us a juggler who eats substances in a state of ignition.

Pyrophlyctis endemica, pir-o-flik'tis en-dem'ik-ah (*pur*, fire, *phluktis*, a blister). Bouton d'Alep.

Pyrophobia, pir-o-fo'be-ah (*pur*, fire, *phobos*, fear). Morbid dread of fire.

Pyrophos'phas. Pyrophosphate. **P. fer'rico-so'dicus**, sodio-ferric pyrophosphate. **P. fer'ricus cum citra'te ammoni'aco**, ammonio-ferric citro-pyrophosphate. **P. na'tricus** or **so'dicus**, sodium pyrophosphate.

Pyrophosphate, pi-ro-fos'fate. See *Pyrophosphoric acid.* **P. of i'ron**, ferri pyrophospas (Ph. U. S.). **P. of so'dium**, sodium pyrophosphate; officinal in Ph. U. S. as sodii pyrophosphas.

Pyrophosphoric (pi-ro-fos-for'ik) **ac'id.** Acid formed by heating phosphoric acid. Of the salts formed by its union with bases, *Pyrophosphates*, the pyrophosphates of iron and P. of sodium are officinal.

Pyropuncture, pi-ro-punk'ture. Puncturing with hot needles.

Pyroscopium, pir-o-skop'e-um (*pur*, fire, *skopeo*, to see). Pyrometer.

Pyrosis, pi-ro'sis (*puroo*, to burn). *Soda, Waterbrash, Waterqualm, Waterpang, Blackwater, Chronic gastric catarrh.* This affection consists of a hot sensation in the stomach, with eructations of an acrid, burning liquid, which causes a distressing sensation in the parts over which it passes. Attention to diet and the use of bitter absorbents will usually relieve when the disease is functional. Occasionally it is symptomatic of organic disease of the stomach. Pyrosis also signified, of old, inflammation, gangrene, and a burn. **P. Suec'ica**, pyrosis.

Pyrosophia, pir-o-sof'e-ah (*pur*, fire, *sophia*, wisdom). Chemistry.

Pyrosphire or **Pyrosphere**, pir'o-sfere (*pur*, fire, *sphaira*, hammer). Hammer heated in boiling water and applied to the skin for the pupose of cauterization.

Pyrotechnia, pir-o-tek'ne-ah (*pur*, fire, *techne*, art). Chemistry.

Pyrotechny, pir'o-tek-ne. Art of making fireworks, etc. Also chemistry. **P., sur'gical**, art of applying fire or the actual cautery in surgery.

Pyrothonide, pir-o'thon-eed (*pur*, fire, *othone*, linen). A kind of pyrogenous or empyreumatic oil produced by the combustion of textures of hemp, linen, or cotton in a copper vessel. The brown product is acid. Its medical properties probably resemble those of creasote. Diluted with three or four times its weight of water, it has been used as a gargle in cynanche tonsillaris. It is said, also, to be a popular remedy for toothache and skin diseases. When prepared from rags, it is called *Rag oil;* when from paper, *Paper oil.*

Pyrotic, pi-rot'ik (*puroo*, to burn). Caustic; inflammable.

Pyroxylic (pi-roks'il-ic) **spir'it.** See *Acetone.*

Pyroxylin (pi-roks'il-in), **Pyroxyli'num** (*pur*, fire, *xulon*, wood). Soluble gun-cotton. See *Collodion.*

Pyroxylinum (Ph. U. S.), pir-ox-il-e'num. Pyroxylin.

Pyrox'ylon. See *Collodion.*

Pyroxylous, pi-roks'il-us. Pyroligneous acid.

Pyrrhopine, pir'rho-peen. Alkaline principle from chelidonium.

Pyrrol, pir'rol. Product of dry distillation of ammonium saccharate and mucate. **P. tetri'odide**, iodol.

Pyrus, pir'us (*pur*, fire, because flame is shaped like the pear). Triticum; see *Pyrus malus.* **P. America'na**, Sorbus Americana. **P. cydo'nia**, *Quince tree.* Ord. Rosaceæ. The fruit is quince. Quinceseed—*Cydonium* (Ph. U. S.), the seed of Cydonia vulgaris—are sometimes used in decoction as a demulcent. The fruit makes a pleasant preserve. **P. domes'tica**, Sorbus domestica. **P. ma'lus**, *Apple tree, Apple, Pomum, Malum, Pear;* the fruit of Pyrus communis, P. sorbus sativa.

Pythogen'ic (*putho*, to putrefy, *gennao*, to generate). Causing putrefaction. Resulting from putrefaction. **P. fe'ver**, typhoid fever.

Py'tia. Colostrum; rennet.

Pytis'ma. Sputum.

Pyul'con or **Pyul'cum** (*puo*, *helko*, to extract). Surgical instrument for extracting pus from any cavity. It acts as an exhaustive syringe.

Pyuria, pe-u're-ah (*pyo*, *ouron*, urine). Discharge of purulent urine; a symptom occurring in many diseases, particularly in cases of renal calculi and in organic affections of the bladder. It is called, according to the part whence the pus proceeds, pyuria urethralis, P. renalis, P. vesicalis, etc. **P. chylo'sa**, chyluria. **P. lac'tea**, chyluria. **P. muco'sa**, cystirrhœa. **P. sero'sa**, cystirrhœa. **P. vis'cida**, cystirrhœa.

Pyxidaria macrocarpa, piks-id-ar'e-ah mak-ro-kar'pah (*pyxis*). The bark is much used in Brazil as an astringent.

Pyxis, piks'is (*puxis*, made of boxwood). Box; pill-box. Emollient ointment. See *Cotyloid.*

Q.

Q. See *Abbreviations.*

Q. l. Abbv. for quantum libet, as much as is required.

Q. q. h. Abbv. for quâque quartâ horâ, every four hours.

Q. s. Abbv. for quantum sufficit, as much as is sufficient.

Quabebe. Piper cubeba.

Quack. Charlatan. **Q. med'icine,** arcanum.

Quack'ery. See *Charlatan.*

Quack'salver. Charlatan.

Quadran'gular (*quatuor*, four, *angulus*, angle). Having four angles. Relating to a lobe of cerebellum. **Q. mem'brane,** membrana quadrangularis.

Quad'rans. Quarter of a pound. Three ounces (troy).

Quadrant, kwod'rant (*quadrans*, fourth part). Fourth part of a circle or ninety degrees. **Q. electrom'eter,** instrument for determining the degree and intensity of electricity.

Quadran'tal. See *Amphora.*

Quadrate (kwod'rat) **car'tilages.** Quadrangular cartilages of small size, often found in alæ of nose. **Q. lobe,** lobus quadrangularis cerebelli. **Q. lob'ule,** square lobe of the liver.

Quadratus, kwod-rat'us (*quadratus*, square). Name for muscles whose figure approaches a square. **Q. dor'si,** Q. lumborum. **Q. fem'oris,** muscle situate at posterior and upper part of the thigh; thin, flat, and quadrilateral, and attached to the outer part of the tuberosity of the ischium, whence it proceeds transversely to the inferior part of the posterior margin of the great trochanter. Rotates the limb, turning the toe outward. **Q. ge'næ,** platysma myoïdes. **Q. lumbo'rum,** flat, somewhat thick, irregularly quadrilateral muscle, situate in the loins, at the sides of the vertebral column. Is attached below to the crista ilii and ilio-lumbar ligament, and above to the inferior margin of the last rib, and, besides, to the base of the transverse processes of the last four lumbar vertebræ. This muscle inclines the loins to its side, depresses the last rib, and is thus a muscle of respiration. It can also raise the hip. **Q. men'ti,** depressor labii inferioris. **Q. plan'tæ,** flexor accessorius plantæ. **Q. rad'ii,** pronator radii quadratus. **Q. supe'rior,** quadratus labii superioris.

Quad'ri. Four or five times; Latin prefix.

Quadriceps (kwad're-seps) **exten'sor mus'cle** (*quatuor*, four, *caput*, head). Great extensor muscle of the leg, including the rectus femoris, vastus externus, vastus internus, and cruræus. **Q. su'ræ,** two heads of the gastrocnemius, with soleus and plantaris, as one muscle.

Quadriga, kwod-re'gah (*quatuor*, four, *jugum*, yoke). Cataphracta.

Quadrigemina tubercula, kwod-re-jem'in-ah tubur'ku-lah (*quatuor*, four, *geminus*, double). *Optic lobes* or *tubercles, Optic ganglia, Quadrigeminal bodies.* Four medullary tubercles situate at the posterior surface of the tuber annulare; white externally, gray internally; oblong, rounded, connected by pairs, and separated by two grooves which divide them crucially. Of these tubercles, the superior, called *Nates, Natulæ, Tubercula anteriora, Glutia,* are larger and more prominent than the lower, called *Testes, Tubercula posteriora.* The pineal gland corresponds exactly to the point of intersection of the two furrows that separate them. They give origin to the optic nerves.

Quadrigeminal (kwod-re-jem'in-al) **bod'ies.** Quadrigemina tubercula.

Quadrigeminous, kwod-re-jem'in-us. Relating to corpora quadrigemina.

Quadrigeminus (kwod-re-jem'in-us) **brach'ii.** Biceps brachii. **Q. cap'itis,** sterno-cleido-mastoid muscle. **Q. pri'mus et supe'rior,** pyramidalis. **Q. quar'tus quadrat'us,** quadratus femoris. **Q. secun'dus et ter'tius,** ischiotrochanterianus.

Quadrimammatus, kwod-re-mam-mat'us (*quatuor*, four, *mamma*, breast). Four-breasted.

Quadristernalis, kwod-re-stur-nal'is. Quartisternal.

Quadroon, kwad-roon' ([L.] *quartus*, one-fourth). See *Mulatto.* **Q., black,** see *Mulatto.*

Quadrumana, kwod-ru'ma-nah (*quatuor*, *manus*). Order of Mammalia, including those in which the four extremities are provided with a hand.

Quadruped, kwod'ru-ped (*quatuor*, *pes*, foot). Four-footed animal.

Quadrupl. Abbr. for quadruplicatus, four times as much.

Quad'ruplets. Four children at one birth.

Quafadil, kwof'a-dil. Melanthium Virginicum.

Quahoil. Cacao.

Quai. Akasja.

Quail (Low L. *qualea*). Tetrao coturnix.

Quain's degenera'tion. Form of hypertrophy of the heart characterized by increase of the connective tissue.

Qua'ker black drop. Acetum opii. **Q. but'tons,** nux vomica.

Qualitative, kwol'it-a-tiv (*qualitativus*). Referring to quality. **Q. anal'ysis,** process for determining in chemistry the component elements of a compound.

Quamash'. Camassia esculenta. **Q., east'ern,** Scilla esculenta.

Quantitative analysis, kwon'tit-a-tiv an-al'is-is. Process for determining in chemistry the proportional quantity of each part in a compound.

Quantivalence, kwon-tiv'al-ence (*quantus*, *valeo*, to be worth). See *Atomicity.*

Quarantine, kwor'an-teen (*quaranta*, forty). *Quarentine, Quarentaine, Quarantaine.* Time during which travellers, returning from a country where the plague or any other pestilential disease exists, are compelled to remain on board ship or in a lazaretto. They, as well as the ship, are said "*to perform quarantine*" and to be "*quarantined.*" Quarantine is sometimes extended beyond forty days, while its duration is generally much less. It is sometimes enforced by land, as when contagious diseases require the establishment of *cordons sanitaires,* and when persons are desirous of leaving infected districts. During quarantine no communication is allowed between the travellers and the inhabitants of the country. Quarantine is of course a great impediment to commerce, and may frequently be enforced when there is but little danger of contagion. The evils, however, that might arise from the introduction of a widely-spreading contagious disease are so disastrous as to induce the health authorities to maintain these laws as rigidly as possible, with a view to the public safety.

Quartan, kwor'tan (*quartus*, the fourth). *Quartan ague.* An intermittent the paroxysms of which recur every fourth day, leaving between them two days' interval. We speak also of the *Quartan type.* A double quartan is one in which one paroxysm occurs on the third and another on the second day, so that there is only one day of apyrexia with two days of paroxysms in succession, the paroxysms of every fourth day resembling each other. A triple quartan is one in which there is a paroxysm every day, and on every three days the paroxysms correspond. A redoubling or repeating quartan is one in which there are two paroxysms every fourth day. See *Intermittent.*

Quartanus, kwor-tan'us. Quartan. **Q. remit'tens,** a quartan in which the intermission is inordinately short or imperfect.

Quartarius, kwor-tar'e-us. Ancient measure equal to one-fourth of the sextarius. See *Weights* and *Measures.*

Quarter (kwor'ter) **evil.** *Quarter ill.* Form of malignant vesicle frequently fatal to the lower orders of animals.

Quarteron, kwor'ter-on ([L.] *quatuor*, four, fourth part). See *Mulatto.* **Q., black,** mulatto.

Quartio, kwor'she-o (*quatuor*, four, being four-sided). Astragalus.

Quartisternal, kwor-te-stur'nal. Fourth osseous portion of the sternum, corresponding to the fourth intercostal space.

Quassatio, kwos-sah'she-o (*quasso*, to shake). Conquassation.

Quassatura, kwos-sat-u'rah. Conquassation.

Quassia, kwosh'e-ah (Ph. U. S.). *Quassy.* Wood of Quassia amara and of Q. excelsa, Picræna excelsa, Bittera febrifuga, lofty bitterwood tree, bitter ash, Simaruba excelsa; ord. Simarubaceæ; W. India trees. The former is the Jamaica quassia, the one in common use; the latter the Surinam quassia. It is called after Quassi, a Surinam negro, who first employed it in the fevers of the country; intensely durable bitter, without astringency; tonic and stomachic. The bitter principle is called *Quassin, Quassiin, Quassit,* and *Bitterin,* $C_{41}H_{42}O_9$. **Q. cups,** vessels made of quassia wood, used for furnishing weak infusion of quassia. **Q. lig'num,** quassia. **Q. simarou'ba,** *Euonymus, Bitter simaruba, Mountain damson;* bark of the root, *Simaruba* (Ph. U. S.), is bitter and not unpleasant; water and alcohol extract its virtues; exhibited wherever a simple tonic is required.

Quassin, kwos'sin. See *Quassia.*

Quassit, kwos'sit. See *Quassia.*

Quaternio (kwot-ur'ne-o) or **Quatrio,** kwot're-o (*quatuor*, four, having four sides). Astragalus.

Queasiness, kwe'ze-ness. Nausea.

Quebrachine, ka-brak'een. Alkaloid derived from quebracho bark; given as hydrochloride in dyspnœa and croup; dose, 1 or 2 grains.

Quebracho, ka-brak'o. Bark of Apidosperma quebracho; tree is a native of Chili; ord. Apocynaceæ. Very bitter and tonic; antispasmodic; recommended in cardiac and asthmatic dyspnœa.

Queen of the meadow. Spiræa lobata. **Q. of the prai'rie,** Spiræa ulmaria.

Queen's delight'. Stillingia. **Q.'s root,** stillingia.

Quercera, kwur-se'rah (*karkairo*, to tremble). Epialos.

Quercetic (kwur-se'tik) **ac'id.** Result of action of potassa upon quercetin.

Quercetin, kwur'se-tin. Neutral principle due to decomposition of quercitrin by acids.

Quer'cin. Bitter principle from Quercus alba.

Quercini herba, kwur-se'ne ur'bah. Lichen plicatus.

Quercit, kwur'sit. Saccharine substance in acorns.

Quercitannic (kwer-se-tan'nik) **ac'id.** Tannin found in oak bark.

Quercitrin, kwur'sit-rin. Crystallizable glucoside; coloring matter of bark of black oak.

Quercitron, quer'sit-ron (*quercus*, oak, *citrus*, citron tree). Bark of Quercus tinctoria, black oak or dyer's oak. Inner bark of Quercus tinctoria, used in dyeing and tanning.

Quercula (kwur'ku-lah) (dim. of **Quercus**) **æ'gilops.** Valonia is derived from it. **Q. ballo'ta,** native of Morocco; oil resembling olive oil is obtained from the acorns of this tree, which can be eaten. **Q. cor'tex,** oak bark. **Q. falca'ta,** Spanish oak. **Q. minor,** Teucrium chamædrys. **Q. pri'nus,** chestnut oak.

Quercus (kwur'kus) **al'ba** (Ph. U. S) (*White oak*), *Q. robur* (*Common oak*), *Q. tinctoria* (*Black oak*), *Q. rubra montana* (*Red oak* or *Spanish oak*), *Q. Pedunculata* (*Common British oak*), ord. Cupuliferæ. The bark of all these varieties—*Quercus*—is probably alike in medicinal properties; astringent and tonic, and used internally as a tonic and in intermittents, externally in decoction, as the astringent wash. The acorn was at one time used as food, and a decoction in dysentery and diarrhœa, glandular obstructions, etc. A pessary made of it has been advised in immoderate flow of the menses. Roasted acorns have been used in the same cases. **Q. cer'ris,** Quercus infectoria. **Q. coccif'era,** see *Kermes.* **Q. cor'tex,** oak bark. **Q. infecto'ria,** tree of Asia Minor, affording Turkey or nut-galls, galls. The nut-gall—Galla (Ph. U. S.)—is a morbid protuberance or tubercle produced by the puncture of the Diplolepsis or Cynips gallæ tinctoriæ, Cynips quercus folii; powerfully astringent and tonic, and employed in diarrhœa, intestinal hemorrhage, and intermittents, but chiefly used externally in gargles and injections. The powder, made into an ointment with lard, is used in piles. The ordinary nut-galls of the shops are procured from the Levant. The large Mecca or Bussorah galls—at times called Dead Sea apples, mad apples, and apples of Sodom—are produced on Quercus infectoria. **Q. mari'na,** Fucus vesiculosus. **Q. peduncula'ta,** see *Quercus.* **Q. ro'bur,** see *Quercus.* **Q. ru'bra montan'a,** see *Quercus.* **Q. su'ber,** see *Suber.* **Q. tincto'ria,** see *Quercus.* **Q. vi'vens,** live oak.

Querquera, kwer'kwa-rah (*karkairo*, to tremble). Fever with chills; cold stage of an intermittent.

Quicken (kwik'en) **tree.** Sorbus aucuparia.

Quickening, kwik''ning. Period of gestation when the motion of the fœtus first becomes perceptible—usually about the eighteenth week; it was erroneously believed to mark the time at which the fœtus becomes alive—*animatio fœtûs.* It possesses the principle of life, however, from the moment of the union of the materials furnished by the sexes at a fecundating copulation. When the motion is felt the female is said to be "quick with child."

Quickens, kwik'ens. Triticum repens.

Quick-in-the-hand. Impatiens.

Quick'lime. Calx viva.

Quicksilver, kwik'sil-ver. Hydrargyrum.

Quies, kwe'aze (rest). Rest; immobility.

Quiescent, kwi-es'ent. At rest.

Quilla'ia (or **Quillaya**) **saponaria,** kwil-la'yah sapo-nah're-ah. Evergreen tree growing in Chili, South America, the bark of which, *Quillaia* (Ph. U. S.), is sometimes given as a febrifuge and as a remedy for coryza. The bark contains saponine, which is poisonous; used in place of soap.

Quillain, kwil-la'in. Aqueous extract of quillaia bark.

Quilled su'ture. See *Suture.*

Quina, kwe'na (*quinquina*). Quinine. **Q. qui'na,** cinchona.

Qui'næ ace'tas, sul'phas, etc. See *Quiniæ acetas,* etc.

Quinamia (kwin-am'e-ah) or **Quinamina,** kwin-am-e'nah. White alkaloid, insoluble in water; obtained from Cinchona siccarubra of India and other barks.

Quinamidine, kwin-am'id-een. Artificial alkaloid obtained from sulphate of quinamine.

Quince, kwince. Scrofula. See *Pyrus cydonia.* **Q., Bengal',** covolam. **Q. tree,** Pyrus cydonia.

Quincke's pulse. Blanching of the root of the finger-nail when the heart is in diastole, indicating aortic insufficiency.

Quinetum, kwin-e'tum. Cinchona febrifuga.

Quinia, kwi'ne-ah (*quinquina*). Quinine. **Q., ac'etate of,** quiniæ acetas. **Q., amorph'ous,** see *Quinia, extract of,* and *Chinioidine.* **Q., arsen'iate of,** quiniæ arsenias. **Q., ar'senite of,** quiniæ arsenis. **Q., bisul'phate of,** quiniæ bisulphas. **Q., bro'mide of,** quiniæ bromidum. **Q., car'bolate of,** quiniæ carbolas. **Q., chlo'rate of,** quiniæ chloras. **Q. and cincho'nia, tan'nate of,** quiniæ et cinchoniæ tannas. **Q., ci'trate of,** quiniæ citras. **Q., ex'tract of,** preparation consisting in evaporating the liquor poured off the crystals of sulphate of quinia to the consistence of a pilular mass; said to have the properties of sulphate of quinia. Its active principle appears to be amorphous quinia or chinioidine. **Q., ferrocy'anate of,** quiniæ ferrocyanas. **Q., hydri'odate of,** quiniæ hydriodas. **Q., hypophos'phite of,** see *Calcis hypophosphis.* **Q., im'pure sul'phate of,** quinia, extract of. **Q., iodhy'drate of,** quiniæ hydriodas. **Q., i'odide of,** quiniæ hydriodas. **Q., i'odide of iodhy'drate of,** see *Quiniæ hydriodas.* **Q., i'odide of sul'phate of,** quinine, iodo-

sulphate of. **P., iod'uret of,** quiniæ hydriodas. **Q. and i'ron, hydri'odate of,** see *Quiniæ hydriodas.* **Q., lac'tate of,** quiniæ lactas. **Q. and mer'cury, protochlo'ride of,** hydrargyri et quiniæ protochloridum. **Q., mu'riate of,** quiniæ murias. **Q., Navanjanda,** a form of fibrous Carthagena bark. **Q., ni'trate of,** quiniæ nitras. **Q., phos'phate of,** quiniæ phosphas. **Q. de Remi'jio** or **de Se'ra,** a form of Cuprea bark; antiperiodic. **Q., sul'phate of,** quinine, sulphate of. **Q., tan'nate of,** quiniæ tannas. **Q., u'rate of,** yellow soluble salt employed in intermittent fever, in smaller doses than the sulphate.

Quin'iæ ace'tas. Acetate of quinia or of quinine. (Prepared by saturating quinia with diluted acetic acid.) Has the properties of other salts of quinia. **Q. arsen'ias,** arseniate of quinia or of quina or of quinine (formed by the union of arsenic acid and quinia); antiperiodic in total daily dose of gr. ¾ to gr. 1½. **Q. ar'senis,** arsenite of quinia (salt resulting from the double decomposition of arsenite of potassium and sulphate of quinia); has been used in chronic cutaneous diseases; an antiperiodic in ague, neuralgia, etc.; dose, gr. ⅓, three times a day. **Q. bisul'phas** (Ph. U. S.), quinine bisulphate, $C_{20}H_{24}N_2O,H_2S_4,7H_2O$; its medicinal effects resemble those of the sulphate. **Q. bro'midum,** bromide of quinia or of quinine; see *Quiniæ hydrobromas.* **Q. car'bolas,** carbolate of quinia or quinine; preparation containing carbolic acid and quinia; used in puerperal affections, typhus, etc. **Q. chlo'ras,** chlorate of quinia or quinine; combination of chloric acid and quinia, employed in low pyrexial conditions, as scarlatina, typhus, etc. Chlorates of cinchonia and of quinidia are similarly made. **Q. et cincho'niæ tan'nas,** tannate of quinia and cinchona; has the same properties as the salts of quinia in general, with the astringency of tannin. **Q. ci'tras,** citrate of quinia or quina or quinine (formed from the union of citric acid and quinia); same properties as the sulphate. **P. diar'senis,** quiniæ arsenis. **Q. ferrocy'anas,** ferrocyanite or hydrocyanoferrate of quinia or of quinine (salt obtained by the decomposition of sulphate of quinia by means of a solution of ferrocyanuret of potassium); has all the properties of sulphate of quinia, and, according to some, in a superior degree. **Q. hydri'odas,** hydriodate or iodhydrate of quinia; called, also, iodu retum or iodidum quiniæ, ioduret or iodide of quinia; formed by precipitating sulphate of quinia by means of iodide of potassium; given in scrofulous affections; gr. ss–j, three times a day, to a child. An iodide and a biniodide have been formed; the latter made by mixing double the quantity of iodide of potassium with sulphate of quinia. An iodized hydriodate of quinine has been employed, consisting of hydrochlorate of quinine, iodide of potassium, and iodine. **Q. hydrobro'mas,** quininæ hydrobromas (Ph. U. S.); $C_{20}H_{24}N_2O_2HBr,2H_2O$; used hypodermically; dose, same as that of other quinine salts. **Q. hydrobro'mas ac'idus,** quinine hydrobromate, acid. **Q. hydrochlo'ras,** quininæ hydrochloras (Ph. U. S.); same action and doses as sulphate. **Q. hydrochlorocarbam'idate,** compound salt of quinine and urea; dose, gr. j–iij; adapted for hypodermic use. **Q. hypophos'phis,** quinine hypophosphite. **Q. i'odas,** quinine iodate. **Q., i'odide of iodhy'drate of,** prepared by pouring into an acid solution of quinia a solution of iodide of iron containing a slight excess of iodine; salt possesses the properties of the other salts of quinia. Under the name hydriodate of iron and quinia a preparation has been used; tonic and antiperiodic. **Q. io'didum,** quiniæ hydriodas. **Q. iodure'tum,** quiniæ hydriodas. **Q. lac'tas,** lactate of quinia or of quinine; made by the action of lactic acid on quinia; used in the same cases as the other salts of quinia. **Q. mec'onas,** meconate of quinine; made by mixing alcoholic solution of meconic acid and quinine. **Q. mu'rias,** muriate of quinia or of quinine; may be prepared by dissolving quinia in dilute muriatic acid; antiperiodic; dose, gr. ss–j. **Q. ni'tras,** nitrate of quinia or of quinine: formed by the addition of nitric acid to quinia; properties are those of the sulphate of quinia. **Q. o'leate,** quinine dissolved in oleic acid (1:3); used for inunction. **Q. phe'nas,** Q. carbolas. **Q. phos'phas,** phosphate of quinia or of quinine; prepared by the addition of dilute phosphoric acid to quinia; thought by many to be next to the sulphate of quinia in remedial powers. **Q. sal'icylas,** salicylate of quinine; made by double decomposition between solutions of quinine hydrochlorate and ammonium salicylate; antiseptic and antipyretic. **Q. sul'phas,** quinine, sulphate of. **Q. sul'phas ac'idus,** bisulphate of quinine. **Q. sulphovi'nas,** sulphovinate of quinine; made by mixing a solution of sodium sulphovinate in alcohol with an alcoholic solution of quinine sulphate. **Q. tan'nas,** tannate of quinia or quinine; made by precipitating infusion of bark, or solution of sulphate of quinia, by infusion of galls or solution of tannic acid; astringent, tonic, and antiperiodic in the same doses as the sulphate. **Q. valeria'nas,** valerianate or valerate of quinia, of quina, or quinine; has the properties of the salts of quinia with the added properties of valerian; dose, gr. j–v.

Quinic (kwi'nic) **fever.** Fever with eruption among persons making quinine.

Quinicine, kwi'nis-een. When a salt of quinia is exposed to heat with certain precautions, the alkaloid is changed into another isomeric with it, to which this name is given. Quinicine and its sulphate possess the medical properties of quinia and its salts; dose, gr. v–xv.

Quinicus, kwin'ik-us. Cinchonic.

Quinidamine, kwi-nid'am-een. Quinidamia; conchinamine. $C_{19}H_{24}N_2O_2$. An alkaloid of Cinchona rosulenta, C. succirubra, and other barks.

Quinidia, kwin-id'e-ah. *Quinidina, Quinidine, Chinidine, Cinchotin.* Alkaloid of the cinchonas—of many of the genuine, at least—obtained from them by the same process as that by which quinia is obtained from the barks that yield it. Its sulphate, *Quinidinæ sulphas* (Ph. U. S.), is soluble in acidulated water and alcohol, and is given as an antiperiodic in doses of gr. xx or xxx to ʒj. The tannate is also used in dyspepsia, diarrhœa, nephritis, etc. and in veterinary medicine. Salts of quinidia are markedly antiperiodic. From gr. x to gr. xxx will usually arrest a paroxysm.

Quinidina, kwin-id-e'nah. Quinidia.

Quinim'etry. Quiniometry.

Quini'na (Ph. U. S.). $C_{20}H_{24}N_2O_2,3H_2O$. Quinia.

Quini'næ bisul'phas (Ph. U. S.). Bisulphate of quinine; possesses greater solubility than the sulphate; well adapted for use in pill form. **Q. hydrobro'mas** (Ph. U. S.), quiniæ hydrobromas. **Q. hydrochlo'ras** (Ph. U. S. and Br.), quiniæ hydrochloras. **Q. sul'phas** (Ph. U. S. and Br.), quinine, sulphate of. **Q. valerian'as** (Ph. U. S.), quiniæ valerianas.

Quinine, kwi'nine. (Receives various popular pronunciations, kin-een', kwin'een, kwin-ine', etc.). Alkaline, uncrystallizable substance; in the form of a porous, whitish mass; almost insoluble in water, soluble in alcohol and ether; obtained from different cinchonas, but chiefly from the yellow, and is the active principle of those valuable drugs; forms, with acids, salts that are in general soluble. The sulphate and valerianate and the citrate of iron and quinia are official; but quite a variety of other salts have been used medicinally, as albuminate, ammonio-citrate, borate, ethylsulphate, ferrichloride, ferricyanide, ferrocitrate, ferrocyanide, ferropeptonate, ferrosalicylate, hydrobromide, oleate, peptonate, phenylate, etc. **Q. ac'etate,** quiniæ acetas. **Q. arse'niate,** quiniæ arsenias. **Q. ar'senite,** quiniæ arsenis. **Q. az'otate,** quiniæ nitras. **Q. bisul'phate,** quiniæ bisulphas. **Q. bro'mide,** quiniæ bromidum. **Q. car'bolate,** quiniæ carbolas. **Q. chlo'rate,** quiniæ chloras. **Q. ci'trate,** quiniæ citras. **Q. ferrichlo'ride,** brown astringent powder, hæmostatic applied externally and when applied internally in hæmorrhage of the stomach and bowels, hæmoptysis, etc. **Q. ferrocy'anate,** quiniæ ferrocyanas. **Q. flower,** root of Sabbatia Elliottii;

tonic, febrifuge, and antiperiodic; dose of fld. extract, f℥ss–j. **Q. hydrobro'mate,** an officinal salt, well adapted for hypodermic injections on account of its greater solubility. **Q. hydrochlo'rate,** quiniæ hydrochloras. **Q., i'odide of,** quiniæ hydriodas. **Q., iodosul'phate of,** *Iodide of sulphate of quinia, Sulphate of iodoquinia.* This salt of quinia is made by adding tincture of iodine drop by drop to a mixture of solution of sulphate of quinia in acetic acid and distilled alcohol. **Q., lac'tate of,** quiniæ lactas. **Q., mu'riate of,** quiniæ murias. **Q., ni'trate of,** quiniæ nitras. **Q. o'leate,** yellow mass, soluble in alcohol, used in suppository, and in skin diseases in ointment; see *Oleate.* **Q., phos'phate of,** quiniæ phosphas. **Q. sul'phas,** quiniæ sulphas. **Q., sul'phate of,** the salt usually employed in medicine; occurs in needles of a pearly and satiny appearance; employed in the treatment of intermittents; and is available in many cases where the bark in substance could not be retained or would be injurious; dose, as a tonic, from 3 to 10 grains in the 24 hours. As an antiperiodic it may be carried much farther. Its action, in a large dose, is decidedly sedative. **Q., tan'nate of,** quiniæ tannas. **Q., vale'rianate of,** quiniæ valerianas.

Quininism (kwi'nin-izm). *Quinism, Cinchonism.* The aggregate of encephalic or neuropathic phenomena induced by over-doses of quinia.

Quiniometry, kwin-e-om'et-re. Estimation of the amount of quinine in any sample of cinchona bark.

Quiniretin, kwin-e-ret'in. Flocculent precipitate deposited from quinine solutions by the action of sunlight; has the same chemical composition as quinine.

Quinium, kwin'e-um. An alcoholic extract made from cinchona barks the composition of which is known, and which are mixed together in such proportions that the quinia and the cinchonia exist in the relation of two of the former to one of the latter. It is used in pills or in wine.

Quinoa, kwin'o-ah. The seeds of Chenopodium quinoa, herbaceous annual of Peru and Chili, have been used as an article of food.

Quinoidine, kwin-oid'een. Chinioidine. **Q., an'imal,** see *Chinioidine.*

Quinolin, kwin-o'lin (*quina, elaion,* oil). Leukoleinum.

Quinology, kwi-nol'o-je (*quina, logos,* discourse). *Cinchonology.* A treatise on the cinchonas or on quinia.

Quinone, kwi'none. Compound obtained from kinic acid by treating with diluted sulphuric acid.

Quinotannic (kwi-no-tan'nik) **ac'id.** Cinchotannic acid.

Quinovic (kwi-no'vik) **ac'id.** Kinovic acid.

Quinovin, kwi-no'vin. Kinovin.

Quinquefolium, kwin-kwe-fo'le-um (*quinque,* five, *folium,* leaf). Potentilla reptans. **Q. ma'jus,** Potentilla reptans.

Quinquina, kwin-kwe'nah (Peruvian, *kina kina*). Cinchona. **Q. bi'color,** Cinchonæ Caribææ cortex.

Quinquino, kwin-kwe'no. Myroxylon Peruiferum.

Quinsy, kwin'ze. Cynanche; C. tonsillaris. **Q., ner'vous,** hysterical feeling of strangulation, with dread of suffocation. **Q., wolf,** wolf-choak or wolf-quinsy; lycanche.

Quintan, kwin'tan (*quintus,* a fifth). A fever whose paroxysms return only every five days inclusively, and between them there are, consequently, three days of apyrexia.

Quinteron, kwin'ter-on (*quintus,* fifth). See *Mulatto.* **Q., black,** see *Mulatto.*

Quintessence, kwin-tes'sence (fifth essence). Name formerly given to alcohol impregnated with the principles of some drug; often synonymous therefore with *Alcoholic tincture.* The most volatile principles of bodies were called *Quintessences.*

Quintisternal, kwin-te-stur'nal. Fifth osseous portion of the sternum, corresponding to the fifth and sixth intercostal spaces.

Quintus columns, kwin'tus kol'ums. Fasciculi marginales aquæducti.

Quinua, kwin'u-ah. Chenopodium quinoa.

Quiricua, kwir-ik-u'ah. See *Chloasma.*

Quisqualis Indica, kwis-kwah'lis in'dik-ah (*quis,* who, *qualis,* of what kind). Shrub, ord. Combretaceæ, native of the East Indies; used in China as a vermifuge.

Quitch, kwitch. Triticum repens.

Quittor, kwit'tor. Fistulous wound upon the quarters or heel of the coronet of a horse's foot.

Quiz'zer. *Grinder.* One who examines and prepares students in medical colleges on the subjects taught in them. The term quizzer, in this sense, is restricted to the United States. To "hold a quiz" is to give an examination in this manner.

Quor. Quorum, meaning "of which."

Quotidian, kwo-tid'e-an (*quotidie,* daily). That which takes place every day. **Q. fe'ver,** *Q. ague;* an intermittent the paroxysms of which recur every day. A simple, double, or triple quotidian is a quotidian which has one, two, or three paroxysms in the twenty-four hours.

Quotient, respiratory, kwo'shent, res'pir-a-to-re. Proportion of oxygen excreted by the lungs to that absorbed by them in the same time.

Q. v. Quantum volueris, as much as you wish.

R

R. or ℞ is placed at the commencement of a prescription as a contraction of *Recipe*. See *Abbreviation*. Originally it was the sign (♃) of Jupiter, and was placed at the top of a formula to propitiate the king of the gods, that the compound might act favorably.

Rabdoï'des sutu'ra (*rhabdos*, rod, *eidos*, resemblance). Sagittal suture.

Rab'id (*rabies*, canine madness). That which belongs to hydrophobia, as rabid virus, etc. Rabid also means affected with hydrophobia.

Rabies canina, rab'e-ees kan-e'nah. Hydrophobia.

Rac'ahout. A name given by the Arabs to the starch prepared from an edible acorn obtained from Quercus ilex; but the so-called racahout of the Arabs sold in Paris is said to be a compound of potato starch, chocolate, and aromatics—as vanilla; or of Caracas cacao, Bermuda arrow root, farina of wheat, sugar of milk, salep, and vanilla.

Raccoon' ber'ry. Podophyllum montanum.

Race (*radix*, root). *Breed.* Union or aggregate of individuals whose conformation or particular condition differs perceptibly from that of neighboring varieties. In the human species several races are designated. See *Man.*

Racemic acid, ra-se'mik as'id. An acid isomeric with tartaric acid.

Rac'emose (*racemus*, a bunch of grapes). In clusters, like grapes; hence racemose glands, glandulæ racemosæ, as the liver, pancreas, etc. **R. an'eurism**, aneurism by anastomosis. **R. cells**, cells in clusters surrounding central ducts.

Rachi. All words commencing with Rachi (for *rhachis*, spine) are more correctly spelled *Rhachi.*

Rachiæi, rak-e-e'e (*rhachis*, spine). Muscles of the spine.

Rachial'gia (*rhachis*, *algos*, pain). Metallic colic; pain in the spine; vertebral disease. **R. mesenter'ica**, tabes mesenterica. **R. pictonien'sium**, metallic colic. **R. pic'tonum** (R. of the Picts, who were in the habit of painting themselves), **R. picto'rum** (R. of painters), metallic colic.

Rachialgitis, rak-e-al-je'tis. Myelitis; spinal irritation.

Rachidian, rak-id'e-an (*rhachis*). Spinal. **R. ar'teries**, spinal arteries. **R. bulb**, see *Medulla oblongata.* **R. canal'**, vertebral canal.

Rachilysis, rak-il'is-is (*rhachis*, *luo*, to loose). Method of treating lateral curvature of the spine by opposing with proper apparatus the unnatural curvature.

Rachiocypho'sis (*rhachis*, *kuphosis*, curvature). Backward curvature of the spine.

Rachiophyma, rak-e-o-fe'mah (*rhachis*, *phuma*, tumor). Tumor on the spine or on the back.

Rachis, rak'is (more correctly **Rhachis**). Vertebral column.

Rachisagra, rak-is'ag-rah (*rhachis*, *agra*, seizure). Gouty or rheumatic affection of the spine.

Rachischisis, rak-is'kis-is (*rhachis*, spine, *schizo*, to split). Congenital fissure of the spinal column, a variety of spina bifida.

Rachitæ, rak-e'te. Muscles of the spine.

Rachitic, rak-it'ik. Relating or appertaining to or affected with rachitis or rickets. Weak, feeble in the joints; defective in development. **R. rose-gar'land**, appearance presented by nodular thickenings on the end of the ribs in rachitis.

Rachitis, rak-e'tis (*rhachis*, spine, *rhachites nosos*, spinal disease). *English disease, Rickets.* Disease not known in England before the first quarter of the seventeenth century, and then termed *Rickets.* Glisson first gave it the scientific name, from *rhachis*, which, in Greek, means the spine. It is characterized by crookedness of the long bones, swelling of their extremities, crooked spine, prominent abdomen, large head, and often precocity of intellect, and is accompanied by leanness, general debility, indigestion. It frequently induces atrophy and hectic. Rickets occurs particularly during the first years of existence of weakly children born of rickety or scrofulous parents, brought up in damp or confined situations, who are badly nourished and do not take sufficient exercise. Some children gradually recover their health; others become more and more deformed, and ultimately die of consumption, dropsy, or other organic disease. Pure air, a healthy situation, nourishing diet, exercise, sea or common cold bathing, and tonics and eutrophics afford the best prospect of success. **R. adulto'rum**, mollities ossium.

Rachitome, rak'it-ome (*rhachis*, *tome*, incision). Anatomical instrument for opening the medulla spinalis without injuring the medulla.

Rachosis, rak-o'sis (*rhakoo*, to produce a wrinkle). Relaxation of the scrotum. Excoriation of the relaxed velum pendulum.

Rack. Arrack.

Rack'et incis'ion. See *Crupper incision.*

Racosis, rak-o'sis. Rachosis.

Rad'cliffe's elix'ir. See *Tinctura aloës composita.*

Radesyge (rad-es-ig'a) or **Radezyge.** Radzyge.

Radiad, ra'de-ad. See *Radial aspect.*

Radial, ra'de-al (*radius*). That which relates to the radius. **R. ar'tery** arises from the brachial at the upper and anterior part of the forearm; descends on the outer side as far as the lower part of the radius, and proceeds downward and backward toward the superior extremity of the space which separates the first two metacarpal bones, then buries itself in the palm of the hand, where it forms the profound or radial palmar arch. The radial artery gives off the recurrent radial, several radiomuscular branches, the transverse palmar, radiocarpal artery, the external superficial artery of the palm of the hand, the external dorsal of the thumb, the dorsalis carpi, dorsal interosseous artery of the index, etc. **R. as'pect**, aspect toward the side on which the radius is situate (Barclay). *Radiad* is used by the same writer, adverbially, to signify "toward the radial aspect." **R. fi'bres of ret'ina**, Müller's fibres. **R. fos'sa**, slight depression on the humerus for reception of the head of the radius when the arm is thoroughly flexed. **R. groove**, musculospiral groove. **R. lymphat'ic glands**, glands in forearm distributed along radial vessels. **R. nerve**, *Spiral nerve, Spiral muscular nerve, Musculospiral nerve*, arises from the four inferior branches of the brachial plexus. At first it is situate behind the other nerves of the plexus, then becomes engaged between the three portions of the triceps brachialis, passes behind the humerus, and descends between the supinator longus and brachialis internus as far as opposite the upper extremity of the radius. In its course it gives numerous filaments to the triceps, supinator longus, extensor carpi radialis longior, and to the integuments. Opposite to the upper extremity of the radius it divides into two branches—the one, posterior, which turns backward into the substance of the supinator brevis, and, when it has reached the space between the two layers of muscles on the posterior surface of the forearm, divides into a great number of filaments distributed to those muscles and to the integuments of the hand. The other branch is the anterior; it descends before the supinator brevis and the radius until, near the inferior third of that bone, it engages itself between the tendons of the supinator longus and extensor carpi radialis longior, and, becoming afterward subcutaneous, divides into two branches, whose filaments are distributed to the integuments of the thumb, index, middle finger, to the outside of the ring finger, and to the first interosseous muscle of the back of the

hand. **R. veins, deep'-seated,** follow the same course as the radial artery.

Radiale, rad-e-al'e. Scaphoid bone.

Radia'lis anti'cus. Flexor carpi radialis. **R. exten'sor lon'gior,** R. externus longior. **R. exter'nus bre'vior,** extensor muscle of the wrist, situate beneath the extensor carpi radialis longior. Attached above to the external tuberosity of the humerus, and terminates below by a long tendon inserted into the posterior part of the upper extremity of the third bone of the metacarpus. Has the same uses as the next muscle. **R. exter'nus lon'gior,** *Grand radial,* is seated at the outer part of the forearm, is thin, but thicker on the outside than on the inside. It is attached above to the inferior part of the outer edge and to the corresponding tuberosity of the humerus, and terminates below by a long tendon which is attached to the superior extremity of the second bone of the metacarpus. It extends the hand on the forearm. **R. exter'nus pri'mus,** R. externus longior. **R. inter'nus,** palmaris magnus. **R. inter'nus profun'dus,** flexor carpi radialis brevis. **R. secun'dus,** R. externus longior.

Radiated, ra'de-a-ted (*radius,* ray). Arranged in rays, in lines diverting from a common centre. Epithet given to several ligaments, etc., as to those which unite the ribs to the sternum, those which unite the tibia and fibula at their inferior extremity, etc. **R. sub'stance of kid'ney,** see *Kidney.*

Ra'diating fi'bres of ret'ina. Müller's fibres. **R. points,** pains symptomatic of disease of the spine, caused by irritation of the posterior roots of the spinal nerves.

Radiatio, rad-e-ah'she-o. Radiation.

Radical, rad'ik-al (*radix*). Going to the very root, therefore complete and thorough; as radical cure, in which the disease is destroyed, as it were, from the root; used in opposition to palliative cure. **R. moist'ure,** see *Humidum radicale.* **R. ves'sels,** *Vascular radicles;* small vessels that take their origin in the tissues, and by their union form larger vessels. **R. vin'egar,** aceticum acidum.

Radices (rad-e'sees) (pl. of **Radix**) **accesso'riæ bre'vis.** Filaments occasionally met with connecting the ciliary ganglion with the three branches of the oculomotor nerve. **R. accesso'riæ me'diæ,** filaments occasionally seen connecting the ciliary ganglion with the carotid plexus. **R. cau'dicis,** fibres of the corona radiata extending from brain-stem to cortex. **R. centra'lis,** corona radiata. **R. cor'poris callo'si,** fibres of corona radiata running from corpus callosum to cortex. **R. cor'porum cavernoso'rum pe'nis,** see *Cavernous bodies.* **R. hyoi'dei os'sis,** cornua of the hyoid bone. **R. medulla'ris cer'ebri,** corona radiata. **R. olfacto'riæ,** olfactory roots. **R. thal'ami op'tici,** fibres of corona radiata extending from thalamus opticus to cortex.

Radiciseca, rad-e-sis'ek-ah (*radix, seco,* to cut). *Rhizotomist.* One employed in collecting and preparing roots was formerly so called.

Radicle, rad'ik-al. Small root or rootlet.

Radicula, rad-ik'u-lah (dim. of **Radix,** root). *Radicle.* Small root or rootlet; also Raphanus hortensis.

Radicular (rad-ik'u-lar) **ar'teries.** Vessels following nerve-roots into the substance of the spinal cord. **R. fi'bres, exter'nal,** name given by Charcot to fibres of posterior roots of spinal nerves that pass through the substantia gelatinosa Rolandi, then ascend and go to the posterior cornu. **R. fi'bres, inter'nal,** posterior roots of spinal nerves, supposed to run to some extent in the posterior columns of the cord before they pass through the gray.

Radii ciliares, rad'e-e sil-e-ar'ees (*radius,* ray, pl. *radii*). Ciliary processes. **R. fron'tis,** folds or wrinkles of the forehead. **R. len'tis,** lines which radiate at the poles of the crystalline lens.

Radio, rad'e-o (*radius*). In composition, the radius.

Radiobicip'ital bur'sa. Bursa between tendon of biceps and tuberosity of radius.

Radiocarpal, ra-de-o-kar'pal. Relating to the radius and carpus. **R. articula'tion,** the wrist-joint or articulation of the os scaphoides, os semilunare, and os cuneiforme of the carpus with the inferior surface of the radius and the fibrocartilage situate below the ulna. It is strengthened by the lateral, anterior, and posterior ligaments. **R. trans'verse pal'mar ar'tery,** transverse branch given off by the radial artery opposite the lower edge of the pronator quadratus, which sends several branches to the anterior or palmar surface of the carpus.

Radiocar'peo-metacar'peus. Flexor carpi radialis brevis.

Radiocar'po-metacarpa'lis. Flexor carpi radialis brevis, attached to carpus and metacarpus.

Radiodig'ital. Radial nerve.

Radiohu'meral articula'tion. Articulation of elbow-joint.

Radiolus, rad-e'o-lus (dim. of **Radius,** rod or spoke). A sound or probe.

Radiometacarpa'lis. Flexor carpi radialis brevis, attached to bones of metacarpus.

Radiomuscular, ra-de-o-mus'ku-lar. Name given to the branches sent off from the radial artery to the muscles of the forearm in the first part of its course, as well as to the nervous filaments which the radial nerve sends to the same muscles.

Radiopal'mar ar'tery. Superficial volar artery.

Radiopalma'ris. Occasional muscle attached with the palmaris longus.

Ra'dio-ul'nar fibrocar'tilage. Triangular cartilage of wrist. **R.-u. lig'aments,** ligaments connecting the radius and ulna.

Rad'ish. Raphanus hortensis. **R., wa'ter,** Nasturtium amphibium.

Radius, rad'e-us (a staff, so called from its shape). *Spokebone.* Long prismatic bone, the upper and lesser extremity of which is called the head, supported by a cervix or neck. At the part where the neck is confounded with the body of the bone is the tubercle or bicipital tuberosity or eminence for the insertion of the biceps. The radius is articulated above with the os humeri and with the lesser sigmoid cavity of the ulna; below, with the scaphoides, semilunare, and the head of the ulna. Its inferior extremity, which is larger than the superior, is flattened before and behind, is regularly quadrilateral, and has below a double facette to be articulated with the first two bones of the carpus. On the outer side is the styloid process, and on the inner a concave facet which joins the ulna. Behind are grooves for the passage of the extensor tendons.

Radix, rad'iks. Root; also the male organ. Radix, root, or fang of a tooth is the part contained in the alveolus. Radix or root of the nail is the portion hidden under the skin. Surgeons give the name to prolongations sent by scirrhous, cancerous, or other tumors into the neighboring parts. The *five aperient roots* were, of old, asparagus, butcher's broom, fennel, parsley, and smallage; the *five lesser aperient roots* were caper, dandelion, eryngo, madder, and restharrow. **R. accesso'ria sphenopalati'na,** filaments occasionally connecting ciliary and sphenopalatine ganglia. **R. aor'tæ,** bulb of aorta. **R. ascen'dens for'nicis,** main part of anterior pillar of fornix, situate between the body and tubercula mammilaria; also applied to radix descendens fornicis. **R. asclepi'adis cris'pa,** see *Gomphocarpus crispus.* **R. Brazilien'sis,** ipecacuanha. **R. bre'vis gan'glii cilia'ris,** branch given off from oculomotor nerve to ciliary ganglion motor. **R. bre'vis gan'glii sphenopalati'na,** sensitive root of sphenopalatine ganglion. **R. bre'vis gan'glii submaxilla'ris,** sensitive root of submaxillary ganglion. **R. carot'ica,** deep petrosal nerve. **R. cochlea'ris,** cochlear auditory root. **R. colum'næ for'nicis,** anterior pillar of fornix. **R. cor'dis,** base of the heart. **R. gen'sing,** see *Panax quinquefolium.* **R. In'dica Lopezia'na,** Lopez radix. **R. lin'guæ,** see *Tongue.* **R. Lopezia'na,** Lopez radix. **R. nin'si pa'nax schin'seng,** Sium ninsi. **R. ru'bra,** rubia. **R. serpen'tum,** see *Ophiorrhiza mungos.* **R. un'guis,** root of the nail. **R. ursi'na,** Æthusa meum. **R. ven'tris,** umbilicus.

Radula, rad'u-lah (*rado,* to scrape). Raspatorium.

Radzyge, rad-zig'a (obsolete Da. word *rada,* malignant, *syge,* disease). Name given in Norway to a disease bearing considerable analogy to the yaws. Some have esteemed it a species of lepra or elephantiasis, and others a syphiloid affection. Another form —the *Spedalske* or *Spedalskhed* of Norway—appears to be a variety of tubercular lepra. Under the epithelial scales numerous acari have been found, and the affection has been called Norwegian scabies or itch, scabies crustosa, and scabies Norvegica Boeckii, after Boeck, who well described a case of it.

Rafflesia (raf-le'ze-ah) **Arnold'i** (after Sir Stamford Raffles). Plant of Java, a decoction of which is employed there as an astringent in relaxed conditions of the genito-urinary apparatus.

Rage, raij. Violent passion, characterized by contraction of the muscles of the face, violence in every movement, extreme irritation of the nervous system, acceleration of the blood's motion, and generally redness and swelling of the face.

Rag'e. A suffix meaning flow; see *Rhage.*

Rag'ged la'dy. Nigella damascena.

Rag'weed. See *Ambrosia clatior.* **R., gold'en,** Senecio aureus. **R., great** or **tall,** Ambrosia trifida.

Rag'wort. Senecio Jacobæa.

Rai'a ba'tis and **R. clava'ta.** See *Oleum morrhuæ.*

Rail'way kid'ney. Renal affection caused by concussion of railway-train. **R. spine,** Erichsen's disease. See *Concussion.*

Rain'bow worm. Herpes iris.

Rai'ney's bod'ies, cap'sules, or **cor'puscles.** Psorosperma.

Raising, ra'zing. Expectoration.

Raisins, ra'zins. Uvæ passæ. See *Vitus vinifera.*

Rakasira, rak-as-e'rah. An American balsam; softening and exhaling an agreeable smell when heated. It has been used as a balsam in gonorrhœa and urinary affections.

Rake'teeth. A term used in the north of England for teeth wide apart, like those of a rake.

Rakia, rak'e-ah. See *Spirit.*

Rakli pili. An Indian name for leprosy.

Râle, ral (F.) *Rattle, Rhoncus* (from [D.] *ratel*) (probably an example of onomatopœia). Noise produced by the air in passing through mucus of which the lungs are unable to free themselves. This condition, tracheal râle, is chiefly observed at the approach of death, and is commonly called "the rattles." The term râle has been given to different sounds during respiration, caused by the air in connection with fluid contained in the bronchi or areolæ of the pulmonary tissue, which are perceived by the stethoscope. Râle has generally been used for a "moist" sound, heard on auscultation of the chest, while rhoncus has meant a "dry" sound. **R., crep'itant,** rhoncus crepitans; see *Crepitant.* **R., mu'cous,** *Mucous rattle;* sound produced by the passage of air through mucus accumulated in the larger bronchi or trachea, or through softened tubercular matter. This râle occurs in catarrh and in softened tubercle. When carried to a very high degree, it constitutes gurgling. **R., sib'ilant,** sibilant rattle; slight, though prolonged, whistling sound, occurring either at the commencement of inspiration or of expiration, owing to the presence of mucus, thin and viscid, but not abundant, which obstructs, more or less completely, the smaller bronchial ramifications; is seated in the small tubes, and occurs in the first stage of bronchitis. The *clicking* and *whistling* varieties differ, in the former being short, the latter prolonged. The former is a quick, sharp sibilus or whistle, which ceases almost instantaneously; the latter a prolonged sibilus, of less sharpness, lasting almost the whole time of the movement which it accompanies. To these may be added the *hissing* variety, the name sufficiently indicating its character. **R., sono'rous,** sonorous rattle; sound resembling at times the snoring of a person asleep, at others the sound of the bass string of an instrument when rubbed with the finger, and not unfrequently the cooing of a dove; seems to be caused by a contraction of the bronchial tubes, and is characteristic of chronic catarrh. **R., subcrep'itant,** the subcrepitant rhonchus, is produced by the bubbling of air through liquid of variable consistence in the minute bronchial tubes. When heard at the base of both lungs, it is a sign of capillary bronchitis; when heard at the base of one only, it is generally connected with tubercles higher up. **R., trache'al,** see *Râle.* **R., vesic'ular,** see *Crepitation.*

Rama'lis ve'na. Vena porta and its branches.

Ram'dohr's su'ture. Suture applied to unite an intestine which has been transversely divided.

Ramenta intestinorum, ram-en'tah in-tes-tin-o'-rum (pl. of **Ramentum**). *Scraping of the intestines.* Shreds or scrapings, as it were, of the mucous membrane of the bowels, often discharged in malignant dysentery.

Ramentum, ram-en'tum (contracted from *radimentum, rado,* to scrape). Fragment; shaving from a metal.

Ramex, ram'eks. Hernia. **R. varico'sus,** varicocele.

Rami, ram'e (pl. of **Ramus**). Branches. **R. adipo'si,** from lumbar arteries to adipose capsule of kidney. **R. ala'res,** from angular artery to alæ of nose. **R. alveola'res,** from infraorbital and inferior dental arteries supplying the alveolar processes. **R. articula'res,** supplying temporomaxillary articulation; also from posterior auricular artery to pinna. **R. bronchia'les,** from the arch of the aorta to the bronchi. **R. bucca'les,** from alveolar nerves to mucous membrane of cheeks. **R. cardi'aci,** from gastric artery to cardiac orifice of stomach. **R. cervicospina'les,** from ascending cervical artery to spinal canal. **R. clavicula'res,** from transverse cervical artery to subclavius muscle. **R. communican'tes no'ni,** communicating branches of ninth pair. **R. cuta'nei,** branches of perforating nerves, anterior and posterior. **R. denta'les,** from inferior dental artery to the teeth. **R. diplo'ici,** alveolar branches of inferior dental artery. **R. dorsa'les na'si,** from angular artery to posterior portion of nose. **R. epiplo'ici,** from gastroduodenal artery to great omentum. **R. episclera'les,** from anterior ciliary arteries, anastomosing with posterior ciliary. **R. exter'ni of intercos'tal nerves,** lateral perforating branches. **R. fascia'les,** branches of infraorbital nerve on the face, of inferior palpebral nerves, external nasal nerves, and superior lateral nerves. **R. fronta'les,** from supratrochlear nerve to skin of forehead. **R. gas'trici,** branches of gastric artery to walls of stomach; also branches of gastroduodenal artery to the walls of the stomach. **R. gingiva'les,** from dental arteries, passing through small canals in the alveolar process to the gums. **R. glandula'res,** branches of superior thyroid artery to thyroid body. **R. of is'chium,** see *Ischium.* **R. labia'les inferio'res,** from mental nerve to lower lip. **R. mamma'rii exter'ni,** from intercostal arteries to the mammary gland. **R. margina'les,** from palpebral arteries to edge of eyelids. **R. masseter'ici,** from external carotid to masseter muscle. **R. mastoï'dei,** from stylomastoid artery to mastoid cells. **R. menin'gei,** from posterior auricular artery; from lachrymal artery; from vertebral artery and intercostal arteries. **R. menin'gei anti'ci,** from anterior ethmoidal artery to falx cerebri and dura mater. **R. nasa'les,** from ethmoidal artery to septum and sides of nose. **R. œsophage'i,** from inferior thyroid artery to the œsophagus near thyroid gland. **R. orbita'les,** from infraorbital artery to periosteum and muscles of orbit; from middle meningeal artery to the orbit; from sphenopalatine ganglion to orbit and the periosteum. **R. palpebra'les exter'ni,** from transverse facial artery to the eyelids. **R. palpebra'les superio'res,** from supratrochlear nerve to upper eyelid. **R. pancreat'ici,** from hepatic artery to the pancreas. **R. parenchymato'si,** from hepatic artery to the liver. **R. parotide'i,** from external carotid artery to parotid gland. **R. pectora'les,** from thoracico-acromial artery to pectoral muscles. **R. perforan'tes,** from hepatic artery to liver. **R. perforan'tes anterio'res,**

from intercostal nerves to skin of thorax and abdomen. **R. perforan'tes latera'les,** lateral from intercostal nerves. **R. pericardi'aci va'gi,** from the pneumogastric nerve to the pericardium. **R. periostea'les,** from posterior dental artery to periosteum of maxillary sinus. **R. pharynge'i,** from inferior thyroid gland to the pharynx near the thyroid gland. **R. pinna'les,** from angular artery to alæ of nose. **R. pterygoï'dei,** from external carotid artery to pterygoid muscles. **R. of pu'bis,** see *Pubis.* **R. semicircula'res tempora'les,** from middle temporal artery to upper edge of temporal muscles. **R. sphenoorbita'les,** orbital branches from sphenopalatine ganglion. **R. superficia'les,** from hepatic artery to the portal fissure and biliary ducts. **R. tar'sei,** from palpebral arteries to edges of the eyelids. **R. thyroï'dei,** from inferior thyroid artery to thyroid gland. **R. trachea'les,** from inferior thyroid artery near the thyroid gland.

Ramification, ram-e-fik-a'shun (*ramus, facio,* to make). Division of arteries, veins, or nerves into branches. Also a branch itself.

Ramollissement (F.), ram-ol-leese'mong. Mollities; softening.

Ramphos, ram'fos (a beak). Rostrum.

Rams'den's eye'piece. Eyepiece with two plano-convex lenses, used in micrometry.

Ram'sted. Linaria vulgaris.

Ram'uli gingiva'les. Gingival nerves. **R. isth'mi fauc'ium,** ramuli mandibulares. **R. mandibula'res,** twigs given off from submaxillary ganglion to mucous membrane of posterior part of mouth. **R. sabi'næ,** sabina. **R. sphenoïda'les,** branches from Vidian nerve to body of sphenoid bone.

Ramulus, ram'u-lus (dim. of **Ramus**). Ramusculus. **R. ampul'læ horizonta'lis,** branch from vestibular nerve to ampulla of horizontal vertical semicircular canal. **R. ampul'læ inferio'ris,** branch from cochlear nerve to ampulla of inferior semicircular canal. **R. ampul'læ sagitta'lis,** ramulus ampullæ superioris. **R. ampul'læ superio'ris,** branch from vestibular nerve to ampulla of superior vertical semicircular canal. **R. coch'leæ,** branch of cochlear nerve running to cochlea. **R. reces'sûs utric'uli,** branch from vestibular nerve to utriculus. **R. sac'culi,** branch from cochlear nerve to sacculus.

Ramus, ram'us (pl. **Rami,** branch). Branch or division of an artery, vein, or nerve. Portion of a bone forming an angle with the body or main portion, as the ramus of the jaw. Also the male organ. **R. abdomina'lis,** branch from lumbar region to walls of the abdomen; hypogastric nerve. **R. acromia'lis,** acromial artery. **R. acus'ticus,** petrosus superficialis. **R. anastomot'icus profun'dus,** deep facial vein. **R. anastomot'icus pu'bicus,** pubic artery. **R. ante'rior of great auric'ular nerve,** branch to parotid gland and region of parotid gland and masseter muscle. **R. ante'rior of inter'nal cuta'neous nerve,** branch from cutaneous nerve to ulnar portion of forearm. **R. ante'rior of lac'rymal nerve,** superior branch of lacrymal nerve. **R. ante'rior na'rium,** external nasal nerve. **R. ante'rior of obtura'tor nerve,** branch to adductor brevis, a. longus, and to gracilis. **R. ante'rior radia'lis,** dorsal radial nerve of the thumb. **R. ante'rior of spi'nal nerve,** anterior division of spinal nerve. **R. articula'ris ge'nu,** from long saphenous nerve to knee-joint. **R. articula'ris ge'nu supe'rior** and **R. articula'ris ge'nu infe'rior,** from peroneal nerve to knee-joint. **R. ascen'dens,** from transverse cervical artery to splenius and deep muscles of the neck. **R. ascen'dens fos'sæ Syl'vii,** anterior ramus or branch of the fissure of Sylvius. **R. auricula'ris Arnol'di** or **R. va'gi,** auricular branch of vagus. **R. auricula'ris infe'rior,** anterior branch of great auricular nerve. **R. auricula'ris ner'vi glossopharynge'i,** tympanic nerve. **R. auricula'ris poste'rior superficia'lis,** posterior branch of great auricular nerve. **R. auric'ulo-ventricula'ris,** see *Ramus circumflexus.* **R. basila'ris,** see *Ramus meningeus of ascending pharyngeal artery.* **R. brachia'lis,** thoracic branch of inferior thyroid artery. **R. cana'lis spina'lis,** from spinal branch of the intercostal artery to walls of the spinal canal. **R. caroticotympan'icus,** caroticotympanic artery. **R. cerebella'ris,** from posterior spinal artery to cerebellum. **R. cervica'lis,** ascending branch of transverse cervical artery. **R. cervica'lis prin'ceps,** princeps cervicis artery. **R. cervicofacial'is,** cervicofacial portion of facial nerve. **R. circumflex'us of left cor'onary ar'tery,** branch passing around the heart in the auriculoventricular furrow. **R. collatera'lis ulna'ris,** branch of musculospiral nerve to inner head of triceps. **R. commu'nicans,** branch from anterior division of spinal nerve to the sympathetic. **R. commu'nicans facie'i profun'dus,** deep facial vein. **R. commu'nicans radia'lis,** branch of radial artery forming deep palmar arch. **R. crura'lis,** lumbo-inguinal nerve. **R. cubita'lis,** R. cutaneus volaris antibrachii. **R. cucula'ris,** from cervical plexus to trapezius muscle. **R. cuta'neo-ulna'ris,** branch of internal cutaneous nerve to ulnar side of forearm. **R. cuta'neus,** superficial branch of external plantar nerve; radial nerve; branch from anterior branch of obturator nerve to skin on inner side of upper part of the thigh. **R. cuta'neus palma'ris,** branch of internal cutaneous nerve of arm to anterior surface of forearm. **R. cuta'neus perone'us,** from communicans peronei nerve to skin on outer side of leg. **R. cuta'neus ulna'ris antibrach'ii,** from cutaneous nerve to ulnar portion of forearm. **R. cuta'neus vola'ris antibrach'ii,** branch of internal cutaneous nerve of arm to anterior part of the forearm. **R. deltoï'deus,** branch of brachial artery to deltoid muscle; branch of thoracicoacromial artery; deltoid artery. **R. descen'dens,** descending ramus of pubis and ischium. Branch of transverse cervical artery to dorsalis scapulæ artery. **R. descen'dens no'ni,** descendens noni nerve. **R. diplo'icus,** branch of supraorbital to diploë of os frontis. **R. dorsa'lis,** branch of intercostal artery to muscles near the spine. **R. dorsa'lis antibrach'ii,** R. cutaneoulnaris. **R. dorsa'lis ma'nûs,** dorsal nerve of the hand. **R. dorsa'lis of musculospi'ral nerve,** radial nerve. **R. dorsa'lis of spi'nal nerve,** deep muscles along the vertebral canal. **R. dorsospina'lis,** dorsal branch of intercostal artery. **R. du'ræ ma'tris va'gi,** from jugular ganglion to the meninges. **R. du'rior sep'timæ conjugatio'nis,** facial nerve. **R. epitrochlea'ris,** R. cutaneo-ulnaris. **R. exter'nus of genitocru'ral nerve,** lumbo-inguinal nerve. **R. exter'nus of great auric'ular nerve,** branch, anterior, of great auricular nerve. **R. exter'nus of lac'rymal nerve,** inferior branch of that nerve. **R. exter'nus na'rium,** external nasal nerve. **R. exter'nus radia'lis,** dorsal radial nerve of the thumb. **R. facia'lis,** anterior branch of great auricular nerve. **R. femora'lis of genitocru'ral nerve,** lumbo-inguinal nerve. **R. fibula'ris,** from anterior tibial or anterior tibial recurrent to region of the fibula. **R. genita'lis of gen'ito-cru'ral nerve,** external spermatic nerve. **R. horizonta'lis** or **h. poste'rior fos'sæ Syl'vii,** posterior portion of fissure of Sylvius. **R. ili'acus,** iliac nerve. **R. infe'rior,** descending ramus of the pubis and of the ischium. **R. infe'rior of lac'rymal nerve,** branch anastomosing with orbital nerve. **R. infe'rior ner'vi inframaxilla'ris,** inferior and larger portion of inframaxillary nerve. **R. infe'rior of oculomo'tor nerve,** portion of that nerve to internal rectus, inferior rectus, and inferior oblique muscles and to ciliary ganglion. **R. infe'rior of or'bital nerve,** branch to the cheek. **R. infracosta'lis,** branch of intercostal nerve along inferior edge of rib. **R. inframaxilla'ris,** inferior maxillary nerve. **R. infraspina'tus,** from subscapular artery to infraspinous fossa. **R. inter'nus of great auric'ular nerve,** posterior branch of great auricular nerve. **R. i. of lac'rymal nerve,** superior branch of lacrymal nerve. **R. i. of spi'nal nerve,** see *R. lateralis.* **R. i. of spi'nal acces'sory nerve,** anastomotic branch of genitocrural nerve; external spermatic nerve. **R. intestina'lis,** visceral branch of spinal nerve. **R. of jaw,** see *Maxilla inferior.* **R. latera'lis na'rium,** from ethmoidal nerve to sides of nose. **R. latera'lis of spi'nal nerve,**

branch of posterior division along transverse processes of vertebræ. **R. mag'nus ner'vi media'ni,** musculocutaneous nerve. **R. mala'ris,** inferior branch of orbital nerve. **R. margina'lis,** dorsal radial nerve of the thumb. **R. mastoï'deus,** occipital branch of posterior auricular artery; small occipital nerve; posterior branch of great auricular nerve. **R. media'lis,** inner nerve of spinal branch of posterior division along spinous processes of vertebræ. **R. medul'læ spina'lis** or **R. medulla'ris,** from spinal branch of intercostal artery to spinal cord. **R. menin'ge'us of ascend'ing pharynge'al ar'tery,** branch ramifying and penetrating the skull and supplying the meninges. **R. meninge'us poste'rior,** from the jugular ganglion to the meninges. **R. mi'nor ner'vi Vidia'ni,** great superficial petrosal nerve. **R. muscula'ris,** part of dorsal branch of intercostal artery to deep muscles of back. **R. mus'culo-auricula'ris,** from posterior auricular nerve to retrahens aurem muscle. **R. nasa'lis,** branch of anterior dental nerve to mucous membrane of nasal fossa. **R. ner'vi facia'lis,** branch of middle meningeal artery anastomosing with stylomastoid artery. **R. ner'vi saphe'ni inter'nus,** from anastomotica magna artery of thigh, with accompanying saphenous nerve, to insertion of sartorius. **R. occipita'lis,** posterior auricular artery to the occipital region; posterior division of superficial temporal artery. **R. ophthal'micus,** ophthalmic nerve. **R. palma'ris lon'gus,** palmar cutaneous nerve. **R. palma'ris ulna'ris,** from ulnar nerve, accompanying the ulnar artery. **R. palpebra'lis,** from superior division of lacrymal nerve to upper eyelid. **R. parieta'lis,** from occipital artery to the dura mater. **R. patella'ris,** from long saphenous nerve to anterior surface of patella. **R. petro'sus superficia'lis,** from middle meningeal artery anastomosing with the stylomastoid artery. **R. pharynge'us,** from superior thyroid artery to inferior constrictor of pharynx. **R. pharynge'us descen'dens,** inferior pharyngeal branch of ascending pharyngeal artery anastomosing with branches from superior thyroid. **R. phren'ico-abdomina'lis dex'ter,** a terminal branch of the right phrenic to vena cava, liver, etc. **R. phren'ico-abdomina'lis sinis'ter,** a terminal branch of the left phrenic to the left crus of diaphragm, to cœliac plexus and suprarenal capsule. **R. poplite'us,** from posterior tibial nerve to popliteus muscle and tibia. **R. poste'rior,** dorsal branch of intercostal artery. **R. poste'rior of great auric'ular nerve,** to back part of pinna and vicinity. **R. poste'rior of inter'nal cuta'neous nerve,** ulnar cutaneous branch of the forearm. **R. poste'rior of lac'rymal nerve,** inferior branch of that nerve. **R. poste'rior of obtura'tor nerve,** branch passing through obturator externus to hip-joint and to adductor minimus and A. magnus. **R. præ-vertebra'lis,** from ascending pharyngeal to prevertebral fascia. **R. pri'mus quin'ti,** ophthalmic nerve. **R. profun'dus of ante'rior cru'ral nerve,** posterior terminal branch of anterior crural nerve. **R. profun'dus of exter'nal plan'tar nerve,** external interossei, adductor hallucis, and outer head of flexor brevis hallucis. **R. profun'dus ner'vi media'ni,** anterior interosseous nerve of arm. **R. profun'dus of obtura'tor nerve,** posterior branch of obturator nerve. **R. radia'lis,** dorsal radial nerve of the thumb. **R. recur'rens hypoglos'si,** from hypoglossal nerve to the meninges. **R. recur'rens va'gi,** branch from jugular ganglion to the meninges. **R. scapula'ris of trans'verse cer'vical ar'tery,** dorsalis scapulæ artery. **R. secun'dus quin'ti,** superior maxillary nerve. **R. sep'ti na'rium,** from ethmoidal nerve to septum of nose. **R. sinua'lis,** recurrent branch from ophthalmic nerve, supplying the tentorium. **R. spina'lis,** part of dorsal branch of intercostal artery to spinal canal. **R. pro stape'dio,** branch of stylomastoid artery to stapes. **R. ster'no-clei'domastoï'deus,** see *Sternomastoid arteries.* **R. subscapula'ris ante'rior,** from a subscapular artery to anterior part of scapula. **R. superficia'lis of ante'rior cru'ral nerve,** terminal branch of that nerve. **R. superficia'lis of brachia'lis anti'cus,** from the inferior profunda or the brachial artery along the middle portion of that muscle. **R. superficia'lis cuta'neus,** from musculocutaneous nerve to radial side of forearm. **R. superficia'lis of exter'nal plan'tar nerve,** branch to the skin on fibular side of sole of the foot. **R. superficia'lis of musculospi'ral nerve,** radial nerve. **R. superficia'lis ner'vi Vidia'ni,** R. minor. **R. supe'rior,** horizontal ramus of the pubis and of the ischium. **R. supe'rior of lac'rymal nerve,** branch to lacrymal gland and upper eyelid. **R. supe'rior ner'vi inframaxilla'ris,** superior division of inferior maxillary nerve. **R. superior of oculomo'tor nerve,** portion to superior rectus and levator palpebræ muscles. **R. supe'rior of or'bital nerve,** branch to inferior branch of lacrymal nerve. **R. superio'ris quin'ti,** ophthalmic nerve. **R. supracosta'lis,** branch of an intercostal nerve along upper margin of a rib. **R. supramaxilla'ris,** superior maxillary nerve. **R. supraspina'tus,** from transverse cervical artery to the supraspinous fossa. **R. tempora'lis of or'bital nerve,** superior branch of that nerve. **R. temporofacia'lis,** temporofacial portion of facial nerve. **R. termina'lis ante'rior,** division of the main trunk of anterior crural nerve to the skin and sartorius. **R. termina'lis poste'rior,** division of main trunk of anterior crural nerve of the thumb. **R. termina'lis radia'lis,** terminal branch of median nerve to middle and ring fingers. **R. termina'lis ulna'ris,** terminal branch of median nerve to thumb and index finger. **R. testicula'ris,** cremasteric artery. **R. thorac'icus,** branch of inferior thyroid artery to the thorax; branch of transverse cervical artery to outer surface of thorax. **R. tonsilla'ris,** from ascending palatine artery to the tonsil. **R. transver'sus,** acromial artery. **R. trochanter'icus,** terminal portion of external circumflex artery to trochanteric fossa. **R. ulna'ris antibrach'ii,** ulnar cutaneous branch of forearm. **R. ulna'ris radia'lis,** dorsal nerve of the hand. **R. veno'sus profun'dus facie'i,** internal maxillary vein. **R. ventra'lis of spi'nal nerve,** anterior division to muscles of ventral and lateral portions of body, including the limbs. **R. vertebra'lis,** spinal branch of intercostal artery. **R. viscera'lis of spi'nal nerve,** from anterior division to the sympathetic. **R. vola'ris profun'dus,** deep ulnar artery. **R. vola'ris radia'lis,** dorsal radial nerve of the thumb. **R. vola'ris superficia'lis,** termination of ulnar artery, forming superficial palmar arch. **R. xiphoï'deus,** branch of internal mammary artery to the ensiform process.

Ramusculus, ram-us'ku-lus (dim. of **Ramus**). Division of a ramus.

Rana, ran'ah. Ranula. **R. esculen'ta** (esculent frog), this frog and the bullfrog, R. taurina, are eaten as delicacies, being easily digested.

Rancid, ran'sid (*ranceo*, to be stale). Epithet given to fatty bodies which have become acrid from age or the contact of air. Mild ointments may thus become very irritating and unfit for the purposes for which they were originally intended.

Randia dumetorum, ran'de-ah du-me-to'rum (R. of thickets, after J. Rand, botanist, of London). Coromandel shrub, ord. Cinchonaceæ; the fruit, bruised and thrown on the water, intoxicates, or even kills, fish. The powder is a powerful emetic; it is a cardiac stimulant and antispasmodic nervine. **R. spino'sa,** R. dumetorum.

Range. Scope, extent; as range of accommodation.

Rangoon' tar. Semi-solid petroleum found in India.

Ranine, ran'ine (*rana*, frog, shaped like a frog). The portion of the lingual artery which advances horizontally between the genioglossus and lingualis muscles as far as the point of the tongue. The ranine vein follows the same course as the artery, and opens into the internal jugular or into the superior thyroid.

Ran'tree. Sorbus aucuparia.

Ranula, ran'u-lah (dim. of **Rana**, frog, so called from its resemblance). *Frogtongue, Sublingual cyst.* Small, soft, fluctuating, and semitransparent tumor

which forms under the tongue, formerly considered to be owing to the accumulation of saliva in Wharton's duct, but now said to be due to obstruction of one of the mucous glands beneath the tongue, as the glands and ducts of Rivini. Sometimes the salivary duct is found plugged by a small calculus. Several other forms of sublingual swelling are included in the term ranula. **R. lapide'a**, see *Calculi, salivary.*

Ranunculus, ran-un'ku-lus (dim. of **Rana**, frog, because found in marshy places where frogs abound). *Crowfoot, Yellow gowan*, ord. Ranunculaceæ. Genus of plants, most of the species of which, when taken internally, act as acrid poisons. They are also acrid and vesicant when applied to the skin, and have accordingly been often used as counter-irritants. Ranunculus (formerly in the Ph. U. S.) is the cormus and herb of Ranunculus bulbosus. The following species answer to the above description: **R. aborti'vus**, *Smallflowered crowfoot, Chickenpepper.* **R. a'cris**, *Upright meadow* or *Tall crowfoot, Buttercups Guilty cups, Yellowweed, Blisterweed, Pilewort, Burwort, Meadowbloom, Yellows.* **R. al'bus**, Anemone nemorosa. **R. aquat'icus**, R. sceleratus. **R. bulbo'sus**, *R. lætus, Bulbous* or *Bulbous-rooted crowfoot, Buttercups.* **R. declina'tus**, R. flammula. **R. digita'tus**, R. sceleratus. **R. fica'ria**, *Lesser celandine, Pilewort.* The leaves and root have been used medicinally—the leaves as an antiscorbutic, the root as a cataplasm in piles. **R. flam'mula**, *R. declinatus, Flammula, Surrecta alba, Smaller water crowfoot, Lesser spearwort.* **R. Illyr'icus.** **R. læ'tus**, R. bulbosus. **R. lin'gua.** **R. nemoro'sus**, Anemone nemorosa. **R. palus'tris**, R. sceleratus. **R. Pennsylva'nicus**, *Bristly crowfoot.* **R. præ'cox**, R. ficaria. **R. praten'sis**, R. acris. **R. pubes'cens**, growing in ditches and marshes in South Africa. The expressed juice is used by the Cape Colonists in cancerous ulcers. **R. re'pens**, *Creeping crowfoot.* **R. ru'fulus**, R. acris. **R. scelera'tus**, *Marsh* or *Crushed* or *Celery-leaved crowfoot.* **R. sic'ulus**, R. acris. **R. Steve'nii**, R. acris. **R. umbella'tus**, R. sceleratus. **R. ver'nus**, R. ficaria. **R. Virginia'nus**, Lobelia syphilitica.

Ran'vier's nodes. Constrictions at equal distance along nerve-fibres.

Rapa, rap'ah. This term was applied of old to the cabbage or turnip kind. **R. na'pus** (rapus), Brassica rapa. **R. rotunda**, Brassica rapa.

Rape (*rapa*). Brassica rapa. Forcible and illicit connection with a married or unmarried woman (*rapio*, to ravish). **R. oil**, oleum rapæ.

Raphanedon, raf-an-a'don (*raphanis*, a radish; like a radish). A transverse fracture of a long bone, leaving no splinters.

Raphania, raf-an'e-ah. Convulsive disease, *Ergotismus*, not uncommon in Germany and Sweden, and attributed to the seeds of the raphanus, raphanistrum, or rapistrum being mixed with the corn. The convulsions are seated in the limbs, and are attended with acute pain. See *Convulsio cerealis.* **R. maïz'tica**, pellagra.

Raphanis, raf'an-is. Raphanus hortensis. **R. mag'na**, Cochlearia armoracia.

Raphanistrum arvense, raf-an-is'trum ar-ven'se. See *Raphania.*

Raphanus, raf'an-us. Rapa, R. hortensis. **R. horten'sis**, ord. Cruciferæ. The root of this plant is a common esculent. It has also been given as a diuretic in calculous affections. The juice, made into a syrup, is exhibited to relieve hoarseness. Radishes have long been celebrated as antiscorbutics. **R. mari'nus**, Cochlearia Armoracia. **R. raphanis'trum**, see *Raphania.* **R. rustica'nus**, Cochlearia Armoracia. **R. sati'vus**, garden radish. **R. sylves'tris**, see *Raphania.*

Raphe, rhaf'e (suture). More correctly, *Rhaphe.* Name given to prominent lines resembling a raised stitch, as that which divides the scrotum into two parts, and extends from the anterior part of the anus to the extremity of the penis. Also two prominent lines, longitudinal and parallel, seen at the upper surface of the corpus callosum, extending from the anterior to the posterior extremity of that commissure. **R. of ampul'la**, longitudinal ridge on upper part of ampulla of the semicircular canal. **R. of medul'la oblonga'ta**, median septum, consisting of fibres running principally in median plane. **R. of pal'ate**, linear median ridge extending from small papilla anteriorly to uvula posteriorly. **R. of phar'ynx**, median seam on posterior wall of pharynx. **R. of tongue**, median furrow on dorsum linguæ. **R. of ure'thra**, ridge along inferior part of urethra.

Raphex, raf'eks. Chenopodium vulvaria.

Raphiankistron, raf-e-an-kis'tron (*rhaphion*, needle, *ankistron*, hook). Instrument employed in the formation of artificial pupil.

Raphidophora vitiensis, raf-id-of'o-rah vish-e-en'sis. Creeping plant, ord. Aroidæ, native of the Fiji Islands; used in making tonga.

Raphion, raf'e-on (dim. of **Rhaphis**, needle). Needle.

Raphis, raf'is. Needle. See *Rapa.*

Raphus, raf'us. Rapa.

Raphys, raf'is. Rapa; Raphanus hortensis.

Rapistrum, rap-is'trum (*rapa*). See *Raphania.*

Rap'tus (*rapio, raptum*, to seize violently and suddenly). Violent and sudden attack or seizure. **R. hæmorrhag'icus**, hemorrhagic attack or seizure. **R. melancholi'cus**, sudden and violent seizure of melancholy. **R. nervo'rum**, sudden and violent nervous seizure; spasm or cramp. **R. post-terga'neus** (*raptus, post*, behind, *tergum*, the back), opisthotonos.

Ra'pum. Rapa. **R. ma'jus**, Brassica rapa.

Rapuntium syphiliticum, rap-un'she-um sif-il-it'ik-um. Lobelia syphilitica.

Ra'pus or **Ra'pys.** Rapa; Raphanus hortensis.

Rarefaciens, rah-re-fah'se-ens (*rarus*, rare, thin, *facio*, to make). Medicines supposed to be possessed of the power of giving more bulk or extension to the blood or other humors.

Rarefaction, ra-re-fak'shun. Act of rarefying or expanding.

Rarefying osteitis, ra're-fi-ing os-te-e'tis. Osteitis in which the Haversian canals enlarge and the bone becomes rarefied; also called osteoporosis.

Rarifa'ciens. Rarefaciens.

Raritas, rar'it-as. Rarity; scantiness; fewness. **R. den'tium**, large space between the teeth, which appear to be, and may be, too few.

Rascatio, ras-kah'she-o. Act of spitting.

Rasceta, ras-sa'tah. Carpus; malleolus. **R. pe'dis**, tarsus.

Ras'cha, Rase'ta, or **Raset'ta.** Carpus; malleolus.

Rash. Exanthem. **R., can'ker**, see *Cynanche maligna.* **R., fe'ver**, scarlatina. **R., lich'enous**, lichen. **R., medic'inal**, eruption following or dependent upon the administration of medicines, as the blue condition of the skin from nitrate of silver, etc. **R., mercu'rial**, eczema mercuriale. **R., mul'berry**, see *Typhus.* **R., net'tle**, urticaria. **R., rose**, roseola. **R., scar'let**, scarlatina. **R., tooth**, strophulus. **R., wild'fire**, Ignis sylvaticus.

Rasorian, raz-o're-an. Relating to Rasori, for an account of whose doctrines see *Controstimulus.*

Rasorism, raz-o'rizm. The Italian medical doctrine of controstimulus, of which Rasori was the founder.

Rasorium, raz-o're-um (*rado, rasum*, to scrape). Raspatorium.

Ras'pail's sed'ative wa'ter. Lotion consisting of camphor and ammoniac.

Raspatorium, ras-pat-o're-um. *Raspatory.* Instrument used for rasping bones, to detach the periosteum, in surgical operations or for anatomical purposes.

Raspberry, raz'ber-re. Rubus idæus. **R., black**, see *Rubus strigosus.* **R., ground**, Hydrastis Canadensis. **R., wild**, Rubus strigosus. **R. vin'egar**, acetum rubi idæi.

Rasp'ing. Eructation.

Rasps. Rubus idæus.

Rasseta (ras-se'tah) **pe'dis.** Tarsus.

Raste'ta. Carpus, malleolus.

Rasura, raz-u'rah (*rado, rasum*, to scrape). Rasure, scratch, or erosion. Rasping or shaving of any sub-

stance, as rasuræ cornu cervi, hartshorn shavings; scobs or shaving of metals.

Ratafia, rat-af-e'ah. Liquor prepared by imparting to ardent spirits the flavor of various kinds of fruits, adding sugar.

Ratanhia-tannic acid, rat-an'he-ah-tan'nik as'id. Form of tannic acid derived from krameria.

Ratanhin, rat'an-hin. Alkaloid found in extract of rhatany root.

Ratanhy, rat'an-he. Krameria ratanhia. **R. of the Antilles**, Krameria ixina. **R. Savanil'la**, Krameria ixina.

Râtelier (*rateau*, rack). A set of artificial teeth.

Rath'ke's pouch. Diverticulum pituitæ. **R.'s trabec'ulæ**, trabeculæ cranii.

Ratio, rah'she-o (*reor*, *ratus*, to think). Reason; cause; explanation; mode or manner; as *ratio symptomatum*, reason of the symptoms. **R. meden'di**, reason, mode, or manner of cure. **R. symptoma'tum**, see *Ratio*. **R. vic'tûs**, dietary.

Ration, ra'shun (*ratio*, proportion). Daily allowance of necessaries, especially of food to a soldier or sailor. Diet rations are founded on principles laid down under Diet, Dietary, etc., and in all civilized countries are in essential respects the same. They vary in time of peace and during active service. The reduction of the "marching ration" in bulk and weight, without impairing its nutritive power, has received much attention.

Rational, rash'un-al. Conformable to reason; this epithet is often opposed to empirical, as rational treatment, which recognizes nature as the great agent in the cure, employing art as an auxiliary, to be resorted to when useful or necessary, and avoided when prejudicial.

Rationalitas, rash-e-o-nal'it-as. Ratio.

Rats'bane. Arsenious acid.

Rattle, rat'l. Râle.

Rattlebush, rat'l-bush. Sophora tinctoria.

Rat'tlefern. Botrychium virginicum; astringent, vulnerary.

Rat'tleflag. Eryngium yuccæfolium.

Rat'tle-herb. Actæa spicata.

Rat'tles. See *Râle*.

Rattlesnake, rat'l-snake. Crotalus horridus. **R. leaf**, Goodyera pubescens. **R. plan'tain**, Goodyera pubescens. **R. root**, Nabulus albus; Polygala senega; Trillium latifolium. **R. weed**, Hieracium venosum.

Rattlesnake's mas'ter. Agave Virginica; Liatris scariosa; Nabalus albus.

Rattleweed. Actæa racemosa.

Ratula, rat'u-lah. Raspatorium.

Rau, pro'cess of. Processus gracilis of the malleus.

Rau'ber's lay'er. Stratum of flat cells found in primary development of membranes of blastoderma.

Raucedo, raw-sa'do (*raucus*, hoarse). Hoarseness; change in the voice, which loses its smoothness and becomes low and obscure; common symptom in diseases of the larynx and trachea. **R. catarrha'lis**, hoarseness from cold.

Raucitas, raw'sit-as. Raucedo.

Raucous, raw'kus. *Raucus*. Hoarse, as a raucous voice.

Rauwolfia nitida, rau-wol'fe-ah nit'id-ah. Native of tropical America; root is cathartic and emetic.

Ravaton's amputa'tion. Operation consisting of a circular incision down to the bone, and of a longitudinal incision on the side for obtaining flaps.

Ravenala Madagascariensis, rav-en-al'ah mad-a-gas-kar-e-en'sis. Tree, native of Madagascar; leaves yield refreshing juice; seeds are edible.

Ravensara, rav-en-sar'ah. Tree, native of Madagascar. R. aromatica has an aromatic flavor, and its fruit has an odor like cloves.

Ravery, ra'ver-e. Delirium.

Ray. Diarrhœa. **R. of direction**, light propagated in a straight line from a luminous point. **R. fun'gus**, actinomyces.

Ray'naud's disease. Defined by Raynaud as a neurosis characterized by an exaggeration of the excitomotor power of the cord in presiding over the vasomotor centres. Sphaceloderma. Also paralysis after parotiditis.

Ra'zor (*rado*, *rasum*, to shave). Instrument for shaving; used in surgery to remove hairs where they would interfere with any operation.

Re (L.). In composition, back, in return, again. Before vowels at times, and before *h* and *d*, it becomes *red*.

Reaching, reech'ing. Vomiturition.

Reacquired (re-ak-kwired') **move'ments.** Movements restored to normal action after injury to motor portions of the brain.

Reaction, re-ak'shun (*re*, again, *ago*, *actum*, to act). Action of resistance to a power applied; species of vital movement or excitement tending to prevent or destroy the effects of any noxious power applied to the animal economy, and which by some has been attributed to the *vis medicatrix naturæ*. It is certainly dependent on the organic instinctive actions of the frame. State of activity which succeeds the action on the nervous system of certain morbific influences. **R. of degenera'tion**, loss or decrease of normal reaction of nerves and muscles to faradic stimuli while the galvanic irritability of the muscles remains. **R. time**, time passing between stimulation of a nerve and a certain result.

Ready (red'e) **meth'od.** *Marshall Hall's method.* Mode of restoring respiration in cases of apnœa, proposed by Dr. Marshall Hall; consists in placing the body in the prone position, making gentle pressure on the back, then removing the pressure and turning the body on its side and a little beyond, executing these movements sixteen times in the minute. Also termed the method of prone and natural respiration in apnœa. See *Drowning, resuscitation from* (for general plan).

Reagent, re-a'jent. Substance used for determining the component parts of other substances; a test.

Realgar, re-al'gar. Red sulphuret of arsenic; violent poison; see *Poison*.

Reason, re'z'n. Faculty or property of the mind by means of which man perceives the distinction between right and wrong in physics as well as in morals. Reason is a just conclusion resulting from the comparison of two ideas by virtue of which we form a judgment.

Reaumuria, ra-o-mu're-ah. Polypetalous shrubs, ord. Tæmariscineæ; leaves of R. vermiculata are used as an external application in itch.

Re'aumur's scale or **thermom'eter.** See *Heat* and *Thermometer*.

Rebo'lea or **Rebo'na.** Mummy; also dried fæces.

Récamier's caus'tic. Escharotic solution of chloride of gold in dilute nitromuriatic acid. **R.'s curette**, instrument of a double S-shape, being graduated and provided with a loop at one end.

Receiver, re-se'ver (*recipio*, to receive). *Ampulla recipient.* In pharmacy, a wide-necked globular vessel, whose neck widens gradually outward to receive the tapering beak of the retort in distillation.

Receiv'ing tubes of kid'ney. Uriniferous tubes or ducts of Bellini.

Recepta, re-sep'tah. Prescription.

Receptacula duræ matris, re-sep-tak'u-lah du're mat'ris (*recepto*, *receptatum*, to receive). Sinuses of the dura mater.

Receptaculum (re-sep-tak'u-lum) **cerebel'li.** That part of the squamous bone below the internal occipital protuberance and sulcus transversalis. **R. chy'li**, receptacle of the chyle. *Lumbar cistern*, *Reservoir* or *Cistern of Pecquet.* A considerable dilatation of the thoracic duct in front of the lumbar region of the vertebral column; commencement of the duct. **R. Cotun'nii**, a triangular space formed by a separation of the two laminæ of the dura mater of the internal ear near the middle of the posterior surface of the petrous portion of the temporal bone, where the aquæductus vestibuli terminates. It is always filled with the fluid of Cotugno or of Cotunnius. **R. lo'bi occipitalis**, that part of the occipital bone above the internal occipital protuberance and sulcus trans-

versalis. **R. Pecque'ti,** R. chyli. **R. sel'læ equi'næ later'ibus appos'itum,** cavernous sinus.

Receptarii medici, re-sep-tar'e-e med'e-se (*receptum*). Physicians who collect from pharmacopœias, chemical and other works masses of receipts.

Receptivity, re-sep-tiv'it-e (*recipio, receptum,* to receive). Susceptibility of certain organs to receive morbific impressions.

Receptum, re-sep'tum. Prescription. **R. acetab'uli,** acetabular fossa.

Recessus, re-ses'sus. Retreat. Abscess. See *Lingula* and *Sinus.* **R. ampulla'ceus,** ampulla of bony semicircular canal; see *Cavitas elliptica.* **R. chias'matis,** space in the third ventricle of the cerebrum between the chiasma and lamina terminalis. **R. cochlea'ris,** cochlear fossa. **R. cona'rii,** occasional hollow in pineal gland. **R. duodenojeju'na'lis,** recess between duodenum and jejunum. **R. ellip'ticus,** hemi-elliptical fossa. **R. epitympan'icus,** pyramidal cavity in tympanum. **R. glosso-epiglot'icus,** glosso-epiglottic fossa. **R. hemi-ellip'ticus,** hemi-elliptical fossa. **R. hemisphær'icus,** hemispherical fossa. **R. hepat'icorena'lis,** pocket in the peritoneum for reception of lobe of liver. **R. ileocæca'les,** ileocæcal fossæ. **R. incisi'vus,** recess on the nasal septum above the anterior palatine canal. **R. infrapinea'lis,** R. conarii. **R. infundib'uli,** continuance of third ventricle into infundibulum. **R. infundibulifor'mis,** fossa of Rosenmüller on the pharyngeal wall. **R. jugula'ris,** jugular fossa. **R. labyrin'thi,** depression leading to the aqueduct of the vestibule; see *Crista vestibuli.* **R. laryngopharynge'us,** pyramidal sinus or space continuous with the pharynx. **R. latera'lis ventric'uli,** pouch on each side of the fourth ventricle. **R. nasopalati'nus,** infundibular recess on the nasal septum above the anterior palatine canal. **R. occipita'lis,** pouch in the side of the lateral ventricle of the embryo, developing subsequently into the posterior cornu. **R. op'ticus,** space in third ventricle between chiasma and lamina terminalis. **R. pharynge'us,** fossa of Rosenmüller. **R. pharynge'us me'dius,** pouch in mucous membrane of back part of pharynx in the middle line. **R. pinea'lis,** occasional hollow in pineal gland. **R. sac'ci lacryma'lis,** occasional dilatation forward of lacrymal sac. **R. salpin'go-pharynge'us,** occasional diverticulum into the pharynx near the opening of the Eustachian tube. **R. sphær'icus,** hemispherical fossa. **R. sphe'no-ethmoïda'lis,** small groove above the superior turbinate bone on lateral walls of nasal fossæ. **R. Stensonia'nus,** infundibular recess on nasal septum above the nasopalatine canal. **R. subcæca'lis,** subcæcal fossa. **R. subsigmoï'deus,** peritoneal pouch made by the mesentericomesocolic ligament. **R. sulcifor'mis,** see *Fovea vestibuli.* **R. suprapinea'lis,** recess between superior portion of pineal gland and roof of third ventricle. **R. utric'uli,** pit at upper part of the utricle. **R. vesi'cæ urina'riæ,** sinus of the bladder.

Rechamel'ca. Rachamelca.

Recidiva morbi, re-sid-e'vah mor'be (*recido,* to fall back). Relapse.

Recipe, res'ip-e (*re, capio,* to take). A Latin word which signifies "take," and with which prescriptions are commenced. It is often represented by R, ℞, and was formerly by ♃, the symbol of Jove. See *Abbreviation* and *R.* Substantively, *Recipe* means a prescription or receipt.

Reciprocation, vibrations (re-sip-ro-ka'shun, vibra'shuns) **of.** See *Sound.*

Reciprolaryngos'copy (*reciprocus,* mutual, *larynx, skopeo,* to view). A hybrid term denoting demonstration of a patient's larynx to others.

Reclinatio, rek-lin-ah'she-o. Reclination. **R. palpebra'rum,** ectropion.

Reclination, rek-lin-a'shun (*reclino,* to bend back). A mode of operating for cataract, which consists in applying the needle in a certain manner to the anterior surface of the cataract, and depressing it into the vitreous humor in such a way that the front surface of the cataract is the upper and its back surface the lower one.

Reclusor palpebrarum, rek-lu'sor pal-pe-brah'rum (*recludo, reclusum,* to open). Levator palpebræ superioris.

Réclus's disease. Cystic disease of the mammary gland.

Recoil' wave. Dicrotic wave of sphygmogram.

Recollectionis jactura, rek-ol-lek-she-o'nis jak-tu'rah. Amnesia.

Recomposition, re-kom-po-zish'un. Reunion of bodies after temporary dissolution.

Recondite, rek'on-dite. Concealed.

Reconstitution, re-kon-ste-tu'shun. Act of forming anew or bringing together missing parts.

Reconvalescentia, re-kon-val-es-sen'she-ah (*re, convalesco,* to get well). Convalescence.

Recordatio, re-kor-dah'she-o (*recordor,* to remember). Memory.

Recorporativus, re-kor-po-rat-e'vus (*re, corporor,* to be formed into a body). Uniting after temporary dissolution. See *Metasyncritic.*

Recovery, re-kuv'er-e (*recupero,* to regain). Return to a normal condition.

Recreatio, rek-re-ah'she-o (*re, creo,* to create). Recovery.

Recrement, rek're-ment (*re, cerno, cretum,* to sift). Dross; excrement. A humor which, after having been separated from the blood, is again returned to it, such as the saliva, the secretion of serous membranes, etc. Such fluids are said to be *Recrementitial.*

Recrementa (rek-re-men'tah) (pl. of **Recrementum**) **vesicæ,** ves-e'se. Urine.

Recrementitial (rek-re-men-tish'al) or **Recrementi'tious fiu'ids.** See *Recrement.*

Recremento-excrementitial, rek-re-men'to-eks-kre-men-tish'al. Term applied to secreted fluids, as the saliva, bile, etc., which are in part reabsorbed and in part excreted.

Recrementum, rek-re-men'tum. Recrement.

Recrudes'cence or **Recrudescentia,** rek-ru-des-sen'she-ah (*re, crudus,* raw). Increase of a disease after temporary remission.

Rectal, rek'tal. Appertaining or relating to the rectum. **R. alimenta'tion,** administration of nutritive enemata. **R. di'aphragm,** a muscle sheet which occludes the rectal outlet of the pelvis, consisting of sphincter ani externus superficially, and a deeper layer, made up of levator ani and coccygeus. **R. expres'sion,** name given to an obstetrical manipulation, consisting of the introduction of two fingers into the rectum of the woman before the end of the stage of expulsion, and thereby helping delivery of the child. Rectal expression is intended to avoid laceration of the perineum. **R. pouch'es, inflamma'tion of,** these pouches become inflamed, enlarged, especially in old people, and ulcerated. The condition is sometimes called encysted rectum or sacciform disease of the anus. **R. tube,** see *Tube.*

Rectalgia, rek-tal'je-ah (*recto, algos,* pain). Hybrid term denoting pain in the rectum.

Rectec'tomy (*recto, ektome,* excision). Hybrid term for excision of portion of the rectum for disease or malformation.

Rectification, rek-te-fe-ka'shun (*rectum,* right, *facio,* to make). Operation by which certain liquids are purified by distilling them, either singly or after admixture with other substances.

Rectified, rek'tif-ide. Purified, distilled. **R. oil of tur'pentine,** oleum terebinthinæ rectificatum. **R. pyrolig'neous ac'id,** acidum pyrolignosum rectificatum. **R. spir'it,** see *Spiritus vini rectificatus.*

Rectitis, rek-te'tis. A hybrid term; properly *Architis* or *Proctitis.* Inflammation of the rectum.

Recto, rek'to. In composition, relating or belonging to the rectum.

Rectocele, rek-to-se'le (Eng. rek'to-seel) (*recto, kele,* rupture). *Rectocele of the vagina, Vaginal rectocele, Rectovaginal hernia.* Prolapse of the posterior wall of the vagina, constituting hernia of the rectum.

Rectococcygeus, rek-to-kok-se-ja'us. Muscle which originates on the anterior surface of the second and third coccygeal vertebræ, and is inserted into the pos-

terior wall of the rectum; it draws the rectum backward.

Rectolabial, rek-to-la'be-al. Appertaining or relating to the rectum and labium.

Rectoscope, rek'to-skope (*recto*, *skopeo*, to see). Hybrid term denoting a speculum for rectal examination.

Rectostenosis, rek-to-sten-o'sis (*recto*, *stenos*, contracted). Stricture of the rectum.

Rectotome, rek'to-tome (*recto*, *tome*, incision). Hybrid term for an instrument devised by Amussat for incising the rectum in cases of stricture of that bowel, the operation being wrongly called *rectotomy*.

Rectotomy, rek-tot'o-me (*recto*, *temno*, to cut). Operative division of rectal stricture.

Recto-urethral, rek'to-u-re'thral. Appertaining or relating to the rectum and urethra.

Recto-uterine, rek'to-u'ter-in (*recto*, *uterus*). Appertaining or relating to the rectum and uterus. **R.-u. cul-de-sac** or **pouch**, see *Uterus*. **R.-u. folds**, see *Uterus*.

Rectovaginal, rek-to-vaj-i'nal. Relating or belonging to the rectum and vagina. **R. cul-de-sac** or **pouch**, formed by the reflection of the peritoneum from the upper third of the vagina to the rectum. **R. fis'tula**, preternatural communication between the rectum and vagina through the above septum. **R. her'nia**, rectocele. **R. sep'tum** is formed by the junction, back to back, of the rectum and vagina; it separates these two canals from each other.

Rectovesical, rek-to-ves'ik-al (*recto*, *vesica*, bladder). Having relation to the rectum and bladder, as the rectovesical fold or pouch or cul-de-sac of the peritoneum, between the rectum and bladder. See *Urinary bladder*. **R. fas'cia**, *Fascia recta vesicalis;* portion of pelvic fascia covering internal surface of levator ani and forming ligaments of prostate gland and of the uterus.

Rectum, rek'tum (*rectus*, straight, so called from a notion that it is straight, which it is not). The third and last portion of the large intestine. It forms the continuation of the sigmoid flexure of the colon, occupies the posterior part of the pelvis, and extends from the left side of the sacrovertebral articulation to the coccyx, before which it opens outward by the orifice called the anus. It is cylindrical, but saccated, as it were, at its inferior portion, where it is consequently larger, and is attached to the sacrum by the mesorectum. Like the other portions of the canal, it is formed of three membranes. Toward the lower extremity some parallel and longitudinal wrinkles are observable on its inner surface. These are the *Columns, Columnæ carneæ of the rectum* or *of Morgagni*. They are merely folds of the mucous membrane, between which are a number of lacunæ. The arteries of the rectum are numerous; they proceed from the inferior mesenteric, hypogastric, and internal pudic, and are called hemorrhoidal. The veins open partly into the hypogastric vein, partly into the inferior mesenteric. The nerves proceed from the sciatic and hypogastric plexuses. The rectum receives the fecal matters as they pass from the colon, which serves as a reservoir for them, to be discharged at the anus. **R., strict'ure of the**, see *Stricture*.

Rectus, rek'tus (straight). Term used in anatomy for parts that pursue a straight course. **R. abdom'inis**, long, flat muscle, situate at the anterior part of the abdomen, and separated from that of the opposite side by the linea alba. It is attached above to the cartilages of the last three true ribs, and below to the pubis by a very strong tendon, the outer edge of which is continuous with the fascia transversalis. This muscle is enclosed in an aponeurotic sheath, and in its course has three or four transverse aponeurotic intersections. It bends the chest on the pelvis, and conversely. **R. abdom'inis anti'cus ma'jor**, rectus abdominis. **R. abdom'inis anti'cus mi'nor**, pyramidalis abdominis. **R. abdom'inis posti'cus**, quadratus lumborum. **R. ante'rior bre'vis**, rectus capitis internus minor. **R. ante'rior lon'gus**, R. capitis internus major. **R. cap'itis anti'cus lon'gus**, R. capitis internus major. **R. cap'itis anti'cus me'dius**, occasional muscle situate between the recti capitis antici muscles. **R. cap'itis anti'cus min'imus**, rectus capitis anticus medius. **R. cap'itis anti'cus mi'nor**, small muscle of the prævertebral region. **R. cap'itis inter'nus ma'jor**, long in proportion to its breadth, flat, and broader above than below. Situate at the anterior and lateral part of the neck, and arising from the transverse processes of the third, fourth, fifth, and sixth cervical vertebræ, and inserted into the basilary process of the occipital bone. **R. cap'itis inter'nus mi'nor**, situate more deeply than the last; is thin, flattened, irregularly quadrilateral, and passes from the anterior surface of the body of the first vertebra, near the origin of the transverse process, to be inserted into the basilary process. **R. cap'itis latera'lis**, there is a muscle of this name on each side of the head; flat, quadrilateral, and passing from the transverse process of the atlas to the occiput, behind the jugular fossa; inclines the head to one side. **R. cap'itis posti'cus ma'jor**, flat, triangular muscle, situate at the posterior and superior part of the neck, extends from the spinous process of the second cervical vertebra to the external surface of the lower semicircular ridge of the occipital bone; extends the head, inclines it to one side, and causes it to experience a rotary motion, which directs the face to its side. **R. cap'itis posti'cus mi'nor**, flat, triangular muscle, situate beneath the last, which passes from the posterior arch of the atlas to the occipital bone; extends the head; see also *Rectus capitis posticus major*. **R. cap'itis posti'cus profun'dus**, rectus capitis posticus minor. **R. cap'itis posti'cus superficia'lis**, rectus capitis posticus major. **R. cap'itis posti'cus supe'rior**, rectus capitis posticus major. **R. col'li**, vertical portion of the long muscle of the neck. **R. cru'ris**, R. femoris. **R. exter'nus oc'uli**, all the recti muscles of the eye, four in number, arise from the bottom of the orbit and are inserted into the sclerotic coat of the eye. The rectus externus is divided at its posterior extremity into two portions, one of which is attached to the outer part of the foramen opticum, and the other to the sphenoid bone. **R. fem'oris**, a straight muscle seated at the anterior part of the thigh. It extends from the anterior and inferior spine of the ilium and the cotyloid cavity of the patella. It extends the leg upon the thigh, and conversely. It can also bend the thigh upon the pelvis or carry the pelvis forward. **R. infe'rior fem'oris**, gracilis. **R. infe'rior oc'uli** arises below the optic foramen from the sphenoid bone; depresses the eye. **R. inter'nus ma'jor**, R. capitis internus major. **R. inter'nus mi'nor**, R. capitis internus minor. **R. inter'nus oc'uli** arises from the sphenoid at the inferior part of the foramen opticum; turns the eye toward the nose. **R. la'bii**, compressor labii. **R. latera'lis**, R. capitis lateralis. **R. latera'lis acces-so'rius**, atlanticomastoideus. **R. latera'lis Fallo'pii**, R. capitis lateralis. **R. latera'lis oc'uli**, rectus externus oculi. **R. ma'jor**, R. capitis posticus major. **R. media'lis**, rectus internus. **R. media'lis oc'uli**, rectus internus oculi. **R. mi'nor**, R. capitis posticus minor. **R. oc'uli**, see *R. externus oculi*, *R. inferior oculi*, *R. lateralis oculi*, *R. medialis oculi*, and *R. superior oculi*. All the recti muscles are concerned in the voluntary motions of the eye. **R. poste'rior**, funnel-shaped muscle which retracts the eyeball. **R. ster'nalis**, sternalis muscle. **R. supe'rior oc'uli** is attached to the circumference of the foramen opticum. **R. thora'cis**, extension of rectus abdominis upon the thorax. **R. thora'cis superficia'lis**, sternalis muscle.

Recubitorium, re-ku-bit-o're-um (*recumbo*, *recubitum*, to recline). A long chair or seat in which one can assume a reclining position.

Recuperation, re-ku-per-a'shun (*recupero*, *recuperatum*, to recover). Return of diseased organs to their normal condition; recovery of strength and health.

Recu'perative or **Recu'peratory.** Restorative; recovering; belonging to recovery.

Recurrent, re-kur'rent (*recurro*, to run back). Name given to several arterial and nervous branches

which seem to reascend toward the origin of the trunk whence they emanate; also to a disease that relapses—a recurrent tumor, for example. **R. ar'teries**, this name has been given to several arteries of the forearm and to one of the leg. In the forearm there are—1, the radial recurrent, which arises from the superior part of the radial and ascends between the supinator longus, supinator brevis, and brachialis internus; 2, the anterior cubital recurrent arises from the upper and inner part of the cubital and ascends between the pronator teres and brachialis internus; 3, the posterior cubital recurrent arises from the preceding artery or from the cubital itself, and ascends between the olecranon and internal tuberosity of the humerus; 4, the posterior radial recurrent, which arises from the posterior interosseous and ascends between the posterior cubital and anconeus muscles. In the leg the recurrent tibial is furnished by the anterior tibial, and ascends to the tibialis anticus muscle. **R. artic'ular nerve**, branch from external popliteal nerve to knee-joint. **R. band'ages** are formed by convolutions of bandages, which make a kind of cap for the part—as the head—to which they are applied. **R. branch of infe'rior max'illary nerve**, branch of lower division of inferior maxillary nerve. **R. branch of supe'rior max'illary nerve**, recurrent superior maxillary nerve; branch of superior maxillary nerve to middle fossa of skull. **R. chorioid'al** or **choroi'dal ar'teries**, recurrent superior maxillary arteries. **R. fe'ver**, see *Relapse*. **R. laryngeal nerve**, inferior laryngeal nerve. **R. nerves of dor'sal**, branches of spinal nerves to vertebræ and adjacent parts. **R. sensibil'ity**, see *Vertebral nerves*. **R. stric'ture**, see *Stricture*.

Recurva'tio (*re*, *curvus*, crooked). See *Hump*.

Recutitus, rek-u-te'tus (*re*, back, *cutis*, skin). One whose prepuce does not cover the glans; one who is circumcised.

Red ant. Formica rufa. **R. bane'berry**, root of Acetata rubra; violent purgative; dose, of fluid extract, ♏v–x. **R. bark**, red cinchona. **R. bay**, Persea Carolinensis; indigenous; has edible fruit; leaves are pectoral and vulnerary, seeds astringent. **R. bean**, Abrus precatorius. **R. berry**, Arbutus uva ursi; gaultheria; Panax quinquefolium. **R. berry, bit'ter**, Cornus florida. **R. berry, swamp**, Vaccinium oxycoccus. **R. buck'eye**, Æsculus pavia. **R. bud**, Cercis Canadensis. **R. cab'bage**, Brassica oleracea rubra. **R. ce'dar**, Juniperus Virginiana. **R. cen'taury**, Sabbatia angularis. **R. chalk**, native hydrated aluminium silicate. **R. chick'weed**, Anagallis arvensis. **R. cincho'na**, Cinchona rubra. **R. clo'ver**, Trifolium pratense. **R. cor'al**, see *Coral*. **R. cur'rants**, Grossularia rubra. **R. elm**, Ulmus fulva. **R. gown**, see *Strophulus*. **R. gum**, see *Strophulus*. **R. head**, Asclepias curassavica. **R. i'odide of mer'cury**, mercuric iodide. **R. lead**, plumbi oxidum rubrum. **R. mailk'es**, Papaver rhœas. **R. nu'cleus**, reddish-gray nerve-cells in tegmentum of brain. **R. oil**, oleum hyperici. **R. o'sier**, Cornus sericea. **R. ox'ide of mer'cury**, hydrargyri oxydum rubrum. **R. pep'per**, powdered capsicum. **R. phos'phorus**, amorphous phosphorus. **R. pop'py pet'als**, Rhœados petala. **R. precip'itate**, hydrargyri nitrico-oxydum. **R. prus'siate of pot'ash**, potassium ferricyanide. **R. puccoon'**, Sanguinaria Canadensis. **R. rod**, Cornus sericea. **R. root**, celastrus, Lachnanthes tinctoria; Sanguinaria Canadensis. **R. rose**, Rosa Gallica. **R. san'dal-wood**, red saunders. **R. saun'ders**, Santalum rubrum. **R. shanks**, Polygonia Persicaria. **R. sol'dier**, erysipelas. **R. sul'phide of mer'cury**, mercuric sulphide. **R. tar'tar**, crude potassium bitartrate. **R. weed**, Phytolacca decandra.

Red-green blind'ness. Form of color-blindness in which varieties of red and green cannot be made out.

Redibia, red-ib'e-ah. Paronychia.

Redimic'ulum (chaplet). Bandage for the head.

Redintegration, red-in-te-gra'shun (*re*, *integer*, entire). Regeneration; restoration of strength after disease or fatigue.

Red-Riv'er snake'root. Aristolochia reticulata.

Reds (from the color). Menses.

Reduced' eye. The two nodal points of the refractive system are taken as one, and also the two principal points. **R. i'ron**, ferrum redactum.

Reductio, re-duk'she-o (*reduco*, to bring back). Reduction; taxis. **R. præpu'tii impedi'ta**, phimosis.

Reduction, re-duk'shun. Surgical operation restoring displaced parts to their original situation, as in the case of a fracture. The reduction of a hernia is the restoration of the protruded parts to the cavity of the abdomen; this is also called taxis. In pharmacy, the process of restoring oxides, chlorides, sulphurets, etc. to the metallic state.

Redundantia, re-dun-dan'she-ah (*re*, *unda*, wave). Plethora.

Reduplication, re-du-ple-ka'shun. Redoubling, as in paroxysms of an intermittent when its type is doubled.

Reduvia, red-u've-ah. Paronychia.

Redux, re'duks. Term signifying the return of certain physical signs in physical examination after their absence during disease; generally accompanying crepitation in pneumonia and friction in pleurisy and pericarditis.

Red-water tree. See *Sassy bark*.

Reed mace. Typha latifolia.

Reef-knot. Sailor's knot, for ligating arteries.

Refectio, re-fek'she-o (*reficio*, *refectum*, to restore). Restoration.

Refectiva, re-fek-te'vah. Restoratives.

Refectus, re-fek'tus. Restoration to health.

Reficientia, re-fis-e-en'she-ah. Restoratives.

Reflect'ed ten'don of rec'tus. Tendon taking its origin immediately above the acetabulum.

Reflec'tio. Reflection. **R. palpebra'rum**, ectropion.

Reflection, re-flek'shun (*re*, *flecto*, *flexum*, to bend). Bending or turning back; duplicature; the act of turning the mind back on its actions, so as to constitute contemplation or deliberation. Bending or turning backward of a ray of light.

Reflector epiglottidis, re-flek'tor ep-e-glot'tid-is. Muscle arising from the arytenoid cartilage and inner part of the thyroid, and inserted into the lateral edges of the epiglottis.

Reflex, re'fleks (same etymon as **Reflection**). Term applied to an action which consists in the reflection by an efferent nerve of an impression conveyed to a nervous centre by an afferent nerve; hence reflex movement, reflex paralysis, etc. A reflex action is generally regarded to be one executed without consciousness. **R., abdom'inal**, see *Reflex, superficial*. **R., Achil'les ten'don**, rhythmic series of clonic spasms or contractions of gastrocnemius muscle at the ankle-joint, while the manipulator maintains tension of the tendo Achillis. **R., aud'itory**, R. caused by irritation of auditory nerve. **R., chin**, movement of chin from blow on the jaw. **R., chok'ing**, R. produced by tickling the pharynx. **R., ciliospi'nal**, see *Centre, ciliospinal*. **R., cra'nial**, see *Reflex, superficial*. **R., cremas'teric**, see *Reflex, superficial*. **R., crossed**, R. on side opposite to that originally impressed. **R., cuta'neous**, muscular action induced by irritation of the cutaneous sensory nerves, and not having its origin in central irritation. In some nervous diseases there is increase of reflex action; in others, diminution. The abdominal reflex is a variety of cutaneous reflex, and the cremasteric reflex is another (see table). **R., deep**, the deep reflexes include several forms, as the patellar-tendon reflex or reaction, knee-phenomenon or knee-jerk (see *Knee-jerk*), ankle-clonus or Achilles-tendon reaction or reflex, toe-clonus, wrist-clonus, etc. **R., epigas'tric**, see *Reflex, superficial*. **R., erec'tor spi'næ**, see *Reflex, superficial*. **R. func'tion**, function due to reflex action. **R., glute'al**, see *Reflex, superficial*. **R. jaw-jerk**, see *Jaw-jerk* and *R., chin*. **R., knee**, knee-jerk. **R. move'ments**, see *Motion*. **R. neuro'sis**, nervous condition due to irritation in a distant part. **R., pal'mar**, see *Reflex, superficial*. **R., patel'lar-ten'don**, knee-jerk. **R., pharynge'al**, R., choking. **R., plan'tar**, see *Reflex, superficial*. **R., reinforced'**, see *Reinforcement*. **R., scap'ular**, see *Reflex, superficial*. **R. spasm**, spasm

limited to area of particular nerves, from lesion situated in afferent fibres. **R., spi'nal,** see *R., superficial,* and *Motion.* **R., superfic'ial,** reflexes excited by stimulation of the skin and accessible mucous membranes. The tests for estimating their various degrees are tickling, pricking, pinching, or gently scratching the surface, or the application of the faradic current to the surface by means of dry electrodes or the faradic brush. The following table (after Ross) exhibits the different forms of superficial reflexes:

THE SUPERFICIAL REFLEXES.

Reflexes.	*Description.*
Abdominal	Consists of a contraction of the abdominal muscles, chiefly the rectus, caused by stroking the skin on the side of the abdomen from the edge of the ribs downward, and requires the integrity of the arc through the nerves from the eighth to the twelfth dorsal nerves.
Cranial	The chief reflexes of the cranial nerves are the contraction of the palatal muscles caused by irritation of the fauces, the facial contortions caused by irritation of the fifth nerve, the sneezing and lacrymation caused by irritation of the mucous membrane of the nose, the cough caused by irritation of the mucous membrane of the larynx, the closure of the eyelids caused by irritation of the conjunctiva, and the reflex contraction of the iris caused by light. For deep reflexes, see *Reflex, deep.*
Cremasteric	By it the testicle is drawn up when the skin on the inner side of the thigh is stimulated, demanding the integrity of the first and second pairs of lumbar nerves.
Epigastric	Produces a dimpling of the epigastrium on the side stimulated. It is induced by stimulation of the side of the chest in the sixth, fifth, and sometimes fourth, intercostal spaces. This dimpling probably depends upon contraction of the highest fibres of the rectus abdominis, and its presence requires the integrity of the cord from the fourth to the sixth or seventh pairs of dorsal nerves.
Erector spinal	Consists of a local contraction of these muscles, caused by stimulation of the skin along their edge from the angle of the scapula to the iliac crest, and demands the integrity of the reflex arcs in the dorsal region of the spinal cord.
Gluteal	Consists of contraction of the gluteal muscles caused by stimulating the skin over the buttock, and depends upon the integrity of the loops through the fourth and fifth lumbar nerves.
Palmar	Consists of a contraction of the flexors of the fingers induced by tickling the palm of the hand. It requires the integrity of the reflex arcs through the greater part of the cervical enlargement. This reflex is not readily induced during waking hours and consequent cerebral activity, probably because the hand is much more under cerebral influence than the foot. During sleep, however, and in young infants, when the cerebral influence is suspended or not yet fully established, this reflex is as readily induced as the reflex of the sole of the foot.
Plantar	Obtained by tickling the sole of the foot, and depending upon the integrity of the reflex loops through the lower end of the cord (conus medullaris).
Scapular	Consists of a contraction of some, or nearly all, of the scapular muscles according to its degree, and demands the integrity of the cord at the level of the upper two or three dorsal and lower two or three cervical nerves.

R. system of nerves, see *Excitomotory* and *Nerve.* **R. ten'don,** muscle reflex action; myotatic contraction; see *Reflex, deep.* **R. time,** time intervening between stimulation of sensory nerve and the manifestation of motor symptoms. **R., toe,** R. affecting toe, foot, leg, and thigh, resulting from flexion of the great toe while patient is supine with his legs extended.

Reflux, re'fluks (*re, fluo,* to flow). Return of blood from the head or from the extremities to the heart.

Refraction, re-frak'shun (*re, frango, fractum,* to break). Change of direction which rays of light experience when they pass obliquely from one medium into another of different density. If the light passes from a rarer to a denser medium, it approaches the perpendicular raised at the point of immersion. The contrary occurs when it goes from a denser to a rarer medium. The theory of lenses, telescopes, and of the eye rests entirely on this property of light. **R., double,** property of certain transparent minerals; double image of an object being due to division of light, as by means of Iceland spar. **R., dynam'ic,** refraction of the eye as increased in accommodation. **R. er'rors,** deficiency in producing a perfect image upon the retina, due to ametropia. **R. in'dex,** refractive power of substances in comparison to that of air. **R., stat'ic,** refraction of the eye when entire relaxation of accommodation is present.

Refractive, re-frak'tiv. Relating to refraction.

Refractometer, re-frak-tom'e-tur. Instrument for measuring refraction of the eye.

Refracture, re-frak'ture. Term applied to the fracture by the surgeon of bones already broken which have been badly united, etc.

Refrangibility, re-fran-je-bil'it-e (*refringo,* to refract). Possessing the property of being refrangible, as the disposition of rays of light to be turned out of a direct course in passing into a denser or rarer medium.

Refrangible, re-fran'je-b'l (*refringo,* to refract). Possessing the property of being refracted.

Refrigerants, re-frij-e-rants (*re, frigus,* cold). Medicines which depress the morbid temperature of the body. Several articles of the materia medica are reputed to be good refrigerants, but the best are chiefly the abstraction of caloric by ice and iced drinks, cold water, cold lemonades, soda-water, and effervescing draughts internally, and externally cool air, cold water, evaporating lotions, and frigorific mixtures.

Regeneration, re-jen-e-ra'shun (*re, genero,* to beget). Reproduction of a part of the body which has been destroyed, as the skin, nerves, etc. See *Nerves, regeneration of.*

Re'gent's oint'ment. Unguentum ophthalmicum, an ointment of impure oxide of zinc.

Regia aqua, re'je-ah ak'wah. Nitromuriatic acid.

Regimen, rej'im-en (*rego,* to govern). Rational and methodical use of food and of everything essential to life, both in a state of health and disease. It is often restricted in its meaning to diet, and sometimes used synonymously with hygiene. Under proper regime and systematic sanitation measures and regulations are framed to prevent the development and propagation of diseases reputed to be pestilential, especially plague, yellow fever, and cholera.

Regiminal, rej-im'in-al (*regimen*). Relating or appertaining to regimen, as regiminal treatment or treatment by regimen.

Regina prati, rej-e'nah prah'te (queen of the meadow). Spiræa ulmaria.

Regio, ra'je-o. Region. **R. auricula'ris,** region of the ear. **R. bucca'lis,** region of the cheek. **R. cardi'aca,** epigastric region. **R. cervica'lis,** region of the neck; cervical region. **R. epigas'trica,** epigastrium. **R. facia'lis,** facial region. **R. fronta'lis,** frontal region. **R. gas'trica,** umbilical region. **R. hypochondri'aca,** each lateral and superior region of the abdomen is so called. **R. hypogas'trica,** see *Hypogastrium.* **R. hypogas'trica latera'lis,** inguinal region. **R. ili'aca,** iliac region. **R. infraclavicula'ris,** infraclavicular region. **R. infrahyoï'dea,** carotid triangles of neck considered as a whole. **R. infra-inguina'lis,** infra-inguinal region. **R. inframamma'lis,** inframammary region. **R. inframaxilla'ris,** inframaxillary region. **R. inguina'lis,** inguinal region. **R. ischiad'ica,** ischiadic region. **R. juga'lis,** jugal region. **R. jugula'ris,** the two inferior carotid triangles considered as a whole. **R. lumba'lis,** lumbi. **R. mammilla'ris,** mammary region. **R. media'na col'li,** trigonum colli medianum. **R. menta'-**

lis, mental region. **R. mesogas'trica,** umbilical region. **R. nasa'lis,** nasal region. **R. nu'chæ,** nuchal region. **R. nucha'lis,** nuchal region. **R. occipita'lis,** occiput. **R. occipita'lis infe'rior,** nuchal region. **R. olfacto'ria,** see *Locus luteus.* **R. perinæ'i,** perineum. **R. præcordi'aca,** precordial region. **R. pu'bis,** pubic region. **R. retromaxilla'ris,** fossa parotidea. **R. spina'lis,** spinal region. **R. sterno-cleido-mastoï'dea,** sterno-cleido-mastoid region. **R. stomacha'lis,** epigastric region. **R. stomach'ica,** epigastric region. **R. subauricula'ris,** depression below the ear. **R. tempora'lis,** temple. **R. umbilica'lis,** umbilical region.

Region, re'jun (*rego,* to direct). Determinate spaces on the surface of the body or of different organs. Thus, the abdomen has been divided into several regions, to which different names have been given. See *Regio,* and also *Abdomen, Epigastrium, Hypochondrium, Hypogastrium.* **R. of Bro'ca,** Broca's convolution.

Re'gional. Relating to a region. **R. anat'omy,** topographical anatomy; see *Anatomy.*

Register, rej'is-ter. Series of tones having the identical quality produced by a certain adjustment of the chordæ vocales.

Regius, re'je-us (*rex,* king). Term given to certain forms of jaundice.

Regression, re-gres'shun (*regredior,* to go back). A going backward, degeneration.

Regressive, re-gres'iv. Passing back. **R. paral'ysis,** acute spinal paralysis.

Regular, reg'u-lar (*regula,* rule). According to rule. Applied to the types of a disease, and to the pulse when according to rule. **R. practit'ioner,** one who practises his profession according to the rules established by law or professional custom, and according to a rational system of therapeutics.

Regula'tor ra'dii. Supinator longus.

Regulus, reg'u-lus (dim. of **Rex,** king). Pure metal. One reduced from its ore. **R. antimo'nii,** antimonium.

Regurgitation, re-gur-je-ta'shun (*re, gurges,* gulf; a glutton). Act by which a canal or reservoir throws back substances accumulated in it. Mitral regurgitation means the reflux of blood through the left auriculoventricular opening during the contraction of the left ventricle. Regurgitation is also applied to the puking or possetting of infants, and to the rising of solids or fluids into the mouth in the adult. Vomiting at pleasure is regurgitation.

Reichert's car'tilage. Cartilage appearing during embryonic life in the hyoid arch, which later on becomes the styloid process, the stylohyoid ligaments, and the cornua minora of the hyoid bone. **R.'s mem'brane,** Bowman's membrane.

Reichmann's disease. Permanent gastric hypersecretion, followed by ulcer.

Reid's meth'od. Method of reducing dislocations of the femur by manipulation. Also applied to the treatment of aneurism by means of Esmarch's bandage.

Reil, island of. Insula cerebri. **R., mod'erator band of,** one of the columnæ carneæ passing from the interventricular septum to the yielding wall in the right ventricle.

Reimplantation, re-im-plan-ta'shun. Replacing within its socket of a tooth which has been extracted.

Reinfection, re-in-fek'shun. Infection occurring a second time or subsequently by the same agent.

Reinforcement, fasciculus of, re-in-fors'ment, fas-ik'u-lus. A band of fibres from the corpus innominatum or lateral part of the antero-lateral column of the medulla, continued up behind and around the corpus olivare; lined on its inner or central surface with cineritious substance. It enlarges as it ascends, passes over the upper surface of the pons Varolii, and is expanded into the optic thalamus. It thus forms, in its course, the anterior paries of the fourth ventricle. It has received its name owing to its constantly increasing as it ascends, and being mixed up with gray matter on its inner face, from which it seems to derive new fibres. **R. of reflexes,** heightened myotatic irritability when muscular actions or stimuli act at the same time together on different parts than that embraced in the reflex circle.

Reinfusion (re-in-fu'zhun), **mode of.** A form of transfusion of blood, which consists in collecting blood lost by the patient and injecting it into his veins.

Reinoculation, re-in-ok-u-la'shun. Inoculation occurring a second time.

Reins, rains (*renes,* kidneys). Kidneys; lumbi.

Reinsch's test. Test for arsenic with HCl and copper, a gray deposit of arsenic being deposited on the copper.

Reissner's mem'brane. Fine connective tissue in the internal ear which divides the vestibular passage from the duct of the cochlea. See *Lamina denticulata.*

Rejectio, re-jek'she-o (*rejicio, rejectum,* to cast back). Every excretion by the mouth—spitting, expectoration, regurgitation, or vomiting. **R. san'guinis e pulmon'ibus,** hæmoptysis.

Rejuvenescence, re-ju-ven-es'sence (*re, juvenescens,* growing young). A renewal of youth; the state of being young again; the assumption of the characteristics of youth by the aged.

Relapse, re-laps' (*re, labor, lapsus,* to fall back). The return of a disease during, or shortly after, convalescence. The terms *relapsing* or *recurrent fever,* short fever, five-day fever, seven-day fever, seventeen-day fever, Irish famine fever, typhinia, synocha, famine typhus, famine fever, bilious remittent fever, remitting icteric fever, and mild yellow fever, typhus or febris recurrens or recidiva, hunger pest, have been given to a form of continued fever which has occasionally appeared epidemically, as in Edinburgh in 1843 and 1847, and afterward in some portions of the United States, and was generally attended with icteric symptoms. The main phenomena disappear at about the end of a week, but in many cases a relapse occurs about the end of a fortnight. Few die of the affection.

Relapsing (re-lap'sing) **fe'ver.** See *Relapse.*

Relatio, re-lah'she-o (*re, fero, latum,* to carry). Deposition made by a medical man to prove the condition of a person, nature of a disease, etc.

Relation, functions of, re-la'shun, funk'shuns. See *Function.*

Relax'ant (*re, laxo,* to loosen). Medicine diminishing the tension of organs. Mucilaginous and fatty substances are relaxants.

Relaxantia, re-laks-an'she-ah. Emollients.

Relaxatio, re-laks-ah'she-o. Relaxation. **R. cor'dis et arteria'rum,** diastole.

Relaxa'tion. In physiology, relaxation is opposed to contraction; in pathology it means great looseness of a part.

Religious (re-lij'us) **diseases.** Diseases affecting the nervous system, and arising from the excitement of religious emotions. See *Convulsionnaire.*

Remak', band of (after Remak, the German physiologist). Axis-cylinder. **R., fi'bres of,** see *Fibres of Remak.* **R., gan'glion of,** intramural ganglion of auricle of frog's heart.

Remansio mensium, re-man'se-o men'se-um (*re, maneo,* to stay). Amenorrhœa.

Reme'dial or **Remediate,** rem-e'de-ate. Medicinal.

Remediless, rem'ed-e-less. Incurable.

Remedium, rem-ed'e-um (*re, medeor,* to heal). Medicament. **R. dentifric'ium,** dentifrice.

Remedy, rem'e-de. Medicament. **R., Eng'lish,** cinchona.

Remijia, rem-ij'e-ah. Named after a surgeon, Remijo, who substituted its bark for cinchona. Small trees or shrubs in Brazil, having resemblance to the cinchonas, ord. Rubiaceæ. R. pedunculata and R. Purdiana furnish cuprea bark.

Remissio, re-mis'se-o (*re, mitto, missum,* to send). Decline; remission. **R. cor'dis et arteria'rum,** diastole. **R. mor'bi,** remission. **R. vir'ium,** atony.

Remission, re-mish'un. In a more extensive signification, a temporary diminution of the symptoms of a disease, either acute or chronic. Diminution in

the febrile symptoms, as in remittent fever between the exacerbations.

Remittens, re-mit'tens. Remittent. **R. ictero'des**, fever, yellow.

Remittent (re-mit'tent) or **Remit'ting.** Any disease which presents remissions. **R. fe'ver**, variously called exacerbating, paroxysmal, subcontinual, endemic, endemial, or endemical fever. One which strikingly exacerbates and remits, but without intermission. Ordinary bilious fever of the United States is a simple remittent. Remittent fevers frequently vary in severity with the climate, being more fatal in tropical regions on account of complications, as cerebral derangement, irritable stomach, etc. **R. fe'ver, bil'ious**, remittent fever; see *Relapse*. **R. fe'ver of chil'dren**, fever, infantile remittent.

Remitting icteric (re-mit'ting ik'ter-ik) **fe'ver.** See *Relapse*.

Remora, rem'o-rah (*re, mora*, delay). Stoppage, stagnation, as of blood. Name given to two surgical instruments intended to retain parts *in situ*. One was used formerly in castration, to prevent the intestines from protruding at the inguinal ring; the other, remora Hildani, was employed to maintain fractures and luxations reduced. **R. ara'tri**, Ononis spinosa. **R. Hilda'ni**, see *Remora*.

Ren. Kidney. **R. mo'bilis**, movable kidney. **R. unguifor'mis**, horseshoe kidney.

Re'nal (*ren*). Relating to the kidney. **R. al'teratives**, see *Alteratives*. **R. ap'oplexy**, hemorrhage into the renal substance. **R. ar'teries**, *Emulgent arteries*, are very large and short, and commonly two in number—one to each kidney. They arise from the sides of the abdominal aorta, forming with it a right angle. The left is commonly a little more anterior and elevated than the right. After a short course they arrive at the fissure of the kidney, where they divide, before entering it, into three or four very considerable branches. **R. cal'culus**, calculus in the kidney or its pelvis. **R. cap'sule**, see *Capsule, renal*. **R. gan'glia**, ganglia of small size in the renal plexus. **R. glands**, suprarenal capsules. **R. nerve**, see *Splanchnic nerves*. **R. plethysmom'eter**, see *Oncometer*. **R. plex'uses**, *Emulgent plexuses*. These are two, one on each side. They proceed from fasciculi of the solar and cœliac plexuses; from the outer side of the semilunar ganglion and the final expansion of the small splanchnic nerves. These plexuses begin by three or four ganglions, situate at the commencement of the renal artery, and they give off from their circumference many fine, straight filaments, which do not anastomose, and which enter the kidney with the divisions of the renal artery. These divisions they accompany. **R. veins**, *Emulgent veins*, are very large. Their roots follow the same course as the arteries in the substance of the kidney. In the fissure or pelvic portion of the kidney they unite into a single trunk, which passes transversely inward and opens at the side of the vena cava descendens.

Ren'chus (*renchos*). Snoring; stertor.

Renculine, ren'ku-leen. Albuminoid principle of the suprarenal capsules.

Renculus, ren'ku-lus (dim. of **Ren**). Small kidney; lobe of the kidney.

Ren'dering (as lard). See *Adeps præparatus*.

Reneal'mia exalta'ta (after F. and M. L. Réneaulme, botanical writers of France). Plant of British Guiana, possessed of diaphoretic and diuretic properties, and, in large doses, emetic; much used there in dropsy, rheumatism, dysentery, etc. The bruised rhizome is the part employed.

Re'nes (ra'naze) (pl. of **Ren**) **loba'ti.** Condition of kidneys resembling lobes, observed in new-born infants. **R. succenturiat'i** (*succenturio*, to substitute or recruit), renal capsules. **R. succenturiat'i accesso'rii**, accessory suprarenal capsules.

Reniculus, ren-ik'u-lus (dim. of **Ren**). Renculus.

Reniform, ren'e-form (*ren, forma*, shape). Nephroid or kidney-shaped.

Renitent, ren'it-ent (*renitor*, to strive or struggle against). Resisting pressure.

Rennet, ren'net ([G.] *gerinnen*, to coagulate). *Runnet*. When the fourth stomach or abomasus of the calf is salted and dried, it possesses the property of coagulating milk when a portion of it is soaked in water and the infusion, rennet, added to milk. **R. whey**, see *Serum lactis*.

Renovation, ren-o-va'shun (*re, novo, novatum*, to make new). Renovation or renewal, as of the blood by the chyliferous vessels and lymphatics.

Rensselaeria Virginica, rens-sa-lar'e-ah vir-jin'ik-ah (after General Van Rensselaer of Albany). Peltandra Virginica.

Renuens, ren'u-ens (*renuo*, to deny by a motion of the head). Rectus capitis internus minor.

Renulus, ren'u-lus (dim. of **Ren**). Small kidney; lobe of the kidney.

Re'num aton'ia. Atony of the kidney. **R. paral'ysis**, atony of the kidney.

Renunciatio, re-nun-se-ah'she-o (*re, nuncio, nunciatum*, to tell). Deposition made by a medical man to prove the condition of a person, nature of a disease, etc.

Renunculi succenturiati, ren-unk'u-le suc-sen-tu-re-at'e (dim. of **Ren**). See *Capsule, renal*.

Repandatio, rep-an-dah'she-o (*repandus*, bent backward). Curvature of bones in general, particularly of the vertebral column forward.

Reparation, rep-a-ra'shun (*re, paro, paratum*, to set in order). Recovery; restoration to health.

Reparative, re-par'a-tiv. *Reparatory*. Having the power of restoring or repairing.

Repellen'tia. Repellents.

Repellents, re-pel'lents (*re, pello*, to drive). *Repercussives*. Medicines which, when applied to a tumefied part, cause the fluids that render it tumid to recede, as it were, from it. Astringents, cold water, ice, etc. are repellents.

Repercolation, re-pur-ko-la'shun. Repeated percolation of the same menstruum to fresh parts of the substance to be percolated.

Repercussion, re-per-kush'un. Disappearance of a tumor or cutaneous eruption in consequence of the application of a repellent. The action of a repellent remedy. Contrafissure. Ballottement. Much unnecessary apprehension has existed in regard to repelling, or driving in, as it is called, different morbid affections—gout and cutaneous eruptions, for example.

Repercussives, re-per-kus'sivs. Repellents.

Repercutientia, re-pur-ku-she-en'she-ah. Repellents.

Repletion, rep-le'shun (*re*, again, *pleo*, to fill). Fulness; plethora.

Replication, rep-le-ka'shun (*replico*, to fold back). Turning back of a part so as to make a duplication.

Reposition, re-po-zish'un (*re, pono, positum*, to place). Reduction; taxis.

Repositor, re-poz'it-or (*re, pono, positum*, to place). Instrument intended to replace the uterus in its proper position in case of displacement.

Rep'rimens (*re, premo*, to press). Diminishing, as the amount of a secretion.

Reproduction, re-pro-duk'shun (*re, produco, productum*, to bring forth). Function by which living bodies produce bodies similar to themselves. See *Generation*. As a general remark, it will be found true that the larger animals are uniparous, and the smaller, which are more exposed to destruction, multiparous.

Reproductive, re-pro-duk'tiv (*re, produco*, to bring forth). Relating to reproduction. **R. func'tion**, power of begetting. **R. or'gans**, organs by which the begetting of offspring is effected. See *Generative organs*.

Reproductivitas, re-pro-duk-tiv'it-as. Capability of reproducing.

Repullulation, re-pul-u-la'shun (*repullulo*, to sprout again). Term used to designate the return of a morbid growth.

Repulsorium, re-pul-so're-um (*re, pello, pulsum*, to drive). Punch.

Repurgatio, re-pur-gah'she-o (*re, purgo, purgatum* to cleanse). Purgation by transpiration or by expec

toration. Medicines producing this effect are called *Repurgantia.*

Requies, rek'we-ees (*re, quies,* rest). Acinesia.

Requietio, rek-we-a'she-o (*re, quiesco, quietum,* to become at rest). Acinesia.

Res contra naturam, res kon'trah nat-u'ram (things against nature). Things tending to destroy man, as disease and everything connected with it. **R. culina'ria,** culinary art. **R. med'ica,** medicine. **R. natura'les** (natural things), things which, by their union, were conceived to constitute the nature of man, such as the elements, temperaments, humors, spirits, etc. **R. non-natura'les** (things not natural), things which anciently formed the matter of hygiene; see *Non-naturals.* **R. vene'rea,** coition. **R. vestia'ria,** clothing.

Resalga'tum. Realgar.

Resectio, re-sek'she-o. Resection. **R. articulo'rum,** see *Resection.*

Resection, re-sek'shun (*reseco, resectum,* to cut off). Act of cutting or paring off. Name given, especially by the French surgeons, to operations in which the carious extremities of long bones, or the unconsolidated extremities of fractured bones forming irregular joints, are removed with the saw. Excision of part of a bone, nerve, etc.

Reseda crispata, res-e'dah kris-pat'ah (*resedo,* to calm or assuage). R. luteola. **R. lanceola'ta,** R. luteola. **R. lute'ola,** *Luteola, Weld, Dyer's weed;* European plant naturalized in the United States, at one time used as a diaphoretic and diuretic.

Reserans, res'e-rans (*resero,* to open). Aperient.

Reserve (re-zurv') **air.** See *Respiration.*

Reservoir (res'er-vwor). Receptaculum. **R. of the thy'mus,** see *Thymus.*

Residentia, rez-id-en'she-ah (*resido,* to settle or sink down). Sediment.

Residual (re-zid'u-al) **air.** See *Respiration.*

Residue, rez'id-u (*residuum,* remainder). That which remains after filtration and other processes.

Resid'uum. Residue.

Resilience, re-zil'e-ens. The act of springing back; healthy reaction.

Resilient stricture, re-sil'e-ent strik'tchur. Contractile tissue formed of elastic tissue, making permanent dilatation difficult or impossible.

Resimus, res-e'mus (turned up, bent back). One who has a short, stumpy nose.

Resin, rez'in (*rheo,* to flow). *Colophony.* Vegetable product, commonly dry and concrete, more or less brittle, inodorous or slightly odorous, insipid or of an acrid warm taste; inflammable, insoluble in water, soluble in alcohol, ether, and yolk of egg, and negatively electrifiable by friction. Many resins are used in medicine; the greater part are purgative and irritating. Some act like acrid poisons. See *Pinus sylvestris.* **R., ac'aroid,** see *Xanthorrhœa.* **R. of al'oes,** precipitate from hot aqueous solution of aloes. **R., Bot'any Bay,** see *Xanthorrhœa.* **R., Cayenne,** caoutchouc. **R. ce'rate,** see *Ceratum resinæ;* unguentum basilicon flavum. **R. of copai'ba,** residue after volatile oil is distilled from copaiba. **R., cow'die** or **cowrie,** see *Pinus damarra.* **R. of guai'ac,** guaiac. **R. of jal'ap,** extractum jalapæ resinosum. **R. of kalada'na,** kaladanæ resina. **R. of may'apple,** resina podophylli. **R. of New Holland,** see *Xanthorrhœa.* **R. plas'ter,** emplastrum adhæsivum; sticking-plaster. **R. of the spruce fir,** see *Pinus abies.* **R. of xanthorrhœ'a,** see *Xanthorrhœa.*

Resi'na (Ph. U. S.). Residue left after distilling off volatile oil from turpentine. Resin. See *Pinus sylvestris.* **R. abi'etis,** see *Pinus abies, Pinus picea.* **R. abi'etis hu'mida,** see *Pinus abies.* **R. abi'etis sicca,** see *Pinus abies.* **R. acaroï'des,** see *Xanthorrhœa.* **R. al'ba,** see *Pinus sylvestris.* **R. al'ba hu'mida,** see *Pinus abies.* **R. ben'zoës,** benjamin. **R. Cayennen'sis,** caoutchouc. **R. copai'bæ** (Ph. U. S.), resin of copaiba. **R. copal',** copal. **R. dammar',** dammar. **R. draco'nis,** dragon's blood. **R. elas'tica,** caoutchouc. **R. el'emi,** elemi. **R. empyreumat'ica liq'uida,** tar. **R. fla'va,** see *Pinus sylvestris.* **R. flu'ida Canadensis,** see *Pinus balsamea.* **R. jala'pæ,** extractum jalapæ resinosum. **R. junip'eri,** sandarac. **R. la'ricis,** see *Pinus larix.* **R. lentisci'na,** see *Pistachia lentiscus.* **R. liq'uida pi'ni balsam'eæ,** see *Pinus balsamea.* **R. liq'uida pi'ni la'ricis,** see *Pinus larix.* **R. lu'tea No'vi Bel'gii,** see *Xanthorrhœa.* **R. ni'gra,** colophonia. **R. pi'ni,** see *Pinus sylvestris.* **R. pi'ni abi'etis sponte concreta,** see *Pinus abies.* **R. pi'ni empyreumat'ica liq'uida,** see *Pinus sylvestris.* **R. podophyl'li,** *Resin of mayapple, R. of podophyllum* (Ph. U. S.), *Podophyllin;* prepared from the powdered rhizome of podophyllum by the action of alcohol, muriatic acid, and water; see *Podophyllum peltatum.* Dose, gr. ¼ to gr. j. **R. scammo'nii** (Ph. U. S.), extractum scammonii. **R. strobili'na,** see *Pinus balsamea* and *Pinus mughos.* **R. terebin'thi,** see *Pistacia terebinthus.* **R. thap'siæ,** thapsia resin.

Resinatum, rez-in-at'um. Wine impregnated with resin, used by the ancients as a stomachic.

Resinocerum, rez-in-o-se'rum (*resine,* resin, *keros,* wax). *Rhetinoceron.* Mixture of resin and wax.

Resinosa, rez-in-o'sah. In pharmacy, resinous substances.

Resinous, rez'in-us. Containing resin; like resin.

Resistance, re-zis'tance. Terms used in electricity to denote the ratio of electromotive force to the current strength, the flow being supposed to be steady.

Resolutio, rez-o-lu'she-o. **R. et diabro'sis ventric'uli,** softening of the stomach. **R. membro'rum,** paralysis. **R. mor'bi,** resolution or disappearance of a disease, especially when without any critical evacuation. **R. nervo'rum,** paralysis. **R. ventric'uli autopep'tica,** softening of the stomach. **R. vi'rium,** dialysis.

Resolution, rez-o-lu'shun. Removal or disappearance, as of a disease. Resolution is one of the terminations of inflammation, in which the inflamed part returns gradually, and without suppuration, to the healthy condition. Certain inflammatory affections which terminate in this manner, as mumps, gout, rheumatism, and some forms of scrofula, have been termed resolving inflammations. Also looseness; weakness.

Resolvents, re-zol'vents (*resolvo,* to loosen, to dissipate). Discutients.

Resolving inflammations, re-zol'ving in-flam-ma'shuns. See *Resolution.* **R. pow'er,** capacity of a microscopic objective to show fine points.

Resonance, rez'o-nance (*re, sono,* to sound). Return of sound; resounding; reverberation of sounds. Thrilling of the voice, more loud than natural, or its existence in a part where it is not heard in health—as detected by auscultation. Thickened and hardened state of the lungs, caused either by a mass of crude tubercles or by inflammation, is generally considered to produce this phenomenon by rendering the lung a better conductor of the murmur of the voice in the bronchi. Hence the origin of the term *Bronchophony* (*bronchus, phone,* voice). Resonance is also used in the sense of resounding, as when the chest is said to be resonant on percussion. **R., vesiculotympanit'ic,** see *Vesiculotympanitic.* **R., vibra'tions of,** see *Sound.*

Resonant, rez'o-nant. Resounding. See *Resonance.*

Resonitus, re-zon'it-us. Contrafissura.

Resopy'rin. Compound of resorcin and antipyrine, in colorless crystals.

Resorbens, re-sor'bens (*re, sorbeo, sorptum,* to suck up). Absorbent.

Resorcin, re-sor'sin. Derivative of benzol; odorless, antiseptic, and antipyretic; yellowish-white crystalline powder formed by fusing different resins, as asafœtida, guaiacum, etc., with caustic alkalies, or synthetically from benzene. Used externally in cutaneous affections, diphtheria, whooping cough, etc., and in surgery in gauzes, sprays, injections, etc. A compound resembling carbolic acid in some of its properties. Its chemical name is metadioxybenzene.

Resor'cinol. Obtained by melting together equal parts of resorcin and iodoform. Used surgically as an antiseptic in chancres, ulcers, and wounds, and in

some cutaneous affections, as scabies, psoriasis, eczema, etc., as a dusting powder or in ointment.

Resorcin-phtalein, re-zor'sin-tal'e-in. Fluorescin.

Resorci'num. Resorcin.

Resorptio, re-sorp'she-o. Absorption; resorption.

R. cuta'nea, see *Absorption.* **R. cu'tis**, see *Absorption.*

Resorption, re-sorp'shun. Absorption of a fluid which has been previously deposited in a part, as of pus, blood, serum, etc. See *Absorption.*

Resorptive (re-sorp'tiv) **fe'ver.** Fever due to absorption of toxic material, as the hectic fever of phthisis.

Res'pirable (*respiro*, to breathe, *habilis*, fit). Capable of being breathed; adapted for respiration.

Respiramen, res-pir-am'en (*respiro*, to take breath). Respiration.

Respiramentum, res-pir-am-en'tum. Respiration.

Respiratio, res-pir-ah'she-o. Respiration. **R. abol'ita**, apnœa. **R. bre'vis**, dyspnœa. **R. diffic'ilis**, dyspnœa. **R. ster'tens**, stertor. **R. stertoro'sa**, see *Stertor.* **R. stertuo'sa**, stertor.

Respiration, res-pi-ra'shun. Function proper to animals, the object of which is to place the materials of the blood—the mixture of the venous blood with lymph and chyle—in contact with atmospheric air, in order that it may acquire the vivifying qualities which belong to arterial blood. The organs for executing this function are, in the mammalia, birds, and reptiles, the lungs. In man the respiration consists of mechanical and chemical phenomena. The mechanical are *Inspiration* and *Expiration.* The muscles concerned in respiration are the following (Chapman):

MUSCLES OF RESPIRATION.

ORDINARY.

Inspiration.	Expiration.
Diaphragm	Internal intercostals, osseous portion.
External intercostals.	
Internal intercostals, sternal portion	Triangularis sterni.
Scaleni	Infracostales.
Levatores costarum.	

AUXILIARY.

Serratus posticus superior	Oblique.
Accessorius	Transversalis.
Sterno-cleido-mastoid	Sacrolumbalis.
Levator anguli scapulæ.	
Trapezius, superior portion.	
Serratus magnus.	
Pectorales major, inferior portion.	
Pectorales minor.	

The evident chemical phenomena consist in the formation of a certain quantity of carbonic acid, the absorption of a part of the oxygen of the air, and the disengagement of a quantity of water in the state of vapor. In the healthy condition the respiration is easy, gentle, regular, and without noise. In man the respirations are generally about 35 per minute in the first year of life, 25 during the second, 20 at puberty, and 18 in the adult age. The chief ways in which the respirations may be rendered quicker or slower are the following, according to Brunton:

The respiratory movements may be quickened by	Excitement of nerves.	Stimulation of the vagus.
		Stimulation of optic nerve.
		Stimulation of acoustic nerve.
	Greater excitement of respiratory centre.	Action of brain (voluntary).
		Increased temperature of blood.
		Increased venosity of blood.
		Action of drugs.
The respiratory movements may be rendered slow by	Diminished excitement of respiratory centre.	Diminished venosity of blood.
		Action of drugs.
		Action of brain (voluntary).
	Nervous influences.	Paralysis of vagi.
		Stimulation of superior laryngeal nerves.
		Stimulation of inferior laryngeal nerves.
		Stimulation of nasal nerves.
		Stimulation of cutaneous nerves.
		Stimulation of splanchnic nerves.

The frequency of respiration in adults and children and at various ages has been thus arranged by Vierordt from various authorities:

In healthy adults, average, 16–18 respirations per minute; 20 (16–24) Hutchinson; 18 (Herman); 16 (Quetelet); 13.5 (Funke); 12 (Vierordt).

In the new-born, average, 35 (35.3); 44 (Quetelet); 41 (Gorham); 37 (Allix); 35 (Mignot); 33.5 (Monti); 30 (Valleix); 26.4 (A. Vogel).

In the first months of life, 40–35; 2d year, 28; 3d–4th years, 25; 6th–10th years, 28–20 (Valleix); 6½–14th years (boys), 24.9–21.5 (Rameaux); older boys, 24–16 (Valleix).

Frequency of respiration in various ages (Quetelet): newborn, 44; 5th year, 26; 15th–20th years, 20; 20th–25th years, 18.7; 25th–30th years, 16; 30th–50th years, 18.1.

Other influences exerted on the frequency of respiration may be stated, according to Guy: while standing the respirations are 22 to the minute; while sitting, 19; while lying down, 13. The new-born child breathes, when the body is in a vertical position, one-third more frequently. Ingestion of food increases the frequency of respiration; during digestion the frequency is 1.72 respirations per minute higher (if no nourishment had been taken seven hours previously); eating with or without wine increases frequency 1.22 (Vierordt). When dinner is omitted respiration is decreased one-half. Increase of temperature of the air decreases the respiration for 1° C. per minute about 0.054. At 8.47°, 12.16; at 19.4°, 11.57 respirations on an average were noted. A rise of the barometer increases the respiration about 0.74 per minute. Greater muscular exercise increases the frequency of respiration. In the sleeping adult the decrease in frequency of respiration amounts to about one-quarter (Quetelet).

The air of respiration has been divided into—1. the *residual air*, or that which cannot be expelled from the lungs, but remains after a full and forcible expiration, estimated at 120 cubic inches; 2. the *supplementary* or *reserve* air, or that which can be expelled by a forcible expiration after an ordinary outbreathing, valued at 130 cubic inches; 3. the *breath*, *tidal*, or *breathing* air, valued at 26 cubic inches; and 4. the *complementary* or *complemental* air, or that which can be inhaled after an ordinary inspiration, which amounts to 100 cubic inches. This estimate gives 250 cubic inches as the average volume of air which the chest contains after an ordinary inspiration. According to Hutchinson, the capacity of respiration in the adult increases about 60 cm. for every 1 cm. length of body in men; in women about 40 cm. The contents of the stomach have an influence to a certain extent, as large quantities of fluid decrease the quantity of the expiratory air 1 cm. for every 24 cm. of fluid. The temperature of expired air (Aschenbrandt) is as follows: At 8–12° C. the air, while passing through the nose, is brought up to the temperature of 30–31° C., and the temperature increased ½° higher than when breathing through the nose (Semon). The average temperature of expired air is 29–31° (23–24°, Semon; 37.3°, Brunner and Valentin; others, 36–37°). **R., abdom'inal**, diaphragmatic respiration. **R., artific'ial**, attempt to supply the place of natural respiration when the latter is in abeyance from any cause, as asphyxia. **R., Biot's**, see *Biot.* **R., bron'chial**, sound of air passing through the bronchi. **R., bronchovesic'ular**, morbid modification of the respiratory murmur, having more or less of the characters of the bronchial and vesicular respiration combined. It denotes incomplete solidification of the lung, as from the presence of tubercle. **R., cav'ernous**, sound made by air in its passage through cavities in the lungs. **R. of the cells**, respiratory murmur. **R., Cheyne-Stokes**, consists of a rhythmical increase of respirations from shallow to strong and deep, and then receding again to feeble, and ceasing temporarily. **R., cogged-wheel**, jerking respiration. **R., cos'tal**, respiration in which the movements of the ribs predominate over abdominal movements. **R., diaphragmat'ic**, respiration produced principally by the diaphragm. **R., interrupt'ed**, jerking respiration. **R., jerk'ing**, *Interrupted*, *Cogged-wheel*, or *Wavy respiration.* When the murmur of inspiration, in place of being continuous, is interrupted as by starts, it is called jerking. It is concomitant of incipient pleurisy, pleurodynia, spasmodic asthma, and tuberculosis of the lung, with corresponding pleuritic adhesion. **R., post'ural,**

see *Ready method.* **R., prone,** see *Ready method.* **R., proof,** Docimasia pulmonum. **R., pu'erile,** see *Puerile.* **R., vagi'nal,** the movement of rise and fall of the vagina under the influence of similar movements on the part of the diaphragm. **R., vesiculobron'chial,** bronchovesicular respiration. **R., wa'vy,** jerking respiration.

Respirator. res'pi-ra-tor. Various instruments under this name have been contrived for the purpose of tempering the air before it reaches the lungs in winter, being made of several layers of fine wire tissue. A charcoal respirator has been devised to act as a kind of air-filter and prevent noxious effluvia from entering the lungs. The air is said to be made several degrees warmer in this way.

Respiratorium ventris, res-pir-at-o're-um ven'tris. Diaphragm.

Respiratory, res'pir-at-o-re. Appertaining to respiration. An epithet applied to the murmur heard by auscultation in a healthy adult during inspiration and expiration. It marks the entrance of the air into the cells and its passage out of them. See *Murmur.* **R. bron'chiole,** same as lobular bronchial tube. **R. bun'dle,** solitary funiculus. **R. cav'ities,** see *Cavities, respiratory.* **R. gan'glia,** see *Encephalon.* **R. glot'tis,** posterior part of glottis. **R. nerve, exter'nal,** see *Thoracic nerves.* **R. nerve of the face,** facial nerve. **R. nerve, superior,** spinal nerve. **R. nerves, inter'nal,** diaphragmatic nerves. **R. pe'riod,** the time from the commencement of one inspiration to the occurrence of the next. If this period be regarded as four seconds, a half second, it has been considered, may be occupied in health by inspiration, a half second in expiration, and two seconds in repose. **R. pulse,** see *Pulse, respiratory.* **R. quo'tient,** ratio of oxygen inspired by the lungs to that expired by them in the form of carbonic acid. **R. re'gion of nose,** inferior part of nasal cavity, not including the olfactory region. **R. tract,** middle column of the spinal marrow, described by Sir Charles Bell as that whence the respiratory nerves originate; see *Nerves.*

Responsibility, res-pon-sib-il'it-e. State of being responsible. The term in medical jurisprudence usually embraces the question of sound mental condition and capability of acting properly.

Resta (res'tah) **bo'vis.** Ononis spinosa.

Restagnatio, res-tag-nah'she-o (*re, stagno, stagnatum,* to overflow). Eructation.

Restaurans, res'taw-rans. Analeptic; corroborant.

Restaurantia, res-taw-ran'she-ah. Analeptics; restorative medicines.

Restauratio, res-taw-rah'she-o (*restauro,* to repair). Restoration of strength after disease or great fatigue. Return of the organs to their normal condition, *Recovery, Recuperation, Reparation.* **R. vi'rum,** restoration of strength.

Resthar'row. Ononis spinosa.

Restibrachium, res-te-brak'e-um (*restis,* rope, *brachium,* arm). Inferior peduncle of cerebellum. Also called myelobrachium.

Restiform, res'te-form (*restis,* rope, *forma,* shape). Shaped like a rope, as the corpora restiformia, restiform bodies. **R. pro'cess,** coracoid.

Restitutio, res-te-tu'she-o (*restituo, restitutum,* to set up again). Reduction; restoration. **R. an'imæ,** resuscitation. **R. ad in'tegrum,** complete restoration to a healthy condition. **R. organ'ica,** plastic surgery. **R. par'tium deperdita'rum,** plastic surgery.

Restitution, res-te-tu'shun (*re, statuo,* to place). Act by which, after the head is born, the child's face turns again to the side of the pelvis toward which it was directed at the beginning of labor.

Restlessness, rest'less-ness. Agitation.

Restoration, res-tor-a'shun. Recovery of health.

Restorative, res-tor'a-tiv. Analeptic; corroborant.

Restraint neuroses, re-straint' nu-ro'sees. See *Inhibitory.*

Restrictio intestini recti (re-strik'she-o in-tes-te'ne rek'te) or **a'ni** (*re, stringo,* to tighten). Stricture of the rectum.

Resumptivum, re-zump-te'vum (*re, sumo,* to take). Any agent calculated to restore flesh and strength to one who has been reduced.

Resumptivus, re-zump-te'vus (*re, sumo, sumptum,* to take). Causing to resume or restore, as the strength.

Resumptorius, re-zump-to're-us. Resumptivus.

Resupinate, re-su'pin-ate (*re, supinoo,* to lie back). Appearing as if turned upside down.

Resurrec'tionist (*re, surgo,* to arise). *Resurrection man, Body-snatcher.* An individual who violates the sanctuary of the grave to obtain subjects for dissection.

Resurrection- man. (rez-ur-rek'shun) Resurrectionist.

Resuscitation, re-sus-se-ta'shun (*resuscito,* to move up, to stir up anew). *Revivification.* Restoration of persons, apparently dead, to life. See *Asphyxia, Suffocation,* and *Drowning, resuscitation from.*

Retardation, re-tar-da'shun (*retardo,* to retard). The act of impeding; term used in obstetrics to denote delay in expulsion of the fœtus.

Retch'ing. Vomiturition.

Re'te (net). Interlacing and decussation of blood-vessels, lymphatics, fibres, and nerves when they form a kind of network. Plexus. Epiploon. **R. acromia'le,** network of vessels formed by anastomosis between acromial thoracic artery and acromial branches of transverse scapular artery. **R. arterio'sum cap'itis,** network of arteries over upper part of cranium, formed by anastomosis of frontal, temporal, and occipital arteries. **R. arterio'sum facie'i,** formed by end branches of facial, infraorbital, ophthalmic, and internal maxillary arteries. **R. articula're cu'biti,** network of arteries around the elbow-joint, given off by superior and inferior profunda and arteries anastomosing above the joint, and anterior and posterior recurrent, radial, and interosseous recurrent below the joint. **R. articula're ge'nu,** network of arteries around the knee-joint. **R. calca'neum,** network of arteries on ball of heel, formed by branches from malleolar and calcanean arteries. **R. carpe'um,** carpal arches. **R. car'pi dorsa'le,** posterior carpal arch. **R. car'pi vola're,** anterior carpal arch. **R. cubita'le,** rete articulare cubiti. **R. dorsa'lis pe'dis,** network of arteries on posterior part of foot, formed by branches from tarsal and metatarsal arteries, communicating by perforating branches with the palmar arch. **R. ma'jus,** gastrocolic epiploon. **R. malleola're exter'num,** network of arteries around the external malleolus, composed of branches from the external malleolar, tarsal, and anterior and posterior peroneal arteries. **R. malleola're inter'num,** network of arteries around the internal malleolus, formed by branches from the internal malleolar to the internal tarsal arteries. **R. Malpigh'ii,** corpus mucosum. **R. mirab'ile,** name given to the ramifications and anastomoses of the internal carotid and vertebral arteries at the base of the brain. In a general manner the term has been applied to the dense, interlacing network of capillary vessels made by the sudden breaking up of larger vessels. **R. muco'sum,** corpus mucosum. **R. tar'seum dorsa'le,** network consisting of branches of tarsal arteries on back of the foot. **R. tes'tis,** an irregular plexus or network formed by the communication of the vasa recta, tubuli or ductuli recti, tubuli seminiferi recti, at the upper and back part of the testicle. These vasa recta are sent out at the back part of the testicle, from the convoluted seminal tubes; the rete vasculosum testis sends out from twelve to eighteen straight tubes, called vasa efferentia, which convey the semen from the testis to the epididymus. **R. veno'sum dorsa'le ma'nûs,** network giving off veins on the back of the hands. **R. veno'sum dorsa'le pe'dis,** plexus of veins on the dorsum pedis. **R. veno'sum vola're manûs,** plexus giving off veins on palmar surface of the hand.

Retentio, re-ten'she-o. Retention. **R. a'ërea,** dyspnœa. **R. alvi'na,** constipation. **R. bi'lis,** retention or suppression of the biliary secretion. **R. flux'ûs hæmorrhoïda'lis,** suppression of the hemorrhoidal flux. **R. fœ'tûs,** dystocia. **R. lac'tis,** retention or

suppression of the lacteal secretion. **R. lochio'rum,** retention or suppression of the lochial discharge. **R. men'sium,** see *Amenorrhœa.* **R. sper'matis,** retention or suppression of the spermatic secretion. **R. sudo'ris,** retention or suppression of the secretion of sweat.

Retention, re-ten'shun (*re, teneo,* to hold, to hold back). Accumulation of solid or liquid substance in canals intended for its excretion, or in a reservoir intended to contain it for a short period. **R. cyst,** *Retention tumor, Dilatation cyst* or *tumor;* cystic formation having its origin in obstruction and dilatation of the larger gland-ducts, and retention of the natural secretion in a modified form. **R. tu'mor,** retention cyst. **R. of urine,** disease in which the urine accumulated in the bladder cannot be evacuated, or, at least, cannot be passed without extreme difficulty. In the former case the retention is said to be complete; in the latter, incomplete. Many writers have distinguished three degrees of this affection, to which they have given the names dysury, strangury, and ischury. Retention of urine may depend upon loss of contractility, paralysis of the bladder, etc., or on some obstacle to the passing of the urine, as in cases of pressure of the womb on the bladder, of tumors in its vicinity, foreign bodies in its cavity, inflammation of the urethra, swelling of the prostate, stricture, etc. The pain is extremely violent, and the bladder may be found distended above the pubis.

Retia (pl. of **Rete**) **uteri,** re'te-ah u'te-re. See *Uterus.*

Reticular, re-tik'u-lar (*reticulum*). *Retiform.* Resembling a net. Epithet applied to many structures in the body, as reticular cartilage. **R. bod'y,** corpus mucosum. **R. forma'tion,** network of longitudinal and transverse fibres occupying the medulla oblongata anteriorly and laterally and reaching up to the pons. **R. lam'ina,** membrane resembling a network reaching over the region of the outer hair-cells of the organ of Corti. **R. lay'er of skin,** deeper part of corium, in which are the hair-follicles and several glands, situate below the papillary layer. **R. lay'ers,** molecular layers. **R. pro'cess of spi'nal cord,** extension of gray matter, resembling a net, into the lateral column of the cord. **R. sub'stance,** cellular tissue. **R. tis'sue,** cellular tissue; adenoid tissue. **R. white sub'stance,** arrangement of white fibres resembling a net on the upper part of the uncinate brain convolution.

Reticularia officinalis, re-tik-u-lah're-ah of-fis-in-al'is. Lichen pulmonarius.

Reticulated, re-tik'u-la-ted. Having net-like meshes.

Reticulum, ret-ik'u-lum (dim. of **Rete**). *Bonnet* or *Honeycomb bag* or *stomach.* Second stomach of the ruminant animal. See also *Epiploon* and *Rete.* Also delicate framework of adenoid tissue supporting the proper nervous substance of the brain and spinal cord. **R. cuta'neum,** rete mucosum. **R. muco'sum,** rete mucosum.

Retiform, ret'e-form (*rete, forma,* shape). Reticular. **R. tis'sue,** adenoid tissue.

Retina, ret'in-ah (*rete,* a net). A soft, pulpy, grayish, semitransparent, very thin membrane extending from the optic nerve to the crystalline, embracing the vitreous humor and lining the choroid, without, however, adhering to either of these parts. It terminates by a defined edge—margo dentatus—at the posterior extremities of the ciliary processes. It is constituted, according to most anatomists, by the expansion of the optic nerve. The retina appears to be formed of several laminæ so joined together that it is difficult to discriminate them. It is now generally considered to consist of ten layers, which have received the following names, from within outward: 1. Membrana limitans interna; 2. Fibrous layer, consisting of nerve-fibres; 3. Vesicular layer, consisting of nerve-cells; 4. Inner molecular or granular layer; 5. Inner nuclear layer; 6. Outer molecular or granular layer; 7. Outer nuclear layer; 8. Membrana limitans externa; 9. Layer of rods and cones (Jacob's membrane or bacillary layer); 10. Pigmentary layer or tapetum nigrum. The thin layer of transparent nucleated cells continued from the indented border, near the outer ledge of the ciliary processes, is called the pars ciliaris retinæ.

The retina is the essential organ of vision; on it the images of objects are impressed. Both it and the optic nerve are devoid of general sensibility. The nerve of general sensibility distributed to the eye is the fifth pair. The retina is liable to various morbid conditions, as hyperæmia, inflammation—*retinitis*—apoplexy, anæmia, atrophy, fatty degeneration, tumors, embolism of its central artery, separation or detachment, etc. **R., anæ'mia of,** a peculiar pallid condition of the retina dependent on contraction of the retinal vessels. It has sometimes been termed epilepsy of the retina, when occurring during an epileptic attack. **R., at'rophy of,** an occasional result of inflammation of the structures of the eye, glaucoma, etc. It may be partial or complete, and accompanied with degeneration and atrophy of the optic nerve. **R., detach'ment of,** disconnection from the choroid. **R., em'bolism of the cen'tral ar'tery of,** a condition produced by obstruction from emboli, characterized by sudden and total blindness, and usually dependent on valvular disease of the left side of the heart. **R., ep'ilepsy of,** see *Retina, anæmia of.* **R., glio'ma of,** see *Glioma.* **R., ischæ'mia of,** ischæmia retinæ. **R., physiolog'ical mid'dle point of,** fovea centralis. **R., separa'tion of,** detachment of the retina from excessive elongation of the coats of the eye in severe myopia, diminution in the bulk of the vitreous humor, tumors, effusion, etc.

Retinacula, ret-in-ak'u-lah. See *Retinaculum.* **R. cu'tis,** bundles of connective tissue extending from deep layers of the skin to the superficial and deep fasciæ. **R. of ileocæ'cal valve,** see *Fræna of the valve of Bauhin.* **R. Morgagn'ii,** see *Fræna of the valve of Bauhin.* **R. patel'læ,** bands extending from the tibia to the ligamentum patellæ. **R. ten'dinum,** ligamenta vaginalia. **R. val'vulæ co'li,** frena of the ileocæcal valve. **R. of Weit'brecht,** bands of tissue on the neck of the trochanter of the femur.

Retinaculum, ret-in-ak'u-lum (*re, teneo,* to hold, to hold back). A surgical instrument formerly used in the operation of castration and in that of hernia to prevent the intestines from falling into the scrotum. Retinacula are also band-like extensions of a cellulomembranous structure which seem to suspend the ovum in the follicle of De Graaf. They correspond to the chalazæ of the egg of the bird. See *Bride.* **R. ligamen'ti arcua'ti,** external lateral ligament of the knee. **R. muscula're ten'dinis subscapula'ris majo'ris,** brachiocapsularis. **R. peroneo'rum supe'rius,** external annular ligament on the ankle, the fascia stretching from the external malleolus to the calcaneum, embracing the tendons of peroneus longus and brevis. **R. ten'dinum peroneo'rum,** the ligamentous sheaths that retain *in situ* at the outer ankle the tendons of the peroneal muscles.

Ret'inal. Relating or appertaining to the retina. **R. ap'oplexy,** see *Retinitis.* **R. field of vis'ion,** expanse perceived by the eye when at rest and all external light is excluded. **R. hori'zon,** name given by Helmholtz to the horizontal plane which passes through the transverse axis of the eyeball. **R. pur'ple,** rhodopsin; pigment found during life in outer segments of retinal rods. **R. red,** retinal purple.

Retinitis, ret-in-e'tis (*retina, itis*). *Inflammatio retinæ.* Inflammation of the retina. When it occurs, it is usually an accompaniment of other ophthalmic affections. When there is an extreme tendency to extravasation of blood into the retina, the affection is called *Retinitis apoplectica, Retinal apoplexy.* Retinitis may be associated with syphilis, and is then called *Retinitis syphilitica.* When this form is confined to the region of the yellow spot and has a marked tendency to recur, it is termed *Central recurrent retinitis.* A form of retinitis often met with in Bright's disease of the kidney is designated *Retinitis albuminurica, Nephritic retinitis. R. leucæmica* is an affection of the retina connected with leucocythæmia. *R. pigmentosa*

is characterized by a deposit of black pigment in the retina, which encroaches on the field of vision, the patient seeing better in the daytime than at night. In *Retinitis nyctalopica* the patient's vision is better in the dusk than in the bright light. In *R. hæmorrhagica* there is infiltration of the nerve-fibre layer by extravasation, congestion of the veins, etc. **R. albuminu'rica**, see *Retinitis*. **R. apoplec'tica**, see *Retinitis*. **R., cen'tral recur'rent**, see *Retinitis*. **R., diabet'ic**, retinitis occurring in diabetes. **R. hæmorrhag'ica**, see *Retinitis*. **R. leucæm'ica**, see *Retinitis*. **R., nephrit'ic**, see *Retinitis*. **R. nyctalop'ica**, see *Retinitis*. **R. paralyt'ica**, condition of the retina usually found in general paralysis. **R. pigmento'sa**, see *Retinitis*. **R. syphilit'ica**, see *Retinitis*.

Retinol, ret'in-ol. Product of destructive distillation of resin of pine or fir; yellowish oily liquid, employed as a solvent agent for a number of remedies, as aristol, iodol, cocaine, carbolic acid, creasote, some of the alkaloids, etc., or from its own therapeutic value in combination with other substances. Internally, antiseptic.

Retinoscopy, ret-in-os'ko-pe (*retina, skopeo*, to view). Examination of the retina.

Retinus, ret'in-us. Reticular.

Retort, re-tort' (*re, torqueo, tortum*, to bend back). Vessels, commonly of glass or earthenware, employed in distillation.

Retraction, re-trak'shun (*retraho*, to draw back). State of a part when drawn toward the centre of the body or backward; as retraction of the testicles. Sometimes it is used synonymously with shortening or drawing up, as in retraction of the thigh.

Retractor, re-trak'tor. Piece of muslin split into two tails, applied around the bone or bones to prevent the soft parts from being injured by the saw. **R. an'guli o'ris**, buccinator. **R. glot'tidis**, genio-epiglotticus. **R. mus'cle of eye**, an infundibular muscle—the choanoid muscle—retracting the eyeball. **R. rec'ti**, rectococcygeus. **R. ure'thræ**, occasional muscular band passing from tuberosity of ischium to corpus cavernosum urethræ. **R. u'teri**, small non-striped muscle-fibres extending from the uterus to the sacrum within the retro-uterine folds.

Retrahens auris, ret'rah-hens awr'is (*retraho*, to draw back). Consists of one or more small fasciculi, or fleshy, thin, somewhat irregular fibres, situate behind the ear; attached to the mastoid process, and passing horizontally forward, to terminate at the convexity formed by the concha of the ear. If this muscle had any use, it would carry the ear backward.

Retrimenta vesicæ, ret-re-men'tah ves-e'sa. Urine.

Retrimentum, ret-re-men'tum (dregs, *re, tero*, to cleanse as by rubbing). Excrement.

Re'tro (L.). In composition, behind, backward.

Retro-action, ret'ro-ak'shun. Action opposed to preceding action.

Retrocedent, ret-ro-se'dent. Relapsing; going back.

Retroceps, ret'ro-seps (*retro, capio*, to take). Form of obstetric forceps which grasps the back portion of the fœtal head.

Retrocession, ret-ro-sesh'un (*retrocedo*, to give place). Act of going back; disappearance or metastasis of a tumor, eruption, etc. from the outer part of the body to the inner.

Retrocessus, ret-ro-ses'sus. Retrocession.

Retroclavicularis, ret-ro-klav-ik-u-lar'is. Sternoclavicularis posticus.

Retroclusion, ret-ro-klu'zhun (*retro, claudo*, to close). Method of acupressure in which the pin is passed through the tissue, then over the artery, then, turning in a semicircle, is brought out behind the artery, the point of the pin coming out near its entrance.

Retrocollic (ret-ro-kol'lik) **spasm** (*retro, collum*, neck). Spasm of muscles of the back of the neck.

Retrodeviation, ret-ro-de-ve-a'shun. Displacement backward of uterus.

Retroflexio uteri, ret-ro-fleks'e-o u'ter-e (*retro, flecto, flexum*, to bend). See *Retroversio uteri*.

Retrograde, ret'ro-grade (*retrogradior*, to go backward). Going back.

Retrogressus, ret-ro-gres'sus (same etymon). Retrocession.

Retro-insular convolutions, ret'ro-in'su-lar con-vo-lu'shuns. Temporoparietal convolutions lying within fissure of Sylvius.

Retrojection, ret-ro-jek'shun (*retro, jaceo*, to throw). Washing a cavity or canal from within outward.

Retromalle'olar fos'sæ. Depressions behind malleoli on either side of tendo Achillis.

Retromax'illary re'gion. Parotid fossa.

Retro-ocular, ret'ro-ok'u-lar (*retro, oculus*). Situate behind the eyeball.

Retro-œsophageal, ret'ro-e-sof-aj-e'al. Behind the œsophagus, as in the areolar tissue—retro-œsophageal abscesses, for example.

Retroperitoneal, ret-ro-per-e-to-ne'al. Relating or belonging to internal parts behind the peritoneum, as retroperitoneal hernia.

Retropharyngeal, ret-ro-far-in-je'al (*retro, pharynx*, pharynx). Relating to parts behind the pharynx—as retropharyngeal abscess, an abscess in the areolar tissue behind the pharynx.

Retroposition, ret-ro-po-zish'un. Displacement of uterus backward, but without flexion or version.

Retropulsion, ret-ro-pul'shun. Pushing or forcing back of fœtal head in labor; also disorder of locomotion observed in paralysis agitans, in which a tendency to walk backward exists.

Retrosternal, ret-ro-stur'nal. Situate behind the sternum.

Retrotarsal (ret-ro-tar'sal) **fold**. Fornix of conjunctiva.

Retro-uterine, ret'ro-u'ter-in (*retro, uterus*). Behind the uterus, as retro-uterine abscess, an abscess seated behind the uterus. **R.-u. hæmat'ocele**, tumor consisting of blood situate behind the uterus in the pouch of Douglas.

Retrovaccination, ret-ro-vak-sin-a'shun (*retro, vaccination*). Vaccination with matter obtained from the cow after inoculating the animal with vaccine matter from the human subject.

Retroversio uteri, ret-ro-vur'she-o u'ter-e (*retro, verto, versum*, to turn). *Retroversion of the uterus*. A change in the position of the uterus so that the fundus of the organ is turned toward the concavity of the sacrum while the neck is directed toward the symphysis pubis. This displacement is commonly attended with constipation, tenesmus, and retention of urine. The usual period of occurrence is between the third and fourth months of pregnancy, before the uterus has escaped above the superior aperture of the pelvis. Simple inclination or bending of the uterus backward is called *Retroflexion of the uterus*, *Reflexio uteri*; not unfrequently, however, this term is employed synonymously with retroversion of the uterus.

Retrover'sion. See *Retroversio*.

Ret'zius, cave of. Space sometimes existing between the two layers of subserous tissue in front of the bladder. **R., fi'bres of**, structure resembling a thread seen in the cells of Dieters and running longitudinally through them. **R., stri'æ of**, lines of brownish color extending almost parallel to the external surface of the enamel of the tooth, indicating the stages of deposit.

Reünio, re-u'ne-o (*re, unio*, to unite). Synthesis. Union of parts that have been separated. **R. par'tium separata'rum**, see *Synthesis*. **R. per pri'mam intentio'nem**, see *Intention*. **R. per secun'dam intentio'nem**, see *Intention*. **R. vaso'rum**, anastomosis.

Reu'nion. See *Reunio*.

Reuss's test. Test consisting in treating ptomatropines with sulphuric acid and oxidizing agents, which give the odor of blossoms.

Revaccination, re-vak-sin-a'shun. See *Vaccina*.

Revalenta Arabica, rev-al-en'tah a-rab'e-kah. See *Ervum*.

Revellent, re-vel'lent (*re, vello*, to pluck). Derivative.

Reverberation, re-vur-bur-a'shun (*reverbero*, to beat back). Resonance.

Rever'din's meth'od. Operation of skin-grafting.

Reversion, re-vur'shun (*reverto*, to turn back). A turning back. Return to a former type.

Revery, rev'er-e. Aphelxia.

Revivification, re-viv-e-fe-ka'shun (*re*, *vivo*, to live, *facio*, to make). Resuscitation.

Reviviscence, re-viv-is'sense. Renewal of life. Awakening from torpidity in animals after hibernation.

Revul'sant. Revellent.

Revulsion, re-vul'shun. Act of turning the principle of a disease from the part in which it seems to have taken its seat. Rubefacients, vesicatories, bleeding in the foot, etc. are often used for this purpose. See *Derivation*.

Revulsive, re-vul'siv. Derivative. **R. bleed'ing,** see *Bloodletting*.

Revulsorius, re-vul-so're-us. Derivative.

Rex amarorum, reks am-ar-o'rum (king of bitters). Bitter shrub of the Moluccas, used in cholera, pleurisy, etc. **R. metallo'rum,** aurum.

Reybard's su'ture. Interrupted or loop suture, used to unite wounds of intestines. A small disk of wood is placed in the intestine and fastened by sutures; when the sutures become absorbed, the disk passes by stool.

Rezzle. Wheeze.

Rha (*ra*, *re*, called, however, after the Rha or Wolga in Pontus). Rheum.

Rhabarbarum, rhab'ar-bar-um (*rha*, *barbaros*, foreign). Rheum. **R. al'bum,** Convolvulus Mechoacan. **R. antiquo'rum,** Rheum Rhaponticum. **R. dioscor'idis,** Rheum Rhaponticum. **R. monacho'rum,** Rumex patientia. **R. ni'grum,** Convolvulus jalapa. **R. pau'perum,** thalictron. **R. plebeio'rum,** see *Rhamnus frangula*. **R. Siber'icum,** rheum. **R. Tartar'icum,** rheum. **R. Tur'cicum,** rheum.

Rhabditis, rhab-de'tis (*rhabdos*, rod). Generic name of small nematoid worms. **R. genita'lis,** minute round worm which has been found in urine. **R. stercora'lis,** anguillula stercoralis.

Rhabdoïdes (rhab-do-e'dees) **sutu'ra** (*rhabdos*, rod or staff, *eidos*, resemblance). Sagittal suture.

Rhabdomyoma, rhab-do-me-o'mah (*rhabdos*, stripe, *myoma*). Myoma involving the striped muscular fibres.

Rhabdonema strongyloïdes, rhab-do-na'mah strongil-o-e'dees (*rhabdos*, rod, *nema*, thread). Anguillula intestinalis.

Rhachetæ, rhak-e'te. Rhachitæ.

Rhachetrum, rhak'a-trum (*rhachetron*, *rhachis*, spine). Middle of the spine.

Rhachiæi, rhak-e-e'e. Rhachitæ.

Rhachiagra, rhak-e'ag-rah. Rachisagra.

Rhachialgia, rhak-e-al'je-ah. Pain in the spine; spinal irritation.

Rhachialgitis, rhak-e-al-je'tis (*rhachis*, spine, *itis*). Spinal irritation; myelitis.

Rhachiasmus, rhak-e-as'mus (*rhachis*, spine). Name given by M. Hall to the first symptoms of epilepsy, made up of spasmodic action of muscles at the back of the neck.

Rhachidagra, rhak-id'ag-rah. Pain in the spine; spinal irritation.

Rhachiocampsis, rhak-e-o-kamp'sis (*rhachis*, *kampsis*, bending). Curvature of the spine.

Rhachiochysis, rhak-e-ok'is-is (*rhachis*, spine, *chusis*, gathering). Accumulation of water in the spinal cord.

Rhachiocyphosis, rhak-e-o-sif-o'sis. Gibbosity; hump.

Rhachiodynia, rhak-e-o-din'e-ah (*rhachis*, *odune*, pain). Pain in the vertebral column.

Rhachiomyelitis, rhak-e-o-me-el-e'tis (*rhachis*, *myelitis*). Myelitis.

Rhachiomyelophthisis, rhak-e-o-me-el-o-te'sis (*rhachis*, *muelos*, marrow). Tabes dorsalis.

Rhachioparalysis, rhak-e-o-par-al'is-is (*rhachis*, spine, *paralysis*). Paraplegia.

Rhachiophy'ma (*rhachis*, *phuma*, growth). Tumor of the spine.

Rhachioplegia, rhak-e-o-plej'e-ah (*rhachis*, *plege*, a stroke). Paraplegia.

Rhachioscolio'ma (*rhachis*, *scolioma*). Lateral curvature of the spine.

Rhachioscoliosis, rhak-e-o-scol-e-o'sis (*rhachis*, *scoliosis*). Lateral curvature of the spine.

Rhachiostrophosis, rhak-e-o-stro-fo'sis (*rhachis*, *strepho*, to turn). Deviation of the vertebral column.

Rhachiotomus (rhak-e-ot'om-us) or **Rhach'iotome** (*rhachis*, *tome*, incision). Instrument for opening the vertebral column.

Rhachiot'omy. Incision into the spine.

Rhachipagia, rhak-e-paj'e-ah (*rhachis*, *pegnumi*, to fasten). Monstrous union of two fœtuses, being connected at the spine.

Rhachiparalysis, rhak-e-par-al'is-is (*rhachis*, *paralysis*). Paraplegia.

Rhachiphyma. Rhachiophyma.

Rhachirrheuma, rhak-ir-roo'mah (*rhachis*, *rheuma*, a defluxion, rheumatism). Lumbago.

Rhachis, rhak'is. Vertebral column. **R. na'si,** line formed by junction of lateral surfaces of the nose.

Rhachisagra, rhak-is'ag-rah. Pain in the spine; spinal irritation.

Rhachis'chisis (*rhachis*, *schizo*, to cleave). Incomplete formation of the spinal column, an opening into the spinal canal remaining, due to deficiency of the arches.

Rhachitæ, rhak-e'te (*rhachis*, spine). Muscles of the spine.

Rhachites, rhak-e'tees (*rhachites*, *muelos*, marrow). Spinal; medulla spinalis. See also *Rachitis* (*rachites*, *nosos*).

Rhachit'ic (*rhachiticus*). Relating to rhachitis.

Rhachi'tis. Rickets; rachitis. **R. adulto'rum,** mollities ossium. **R. spina'lis,** inflammation of the spine; pain in the spine.

Rhachitismus, rhak-it-iz'mus (*rhachis*). Rachitis.

Rhacho'ma (*rhachoo*, to wrinkle). Rhacoma; rhagades.

Rhachosis, rhak-o'sis. Rachosis.

Rhachus (rhak'us) or **Rha'cus** (*rachoo*, to wrinkle). A wrinkle; laceration of the skin; lacerated ulcer.

Rhaco'ma (*rhakos*, a rent or tear). Chap; excoriation; pendulousness of the scrotum.

Rhaco'sis. Condition of rhacoma.

Rha'cous (*rhakoo*, torn). Torn, corrugated, or wrinkled.

Rhæbauchen, rhe-bau'ken (*rhaibos*, crooked, *auchen*, neck). Wry neck; torticollis.

Rhæbocrania, rhe-bo-cran'e-ah (*rhaibos*, crooked, *kranion*, skull). Torticollis.

Rhæbodere, rhe-bo'der-e (*rhaibos*, crooked, *dere*, neck). Torticollis.

Rhæboscelia, rhe-bo-skel'e-ah (*rhaibos*, crooked, *skelos*, leg). Crookedness of the legs.

Rhæbosis, rhe-bo'sis (*rhaibos*, crooked, *osis*). Crookedness, as of the legs.

Rhæo'ma (*rhakos*, torn). Rhagades. Also flaccid, pendulous state of scrotum.

Rhagades (rhag-ah'dees) or **Rhaga'dia** (*rhagas*, fissure). Ruptures, chaps, or narrow and long ulcers which form near the origin of mucous membranes, especially around the anus, usually due to syphilitic virus. See *Fissure*.

Rhage. Suffix denoting violent rupture or discharge, as in Hemor*rhage*, etc. Also a fissure.

Rhages, rhag'ees (*rhax*, grape). Uvæ passæ.

Rhagicus, rhaj'ik-us (*rhachikos*). Grape-like. See *Rhagoïdes*.

Rhagoideitis, rha-goy-di'tis (*rhagoides*, *tunica*, *itis*). Uveitis.

Rhagoïdes, rha-go-e'dees (*rhax*, berry, grape, *eidos*, resemblance.) Grape-like, as *Tunica rhagoïdes*; the uvea. Also the choroid coat of the eye.

Rhagus, rhag'us (*ragos*). Wrinkle.

Rham'negin or **Rhamnegi'na.** Glucoside dis-

covered in buckthorn berries; similar to rhamnin excepting its solubility in cold water.

Rham'netin. Substance produced by action of dilute acids upon rhamnin.

Rhamni baccæ, rham'ni bak'se. See *Rhamnus.* **R. Purschia'ni cor'tex** (Ph. B.), dried bark of Rhamnus Purshianus, Cascara sagrada. **R. suc'cus,** see *Rhamnus.*

Rham'nin. Crystallizable glucoside extracted from buckthorn berries.

Rhamnocathart'in. Bitter active principle of buckthorn berries; yellow and amorphous.

Rhamnoxan'thin. Frangulin.

Rhamnus, rham'nus (*rhamnos*). Family Rhamnaceæ. The berries—*Rhamni baccæ*—have a faint, disagreeable odor and bitterish, nauseous taste. Their juice—*Rhamni succus*—is cathartic, and excites gripping, which must be obviated by the use of diluents. The name *Cathartin, Cathartic acid,* has been given to a purgative principle derived from the buckthorn. **R. alater'nus,** the leaves have been used as detergents and astringents, as a gargle especially. **R. Caroliniа'na,** buckthorn of Southern U. S. **R. cathart'icus,** purging buckthorn; blackthorn. **R. fran'gula,** *Black alder.* All the parts of this tree, as well as of the common alder, are astringent and bitter. The bark is most so. The inner, yellow bark of the trunk or root, once called *rhabarbarum plebeiorum,* is a cathartic; has been employed as an anthelmintic. **R. Hispan'icus,** R. alaternus. **R. infecto'rius** produces French berries. **R. juju'ba,** see *Jujube.* **R. lo'tus,** see *Jujube.* **R. Purshia'nus,** shrub growing on northwestern coast of U. S. The dried bark is used medicinally under the name rhamni purshianæ cortex or cascara sagrada. See *Cascara.* **R. ziz'iphus,** Ziziphus vulgaris; see *Jujube.*

Rhan'ter (*rhanter,* a sprinkler). The greater canthus.

Rhaphanedon, rhaf-an-e'don. Raphanedron.

Rhaphania, rhaf-an'e-ah. Raphania.

Rhaphanis, rhaf'an-is. Raphanus hortensis.

Rhaphanus, rhaf'an-us. Rapa; Raphanus hortensis.

Rhaphe, rhaf'a. Suture.

Rhaphidagogus, rhaf-id-ag-o'gus (*rhaphis,* needle, *ago,* to lead). Porte-aguille.

Rhaphion, rhaf'e-on (*rhaphion,* dim. of *rhaphis*). Needle.

Rhaphis, rhaf'is (*rhaphis*). Needle.

Rhaphosymphysis, rhaf-o-sim'fis-is (*rhaphe,* suture, *sumphusis,* union.) Union by suture—as of cranial bones.

Rhaphus, rhaf'us (*rhaphos*). Rapa.

Rhaphys, rhaf'is (*rhaphus*). Rapa; Raphanus hortensis.

Rhaponticum, rhap-on'tik-um (*rha,* rhubarb, of Pontus). Rheum rhaponticum. **R. vulga're,** Centaurea centaurium.

Rhaps (*rhapus*). Raphanus hortensis.

Rha'pys (*rhapus*). Raphanus hortensis.

Rhata'nia. Krameria rhatania.

Rhat'any. Krameria.

Rhax (*rhax*). See *Vitis vinifera.*

Rhege, rha'ge (*rhege*). Cramp; contusion; laceration.

Rheg'ma (*rhegma*). Cramp; contusion; laceration; rhexis; breaking of an abscess. **R. ligamenta're,** solution of continuity of a ligament. **R. oc'uli,** rupture of the eyeball.

Rheg'mus (*rhegmos*). Cramp; contusion; laceration.

Rhe'i radix. Rhubarb root.

Rhe'in. Chrysarobin.

Rhembasmus, rhem-bas'mus (*rhembasmos,* wandering about). Somnambulism; a wandering condition of the mind.

Rhembe, rhem'ba (*rhembe,* wandering about). Irregularity in the return of febrile paroxysms.

Rhem'bus (*rhembos*). Rhembe.

Rhe'ocord (*rheos,* current, *chorde*). Instrument for regulating the strength of electrical currents.

Rheofore (rhe'o-fore) or **Re'opore** (*rheo,* to flow, *phero,* to carry). Conducting material attached to galvanic battery which is applied to body of patient—viz. electrode.

Rheom'eter (*rheos,* current, *metron,* measure). Galvanometer; measure of electromotive force of a current.

Rhe'on. Rheum.

Rhe'oscope (*rheos,* a current, *skopeo,* to inspect). Instrument for determining the presence of electrical currents. **R., physiolog'ical,** see *Rheoscopic limb.*

Rheoscop'ic limb. Sensitive nerve-muscle preparation, contraction of which determines the existence of the electrical current of muscles.

Rheostat, rhe'o-stat (*rheos, histemi,* to stand). Instrument for registering the resistance of an electric current. To lessen or make the current uniform a rheostat is placed in the circuit, in order that exact uniformity of electrical force may be obtained.

Rheotan'nic ac'id. $C_{26}H_{26}O_{14}$. Kind of tannic acid found in rhubarb.

Rheotome, rhe'o-tome (*rheos,* current, *temno,* to cut). Instrument used to cut off or interrupt the faradic current.

Rhetine, rhet'in-a (*rheo,* to flow). Resin.

Rhetini'tes (*rhetinites*). Resinatum.

Rhetinoceron, rhet-in-o-sa'ron (*retine, keros,* wax). Resinatum.

Rhetinodes, rhet-in-o'dees. Resinous.

Rhetoranche, rhet-o-ran'ka (*rheton,* a speech, *ancho,* to strangle). See *Pharyngitis, follicular.*

Rheum, rhoom (*rheuma, rheo,* to flow). Any thin watery discharge from mucous membranes or skin, as the thin discharges from the air-passages due to cold. **R., salt,** popular name in the United States, like "tetter," for various cutaneous affections, of the eczematous and herpetic forms especially. At times applied to a kind of chronic psoriasis; likewise to cutaneous affections in those who immerse the hands in metallic or acid solutions.

Rheum (rhe'um) **rhu'barb** (*Rha,* now called Wolga, a river in Russia whence it was first brought). Ord. Polygonaceæ. The root of *R. officinalis* (Chinese rhubarb) is most commonly used in medicine. Odor is aromatic, peculiar, and rather nauseous; taste somewhat aromatic, subacrid, bitterish, and astringent, coloring the saliva and the urine yellow. It is easily pulverized, forming a powder of a bright buff-yellow color. Water and alcohol extract its virtues. Rhubarb root is purgative, stomachic, and astringent. Externally the powder is sometimes sprinkled over ulcers to assist their granulation. In small doses taken internally it is stomachic. Numerous species of Rheum, as *R. palmatum, R. undulatum,* and *R. compactum,* yield rhubarb root. The rhubarbs most used in the United States are the Chinese or India rhubarb, the Russian, Turkey, or Bucharian rhubarb, and the European rhubarb. **R. compac'tum,** rheum. **R. In'dicum,** see *Rheum.* **R. palma'tum,** rheum. **R. Rhapon'ticum,** *Rhapontic rhubarb;* rhubarb of the ancients. It is more astringent than that of the Rheum palmatum, and less purgative. French, Rhapontic, or Krimea rhubarb is obtained from this species, as well as from R. undulatum and R. compactum. R. Rhaponticum is the pie rhubarb or pie plant, cultivated for its fleshy, esculent leaf-stalks. **R. Rus'sicum,** see *Rheum.* **R. Sinen'se,** see *Rheum.* **R. Tur'cicum,** see *Rheum.* **R. undula'tum,** see *Rheum.*

Rheuma, rhoo'mah (*rheuma, rheo,* to flow). Catarrh; diarrhœa; rheum; rheumatism. Inflammation of a fibrous tissue, as in rheumatism and gout. In composition, a flow, a defluxion; also rheumatism. **R. catarrha'le,** chronic bronchitis. **R. epidem'icum,** chronic bronchitis; epidemic catarrh. **R. pec'toris,** catarrh. **R. u'teri,** leucorrhœa.

Rheumapyra, rhoo-map'ir-ah (*rheuma, pur,* fever). Rheumatism, acute.

Rheumarthritis, rhoom-arth-re'tis (*rheuma, arthritis*). See *Rheumatism, acute.*

Rheumarthrosis, rhoom-arth-ro'sis (*rheuma, arthrosis,* affection of the joints). Rheumatism of the joints.

Rheumatalgia, rhoom-at-al'je-ah (*rheuma, algos,*

pain). Rheumatic pain. **R. arthrit'ica,** see *Rheumatism, acute.*

Rheumatic, rhoom-at'ik (*rheumatikos*). Belonging to rheumatism, as rheumatic fever. Also applied to one affected with rheumatism. **R. at'rophy,** rheumatic atrophy. **R. diath'esis,** the special condition of the body that gives occasion to rheumatism. It may exist without presenting the usual phenomena in the joints, whilst the heart may be seriously affected. **R. fe'ver,** see *Rheumatism.* **R. gout,** see *Rheumatism, acute.*

Rheumatics, rhoom-at'iks. Rheumatism.

Rheumatism, rhoom'at-izm (*rheuma*). Rheumatism is a word used to denote a variety of clinical states, the underlying cause of which is supposed to be essentially the same. The disease may attack joints, muscles, fibrous or serous structures, or tissues; hence the terms *muscular, articular, synovial, gonorrhœal, cardiac, cerebral,* etc. It may be acute, subacute, or chronic in its course and duration. It also includes rheumatic fever, various painful affections of joints, and different varieties of arthritis. It is characterized subjectively by pain chiefly, which may be severe, lancinating, shifting, or dull boring, according to the variety of the disease and to the structures involved. Objectively there may be fever, local redness, and swelling when acute, or no perceptible change in the affected part, or in certain cases great deformity may result from inflammatory changes with secondary contraction and disability. The morbid anatomy and etiology of rheumatism remain doubtful. The causes commonly ascribed are the presence of lactic acid and excess of fibrin in the blood, cold, and micro-organisms. Practically, we know that the disease is due to some abnormal product of the bodily chemistry which produces the constitutional condition termed the rheumatic diathesis. **R., acute',** usually comes on with the ordinary symptoms of fever; soon after which, or simultaneously, or even before the appearance of febrile signs, excruciating pains are felt in different parts of the body, particularly in the larger joints, which are more or less red and swollen, the pain shifting from one to another at times with great rapidity. The disease rarely terminates in less than six weeks, during the greater part of which period the febrile symptoms remain severe; and, what is peculiar to the disease, the skin, feeling extremely hot, may be covered daily with a profuse perspiration, and the pulse appear in no way modified by it. It is one of the essential symptoms of the affection, and consequently gives no relief. The only danger to be apprehended from acute rheumatism, despite the apparent severity of the symptoms, is the translation or extension of the disease—*metatastic rheumatism*—to some internal part, especially to the heart. This tendency must always be borne in mind. Acute rheumatism seldom terminates in chronic; those liable to the former are rarely so to the latter, and conversely. Sometimes it assumes a subacute form. After a few weeks the disease usually goes off, but leaves the patient very liable to a recurrence on slight exposures or errors of diet. At times acute rheumatism of the joints puts on the appearance of gout, seeming to be a complication of the two affections. It is then called gouty or arthritic rheumatism, rheumatic gout, rheumatalgia arthritica, rheumarthrosis, rheumarthritis, arthritis rheumatica or juvenilis, chronic ostearthritis, O. longa, rheumatoid or rheumatic arthritis, or nodular rheumatism. When accompanied with deformity of a joint it is called arthritis deformans; of several joints, polyarthritis deformans. When affecting the hip-joint of old people it is called morbus coxæ senilis. **R. of the arm,** brachiorrheuma. **R., arthrit'ic,** see *Rheumatism, acute.* **R. of the blad'der,** cystorrheuma. **R. of the bowels,** enterorrheuma. **R., cap'sular,** rheumatism seated in the lining membrane of the joints and bursæ of the tendons. The parts most liable to attacks are the feet and hands, where it is generally easily recognized by the enlargement of the joints; but the peculiar characters of the disease are most strikingly seen when it attacks the knee. **R., cer'ebral,** *Rheumatic meningitis, Rheumatic apoplexy;* meningitis occurring during the course of acute rheumatism, probably metastatic. **R. of the chest,** pleurodynia. **R., chron'ic,** is attended with pains in the hips, shoulders, knees, and other large joints; at times confined to one joint, at others shifting from one to another without occasioning inflammation or fever. Thus the complaint often continues for a long time, and then ceases. There is no danger attendant upon it; the patient may become lame, and is always liable to painful recurrences. Effusion of coagulable lymph is apt to occur, so as to occasion permanent thickening of the parts. Flannel should be worn next the skin as a preventive of the disease or even as an adjuvant to the treatment. The whole class of rubefacients may be used with advantage. The warm bath, especially the natural warm bath, the temperature of which does not vary, is a successful remedy. **R. of the extremities,** acrorrheuma. **R. of the face,** prosoporrheuma. **R., gonorrhœ'al,** rheumatism associated with gonorrhœa. **R., gout'y,** see *Rheumatism, acute.* **R. of the heart,** cardiorrheuma. **R. of the hip,** see *Neuralgia femoropoplitæa.* **R., lead,** see *Lead rheumatism.* **R. of the leg,** sclerrheuma. **R. of a limb,** merorrheuma. **R., lo'cal,** merorrheuma. **R. of the loins,** lumbago. **R., metastat'ic,** see *R., acute.* **R., mus'cular,** pain in the muscular structures increased by motion. **R. of the neck,** torticollis. **R., nod'ular,** see *Rheumatism, acute.* **R., par'tial,** merorrheuma. **R., pre-abdom'inal,** rheumatism of the muscles of the anterior and lateral portions of the abdomen. **R. root,** Jeffersonia Bartoni. **R. of the skin,** see *Dermalgia.* **R., sub'acute,** see *Rheumatism, acute.* **R., syno'vial,** a rheumatic affection in which an accumulation of non-purulent fluid occurs in the synovial sacs, especially of the knee-joints. **R., top'ical,** rheumatism affecting a limited area. **R., ure'thral,** *Urethral fever, Stricture fever;* a peculiar affection, apparently pyæmic, probably due to absorption of morbid materials from the urethra, accompanied with subacute inflammation of the synovial membranes and fibrous tissues about the ankle, heels, etc. **R. of the u'terus,** metrorrheuma. **R., vis'ceral,** rheumatism affecting the muscular or fibrous tissues of the viscera. **R. weed,** Pyrola maculata; P. umbellata.

Rheumatis'mal. Rheumatic.

Rheumatis'moid (*rheumatism, eidos,* resemblance). Resembling rheumatism.

Rheumatismus, rhoom-at-iz'mus. Rheumatism. **R. abdom'inis,** cœliorrheuma. **R. acu'tus,** rheumatism, acute. **R. articulo'rum acu'tus,** rheumatism, acute. **R. brach'ii,** rheumatism of the arm. **R. cancro'sus,** neuralgia faciei. **R. cervi'cis,** torticollis. **R. col'li,** torticollis. **R. cor'dis,** rheumatism of the heart. **R. cru'ris,** rheumatism of the leg. **R. dorsa'lis,** lumbago. **R. extremitat'um,** rheumatism of the extremities. **R. facie'i,** rheumatism affecting the face. **R. febri'lis,** dengue. **R. frig'idus,** rheumatism, chronic. **R. gonorrho'icus,** rheumatism, gonorrhœal. **R. habitua'lis,** rheumatism, chronic. **R. hypersthen'icus** or **inflammato'rius,** rheumatism, acute. **R. intestino'rum,** enterorrheuma. **R. intestino'rum cum ul'cere,** dysentery. **R. invetera'tus,** rheumatism, chronic. **R. larva'tus,** neuralgia faciei. **R. loca'lis,** menorrheuma. **R. lon'gus,** rheumatism, chronic. **R. membro'rum singulo'rum,** merorrheuma. **R. metal'licus,** see *Tremor.* **R. muscula'ris** or **musculo'rum,** rheumatism, muscular. **R. partia'lis,** merorrheuma. **R. pec'toris,** pleurodynia. **R. phlegmono'des,** rheumatism of the muscles. **R. spu'rius nervo'sus,** neuralgia. **R. subacu'tus,** see *Rheumatism, acute.* **R. synovia'lis,** rheumatism, synovial. **R. universa'lis febri'lis,** rheumatism, acute. **R. u'teri,** metrorrheuma. **R. vesi'cæ urina'riæ,** rheumatism of the urinary bladder. **R. vulga'ris,** rheumatism, chronic.

Rheumatodynia, rhoom-at-o-din'e-ah (*rheuma, odune,* pain). Rheumatism, chronic.

Rheumatoid, rhoom'at-oid. Resembling rheumatism. **R. arthri'tis,** arthritis deformans.

Rheumatophthalmia (rhoom-at-of-thal'me-ah) or

Rheumophthalmia, rhoom-of-thal'me-ah. Rheumatic ophthalmia.

Rheumatopyra, rhoom-at-op'ir-ah (*rheuma*, *pur*, fever). Rheumatism, acute.

Rheumato'sis. Rheumatism.

Rheum'ic acid. Acid derived from rhubarb.

Rheumophthalmia, room-of-thal'me-ah (*rheuma*, *ophthalmia*). Rheumatophthalmia; sclerotitis. Ophthalmia of rheumatic origin.

Rhexis, rheks'is (*rhexis*, rupture). Rupture of a vessel or organ. Spontaneous opening of an abscess. **R. oc'uli**, bursting of the eye from any cause, spontaneous or excited.

Rhicnosis, rhik-no'sis (*rhiknoomai*, to become wrinkled). Wrinkling of the skin from extenuation of the body.

Rhigolene, rhig'o-leen (*rhigos*, cold). Petroleum naphtha, used as a local anæsthetic; boils at 70° F., s. g. 0.625; is applied in the form of spray in the smaller operations, evaporation of the rhigolene producing a temperature 15° below zero. There is danger of gangrene, however, from its use.

Rhigos, rhig'os. Rigor.

Rhin (*rhin*). Nose.

Rhinacanthus, rhin-ak-an'thus. Root and leaves of R. communis. The active principle is *Rhinocanthin*, which resembles hydroquinone; employed in parasitic affections of the skin.

Rhinæsthesis (*rhis*, nose, *aisthesis*, sensation). The sense of olfaction or smell.

Rhinæus, rhin-e'us (*rhis*, nose). Compressor naris.

Rhinalgia, rhin-al'je-ah (*rhin*, *algos*, pain). Pain in the nose. **R. ab intru'sis**, pain in the nose from foreign bodies. **R. vermino'sa**, pain in the nose from worms.

Rhinanchone, rhin-an'ko-ne (*rhin*, *anchone*, strangulation). Contraction of the nose; snuffles.

Rhinangia, rhin-an'je-ah. Rhinanchone; snuffles.

Rhinantralgia, rhin-an-tral'je-ah (*antron*, cavity, *algos*, pain). Pain in the nose and frontal sinuses.

Rhinelcus (*rhin*, *helkos*, ulcer). Nasal ulcer.

Rhinencephalia (rhin-en-sef-al'e-ah) or **Rhinenceph'ale** (*rhin*, *en*, in, *kephale*, head). Cyclopia. See *Rhinocephalus*.

Rhinen'chysis or **Rhinenchys'ia** (*rhin*, *en*, in, *chuo*, to pour). An infusion or injection made into the nostrils with a syringe called *Rhinenchites*.

Rhines, rhin'ees (pl. of **Rhin**). Nares.

Rhineurynter, rhin'u-rint-er (*rhin*, *eureuno*, to dilate). An apparatus consisting of a bag or sac to be inflated after its introduction into the nose in epistaxis. It resembles the colpeurynter of the obstetricians.

Rhinion, rhin'e-on (*rhis*, nose). Lower extremity of suture between the nasal bones; superior median point of anterior nasal aperture.

Rhinitis, rhin-e'tis. Inflammation of the nose; coryza. **R., atroph'ic**, ozæna; chronic inflammation of the nasal mucous membrane, with sensation of dryness in the nasopharyngeal region, thick purulent discharge of hard crusts, offensive odor, called ozæna, impaired sense of smell. **R., hypertroph'ic**, discharge of thick mucus from the nose; acute coryza, nasal obstruction, breathing through the mouth, nasal tone of voice, headache over the forehead, impaired smell. **R. ulcero'sa**, ozæna.

Rhino (*rhis*, nose). Prefix, in composition, meaning connection with or relation to the nose.

Rhinoblennorrhœa, rhin-o-blen-nor-rhe'ah. Rhinorrhœa.

Rhinobyon, rhin-o'be-on (*rhis*, *buo*, to stop up). Instrument consisting of a tube and bladder of goldbeaters' skin, intended for tamponing the nasal fossæ.

Rhinocace, rhin-ok'as-e (*rhis*, *kakos*, evil). Offensive discharge from the nose and other symptoms indicating a morbid condition of the Schneiderian membrane that accompanies the worst forms of scarlatina.

Rhinocarcinoma, rhin-o-kar-sin-o'mah. Nasal cancer.

Rhinocatar'rhus. Coryza.

Rhinocephalus, rhin-o-sef'al-us (*rhis*, *kephale*, head). Monstrosity characterized by a projection of the nose and a single orbit in which are two fused orbits, without any appreciable congenital lesion of the encephalon or of the eyes.

Rhinoceros (rhin-os'er-os) **leg**. Elephantiasis.

Rhinocleisis, rhin-o-kli'sis (*rhis*, *kleio*, to close). Obstruction of the nasal passages.

Rhinocnesmus, rhin-o-nez'mus (*rhis*, *knesma*, itching). Itching of the nose.

Rhinocœlia, rhin-o-se'le-ah (*rhis*, *koilia*, cavity). Olfactory ventricle.

Rhinodacryolithus, rhin-o-dak-re-ol'ith-us (*rhis*, *dakruon*, tear, *lithos*, stone). Calculus of the lacrymal passages. See *Dacryolite*.

Rhinoderma, rhin-o-dur'mah (*rhis*, *derma*, skin). Keratosis pilaris.

Rhinodynia, rhin-o-din'e-ah (*rhis*, *odune*, pain). Pain in the nose.

Rhinœop'rion pen'etrans. Pulex penetrans.

Rhinogramma, rhin-o-gram'mah. Nasal line.

Rhinolere'ma or **Rhinoleresis**, rhin-o-ler-a'sis (*rhis*, *leros*, trifling). Abnormal olfaction.

Rhinolite, rhin'o-lite (*rhis*, *lithos*, stone). See *Dacryolite*.

Rhinolith, rhin'o-lith. Calculus in the nasal cavity. See *Dacryolite*.

Rhinolithiasis, rhin-o-lith-e'as-is. The state of having nasal calculi.

Rhinologist, rhin-ol'o-jist (*rhis*, *logos*). Specialist in treatment of affections of the nose.

Rhinology, rhin-ol'o-je (*rhis*, *logos*, science). Science of nasal disease.

Rhinonecrosis, rhin-o-nek-ro'sis. Nasal diseases attended by necrosis of bone.

Rhinophonia, rhin-o-fo'ne-ah (*rhis*, *phone*, voice). Nasal voice; speaking through the nose.

Rhinophyma, rhin-o-fe'mah (*rhis*, *phuma*, tumor). Nasal tumor.

Rhinoplas'tic (*rhis*, *plasso*, to form). Relating to rhinoplasty.

Rhinoplasty, ri'no-plast-e (*rhis*, *plasso*, to form). Operation for forming a new nose, which dates far back. Three chief methods have been described: 1. *Method of Celsus*, consisting in bringing forward the skin of the cheeks, and forming a septum, if necessary, from the lip; 2. *Italian* or *Taliacotian method* or *operation*, called also the *German method*, on account of the application made of it by Von Graafe, consisting in paring the edges of the nostrils, and uniting them to a graft taken from an arm, but left attached to it until union has taken place; 3. *Indian method*, cutting off the nose having been a common punishment for criminals in that country; now generally adopted, the graft being taken from the forehead.

Rhinopolypus, rhin-o-pol'ip-us (*rhis*, *polypus*). Polypus of the nose.

Rhinoptia, rhin-op'she-ah (*rhis*, *optomai*, to see). Act of seeing over the nose; squinting over the nose.

Rhinorrhagia, rhin-or-rhaj'e-ah (*rhis*, *rhage*, a breaking forth). Bleeding at the nose; epistaxis.

Rhinorrhaphy, rhin-or'rhaf-e (*rhis*, *rhaphe*, a suture). Operation for the removal of epicanthis, consisting in pinching up a longitudinal fold of the skin, including this fold in two elliptical incisions, removing it, and bringing together the edges of the wound by harelip suture.

Rhinorrhœa, rhin-or-rhe'ah (*rhis*, *rheo*, to flow). A discharge of limpid mucus from the nose without any inflammatory symptom; a gleet from the nose.

Rhinoscleroma, rhin-o-skler-o'mah (*rhis*, *skleros*, hard). Chronic tuberculous induration of the nose and its vicinity, slowly developed and unaccompanied with œdema or inflammatory symptoms.

Rhinoscope, rhi'nos-kope (*rhis*, *skopeo*, to view). Instrument of the speculum kind for inspecting the nasal passages. The operation is termed *Rhinoscopy* or *Rhinoscopia*.

Rhinoscopy, rhin-os'ko-pe. See *Rhinoscope*.

Rhinosis, rhin-o'sis (*rhinos*, skin, leather). State of looseness and excess of skin observed in phthisis.

Rhinostegnosis, rhin-o-steg-no'sis (*rhis, stegnosis,* constriction or obstruction). Narrowing of the canal of the nose from inflammation, swelling, etc.

Rhinotrix, (*rhis, thrix,* hair). Fine hair in the external nasal passages. See *Vibrissæ.*

Rhiptasmus, rhip-taz'mus (*rhipto,* to throw). Jactation.

Rhiptolusia, rhip-to-lu'se-ah (*rhipto,* to throw, *louo,* to wash). Affusion.

Rhis. Nose.

Rhi'za. Root; radix.

Rhi'zo- (*rhin, rhiza,* root). Prefix meaning relation to or connection with a root.

Rhizodontrypy, rhiz-o-don'trip-e (*rhiza, odous,* tooth, *trupao,* to perforate). Perforation of the root of a tooth for the discharge of fluid.

Rhizography, rhiz-og'raf-e (*rhiza, grapho,* to write). A treatise describing roots of plants.

Rhizology, rhiz-ol'o-je (*rhiza, logos,* description). The study or science of roots.

Rhizoma, rhiz-o'mah (*rhiza,* root). *Rhizome.* The part of the root of a plant consisting of wood or flesh, as in the carrot. See *Rhizome.*

Rhizome, rhiz-ome'. That part of a plant beneath the earth, running more or less horizontally, and consisting of joints, with leaves in form of scales.

Rhizonychia, rhiz-o-nik'e-ah (*rhiza, onux,* nail). See *Nail.*

Rhizophagus, rhiz-of'ag-us (*rhiza, phago,* to eat). One who lives on roots.

Rhizotomist, rhiz-ot'o-mist (*rhiza, tome,* incision). Radiciseca.

Rhizotomus, rhiz-ot'om-us. Apothecary.

Rhoa, rho'ah. Punica granatum.

Rhodelæ'on (*rhodon, elaion,* oil). Oil of roses or oil impregnated with roses.

Rhodeorrhetin, rho-de-or-rhet'in. Convolvulin.

Rhodia, rho'de-ah (*rhodon,* a rose, owing to odor). The root, *Roseroot,* when dry, smells pleasantly and is slightly astringent; it is not used.

Rhodinus, rho-de'nus. Rosy; formed of, or containing, roses.

Rhodiola rosea, rho-de'o-lah ro'ze-ah (dim. of **Rhodia**). Rhodia.

Rhodites vinum, rho-de'tees ve'num (*rhodites, oinos*). Wine in which roses have been macerated.

Rhodium lignum, rho'de-um lig'num (*rhodon,* rose). *Rosewood.* Wood or root of Genista Canariensis. Ord. Leguminosæ. The essential oil is a perfume, and possesses cordial and tonic virtues.

Rhodius, rho'de-us. Rosy; formed of or containing roses.

Rhododaphne, rho-do-daf'ne. Nerium oleander.

Rhododaphnis, rho-do-daf'nis. Nerium oleander.

Rhododendron chrysanthemum, rho-do-den'dron kris-an'them-um (*rhodon, dendron,* tree). *Oleander, Rose-bay, Yellow* or *Yellow-flowered rhododendron, Mountain laurel.* Ord. Ericaceæ. This plant has been recommended in rheumatism, gout, and syphilis. Overdoses produce acronarcotic symptoms. **R. max'imum,** *Great laurel, American rose-bay;* indigenous shrub, ord. Ericaceæ, flowering in July; stimulant and astringent, being used by the Indians in gout and rheumatism. **R. puncta'tum,** indigenous, has similar properties.

Rhodomela palmata, rhod-o-ma'lah pal-mat'ah. *Dulse.* One of the Algæ, eaten largely throughout the maritime countries of the north of Europe and in the Grecian Archipelago.

Rhodomeli, rhod-om'el-e (*rhodon, meli,* honey). Mel rosæ.

Rhodon, rho'don. Rosa; rosa centifolia.

Rhodophane, rho'do-fane (*rhodon,* rose, *phanos,* luminous). Rose-colored pigment obtained from the retina of birds.

Rhodopsin, rho-dop'sin (*rhodon,* rose, *ops,* eye). Purple color of the retina, observed in the external segment of the rods. Visual purple.

Rhodosaccharum, rho-do-sak'ar-um (*rhodon, saccharum,* sugar). Confectio rosæ Gallicæ.

Rhodostacton, rho-do-stak'ton. Mel rosæ.

Rhodostagma, rho-do-stag'mah (*rhodon, stagma,* that which has been dropped). Aqua rosæ.

Rhœa, rhe'ah (*rhoia*). Punica granatum.

Rhœadic (rhe'ad-ik) **ac'id.** Coloring material discovered in red-poppy petals.

Rhœadina, rhe-ad-e'nah. An alkaloid obtained from all parts of Papaver rhœas, the ripe capsules of Papaver somniferum, and from opium, soluble and in white prisms. *Rhœagenine* is derived from it.

Rhœadine, rhe'ad-een. $C_{21}H_{21}N_6O$. An alkaloid of opium, not important medicinally.

Rhœados petala (Ph. Br.), rhe'ad-os pet'al-ah. Fresh petals of Papaver rhœas.

Rhœagenine, rhe-aj'en-een. See *Rhœadina.*

Rhœas, rhe'as. See *Papaver rhœas.*

Rhœbde'sis (*rhoibdeo,* to sup up). Absorption.

Rhœum, rhe'um. Rheum.

Rhogmus, rhog'mus. Râle.

Rhoïtes, rho-e'tees (*rhoa,* the pomegranate). Wine impregnated with the pomegranate. A confection made by boiling the juice of pomegranates in honey.

Rhomboid, rhom'boid (*rhombos,* a rhombus whose sides are equal, with two obtuse and two acute angles; *eidos,* resemblance). Having the shape of a rhombus. **R. lig'ament,** costo-clavicular ligament. **R. mus'cles,** flat muscles arising from the ligamentum nuchæ and spines of seventh cervical and four upper dorsal vertebræ, and inserted into vertebral border of the scapula; it is divided for the transmission of vessels about the union of the upper and middle thirds, and hence it has been described as two muscles, rhomboideus major and minor, or superior and inferior.

Rhomboi'dal si'nus. Fourth ventricle of the brain.

Rhomboïdeus, rhom-bo-id-a'us (same etymon as **Rhomboid**). A muscle situate at the posterior inferior part of the neck and at the posterior part of the back, having a rhomboidal shape, and attached, by its inner edge, to the posterior cervical ligament and to the spinous processes of the last cervical vertebræ, and of the first four or five dorsal. By its outer edge it is attached to the spinal or posterior edge of the scapula. It is divided into two fasciculi, constituting the rhomboideus major and R. minor, the latter being situate higher than the other. This muscle draws the scapula backward and upward, bringing its inferior angle nearer to the spine, and, consequently, depresses the anterior angle and the shoulder. See *Rhomboid.*

Rhom'bo-occipita'lis. A muscle arising from the spinal border of the scapula and inserted below the middle third of the superior curved line of the occipital bone.

Rhombos, rhom'bos. A bandage mentioned by Galen; so called on account of its rhomboidal shape.

Rhonchal, rhon'kal (*rhonchus,* rattle). Relating or appertaining to rhonchus, as rhonchal fluctuation. Fremitus occurring through the influence of respiration is attendant upon cavernous rhonchi.

Rhonchus, rhon'kus. Râle; snoring; stertor. **R., cav'ernous,** see *Gurgling.* **R., cavern'ulous,** see *Gurgling.* **R., click'ing,** rhonchus which has been considered positively indicative of the existence of tubercles in the lungs. **R. crep'itans,** see *Crepitant.* **R. crep'itans re'dux,** see *Crepitant.* **R., mu'cous,** see *Râle, mucous.* **R. sib'ilans,** see *Râle, crepitant.* **R. sib'ilus,** râle, sibilant. **R., sono'rous,** snoring or cooing sound caused by contraction of the bronchial tubes. **R., subcrep'itant,** see *Râle, mucous.*

Rhopalosis, rho-pal-o'sis (*rhopalon,* club, the hair being matted like a club). Plica.

Rhopalum, rho'pal-um. Penis.

Rhope, rho'pe (*rhope,* a moving forward or downward). Congestion.

Rhophalismus, rho-fal-iz'mus. Priapism.

Rhotacismus, rho-tas-iz'mus. Rotacism.

Rhox (*rhox,* fissure). Pupil; uvea.

Rhu'barb (*rha, barbaros,* foreign). Rheum. **R., Chinese',** see *Rheum.* **R., French,** Rheum Rhaponticum. **R., In'dia,** see *Rheum.* **R., Krime'a,** Rheum Rhaponticum. **R., monk's,** Rumex alpinus, Rumex

patientia. **R., pie,** Rheum Rhaponticum. **R., poor man's,** thalictron. **R., rhapon'tic,** Rheum Rhaponticum. **R., Rus'sia,** see *Rheum.* **R., Tur'key,** see *Rheum.* **R., wild,** Convolvulus panduratus.

Rhuma, rhoo'ma. In composition, a flow or defluxion; rheumatism. See *Rheuma.*

Rhumapyra, rhoo-map'ir-ah. Rheumatism, acute.

Rhumatalgia, rhoo-mat-al'je-ah. Rheumatism, chronic.

Rhus aromat'ica. The bark of the root of sweet sumach. **R. Bel'gica,** Myrica gale. **R. copalli'na,** see *Rhus typhina.* **R. coria'ria,** *Sumach, Shumach, Elmleaved sumach,* ord. Anacardiaceæ; this is the only species of the genus Rhus that is innocent; both the leaves and berries are used as astringents and tonics. **R. diversal'oba,** a variety of rhubarb growing on the Pacific coast. **R. gla'bra,** *Smooth* or *Pennsylvania sumach;* indigenous and officinal; infusion of the fruit (*Rhus glabra,* Ph. U. S.), which is acid and astringent, has been used as a cooling drink and as a gargle; infusion of the inner bark of the root has been recommended in mercurial ptyalism. **R. meto'pium,** tree growing in tropical zone of America. **R. pu'mila,** exceedingly poisonous variety; grows in Southern U. S. **R. radi'cans,** *Poison vine;* this plant is extremely acrid when applied to the skin, produces erysipelas and vesications, and has been used, like R. toxicodendron, in paralysis and other nervous affections; see *Poisons* (table of). **R. semial'ta,** Chinese and Japanese tree yielding Chinese galls, which contain 70 per cent. of tannic acid. **R. succeda'nea,** see *Wax, Japan.* **R. sylves'tris,** Myrica gale. **R. toxicoden'dron** (Ph. U. S.), *Poison oak,* the fresh leaves of which are employed in paralytic affections, eczema, erysipelas, etc.; poisonous, like R. radicans. **R. typhi'na,** *Stag's horn Sumach,* and **R. copalli'na,** *Mountain sumach,* have similar properties to Rhus glabra. **R. venena'ta,** *Poison sumach,* and **R. pu'mila** have similar properties to Rhus toxicodendron. **R. ver'nix,** R. radicans.

Rhyas, rhe'as (*rheo,* to flow). Ulceration of the lacrymal caruncle, with a constant flow of tears.

Rhyma, re'mah. Medicament.

Rhynchoprion (rhin-kop're-on) **pen'etrans.** Pulex penetrans, sand-flea, or chique.

Rhynophyma, rhin-o-fe'mah (*rhis, phuma,* growth). Acne rosacea of long standing, in which, by cell-infiltration and hyperplasia of connective tissue deep in the skin, a red lobulated tumor of considerable size is formed.

Rhyparia, rhip-ar'e-ah (*rhupos,* dirt). Rupia. Embarras gastrique.

Rhyp'ia. Rupia.

Rhyptic, rhip'tik (*rhuptikos,* adapted for cleansing). Applied to a substance having detergent properties.

Rhyp'tica (*rhuptikos,* adapted for cleansing). Detergents.

Rhyp'ticus. Abstergent.

Rhyptolusiæ, rhip-to-lu'se-e (*rhupto,* to cleanse, *lusis,* solution). See *Affusions.*

Rhy'pus. Sordes.

Rhy'sis. Flux; rhyas.

Rhyssema, rhis-sa'mah. Wrinkle.

Rhythm (measured movement). Order of proportion as regards time reigning between the different movements of an organ or of the organism in health or disease. Thus, rhythm is applied to the regular daily variations of the pulse, and to the paroxysmal movements of an intermittent.

Rhyth'mical (*rhuthmikos*). Periodical. **R. contrac'tions of muscles** are those succeeding one another after regular intervals.

Rhyth'mus. Rhythm.

Rhytidosis, rhit-id-o'sis. Act of wrinkling. Corrugation and subsidence of the cornea. Destruction or atrophy of the eye.

Rhytis, rhe'tis. Wrinkle.

Rib. Costa. **R., false,** see *Costa.* **R., float'ing,** see *Costa.* **R., ster'nal,** see *Costa.* **R., true,** see *Costa.*

Ribbon of Vicq d'Azyr or **Vicq d'Azyr's line.** Whitish streak seen microscopically on section of the cortex of the brain, especially in the region of the calcarine fissure.

Ri'bes (of Arab. origin) **glossula'ria.** R. uva crispa. **R. ni'grum,** *Black currant, Gazel;* ord. Grossulaceæ; the berries—*Black currants*—have been recommended in sore throat and as diuretics; the leaves have been advised for the same purpose; chiefly used as preserves. **R. officina'le,** R. rubrum. **R. ol'idum,** R. nigrum. **R. ru'brum,** *Red currant,* of which the white is a variety. It is cultivated, affording an agreeable fruit—red currants—possessing qualities of the subacid fruits in general; it makes an excellent preserve. **R. u'va cris'pa,** *Common gooseberry;* the fruit—*Gooseberry, Feaberry*—is agreeable, making a good preserve. **R. vulga'ris,** R. rubrum.

Rib'grass. Plantago lanceolata.

Ribs. See *Costa.* **R., neck of the,** narrow part of the ribs between the head and tubercle. **R., short,** see *Costa.*

Rib'wort. Plantago Virginica.

Rice. Oryza. **R. bod'ies,** corpora oryzoïdes. **R., Can'ada,** Zizania aquatica. **R. disease,** cholera. **R., ground,** see *Oryza.* **R. jel'ly,** see *Oryza.* **R. starch,** rice flour, smallest commercial starch, with polygonal granules. **R. wa'ter,** see *Oryza.* The evacuations of cholera have been termed, from their resemblance to rice-water, rice-water discharges, and in India congee discharges—congee, in Hindoostanee, meaning rice-water. **R., wild,** Zizania aquatica.

Rich'leaf. Collinsonia Canadensis.

Rich'ter's her'nia. Enterocele partially strangulated, so that the lumen of the intestine is partly open; parietal enterocele.

Rich'weed. Actæa racemosa; Ambrosia trifida; Collinsonia Canadensis; Pilea pumila.

Ricinela'idic ac'id. Acid produced by saponification of ricinelaidin.

Ricinela'idin. Substance resulting from acting on castor oil with peroxide of nitrogen.

Ricini (ris'in-e) **o'leum.** Castor oil; fixed oil obtained from seeds of R. communis by compression, consisting of ricinoleic acid combined with glyceryl. Its action is laxative or purgative. Dose, f ℥j–f ℥j.

Ric'inic (*ricinus*). Relating to castor beans or oil. **R. acid,** acid obtained from castor oil (oleum ricini).

Ricinine, ris'in-een. Non-purgative alkaloid in castor oil.

Ricinoïdes, ris-in-o-e'dees (*ricinus, eidos,* resemblance). Jatropha curcas.

Ricino'leate of glyc'eryl. Ricinoleic acid in combination with the base glyceryl in castor oil.

Ricinoleic (ris-in-o'le-ik) **ac'id.** $C_{18}H_{34}O_3$. Liquid fatty acid made by saponification of castor oil.

Ricinolein, ris-in-o'le-in. A saponifiable oil like olein, one of the component parts of castor oil, stearin and palmitin being the other ingredients.

Ricinus communis ris'in-us kom-mu'nis (*ricinus,* a tick, which its seed resembles). *Castor-oil plant,* ord. Euphorbiaceæ. Castor seeds, whence the oil is obtained, are inodorous; taste acrid and slightly sweetish. One or two seeds—semina cataputiæ majoris or ricini vulgaris—will act as a cathartic, but the oil is alone used. It is obtained by bruising the castor seeds, previously decorticated, and then expressing the oil without the application of heat. Recently-drawn castor oil—in the United States often called simply *Oil*—is inodorous, nearly insipid, cathartic, operating speedily, and may be used in cases where powerfully stimulating purgatives would be injurious. Dose, f ℥j to f ℥j. At the Cape of Good Hope the oil is obtained from Ricinus lividus. A variety of Ricinus at Cape Verd is employed by the inhabitants to increase the secretion of milk, being applied in the form of poultice made with the green leaves to the mammæ, or of a strong decoction with which the mammæ and external parts of generation are washed. See *Ricinolein.* **R. liv'idus,** see *Ricinus communis.* **R. ma'jor,** Jatropha curcas. **R. mi'nor,** Jatropha manihot. **R. vir'idis,** R. communis. **R. vulga'ris,** R. communis.

Rick. Malleolus.

Rick'ets. Rhachitis.

Rick'ety. Rhachiticus.

Rictus, rik'tus (*ringor, rictus,* to show the teeth). Yawning; risus sardonicus. **R. lupi'nus** (*lupus,* wolf), fissure of the palate; see *Hare-lip.*

Ri'der's bone. Bony development in adductor muscles of the leg from saddle-pressure. See *Drill bone* and *Exercise bone.* **R.'s bur'sa,** fluctuating swelling of the groin from enlarged bursa; same causation as rider's bone.

Ri'ding (of bones). Displacement of the fragments of a bone, chiefly produced by the contraction of muscles, which occasions shortening of the limb, the fractured extremities *riding* over each other instead of being end to end. **R. hag,** incubus.

Rife. Prevailing; as applied to diseases.

Ri'gal's su'ture. Twisted suture made with rubber rings.

Riggs's disease'. Pyorrhœa alveolaris.

Right lymphat'ic duct. See *Lymphatic vessels.*

Right-hand'edness. *Dextral pre-eminence.* By some this is considered to be due to the greater development of the left side of the brain, to the larger size of the arteries on that side, and to the left carotid being less tortuous, and therefore more direct, than the right.

Rigiditas, rij-id'it-as. Rigidity. **R. articulo'rum,** stiffness of the joints; false ankylosis.

Rigidity, rij-id'it-e (*rhigeo,* to stiffen). *Rigor.* Great stiffness of fibre or want of suppleness. The stiffness of the dead body, cadaveric rigidity, is one of the signs of the cessation of life. It may be removed, however, for a time, by the injection into the arteries of oxygenated defibrinated blood. See *Rigor mortis.*

Rigor (*rhigeo,* to stiffen, especially from cold). *Coldness, Rigidity.* Sensation of cold, with involuntary shivering or shaking of the whole body—a symptom of fever. A slighter degree of, and at times full, rigor is sometimes termed a chill. **R. ar'tuum,** contractura. **R. cadavero'sus,** rigor mortis. **R. congesti'vus,** congestive chill. **R. cor'poris mor'tui,** rigor mortis. **R. emortua'lis,** rigor mortis. **R. maxil'læ inferio'ris,** trismus. **R. mor'tis,** *Stiffness of death;* death-stiffening; rigidity of limbs occurring on dissolution; see *Rigidity.* **R. nervo'rum** or **nervo'sus,** tetanus.

Ri'ma. A fissure; a cleft. The opening of the glottis. The opening of the vulva; see *Vulva.* The opening of the mouth. **R. cana'lis orbita'rii,** suborbitar fissure. **R. clu'nium,** see *Nates.* **R. glot'tidis,** see *Rima* and *Glottis.* **R. hel'icis,** slit occasionally found in the cartilage of the ear at the junction of the helix and crus helicis. **R. hyperglot'tica,** see *Larynx.* **R. ad infundib'ulum,** vulva cerebri. **R. laryn'gis,** rima glottidis. **R. mag'na vul'væ,** see *Rima.* **R. o'ris,** see *Rima.* **R. palpebra'rum,** see *Palpebra.* **R. puden'di,** see *Rima.* **R. transver'sa mag'na cer'ebri,** fissure, transverse, of the brain. **R. ventric'uli,** opening between the ventricle of the larynx and general laryngeal cavity. **R. voca'lis,** glottis. **R. vul'væ,** see *Rima.*

Ri'mæ (pl. of **Rima**). Rhagades.

Ri'mous or **Rimose'** (*rima,* a cleft). Cracked or fissured.

Ri'mula (dim. of **Rima**). A small fissure or cleft. **R. glot'tidis,** see *Rima.* **R. laryn'gis,** rima glottidis.

Ri'mule. Rimula.

Rinæ'us (*rhin*). Compressor naris.

Rinderpest, rin'der-pest (*rinder,* cattle, *pest,* plague). The cattle-plague is so called by the Germans. It is the steppe disease, Russian cattle-plague, contagious typhoid fever, pestilential fever, typhus contagiosus bovum of different writers.

Ring. A name given to natural circular or roundish apertures, with muscular or aponeurotic parietes, serving for the passage of some vessel or part—as the umbilical ring, inguinal ring, etc. **R., abdom'inal,** see *Obliquus externus abdominis.* **R., arthrit'ic,** see *Sclerotic zone.* **R. bone,** deposit of bony material about the coronet of horses' feet. **R., cramp,** see *Cramp rings.* **R., cru'ral,** crural canal. **R., fem'oral,** opening between Gimbernat's and Poupart's ligaments and pubic bone. **R. finger,** annular or fourth finger. **R. pes'sary,** circular pessaries made of hard or soft rubber.

Ring'man. Annular or fourth finger.

Rings, festooned. Tough tendinous tracts in the heart. **R., fibrocartilag'inous,** R., festooned.

Ring'worm. Tinea trichophytina; herpes circinatus. **R. of the scalp,** porrigo scutulata. **R., ul'cerative,** herpes exedens. **R., vesic'ular,** herpes præputii.

Rinné's test. Method of examining the hearing to find out whether the conductive or perceptive mechanism is diseased, by the application of a vibrating tuning-fork over the mastoid process. Just before vibrations cease it is transferred to a position opposite the meatus. The distinctness with which it is heard determines whether conduction is better by air or by bone.

Riolan's (re'o-lan's) **muscle.** Certain fibres of orbicularis palpebrarum.

Rio Ne'gro sarsaparil'la. Para sarsaparilla.

Ris'agon. Cassumuniar.

Rish'teh. Dracunculus.

Risidon'trophy (*rhiza,* root, *odous,* tooth, *trupao,* to bore). Operation of boring a hole through the root of a tooth.

Risigallum, ris-e-gal'lum. Orpiment.

Ri'sing. Abscess. See *Regurgitation.* **R. of the lights,** cynanche trachealis. **R.** or **Eleva'tion of the pulse,** *Pulsûs elevatio;* the pulse is said to rise when it becomes more full and frequent; occurring in the exacerbations of acute disease.

Risipola, ris-ip'o-lah. Erysipelas. **R. Lombar'da,** pellagra.

Riso'rius (*rideo,* to laugh). Upper part of the platysma myoïdes. It arises from the parotid fascia, and is inserted into the angle of the mouth. It causes certain motions of the lips in the act of laughing. **R. novus,** portion of the platysma myoïdes which passes from the cheek toward the commissure of the lips.

Rissigallum, ris-se-gal'lum. Orpiment.

Risus, re'zus (*rideo,* to laugh). *Laughing, Laughter, Laugh.* Involuntary movement of the muscles of the face, and of the lips in particular, accompanied with a sonorous and interrupted expiration, commonly indicating mirth or satisfaction. **R. a'pium,** ranunculus sceleratus. **R. cani'nus,** canine laugh. **R. involunta'rius,** canine laugh. **R. sardon'icus, R. sardo'nius,** canine laugh. **R. spas'ticus,** canine laugh.

Ritgen's method. Introduction of fingers into the rectum to fix the head of the child to prevent laceration of the perineum.

Rit'ter's tet'anus. Tetanus after breaking of electrical current.

Rit'ter-Val'li law. When a nerve is cut off from its central connection, artificially or by disease, it first increases its excitability, this increase commencing at the central end and going toward the periphery, and then gradually disappearing.

Rivallie's caustic. *Solidified nitric acid.* A gelatinous paste made by adding nitric acid in its highest degree of concentration to lint in an earthen vessel, being usually left on a part for fifteen or twenty minutes, or even, as in encephaloid cancer, for twenty-four hours.

Ri'valry. Competition for supremacy. **R. of colors,** when visual fields present different colors. **R. of con'tours,** contours situated in the monocular fields in such a manner as to overlap each other in the binocular field.

Riv'erweed. Conferva rivalis.

Ri'ving. Eructation.

Rivinus (riv-e'nus), **duct of.** See *Sublingual gland.*

Rivol'ta's disease. Actinomycosis.

Rivus lacrymalis, re'vus lak-re-mal'is (*rivus,* small stream). See *Palpebra.*

Rizzo'li-Es'march opera'tion. Operation making section of ramus of lower jaw for ankylosis.

Roan tree. Sorbus aucuparia.

Rob. This word, of Arabic extraction, means the juice of any fruit thickened to the consistence of honey by evaporation before fermentation. The juice of grapes boiled to this consistence was called *Sapa*, and, when not quite so thick, *Defrutum*. **R. antisyphilit'icum de Laffecteur**, see *Syrupus de sarsaparillâ et sennâ compositus*. **R. ex mo'ris**, diamorum. **R. nu'cum**, diacaryon.

Roberts's differen'tial den'sity meth'od. Take sp. gr. of urine; mix f℥iv of the urine with half a cake of Fleischman's yeast; warm for twenty-four hours; estimate sp. gr. and deduct from that previously taken. Each degree of the remainder is equivalent to one grain of sugar to the fluidounce. Multiply by 0.219 to obtain the percentage. **R.'s pel'vis**, double synostotic or transversely contracted pelvis; ankylosed pelvis. **R.'s rea'gent**, for purpose of doing away with objections to HNO_3 in Heller's test, add 1 vol. strong HNO_3 to 5 vols. saturated and filtered solution of magnesium sulphate. Perform the test in same manner as in Heller's test.

Rob'ertson's pu'pil. *Argyll-Robertson's pupil.* Condition of myotic pupil responding to accommodation, but not to light; an early symptom of tabes.

Robinia amara, ro-bin'e-ah am-ar'ah (after the Robins, French botanists). Ord. Leguminosæ. The roots of the Robinia amara of Cochin China are bitter, and have been recommended, especially in that country, in diarrhœa and dyspepsia. **R. pseu'do-aca'cia**, *False acacia, Black locust, Locust tree;* native of America. Flowers are said to possess antispasmodic properties, and the bark of the root is considered emetic and cathartic.

Rob'in-run'away. Glechoma hederacea.

Rob'in-run-the-hedge. Galium aparine.

Rob'in's rye. Haircap moss; stem and leaves of Polytrichum juniperum. Powerful diuretic. **R.'s plan'tain**, Erigeron bellidifolium.

Roborans, ro'bo-rans (*roboro*, to make strong). Corroborant.

Roborant, rob'o-rant (*roboro*, to make strong). Invigorating, strengthening.

Roborantia, rob-o-ran'she-ah. Tonics.

Ro'bub. Rob.

Roccella, rok-sel'lah (*roca*, a rock or stone). Lichen roccella. **R. tincto'ria**, Lichen roccella.

Rocheal'um. Light, rose-colored alum, first made at Rocca, Syria.

Rochelle (ro-shel') **pow'ders.** See *Powders, soda*, and *Sedlitz, mineral waters of.* **R. salt**, sodium tartrate.

Rochetta Alexandrina, ro-shet'tah al-eks-an-dre'nah. Soda.

Rock cress. *Aralis lyrata.* Supposedly diuretic and antiscorbutic. **R. fern**, Adiantum pedatum. **R. fe'ver**, intermittent fever. **R. oil**, petroleum. **R. rose**, herb, Helianthemum corymbosum. Used in diarrhœa, secondary syphilis, and scrofula as astringent, tonic, and alterative. **R. weed**, Geranium Robertianum.

Rock'ett, gar'den. Brassica eruca. **R., Ro'man**, Brassica eruca.

Rock'y Moun'tain fe'ver. Form of typho-malarial fever met with in high altitudes, as in the Rocky Mountains.

Rod'dikin. Abomasus.

Ro'den tree. Sorbus aucuparia.

Ro'dens. See *Sorbus aucuparia.*

Ro'dent (*rodo*, to gnaw). Phagedenic. **R. can'cer**, see *Ulcer, rodent.* **R. ul'cer**, ulcer, rodent.

Rod-fi'bres, Minute fibrils attached to the base of the retinal rods, and prolonged throughout the outer nuclear layer.

Rod-gran'ules. Granules in outer nuclear layer of retina, connected with the retinal rods.

Rods of Cor'ti. See *Corti.* **R. of Hei'denhain**, fibrils seen in endothelial cells of tubules of the kidney, running vertically to the basement membrane. **R. of ret'ina**, minute rod-cylinders placed perpendicularly upon the outer layer of the retina, except at the position of the macula lutea.

Rod-wax. Accumulations upon machinery about oil-wells; it has been used in bronchial affections.

Roe'derer's obliq'uity. Flexion of chin of child at superior strait in labor.

Ro'hab. Rob.

Rohe'na bark. Swietenia.

Ro'hob. Rob.

Ro'hun. See *Strychnos nux vomica.* **R. bark**, bark of Soymida febrifuga, having tonic, astringent, and antiperiodic virtues.

Rolan'do, fis'sure or **fur'row of.** Fissure of Rolando. **R., tu'bercle of**, see *Tubercle of Rolando.*

Roll sul'phur. Crude sulphur run into cylindrical moulds.

Roll'er. Bandage; fascia.

Ro'man. Relating to or derived from Rome. **R. a'lum**, a good variety of alum coming from Tolfa, near Rome, made from alunite. **R. cham'omile**, Anthemis nobilis. **R. cli'mate** is considered one of the best in Italy; is very still, hence a good winter climate for consumptives, admitting of open-air exercise. **R. fen'nel**, fennel fruit of large size and aromatic. **R. fe'ver**, typho-malarial type of fever. **R. worm'wood**, absinthium.

Rom'berg's sign or **symp'tom.** Unsteadiness and uncertainty of gait of ataxics in the dark. **R.'s trophoneuro'sis**, facial hemiatrophy.

Ron'chus. Snoring; stertor; rhoncus.

Rone. Sorbus aucuparia.

Rongeur, ron-zhur' (F.). Bone forceps, having sharp, semicircular, concave points.

Ron'nachs. Triticum repens.

Roob. Rob.

Roof of the mouth. Palate. **R. nu'cleus**, a gray nucleus over roof of fourth ventricle, in the lobus centralis and lingula.

Root. Radix. **R., a'gue**, Aletris farinosa. **R., bit'ter**, Apocynum androsæmifolium. **R., Can'ada**, Asclepias tuberosa. **R., col'ic**, aletris. **R. doc'tor**, herb doctor. **R., red**, celastrus; Lachnanthes tinctoria. **R., rough**, liatris. **R. of scar'city**, Beta hybrida. **R. sheath of hair**, portion of hair-follicle derived from the epidermis, being composed of outer and inner layers, corresponding respectively to the rete mucosum and the horny layer. **R., squaw**, Actæa racemosa. **R., sweet**, Acorus calamus. **R., u'nicorn**, Aletris farinosa. **R., white**, Ligusticum actæifolium. **R., yel'low**, Jeffersonia Bartoni; Xanthorriza apiifolia. **R. zo'nes**, the anterior include all fibres of anterior columns of spinal cord except those of the pyramidal tracts; the posterior zone is the fasciculus cuneatus.

Rope'bark. Dirca palustris.

Rorel'la (*ros*, dew). Drosera rotundifolia.

Rorif'erous (*ros*, dew, *ferro*, to carry). An epithet given to vessels pouring exhaled fluids on the surface of organs. **R. duct**, thoracic duct.

Ros (dew). Sperm. **R. Calab'rinus**, see *Fraxinus ornus.* **R. so'lis**, Drosera rotundifolia. **R. Syri'acus**, see *Fraxinus ornus.*

Ro'sa (rose). R. centifolia. Erysipelas. **R. afzelia'na**, R. canina. **R. al'ba**, the *White rose;* ord. Rosaceæ. The flowers of this species possess similar but inferior qualities to the damask. **R. arma'ta**, R. canina. **R. Astu'rica**, see *Pellagra.* **R. Austri'aca**, R. Gallica. **R. calyci'na**, R. canina. **R. cani'na**, *Dogrose, Wild brier.* The fruit of this variety, called *Heps* or *Hips, Hops*, has a sourish taste and is formed into a conserve. See *Confectio cynosbati.* Seldom employed except to give form to more active remedies, as to pills, boluses, linctuses, etc. **R. centifo'lia**, *Damask, Pale, Hundred-leaved*, or *Cabbage rose.* The petals of this rose, *Rosa centifolia* (Ph. U. S.), have an extremely fragrant odor and subacidulous taste. They are laxative, but are scarcely used for any purposes except for the distillation of rose-water, oil of roses, attar, otto, or essence of roses, and the formation of a syrup. **R. Damasce'na**, R. centifolia. **R. Gal'lica**, *Red rose.* The petals of this variety, *Rosa Gallica* (Ph. U. S.), are astringent, and are used in infusion, conserve, etc. **R. leucan'tha**, R. alba. **R.**

pal'lida, R. centifolia. **R. ru'bra**, R. Gallica. **R. ru'bra vulga'ris**, R. canina. **R. sal'tans**, essera. **R. sentico'sa**, R. canina. **R. Swartzia'na**, R. canina. **R. sylves'tris**, R. canina. **R. usitatis'sima**, R. alba.

Rosacea, ro-sah'se-ah. Acne rosacea. **R. erythemato'sa**, general redness of the skin of a part. **R. hypertroph'ica**, red skin due to dilated capillaries. **R. papulo'sa et pustulo'sa**, red skin, accompanied by eruption of papules and pustules.

Rosa'ceus (*rosa*). Relating to or resembling roses.

Rosa'go. Nerium oleander.

Rosa'lia (*rosa*, rose, from color). Scarlatina. See *Rubella*.

Rosa'liæ. Scarlatina.

Rosan'iline. Fuchsin. Derivative of aniline, employed in albuminuria in the form of hydrochlorate of rosaniline.

Rosatus, ro-zat'us. Relating to or resembling roses.

Rose. Erysipelas (from color); rosa. **R. ap'ple**, fruit of Eugenia jambos. **R. bay**, rhododendron. **R., cab'bage**, Rosa centifolia. **R. cam'pion**, Lychnis githago. **R. catarrh'**, rose fever; an affection analogous to hay asthma, prevalent in parts of the United States where the rose is largely cultivated. **R. ce'rate**, white wax, 50 parts; oil of almond, 100 parts; melt together; add carmine, 0.5 parts; oil of rose, 0.5 parts. **R., Christ'mas**, Helleborus niger. **R. cold**, hay fever. **R., cop'per**, Papaver rhœas. **R., corn**, Papaver rhœas. **R., da'mask**, Rosa centifolia. **R., dog**, Rosa canina. **R., dog, con'serve or confec'tion of**, confectio rosæ caninæ. **R. drop**, gutta rosea; Rosa canina. **R. gar'land, rhachit'ic**, see *Rhachitic*. **R., hun'dred-leaved**, Rosa centifolia. **R. laur'el**, *Kalmia centifolia;* calico bush. **R., marine**, rosmarinus. **R., pale**, Rosa centifolia. **R. rash**, roseola; erythema; rötheln; erysipelas. **R., red**, Rosa Gallica. **R., rock**, Helianthemum corymbosum. **R. spots**, see *Spots, red*. **R. wa'ter**, aqua rosæ; made by aqueous distillation of petals of the white rose, or by dissolving 1 part of oil of rose in 10,000 parts of distilled water. **R., white**, Rosa alba. **R. wil'low**, swamp dogwood; see *Cornus sericea*.

Ro'sea. Rosy; resembling a rose.

Rose'balm, scar'let. Monarda coccinea.

Rose'bay, Amer'ican. Rhododendron maximum.

Rose'in. Fuchsin.

Rosellina, ro-zel-le'nah (*rosa*, rose, on account of color). Roseolæ.

Rose'mary. Rosmarinus. **R., marsh**, Statice limonium and S. Caroliniana. **R., wild**, Eriocephalus umbellulatus.

Ro'senbach's sign. Absence of abdominal reflex.

Rosenmüller's (ro'zen-mil-ler's) **body.** Parovarium. **R.'s fold**, semilunar duplication of mucous membrane in the lacrymal sac. **R.'s gland**, lower part of lacrymal gland. **R.'s or'gan**, parovarium.

Roseola, ro-ze'o-lah (*rosa*, rose, on account of color). *Rose rash.* An efflorescence in blushing patches, gradually deepening to rose-color, mostly circular or oval; often alternately fading and reviving; sometimes with colorless nucleus; chiefly on the cheeks, neck, or arms. It is frequently found, as a symptom, in dentition, dyspepsia, rheumatism, etc., and is of no consequence. *Infantile rose, Summer rose*, etc. are all forms of rose rash. See *Roseolæ, Rubeola*, and *Scarlatina*. **R. acno'sa**, gutta rosea. **R. æsti'va**, the form of the affection which prevails in summer. The eruption is of darker color, and is attended with more itching; occurring in autumn, it is called *Roseola autumnalis*. **R. annula'ta**, characterized by patches in the form of rose-colored rays, with central areas of the color of the skin. **R. autumna'lis**, see *Roseola æstiva*. **R. choler'ica**, erythema papulatum. **R. febri'lis**, R. miliaris. **R. fico'sa**, sycosis. **R. infanti'lis**, see *Roseola*. **R. milia'ris**, R. febrilis; a rosy blush accompanying miliary fever. **R. puncta'ta**, roseola characterized by punctated appearance. **R. rheumat'ica**, rose rash accompanying rheumatism and gout. **R. symptomat'ica**, see *Roseola*. **R. typho'sa**, spots, red. **R. vaccin'ia**, an eruption coexistent with the formation of the vaccine vesicle, and commencing around and about the seat of the vaccination; *Vaccine lichen*. **R. variolo'sa**, roseolæ.

Rose'olæ. *False* or *French measles.* Name given by some to an acute exanthem, midway between measles and scarlatina, belonging to neither one nor the other, as it affords no protection against either. It is called rubeola by some, and rubeoloid, a term which is applicable to any eruption resembling rubeola. An eruption often preceding that of smallpox is termed roseola variolosa, erythema variolosum.

Rose'pink. Chironia angularis.

Rosette, ro-zet'. See *Karyokinesis*.

Roseus, ro'ze-us (*rosa*). Rosy.

Rose'-water. Aqua rosæ.

Rose'wood. Rhodium lignum.

Rose'wort. Rhodia.

Ros'in, black (*resina*). Colophonia. **R., brown**, colophonia. **R. weed**, Silphium laciniatum. **R., white**, see *Pinus sylvestris*. **R., yel'low**, see *Pinus sylvestris*.

Rosio stomachi, ro'ze-o stom'ak-e (*rodo*, to corrode). Cardialgia. **R. ventric'uli**, cardialgia.

Rosmarinum, ros-mar-e'num. Rosmarinus.

Rosmarinus, ros-mar-e'nus (*ros*, dew, *marinus*, marine). *Rosemary.* Ord. Labiatæ. The leaves of this plant, Rosmarinus (Ph. U. S.), have a fragrant, grateful smell, and an aromatic, warm, bitterish taste, depending on an essential oil combined with camphor. Rosemary has been recommended in nervous headaches in the form of infusion. It is rarely used, except for its odor. Its oil—oleum rosmarini—is official. From two to six or ten drops are given in nervous complaints, rubbed up with sugar. **R. horten'sis**, rosmarinus. **R. latifo'lius**, rosmarinus. **R. officina'lis**, rosmarinus. **R. stœ'chadis fa'cie**, Teucrium creticum. **R. sylves'tris**, Ledum sylvestre.

Rosolic (ro-zol-ik) **ac'id.** $C_{20}H_{16}O_3$. A phenol acid derivative, made by action of nitric acid upon rosaniline. Insoluble in water, soluble in alchol or ether; crystalline in form; used as a dye, especially for histological purposes.

Rossalia, ros-sal'e-ah (*rosa*, the rose, from its color). Scarlatina. **R. squamo'sa**, scarlatina.

Rossolio, ros-so'le-o. See *Spirit*.

Ros'trum (a beak). A name given to several old forms of forceps, on account of their resemblance to the beaks of different birds, as rostrum of the sphenoid bone or of the corpus callosum. See *Lamina spiralis*. **R. exter'num**, olecranon. **R. porci'num**, acromion. **R. poste'rius**, olecranon. **R. sphenoida'le**, azygous process of sphenoid bone.

Ro'sy Bet'ty. Erigeron bellidifolium. **R. bush**, Spiræa tomentosa. **R. drop**, gutta rosea. **R. whelk**, gutta rosea.

Rot. Wasting disease in man or animals, especially affecting the lungs. See *Distoma hepaticum*. **R., grind'er's**, asthma, grinder's.

Ro'tacism. A vicious pronunciation of the letter *r*, common in the northern parts of England; called there the *Burr* or *Burrh*.

Rotacismus, ro-tah-siz'mus. Rotacism.

Rotatio, ro-tah'she-o (*roto*, to turn round). Diarthrosis. **R. spi'næ**, *Revolving spine;* congenital disposition in some animals, as the calf, similar to the twist of the spinal column seen in lateral curvature.

Rotation, ro-ta'shun. The action of turning of a limb upon its axis. **R. stage of la'bor**, so called because of the rotation of the presenting portion of the fœtus. It is internal when in the parturitive canal; external after the birth of the presenting portion of the child.

Rota'tor (*roto*, to turn round). Name given to several muscles turning the parts to which they are attached upon their axes; such as the oblique muscles of the eye, the pronators, supinators, etc.; trochanter.

Rotato'res dor'si. Eleven small muscles on each side of the dorsal vertebræ, arising from the point or upper edge of each transverse process, passing to the lower edge of the arch of the vertebra above as far as the base of the transverse process, their action rotating the individual vertebræ on each other. **R.**

fem'oris, obturator muscles. **R. oc'uli**, oblique muscles of the eye.

Rot'coll. Cochlearia armoracia.

Röth'eln. Rubella.

Rottacismus, rot-tah-siz'mus. Rotacism.

Rottlera Schimperi, rott-la'rah shim-pa're. A large tree of Abyssinia, ord. Euphorbiaceæ, the bark of which, called cortex musenæ, formerly known as cortex brayeræ anthelminticæ, mixed with koosso, is used in that country against tapeworm. **R. tincto'ria**, a euphorbiaceous plant of India; a powder is attached to the fruit-capsule of this plant, which is brushed off and collected when the fruit is dry. It is called kamala (Ph. U. S.). See *Kameela*. It is used in Northern India as a vermifuge for dogs, proving effectual against tapeworm in man. The purgative dose is two or three drachms. Crystals of what has been called *Rottlerin* are deposited from an ethereal extract of rottlera.

Rotula, rot'u-lah (*rota*, wheel). Patella; trochiscus. **R. ge'nu**, patella.

Rotulad, rot'u-lad. See *Rotular aspect.*

Rotular, rot'u-lar (*rotula*). Relating or appertaining to the patella. **R. as'pect**, an aspect toward the side on which the patella is situated (Barclay). *Rotulad* is used by the same writer adverbially to signify "toward the rotular aspect."

Rotulian, ro-tu'le-an. Relating or belonging to the rotula or patella.

Rotun'dus (*rota*, wheel). Round.

Rouge's opera'tion. Operation for exposure of the nares for removal of tumors or dead bone. The upper lip and lower end of the nose are cut loose from the upper jaw and the flap displaced upward.

Rouget's muscle. The circular part of the ciliary muscle.

Rough'root. Liatris.

Round ([L.] *rotundus*). Anatomists have given this name to many organs whose fibres are collected in round fasciculi. See *Teres*. **R. car'damoms**, *Amomum cardamomum*, native of East Indies. **R. fora'men**, a foramen of the sphenoid bone, a little behind the *foramen lacerum superius*, which gives passage to the second branch of the fifth pair of nerves, called superior maxillary. **R. lig'aments of the u'terus**, two cords arising from the lateral and superior parts of the uterus, whence they proceed toward the abdominal rings, which they pass through, terminating by vanishing in the areolar tissue of the groins, mons Veneris, and labia majora. These cords are whitish, flattened, and narrower in the middle than at the extremities. See *Teres ligamentum*. **R. win'dow**, fenestra rotunda. **R. worm**, ascaris lumbricoïdes.

Round'heart. Thaspium atropurpureum.

Round'tree. Sorbus aucuparia.

Roup. Cynanche trachealis; raucedo.

Routine practitioner, roo-teen' prak-tish'un-er. Routinist.

Routinist, roo-teen'ist (*routine*, a regular habit or practice, unvaried by circumstances). One who practises in such an unvaried manner—a *routine practitioner*.

Roux's amputa'tion. Amputation of the whole foot, tibia and fibula, treated as in Syme's operation, with an internal flap.

Ro'ving (wandering). Delirium.

Row'an tree. Sorbus aucuparia.

Roy'al stitch. Ligature about the neck of a hernial sac. **R. touch**, see *Touch*.

Rub'ber, In'dian. Caoutchouc.

Rub'bing. Friction; massage. **R., dry**, see *Friction*. **R., moist**, see *Friction*. **R. sound**, bruit de frottement.

Rubedo, ru-ba'do (*rubeo*, to be red). A diffused, but not spotted, redness on any part of the skin, like that which arises from blushing; blushing.

Rubefacient, ru-be-fa'shent (*rubeo*, to be red, *facio*, to make). Producing redness; a medicine which produces redness of the skin. The action is called *Rubefaction*, a gentle local irritant.

Rubella, ru-bel'lah (*rubeo*, to be red). *Bastard* or *German measles*, *Hybrid of measles and scarlatina*, *Anomalous exanthem*. A form of eruption resembling measles, sometimes not unlike scarlatina, dusky red, uniformly distributed, without catarrhal symptoms, not contagious, and of very favorable prognosis; by some regarded as coexistent measles and scarlatina. It was at first confounded with variola.

Rubeola, ru-be'o-lah (*rubeo*, to be red). One of the major exanthemata; generally affecting individuals but once, and produced by specific contagion. The rash usually appears on the fourth, but sometimes on the third, fifth, or sixth day of a febrile disorder; after continuing four days, gradually declines with the fever. The disease generally commences from ten to fourteen days after the contagion has been received. The eruption first shows itself in distinct, red, nearly circular spots, somewhat less than the ordinary areolæ of flea-bites. As these increase in number they coalesce, forming small patches of an irregular figure, but approaching nearest to that of semicircles or crescents; these patches are intermixed with single circular dots and with interstices of the natural color of the skin. On the face they are slightly raised, so as to give the sensation of inequality of surface to the finger passed over the cuticle. The disappearance of the eruption is followed by desquamation of the cuticle. Measles is not dangerous of itself, but is liable to induce pneumonia in winter and dysentery in summer, which are, at times, very fatal. These are apt to come on at the time of, or soon after, the disappearance of the eruption. When they supervene, they must be treated as idiopathic affections. See *Eruptive diseases* (table). A form of rubeola called rubeola spuria or R. sine catarrho has been described, in which the rash runs its regular course, with little fever or catarrhal affection, affording no certain security against the common or regular disease. Rubeola nigra or black measles is a name given to an unusual appearance of the measles about the seventh or eighth day, when the rash becomes suddenly livid, with a mixture of yellow. In the uncomplicated forms of measles but little treatment is necessary. Epidemic measles has occasionally prevailed largely in the military service, and has been called camp measles. **R. German'ica**, rubella. **R. ni'gra**, see *Rubeola*. **R. no'tha**, rubella; roseolæ. **R. spu'ria**, see *Roseolæ* and *Rubeola*.

Rubeo'læ. Roseolæ.

Rube'oline (*rubeola*). Term proposed by Dr. Wm. Farr for the specific zymotic principle by which measles is propagated.

Rube'oloid (*rubeola*, *eidos*, resemblance). See *Roseola*.

Rubia, ru'be-ah (*ruber*, red). *Dyer's madder*, *Madder*. Family Rubiaceæ. The root, *Rubia* (Ph. U. S.), has a bitterish, somewhat austere taste, and a slight, not agreeable smell. It was formerly considered deobstruent, detergent, and diuretic.

Rubidium, ru-bid'e-um. Uncommon alkaline metal, resembling potassium chemically and physically. **R. ammo'nium bro'mide**, $RbBr(NH_4Br)_3$; white soluble powder, suggested as substitute for potassium bromide in epilepsy; sedative and hypnotic. **R. chlo'ride** lowers the pulse-rate, increases arterial tension.

Rubiginous, ru-bij'in-us (*rubigo*, rust). Rusty. Having rusty color. Epithet given to the sputa in certain cases of pneumonia.

Rubigo, ru-be'go. Rust.

Ru'bi-jer'vine. A principle, traces of which are found in veratrum viride.

Rubi'nus ve'rus (*ruber*, red). Anthrax.

Ru'bor (redness). Rubedo.

Rubrica fabrilis, ru-bre'kah fab-ril'is (*ruber*, red). Red, heavy earthy matter, formerly employed for making drying powders—*Hard ruddle*, *Red chalk*. **R. Sinop'ica**, a heavy, compact, reddish earth from Sinope, formerly used in diarrhœa.

Ru'brin (*ruber*, red). Hæmatin.

Ru'bus (*ruber*, red). The pharmacopœial name (Ph. U. S.) of the bark of the root of Rubus Canadensis, R. villosus, and R. trivialis. Also genus of

plants, ord. Rosaceæ. Useful in the summer diarrhœa of children. **R. affi'nis**, R. fruticosus. **R. arc'ticus**, *Shrubby strawberry;* fruit is antiseptic, refrigerant, and antiscorbutic. **R. ba'tus**, R. cæsius. **R. cæ'sius**, *Dewberry plant;* fruit resembles the blackberry in appearance and properties; bark of the root of *American dewberry* or *Low blackberry* is astringent. **R. Canaden'sis**, see *R. cæsius.* **R. chamæmo'rus**, *Cloudberry tree, Cloudberries, Knotberries;* the ripe fruit is sometimes prepared as a jam, and used in fevers, etc. to allay thirst. It has been much extolled as an antiscorbutic. **R. flagella'ris**, see *R. cæsius.* **R. frambœsia'nus**, R. idæus. **R. frondo'sus**, R. fruticosus. **R. frutico'sus**, *Common bramble,* which affords *Blackberries, Brambleberries;* the berries are eaten as a summer fruit, of which they form a poor variety; bark of the root of the American blackberry, high or standing blackberry, hairy American bramble, is astringent, having been used in the last stages of dysentery and in cholera infantum. **R. idæ'us**, *Raspberry;* fruit of best varieties very agreeable, being much used. **R. ni'ger**, R. fruticosus. **R. occidenta'lis**, see *R. strigosus.* **R. panicula'tus**, R. fruticosus. **R. procum'bens**, see *R. cæsius.* **R. strigo'sus**, *Wild red raspberry* of the United States; leaves are a mild astringent, like those of *Rubus occidentalis, Black raspberry.* **R. trivia'lis**, see *Rubus cæsius.* **R. vulga'ris**, R. fruticosus.

Ruck'ing (*ructus*). Eructation.

Ructa'men (*ructo*, to belch). Eructation.

Ructatio, ruk-tah'she-o. Eructation.

Ructuositas, ruk-tu-os'it-as. Eructation carried to a morbid degree.

Ruc'tus. Eructation. **R. ac'idus**, acid eructation.

Rudbeck'ia lacinia'ta (after the Rudbecks of Upsal). *Coneflower, Thimbleweed.* Indigenous; order, Compositæ. Diuretic; having been given in nephritic affections.

Rud'dle, hard. Rubrica fabrilis.

Rudimental (ru-de-men'tal) or **Rudimen'tary** (*rudis*, rude, the first beginning). That which is but slightly developed.

Rudol'phia frondo'sa (after C. A. Rudolphia, a botanist of Jena). Butea frondosa.

Ruft (*rive, rived*). Eructation.

Ru'fus's pills. Pills of aloes and myrrh.

Ruga (pl. **Rugæ**). Wrinkle. Term especially applied to the rugæ of the stomach and vagina; also to ridges on bones for insertion of muscles and ligaments.

Ru'gæ pennifor'mes. Palmæ uteri plicatæ.

Rugi'tus (*rugio*, to roar). Particular species of borborygmus having a roaring sound.

Ru'gose (*ruga*, a wrinkle). Wrinkled.

Rugosity, ru-gos'it-e. Fold, wrinkle, or roughness.

Ru'gous. Wrinkled.

Rui'zia fra'grans. Species of Pneumus boldus, ord. Monimiaceæ. Evergreen shrub, native of Chili. Wood is used to make charcoal, and the bark for tanning purposes.

Rum. *Molasses spirit.* Spirit distilled from sugar or molasses. See *Spirit.* **R., bay**, spiritus myrciæ. **R. blos'som**, acne rosacea. **R. buds**, gutta rosea. **R. cher'ry**, Prunus Virginiana; choke-cherry.

Ruma, ru'mah. Mamma.

Ru'men. Paunch of animals. See *Plenalvia.*

Rumenotomy, ru-men-ot'o-me (*rumen, tome*, section). Operation of opening the rumen or paunch of animals in case of impaction, etc. of that organ.

Ru'mex acetosel'la (*ruma*, a teat, in allusion to the Romans sucking it to allay thirst). *Sheep sorrel, Field sorrel.* Indigenous Rumex (Ph. U. S.) is root of R. crispus and other species of Rumex; has similar virtues with **R. aceto'sus**, *Sour dock, Sorrel, Common sorrel*, ord. Polygonaceæ; leaves are sour, being used in cookery and also as a refrigerant. **R. acu'tus**, *Sharp-pointed wild dock;* decoction of the root has long been used in cutaneous affections; sometimes employed for the cure of the itch. **R. ætnen'sis**, R. scutatus. **R. alpi'nus**, the systematic name of the plant that affords Monk's rhubarb; see *Rumex patientia.* **R. aquat'icus**, Rumex hydrolapathum. **R. Britan'nica**, Rumex hydrolapathum. **R. confer'tus**, R. patientia. **R. cris'pus**, native of Europe, but common in America. **R. di'gynus**, Oxyria reniformis. **R. gigante'a**, *Vegetable mercury, Mudar, Muddar, Mudarrh;* bark of the root has a reputation in the East Indies for the treatment of leprosy, elephantiasis, etc. **R. glau'cus**, R. scutatus. **R. hasta'tus**, R. scutatus. **R. hastifo'lius**, R. scutatus. **R. hydrolap'athum**, *Water dock;* leaves of this plant are subacid, and said to be laxative. Root has been used as a tonic, astringent, and antiscorbutic; having also been employed externally in some cutaneous affections. **R. interme'dius**, R. acetosus. **R. obtusifo'lius**, *Blunt-leaved dock, Bitter dock;* root of this, as well as of **R. cris'pus**, *Curled* or *Sour* or *Yellow dock*—Rumex (Ph. U. S.)—has similar virtues to those of the other species, both being used in decoction in the same cases as sarsaparilla. **R. oxyo'tus**, R. scutatus. **R. paludo'sus**, R. acutus. **R. patien'tia**, *Patientia, Monk's rhubarb;* this root is supposed to possess the virtues of rhubarb, but in an inferior degree. **R. pusil'lus**, R. acutus. **R. sanguin'eus**, *Bloody dock* or *Bloody-veined dock;* root has an austere astringent taste, and has been employed in dysentery **R. scuta'tus**, *Roman* or *Garden sorrel, Green sauce, French sorrel;* virtues the same as those of the common sorrel. **R. tubero'sus**, R. acetosus.

Rumina'tion (*ruminatio*, chewing of the cud). Function peculiar to ruminating animals, by which they chew a second time the food they have swallowed. An analogous phenomenon is sometimes seen in man.

Ru'mis. Mamma.

Rum'met. Pityriasis.

Rump (D. *rump*, G. *rumpf*). The crupper; the region of the coccyx; the buttocks. **R. bone**, coccyx.

Run'ches. Sinapis arvensis.

Runcina, run-se'nah (a plane). Raspatorium.

Runcinula, run-sin'u-lah (dim. of **Runcina**). Raspatorium.

Run'net. Rennet.

Run'ning. Succession of leaps, executed rapidly, to transport the body from one point to another. Pathologically, a discharge of pus. Rennet.

Run'round. See *Paronychia.*

Rupes, ru'pees (cliffs). Lips of the vulva. See *Lip.*

Rupia, ru'pe-ah (*rhupos*, filth). An eruption of large flattish blebs, which contain a fluid—at first serous, afterward puriform, and often bloody—which rapidly concretes into crusts, at the base of which are ulcers of variable depths. If the spots are of inconsiderable size, it is called rupia simplex; if the crusts are large and prominent, rupia prominens. **R. cachec'tica**, Pompholyx epinyctis. **R. escharot'ica**, known in Ireland under the names white blisters, eating hives, and burnt holes. An affection which bears a close similarity to pemphigus, particularly in the absence of a thick rugous crust, while in its chief feature, that of ulceration, it evidently belongs to rupia. **R. prom'inens**, see *Rupia.* **R. sim'plex**, see *Rupia.* **R. syphilit'ica**, a term used to designate the thickly-stratified crusts of flat pustular syphilitic skin lesions.

Rupial, ru'pe-al. Appertaining or relating to rupia.

Ruptibilitas, rup-te-bil'it-as (*rumpo, ruptum*, to break, *habilis*, able). Fragility.

Ruptilitas, rup-til'it-as. Fragility.

Ruptio, rup'she-o (*rumpo*, to break). Rupture of a vessel or organ.

Rupto'rium (*rumpo, ruptum*, to break). Cauterium. **R. commu'ne**, potassa fusa.

Ruptura, rup-tu'ra (*rumpo, ruptum*, to break). Hernia; laceration; rupture of a vessel or organ. **R. arte'riæ**, aneurism. **R. co'rneæ**, ceratorrhexis. **R. hernio'sa**, hernia. **R. ova'rii**, oariorrhexis. **R. u'teri**, rupture of the uterus. **R. vagi'næ**, colporrhexis.

Rup'ture (*rumpo*, to break or burst). Hernia; rhexis. **R. of the groin**, bubonocele. **R. of the**

heart, cardiorrhexis. **R. herb or wort**, Herniaria glabra.

Rup'tured. See *Hernial.*

Rus'cus. *Wild myrtle, Centromyrine, Butcher's broom.* Ord. Smilaceæ; root has been recommended as aperient and diuretic. **R. aculea'tus**, ruscus, belonging to ord. Asparagineæ. European shrub, *Butcher's broom, Knee holly.* Root is officinal; possesses diuretic virtues. **R. hypoglos'sum**, formerly used against relaxed uvula.

Rush, sweet. Acorus calamus; Juncus odoratus. **R., u'terine**, bruit placentaire.

Rus'ma. See *Orpiment.*

Rusot. See *Oxycantha Galeni.*

Rus'sian. Relating to or derived from Russia. **R. cas'tor**, kind of castor gotten from the Russian beaver; is better than the Canadian variety. **R. i'singlass**, officinal isinglass. **R. lic'orice root**, radix liquiritiæ mundata; more bitter than Spanish licorice. **R. mus'tard**, the seeds of Sinapis juncea, grown in south of Russia. **R. rhu'barb**, Chinese rhubarb, formerly taken overland into Russia and exported thence.

Rust. Hydrates, carbonates, and oxides which collect on metallic surfaces. Species of uredo growing on stalks of several cereals.

Rus'wut. See *Oxycantha Galeni.*

Rut. Heat.

Ru'ta. *Common rue;* ord. Rutaceæ. The plant has a strong, ungrateful odor, and bitter, pungent taste. It is so acrid as to blister the skin. Its properties are reputedly tonic, stimulant, antispasmodic, and emmenagogue. The leaves are officinal—*Ruta* (Ph. U. S.). *Oleum rutæ* (Ph. U. S.), distilled oil of rue, is antispasmodic; externally, rubefacient; dose, gtt. ij–vj. **R. al'tera**, ruta. **R. capra'ria**, Galega officinalis. **R. grave'olens**, ruta. **R. horten'sis**, ruta. **R. mura'ria**, Asplenium ruta muraria.

Rutab'ulum. Penis.

Ruta'ceum (*ruta*). Vinegar of rue.

Ruth'erford's solu'tion. Solution for hardening and decalcifying specimens of tissues, consisting of chromic acid 1 grm., water 200 c.c., with 2 c.c. of nitric acid.

Ru'tic ac'id. Capric acid.

Rutido'ma. See *Rutidosis.*

Rutido'sis (*rhutidoo*, to wrinkle). Act of wrinkling; as *Rutidoma* means a shrivelled or wrinkled body. Destruction or atrophy of the eye. Corrugation and subsidence of the cornea.

Ru'tilin. Resinoid substance created by the chemical reaction between sulphuric acid and salacin.

Rut'ting. Sexual excitement in female animals at time of rupture of the ovisacs.

Ruysch (Dutch anatomist, 1638–1731), **glom'erules of.** Malpighian corpuscles. **R., u'terine mus'cle of**, fibres at the fundus, according to R., having independent action.

Ruyschiana tunica, rish-e-an'ah tu'nik-ah. According to Ruysch (pron. *Risch*) and the greater part of his disciples, the choroid coat of the eye is formed of two laminæ. *Tunica cellulosa Ruyschiana* is the areolar substance under the peritoneal covering of the stomach. It is not usually numbered among the coats of that organ, although in an exact study of the stomach it might be so regarded.

Rye. Secale. **R., horned**, ergot. **R., Rob'in's**, Polytrichum juniperinum. **R., spurred**, ergot.

Rytidosis, rit-id-o'sis. Rutidosis.

Ry'tis (*rhutis*). Wrinkle.

S.

S., S. a., etc. See *Abbreviation.*

Sabadil'la (Ph. B.). Dried ripe seeds of Schœnocaulon officinale. Veratrum sabadilla. See *Veratrina.*

Sabadillin, sab-ad-il'lin. See *Veratria.*

Sabadilline, sab-ad-il'leen. See *Veratria.*

Sa'bal serrula'ta. *Saw palmetto.* Grows in Southern States; sedative, diuretic, expectorant, and nutritive. Given in laryngeal and bronchial troubles, asthma, ozæna, etc.

Sabatil'la. Veratrum sabadilla.

Sab'atrine. $C_{102}H_{86}N_2O_{34}$. An alkaloid derived from cevadilla.

Sabbatia, sab-bat'e-ah (after *Sabbati,* an Italian botanist). Chironia angularis. **S. angula'ris,** Chironia angularis. **S. Elliot'ii,** quinine flower. Plant of ord. Gentianaceæ, whose habitat is Florida. Flower is antiperiodic. Glucoside *Sabbatia* has been obtained from it.

Sabina (Ph. U. S.), sab-e'nah. Tops of Juniperus sabina. See *Juniperus sabina.*

Sabinæ cacumina, sab-e'ne kak-u'min-ah. Juniperus sabina.

Sab'ine. Juniperus sabina.

Sabu'cus. Sambucus.

Sabulous, sab'u-lus (*sabulum,* sand). Sandy deposit often seen in the urine.

Sab'ulum cona'rii. See *Pineal gland.*

Sabu'ra. Saburra.

Sabur'ra (coarse sand or ballast). Commonly it means foulness of the stomach, from vitiated matters supposed to be retained and accumulated in the stomach—the result of imperfect digestion—and which have been sometimes considered as a morbid product of the mucous secretion of that organ or of the biliary secretion; at others, as a residuum from alimentary substances badly digested. The *Saburral condition* or *state* is an accumulation of saburræ in the stomach, which the humorists considered the cause of a number of diseases. **S. vermino'sa,** helminthiasis.

Sabur'ral. Relating or appertaining to saburræ. **S. fe'ver,** fever with much gastric disorder, coated tongue, and sordes.

Saburratio, sab-ur-rah'she-o. Arenation.

Sac. See *Sack.* **S., hernial,** an envelope or pouch, formed by the serous membrane of the cavity, whence the viscus has escaped. We distinguish, in a hernial sac, its orifice or the opening by which it communicates with the great cavity lined by the serous membrane; its cervix or neck, the narrow portion on the outside of the orifice, where strangulation sometimes occurs; the body, which is the round, prominent part; and the fundus or bottom, the part opposite to the orifice. **S., lac'rymal,** see *Lacrymal puncta.* **S. of the omen'tum,** see *Epiploon, gastrohepatic.* **S., se'rous,** the shut cavity formed by any serous membrane, as by the pleura or peritoneum.

Saccated, sak'ka-ted (*saccus,* a sac). Encysted. Also pouched, as the colon. *Sacculated,* a diminutive of saccated.

Sacchar, sak'kar. Saccharum.

Sac'charate of lime. Calcaria saccharata.

Saccharated, sak'ar-a-ted (*saccharum*). Made from or containing sugar. **S. car'bonate of iron,** a mixture of ferric oxide, ferrous carbonate, and sugar. **S. fer'rous i'odide,** consisting of ferrous iodide and sugar of milk, which prevents oxidation of the iron salt. **S. i'ron,** reddish-brown mixture of ferric hydrate and sugar, soluble in water. **S. pep'sin,** consisting of pepsin and sugar of milk.

Saccharephidrosis, sak-ar-ef-id-ro'sis. Sweet perspiration, a form of hyperidrosis.

Sac'chari fæx (dregs of sugar). Molasses.

Saccharic (sak'ar-ik) **ac'id.** $C_6H_{10}O_8$. Acid made by action of nitric acid upon sugar. It is colorless, amorphous, and deliquescent.

Saccharif'erous (*saccharum, fero,* to carry). Consisting of or containing sugar.

Saccharifica'tion (*saccharum, facio,* to make). Process of conversion of starch into sugar.

Saccharin, sak'ar-in. Orthosulphamidobenzoic anhydride; sulphinide of benzoic acid. White crystalline powder with a very sweet taste, derived from coal-tar; nearly three hundred times sweeter than sugar. Used in diabetes, cystitis, urethritis, and gastro-hepatic disorders; antiseptic.

Saccharina, sak-ar-e'nah. Saccharoles.

Saccharine, sak'ar-in (*saccharum,* sugar). Having the nature of, or containing, sugar.

Sac'charogen. Substance existing in milk. Lactose is formed from it. It is not identical with glycogen.

Saccharogenesis, sak-ar-o-jen'es-is (*saccharum, genesis,* production). The process of sugar formation.

Saccharogummita, sak-ar-o-gum'mit-ah (*saccharum, gummi*). Sweet principle of glycyrrhiza.

Saccharometer, sak-ar-om'e-ter (*saccharum, metron,* measure). Hydrometer adapted for determining the density of syrups. See *Areometer.*

Saccharomyces, sak-ar-om'is-ees (*saccharum, mukes,* fungus). Unicellular organism belonging to a genus of ascomycetous Fungi, and including the active fungus of yeast and urine. These fungi multiply by process of budding, and sometimes by endogenous cell-formation, and are present most commonly in alcoholic fermentation. **S. al'bicans,** oïdium albicans of thrush. **S. apicula'ta,** existing upon various berries, including the gooseberry. **S. cerevis'iæ,** the fungus of brewer's yeast. **S. ellipsoï'deus,** the ordinary ferment of urine. **S. exig'uus,** present in syrups undergoing fermentation. **S. mi'nor,** microbe of baker's yeast, according to Engel. **S. mycoder'ma,** S. albicans. **S. Pasteuria'nus,** a species found in low fermentation.

Saccharorrhœa, sak-ar-or-rhe'ah (*saccharum, rheo,* to flow). Glycyrrhœa. **S. cuta'nea,** sweet sweat; see *Sudor dulcis.* **S. lac'tea,** a secretion of unusually sweet milk. **S. pulmona'lis,** the copious expectoration of unusually sweet matter from the lungs. **S. urino'sa,** diabetes mellitus.

Saccharo'ses. See *Saccharum.*

Saccharure, sak'ar-ure. *Saccharuretum.* Term applied to a preparation made by saturating sugar with a tincture, and drying and powdering the mixture.

Saccharum, sak'ar-um (*sakchar, saccharum,* sugar). *Sugar.* The produce of the juice of sugar-cane, ord. Gramineæ, and also of the beet, maple, Chinese sugar-cane, etc., is refined sugar. *True sugars* are those with which alcoholic fermentation may be effected by the addition of yeast and water. They are: Hard sugar of the cane, maple, beet, chestnut, etc.; liquid sugar, sugar of malt, of the sweet potato, molasses, honey, etc.; hard sugar of the grape, ripe fruits, starch, diabetes, etc.; and hard sugar of the mushroom. Imperfect sugars are those in which alcoholic fermentation cannot be affected by means of yeast and water, as manna, sugar of milk, sugar of jelly or glue, licorice, picromel. Sugar, cane-sugar, is prepared from the expressed juice of the sugar-cane, boiled with the addition of quicklime or common vegetable alkali. It is used in pharmacy for the preparation of syrups, conserves, lozenges, etc. It is nutritious, is employed as an aliment, and as a eutrophic demulcent and antiseptic. Dissolved in small quantities in water, as in tea, it is apt to disagree with dyspeptics—an evil which does not always occur when the same substance is taken more largely. *Liver* or *Hepatic sugar* has been found a normal formation by the liver. It is more readily assimilated than other varieties of

sugar. See *Glucose* and *Glycogenic matter*. According to Tolleus, the various sugars may be thus classified, being arranged in groups, mainly according to their chemical composition:

CLASSIFICATION OF SUGARS.

I. *Monosaccharides* or *Glucoses*, $C_6H_{12}O_6$.	II. *Disaccharides* or *Saccharoses*, $C_{12}H_{22}O_{11}$.	III. *Polysaccharides*.
Dextrose, } Invert sugar. Levulose, }	Cane-sugar.	*a. Crystallizable polysaccharides.*
Mannitose.	Milk-sugar.	Raffinose, $C_{36}H_{64}O_{32} + 10H_2O$.
Galactose.	Maltose.	Lactosin, $C_{36}H_{64}O_{31}$.
Sorbin or Sorbose.	Trehalose.	*b. Uncrystallizable* or *difficultly crystallizable polysaccharides.*
	Melezitose.	Starch-derivatives belonging to dextrose group.
		Inulin-derivatives belonging to levulose groups.
		Gums and mucilages, yielding galactose, arabinose, etc.
		Cellulose.
		Pectin substances.

S. acer'num, *S. Canadense, Maple sugar;* often used as a demulcent. **S. al'bum**, *White sugar, Refined sugar*, is loaf-sugar; *Double-refined sugar* has been called tabarzet; see *Saccharum*. **S. alumina'tum**, equal parts of white sugar and alum, powdered; used as a styptic. **S. can'didum**, *Nabot, Sugar candy, Sugar candied*, is the crystallized juice of the cane. **S. can'dum**, S. candidum. **S. can'thum**, S. candidum. **S. can'tum**, S. candidum. **S. commu'ne**, saccharum non-purificatum. **S. hordea'tum**, *Barley sugar*, is a variety of sugar candy. **S. lac'tis** (Ph. U. S.), $C_{12}H_{22}O_{11},H_2O$; crystalline sugar from whey of cow's milk by evaporation and purification by recrystallization; sugar of milk. **S. non-putrifica'tum**, *Raw, Crown*, or *Moist sugar*, is coarse sugar. **S. officina'rum**, see *Saccharum*. **S. penid'ium**, S. hordeatum. **S. purifica'tum**, see *Saccharum*. **S. rosa'ceum**, confectio rosæ Gallicæ. **S. satur'ni**, plumbi superacetas.

Sac'ci (pl. of **Saccus**) **co'li**. See *Colon*.

Sacciform, sak'se-form. Having the form of a sac; sac-shaped. **S. disease of the a'nus**, see *Rectal pouches*.

Sac'cular glands. Glands the acini of which are sacciform.

Sacculated, sak'u-la-ted. Encysted. See *Saccated*.

Sacculatus, sak-u-lat'us. Encysted. See *Saccated*.

Sacculi (sak'u-le) (pl. of **Sacculus**) **adipo'si**. Fatty vesicles. **S. chalico'phori**, see *Lacunæ of bone*. **S. larynge'i**, ventricles of the larynx. **S. medicina'les**, bags containing medicinal substances. **S. medulla'res**, see *Medullary membrane*.

Sacculus, sak'u-lus (dim. of **Saccus**, a sac). This name has been given to two sacs formed by the membranous vestibule which open into each other and contain the otolithi and otoconia; one of these is termed the sacculus vestibuli; the other, sacculus. See *Semicircular canals*. Marsupion. **S. cephal'icus**, cucupha. **S. chy'lifer**, receptaculum chyli. **S. commu'nis**, see *Semicircular canals*. **S. cor'dis**, pericardium. **S. ellip'ticus**, see *Semicircular canals*. **S. hemiellip'ticus**, see *Semicircular canals*. **S. lactif'erus**, see *Lactiferous vessels*. **S. laryn'gis**, a cæcal pouch of variable size formed by the mucous membrane in the ventricles of the larynx. Its laryngeal surface is covered by the arytæno-epiglottideus inferior muscle or compressor sacculi laryngis (muscle of Hilton). **S. medicina'lis**, medicated pillow, as of hops. **S. oblon'gus**, see *Semicircular canals*. **S. pro'prius**, see *Semicircular canals*. **S. ror'ifer**, receptaculum chyli. **S. rotun'dus**, see *Semicircular canals*. **S. semiova'lis**, see *Semicircular canals*. **S. sphæ'ricus**, see *Semicircular canals*. **S., ves'ical**, see *Bladder, sacculated*. **S. vestib'uli**, semicircular canals; see *Sacculus*.

Sac'cus. Sac. **S. cæ'cus**, see *Stomach*. **S. cæ'cus co'li**, cæcum. **S. co'li**, cæcum. **S. cor'dis**, pericardium. **S. epiplo'icus**, epiploon. **S. hernio'sus**, hernial sac. **S. intesti'ni cras'si**, cæcum. **S. lacryma'lis**, lacrymal sac. **S. lac'teus**, receptaculum chyli. **S. muco'sus**, see *Bursæ mucosæ*. **S. peritonæ'i retroventricular'is**, see *Epiploon, gastrohepatic*. **S. pleu'ræ**, pleura. **S. vena'rum cava'rum**, sinus dexter cordis. **S. vena'rum pulmona'lium**, sinus pulmonalis. **S. ventric'uli**, see *Stomach*.

Sa'cer (sacred, holy). Sacral. **S. ig'nis**, herpes zoster; erysipelas. **S. mor'bus**, epilepsy. **S. mus'culus**, transversalis dorsi or longissimus dorsi.

Sacerdotis (sas-er-do'tis) **pe'nis**. Arum maculatum.

Sack. A dry wine used by our ancestors, probably sherry. A bag or pouch. **S. pos'set** (*sack, posset*), a posset made of sack, milk, and other ingredients. **S. whey**, wine whey.

Sac'ra fis'tula. Vertebral column.

Sa'crad. See *Sacral aspect*.

Sa'cral. That which belongs or relates to the sacrum. Name given to several parts. **S. ar'teries** are distinguished into: 1. The *Anterior* or *Middle sacral, Median artery of the sacrum*, which arises from the posterior part of the abdominal aorta, in front of the 4th lumbar vertebra; descending in a serpentine manner upon the sacrovertebral articulation and on the anterior surface of the sacrum, furnishing many lateral branches, which unite with the lateral sacral arteries, and enter the anterior sacral foramina, to be distributed to the membranes of the marrow, etc. 2. The *Lateral sacral arteries*, which are two in number, one on each side. They arise from the hypogastric, from the iliolumbar, or from the gluteal, and descend before the anterior sacral foramina, anastomosing in an arched manner, toward the coccyx, with the middle sacral. They give off external and posterior branches, which enter the sacral foramina; and internal branches, which are distributed to the pyramidalis, sacrum, etc. **S. as'pect**, aspect toward the region where the sacrum is situate (Barclay). *Sacrad* is used by the same writer adverbially to signify "toward the sacral aspect." **S. extrem'ities**, the lower limbs. **S. grooves**, two longitudinal excavations, slightly marked, at the posterior surface of the sacrum, which appear to terminate the vertebral grooves or gutters. **S. in'dex**, breadth of sacrum multiplied by 100 and divided by its length. **S. nerves** are generally six in number. They arise from the termination of the spinal marrow. The first, united with the great cord which descends from the lumbar plexus, concurs with the three others in forming the sacral or sciatic plexus. The third and fourth, with branches of the great sympathetic, form the hypogastric plexus. The fifth and sixth (*coccygeal nerve*) are distributed to the ischiococcygeus muscle and to the sphincter and levator ani. **S. plex'us**, *Sciatic plexus*—the *sacral portion of the crural plexus* of Chaussier—constituted as just mentioned, is situate in front of the pyramidalis. It gives off, backward, two branches, called the pudic and the lesser sciatic. It terminates in the great sciatic nerve.

Sacra'to. The species of mulatto nearest to pure negro type. See *Mulatto*.

Sa'cred bark. Cascara sagrada; dried leaves of Rhamnus Purshianus. **S. bean**, nelumbo.

Sa'cro. In composition, relating or belonging to the sacrum.

Sacrococcygeal, sak-ro-kok-se-je'al. Relating to the sacrum and coccyx. **S. articula'tion** is that of the lower extremity of the sacrum with the superior facette of the coccyx. It is closed by two ligaments—anterior and posterior sacrococcygeal.

Sacrocostalis, sak-ro-kos-tal'is (*costa,* rib). Sacrolumbalis.

Sacrocoxal'gia (*sacro, coxa,* hip, *algos,* pain). Rheumatic affection of the sacro-iliac symphysis.

Sacrofem'oral. Glutæus major.

Sacro-iliac, sak'ro-il'e-ak. That which relates to the sacrum and ilium. **S.-i. articula'tion, sym'physis,** or **synchondro'sis,** iliosacral articulation, symphysis, or synchondrosis, is the union of two surfaces—two inclined planes, broader above than below, one formed by the sacrum, the other by the ilium. Both surfaces are encrusted by an articular cartilage. The bands strengthening them are the two sacrosciatic ligaments, the sacrospinal, a sacro-iliac ligament, and some irregular fibres. The sacro-iliac ligament is a very thick assemblage of short, dense, irregular fibres, occupying the space which the sacrum and ilium leave between them behind their articular surface. Some authors have termed some irregular fibres situate in front of the sacro-iliac articulation anterior sacro-iliac ligaments, in opposition to the preceding fasciæ, which they call posterior sacro-iliac. **S.-i. disease,** a painful acute or chronic inflammatory condition of the sacro-iliac articulation, dependent on local injury, accidents of pregnancy or parturition, or strumous diathesis.

Sacro-ischiatic, sak'ro-is-ke-at'ik. Sacrosciatic.

Sacrolumba'lis. Sacrolumbar.

Sacrolum'bar. That which belongs to the sacrum and loins. **S. mus'cle,** *Dorsotrachelian portion of the sacrospinal* of Chaussier; seated at the posterior part of the trunk, is thick and triangular below, flat and thin in the remainder, and terminates in a point at the upper extremity. It is attached to the posterior surface of the sacrum, to the corresponding portion of the crista ilii, to the extremities of the transverse processes of the lumbar vertebræ, to the angles of the eleven inferior ribs, to the tuberosity of the first and the posterior tubercle of the transverse processes of the last five cervical vertebræ. The sacrolumbalis straightens the vertebral column when bent forward, maintaining it straight. By means of its insertion into the ribs it can elevate or depress these bones according as it contracts from above to below or from below to above. It acts, consequently, sometimes as an inspiratory, at others as an expiratory muscle. From six or eight of the lower ribs arise an equal number of fleshy portions which terminate at the inner side of this muscle. From the upper part of the sacrolumbalis a fleshy slip runs up, to be fixed to the transverse processes of the fourth, fifth, and sixth cervical vertebræ by three distinct tendons. These last parts, though separated by some anatomists, belong to the sacrolumbalis.

Sacrome'dian ar'tery. Middle sacral artery.

Sacropectine'al diam'eter. One of the pelvic diameters.

Sacrosciatic, sak-ro-si-at'ic. That which belongs to the sacrum and ischium. **S. lig'aments** are two ligaments which assist in securing the sacro-iliac articulation. The great or posterior sacrosciatic ligament extends from the crista ilii and the sides of the sacrum and coccyx to the tuberosity of the ischium. The less or anterior sacrosciatic ligament arises from the same point, and terminates in the spine of the ischium.

Sacrospi'nal. Relating to the sacrum and spine. Dorsotrachelian portion of the sacrolumbalis.

Sacrospina'lis. Relating to the sacrum and spine. It includes the sacrolumbalis, longissimus dorsi, transversalis, transversospinalis, and intertransversalis muscles, and is divided into three portions, the erector spinæ, extensor dorsi communis, lumbocostalis.

Sacrovertebral, sak-ro-vur'te-bral. That which relates to the sacrum and the vertebræ. **S. articula'tion** is the junction of the last vertebræ of the loins with the sacrum. The angle which these two bones form at the anterior part has been called the promontory of the sacrum or the sacrovertebral angle. **S. lig'ament** is a strong ligament which passes from the anterior part of each of the transverse processes of the last lumbar vertebra to be attached to the base of the sacrum. Its use is to maintain the articulation of those two bones *in situ.*

Sa'crum (neuter of **Sacer**) (*sacer,* sacred, because it contributes to protect the genital organs, which were considered sacred, or because it was offered in sacrifice). *Crossbone.* The bone forming the posterior part of the pelvis and a continuation of the vertebral column. The sacrum is symmetrical and triangular, situate at the posterior part of the pelvis, and concave anteriorly. It has: 1. A pelvic or anterior surface, which corresponds to the pelvic cavity, and has four transverse furrows pointing out the parts where the primitive portions of the bone were separated from each other. On each side there are four foramina, called anterior sacral; these are oblique, decreasing in size from above downward. Through them pass the anterior branches of the sacral nerves. 2. A spinal or posterior surface, convex, rough, and covered by muscles. Upon the median line are four horizontal tubercular eminences, forming a continuation of the spinous processes of the vertebræ; and below, a triangular notch, where the sacral canal terminates. On each side of the surface are four foramina, called posterior sacral, which are smaller than the anterior, and give passage to the posterior branches of the sacral nerves. 3. The vertebral surface or base. Its greatest extent is transversely. It is articulated with the last lumbar vertebra. On it is seen the orifice of the sacral canal, of a triangular shape, and decreasing in width from above downward, terminating the vertebral canal; being lined by a prolongation of the cerebral membrane; containing the fasciculi of the sacral nerves; communicating externally by the sacral foramina; and terminating at the triangular notch on the posterior surface of the bone. At the sides of the upper orifice of the sacral canal are two articular processes, which receive the articular processes of the last lumbar vertebra. The projection formed by the union of the base of the sacrum with the last lumbar vertebra is called the promontory, great angle of the sacrum, or sacrovertebral angle. 4. A coccygeal face or apex, which is very narrow, being articulated with the coccyx. 5. Two lateral margins, having above a broad, oblique surface, articulated with the ilium.

Sacs of peritone'um. Two cavities, the greater and lesser, communicating by the foramen of Winslow, developed from original right and left symmetrical cavities.

Sad'dle, Turk'ish. Sella Turcica.

Sad'dle-head. Clinecephalus.

Saddle-joint. Articulation composed of two surfaces, one concave, the other convex, as the carpometacarpal joint of thumb.

Sad'dle-nose. A nose with bridge depressed, due to necrosis of the nasal bones.

Sad'ism (after Marquis de Sade, a French writer, who wrote novels filled with tales of obscenity, cruelty, etc.). Sexual perversion in which a member of one sex has sensual gratification in domineering, even by force or cruelty, the other sex. Opposite condition to masochism. See *Masochism.*

Sadis'tic. Related to sadism, as a sadistic act.

Sænger's operation. See *Sänger.*

Sæpes, se'pees. Sepes.

Saf'flow. Carthamus tinctorius.

Saf'flower. Carthamus tinctorius.

Saf'fron. Crocus. **S., bas'tard,** Carthamus tinctorius. **S., dy'er's,** Carthamus tinctorius. **S. flow'er,** Carthamus tinctorius. **S., mead'ow,** Colchicum autumnale.

Saf'ranum. Carthamus tinctorius.

Saf'rol. $C_{10}H_{10}O_2$. Chief constituent of sassafras oil.

Sa'ga. Midwife. In ancient Rome the sagæ exercised, also, the calling of magicians, procuresses, perfumers, and abortionists. Also sago.

Sag'aban. Apios tuberosa.

Sagapenum. sag-ah-pe'num (*sagapenon*). A gum-resin, supposed to be obtained from the Ferula Persica,

ord. Umbelliferæ. Odor fetid and alliaceous, taste pungent, bitterish, nauseous. It is reputed antispasmodic and emmenagogue.

Sag'apin. Sagapenum.

Sage. Salvia. **S., In'dian,** Eupatorium perfoliatum. **S., Jeru'salem,** pulmonaria. **S. tea,** infusum salviæ. **S. tree,** lantana. **S., wild,** Salvia Africana; S. lyrata.

Sage femme (Fr.). Midwife.

Sagena, sag-e'nah (*sagene,* seine). Epiploon.

Sagimen vitri, saj-e'men vit're. Sodium subcarbonate.

Sagittal, saj-it'tal (*sagitta,* arrow). Arrow-shaped. **S. circum'ference of skull,** taken from nasion to opisthion on the surface; from opisthion to basion; from basion to nasion. **S. fur'row** or **groove** is a channel on the median line of the inner surface of the skullcap. It is excavated in the os frontis and in the two parietal and occipital bones, extending from the crista galli to the internal occipital protuberance. It lodges the longitudinal sinus, which has been called the sagittal sinus. **S. nu'cleus,** nucleus of oculomotor nerve. **S. plane,** median plane of the body. **S. semicir'cular canal',** posterior semicircular canal. **S. si'nus,** see *Sagittal furrow.* **S. su'ture,** *Biparietal suture;* suture uniting the parietal bones, and extending from before to behind on the median line from the coronal suture to the lambdoidal. It is so called from *sagitta,* an arrow, because seeming to meet the coronal suture as an arrow meets the string of a bow.

Sagittaria variabilis, sa-git-tah're-ah vah-re-ab'il-is (*sagitta,* arrow, owing to the prevalent form of the leaves). *Arrowhead, Arrôwleaf, Arrow-weed, Wapata* of Oregon. Ord. Alismaceæ. Esculent, yielding fecula-like arrow root. The roots are cooling and subastringent, and are at times applied to the feet in cases of yaws and dropsical swellings of the legs. The leaves are applied to the breasts to dispel milk.

Sagittarium (saj-it-tah're-um) **alexiphar'macum.** A root cultivated in the West Indies; supposedly a remedy for wounds by poisoned arrows.

Sagitta'tus. Sagittal.

Sa'go (*saga* is the Malay name for various plants). A fecula obtained from the pitch of the Sagus Rumphii, Cycas circinalis, C. revoluta, etc., growing in the Moluccas, Philippine Isles, etc., being imported in small grains. The same substance is also obtained from the West Indies, but is inferior to that from the East. By boiling in water or milk, sago becomes soft and transparent, forming an agreeable, nutritious food in febrile, calculous, and other disorders. It is made palatable by sugar, lemon-juice, or wine where the last is not contraindicated. To make sago into a proper mucilage for the sick, a tablespoonful should be macerated in a pint of water for two hours, and then boiled for fifteen minutes, stirring assiduously. Care must be taken that the grains are perfectly dissolved by long boiling and constant stirring. It is a good restorative. **S., French,** see *Solanum tuberosum* and *Arrowroot, common.* **S., Port'land Island,** see *Arum maculatum.* **S. spleen,** amyloid degeneration of the Malpighian corpuscles of the spleen, resembling boiled sago.

Sagra'da. Cascara sagrada.

Sa'gu. Sago.

Sague'rus Goma'to. See *Toddy.* **S. Rum'phii,** see *Toddy.* **S. sac'charifer,** see *Toddy.*

Sa'gus. Sago. **S. Rum'phii,** see *Sago.*

Sahara. Insomnia.

Saint Ag'atha's disease'. Mammitis.

Saint Aignon's disease'. Tinea.

Saint An'drew's cross. Ascyrum crux Andreæ. An indigenous herb, used as a local discutient application.

Saint An'thony's fire. Erysipelas.

Saint Appolonia's disease'. Pains in the teeth and jaws.

Saint Avertin's disease'. Epilepsy.

Saint Barthol'omew's tea. Paraguay tea.

Saint Blase's disease'. Quinsy or sore throat.

Saint Charles's root. Carlo sancto (radix).

Saint Clair's disease'. Ophthalmia.

Saint Dymphna's disease'. Insanity.

Saint Eras'mus's disease'. Colic.

Saint Fia'cre's disease'. Hemorrhoids or painful vegetations around the anus.

Saint Giles's disease'. Cancer.

Saint Goth'ard's disease'. Anæmia.

Saint Guy's dance. Chorea.

Saint Hu'bert's disease'. Hydrophobia.

Saint Igna'tius' bean. Ignatia (Ph. U. S.).

Saint James's wort. Senecio Jacobæa; Thlaspi bursa.

Saint Job's disease'. Syphilis.

Saint John Long's lin'iment. Stokes's liniment.

Saint John's dance. See *Mania, dancing.* **S. John's evil,** epilepsy. **S. John's head,** fruit of Ceratonia siliqua; used as demulcent and expectorant. **S. John's wort,** flowering tops of Hypericum perforatum; used as a remedy for chronic catarrh and intermittent fever, and as a discutient.

Saint Laz'arus's disease'. Leprosy; measles of the hog or tinea.

Saint Main's disease'. Scabies.

Saint Mar'tin's evil. Alcoholism.

Saint Ma'ry's this'tle. *Carduus marianus.* An old popular remedy in hæmoptysis.

Saint Math'urin's disease'. Insanity; epilepsy.

Saint Roch's disease'. Bubo.

Saint Se'ment's disease'. Syphilis.

Saint Vi'tus's dance. Chorea. See *Mania, dancing.* **S. Vi'tus's dance of the voice,** balbuties; stuttering or stammering.

Saint Zach'ary's disease'. Dumbness.

Saire. Essera.

Sa'ki. See *Spirit.*

Sal. Salt. **S. absin'thii,** potassii subcarbonas; see *Potash.* **S. acetosel'læ,** potassium oxalate **S. aceto'sus ammoniaca'lis,** liquor ammonii acetatis. **S. ac'idum ben'zoës,** benjamin. **S. aëra'tus,** see *Potassii carbonas.* **S. al'bus,** sodium muriate. **S. al'embroth,** alembroth salt. **S. al'kali,** sodium subcarbonate. **S. alkali'nus fix'us fos'silis,** soda. **S. ama'rum,** magnesii sulphas. **S. ammo'niac volat'ile,** ammonii carbonas. **S. ammoni'acum,** ammonii chloridum. **S. ammoni'acum martia'le,** ferrum ammoniatum. **S. ammoni'acum secre'tum Glauberi,** ammonii sulphas. **S. ammoni'acum tartar'eum,** ammonii tartras. **S. ammoni'acum vegetab'ile,** liquor ammonii acetatis. **S. ammoni'acus,** ammonii chloridum. **S. ammoni'acus nitro'sus,** ammonii nitras. **S. ammo'niæ,** ammonii chloridum. **S. Anglica'num,** magnesii sulphas. **S. An'glicum,** magnesii sulphas. **S. anti-epilep'ticus of Weiss'man,** cuprum ammoniatum. **S. antimo'nii,** antimonium tartarizatum. **S. Armeni'acum,** ammonii chloridum **S. ar'tis,** alembroth salt. **S. asphalti'tis,** bit noben. **S. cathar'ticus ama'rus,** magnesii sulphas. **S. cathar'ticus Glauberi,** sodium sulphate. **S. commu'nis,** sodium muriate **S. cor'nu cer'vi volat'ile,** ammonii carbonas. **S. culina'ris,** sodium chloride. **S. digesti'vus Syl'vii,** potassii chloridum. **S. diuret'icus,** potassii acetas. **S. de duo'bus,** potassii sulphas. **S. Ebsdamen'se,** magnesii sulphas. **S. enix'um,** potassii supersulphas. **S. Epsomen'sis,** magnesii sulphas. **S. essentia'le ben'zoës,** benjamin. **S. essentia'le cort'icis Peruvia'ni,** quinine. **S. febrif'ugus of Lem'ery,** potassii supersulphas. **S. febrif'ugus Syl'vii,** potassii murias. **S. fon'tium,** sodium muriate. **S. fos'silis,** sodium muriate. **S. fulig'inis,** ammonii carbonas. **S. gem'mæ,** sodium muriate. **S. herba'rum,** potassii subcarbonas. **S. in'dus,** saccharum album. **S. lixivio'sum,** see *Lixivium.* **S. lu'cidum,** sodium muriate. **S. mari'nus,** sodium muriate. **S. mar'tis,** ferri sulphas. **S. mar'tis muriat'icum sublima'tum,** ferrum ammoniatum. **S. mirab'ile perla'tum,** sodium phosphate. **S. mirab'ilis Glauberi,** sodium sulphate **S. muriat'icum barot'icum,** baryta, muriate of. **S. ni'trum,** potassii nitras. **S. os'sium,** ammonii carbonas. **S. panchres'tum,** po-

tassii tartras. **S. pe'træ**, potassii nitras. **S. plum'bi**, plumbi superacetas. **S. polychres'tum Seignet'ti**, sodium tartrate. **S. polychres'tus**, potassii sulphas. **S. polychres'tus Glace'ri**, potassii sulphas cum sulphure. **S. prunel'læ**, potassii nitras fusus sulphatis paucillo mixtus. **S. Rupellen'sis**, sodium tartrate. **S. sapien'tiæ**, alembroth salt, potassii sulphas. **S. satur'ni**, plumbi superacetas. **S. scien'tiæ**, alembroth salt. **S. secre'tus Glauberi**, ammonii sulphas. **S. sedati'vus Homber'gi**, boracic acid. **S. Sedlisen'sis**, magnesii sulphas. **S. Seignet'ti**, sodium tartrate. **S. senner'ti**, potassii acetas. **S. Seydschützen'se**, magnesii sulphas. **S. so'dæ**, sodium subcarbonate. **S. Sodom'enus**, bit noben. **S. succi'ni**, succinic acid. **S. tar'tari**, potassii subcarbonas; see *Potash*. **S. tar'tari essentia'le**, tartaric acid. **S. tar'tari sulphura'tum**, potassii sulphas. **S. uri'næ**, microcosmicum sal. **S. urino'sum**, urea. **S. vegetab'ilis**, potassii tartras. **S. vi'tæ**, alembroth salt. **S. vitri'oli**, zinci sulphas. **S. vitri'oli narcot'icum**, boracic acid. **S. volat'ile**, ammonii carbonas; spiritus ammoniæ aromaticus. **S. volat'ile ben'zoës**, benjamin. **S. volat'ile bora'cis**, boracic acid. **S. volat'ile oleo'sum Syl'vii**, spiritus ammonii aromaticus. **S. volat'ile succ'cini**, succinic acid. **S. volat'ilis sa'lis ammoni'aci**, ammonii carbonas. **S. vomito'rium vitri'oli**, zinci sulphas.

Salaam' or **Salam' convul'sion.** See *Convulsion, salaam.* **S. tic**, spasmodic or convulsive salutation.

Salab. Salep.

Salacious, sal-a'shus (*salax*, lustful). Lustful; lecherous.

Salacitas, sal-as'it-as. Salacity; satyriasis. **S. vul'væ**, nymphomania.

Salacity, sal-as'it-e (*salax*, lustful, lecherous). Lecherousness; strong desire for venery.

Sal'ad (*sal*, salt). Fresh herbs—as lettuce—dressed with salt, oil, vinegar, etc. **S. corn**, Valeriana dentata.

Sal-alem'broth. A combination of chloride of ammonium and bichloride of mercury, used in Listerian antisepsis.

Salamandarine, sal-am-an'dar-een. $C_{34}H_{60}N_2O_5$. Poisonous leucomaïne. See *Leucomaïnes* (table).

Sal-bromalide, sal-bro'mal-eed. Combination of acetanilide, salicylic acid, and bromine; antiseptic, antipyretic, hypnotic.

Salep (usually pronounced saloop'). *Salab, Salap.* The prepared bulb of the Orchis mascula and other species of Orchis. The salep of Cashmere is from a species of Eulophia. Salep is in small, irregular, hard masses, in composition, etc. closely analogous to tragacanth. It is possessed of virtues similar to those of sago, tapioca, etc. The mucilage is prepared by dissolving the powdered salep in hot water with assiduous stirring, and adding to the solution sugar and milk. An indigenous salep has been made in France from Orchis maculata, O. bifolia, O. mascula, O. militaris, and O. latifolia. See *Saloop.* **S., Otahei'te**, arrow root (Tahiti).

Saleratus, sal-er-at'us (*sal*, salt, *aër*, air). Common potassium carbonate used for cooking purposes.

Saler'num, School of. An ancient school of medicine at Salerno, in Italy. It was established by Charlemagne in 802, and was the first Christian university at which medicine was taught. It was much celebrated, especially in the 12th century, and, on its account, Salerno was self-styled *Civitas Hippocratica.* The work on hygiene, *De Conservanda Valetudine*, which bears its name, has passed throug several editions in various languages. It is supposed to have been written by John of Milan in 1100, and is in Leonine verses. (See author's *History of Medicine*, Philadelphia, 1872, p. 207.)

Salicaria, sal-e-kah're-ah (*salix*). Lythrum salicaria.

Salicin, sal'i-sin. See *Salix.*

Salicinum, sal-is-e'num (Ph. U. S. and Br.). Salicin. Neutral principle from bark of Salix helix and other species of Salix. See *Salix.*

Salicornia (sal-e-kor'ne-ah) **Arab'ica**, etc. (*sal*, salt, from its abounding in salt). See *Soda.*

Salicyl aldehyde, sal'is-il al'de-hide. Salicylous acid.

Sal'icylage. Preservation of dietetic articles under the antiseptic influence of salicylic acid.

Salicylamide, sal-is-il'am-eed. Product of action of concentrated ammonia on crude methyl salicylate, as oil of wintergreen; or of heat on ammonium salicylate; antiseptic, and having other properties like salicylic acid.

Salicylan'ilide bromacetan'ilide, Sal-bromalide.

Salicylas (sal'is-il-as) **bismu'thi.** Bismuth salicylate. **S. lith'icus**, lithium salicylate. **S. nat'ricus**, sodium salicylate. **S. physostig'minæ**, physostigmine salicylate. **S. quin'icus**, quinine salicylate. **S. so'dicus**, sodium salicylate. **S. zin'ci**, zinc salicylate.

Salicylate, sal'is-il-ate (*salicylas*). Any salt of salicylic acid. See *Salicylas.*

Sal'icylated cam'phor. Made by heating together 65 parts of salicylic acid with 84 parts of camphor. It is an oily liquid which solidifies to crystalline form, and is used as an antiseptic. **S. cot'ton**, a surgical dressing made by impregnating pure cotton with salicylic acid.

Salicylbromanilide (sal-is-il-bro-man'il-eed) or **Salbroman'ilide.** Combination of bromacetanilide and salicylanilide; antipyretic, antineuralgic, and antinervine. Useful in asthenic inflammatory conditions.

Salicylic (sal-is-il'ik) **acid.** $HC_7H_5O_3$. White crystalline organic acid. Occurs in nature in certain plants. Commercially it is obtained from carbolic acid; also from natural salicylates, as oil of wintergreen and sweet birch. It is in white crystals, with slightly aromatic odor; commonly used in rheumatism and as an antiseptic. It is usually administered in the form of a salicylate, as that of sodium, of ammonium, or of quinine. The depressing effects of the drug must be carefully watched.

Salicyl'ous ac'id. $C_7H_6O_2$. Fragrant oily liquid; salicyl-aldehyd; made by the distillation of salicylin with bichromate of potash and sulphuric acid.

Saligenin, sal-ij'en-in. $C_7H_8O_2$. Produced by action of dilute acids upon salicin; the latter being mainly composed of saligenin and a glucose.

Salinaphthol, sal-e-naf'thol. Naphthalol; naphtholsalol; beta-naphthol salicylate; betol. Internal antiseptic, antizymotic, etc. in certain affections of the intestines.

Saline, sal-ine' (*sal*). That which contains a salt or has the properties of a salt.

Sali'nous. Saline.

Salipyrine, sal-e-py'rin. Antipyrine salicylate; combination of salicylic acid and antipyrin; white crystalline powder, used in arthritic affections, neuralgia, etc.

Sa'lis ammoni'aci flo'res. Ammonii carbonas.

Sal'iswitch frac'ture. See *Fracture, saliswitch.*

Salitio, sal-ish'e-o (*salio*, to leap). Leap.

Salitus, sal-e'tus (*sal*). Saline.

Salium, sal'e-um. Saliva.

Saliun'ca. Valeriana Celtica.

Saliva, sal-i'vah (probably from *sialos*). An inodorous, insipid, transparent, slightly viscid fluid secreted by the parotid, submaxillary, and sublingual glands, and poured into the mouth by the ducts of Steno, Wharton, and Rivinus, the use of which is to mix with the alimentary bolus and to serve in the process of digestion. Its specific gravity is 1.008. It is composed, according to Berzelius, of 994.9 parts of water, 1.2 of a particular animal matter soluble in water and insoluble in alcohol, *Ptyalin* (*Principium salivale, Materia sialina, Casein of the saliva, Salivary albumen, Salivine*), of 1.3 of mucus, epithelium, and mucin, 1.1 fatty matters, 1.5 salts, 1.7 of chlorides of potassium and sodium, 0.9 of lactate of sodium and animal matter, and 0.2 of soda. The chemical composition of the saliva secreted from different salivary glands varies. The ptyalin acts as a ferment, converting starchy matters first into dextrin and then into sugar. See *Ferment* and *Enzymes.*

Some interesting facts in regard to the saliva may be thus stated (Vierordt):

The quantity of mixed saliva (and fluid of the mouth)—
In 24 hours is 300–1500 g. (F. Bidder and C. Schmidt);
500–700 during the process of chewing in 30–58 minutes (Tucgek);
In one hour from the parotis, over 2;
In one hour from the submaxillary gland, about 7 (Oehl).
The amount for both pairs of glands in 24 hours is over 400 g. Specific weight, 1.003–1.004 (1.002–1.009), varies according to amount of mucus it contains. Reaction is alkaline.

Saliva from the parotid gland:
Quantity, 80–100 g. in 24 hours (Oehl).
Specific gravity, 1.0031–1.0043.
Analysis in 1000 parts:

	Mitscherlich.	Hoppe-Seyler.	Van Setten.
Water	985.4–983.7	993.16	983.8
Solid matter	14.6–16.3	6.84	16.2
Organic material	9.0	3.44	
Potassium sulphocyanide	0.3		
Potassium chloride, Sodium chloride, Carbonate of lime	5.0	3.4	

The saliva from the sublingual gland has not, up to the present time, been collected in sufficient quantity for examination.
The secretion of mucus in children becomes apparent from the second month. In the fourth month Koroivin obtained 1–1½ c.m. in 5–7 minutes. In the eleventh month no deviation from that of the adult could be noticed.

Sali'væ flux'us ci'bo vi'so. Flow of saliva at the sight of food. See *Salivation.*

Sal'ival. Salivary.

Salivans, sal-i'vans. Sialagogue.

Salivaris, sal-iv-ar'is. Salivary. **S. her'ba,** Anthemis pyrethrum.

Salivary, sal'iv-a-re. Belonging to the saliva. **S. albu'men,** see *Saliva.* **S. cal'culi,** see *Calculi, salivary.* **S. fis'tulæ** are such as depend upon an accidental opening into the excretory ducts of the salivary glands. Fistulæ are most commonly met with in the duct of Steno. **S. glands,** *Secreting organs of the saliva, Salival glands,* are situate symmetrically, to the number of four, on each side of the face. Their form is very irregular, and their extent varies according to individuals. Their excretory ducts carry the saliva directly into the mouth without pouring it into any intermediate reservoir, as happens in the case of some other glands. The salivary glands have been distinguished into the parotid, the submaxillary, the sublingual, and the intralingual or lingual, seated at the inferior surface of the tongue, where the mucous membrane forms a fringed fold. See *Lingual glands.*

Salivated, sal'iv-a-ted (*saliva*). *Ptyalized.* Affected with salivation.

Salivatio, sal-iv-ah'she-o. Salivation. **S. mercuria'lis,** salivation, mercurial.

Salivation, sal-i-va'shun. *Ptyalism.* Superabundant secretion of saliva, occasioned either locally by use of irritating masticatories, or under the influence of some cause which acts on the whole economy, and especially of mercurial preparations. In this last case it is accompanied by a coppery taste in the mouth, by swelling of the gums, and sometimes by looseness of the teeth. Salivation may usually be diminished by the use of astringents, laxatives, etc. *Mouth-watering,* the increased flow of saliva produced by the sight, smell, or thought of agreeable food, is a species of ptyalism, as well as the **S., mercu'rial,** salivation produced by mercury. The stomatitis that accompanies it is termed mercurial, stomatitis mercurialis, hydrargyrostomatitis.

Saliva'tum (*saliva*). Sialagogue.

Saliva'tus. Salivated.

Salivine, sal'i-veen. See *Saliva.*

Salivo'sus. Salivary.

Salivous, sal-i'vus. Salivary.

Sa'lix. Willow. A genus of plants in the Linnæan system; ord. Salicaceæ. **S. Ægypti'aca,** see *Calaf.* **S. al'ba** (Ph. U. S.), *White willow.* **S. ca'prea,** *Great round-leaved willow.* **S. erioceph'ala.** **S. frag'ilis,** *Crack* or *Bedford willow.* **S. humil'is,** *Low-bush willow, Speckled willow.* **S. latifo'lia,** *Broad-leaved willow.* **S. petan'dria** or **hermaphrodit'ica.** Bark of these and other willows has a slightly aromatic odor and a bitter astringent taste, which is nearly the same in all the species. They are tonic and astringent, being used in intermittents and in cases of dyspepsia, worms, etc. An active neutral principle has been separated and called *Salicin* or *Salicine, Salicina, Salicinum* (Ph. U. S. and Br.). It has been found in a large number of species of Salix and of Populus; is like quinine in medical efficacy; is antiperiodic, and used as a substitute for salicylic acid in rheumatism.

Sal'lenders. Malandria.

Sal'lis. Adeps.

Sal'low. Lurid.

Sal'ly. Salix.

Sally-switch fracture. Green-stick fracture.

Sal'miac (contraction of *sal ammoniac*). Ammonium chloride.

Sal'ol. Salicylic acid in which one atom of hydrogen has been replaced by the group phenol; phenyl salicyl; phenol salicylate; phenylic ether of salicylic acid. Physically it is a white tasteless powder with an agreeable odor, insoluble in water and soluble in alcohol; used in medicine for its antiseptic and antipyretic properties, in rheumatism, skin diseases, intestinal affections, etc., and locally in ozæna, otorrhœa, gonorrhœa, etc., applied in gauze, collodium, powders, ointment, etc.

Salol-cam'phor. Compound of three parts of salol and two of camphor; colorless oily liquid, used in treatment of abscess of middle ear or suppurative otitis.

Saloop'. Salep. Also sassafras tea flavored with milk and sugar; sold in London. In different parts of the United States it is sometimes called *Sass tea.*

Salop'. Salep.

Salophen, sal'o-fen. Derivative of salol containing nearly 51 per cent. of salicylic acid; in white, odorless and tasteless scales; antipyretic and antirheumatic; used in acute rheumatic arthritis. Chemically, acetylparamidosalol.

Salpe'tra (*sal, petra,* rock). Potassium nitrate; sodium nitrate.

Salpingectomy, sal-pin-gek'to-me (*salpinx,* Fallopian tube, *ektome,* excision). Excision of the Fallopian tube.

Salpingemphraxis, sal-pin-gem-frak'sis (*salpingo, emphraxis,* obstruction). Obstruction of the Eustachian tube.

Salpin'gian dropsy. Hydrosalpinx.

Salpingitis, sal-pin-je'tis (*salpingo, itis*). Inflammation of the Eustachian or Fallopian tube.

Salpin'go (*salpinx,* tube). In composition, the Eustachian or the Fallopian tube.

Salpingocatheterismus, sal-pin-go-kath-et-er-iz'mus (*salpingo, catheterismus*) Catheterism of the Eustachian tube.

Salpingocyesis, sal-pin-go-se-a'sis (*salpingo, kuesis,* pregnancy). Tubal pregnancy. See *Pregnancy.*

Salpingomal'leus. Tensor tympani muscle.

Salpingona'sal fold. Fold of mucous membrane from opening of Eustachian tube to posterior nares.

Salpingo-oöphorectomy, sal-pin'go-o-o-for-ek'to-me. Operation for excision of Fallopian tube and ovary.

Salpingoövariot'omy. Salpingo-oöphorectomy.

Salpingopal'atal fold. Fold of mucous membrane covering levator palati muscle.

Salpingopharyngæus, sal-pin-go-far-in-je'us (*salpingo, pharunx,* pharynx). Bundle of fibres passing from the Eustachian tube to the pharynx.

Salpingopterygoid (sal-pin-go-ter'ig-oid) **lig'ament.** The slip of fascia extending between the spine of the sphenoid and the hamular process.

Salpingostaphylinus, sal-pin-go-staf-il-e'nus. Circumflex muscle. **S. inter'nus,** levator palati.

Salpingostenochoria, sal-pin-go-sten-o-ko're-ah (*salpingo, stenos,* narrow, *chora,* space). Narrowness or stricture of the Eustachian tube.

Salpingosterocyesis, sal-pin-go-ster-o-se-a'sis (*salpinx, stereos*, solid, *kuesis*, pregnancy). Pregnancy in which the fœtus occupies both the uterus and the Fallopian tube, developing at their junction.

Salpingotomy, sal-pin-got'o-me (*salpinx*, Fallopian tube, *tome*, incision). Operation upon the Fallopian tube for extirpation of tumors of that canal; sometimes also rendered necessary in removal of the ovary.

Salpinx, sal'pinks (*salpinx*, tube). Eustachian tube; Fallopian tube.

Sal'safy. Tragopogon porrifolium.

Salsaparil'la German'ica. Sarsaparilla Germanica.

Salsedo, sal-sa'do (*salsus*, salt). Brine. **S. mu'crum**, potassii nitras.

Sal'sifi. Tragopogon porrifolium.

Salsila'go or **Salsitu'do** (*salsus*, salt). Brine.

Salso'la decum'bens (*salsus*, owing to its saline properties). S. kali. **S. ka'li**, *Prickly saltwort*, ord. Chenopodiaceæ. This plant, as well as S. sativa and S. soda or longifolia, produces the alkaline salt commonly called barilla, soda, or kelp. **S. longifo'lia**, S. kali. **S. sati'va**, see *S. kali* and *Soda*. **S. so'da**, see *S. kali*.

Salsuginosus, sal-su-jin-o'sus (*salsus*, salty). Briny. Term applied to an affection in which the heat feels pungent under the finger of the physician.

Salsu'go (*salsus*, salt). Brine.

Sal'sus. Saline; salty.

Salt. Name formerly given to a considerable number of substances of very different nature. At present chemists apply the term generally to the combination of an acid with one or more bases. Neutral salts are those in which the acid and base reciprocally saturate each other. Acid salts or supersalts are those in which the acid predominates over the base, and the prefixes *bi* and *ter* indicate the proportion of acid. Alkaline salts or subsalts are those in which the base is predominant, when the prefixes *di* and *tre* indicate the proportion of base. The different denominations of the salts are compounded: 1. Of the name of the acid, the termination of which is changed into *ite* when the name of the acid is in *ous*; *ate* when it is in *ic*. Thus the salts formed by *sulphurous* acid are *sulphites*; those by *sulphuric*, *sulphates*. 2. This name is followed up by that of the oxide which enters into the composition of the salt. Thus the sulphate of protoxide of iron is a combination of sulphuric acid with the protoxide of that metal. Frequently, to shorten the name, the word *oxide* is suppressed; and *proto*, *deuto*, *trito*, etc. put before the acid; as *protosulphate of iron*. *Simple salts* are those resulting from the combination of an acid with a single base; *double salts*, with two different bases; *triple*, with three, etc. A *haloid salt* is one constituted after the type of common salt, or which contains a metal and a salt-radical, as chlorine, iodine, etc. An *oxysalt* is formed from the combination of an acid with an oxide.

When salt is used in an abstract sense it means the chloride of sodium.

Salt, ape'rient, of Fred'erick. Sodium sulphate. **S., ba'ker's**, ammonii carbonas. **S. of baril'la**, sodium carbonate. **S., bay**, sodium chloride. **S., bit'ter pur'ging**, magnesii sulphas. **S. of bones**, ammonii carbonas. **S., com'mon**, sodium chloride. **S., Ep'som**, magnesii sulphas. **S., Glau'ber's**, sodium sulphate. **S., Glau'ber's, Lymington**, see *Sodium sulphate*. **S. of lem'ons**, potassii oxalas. **S., Pres'ton**, see *Ammonii carbonas*. **S. rheum**, a commonly used term for several skin diseases, particularly chronic eczema. **S., Rochelle**, sodium tartrate. **S., rock**, sodium chloride. **S., sea**, sodium chloride. **S., sec'ondary**, neutral salt. **S., Seig'nette's**, sodium tartrate. **S., smell'ing**, ammonii carbonas. **S. of so'da**, sodium carbonate. **S. solu'tion**, made by adding 0.6 per cent. of sodium chloride to distilled water. Used for histological purposes. **S., sore throat**, potassæ nitras fusus sulphatis paucillo mixtus. **S. of tar'tar**, see *Potassii carbonas* and *Potash*. **S., taste'less pur'ging**, sodium phosphate. **S. of u'rine**, ammonii carbonas. **S., white**, sodium chloride. **S. of wood'soot**, ammonii carbonas. **S. of worm'wood**, see *Potash*.

Sal'tans ro'sa. Urticaria.

Saltatio, sal-tah'she-o (*salto*, to dance). Dancing. **S. Sanc'ti Vi'ti**, chorea.

Saltato'ric (*saltator*, dancer). Jumping or dancing. **S. spasm**, uncommon nervous disease marked by clonic spasms of the leg-muscles when the patient attempts to stand, causing jumping movements.

Saltatory, sal'ta-to-re. Progressing by jumps. Jumping.

Sal'ter's incremen'tal lines. Lines parallel to outer surface of dentine of teeth, due to imperfect calcification of the dentine. **S.'s swing**, a surgical apparatus for suspension of a fractured limb.

Saltpe'tre (*sal, petra*, a rock). Potassii nitras.

Salts. Common name for Epsom salts or magnesium sulphate.

Sal'tus (*salio, saltum*, to leap). Leap. Vulva. **S. ten'dinum**, subsultus tendinum.

Salt'wort, prick'ly. Salsola kali.

Salu'ber. Salutary.

Salu'brious (*salubris*, healthy). Salutary.

Salu'briousness. Salubrity.

Salu'bris (*salus*, health). Salutary.

Salubrity, sal-u'brit-e (*salubris*). *Salubriousness.* Anything which contributes to the health of individuals or of communities. Situations differ materially from each other in this respect.

Sal'ufer. Neutral sodium silico-fluoride; white inodorous substance. Used as a deodorant and disinfectant.

Sa'lus. Health.

Sal'utary (*salus*). Salubrious; healthy; that which is favorable to health.

Salutif'erous (*salus, fero*, to bear). Bringing health; health-bearing.

Salvatel'la. *Vena salvatella.* A vein situate on the back of the hand, near its inner margin. It begins on the posterior surface of the fingers and dorsal surface of the hand by a plexus formed by a number of radicles, frequently anastomosing with each other; it then ascends to the inner part of the forearm, where it takes the name posterior cubital. The ancients attributed to abstraction of blood from this vein considerable efficacy in curing disease: hence its name, *salveo*, to be well.

Salve. Unguentum. **S., blis'tering**, unguentum lyttæ. **S., Desh'ler's**, ceratum resinæ compositum. **S., eye**, unguentum oxidi zinci impuri; unguentum hydrargyri nitrico-oxidi.

Salvia, sal've-ah (*salveo*, to be well, owing to its reputed healing qualities). *S. officinalis, Sage, Save.* Ord. Labiatæ. The leaves of Salvia officinalis (Ph. U. S.) are tonic, stimulant, and carminative. In the form of a weak infusion sage is used as a diluent and as a wash for sore mouth and a gargle. **S. Africa'na**, *Wild sage*, a S. African species, has the same medical properties as salvia. **S. colora'ta**, Salvia horminum. **S. hormi'num**, of the pharmacopœias, is used in similar cases to salvia. **S. horten'sis**, salvia. **S. lyra'ta**, *Wild sage, Cancerweed*; indigenous; the fresh leaves, bruised, are used to destroy warts, and have been employed in cancer. **S. mi'nor**, salvia. **S. officina'lis**, salvia. **S. scla'rea**, *Common clary*; the leaves have been recommended as corroborants and antispasmodics. **S. vi'tæ**, Asplenium ruta muraria. **S. vulga'ris**, salvia.

Sal'viol. Volatile oil in sage, wild sage especially.

Samade'ra In'dica. Furnishes the niepa bark, which is antiperiodic.

Sambaï'ba. Curatella sambaiba.

Sambaïbin'ha. Davila rugosa.

Sam'bo. See *Mulatto*. *Sambo* and *Zambo* also signify the offspring of the Indian and negro.

Sambucus, sam-bu'kus (*sambuke*, an ancient musical instrument, said to have been made of its wood). *Elder, Elnorne, Ellentree, Ellarne.* Ord. Caprifoliaceæ. (The flower and bark were formerly called *Canopum.*) The flowers, *Sambucus* (Ph. U. S.), *Sambuci flores* (Ph.

Br.), berries, and bark of the elder have been used in medicine; the flowers being reputed diaphoretic and discutient; the berries, aperient and sudorific; the bark, purgative and, in small doses, deobstruent. The flowers are sometimes used in fomentations and to form a cooling ointment. **S. arbo'rea,** sambucus. **S. Canaden'sis,** sambucus. **S. chamæac'te,** S. ebulus. **S. eb'ulus,** *Dwarf elder, Danewort;* the root, interior bark, leaves, flowers, berries (*Baccæ* or *Grana actes*), and seeds have all been given in moderate doses as resolvents and deobstruents; in large doses as hydragogues. **S. he'lion,** Sambucus ebulus. **S. herba'cea,** S. ebulus. **S. hu'milis,** S. ebulus. **S. ni'gra,** sambucus. **S. pu'bens** or **pubes'cens** or **racemo'sa,** *Red-berried elder;* indigenous; the bark in decoction is said to be a valuable hydragogue cathartic. **S. racemo'sa,** S. pubens. **S. vulga'ris,** sambucus.

Sa'mi ter'ra. *Samian earth.* Argillaceous earth found in the island of Samos, to which were ascribed virtues similar to those of the terra Lemnii.

Sa'mius la'pis. *Samian stone.* Stone found in the isle of Samos, formerly believed astringent and refrigerant.

Sam'phire. Crithmum maritimum.

Samp'son, black. Echinacea purpurea.

Sampsuchon, samp'su-kon. Origanum majorana.

Sampsu'cus. Sweet marjoram.

Sampsychum, samp'sic-um. Origanum majorana.

Sam'son's snake'root. Psoralea melilotoïdes.

Sanab'ilis (*sano,* to heal, *habilis,* able). Curable.

San'able. Curable.

San'amunda. Geum urbanum.

Sanatio, san-ah'she-o (*sano,* to cure). Curation; cure.

Sanative, san'at-iv. Curative; sanitary.

Sanato'rium. See *Sanitarium.*

Sanatory, san'at-o-re. Curative.

Sand. See *Gravel.* **S. bath,** see *Arenatio* and *Bath.* **S., brain,** see *Pineal gland.* **S., pin'eal,** see *Pineal gland.* **S. tu'mor,** psammoma.

San'dalum cæru'leum. Ben nut. See *Guilandina moringa.* **S. ru'brum,** Pterocarpus santalinus.

Sandal-wood. Santalum.

San'darac. *Gum juniper* or *sandarach, Pounce.* Odorous resin which flows from the Thuya aphylla; stimulant like all the resins.

Sandarach'a Græco'rum (*sandarache*). Realgar.

Sand'blind. Defect of vision in which small particles seem to fly before the eyes. See *Metamorphopsia.*

San'ders. See *Saunders.*

Sand'flea. Pulex penetrans.

San'diver. See *Vitrum.*

San'dix or **San'dyx.** Plumbi oxidum rubrum.

Sand'sedge. Carex arenaria.

Sang. The malignant vesicle so fatal to cattle.

Sangaree, san-gar-e'. Wine and water or porter and water, sweetened and spiced.

Sänger's operation. Gastro-hysterotomy, the technique of which has been modified and improved by Sänger. The uterus is raised from the cavity, sutures applied at the upper angle of the wound in the abdomen to close it about the uterus, and compression exerted at the cervix. The uterus is then opened and the child extracted. The peritoneum is then dissected from the muscular margin of the wound, and a wedge-shaped piece of the muscular coat removed, the peritoneum being turned down over the muscular layer and sutures introduced, and the peritoneal surfaces also united by sutures.

Sangra'do (*sangrador,* bleeder). A doctor in Gil Blas who was a heroic bleeder; hence popularly applied to such a one.

Sanguiductus (san-gwe-duk'tus) **du'ræ ma'tris** (*sanguis,* blood, *duco,* to lead). Sinuses of the dura mater.

Sanguification, san-gwe-fik-a'shun (*sanguis,* blood, *facio,* to make). Hæmatosis. **S. debil'ior,** morbidly diminished hæmatosis or aëration of the blood.

Sanguifluxus, san-gwe-fluks'us (*sanguis,* blood, *fluo,* to flow). Hemorrhage. **S. uteri'nus,** metrorrhagia.

Sanguimotion, san-gwe-mo'shun (*sanguis,* blood, *moveo,* to move). Circulation of the blood.

Sanguimotory, san-gwe-mo'to-re. Circulatory.

Sanguinalis corrigiola, san-gwin-al'is kor-rij-e-o'lah (*sanguis,* because used to stop blood). Polygonum aviculare.

Sanguina'ria (*sanguis,* blood, owing to the color of its juice). *Bloodroot, Bloodwort, Puccoon, Red puccoon, Red root, Indian paint, Turmeric;* ord. Papaveraceæ. A N. American plant. The rhizome—*Sanguinaria* (Ph. U. S.)—and seeds are used in medicine; emetic. Sanguinaria is said to reduce the velocity of the pulse. The active principle is *sanguinarina* or *sanguinarine.* The nitrate of sanguinarine is employed as an expectorant, nauseant, etc. in doses of gr. $\frac{1}{10}$–$\frac{1}{4}$. The sulphate is also used as an emetic, ½ to 1 grain. Polygonum aviculare.

Sanguinarina (san-gwin-ar-e'nah) or **Sanguin'arine.** See *Sanguinaria.* **S. ni'trate,** see *Sanguinaria.* **S. sul'phate,** see *Sanguinaria.*

San'guine (*sanguis,* blood). Hematic; bloody; blood-like; having the color of blood, as a sanguine countenance; plethoric.

Sanguinea, san-gwin'e-ah. Potassii nitras.

San'guineness. Plethora.

Sanguineous, san-gwin'e-us. Plethoric; sanguine. **S. cysts,** cysts containing blood, either primarily or from accidental hemorrhage into their cavities.

Sanguin'eus. Sanguine.

San'guinis absorp'tio. Absorption of blood, as when effused. **S. conges'tio,** congestion. **S. dissolu'tio,** dissolution of the blood. **S. fluor,** hæmoptysis. **S. flu'or vesi'cæ,** discharge of blood from the vessels of the urinary bladder. **S. ic'tus,** cerebral apoplexy. **S. mis'sio,** bloodletting. **S. profiu'vium copio'sum,** hemorrhage. **S. profiu'vium ex ore,** hemorrhage from the mouth. **S. stagna'tio,** stagnation of the blood.

Sanguinolent, san-gwin'o-lent (*sanguis*). Tinged with blood. An epithet applied particularly to the sputa when so tinged; bloody.

Sanguino'sus. Sanguine.

Sanguipurgium, san-gwe-pur'je-um (*sanguis, purgo,* to cleanse). Purgation of the blood. A name given by some authors to mild fevers, from an idea that they purged the blood of noxious matters.

Sanguis, san'gwis. Blood; sperm. **S. bovi'nus,** dried bullock's blood; employed as a nutrient. **S. concre'tus,** coagulum. **S. draco'nis,** see *Calamus rotang.* **S. hir'ci sicca'tus,** see *Blood.* **S. men'struus,** see *Menses.* **S. in uri'nâ,** hæmaturia. **S. vir'ginis pri'mum menstrua'tæ,** see *Menses.*

Sanguisorba Canadensis, san-gue-sor'bah can-aden'sis (*sanguis,* blood, *sorbeo,* to absorb, so called from its astringency). Indigenous plant, ord. Rosaceæ, with white, sometimes purple, flowers, which has the same virtues as **S. officina'lis,** *Italian pimpernel.* The latter was formerly used as an astringent and tonic in hemorrhages, dysentery, etc.

Sanguisuga, san-gue-su'gah (*sanguis,* blood, *sugo,* to suck). Leech.

Sanguisugum, san-gwe-su'gum. Barbarous term, denoting too great an accumulation of blood in the heart.

San'icle. Sanicula; S. Marilandica. **S., Amer'ican,** Heuchera cortusa. **S., York'shire,** Pinguicola vulgaris.

Sanicula, san-ik'u-lah (*sano,* to heal). Saxifraga granulata. **S. Eboracen'sis,** Pinguicola vulgaris. **S. Europæ'a** or **mas** or **officina'rum,** *Woodmarch;* an herb formerly used as a mild astringent. **S. Marilan'dica,** *Sanicle, Maryland sanicle, Black snakeroot;* indigenous plant; tonic. The powdered root is employed in popular practice as a remedy in intermittent fever; also in chorea. **S. mas,** sanicula. **S. monta'na,** Pinguicola vulgaris. **S. officina'rum,** sanicula.

Sanidodes, san-id-o'dees (*sanis,* a board). One whose thorax is flat like a board.

Sanies, san'e-ees (*sanguis,* blood). Thin serous fluid, presenting some of the qualities of pus and

blood, and commonly exhaled at the surface of ulcers. **S. gangræno'sa,** fluid resulting from destruction of tissue, differing according to the structures involved.

Saniosus (san-e-o'sus) or **Sanious,** san'e-us. Ichorous.

Sanita'rium (*sanitas,* health). Retreat selected for valetudinarians in consequence of its salubrity. Also an establishment for the treatment of the sick. The former would be more properly a sanitarium, the latter a sanatorium.

San'itary. *Sanatory.* Relating to health, especially to public health.

San'itas (*sanus,* healthy). Health. A state in which all the functions are exerted with regularity and harmony. A person may, however, be in health although certain functions are not performed—a blind man, for example. Sanity is often used for soundness of mind. See also *Cure.*

Sanitation, san-it-a'shun (*sanitas,* health). The method of application of the rules of hygienic living.

San'ity. Sanitas.

Sanki'ra. Smilax China.

San'son-Purkin'je's im'ages. Three pairs of reflected images of one object, seen in the pupil of the eye. The first two are perpendicular, respectively from the anterior surface of the cornea and anterior surface of the lens; the third inverted pair being from the posterior capsule of the lens.

San'son's exper'iment. A method formerly employed in diagnosing cataract, consisting of reflections of a candle-flame from the surfaces of the cornea and lens; the reflections from the surface of the cornea and anterior surface of the lens being large, while the reflection from the posterior surface of the lens is small and inverted.

San'ta An'a bark. Cusco bark.

Santalin, san'tal-in. $C_{15}H_{14}O_5$. Coloring matter of red saunders.

Santalum, san'tal-um. See *Pterocarpus santalinus.* **S. al'bum,** *Yellow* and *White saunders;* ord. Santalaceæ. White sandal-wood is the young timber, yellow sandal-wood the old; the virtues of the wood of the white saunders reside in the volatile oil and resinous principle; the odor is fragrant and resembles a mixture of ambergris and roses. It has been used as a stimulant and sudorific; the oil has been given in gonorrhœa. **S. myrtifo'lium,** S. album. **S. ru'brum,** Pterocarpus santalinus.

San'tal-wood. Sandal-wood.

Santolina chamæcyparissus, san-to-le'nah kam-e-sip-ar-is'us. An indigenous plant of the mountains of Europe; ord. Compositæ.

Santon'ic ac'id. Acid formed by boiling santonin in strong baryta-water. Isothermic with santoninic acid.

Santonica (Ph. U. S. and Br.), san-ton'ik-ah. The unexpanded flower-heads of Artemisia maritima. See *Artemisia santonica.*

Santonicum, san-ton'ik-um (Santonia, its native place). Artemisia santonica.

San'tonin or **San'tonine.** *Santoninum* (Ph. U. S. and Br.). $C_{15}H_{18}O_3$. A peculiar crystalline substance obtained from Artemisia santonica. Anthelmintic.

Santo'ninas so'dicus. Sodium santoninate.

Santoninic (san-to-nin'ik) **ac'id.** $C_{15}H_{20}O_4$. Made by action of alkalies upon santonin.

Santoninoxim, san-ton-in-oks'im. Derivative obtained by heating santonin with hydrochlorate of hydroxylamine; anthelmintic.

Santoninum, san-to-ne'num. Santonin or santonine.

Santorini (san-tor-e'ne), **car'tilages of** (after the Italian anatomist). Corniculum laryngis. **S., fis'sures of,** clefts at the upper and back part of the fibrocartilaginous portion of the external ear. **S., tu'bercles of,** small cartilaginous projections at the top of the arytenoid cartilages, which support the ligaments of the glottis; see *Corniculum laryngis.* **S., veins of,** emissary veins, those forming communications between the sinuses of the dura mater and veins exterior to the skull.

Sao'ria (Guiana name). The ripe and dried fruit of Maesa or Bœobotrys picta, an Abyssinian tree; used in powder as a tæniafuge.

Sap. The circulating fluid of vegetables, corresponding to the blood of animals.

Sa'pa. See *Rob.*

Sapha'da. Reddish scales adherent to the hair in some eruptions of the hairy scalp.

Saphæna, saf-e'nah. Saphena.

Sapha'tum. Asaphatum.

Saphena, saf-e'nah (*saphes,* manifest, evident). A name given to two subcutaneous veins of the lower limb—saphenous veins. These are—1. The *Great saphena vein.* Its radicles occupy the inner part of the great toe, forming a transverse arch on the back of the foot, which unites with the saphena externa, receiving at its convex part, which is turned forward, a number of branches from the toes. These radicles, when united, ascend before the inner ankle and form a trunk, its size being further increased by several branches proceeding from the region of the tarsus and that of the metatarsus. This trunk ascends vertically at the inner part of the leg, passes behind the inner condyle of the femur, proceeds along the inner part of the thigh, receives other subcutaneous veins, and passes through the inferior opening of the crural canal to empty itself into the femoral vein. 2. The *lesser vena saphena* commences by several roots, spreading over the dorsum and outer side of the foot, and embracing the outer ankle. Behind this they unite into a single trunk, which ascends obliquely, approaching the tendo Achillis, and proceeding vertically toward the ham to open into the popliteal vein.

Saphenous, saf-e'nus. Of or belonging to the saphena. **S. nerves** are two in number, and are branches of the crural or femoral nerve. They are the short saphenous (nervus cutaneus internus) and the long saphenous (nervus cutaneus internus longus). The external saphenous, formed by the union of the communicans poplitei and communicans peronei, passes down the leg by the side of the external saphenous vein of the foot. **S. o'pening,** oval and somewhat oblique opening in the fascia lata, a little below Poupart's ligament, for the transmission of the principal superficial vessels; here likewise femoral hernia descends. **S. veins,** see *Saphena.*

Sap'id (*sapio,* to taste). Possessed of sapidity; having the power of affecting the organs of taste.

Sapid'ity. *Sapidness, Saporosity, Sapor.* The quality of bodies giving them taste.

Sapindus, sap-in'dus (*sapo Indus,* Indian soap). *Soap tree;* ord. Sapindaceæ. The name of the plant that affords the soap-nut or soap-berry, a spherical fruit about the size of a cherry; the cortical part is yellow, glossy, and so transparent as to show the spherical black nut that rattles within, and includes a white kernel. The cortical part of this fruit, which has similar effects with soap in washing, has been recommended in chlorosis and as a stomachic and deobstruent.

Sa'pium sebif'erum. Stillingia sebifera. **S. sylvat'icum,** Stillingia sylvatica.

Sa'po (L.) (Greek *sapon*). A product obtained by treating fatty bodies with caustic alkalies dissolved in water. Yellow soap is formed of turpentine, oil, and an alkali. Castile soap, being made of fine olive oil, is the kind generally selected for internal use. The yellow and soft soaps are the most stimulating, and are consequently best adapted for particular cutaneous eruptions. Internally, soap is purgative and diuretic; externally, it is detergent and stimulant. Soapy water is used with the greatest success in cases of poisoning by acids. Soap is applied externally to bruises and sprains. In pharmacy it is used to favor the solution of resins. **S. ac'idus,** *Acid soap,* a combination of a fixed oil with an acid. **S. al'ba,** castile soap; olive oil soap. **S. ammoniaca'lis,** linimentum ammoniæ fortius. **S. ammo'niæ olea'ceus,** linimentum ammoniæ fortius. **S. amygdali'-**

nus, sapo medicinalis. **S. anima'lis** (Ph. Br.), curd soap; soap made with soda and a purified animal fat consisting principally of stearin. **S. aromat'icus sol'idus,** opodeldoc. **S. butyri'nus,** butter soap. **S. cacaoti'nus,** sapo coconeus. **S. calca'rius,** linimentum aquæ calcis. **S. cal'cis,** lime soap; see *Linimentum aquæ calcis.* **S. Castilien'sis,** see *Sapo medicinalis.* **S. coco'neus,** *Soap of cocoanut oil,* has been much used in Germany in herpetic affections. **S. domes'ticus,** curd soap. **S. du'rus,** S. medicinalis. **S. guaiaci'nus,** *Soap of guaiac;* soap made from guaiacum and liquor potassæ. **S. Hispan'icus,** see *S. medicinalis.* **S. kal'icus,** S. mollis. **S. liq'uidus,** *Liquid soap,* cosmetic composed of olive oil. ol. tartari per deliquium, and aq. rosarum. **S. medicina'lis** or **medica'tus,** *Medicinal soap,* is made of oil of sweet almonds and half its weight of caustic alkali; or, like the Spanish or Castile soap, sapo durus, sapo (Ph. U. S.), of olive oil and soda. **S. mol'lis** (Ph. Br.), *Common* or *Soft soap,* is made of potassa and olive oil. The *Sapo vulgaris,* or "common soap," formerly in the Ph. U. S., was made of soda and almond oil. **S. ni'ger,** *Black soap,* a combination of train-oil and an alkali. **S. plum'bi ox'idi,** lead soap; see *Lead plaster.* **S. terebin'thinæ,** see *Sapo.* **S. vegetab'ilis,** pulvis gummosus alkalinus. **S. vir'idis** (Ph. U. S.), *Green soap;* soap prepared from potassa and fixed oils; used extensively in treatment of skin diseases, especially of eczema rubrum. A soap of hempseed oil, linseed oil or rape oil, with an alkali; was formerly called green soap. A tincture of sapo viridis is made of green soap, 65; oil of lavender, 2; alcohol, q. s. ad 100 parts. **S. vulga'ris,** see *Sapo mollis.*

Sapodilla, sap-o-dil'la. Fruit of Achras sapota, seeds of which are diuretic and cathartic.

Saponaceous, sa-pon-a'shus (*sapo,* soap). Soapy; containing soap, as soap liniment.

Sapona'ria (*sapo,* the juice forming a lather with water). *Soapwort, Bruisewort, Bouncing bet;* a decoction of the leaves of this plant has been used in scrofula, cancer, syphilis, cutaneous eruptions, jaundice, visceral obstructions, etc. See *Sapindus saponaria.* **S. vacca'ria,** Vaccaria vulgaris.

Sapona'riæ nu'culæ. See *Sapindus saponaria.*

Saponification, sa-pon-i-fi-ka'shun (*sapo, facio,* to make). Formation of soap. When a putrefying corpse is exposed to water or is placed in very damp soil, it may undergo a process of saponification, the fatty acids combining with the ammonia, forming adipocire.

Saponin, sa'po-nin (*sapo*). Glucoside occurring in Soapwort, in the root of Polygala senega, in Caulophyllum, Quillaya, and other plants, a solution of which, in water, froths like soap. It is a local irritant, an anæsthetic, and paralyzant.

Saponules, sap'on-ules. Imperfect soaps formed by combinations of volatile or essential oils with different bases. See *Opodeldoch.* Acid saponules are combinations of such oils with acids.

Sapon'ulus ammoniaca'lis. Ammonia liniment.

Sa'por. Sapidity; savor.

Saporosity, sap-or-os'it-e. Sapidity.

Saporous, sa'por-us. Sapid.

Sapota, sap-o'tah. Sapodilla plum tree; oval-fruited sapota. A tree growing in the Antilles, and particularly at St. Domingo. Its fruit is much esteemed. It resembles the marmalade of quinces; hence has been called natural marmalade. Emulsion of the seeds has been given in nephritic affections. The bark is febrifuge. **S. a'chras,** sapota. **S. Mull'eri,** bullet tree of Dutch Guiana, producing a substance, analogous to gutta percha, called bulata.

Sapotil'la. Sapota.

Sap'pan-wood. Wood of Cæsalpinia sappan. Used as a dye and to substitute hæmatoxylon.

Sapphism, saf'fism (*Sappho*). Lesbian love; sexual love of women for members of their own sex.

Sapræmia, sap-re'me-ah (*sapros,* putrid, *haima*). Toxæmia due to products of septic micro-organisms.

Saprine, sap'reen (*sapros,* putrid). $C_5H_{14}N_2$. Non-poisonous ptomaine, isomeric with cadaverine, occurring in putrefying human livers and spleens, with cadaverine, putrescine, etc. See *Ptomaïnes* (table).

Saprogenic (sap-ro-jen'ik) or **Saprogenous,** sap-roj'en-us. Inducing putrefaction. See *Bacteria.*

Saproleg'nia. A genus of plants, midway between the fungi and algæ, existing upon the surface of marine animals.

Saprophilous, sap-rof'il-us (*sapros, phileo,* to love). Name applied to micro-organisms living or developing in putrid material, as bacteria, bacilli, etc.

Saprophytes, sap'ro-fites (*sapros, phuton*). Vegetable organisms living upon dead organic material.

Saprophytic, sap-ro-fit'ik. Pertaining or relating to saprophytes. See *Bacteria.*

Saprop'yra (*sapros,* putrid, *pur,* fever). Typhus gravior; putrid fever.

Sa'pros (*sapros*). Putrid; rancid.

Saprostomous, sap-ros'to-mus (*sapros, stoma,* mouth). One having an offensive breath.

Saprotes, sap'ro-tees (*sapros,* putrid). Putrefaction.

Sara'ca In'dica. Jasundi; asak. Bark used as astringent and sedative in menorrhagia.

Sarapus, sar'ap-us (*saro,* to grin, *pous,* the foot). One who has a large foot, whose toes are largely separated, or whose feet are much asunder in walking. See *Kyllosis.*

Sarato'ga, min'eral wa'ters of. The Saratoga Springs in New York are much frequented. These excellent waters are, as a class, applicable to cases of dyspepsia associated with visceral engorgement, chronic congestion of the liver, biliary catarrh, jaundice, etc.; but, as they differ in composition, it is impossible to state explicitly to what special affections they are universally applicable.

Sarcentome, sark'en-tome (*sarco, en,* in, *tome,* incision). *Entome.* Modified form of scarificator for stricture of the urethra.

Sarcepiplocele, sark-ep-ip-lo-se'le (Eng. sark-ep-ip'-lo-seel). Sarco-epiplocele.

Sarcepiplomphalocele, sark-ep-ip-lom-fal-o-se'le (Eng. sark-ep-ip-lom'fal-o-seel). Sarco-epiplomphalocele.

Sarcepiplomphalus, sark-ep-ip-lom'fal-us. Sarco-epiplomphalus.

Sarcidium, sar-sid'e-um (*sarkidion,* small piece of flesh). Caruncle.

Sarcin (sar'sin) or **Sarcine,** sar'seen. Sarcosin; hypoxanthin.

Sarcina, sar'sin-ah (a pack, a burden). Genus of family Coccaceæ; packet cocci, dividing in three directions, forming colonies in cubes or packets. Fœtus. **S. auranti'aca,** micrococci either single, in pairs, tetrads, or groups, forming deeply yellow colonies on gelatin culture-media, with liquefaction of the same. **S. au'rea,** oscillating cocci occurring in same forms as S. aurantiaca, forming yellow colonies with rapid liquefaction of gelatin; flourishes on agar or bouillon. **S. hyali'na,** discovered in marshy ground. **S. intestina'lis,** cocci in groups of four or eight in intestines of fowls. **S. litora'lis,** in sea-water containing putrefying matter. **S. lu'tea,** common in ordinary air; forms small disk-like colonies on gelatin and a yellow layer on potato. **S. pulmo'num** exists in phthisical sputa; forms small white colonies on gelatin, brown on potato. **S. Reitenbach'ii,** discovered on rotting water-plants. **S. ro'sea,** a variety found in marshes. **S. uri'næ,** very minute cocci, occurring in packets of from eight to sixty-four; has been found in the bladder. **S. ventric'uli,** microscopic cryptogamous plant found in the fluid of water-brash. See *Parasites.*

Sar'cine. Hypoxanthine.

Sarcion, sar'se-on (*sarkion*). Caruncle.

Sarcites, sar-se'tees (*sarx,* flesh). Anasarca. **S. flatuo'sus,** emphysema.

Sarcitis, sar-se'tis (*sarx,* flesh). Inflammation of muscular structures; myositis.

Sar'co (*sarx,* flesh). In composition, flesh.

Sarcocele, sar-ko-se'le (Eng. sar'ko-seel) (*sarco, kele,* a tumor). *Sarcoma scroti.* Scirrhus of the testicle; cancer of the testicle; carcinoma testiculi. It has

also been called malignant sarcocele, as cystic disease of the testicle, morbus testiculi cysticus, has been termed cystic sarcocele. The disease affects adults particularly, most commonly after an inflammatory swelling of the testicle; sometimes depending upon a blow, at others appearing without appreciable cause. There is a hard, heavy, ovoid or spherical swelling of the testicle, being at first slightly or not at all painful, and causing an unpleasant traction on the spermatic cord which is swollen and participates in the affection. Very painful shootings occur; the lymphatic glands of the abdomen become swollen, forming a tumor which may at times be felt through the abdomen, and the patient at length dies with every sign of the cancerous diathesis. The prognosis is very unfavorable. Extirpation of the testicle will sometimes save life. When of syphilitic origin sarcocele is called syphilitic sarcocele, morbus syphiliticus testiculi. Tuberculous disease of the testicle has received the name tuberculous sarcocele, morbus testiculi tuberculosus. **S. Ægypti'aca,** elephantiasis scroti. **S., cys'tic,** see *Sarcocele.* **S., malig'nant,** see *Sarcocele.* **S. syphilit'ica,** see *Sarcocele.* **S., tuber'culous,** see *Sarcocele.*

Sarcoceph'alus esculen'tus. Shrub of tropical Africa; ord. Rosaceæ. African peach root. The root is used as a bitter tonic in indigestion.

Sarcocolla, sar-ko-kol'lah (*sarco, kolla,* glue). Resinous matter from Penæa sarcocolla, P. mucronata, and other species of Penæa, an African shrub, being so called from a belief that it facilitates the consolidation of flesh. It was once employed as an astringent and detergent.

Sarcocoptes, sar-ko-kop'tees (*sarco, kopto,* to wound). See *Psora.*

Sarcode, sar'kode (*sarco*). A secondary form of the primordial blastema. In some of the inferior animals this amorphous, homogeneous substance, devoid of apparent structure, constitutes the greater portion, and even the whole, of the animal, as in the hydra. The term has been applied to the contents of cells, as of the cells of nutrition, epithelial cells, etc. See *Cytoblastema* and *Protoplasm.*

Sarcodes, sar-ko'decs (*sarx,* flesh, *odes*). Carneous.

Sarcodic, sar-kod'ic. Relating or appertaining to sarcode, as sarcodic movement. **S. sub'stance,** sarcode.

Sarco-epiplocele, sar-ko-ep-ip-lo-se'le (Eng. sar-ko-ep-ip'lo-seel) (*sarco, epiploon,* the epiploon, *kele,* tumor). Epiplocele complicated with sarcoma or sarcocele.

Sarco-epiplomphalus, sar-ko-ep-e-plom'fal-us (*sarco, epiploon,* epiploon, *omphalos,* navel). Umbilical hernia formed by scirrhous epiploon or complicated with sarcoma.

Sarcog'lia (*sarx, glia,* glue). Protoplasmic material forming the eminence of Doyère, where a motor nerve enters a muscular fibre; contains granules and nuclei.

Sarcohydrocele, sar-ko-hid-ro-se'le (Eng. sark-o-hi'dro-seel). Hydrosarcocele.

Sarcoid, sar'koid (*sarco, eidos,* resemblance). Resembling flesh.

Sarcolac'tic acid. $C_3H_6O_3$. An acid isomeric with lactic acid; occurs in muscles and urine.

Sarcolem'ma (*sarco, lemma,* coat). Sheath surrounding the fibrils of muscle forming a fibre. It is quite distinct from the areolar membrane binding the fibres into fasciculi.

Sarcologia, sar-ko-loj'e-ah (*sarco, logos,* discourse). Myology; sarcology.

Sarcol'ogy (same etymon). The part of anatomy treating of the soft parts, comprising myology, angiology, neurology, and splanchnology.

Sar'colytes (*sarco, lutos,* loosened). Round or cylindrical bodies observed in developing muscles of the frog; supposed to be products of retrograde metamorphosis of the muscle-fibres, and by some to be a developmental stage of the muscle-fibre.

Sarcoma, sar-ko'mah (*sarkoma, sarx,* flesh, *oma*). *Sarcomatous tumor, Histioid growth* or *tumor.* Literally, any species of excrescence having a fleshy consistence. The term has, however, of late years been employed to embrace a group of tumors, the tissues forming which belong to the series of connective substances, but which are distinguished from the tumors formed of the connective tissues by the preponderating development of the cell-elements. Granulation tissue formed during the inflammatory irritation of the connective tissue is regarded by Paget as the normal prototype of these tumors. Numerous morbid growths, malignant and non-malignant, varying in structure, location, consistence, etc., have been classed under this head. According to Paget, the following varieties have been described: 1. Tumors with spindle-shaped cells, the fibroplastic cells of Lebert (recurrent fibroid or fibroplastic tumors). This form of sarcoma is also called fasciculated or albuminous sarcoma and plasmoma. 2. Tumors with colossal, giant, many-nucleated, or myeloid cells (myeloid or myeloplaxic tumors). 3. Tumors with small round cells like the lymph- or white blood-corpuscles, or pus or granulation cells (granulations sarcoma, gliosarcoma, lymphosarcoma). This form of sarcoma is known also as the embryoplastic tumor, soft, medullary, glious. lymphoid, or encephaloid sarcoma. 4. Tumors with stellate cells and a gelatinous, shiny, intercellular substance, not unlike the material found in a myxoma (myxosarcoma). 5. Tumors with round or variously-shaped cells, most of which are of large size, and are usually imbedded in a fibrous matrix. *Glioma* is a variety of round-celled sarcoma growing from the neuroglia or connective tissue of nerves. 6. Tumors in which the cells contain a considerable proportion of pigment, which is most frequently found in the cells described in the last group, in the tumors with round and with fusiform cells (pigment or pigmentary sarcoma, melanoma, melanotic sarcoma). In all these forms, according to the same authority, an intercellular substance occurs, either homogeneous or fibrous, or which may present a delicate net-like or trabecular structure like that of a lymphatic gland. The following table exhibits the principal histological differences between glandular carcinoma and sarcoma (Gibbes):

Carcinoma.	*Sarcoma.*
Derived from epiblastic and hypoblastic structures.	Derived from mesoblastic structures.
Possess a fibrous stroma.	No stroma.
Blood-vessels run in fibrous trabeculæ of stroma.	Vessels run directly in contact with cells.
Lymphatics in stroma.	No lymphatics.

Sarco'ma, ad'ipose, of Ab'ernethy, see *Adipose sarcoma.* **S. alveola're,** a form of round-celled sarcoma, being a carcinomatous degeneration of the sarcoma, usually occurring in the medulla of bone, in the eye, and in the subcutaneous tissues. **S. carcinomato'des,** S. alveolare; scirrhus. **S. cerco'sis,** see *Cercosis.* **S., com'mon vas'cular** or **or'ganized, of Ab'ernethy,** tumors seemingly composed of the gelatinous portion of the blood made vascular by growth of blood-vessels through it. They are vascular throughout, of simple texture; when bulky, mapped on the surface with arborescent veins. **S. epu'lis,** epulis. **S. fibrocellula're,** see *Tumor, fibrocellular.* **S., gelat'inous,** see *Tumor, fibrocellular.* **S., glan'dular,** Hodgkin's disease. **S. globulocellula're sim'plex,** granulation-like round-celled variety of sarcoma. **S. lipomato'des,** see *Sarcoma lymphadenoïdes.* **S., lipo'matous,** see *Sarcoma lymphadenoïdes.* **S. lymphadenoï'des,** lymphatic, gland-like, round-celled form of sarcoma. In lipomatous sarcoma, S. lipomatodes, which is one variety of this, a partial transformation into fat-cells takes place by the infiltration of fat, while in mucous sarcoma, S. myxomatodes, another variety, a mucoid metamorphosis of the basis-substance occurs; see *Lymphosarcoma.* **S., mas'toid,** mammary sarcoma. **S. medulla're or med'ullary,** see *Sarcoma alveolare, Encephaloid, Hæmatodes fungus.* **S., melanot'ic,** a variety of sarcoma in which many of the cells contain granules of dark-colored pigment distinct from the pigment of extravasated blood. **S.**

mol'le, sarcoma lymphadenoïdes. **S. mollus'cum**, connective-tissue tumors of the skin; multiple and presenting few spindle-cells. **S., mu'cous**, see *Sarcoma lymphadenoïdes*. **S. myxomato'des**, see *Sarcoma lymphadenoïdes*. **S., pul'py**, hæmatodes fungus. **S. scro'ti**, sarcocele.

Sarcomatodes, sar-kom-at-o'dees. Sarcomatous.

Sarcomato'sus. Sarcomatous.

Sarcom'atous. Belonging to or having the characters of sarcoma.

Sarcom'phalum. Sarcomphalus.

Sarcomphalus, sar-kom'fal-us (*sarco, omphalos*, navel). Scirrhous or fleshy tumor developed at the navel.

Sarcomyces, sar-kom'is-ees (*sarco, mukes*, fungus). Sarcospongus.

Sarcomyce'tes. Parasitic fungi in animal tissues.

Sarcophagus, sar-kof'ag-us (*sarco, phago*, to eat). Carnivorous; catheretic.

Sarcoph'agy. Term applied to the eating of a diet composed of flesh.

Sarcophia, sar-kof'e-ah (*sarco, phuo*, to grow). Excrescence; sarcoma. See *Sarcophyte*.

Sarcophy'ma. Tumor composed of flesh; sarcoma.

Sarcophyte, sar'ko-fite (*sarco, phuton*, vegetable). *Flesh germ.* Term synonymous with bioplast, the former, however, expressing the condition and destination of a white cell, leucocyte; the latter, its vital and formative properties.

Sar'coplasm. Sarcoglia.

Sarcoplas'ma. Interfibrillar substance of muscles.

Sar'coplasts. See *Sarcolytes*.

Sarcopsyl'la pen'etrans (*sarco, psulla*, flea). Chique.

Sarcop'tes scabie'i (*sarco, kopto*, to wound). Acarus scabiei. See *Psora* and *Parasites*.

Sarcopyodes, sar-ko-pe-o'dees (*sarco, puon*, pus, *odes*). Having the appearance of pus mixed with flesh. An epithet given to certain excreted matters, particularly the sputa of consumptives.

Sar'cosin (*sarco*). Extractive matter found in the flesh and in the blood.

Sarco'sis (*sarx*, flesh, *osis*). Formation of flesh; also sarcoma; abnormal fleshy growth. **S. bul'bi**, fleshy growth from the globe of the eye. **S. u'teri**, hypertrophy of the uterus.

Sarcospongus, sar-ko-spon'gus (*sarco, spongos*, fungus). Fleshy fungus.

Sarcostosis, sar-cos-to'sis (*sarco, ostosis*, formation of bone). Osteosarcoma; growth of bony tumor in muscular tissue.

Sarcothlasis (sar-koth'las-is) or **Sarcothla'sia** (*sarco, thlao*, to bruise). Bruise of the flesh.

Sarcotic, sar-kot'ic. Promoting growth or regeneration of the flesh.

Sar'cotome (*sarco, tome*, incision). Instrument for cutting soft tissues.

Sar'cous (*sarx*, flesh). Of or belonging to flesh or muscle, as sarcous tissue. **S. el'ements**, *Primitive particles;* elementary particles which, by their union, form the mass of muscular fibre. Under high powers of the microscope the muscular fibrils seem to consist of alternate rectangular light and dark particles. These were so named by M. Bowman, and he considered that they resulted from a splitting transversely of the muscular fibre into disks—Bowman's disks—and lengthwise into fibrillæ. The dark particles refract light doubly, hence called disdiaclasts, while the others are only singly refractile.

Sardiasis, sar-de'as-is (*Sardo*, Sardinia). Canine laugh; risus sardonicus.

Sardo'nia her'ba. Ranunculus sceleratus.

Sardoniasis, sar-don-e'as-is. Canine laugh; risus sardonicus.

Sardon'icus or **Sardo'nius ri'sus.** Canine laugh.

Sa're. Essera.

Sarep'ta. Russian mustard.

Sar'kine. Hypoxanthin; sarcosin.

Sar'koblasts. Sarcolytes.

Sar'kolytes. Sarcolytes.

Sarotham'nus scopa'rius (*saros*, broom, *thamnos*, shrub). Spartium scoparium.

Sarracenia, sar-rah-sen'e-ah (after Dr. Sarrazin of Quebec). *Sidesaddle plant, Flytrap.* The root of *S. flava* and *S. variolaris* is bitter and astringent, being a domestic remedy in dyspepsia, and the root of *S. purpurea, Pitcher plant, Indian* or *Huntsman's cap*, is used, in infusion, by the Indians as a remedy for smallpox, both for prevention and cure.

Sar'sa. Smilax sarsaparilla.

Sar'sæ ra'dix. Smilax sarsaparilla.

Sarsaparilla, sar-sa-par-il'la ([S.] *zarza*, brier, *parilla*, little vine, or from *Parillo*, a physician who first employed it). Sarsaparilla (Ph. U. S.) is the root of Smilax officinalis, S. medica, and other undetermined species of smilax. Diuretic, alterative, and popular as a purifier of the blood; used in scrofula, syphilis, etc., and as a vehicle for potassium iodide. **S., false**, Aralia nudicaulis. **S. German'ica**, a plant growing on the sea-coasts of Europe; recommended in some mucous affections of the trachea, in rheumatism, gout, etc. **S., In'dian**, Hemidesmus Indicus. **S., wild**, Aralia nudicaulis.

Sarsaparil'lin. See *Smilax sarsaparilla*.

Sartaparil'la. Smilax sarsaparilla.

Sartian (sar'shun) **disease.** Endemic skin disease, commencing as a red spot on the face, proceeding to ulceration; seen especially along the Mediterranean, and synonymous with Biskra button, Oriental boil, Pendjeh sore, Gafsa button, Delhi sore, and Aleppo boil.

Sarto'rius (*sartor*, tailor, because used in crossing the legs). Muscle situate at the anterior part of the thigh; long, small, and flattened, extending obliquely from the anterior and superior spine of the ilium to the superior and inner part of the tibia. This muscle can also flex the pelvis on the thigh, and conversely.

Sarx. Flesh; pulp.

Sar'za ([S.] *sarza*, brier). Smilax sarsaparilla.

Sas'sa gum. A gum the product of a tree called sassa, and resembling gum tragacanth.

Sas'safras. Laurus sassafras, Nectandra cymbarum (Ph. U. S.), bark of root of Sassafras officinale. **S. infu'sion**, "sassafras tea." **S. medul'la** (Ph. U. S.), pith of Sassafras officinale; see *Laurus sassafras*. **S. nut**, see *Pichurim beans*. **S. oil**, volatile oil of sassafras. **S. pith**, S. medulla. **S. radi'cis cor'tex**, see *Laurus sassafras*. **S. ra'dix**, see *Laurus sassafras*. **S., swamp**, Magnolia glauca. **S. tea**, saloop.

Sas'safrin. A peculiar principle found in sassafras.

Sas'solin. A native variety of boracic acid.

Sas'sy bark. Poisonous bark of a large African tree, genus Erythrophleum, E. Guineense; ord. Fabaceæ; redwater tree of Sierra Leone; used in an ordeal to which persons suspected of crimes are subjected to test their innocence or guilt. Hence it is called in Conga ordeal bark, and in Ashantee and Liberia doom bark. The alkaloid *Erythrophleine* has been separated from it, and given in form of hydrochlorate; said to resemble digitaline in its action on the heart, and cocaine in producing local anæsthesia and relieving local pain.

Satellite, sat'el-lite. That which guards; that which is placed near. **S. veins** are those that accompany arteries.

Sathe, sah'the. Penis.

Satias, sash'e-as. Satiety.

Saties, sash'e-ees. Satiety.

Satietas, sat-e'et-as. Satiety.

Satiety, sat-i'et-e (*satio*, to give enough). Disgust for food; commonly caused by repletion.

Sat'in. Lunaria rediviva.

Saturans, sat'u-rans (*saturo*, to satiate). Absorbent medicine. See *Saturation*.

Saturatio, sat-u-rah'she-o. Satiety; saturation.

Satura'tion. State of a compound in which its elements are combined in such proportion that a fresh quantity of either cannot be added without producing excess.

Saturei'a capita'ta (*saturoi*, satyrs, owing to its presumed power of exciting to venery). *Ciliated savory, Thymus.* Possesses properties similar to those of

thyme. **S. horten'sis**, aromatic plant, cultivated for culinary purposes; used as an excitant in anorexia, anaphrodisia, etc. **S. monta'na**, winter savoy. **S. origanoï'des**, Cunila mariana. **S. sati'va**, S. hortensis.

Satu'ritas (*saturo*, to satiate). Satiety.

Satur'ni dulce'do. Plumbi superacetas.

Saturnine, sat'ur-nine (*saturnus*, lead). *Saturninus.* Relating or appertaining to lead. **S. breath**, peculiar odor of the breath in one laboring under saturnismus. **S. encephali'tis**, cerebral inflammation due to lead-poisoning. **S. neuri'tis**, a form of inflammation of nerve-fibres consequent upon lead-poisoning. **S. pal'sy** or **paral'ysis**, paralysis due to lead-poisoning. **S. poi'soning**, poisoning from lead.

Saturninus, sat-ur-ne'nus. Saturnine.

Saturnism, sat'ur-nizm. Poisoning by lead; lead-poisoning; saturnine cachexy.

Saturnis'mus. Saturnism.

Satur'nus. Lead. See *Plumbum.*

Satyr'ia. Elephantiasis.

Satyriasis, sat-er-e'as-is (*saturos*, a satyr, because the satyrs were greatly addicted to venery). Irresistible desire in man to have frequent connection with the female, accompanied by the power of doing so without exhaustion. The causes are commonly obscure; sometimes the abuse of aphrodisiacs has occasioned it. The principal symptoms are almost constant erection; irresistible and almost insatiable desire for venery; frequent nocturnal pollutions. **S. fu'rens**, satyriasis.

Satyriasmus, sat-ir-e-az'mus. Satyriasis.

Satyrion, sat-ir'e-on. Orchis mascula.

Satyrismus, sat-ir-iz'mus. Satyriasis.

Satyrium, sat-ir'e-um. Goodyera pubescens.

Sauar'ja. Saoria.

Sauce alone'. Alliaria. **S., green**, Rumex scutatus.

Sau'cy bark. Erythrophlœum.

Saugh, saw. Salix.

Saun'ders, red. Pterocarpus santalinus. **S. tree**, Pterocarpus santalinus. **S., yel'low**, Santalum album.

Saura, saw'rah. Lizard.

Sauriderma, saw-rid-ur'mah (*saura*, lizard, *derma*, skin). Sauriosis.

Saurioïdes, saw-re-o-e'dees. Sauriosis.

Saurio'sis. Ichthyosis with altered state of the sebiparous secretion, giving occasion to the accumulation of sebaceous matter on the skin, suggesting the idea of the coat of a lizard.

Sauroderma, saw-ro-dur'mah (*saura*, *derma*, skin). Sauriosis.

Sauropsida, saw-rop'sid-ah. Huxley's term including reptiles, birds, and mammals.

Saururus cernuus, saw-ru'rus sur'nu-us (*saura*, lizard, *oura*, tail). *Lizard tail, Breastweed.* Indigenous. Ord. Saurnraceæ. It has been used in lumbago. The bruised root is emollient, and is popularly applied to inflamed breasts.

Saus'age poi'son. See *Allantotoxicum* and *Ptomaïnes.*

Sausaris'mus. Dry state of the tongue.

Sauter's operation, sow'tur's op-ur-a'shun. Kolpohysterectomy.

Sava'kin gum. Suakin gum.

Savanil'la ratan'hy. See *Krameria ixina.*

Save. Salvia.

Savian corpuscles, sa've-an kor'pus-s'ls. Corpuscles described by Savi in the skin of the torpedo, analogous to the Pacinian corpuscles.

Savine, sav'in. Juniperus sabina. This plant is commonly employed to induce abortion, and in large doses is a violent irritant poison. It is used in medicine as a local irritant and emmenagogue. **S. ce'rate**, savine ointment, made by gently heating together fluid extract of savine 25 parts with resin cerate 90 parts until the alcohol has been evaporated (Ph. U. S.).

Saviot'ti's canals'. Minute slits between the glandular cells of the pancreas, now considered as artificially formed.

Sa'vor. *Taste.* Qualities of bodies by which they act upon the sense of taste. Chemists, at times, avail themselves of this quality to analyze an unknown substance.

Sa'vory. An epithet given to bodies having taste, particularly to those exciting a very agreeable impression on the organ of taste. See *Satureia.* **S. cil'iated**, Satureia capitata. **S., sum'mer**, Satureia hortensis.

Savoy'an. Galium verum.

Saw. Surgical instrument made like a common saw, used for sawing the bones in amputations or for removing exostoses, etc. Saws of different sizes and shapes are used in surgery. The crown of the trepan is nothing more than a species of circular saw. **S., amputa'tion**, saw used in amputation. **S., butch'er's**, has an appliance for fixing the blade at any desired angle. **S., hemp**, a hempen cord drawn back and forth rapidly over a part to be taken away; used in embryotomy and in situations where other saws cannot be employed. **S., Hey's**, an instrument used by Mr. Hey, of Leeds, in fractures of the cranium, consisting of a long handle, to which a small saw with a convex or straight edge is attached, and by which a piece of bone of any shape may be removed. With the trephine the saw must always be circular. **S. palmet'to**, Chamærops serratula; Sabal serrulata.

Saw'wort. Liatris.

Saxifraga, saks-if'rag-ah (*saxum*, stone, *frango*, to break). Pimpinella saxifraga. **S. an'glica**, Peucedanum silaus; see *Calcifraga.* **S. crassifo'lia**, root is said to be antiseptic. **S. granula'ta**, *White saxifrage;* diuretic and lithontriptic. **S. ligula'ta**, rhizome of this Himalayan plant is employed for ophthalmia and boils, and internally in bronchitis and dysentery. **S. ru'bra**, Spiræa filipendula. **S. Sibir'ica** contains, in common with other species of S., a bitter crystalline principle, called bergenin, which is reputed to be a good nerve tonic. **S. vulga'ris**, Peucedanum silaus.

Saxifrage (saks'e-frage), **burnet.** Pimpinella saxifraga. **S., mead'ow**, Peucedanum silaus. **S., white**, Saxifraga granulata.

Saxif'ragus (*saxum*, stone, *frango*, to break). Lithontriptic.

Saxon'icus pul'vis. A powder of the roots of the wild and the cultivated angelica, the Asclepias vincetoxicum, etc., considered formerly as an antidote.

Sayre's jack'et. A plaster-of-Paris jacket applied as a spinal support. **S.'s meth'od** means treatment of spondylitis by Sayre's jacket, consisting of a plaster-of-Paris dressing around the body, fitted with a "jury-mast" if upper dorsal or cervical vertebræ are affected.

Scab. An incrustation which forms upon a sore, owing to the concretion of the fluid discharged from it; eschar.

Scab'by or **Scabbed.** Covered or diseased with scabs.

Scabies, skab'e-ees (*scabo*, to scratch). Psora. **S. a'gria**, lichen. **S. cap'itis**, porrigo lupinosa, porrigo scutulata. **S. cap'itis favo'sa**, porrigo favosa. **S. crusto'sa**, radzyge. **S. fe'ra**, ecthyma. **S. feri'na**, *Itch of animals, Mange* (pronounced mainj); cutaneous disease which affects almost all domestic animals, but especially the horse, sheep, dog, and cow. It is said to have been transmitted to man, but this is questionable; see *Psoriasis.* **S. hu'mida**, eczema. **S. milia'ris**, eczema. **S. Norve'gica Boeck'ii**, radzyge. **S. papulifor'mis**, prurigo. **S. sic'ca**, lichen; psoriasis. **S. vene'rea contagio'sa**, scherlievo.

Scabiola, skab-e'o-lah. Psora.

Scabiosa, skab-e-o'sah (*scaber*, rough, owing to its rough hairy surface). *Eastningwort.* Bitter and subastringent, being formerly used in leprous affections and affections of the lungs. **S. arven'sis**, scabiosa. **S. carduifo'lia**, echinops. **S. succi'sa**, *Devil's bit*, has similar properties.

Scabious, skab'e-us. Erigeron Philadelphicum. **S., field**, scabiosa. **S., sweet**, Erigeron heterophyllum.

Scabish, skab'ish. Œnothera biennis.

Scab'rate or **Scab'rous** (*scaber*). Harsh; rough; covered with scabs.

Scabrities, skab-rish'e-ees (*scaber*, rough). Lichen; trachoma. **S. un'guium**, morbid condition of the nails, in which they are distorted and separated from the matrix. See *Onychophyma.*

Scab'wort. Elecampane; Inula helenium.

Scævola, see'vo-lah. See *Bela-modagam.*

Scala, skal'ah. Staircase. See *Scalæ.* Machine formerly used for reducing dislocations of the humerus. **S. ante'rior coch'leæ**, see *Scalæ.* **S. clau'sa**, see *Scalæ.* **S. exter'na coch'leæ**, see *Scalæ.* **S. infe'rior coch'leæ**, see *Scalæ.* **S. inte'rior coch'leæ**, see *Scalæ.* **S. me'dia**, space between basilar membrane and Reissner's membrane; see *Membrane of Corti.* **S. poste'rior coch'leæ**, see *Scalæ.* **S. supe'rior coch'leæ**, see *Scalæ.* **S. tym'pani**, see *Cochlea* and *Scalæ.* **S. vestib'uli**, see *Cochlea* and *Scalæ.*

Scalæ (skal'e) **of the coch'lea.** *Spiral canals* or *tubes of the cochlea.* The cavities in the cochlea, separated from each other by the spiral septum. The one—scala interna or posterior or inferior cochleæ, S. tympani—would communicate with the cavity of the tympanum were it not for the membrane that closes it. The other—scala externa or anterior or superior cochleæ, S. vestibuli—opens into the cavity of the vestibule. The scalæ communicate with each other by an opening at the top of the partition.

Scalariform (skal'ar-e-form) or **Scalarifor'mis.** Having the form of a ladder.

Scald, skawld. Burn produced by hot liquid.

Scald-head. Porrigo. See *Favus.*

Scald'ricks. Sinapis arvensis.

Scald-weed. Dodder; Cuscuta Americana.

Scale. An opaque and thickened lamina of cuticle, commonly produced by some degree of inflammation of the true skin, over which it is formed. See *Scales.* **S., dry**, psoriasis.

Scalene' tu'bercle. An eminence on first rib, giving attachment to tendon of scalenus anticus muscle.

Scalenus, skal-a'nus (*skalenus*, irregular or unequal). Geometers employ this word to designate a triangle whose three sides are unequal. Anatomists have given the name to two muscles. **S. anti'cus**, situate at the internal and inferior part of the neck. It is long and triangular, being inserted, below, at the upper surface of the first rib; above, at the anterior tubercle of the transverse processes of the 3d, 4th, 5th, and 6th cervical vertebræ. This muscle bends the neck, drawing it to one side. It can also raise the first rib. **S. posti'cus**, situate behind the last. It is also long and triangular, but more bulky than the S. anticus. It is attached below to the outer surface of the first two ribs, terminating above at the summit of the transverse processes of the last six vertebræ. This muscle bends the neck laterally, and can elevate the first two ribs. Some anatomists have described five scaleni muscles on each side, and have called them S. prior, S. minimus, S. lateralis, S. medius, S. posticus. Others describe only one scalenus muscle on each side. Others, again, admit three—S. anticus, S. medius, and S. posticus; or primus, secundus, and tertius.

Sca'ler. Instrument used to remove tartar from the teeth.

Scales (*squamæ*). Small, thin laminæ or plates; applied to exfoliations from skin or bone. **S. of iron**, made by washing scales of iron, etc., found about blacksmiths' forges, with water, separating the iron from impurities with a magnet, and reducing it to powder.

Sca'ling. In dentistry, an operation consisting in removing the tartar from the teeth.

Scall, skawl. Impetigo; scab. **S., asbes'tos**, see *Eczema of the hairy scalp.* **S., crust'ed**, impetigo. **S., dry**, psoriasis. **S., hon'eycomb**, porrigo favosa. **S., hu'mid**, eczema. **S., milk'y**, porrigo larvalis. **S., pap'ulous**, ecthyma. **S., run'ning**, eczema; impetigo. **S., vesic'ular**, eczema capitis. **S., wash'erwoman's**, psoriasis.

Scal'lard. Porrigo.

Scalled (skawl'd) **head.** Porrigo; P. scutulata.

Scal'ma. Infectious disease of horses, not directly contagious. It attacks the bronchi and nasal chambers.

Scalp. The integuments covering the head. **S. tu'mor**, caput succedaneum; cephalhæmatoma.

Scal'pel (*scalpo*, to cut). A cutting instrument, formed of a blade of well-tempered steel, very sharp, of variable shape and size, and fixed solidly in a handle. Used to divide the soft parts in operations, dissection, etc.

Scalpel'lum. Scalpel. **S. lenticula're**, a lens-shaped knife.

Scalpel'lus. Bistoury; scalpel.

Scalpeum, skal'pe-um. Bistoury.

Scalprum, skal'prum (*scalpo*, to cut, to scrape). Raspatorium. **S. chirur'gicum**, lancet. **S. denta'rium**, a tooth file, a dental file, or file used by the dentist. **S. raso'rium**, raspatorium.

Sca'ly. Squamous. **S. diseases**, squamous cutaneous diseases; see *Squamous* and *Cutaneous diseases.* **S. epithe'lium**, flat or pavement epithelial cells. **S. tet'ter**, psoriasis.

Scamma, skam'mah (*skamma*). Fossa.

Scammo'nia. See *Convolvulus scammonia.*

Scammo'niæ ra'dix (Ph. Br.). Dried root of Convolvulus scammonia. See *Convolvulus scammonia.* **S. resi'na**, extractum scammonii.

Scammonin, skam'mo-nin. Glucoside derived from boiling resin of scammony with dilute sulphuric acid.

Scammonium, skam-mo'ne-um (Ph. U. S.). Resinous exudation from root of Convolvulus scammonia; see *Convolvulus scammonia.* **S. Syria'cum**, Convolvulus scammonia.

Scam'mony. See *Scammonium* and *Convolvulus scammonia.* **S., Bour'bon**, concrete juice of Periploca Mauritiana. **S., Ger'man**, see *Convolvulus sepium.* **S. mix'ture**, mistura scammonii (Ph. Br.). **S. of Montpel'lier**, Cynanchum Monspeliacum. **S., resin of**, see *Convolvulus scammonia.* **S. root**, dried root of Convolulus scammonia.

Scam'num Hippocrat'icum (*scamnum*, a bench). A machine invented by Hippocrates for reducing fractures; a sort of bed on which the patient was fixed. Straps were attached above and below the fracture or luxation, and extension and counter-extension were effected by a winch. See *Bathron.*

Scandix, skan'diks. S. cerefolium. **S. bulbocas'tanum**, Bunium bulbocastanum. **S. cerefo'lium**, *Chervil;* a culinary herb, slightly aromatic and grateful, and reputed to be gently aperient and diuretic. **S. odora'ta**, *Sweet cicely*, has similar properties; see *Chærophyllum odoratum.*

Scandula'ria mus'culus. Transversus pedis muscle.

Scandyx, skan'diks (*skandux*). Scandix cerefolium.

Scapha, skaf'ah (*skapto*, to make hollow). *Scaphus.* Excavation or cavity of the external ear, between the helix and anthelix. Meatus auditorius externus. Rima vulvæ. Name of a head bandage mentioned by Galen, called also Tholus diocleus.

Scaphion, skaf'e-on (*skaphe*, trough). Cranium; papaver (capsule).

Sca'phium ocula're. *Eye-glass.* A small porcelain, glass, or metallic vessel used to apply lotions to the eye.

Scaphocarposuperphalange'us pol'licis. Abductor pollicis brevis.

Scaphocephalic, skaf-o-sef-al'ik (*skaphe*, boat, *kephale*, head). Having or relating to a skull that is scaphoid or boat-shaped.

Scaphocephalous, skaf-o-sef'al-us (*skaphe*, boat, *kephale*, head). Term used to denote a boat-shaped cranium due to infantile ossification of the sagittal suture.

Scaphoid, skaf'oid (*skaphe*, boat, *eidos*, form). A name given to several parts. **S. abdo'men**, hollowed-out, sunken belly seen in emaciation, wasting diseases, and certain acute affections. **S. bone of the foot**, *Boat-like bone;* bone situate at the fore part of the astragalus and inner part of the foot. The

posterior surface forms a cavity somewhat like that of a boat, for receiving the head of the astragalus. There is a prominence at the inner side of the bone for the insertion of tendons, muscles, and strong ligaments. The fore part of the bone is convex, and divided into three articular surfaces for articulation with the ossa cuneiformia. Between the os naviculare and astragalus the foot has its principal lateral and rotary motions, although each of the other joints of the tarsus contributes a little. Part of the tibialis posticus is inserted into it. **S. bone of the wrist,** *Boat-like bone;* the first bone of the first row of the carpus. The upper surface is convex, articulating with the radius. The under and outer surfaces are also convex, articulating with the trapezium and trapezoïdes. Between the upper and under cartilaginous surfaces there is a rough fossa for the insertion of the capsular ligament. The anterior and inner surface has an oval cavity articulating with the os magnum, which gives name to the bone. There is a process on the outer end of the bone for the attachment of part of the anterior transverse ligament of the wrist. **S. fos'sa,** a small cavity at the upper part of the internal ala of the pterygoid process in which the peristaphylinus internus is attached.

Scaphoïdes, skaf-o-e'dees. Scaphoid. See *Scaphoid.*

Scaphoïdo-astragalan, skaf-o-id'o-as-trag'al-an. Relating to the scaphoid bone and astragalus. The articulation of these bones is so called; and the ligament which strengthens it is termed the scaphoïdo-astragalan ligament.

Scaphoïdocu'boid. Relating to the scaphoid and cuboid bones. The articulation of these bones is so called.

Scaphula, skaf'u-lah (dim. of **Scapha**). Navicular fossa.

Scaphus, skaf'us (*skaphe,* skiff, trough). External auditory canal; rima vulvæ; scapha.

Scapula, skap'u-lah (dim. of **Scapha**). *Blade-bone, Shoulder-blade.* An irregular, broad, flat bone of triangular shape, situate at the posterior part of the shoulder. It has—1, a posterior or dorsal surface or dorsum, testudo scapulæ, divided transversely into two parts by a triangular process, called spine of the scapula, terminating by a considerable eminence called the acromion. Above the spine is the fossa supraspinata; below it, the F. infraspinata. 2. Anterior or costal surface or venter, forming the fossa subscapularis. 3. Superior cervical edge, thin, and terminating anteriorly by a strong, curved apophysis, called the coracoid process. 4. Posterior or vertebral edge, called the base. 5. Outer or axillary or inferior edge, having a thick, truncated angle, in which is the glenoid cavity. With this is articulated the head of the humerus. The glenoid cavity is separated from the body of the bone by a narrow part called the cervix or neck. The edges or margins are also called costæ. The scapula has three angles—an inferior, superior, and anterior. Humerus.

Scapulæ nasi, skap'u-le nas'e. The lateral parts of the nose.

Scapulalgia, skap-u-lal'je-ah (*scapula,* the shoulder-blade, *algos,* pain). Arthralgia of the scapula. Pain in the shoulder-blade.

Scapular, skap'u-lar (*scapula*). *Scapulary.* Relating or belonging to the scapula. **S. aponeuro'sis,** a broad, thin aponeurosis, with decussating fibres, being attached, above, to the spine of the scapula; below, to crest between the teres major and infraspinatus; within, to the spinal edge of the scapula, uniting at its middle with the thin aponeurosis covering part of the external surface of the deltoid. **S. arch,** hæmal arch of occipital vertebra (Owen), consisting in man of the scapula and coracoid. **S. ar'teries,** these are several: 1. The superior scapular, superficial scapular of Sömmering. This arises from the subclavian, and often from the inferior thyroid, or from a trunk common to it and the posterior scapular or transverse scapular or cervical. It passes behind the clavicle, above the superior edge of the scapula, and buries itself between the dorsal surface of that bone and the muscles inserted into it. 2. The inferior scapular or common scapular or internal scapular or subscapular artery is of considerable size. It arises from the inferior part of the axillary artery, behind the brachial plexus, gives off several branches to the arm-pit, dividing into two branches: the one, scapularis interna, the smaller of the two, is distributed almost entirely to the serratus major anticus and latissimus dorsi; the other, the larger, which distributes its branches to the subscapular, supraspinal, and infraspinal regions. See *Acromial artery.* **S. line,** line drawn vertically through the inferior angle of the scapula when the arms are folded. Used in physical examination. **S. notch,** see *Notch, scapular.* **S. re'flex,** contraction of scapulary muscles on sticking or pinching the skin of the outer scapular region. **S. re'gion,** that portion of the back bounded by the scapulæ. **S. veins** follow the same course as the arteries which they accompany.

Scapulare, skap-u-lah're. Scapulary.

Scapulary, skap'u-lah-re. A broad linen bandage, divided into two tails for three-quarters of its length, the undivided extremity being attached to the posterior and middle part of a bandage carried round the body, the tails passing over the shoulders and being attached to the anterior part of the body-bandage to prevent it from slipping down.

Scap'ulo. In composition, the scapula.

Scapuloclavicula'ris. Rare band of muscular fibres attached to the upper border of the scapula and clavicle outside of the insertion of the subclavius.

Scapulocor'acoid arch. The scapular arch.

Scapulocosta'lis mi'nor. Sternoscapular muscle.

Scapulodynia, skap-u-lo-din'e-ah (*scapula, odune,* pain). Pain or rheumatism of the shoulder.

Scapulohumeral, skap-u-lo-u'mer-al. Relating to the scapula and humerus. An epithet given to the shoulder-joint. It is an orbicular articulation resulting from the reception of the head of the humerus into the glenoid cavity of the scapula. To keep the bones in connection there are—1. A very strong, conoidal capsular ligament, passing from the circumference of the glenoid cavity around the neck of the humerus; 2. A fibrocartilaginous ring, called the glenoid ligament, and a synovial capsule.

Scapulohumera'lis digas'tricus. Deltoideus accessorius.

Scapulum, skap'u-lum. Scapula.

Scapus, skap'us (*skapos,* shaft, stalk). Penis. See *Hair.*

Scar (*eschara*). Seam. Cicatrix. To mark with a cicatrix or seam.

Scarabæolus hemisphæricus, skar-ab-e'o-lus hem-is-fer'ik-us (dim. of **Scarabæus**). Coccus cacti.

Scardamygmus, skar-dam-ig'mus (*skardamuso,* to wink). Winking; closure of the eyelids.

Scarenzio's treat'ment. Administration of calomel hypodermically for syphilis.

Scarf'-skin. Epidermis.

Scarification, skar-if-i-ka'shun (*scarifico,* to make a light scratch). Act of scarifying. A small incision made into the skin with a lancet, bistoury, or scarificator for therapeutical purposes, as to draw blood or to discharge some effused fluid; sometimes the scarifications are very superficial, and do not go farther than the skin.

Scar'ificator. Instrument for making scarifications; it consists of a small brass box of a cubical shape, in which 10 or 12 lancet-points turn upon a common pivot. By means of a spring all these blades can be made to issue at once, making as many scarifications. Other instruments, much more simple in construction, are so called, intended for the scarification of the conjunctiva, the larynx, etc.

Scarificato'rium. Scarificator.

Scariola, skar-e'o-lah. Cichorium endivia; Lactuca scariola.

Scarlata, skar-lat'ah. Scarlatina.

Scarlatina, scar-lat-een'ah. *Scarlet fever, Rash fever, Scarlet rash.* The characteristic symptoms of scarlatina are a scarlet flush, appearing about the

second day of fever, on the face, neck, and fauces, and progressively spreading over the body, terminating about the seventh day. Two great varieties may be reckoned: *S. simplex* or *febris* or *benigna* or *sine anginâ*, in which the fever is moderate, terminating with efflorescence, prostration of strength being trifling; and the *S. anginosa* or *paristhmitica* or *cynanchica, Fothergill's sore throat*, in which the fever is severe, the throat ulcerated, the eruption later in its appearance and less extensive, often changing to a livid hue. *Scarlatina maligna* or *gravior* has been reckoned a variety of this in its worst form. Scarlatina belongs to the major exanthemata, being a disease chiefly of children. The eruption differs from that of measles in being an efflorescence not raised above the cuticle. Measles, too, is attended with catarrhal symptoms, while the complication in scarlatina is cynanche or sore throat. The disease is generally regarded as eminently contagious. To the zymotic principle the name *Scarlatinin* has been given. Anasarca sometimes supervenes on scarlatina and requires attention. See *Eruptive diseases* (table). **S. angino'sa**, see *Scarlatina*. **S. cynan'chia**, see *Scarlatina*. **S. feb'ris**, see *Scarlatina*. **S. gra'vior**, see *Scarlatina*. **S. malig'na**, a commonly fatal variety, attended by rapid exhaustion and grave nervous symptoms. **S. milia'ris**, miliary erythema or measles; rubeola. **S. mit'ior**, see *Scarlatina*. **S. morbillo'sa**, rubella. **S. nervo'sa**, type attended by grave nervous symptoms, as coma, subsultus, delirium, convulsions, etc. **S. paristhmit'ica**, see *Scarlatina*. **S. petechia'lis**, S. nervosa. **S. pustulo'sa**, rubeola. **S. pu'trida**, malignant scarlet fever. **S. rheumat'ica**, dengue. **S. si'ne angi'nâ**, see *Scarlatina*. **S. urtica'ta**, urticaria.

Scarlatin'iform. Term applied to any affection resembling scarlet fever or its specific eruption.

Scar'latinin. See *Scarlatina*.

Scarlatinoid, skar'lat-in-oid (*scarlatina, eidos*, resemblance) Resembling scarlatina.

Scarlatinous, skar-lat-e'nus. Relating or appertaining to scarlatina; scarlatinal.

Scar'let ber'ry. Solanum dulcamara. **S. fe'ver**, scarlatina. **S. pim'pernel**, a plant, Anagallis arvensis, stimulant, expectorant, and toxic. **S. rash**, scarlet fever; also diffuse scarlet eruption seen in some cases of septicæmia. **S. straw'berry**, Fragaria Virginiana.

Scar'pa. Celebrated Italian anatomist and surgeon. **S.'s fas'cia**, deep layer of superficial fascia of the groin. **S.'s foram'ina**, two of the four smaller foramina into which the anterior palatine foramen of the superior maxillary bone is divided, the others being called the foramina of Stenton. **S.'s gan'glia**, intumescentia ganglioformis. **S.'s shoe**, see *Shoe, Scarpa's*. **S.'s tri'angle**, see *Triangle*.

Scarred. See *Scar*.

Scatacra'sia (*skor*, excrement, *a*, priv., *krasis*, mixture). Scoracratia.

Scatacratia, scat-ah-krat-e'ah (*skor*, excrement, *akrateia*, want of power). See *Scoracratia*.

Scatophagia, skat-o-faj'e-ah (*skatos*, excrement, *phago*, to eat). Excrement-eating.

Scav'enging. The cleansing of alleys, etc. from filthy material.

Scelalgia, skel-al'je-ah (*skelos*, leg, *algos*, pain). Pain in the leg. **S. anti'ca**, neuralgia femoropretibialis. **S. posti'ca**, neuralgia femoropoplitea. **S. puerpera'rum**, phlegmatia dolens.

Sceleteuma, skel-e-tu'mah. Mummy.

Sceleteu'sis (*skeleteuo*, to desiccate, to pickle). Mummification. The mode of making a skeleton; *Skeletopœia, Syntaxis*.

Sceletography, skel-et-og'raf-e. Skeletography.

Sceletologia, skel-et-o-loj'e-ah. Skeletologia.

Scel'eton. Skeleton.

Sceletopœa, skel-et-o-pe'ah. Sceleteusis; skeletopœia.

Scel'etum. Skeleton. **S. artificia'le**, see *Skeleton*. **S. natura'le**, see *Skeleton*.

Scelocambosis, ske-lo-kam-bo'sis (*schelos, kampto*). Curvature of the legs.

Scelodes'mus (*desmos*). Bandage for knee-joint.

Scelodid'ymus. Ischiopagus.

Sceloncus, skel-on'kus (*scelos, onkos*, tumor). A tumor of the leg. Phlegmatia dolens.

Scelorrheu'ma (*scelos, rheuma*, defluxion, rheumatism). Rheumatism of the leg.

Sce'los (*skelos*). Leg.

Sceloscambosis, skel-o-skam-bo'sis (*scelos, kampto*, to bend). See *Rhæbosis*.

Scelotyrbe, skel-o-tur'be (*scelos, turbe*, tumult). Chorea; Porphyra nautica. **S. ag'itans**, dystaxia. **S. febri'lis**, see *Subsultus tendinum*. **S. fes'tinans**, paralysis agitans. **S. tarantis'mus**, chorea.

Scenomeninx, sken-o-men'inks (*skenos*, hut, *meninx*, membrane). See *Cell*.

Scenotheoria, sken-o-the-o're-ah (*skenos*, hut, *theoria*, theory). Cell doctrine.

Sceparnos, skep-ar'nos (*skeparnon*, an axe). Ancient bandage, in shape like an axe or hatchet.

Sceparnum, skep-ar'num. Amnion.

Scepasterium, skep-as-ta're-um (*skepazo*, to protect). Scepastrum.

Scepas'trum. Bandage applied to the head for retaining dressings, etc.

Scep'trum (*skeptron*). Penis.

Schach'er's gan'glion. Ophthalmic ganglion.

Schasis, skah'sis. Scarification.

Schasmus, skaz'mus. Scarification.

Schasterion, skas-ta're-on. Fleam; lancet; scarificator.

Sche'ba Ar'abum. Artemisia santonica.

Schedula, sked'u-lah (dim. of **Scheda**, a leaf of paper). Prescription.

Scheele's green. Arsenite of copper.

Schei'ner's exper'iment. An experiment to show refraction of the lens during accommodation. Two pin-holes are made in a card, the distance between them being somewhat less than the diameter of the pupil, and the patient is directed to look through them at two needles placed one behind the other, when it will be observed that the needle not directly in the line of vision appears double.

Schema, ska'mah. Plan, scheme, diagram, or arrangement.

Schematic (ske-mat'ik) **eye.** One exhibiting typical proportions of the eye.

Scherbet, shur'bet. *Sherbet*. A drink prepared by the Turks, Persians, Egyptians, etc., with sugar and the juice of acid fruits.

Scherlievo, sher-li-e'vo. *Venereal itch*. A name given to a particular form of syphilis at one time observed in Illyria; said to be capable of being communicated without immediate contact. Its principal symptoms were pains in the bones, ulceration of the fauces, pustules and fungous growths in different parts of the body. Affections known by this name, as well as by those of *Male di Breno, Falcadina, Boala*, and *Frenga*, have prevailed in the frontier countries of the Austrian empire, and were generally regarded as contagious, of syphilitic origin, and as having been introduced from a surrounding country. The terms appear, however, in the course of time to have been applied to a variety of ulcers, eruptions, and other morbid conditions in no way connected with syphilis, so that they lost their former signification.

Scheroma, sker-o'mah (*scheros*, a shore, dry land). A dryness of the eye from the want of lacrymal secretion.

Scheurlen's bacillus. Form of bacillus supposed to be definitely connected with cancer, although probably not found exclusively in this affection.

Schias, ske'as. Ischias; neuralgia femoropoplitea.

Schiaticus, ske-at'ik-us. Sciatic.

Schidakedon, skid-ak-e'don (*schizo*, to cleave). A longitudinal fracture of a bone.

Schiff's test. A test for uric acid, based upon the fact that uric acid or a urate, in the presence of an alkaline carbonate, will reduce silver nitrate; the test being performed by saturating bibulous paper with a solution of silver nitrate and dropping it upon the suspected solution prepared according to the above conditions.

Schindacedum, skin-das-a'dum. Longitudinal fracture of a bone.

Schindalamus, skin-dal'am-us. Longitudinal fracture of a bone; schindylesis.

Schindalesis, skin-dal-a'sis. Schindylesis.

Schindalmus, skin-dal'mus. Schidakedon; schindylesis.

Schindylesis, skin-dil-a'sis (*schinduleo*, to split into small pieces). An articulation of bones—by furrowing, as it were—as in that of the vomer, forming, in part, the septum narium. The act of splitting into small pieces.

Schinelæon, skin-el-e'on (*schinos*, mastic tree, *elaion*, oil). Oil of mastic.

Schinocephalus, skin-o-sef'al-us (*schinos*, squill, *kephale*, head). Scillocephalus.

Schinus, ske'nus. Pistacia lentiscus; scilla. **S. arveira**, *Arveira*. A tree of Brazil; bark is slightly aromatic and resinous, and markedly astringent. The resinous juice of Schinus molle is slightly purgative.

Schisma, shiz'mah. Fissure; rima.

Schistocephalus, shis-to-sef'al-us (*schistos*, cleft, *kephale*, head). Monster having some part of the head cleft or fissured.

Schistocœlia, shis-to-se'le-ah (*schistos*, cleft, *choilia*, intestines). Fissure of the abdomen.

Schistocormus, shis-to-cor'mus (*schistos*, cleft, *kormos*, trunk). Monster having part or the whole of the trunk cleft or fissured.

Schistoglossia, shis-to-glos'se-ah. Slit or fissure of the tongue.

Schistomelus, shis-tom'el-us (*shistos*, cleft, *melos*, limb). Monster whose limbs are fissured.

Schistoprosopia, shis-to-pros-o'pe-ah. Fissure of the face from defective development.

Schistoprosopus, shis-to-pros-o'pus. Monstrosity having a fissure of the face.

Schistorrhachis, shis-tor'rhak-is (*schistos*, cleft, *rhachis*, spine). Fissure of the spine from defective development. Spina bifida. See *Hydrorrhachis*.

Schistosomus, shis-to-so'mus (*schistos*, cleft, *soma*, body). Malformation of the abdomen, in which the fissure and eventration extend over the entire length of the abdomen, the lower extremities being absent or very little developed, so that the body appears as if truncated inferiorly. See *Chloasma*.

Schistotho'rax (*schistos*, cleft, *thorax*). Condition in which part or the whole of the thorax is cleft or fissured.

Schistotrachelus, shis-to-trak-e'lus (*schistos*, cleft, *trachelos*, neck). Fissure of the neck.

Schiza, shiz'ah. Rima or cleft. **S. vul'væ**, opening of the vulva.

Schizatrichia, shiz-at-rik'e-ah (*schizo*, to split, *thrix*, a hair). Splitting of the hairs at their extremities.

Shizo (*shizo*, to split). In composition, split or cleft.

Schizocele, shiz-o-se'le (Eng. shiz'o-seel). Fissure of the blastoderm from which the pleuroperitoneal cavity develops.

Schizomycetes, shiz-o-mis-a'tees. General term to include such micro-organisms as micrococci, bacilli, and spirilli: unicellular, reproducing by division and spore-formation.

Schizomycosis, shiz-o-mik-o'sis. Term applied to the development of schizomycetes within the body.

Schizophyta, shiz-of'it-ah (*schizo*, *phuton*, plant). Dried schizomycetes or microbes after evaporation of the fluid in which they exist, but still so viable that if borne through the atmosphere to a congenial soil they may again actively develop.

Schizothorax, shiz-o-tho'raks. Schistothorax.

Schizotrichia, shiz-o-trik'e-ah. Schizatrichea.

Schlemm, canal' of. See *Canal of Schlemm*.

Schlippe's salt. $Na_3SbS_4 + 9H_2O$. Crystalline salt, sodium thioantimoniate.

Schnapps, Schiedam'. See *Gin*.

Schneiderian (shni-de're-an) **mem'brane.** Pituitary membrane.

Schœnanthus, ske-nan'thus (*schoinos*, the common rush, *anthos*, flower). Juncus odoratus.

Schoenlein's disease. Peliosis rheumatica.

Schola, sko'lah. School, as of medicine.

Schollera oxycoccos, skol-la'rah oks-e-kok'kus. Vaccinium oxycoccus.

Schönlein's disease. Peliosis rheumatica.

School-made chore'a. Chorea induced by excessive educational strain at school. Other diseases, especially those of the nervous system, may have a similar origin.

Schousbœ'a coccin'ea (after P. K. A. Schousbe, a Danish botanist). Cacoucia coccinea.

Schre'ger's lines. Curvilinear markings in dentine of teeth.

Schubertia disticha, shu-bur'te-ah dis'tik-ah (after G. H. von Schubert, Professor of Natural History at Munich). Taxodium distichum.

Schultze's gran'ule mass'es. Granular gray-white masses in the blood, consisting of blood-plaques.

Schwann, sheath of. Neurilemma. **S., white substance of**, see *Substance, white*.

Schwein'furth's green. Arsenite of copper.

Sciascopia, se-as-kop'e-ah. Skiascopy. Mode of determining refraction of the eye by observation of the rapidity of movement and direction of the reflected images of a flame from the refracting media of the eye.

Sciatic, si-at'ic (*ischion*, haunch). Formed by contraction from *ischiatic*, which latter is still used. See *Ischiatic*. Used substantively for sciatica. **S. ar'tery**, branch of internal iliac, traversing great sacrosciatic foramen to supply posterior pelvic muscles. **S. foram'ina**, formed by sacrosciatic ligaments and sciatic notches. I. The great or superior sciatic foramen is formed in front by great sciatic notch, behind by great sacrosciatic ligament, below by lesser sacrosciatic ligament. Through it passes the pyriformis muscle with the gluteal, sciatic, and pudic vessels and nerves. II. The lesser or inferior sciatic foramen is formed in front by lesser sciatic notch, behind by great sciatic ligament, and above by the lesser sacrosciatic ligament. **S. nerve, great,** *Great femoropopliteal nerve;* ought to be esteemed a continuation of the sacral plexus; issuing from the pelvis, between the pyramidalis and superior gemellus, descending along the posterior part of the thigh, and, after having given branches to the gemini, quadratus, obturator externus, glutæus maximus, semimembranosus, semitendinosus, biceps, and third abductor muscles, dividing about the inferior third of the thigh into two branches, the external and internal popliteal. **S. nerve, les'ser**, inferior gluteal branch of the sacral plexus, lesser femoropopliteal nerve, which seems especially formed by the second and third sacral, is given off from the lower part of the plexus, escaping from the pelvis beneath the pyramidalis muscle. It gives branches, nervi cutanei clunium inferiores, to the glutæus maximus, a sciatic branch or infrapelvic cutaneous or perineal cutaneous, which passes under the tuberosity of the ischium, and furnishes filaments to the glutæus maximus and to the muscles of the perineum, urethra, penis, scrotum, etc., and a posterior femoral cutaneous branch, middle posterior cutaneous nerve, the filaments of which traverse the femoral aponeurosis, to be distributed on the skin of the posterior part of the thigh. The principal branch of the lesser sciatic nerve divides near the ham into two or three filaments, which descend under the integuments almost as far as the inferior part of the leg. **S. notch, great,** sciatic foramen, is a large notch at the posterior edge of each os innominatum, below the posterior and inferior iliac spine, which is converted into a foramen by the sacrum and sacrosciatic ligaments. The *Lesser sciatic notch* is much smaller than the last, being separated from it by the sciatic spine. It gives passage to the tendon of the obturator internus and the internal pudic vessels and nerves. **S. re'gion**, ischiadic region. **S. spine**, *Spine of the ischium*, *Spinous process of the ischium*, is a short, flat, pyramidal eminence on the os innominatum above the preceding foramen, giving insertion to the lesser sacrosci-

atic ligament. **S. veins** accompany arteries of same name, emptying into internal iliac vein.

Sciatica, si-at'ik-ah. Neuralgia femoropoplitea; neuralgia of the sciatic nerve.

Science, si'ence. Systematized knowledge.

Scientia (se-en'she-ah) **hermet'ica.** Hermetic science; alchemy. **S. meden'di,** medicina. **S. med'ica,** medicina.

Scientif'ic. Pertaining or relating to science.

Scieropia, si-er-o'pe-ah (*skieros,* shady, *ops,* eye). Effect of vision in which all objects have a darker hue than natural.

Scilla, sil'lah. *Squill* or *Sea onion, Eye of Typhon;* ord. Liliaceæ. Native of Spain, Austria, etc. The sliced bulb of the squill, Urginea scilla, *Scilla* (Ph. U. S. and Br.), has a bitter, nauseous taste, and is extremely acrid, inflaming the skin when rubbed on it. Its virtues are extracted by vinegar, spirit, and water. In large doses squill is emetic and purgative; in small doses, diuretic and expectorant. Its active principle has been called *scillitin.* **S. esculen'ta,** *Eastern quamosh, Wild hyacinth;* an article of diet, being made into bread, and into poultices for inflamed breasts.

Scillain, sil'la-in. Glucoside from bulb of the squill. Yellowish or colorless powder; diuretic and poisonous. Dose, $\frac{1}{60}$ grain.

Scil'lin. A principle derived from scilla.

Scillipicrin, sil-le-pi'krin. Principle from bulb of squill; light-yellowish soluble powder; diuretic. Dose, $\frac{1}{60}$ grain.

Scillitic, sil-lit'ik (*scilla*). Containing squill.

Scillitin, sil'lit-in. See *Scilla.*

Scillitoxin, sil-le-toks'in. Poisonous amorphous principle discovered in squill.

Scillocephalus, sil-lo-sef'al-us (*scilla,* squill, *kephale,* head). One having a large bulbiform head.

Scincus, sin'kus. Species of Saurus or Lacerta, common in Egypt; much extolled by the ancients as alexipharmic and aphrodisiac.

Scinde boil. *Rain boil.* Form of furunculus met with in the rainy season in all parts of India.

Scintilla (sin-til'lah) **Ven'eris** (*scintilla,* spark). Literally, a spark or relic of Venus. Impotence and loss of power in the limbs produced by syphilis.

Scintillation, sin-til-la'shun. A bright succession of sparks; in medicine, applied to subjective sensation of sparks before the eyes.

Sciomachy, si-om'ak-e (*skia,* shade, *mache,* fight). A gymnastic exercise with the ancients, consisting in a mock encounter at boxing and jumping with one's own shadow.

Scirhus, skir'hus. Scirrhus.

Scirpus (skur'pus) (*scirpus,* rush) **palus'tris.** Eleocharis palustris.

Scirrhoblepharoncus, skir-rho-blef-ar-on'kus (*scirrhus, blepharon,* eyelid, *onkos,* swelling). See *Scleriasis.*

Scirrhocele, skir-rho-se'le (Eng. skir'rho-seel) (*scirrhus, kele,* rupture). Orchocele scirrhosa.

Scirrhodes, skir-rho'dees (*scirrhus, odes*). Scirrhous.

Scirrhogastria, skir-rho-gas'tre-ah (*scirrhus, gaster,* stomach). Scirrhus of the stomach.

Scirrhoid, skir'rhoid (*scirrhus, eidos,* resemblance). Resembling scirrhus.

Scirrhoma, skir-rho'mah. Scirrhus. **S. caminario'rum,** chimney-sweeper's cancer; scrotal epithelioma.

Scirrhophthalmia, skir-rhof-thal'me-ah (*scirrhus, ophthalmos,* eye). Cancer of the eye. **S. palpebra'rum,** see *Scleriasis.*

Scirrhosarca (skir-rho-sar'kah) **neonato'rum** (*scirrhus, sarx,* flesh, *neonatus,* new-born). Induration of the cellular tissue of infants.

Scirrhosis, skir-rho'sis. Scirrhus. A livid excrescence caused by inflammation.

Scirrhous, skir'rhus (*scirrhus*). Of or belonging to scirrhus. **S. sarco'ma of Ab'ernethy,** hard, rigid, vascular infarction of glandular follicles; indolent, insentient, glabrous; sometimes shrinking and becoming more indurated.

Scirrhus, skir'rhus (*skirrhos,* hard, indurated). *Carcinomatous sarcoma, Hard* or *Fibrous cancer, Scirrhous cancer.* A disease, so called from the hardness characterizing it. It is a state of induration of a peculiar kind, affecting glandular structures generally, but capable of occurring elsewhere. Scirrhus must not be confounded with the induration which succeeds inflammation, although the two states are often complicated, and may stand, occasionally, in the relation of cause and effect to each other. Scirrhus is ordinarily accompanied by violent shooting pains. It is irregular on its surface, and when cut into has a bluish or grayish-white color. See *Cancer* and *Encephaloid.* **S. et carcino'ma ventric'uli,** narrowness of the orifices of the stomach from cancer. **S., cuirass'-like,** chronic form of scirrhus, in which a cancerous mass surrounds the chest, giving an appearance like that indicated by its name. **S. he'patis,** scirrhus of the liver. **S. intestino'rum,** cancerous condition of the intestines. **S. palpebra'rum,** see *Scleriasis.* **S. testic'uli,** sarcocele. **S. u'teri,** metroscirrhus. **S. ventric'uli,** scirrhus of the stomach.

Scission, siz'zhun (*scindo, scissum,* to cut). The cutting or dividing of any substance.

Scissors, siz'zors (*scindo, scissum,* to cut). A well-known instrument in common use; often employed in surgery; composed of two cutting blades crossing each other and moving upon an axis. They are straight or curved. Sometimes the curve is on the flat side; at others, on the edges. Scissors bent so that the blades make an obtuse angle with the handles are also much used. Scissors are used for dividing soft, loose, isolated parts which it would be difficult to reach and to cut with a bistoury. They are employed, likewise, in the operation for hare-lip, and for removing warts, fungous excrescences, etc. **S., Smel'lie's,** see *Perforator.*

Scissura, sis-šu'rah (*scindo, scissum,* to split). Fissure; cleavage. **S. au'ris,** incisura auris. **S. vul'væ,** opening of the vulva.

Scissuræ, sis-su're. Rhagades.

Scitta, sit'tah. See *Dysentery.*

Sclarea, sklar'e-ah. Salvia sclarea.

Sclera, skla'rah. Sclerotica. **S. tes'tis,** tunica albuginea testis.

Scle'ral extrac'tion. Graefe's method of extracting cataract by means of an almost linear incision, having its base in the sclera, combined with an iridectomy.

Sclerectasia, skler-ek-taz'e-ah (*scleros, ektasis,* dilatation). Staphyloma of the sclerotic. **S., poste'rior,** staphyloma, posterior.

Sclerectomy, skler-ek'to-me (*sclera, ektome,* excision). Excision of the sclerotic.

Sclerema, skler-a'mah (*scleros*). Induration of the cellular tissue. **S. adulto'rum,** scleroderma. **S. atroph'icum,** see *Induration of the cellular tissue.* **S. eleva'tum,** see *Induration of the cellular tissue.* **S. neonato'rum,** œdema, induration, discoloration, and coldness of skin, occurring soon after birth, and commencing commonly in the lower extremities.

Scleremia, skler-a'me-ah. Induration of the cellular tissue.

Scleremus, skler-a'mus. Induration of the cellular tissue.

Sclerencephalia, skler-en-sef-al'e-ah (*scleros, enkephalos,* brain). Sclerosis of the brain; cerebral sclerosis. Morbid condition of the brain characterized by induration and atrophy of the cerebral tissue.

Scleria, skla're-ah. Scleriasis.

Scleriasis, skla-re'as-is (*skleriasis*). Any kind of hardness or induration. See *Scleroderma* and *Scirrhus.*

Scleritis, skler-e'tis. Sclerotitis.

Sclerocataracta, skler-o-cat-ar-ak'tah. See *Cataract.*

Sclerochorioiditis (skler-o-ko-re-oid-e'tis) or **Sclerochoroiditis,** skler-o-ko-roid-e'tis (*sclerosis, choroidea*). Inflammation of the sclerotic and choroid tunics of the eye. **S., poste'rior,** see *Staphyloma, posterior.*

Sclerodac'tyle (*scleros, daktulos,* finger). A condi-

tion of dystrophy in which the fingers become deformed, shortened, and atrophied, the skin thickened and discolored.

Scleroder'ma (*scleros, derma*, skin). *Hide-bound disease.* Induration of the derma proper or corium. Induration of the cellular tissue. **S. adulto'rum**, see *Induration of the cellular tissue.* **S. circumscrip'tum**, morphœa; local scleroderma. **S. diffu'sa**, that involving the skin symmetrically. **S. neonato'rum**, sclerema neonatorum.

Sclero'des (*scleros, odes*). Sclerotic.

Sclerogenous, skler-oj'en-us (*scleros, gennao*, to beget). Hardening; becoming sclerotic.

Sclerokeratitis, skla-ro-ker-a-ti'tis. Inflammation of the sclerotic and cornea.

Scleroïritis, skla-ro-ir-e'tis. Inflammation of the sclerotic and iris.

Scleroma, skler-o'mah (*scleros*). Induration of the areolar tissue; scleriasis. **S. neonato'rum**, inflammatory induration of the new-born.

Scleromeninx, skler-o-men'inks (*scleros, meninx*, membrane). Dura mater.

Scleromu'cin. A principle derived from ergot.

Scleronyxis, skler-o-niks'is. Scleroticonyxis.

Scleropathi'a (*scleros, pathos*). Scleroma.

Sclerophthalmia, skler-of-thal'me-ah. Hordeolum; schirrophthalmia.

Scle'ros. Hard. In composition, the sclerotica.

Sclerosarcoma, skler-o-sar-co'mah (*scleros, sarkoma*, fleshy tumor). Hard, fleshy tumor seated on the gums, and resembling a cock's comb.

Sclero'sing. Term applied to process of sclerotic degeneration.

Sclerosis, (skle-ro'sis *scleros*). See *Induration of the areolar tissue* and *Scleriasis.* Thickening with condensation. **S., amyotroph'ic lat'eral**, degeneration of entire pyramidal tract of spinal cord, with atrophy of various nerve-centres in the medulla, large masses of muscles being atrophied; see *Amyotrophic.* **S., an'nular**, seen as ring-like band around the spinal cord in certain cases. **S., an'tero-lat'eral**, disease due to sclerosis of lateral columns characterized by loss of power, augmented reflexes, and spasm of muscles. **S. of bone**, *Condensing ostitis, Diffuse hypertrophy of bone.* A result of ostitis, characterized by the filling of the medullary cavity with a compact osseous structure and the formation of bone on the surface. **S. of the brain**, morbid condition of the brain characterized by induration and atrophy of the cerebral tissue. **S. co'rii** or **der'matos**, induration of the derma proper or corium. **S., diffuse'**, S. when large tracts of brain or cord are involved. **S., dissem'inated** or **in'sular**, chronic affection of the spinal cord and brain caused by the dissemination of isolated patches of the disease throughout the nervous system. **S., lat'eral**, S., antero-lateral. **S. of the liver**, see *Hepatitis, chronic.* **S., lo'bar**, S. involving a single lobe of the brain; hemiplegia of infants. **S., mil'iary**, S. in which there are grayish-red spots at the junction of the white and gray matters of the spinal cord. **S., mul'tiple**, S., disseminated. **S. os'sium**, sclerosis of bone. **S., poste'rior spi'nal**, see *Sclerosis, spinal.* **S., posterolat'eral**, see *Sclerosis, spinal.* **S., pri'mary lat'eral**, primary spastic paraplegia, a form of spinal sclerosis. **S., re'nal**, chronic interstitial nephritis; see *Kidney, Bright's disease of the.* **S., spi'nal**, two forms of this affection have been referred to: sclerosis of the anterolateral columns of the spinal cord; and sclerosis of the posterior columns, generally described as locomotor ataxia. The former is essentially a hypertrophied condition of the connective tissue, with atrophy of nerve-substance. See *Atrophy, progressive muscular.* **S. of the stom'ach**, *Gastric cirrhosis, Fibroid infiltration of the stomach*; a condition elsewhere described under the name of *Plastic linitis.* **S. te'læ cellula'ris et adipo'sæ**, induration of the derma and subcutaneous tissues. **S., tu'berous**, hypertrophic form of S., in which there is enlargement and increased density of the areas of the convolutions involved.

Scleroskel'eton. Term used to denote bones developed in ligaments, tendons, or aponeuroses.

Sclerostenosis cutanea, skler-o-sten-o'sis ku-tan'-e-ah (*scleros, stenos*, contracted). Induration of the areolar tissue.

Scleros'toma duodena'le. Form of entozoon met with in Egypt and Northern Italy, giving rise, by its presence in the duodenum and jejunum, to serious anæmia, Egyptian chlorosis, with bloody evacuations from the bowels. See *Parasites* and *Worms.* **S. syn'gamus**, syngamus trachealis.

Sclerosus, skler-o'sus (*scleros*). Hard.

Sclerotal, skler-o'tal. Name given by Owen to the material forming the sclerotic coat of the eye. In certain vertebrates it is cartilaginous or osseous.

Sclerothrix, skler'o-thriks. Name applied by Metschnikoff to the tubercle bacillus.

Sclerotic, skler-ot'ik (*scleros*). A hard, resisting, opaque membrane, of pearly-white color and fibrous nature, covering nearly four-fifths of the globe of the eye; in form of a sphere truncated in front. It is strengthened by the expansion of the ocular muscles, to which expansion many anatomists have given the name tunica albuginea or tendinosa. The subconjunctival sclerotic forms the white of the eye. The sclerotic is penetrated posteriorly by a round opening for the passage of the optic nerve; and, anteriorly, it has a much larger opening into which the transparent cornea is received. There are, besides, many small oblong apertures in it for the passage of nerves and vessels proceeding to the interior of the eye. Its inner surface is of a light-brown color, owing to a delicate areolar tissue containing brown pigment-cells, and hence called membrana or lamina fusca. In the fœtus the sclerotic may be separated into very distinct laminæ. **S. acid**, sclerotinic acid. **S., staphylo'ma of**, see *Staphyloma.* **S. zone**, *Arthritic ring*; vessels given off from a ring of anastomosis of deep conjunctival vessels around the circumference of the cornea, perforating the sclerotic, anastomosing with those of the iris and choroid—a condition seen in many cases of iritis.

Sclerot'ica. Sclerotic. **S. ceratoï'des**, cornea.

Sclerot'ical. Relating or appertaining to the sclerotic.

Scleroticectomia, skler-ot-ik-ek-tom'e-ah (*sclerotica, ektome*, excision). Operation for forming an artificial pupil by excision of a portion of the sclerotica.

Sclerotici'tis, skler-ot-is-e'tis. Sclerotitis.

Sclerot'ico-chorioidi'tis or **-choroidi'tis, poste'rior.** Staphyloma, posterior.

Scleroticonyxis, skler-ot-ik-o-niks'is (*sclerotica, nusso*, to pierce). Perforation of the sclerotica for cataract by depression.

Scleroticotomia, skler-ot-ik-o-tom'e-ah (*sclerotica, tome*, incision). Operation for cataract by cutting through the sclerotic.

Scleroticus, skler-ot'ik-us (*scleros*). Medicine which hardens the part to which it is applied.

Sclerotinic (skler-o-tin'ik) **ac'id.** $C_{12}H_{19}NO_9$. Noncrystalline feebly-acid principle prepared from ergot. See *Ergot.*

Sclerotis, skler-o'tis (*scleros*). Sclerotica. Ergot of rye.

Sclerotisectomia, skler-ot-e-sek-tom'e-ah. Excision of a portion of the sclerotic.

Sclerotitis, skler-o-te'tis. *Rheumatic ophthalmia.* Inflammation of the sclerotic coat of the eye.

Sclerotium clavus, skler-o'she-um klav'us. See *Ergot.* **S. gigante'um**, see *Lycoperdon tuber.*

Sclerotome, skler'o-tome (*skleros*, hard, *tome*, division). A section of the skeleton. Knife used in sclerotomy.

Sclerotomia, skler-o-tom'e-ah. Scleroticectomia.

Sclerotomy, skler-ot'o-me. Section of the sclerotic just behind the cornea; used in glaucoma.

Sclerotonyxis, skler-ot-o-niks'is. Scleroticonyxis.

Sclerous (skler'us) (*scleros*, hard) **tis'sue.** See *Tissue, sclerous.*

Scleroxanthin, skler-o-zan'thin. Inert crystalline principle of ergot.

Sclerunticus, skler-un'tik-us. Scleroticus.

Scler'us. Induration; scirrhus.

Sclerymen, skler'im-en. Sclerotic.

Sclerymenitis, skler-im-en-e'tis (*sclerymen, itis*). Inflammation of the sclerotic coat of the eye.

Scleryn'ticus, skler-in'tik-us. Scleroticus.

Sclerysma, skler-iz'mah (*scleros*). Induration; also induration of the liver.

Sclerysmus, skler-iz'mus. Scleriasis.

Sclopetarius, sklo-pet-ah're-us. Relating to a gun; hence aqua sclopetaria or sclopetica, a water for gunshot wounds; vulnera sclopetaria or sclopetica, gunshot wounds, etc.

Sclopetoplagæ, sklo-pet-o-plag'e. Gunshot wounds.

Scobs. A shaving; an alkali; the scoria of any metal.

Scolecesis, sko-les-a'sis. Helminthiasis.

Scoleciasis, sko-les-e'as-is. Helminthiasis.

Scolecoid, sko'le-koid. Vermiform.

Scolecology, sko-lek-ol'o-je (*skolex*, worm, *logos*, discourse). Helminthology.

Scolesis, sko-la'sis. Scoliosis.

Sco'lex (*skolex*, worm). Ascaris lumbricoïdes; also used generically for some imperfectly developed forms of tænia. The head of these being the most characteristic part, it was generally applied to the heads of all forms of cystic and tape worms. Encysted tænia or worm.

Scolio'ma. Scoliosis.

Scoliosiometry, sko-le-o-se-om'et-re. Measurement of spinal curvature.

Scolio'sis (*skolios*, crooked). A distortion of the spine to one side from shortening of the muscles or shrinking and atrophy. See *Gibbositas* and *Hump*. **S., pel'vic**, condition of lessened oblique diameter of the pelvis.

Scoliotic, sko-le-ot'ik. Relating to scoliosis.

Scolopendra, sko-lo-pen'drah. Asplenium scolopendrium.

Scolopendria, sko-lo-pen'dre-ah. Asplenium ceterach and A. scolopendrium.

Scolopen'drium lin'guæ. Asplenium scolopendrium. **S. officina'rum**, Asplenium scolopendrium. **S. phylli'tis**, Asplenium scolopendrium. **S. ru'ta mura'ria**, Asplenium ruta muraria. **S. vulga're**, Asplenium scolopendrium.

Scolopomachærion, sko-lo-po-mak-e're-on (*skolopax*, woodcock, *machaira*, knife, so called because it is slightly bent at the extremity like a woodcock's bill). A sort of blunt-pointed bistoury.

Scolymus sativus, skol'im-us sat-e'vus. Cynara scolymus.

Scoop. Surgical instrument of the shape of a spoon, used for the extraction of certain foreign bodies, to extract balls impacted in the soft parts, to remove calculi from the urinary bladder in lithotomy, vegetations or soft foreign bodies from the interior of the uterus, etc. A small scoop is sometimes used to extract foreign bodies from the meatus auditorius externus, nasal fossæ, etc. **S. extrac'tion of cat'aract**, a mode of operation by which the lens is removed by a thin, flat, concave scoop, so constructed as to pass readily behind the posterior surface of the cataract. The operation includes incision, iridectomy, laceration of the capsule, and removal of the lens by the scoop.

Scopa regia, sko'pah re'je-ah (*scopa*, broom). Ruscus.

Scopa'rii cacu'mina. Tops of broom.

Scoparin, sko-pah'rin. Crystallizable neutral principle from Spartium scoparium. See *Spartium*.

Scoparius, sko-pah're-us (*scopa*, broom) (Ph. U. S.). Tops of Sarothamnus scoparius. See *Spartium scoparium*.

Scope (*skopeo*, to look round). Common suffix to words meaning 'view' or 'inspection,' as stetho*scope* laryngo*scope*, etc.

Scopo'leïne. Scopoline.

Scopolia (skop-o'le-ah) **Japon'ica.** Botanical source of Japanese belladonna; root is employed for same purposes as belladonna root.

Scopolina atropoïdes, sko-po-le'nah at-rop-o-e'dees (after J. A. Scopoli, Prof. at Pavia). Hyoscyamus scopolia.

Scopoline (sko'po-leen) or **Scopoleïne**, skop-o'le-een. Alkaloid found in Scopolia Japonica; actively mydriatic.

Scoptula, skop'tu-lah. Scapula.

Scopula, skop'u-lah (dim. of **Scopa**, broom). Brush.

Scor. Excrement.

Scoracrasia, skor-ah-kras'e-ah. Scoracratia.

Scoracrati'a (*scor, akratia*, want of control). Want of power to retain the fæces; involuntary evacuation of the fæces. *Scatacrasia* and *Copracrasia*, although used in the same sense as scoracratia, really mean undue admixture of the excrement. See *Scatacrasia*.

Scorbutic, skor-bu'tic (*scorbutus*, scurvy). Relating to scurvy; one affected with scurvy; applied, at times, indefinitely to a furfuraceous or scurfy—not scurvy—eruption. **S. fe'ver**, scurvy.

Scorbu'tus. Scurvy. See *Purpura*. **S. alpi'nus**, pellagra. **S. nau'ticus**, Porphyra nautica. **S. o'ris**, cancer aquaticus.

Scordinema (skor-din-a'mah) or **Scordinismus**, skor-din-iz'mus. Carebaria; pandiculation.

Scordium, skor'de-um (*scordon*, garlic, from similarity of smell). Teucrium scordium.

Scordon, skor'don. Allium.

Scorium, sko're-um. Scrotum.

Scor'odon. Allium.

Scorodos'mine (*scorodon, osme*, odor). Cystic oxide.

Scorpiodexis, skor-pe-o-deks'is (*skorpios*, scorpion, *dexis*, biting; more properly, *Scorpiostigma*, from *skorpios, stigma*, puncture). Sting of the scorpion.

Scorpion (*skorpios, skorpioo*, to enrage). A genus of insects having a sting at the extremity of their tail, with which they make dangerous wounds.

Scorpiostigma, skor-pe-o-stig'mah (*scorpius, stigme*, puncture). Sting of the scorpion.

Scorpius, skor'pe-us. Scorpion.

Scorteum, skor'te-um (leather coat). Scrotum.

Scorzonera, skor-zo-na'rah (*scurzo*, Old Spanish for viper). *Officinal viper's grass, Viper's grass, Goat's grass.* The roots have been used as alexipharmics in hypochondriacal disorders and obstructions of the viscera. The root of the Scorzonera Hispanica is esculent, but inefficacious as a drug.

Scotasma, sko-taz'mah (*skotos*, darkness). Obscurity of vision, darkness, *Suffusio radians*; dark spots seen before the eye. See *Scotodinia*.

Scotch pine. Pinus sylvestris.

Scotodia, sko-to'de-ah. Scotasma; scotodinia.

Scotodinia, sko-to-din'e-ah (*skotos*, darkness, *dineo*, to turn around). *Scotomy.* Giddiness, with impaired sight, often succeeded by headache. Fixed blind spots in the field of vision, dependent on complete loss of sensibility of a portion of the retina, are called *Scotomata*. See *Vertigo*.

Scotoma, sko-to'mah. Scotasma; scotodinia.

Sco'tomy. Scotodinia.

Sco'tos (*skotos*, darkness). Scotasma; scotodinia.

Scotosis, sko-to'sis. Scotodinia.

Scour, skour. Diarrhœa.

Scourge, skurje. Any malignant epidemic disease. Also a religious furor of the 13th century, during which scourging of themselves was practised by those affected. As a verb, to whip the skin.

Scourging, skur'jing. Flagellation, employed by the ancients in many diseases. **S. ma'nia**, see *Mastigosis*.

Scour'ing. Diarrhœa; purgation. **S. rush**, Equisetum hymenale.

Scoutellen's meth'od. Oval amputation.

Scrat. Hermaphrodite; psora.

Scratch. Psora.

Screa'tus (*screo*, to hawk). Act of spitting.

Screwbean. Mesquite, Prosopsis pubescens.

Screw'driver teeth. Peculiar teeth seen in young subjects of hereditary syphilis.

Screw-joint. Cochlearthrosis.

Scribe pal'sy. Cramp, writer's.

Scrip'lum, Scrip'tium, Scrip'tulum, Scrip'ulum, or **Scrip'ulus.** Scruple.

Scriv'ener's cramp. Cramp, writer's. **S.'s pal'sy** or **paral'ysis**, cramp, writer's.

Scrobiculus, skro-bik'u-lus (dim. of **Scrobs**, ditch). A little ditch or furrow. **S. cor'dis**, the pit of the stomach; the depression at the anterior part of the abdomen, below the xiphoid cartilage. **S. vari'olæ**, pockmark.

Scroffæ, skrof'fe. Scrofula.

Scrofula, skrof'u-lah (*scrofa*, sow, because swine were presumed to be subject to a similar complaint). *King's evil*, *The evil*. A morbid state of the system, usually characterized by indolent, glandular tumors, chiefly in the neck, suppurating slowly and imperfectly, and healing with difficulty; the disease ordinarily occurring in those of sanguine temperament, with thick upper lip, etc. The tumors, after suppuration, degenerate into ulcers, which, in process of time, cicatrize, leaving scars. The internal organs are apt to be attacked in those disposed to scrofula; hence they are often the subjects of phthisis and mesenteric affections. Scrofula is hereditary; is frequently excited by insufficient or improper regimen, and by a close, confined air during childhood. Scrofula may exist with or without tubercle, but scrofulous inflammations frequently end in acute miliary tuberculosis; see *Tubercle*. **S. abdomina'lis inter'na**, tumid abdomen from scrofulous enlargement of the glands. **S. plant**, figwort. **S. root**, Erythonium Americanum.

Scrofularia, skrof-u-lah're-ah. Scrophularia.

Scrofulism, skrof'u-lizm. See *Diathesis*.

Scrof'uloderm. Scrofuloderma.

Scrofuloderma, skrof-u-lo-dur'mah (*scrofula*, *derma*, skin). Chronic strumous inflammation of the skin, characterized by indolent red tubercular formations, tending to unhealthy suppuration, with scabbing and ulceration; healing with distinct scarring. **S., large pus'tular**, large oval or round pustules surrounded by deep reddish or purple areola. **S., small pus'tular**, small yellowish pustules, usually occurring on the hands and forearms; drying into grayish crusts, finally healing and leaving a depressed scar. **S., ul'cerative**, mycosis fungoïdes. **S. ungua'le**, inflammation of the matrix of the nails in scrofulous subjects.

Scrofulosis, skrof-u-lo'sis. *Scrofulous dyscrasia*, *Scrofulous cachexia*. Terms used to signify the cachetic state of the system which characterizes scrofula. See *Diathesis*.

Scrofulous, skrof'u-lus. *Strumous*. Suffering from, or relating to, scrofula, as scrofulous cachexia. See *Scrofula*.

Scrog'legged. Cnemoscoliosis.

Scroof. Scurf.

Scrophula, skrof'u-lah. Scrofula. **S. mesenter'ica**, tabes mesenterica. **S. Molucca'na**, frambœsia.

Scrophulæ, skrof'u-le. Scrofula. **S. gonorrho'icæ**, gonorrhœa impura.

Scrophularia, skrof-u-lah're-ah (*scrofula*, against which it has been employed). S. nodosa. **S. aquat'ica**, *Greater water figwort*, *Water betony*, ord. Scrophulariaceæ; leaves are correctors of the bad flavor of senna; at one time regarded as eminently antiscorbutic, stomachic, and carminative. **S. fœ'tida**, Scrophularia nodosa. **S. lanceola'ta**, S. nodosa. **S. Marilan'dica**, S. nodosa. **S. mi'nor**, Ranunculus ficaria. **S. nodo'sa**, *Figwort*, *Kennelwort*, *Holmesweed*, *Healall;* root and leaves of this plant have been popular as an internal and external remedy against inflammations, piles, scrofulous tumors, ulcers, etc. **S. vulga'ris**, Scrophularia nodosa.

Scrophularius, skrof-u-lah're-us. Scrofulous.

Scrophulelco'sis (*scrofula*, *helcos*, ulcer). Ulceration of scrofulous etiology.

Scrophuloderma, skrof-u-lo-dur'mah. Scrofuloderma.

Scrophulonychia skrof-u-lo-nik'e-ah. Scrofulous onychia.

Scrophulophyma, skrof-u-lo-fe'mah. Scrofulous tumor of the skin.

Scrophulosis, skrof-u-lo'sis. See *Diathesis* and *Scrofulosis*.

Scrophulo'sus. Scrofulous.

Scrotal, skro'tal (*scrotum*). Relating to the scrotum, as hernia scrotalis, scrotal hernia; see *Oscheocele*. **S. ar'teries** supply the scrotum, and consist of anterior branches from inferior external pudic, and posterior branches from transverse perineal arteries. **S. fis'tula**, a urethral fistula having external opening in the scrotum. **S. her'nia**, see *Scrotal*. **S. nerve**, see *Genitocrural nerve*.

Scrotocele, skro-to-se'le (Eng. skro'to-seel) (*scrotum*, *kele*, tumor). *Scrotal hernia*. Inguinal hernia, descending into the scrotum.

Scro'tum (*scorteum*, leather coat). Integuments which cover the testes. These are nothing more than a prolongation of the skin of the inner part of the thighs, perineum, and penis. The skin is remarkable for its brown color, the numerous rugæ, especially when the scrotum is contracted; the great number of sebaceous follicles it contains; and for the long and few hairs which issue from it in the adult. The scrotum is divided into two equal parts by a raphe which extends from the anus to the root of the penis. Its organization is similar to that of the skin of other parts of the body, except that the chorion is thinner. **S. cor'dis**, pericardium. **S., epithe'lial can'cer of**, cancer, chimney sweeper's.

Scru'biegrass. Cochlearia officinalis.

Scruff. Nucha.

Scruple, scru'p'l. A weight of twenty grains troy; twenty-four grains poids du marc.

Scud'amore's mixture. See *Mixture*, *Scudamore's*.

Scull. Cranium. **S. cap**, calvaria.

Sculte'tus, band'age of. Many-tailed bandage, consisting of strips overlapping each other.

Scurf. Small exfoliations of the cuticle.

Scurf'-skin. Scarf-skin.

Scurf'y. Furfuraceous.

Scurvy, skur've. See *Purpura*. **S. of the Alps**, pellagra. **S., but'ton**, see *Button scurvy*. **S., land**, purpura hæmorrhagica. **S., pete'chial**, purpura simplex. **S., sea**, purpura nautica.

Scurvygrass, skur've-grass. Sisyrinchium Bermudianum. **S., common**, Cochlearia officinalis. **S., lemon**, Cochlearia officinalis. **S., wild**, Cochlearia coronopus.

Scutella, sku-tel'lah (dim. of **Scutra**, dish). Cup.

Scutellaria (sku-tel-lah're-ah) **Carolinia'na** (*scutella*, cup, in allusion to the form of the calyx). S. integrifolia. **S. galericula'ta**, *Skullcap*. This plant has a bitter taste and a garlicky smell; has been esteemed especially serviceable in tertian ague. **S. hyssopifo'lia**, S. integrifolia. **S. integrifo'lia**, another indigenous variety; an intense bitter. **S. laterifio'ra**, Scutellaria (Ph. U. S.), *Skullcap*, *Mad-dog skullcap*, *Madweed*, *Hoodwort*, *Blue pimpernel*. An indigenous plant in the United States in moist places; at one time esteemed a preventive of hydrophobia, but probably possessed of little virtue of any kind; by some, however, regarded as a good nervine.

Scuticula digitorum (sku-tik'u-lah dij-it-o'rum) **ma'nûs**. Phalanges of the fingers.

Scutiform, sku'te-form (*scutum*, a shield). Having the shape of a shield.

Scutula, sku'tu-lah (pl. of **Scutulum**, little shield). The yellow crusts formed by the drying up of vesicles, as in favus.

Scu'tulæ (pl. of **Scutula**, cylinder) **digito'rum ma'nûs**. Phalanges of the fingers.

Scu'tum (shield). Thyroid cartilage. **S. cor'dis**, scapula; sternum. **S. ge'nu**, patella. **S. pec'toris**, sternum; thorax. **S. stomach'icum**, a large plaster applied to the breast or stomach. **S. thora'cis**, scapula. **S. tympan'icum**, semilunar surface forming outer boundary of superior portion of the cavity of the tympanum.

Scybala, skib'al-ah (**Skybalon**, excrement) (*skubalon*, excrement). Hard fecal matters discharged in round lumps.

Scylla, sil'lah. Scilla.

Scyphus (se'fus) **audito'rius** (*skuphos*, cup). Infundibulum of the cochlea. **S. cer'ebri**, infundibulum of the brain. **S. Vieussen'ii**, infundibulum of the cochlea.

Scypophorus pyxidatus, sip-of'or-us piks-id-at'us (*skuphos*, cup, *phoreo*, to bear). Lichen pyxidatus.

Scyros, sir'os (*skirrhos*). Callosity.

Scytalides (sit-al'id-ees) (*skutalis*, a small staff) **digito'rum ma'nûs.** Phalanges of the fingers.

Scythian (sith'e-an) **disease'.** An infection marked by atrophy of the penis and testicles, with impotency, occurring in adults, terminating frequently in mental disease. Scythian insanity, or insanity of the Scythians, supposedly common in the Caucasus, but met with elsewhere. **S. insan'ity**, see *S. disease.*

Scythica (sith'ik-ah) (**ra'dix**) (*Scythia*). Glycyrrhiza.

Scythropasmus, sith-ro-paz'mus (*skuthropazo*, to look gloomy). A gloomy, depressed countenance, of bad augury in serious diseases.

Scytitis, sit-e'tis (*skutos*, skin). Inflammation of the skin.

Scytoblastema, sit-o-blas-ta'mah (*skutos*, skin, *blastos*, germ). Recently-formed skin; primary stage of skin-formation.

Scytoblastesis, sit-o-blas-ta'sis (same etymon). The formation of skin.

Scytodepsium, sit-o-dep'se-um (*skutodepseo*, to curry leather). Tannin.

Scytomorphosis, sit-o-mor-fo'sis (*skutos*, skin, *morphe*, shape). Pathological skin-formation.

Sea air. The air in the neighborhood of the sea contains saline particles commingled with it, which render it a valuable change for scrofulous and debilitated individuals. The sea and seacoast are usually, also, more equable in their temperature than places inland. **S. ash**, prickly ash of the south, Xanthoxylum Carolinianum. **S. bath'ing**, see *Baths.* **S. burdock**, Xanthium strumarium; clotbur. **S. gir'dles**, Laminaria digitata. **S. grape**, Salsola kali. **S. hol'ly**, Eryngium maritimum. **S. lav'ender**, Statice limonium. **S. sedge**, Acorus calamus. **S. tan'gle**, the branching stems of Laminaria digitata. Used in medicine as a dilator of the os uteri, etc., by reason of the readiness with which the dried stem absorbs water and swells. **S. ware**, see *Pila marina.* **S. wa'ter**, see *Water, sea.* **S. wrack**, Pila marina.

Seal, gold'en. Hydrastis Canadensis. **S. med'icine**, cachet. **S., Sol'omon's**, Convallaria polygonatum. **S., Sol'omon's, great**, Convallaria canaliculata. **S., Sol'omon's, small'er**, Convallaria pubescens.

Seam. Cicatrix; suture.

Search'er. Body-searcher.

Search'ing. Probing. Also the operation of ascertaining, by the introduction of a metallic instrument, whether there is a stone in the bladder; sounding.

Sear'cloth. A cloth to cover a sore; a plaster.

Sea'sickness. See *Nausea marina.*

Seas'on. One of the four great divisions of the year, reckoned by the return of the sun in its annual course—spring, summer, autumn, and winter. It is to the seasons that we are indebted for the organic changes in the vegetable kingdom, and their mutation exerts a powerful influence on man.

Seas'oning. Acclimation. **S. fev'er**, fever, strangers', or fever occurring in those unacclimated.

Seat (*sedeo*, to sit). Anus; nates. **S. bone**, ischion. **S. worm**, oxyuris vermicularis.

Sebaceofollic'ular. See *Sebaceous.*

Sebaceous, se-ba'shus (*sebum*, suet). Having the nature of suet, as sebaceous or sebaceofollicular tumors. **S. cyst**, wen; steatoma. **S. flux**, stearrhœa; seborrhœa. **S., Sebip'arous**, or **Sebif'erous glands**, *Sebaceous follicles* or *crypts*, *Oil* or *Miliary glands*, are small hollow organs of rounded or pyriform shape, seated in the substance of the skin, and opening on its surface by a small excretory duct, furnishing yellow, unctuous humor, smegma cutaneum, sebum cutaneum, having some analogy with suet, which is destined to lubricate the surface of the body. Follicles of similar nature exist around the corona glandis of the male, and under the skin of the labia majora and nymphæ of the female. They secrete sebaceous matter, which emits a peculiar odor, and hence, after the name of one who described them, have been called Tyson's glands, glandulæ odoriferæ Tysoni, glandulæ Tysoni, glandulæ odoriferæ or sebaceæ glandis, glandulæ coronæ penis, folliculi sebacei coronæ glandis, glandulæ odoriferæ præputii, and cryptæ præputiales.

Sebastomania, seb-ast-o-man'e-ah (*sebastos*, worshipped, *mania*). Religious insanity; demonomania.

Sebestena, seb-es-te'nah. *Smooth-leaved cordia, Assyrian plum.* Ord. Cordiaceæ. The dark, black fruit of the Sebestena possesses glutinous and aperient qualities, being exhibited in decoction in various thoracic diseases.

Sebiferous, se-bif'er-us (*sebum*, suet, fat, *fero*, to carry). See *Sebaceous.*

Sebiparous, se-bip'ar-us (*sebum*, suet, fat, *pario*, to bring forth). See *Sebaceous.*

Seborrhagia, seb-or-rhaj'e-ah (*sebum*, suet, fat, *rhage*, breaking forth). Stearrhœa.

Seborrhœa, seb-or-rhe'ah (*sebum*, suet, fat, *rheo*, to flow). Stearrhœa; sebaceous flux; acne sebacea; seborrhagia. **S. amiantha'cea**, see *Stearrhœa.* **S. capilli'tii**, seborrhœa capitis. **S. cap'itis**, seborrhœa of the scalp, of very young children especially; seborrhœa capillitii. **S. congesti'va**, lupus erythematodes. **S. cor'poris**, type marked by oval or round deep-yellow eruption on the trunk, of size of split pea and larger, covered with scales and lasting from two weeks to two months; pruritus is also a feature of the affection. **S. furfura'cea**, pityriasis capitis. **S. genita'lium** occurs behind corona glandis in the male, and around clitoris and vestibule in the female. **S. ichthyo'sis**, form marked by large thin plates. **S. na'si**, S. affecting nose and adjacent skin. **S. nig'ricans**, a form of chromidrosis. **S. oleo'sa**, S. marked by a thin oily secretion. **S. sic'ca**, see *Stearrhœa.* **S. squamo'sa**, S. sicca. **S. tabescen'tium**, form characterized by minute scales, affecting large areas of the body.

Seb'sten. Sebestina.

Se'bum. Pinguedo; sevum. **S. cacao**, oil of theobroma. **S. cuta'neum**, see *Sebaceous glands.* **S. ovil'le**, mutton suet. **S. palpebra'le**, see *Chassie.* **S. præputia'le**, smegma præputii.

Secale, sek-al'e. The rye plant, ord. Gramineæ. Rye is chiefly used as an article of diet, particularly in Europe and America, and a spirit is also extracted from it. The grain is disposed to acescency, and hence its internal use at first generally produces a laxative effect. **S. barba'tum**, secale. **S. cornu'tum** or **clava'tum**, ergot. **S. mater'num tur'gidum** or **temulen'tum**, ergot.

Secalia, se-cal'e-ah. A volatile alkaloid discovered in ergot of rye. See *Propylamia.*

Seca'lis ma'ter. Ergot.

Secern'ent (*secerno*, to separate). Secreting.

Secerning, se-sern'ing. Secreting. **S. sub'stance of the kid'ney**, see *Kidney.*

Secessio fæcum, se-ses'se-o fe'kum (*secedo*, to withdraw). Defecation.

Secessus, se-ses'sus. Vulva. **S. ni'ger**, melæna.

Secluso'rium (*secludo*, to shut up). Sac.

Sec'ond inten'tion. One of the modes of healing of wounds, union by granulation.

Secondaries, sek'un-da-rees. Term applied to secondary symptoms of syphilis; opposed to primaries.

Sec'ondary (*secundus*, second). Something that acts subordinately to another, as the secondary symptoms of a disease—that is, those following the primary. A secondary amputation is one performed after the constitutional effects of the injury have mainly passed away. See *Fever, secondary*, and *Hemorrhage.* **S. substance of Rollet**, disks of muscle-fibre. **S. syph'ilis**, see *Syphilis.*

Secre'ta (same etymon as **Secretion**). Things or matters secreted or separated from the blood.

Secre'ting. *Secerning, Secernent, Secretory, Excernent.* That which secretes; as a secreting organ. **S. fringes**, synovial fringes,

Secretio, sek-ra'she-o. Secretion. **S. lac'tis**, secretion of milk. **S. lo'tii** or **uri'næ**, secretion of urine by the kidney. **S. vica'ria**, see *Vicarious.*

Secre'tion (*secerno*, to separate). An organic function, chiefly executed in the glands, consisting in an elaboration or separation of the materials of the blood at the very extremities of the arterial system, or rather of the vascular secretory apparatus; differing in each organ according to its particular structure; hence the formation of different fluids—bile, saliva, urine, milk, etc. The term is also applied to the thing secreted. The secretions are chiefly *exhalant*, *follicular*, or *glandular*. Simple secretions are those which exist ready formed in the blood, and pass out of the vessels by an act of exosmosis, while the more complicated are formed from the liquor sanguinis by cell agency. The latter alone are by some called secretions.

Secretomotor, se-kre-to-mo'tor. Epithet applied to nerves which influence secretion in the manner of excitomotor nerves.

Secretorius, sek-re-to're-us. Secreting.

Secre'tory. Secreting.

Secre'tum. The thing secreted.

Sectio, sek'she-o. Section. Act of cutting; division. **S. abdomina'lis**, abdominal section. The term *Gastrostomy* has been applied to an operation to establish an artificial mouth connecting directly with the stomach by an incision into that organ; usually made in the left linea semilunaris; see *Gastrotomy* and *Gastrostomy*. **S. al'ta**, see *Lithotomy*. **S. anatom'ica**, dissection. **S. cadav'eris**, post-mortem examination. **S. cadav'eris lega'lis**, post-mortem examination. **S. Cæsar'ea**, Cæsarean section. **S. Franconia'na**, see *Lithotomy*. **S. hypogas'trica**, see *Lithotomy*. **S. latera'lis**, see *Lithotomy*. **S. lega'lis**, examination after death for medico-legal purposes. **S. maria'na**, see *Lithotomy*. **S. nympha'rum**, nymphotomy. **S. perinæa'lis**, perineal section. **S. rectovesica'lis**, see *Lithotomy*. **S. rena'lis**, nephrotomy. **S. ten'dinum**, tenotomy. **S. vaginovesica'lis**, lithotomy through the vagina. **S. vesica'lis**, lithotomy.

Section, sek'shun. See *Sectio*. **S., abdom'inal**, gastrotomy. **S., Cæsa'rean**, see *Cæsarean*. **S. cutter**, microtome. **S., perine'al**, see *Lithotomy* and *Urethrotomy*. **S., Sigaul'tian**, symphyseotomy. **S. of ten'dons**, see *Tenotomy*.

Sec'tions of the brain. Vertical sections made at definite points, and variously named prefrontal, frontal, etc. **S., fron'tal**, vertical section of the brain made through the ascending frontal convolution parallel with the fissure of Sylvius. **S., occip'ital**, vertical section through the occipital convolutions. **S., pari'etal**, vertical section through the ascending parietal convolutions. **S., pedunculofron'tal**, vertical section of the brain in front of fissure of Rolando, passing through the bases of the three frontal convolutions. **S., præfron'tal**, vertical section of the brain at right angles to its longitudinal axis in the præfrontal region.

Sec'tor for ca'vum nasopharynge'um. Area in median plane of skull bounded by lines connecting hormion, basion, and staphylion. **S. cerebella'ris**, cerebellar sector.

Secun'dæ (*secundus*, second). Secundines.

Secundinæ, sek-un-de'ne. Secundines.

Secundines, sek'un-deens (*secundus*, second). *Afterbirth*, *After-burden*. All that remains in the uterus after the birth of the child—viz. the placenta, a portion of the umbilical cord, and the membranes of the ovum. These are commonly not expelled till some time after the birth of the fœtus; hence their name.

Secun'dum ar'tem. Properly, according to art.

Secun'dum par tuberculo'rum. Optic thalami.

Secun'dus proprio'rum auric'ulæ. Retrahens auris.

Se'cus. Sex.

Sedantia, sed-an'she-ah. Sedatives.

Sedation, se-da'shun (*sedo*, to settle or assuage). Effect induced by sedatives.

Sed'atives. *Calmants*, *Temperants*. Medicines which directly depress the vital forces, being consequently employed whenever necessary to diminish preternaturally increased action; as bromides, antimony and its preparations, aconite, potash salts, camphor, lobelia, gelsemium, conium, chloral, nitroglycerin, Calabar bean.

Se'dem attol'lens (raising the seat). Levator ani.

Sedenta'ria os'sa. The bones upon which the body rests when in the sitting position—viz. the ischial and coccygeal bones.

Se'des (*sedeo*, to sit). Anus; excrement. **S. cruen'tæ**, dysentery; passage of blood with the discharges from the bowels. **S. lactescen'tes**, cœliac flux. **S. procid'ua**, proctocele.

Sed'hee. Bangue.

Sedil'ia (*sedeo*, to sit). Nates.

Sédillot's amputa'tion. Amputation of middle or upper third of leg made with lateral flaps, the outer being much longer than the inner.

Sed'iment (*sedeo*, to sink down). Deposit formed by the precipitation of some one or more of the substances held in solution or suspension by a liquid. That formed in the urine at the time of cooling varies in different states of the system. In calculous affections it is a most important object of attention. See *Urine*.

Sedimen'tum. Sediment. **S. uri'næ lateric'ium**, see *Lateritious*. **S. uri'næ pityroï'des**, bran-like sediment in urine; see *Furfuraceous*.

Sed'litz. Name of natural springs in Bohemia near Prague. The waters are simply saline. **S. pow'der**, composed of sodii et potassii tartras ℥ij, sod. bicarb. ℈ij, in one paper; acid tartaric, gr. xxxv in another; dissolve separately; mix; to be taken during effervescence. See *Pulvis effervescens compositus*.

Se'dum (*sedeo*, to sit, owing to its attachment to rocks and walls). *Wall pepper*, *Jack of the buttery*, *Pricket*, *Bird's bread*, *Stonecrop*, *Biting stonecrop*, *Small houseleek*; ord. Crassulaceæ. In recent state it is very acrid, being emetic and cathartic. Externally, in the form of cataplasm, it produces vesications and erosions. It has been recommended in cancerous and malignant ulcers. **S. a'cre**, small cultivated plant of Europe; local irritant. S. rhodiola and S. album have similar properties. Saxifraga granulata. **S. al'bum**, see *Sedum*. **S. glacia'le**, sedum. **S. ma'jus**, Sempervivum tectorum. **S. mi'nus**, sedum. **S. rhodi'ola**, see *Sedum*. **S. tele'phium**, formerly used as a cataplasm in cuts, hemorrhoids, corns, whitlows, etc. **S. telephoï'des**, S. telephium. **S. vermicula're**, sedum.

Seed. Semen; sperm.

Segmen'ta cartilagin'ea (*segmentum*, segment). See *Trachea*.

Segmen'tal. Relating to segmentation. **S. ar'teries**, arteries supplying the region in which they have their origin. **S. duct**, that into which segmental tubules empty; only found in anamniota. **S. or'gan**, tubule lined with epithelium opening on the surface of the body and communicating with the body-cavity; in vertebrates it empties into a special longitudinal duct. It is thought the segmental organs are the primitive type from which the kidneys have been evolved. **S. spheres**, the mass of cells produced by segmentation of the nucleus of the ovum. **S. tube**, segmental organ.

Segmentation, seg-men-ta'shun (*segmentum*, segment, itself from *seco*, to cut). The act of being divided into segments or portions. Term applied to the division of the vitellus or yoke into segments, each containing a transparent vesicle, which may be a descendant of the primordial or germ-cell. **S. cav'ity**, space between ectoderm and entoderm, afterward occupied by mesoderm. **S. nu'cleus**, that formed by union of pronuclei in the ovum. **S. spheres**, morula.

Seg'ments, ver'tebral. Somatomes. Term applied to leaflets of the cardiac valves.

Segnitia (seg-nish'e-ah) or **Segnities**, seg-nish'e-ees (*segnis*, sluggish). Sluggishness or torpor in the exercise of a function, as segnities alva, torpor of the bowels; segnities virium, languor.

Se'gond, an'gles of. Angles formed by lines drawn from basion to chief points on median circumference of the skull.

Se'gu. Sago.

Seidlitz, side'lits. Sedlitz.

Seignette's salt. Sodium tartrate.

Seiriasis, si-re'as-is. Coup de soleil; insolation; phrenitis.

Seismus (*seismos*). Concussion; vibration; shaking.

Seiz'ure. Attack.

Seiz'ures, hid'den. See *Hidden.*

Sekiskayavodka. See *Spirit.*

Selago, sel-ah'go. Camphorosma Monspeliaca; Lycopodium selago.

Selec'tion. The act of making a choice. **S., artifi'cial,** the choice of types of animals or plants, which by differentiation develop into the desired form. **S., nat'ural,** the development of the individuals of any species due to their natural environment or conditions.

Selene, sel-e'ne. Moon. See *Nail.*

Seleniaci, sel-en-e'as-e (*selene,* moon). See *Lunatic.*

Seleniasis, sel-en-e'as-is (*selene*). Somnambulism.

Seleniasmus, sel-en-e-az'mus. Somnambulism.

Sele'nium. One of the rare elements having properties resembling those of sulphur.

Selenobletus, sel-en-o-bla'tus (*selene,* moon, *ballo,* to strike). Lunatic.

Selenogamia, sel-en-o-gam'e-ah (*selene, gamos,* marriage). Somnambulism.

Selenoplege, sel-en-o-pla'ga (*selene, plege,* stroke). See *Coup de soleil* and *Insolation.*

Selenoplexia, sel-en-o-pleks'e-ah. Moon-stroke.

Self-abuse'. Masturbation.

Self-diges'tion. Digestion of the walls of the stomach by the gastric juice, from pathological causes.

Self-heal'. Prunella.

Self-infec'tion. General infection from any locally-acting virus.

Self-lim'ited. An epithet applied to diseases which appear to run a definite course but little modified by treatment—small-pox, for example.

Self-pollu'tion. Masturbation.

Selibra (sel-e'brah) or **Semili'bra.** Six ounces troy; eight, avoirdupois.

Selinites, sel-in-e'tees. Wine impregnated with the seeds of the selinon or parsley.

Selinum, sel-e'num. Apium petroselinum. **S. angel'icus,** Angelica sylvestris. **S. gal'banum,** Bubon galbanum. **S. imperato'ria,** imperatoria. **S. lates'cens,** Peucedanum palustre. **S., marsh,** Peucedanum palustre. **S. opop'onax,** Pastinaca opoponax. **S. oreoseli'num,** Athamanta aureoselinum. **S. ostruth'ium,** imperatoria. **S. palus'tre,** Peucedanum palustre. **S. pastina'ca,** Pastinaca sativa. **S. peuced'anum,** peucedanum. **S. pubes'cens,** Angelica sylvestris. **S. sylves'tre,** Angelica sylvestris, Peucedanum palustre. **S. thysseli'num,** Peucedanum palustre.

Sel'la (seat). S. Turcica. **S. equi'na,** S. Turcica. **S. familiar'ica,** lasanum. **S. obstetri'cia,** close-stool. **S. sphenoïda'lis,** S. Turcica. **S. Tur'cica,** *Pituitary fossa, Turkish saddle;* depression at the upper surface of the sphenoid bone, being bounded, anteriorly and posteriorly, by the clinoid processes, lodging the pituitary gland. It is so called from its resemblance to a Turkish saddle.

Selters, Seltz, or **Selt'zer, min'eral wa'ters of.** Cold, acidulous springs, the source of which is at Seltz, nine leagues from Strasburg, in the department of the Bas-Rhin. They chiefly contain carbonates of sodium, chloride of sodium, sulphates of sodium, calcium, magnesium, and iron, and much carbonic acid. They are refrigerant, tonic, diuretic, and aperient, but are not much frequented. *Artificial Seltzer water* may be made from muriatic acid, gr. xxxv; water, Oj; white marble, gr. iij. Keep in a stoppered bottle till dissolved. Add carbonate of magnesium gr. v, and, after some time, subcarbonate of sodium gr. xxxij.

Sembella, sem-bel'lah. Selibra.

Semecarpus anacardium, sem-e-kar'pus an-ak-ar'de-um (*semeion,* mark, *karpos,* fruit). Avicennia tomentosa.

Semeiography (sem-i-og'raf-e), **Semiog'raphy,** or **Symptomatog'raphy** (*semeion,* symptom, *graphe,* description). A description of symptoms or signs of disease.

Semeiology (sem-i-ol'o-je) or **Semiol'ogy** (*semeion,* symptom, *logos,* discourse). The branch of pathology whose object is the doctrine of the symptoms or signs of disease.

Semeion, sem-i'on. Sign, symptom. **S. Boethemat'icum,** indication.

Semeiosis, sem-i-o'sis. Semeiology.

Semeiotice, sem-i-ot'is-e. Semeiology.

Semeiotics, sem-i-ot'iks. Science of signs or symptoms.

Semeioticus, sem-i-ot'i-cus. Symptomatic.

Semelin'cident (*semel,* once, *incidens,* happening). Term applied to diseases occurring but once in the same individual—small-pox, for example.

Se'men (*semen,* seed). That which is sown. Seed of plants and animals. Sperm. **S. abelmos'chi,** musk seed. **S. a'bri,** jequirity. **S. Alexandri'num,** santonica. **S. amo'nii,** pimento. **S. ani'si stella'ti,** star-anise seed. **S. ani'si vulga'ris,** aniseed. **S. are'cæ,** areca nut. **S. Ba'dian,** Illicium anisatum. **S. caca'o,** cacao. **S. Cal'abar,** physostigma. **S. calcitrip'pæ,** larkspur seed. **S. cardamo'mi mino'ris,** cardamon. **S. catapu'tiæ mino'ris,** seeds of Euphorbia lathyris. **S. ci'næ** or **ci'næ Halepen'se,** santonica. **S. co'la,** cola nut. **S. col'chici,** colchicum seed. **S. consol'idæ,** larkspur seed. **S. con'tra ver'mes,** Artemisia santonica. **S. cydo'niæ,** cydonium. **S. eru'cæ,** white mustard seed. **S. genita'le,** S. masculinum. **S. Igna'tiæ,** ignatia. **S. lycopo'dii,** lycopodium. **S. masculi'num,** sperm. **S. mulie'bre,** sperm (of the female). **S. myris'ticæ,** nutmeg. **S. nu'cis vom'icæ,** nux vomica. **S. papa'veris,** poppy seed. **S. pedicula'ris,** staphisagria. **S. quer'cûs,** seeds from Quercus robur. **S. quer'cûs tos'tum,** acorn coffee. **S. sabadil'læ,** cevadilla. **S. sanc'tum,** see *Artemisia santonica.* **S. santon'ici,** see *Artemisia santonica.* **S. sina'pis,** black mustard. **S. sina'pis al'bæ,** white mustard. **S. sina'pis ni'græ,** black mustard. **S. stramo'nii,** stramonium seeds. **S. strych'niæ,** nux vomica. **S. tig'lii,** croton seeds. **S. viri'le,** S. masculinum. **S. zedoa'riæ,** see *Artemisia santonica.*

Sem'i (*hemisu,* half). *Semi* or *demi,* in composition, universally signifies half.

Semi-albinismus, sem-e-al-bin-iz'mus (*semi, albus,* white). Diminution in the color of the skin, affecting negroes only.

Semi-animis, sem-e-an'im-is (*semi, animus,* life), Half-living; half-dead.

Sem'ibulb of the fe'male. Bulbus vestibuli.

Semibul'bus cor'poris spongio'si. Bulbus vestibuli.

Semicanaliculus, sem-e-kan-al-ik'u-lus (*semi, canaliculus,* a small channel). Sulcus.

Semicanalis, sem-e-kan-al'is (*semi, canalis,* channel). Sulcus. **S. hu'meri,** the bicipital groove. **S. ner'vi Vidia'ni,** groove on anterior surface of pectinous portion of temporal bone. **S. ten'sor tym'pani,** canal for tensor tympani muscle. **S. tu'bæ Eusta'chii,** lower portion of canalis musculotubarius containing Eustachian tube. **S. tympan'icus,** sulcus Jacobsonii.

Semicephalus, sem-e-sef'al-us. Hemicephalus.

Semicircular, sem-e-sur'ku-lar (*semi, circulus,* circle). That representing half of a circle. **S. canals'** are seated in the pars petrosa of the temporal bone, opening into the vestibule behind which they are situate. They are three in number, of which one is superior or vertical—canalis semicircularis verticalis superior; another posterior or oblique—canalis semicircularis verticalis posterior or internus or inferior; and the third exterior or horizontal—canalis semicircularis horizontalis or externus or exterior or medius or minimus or brevissimus. Their parietes are formed of a bony, compact, hard plate. At their termination they have the elliptical arrangements called ampullæ, and by both extremities they open into the vestibule in the sac at its superior part, variously called the sacculus ellipticus or oblongus or hemi-

ellipticus or semi-ovalis or communis; alveus or utriculus or sinus communis or medianus; sinus or alveus utriculosus; sacculus vestibuli; median sinus, utricle. In front of the sacculus ellipticus, nearer the cochlea and opposite the foramen ovale, is the sacculus sphæricus or rotundus or proprius. The membranous semicircular canals—canales semicirculares membranacei, tubuli or ductus semicirculares—follow the same course as the osseous canals, described above.

Semicirculi ossei, sem-e-sur'ku-le os'se-e. Semicircular canals.

Semicir'culus exsculp'tus (semicircle cut out). Aortic opening of the diaphragm.

Semicongius, sem-e-kon'je-us. Half a gallon, or four pints.

Semicubium, sem-e-cu'be-um (*semi, cubo,* to lie down). A half-bath, or such as receives only the hips or extremities.

Semicupium, sem-e-cu'pe-um. Semicubium.

Semidecussa'tion. Incomplete or partial decussation.

Semifibulæus, sem-e-fib-u-le'us. Peronæus brevis.

Semihomo, sem-e-ho'mo (*semi,* half, *homo,* man). Atropa mandragora.

Semi-interosseus indicis, sem-e-in-tur-os'se-us in'dis-is. Abductor indicis. **S.-i. pol'licis,** opponens pollicis.

Semilibra, sem-e-le'brah. Selibra.

Semilu'nar (*semi, luna,* moon). Having the shape of a half-moon. **S. bone,** one of the carpal bones; see *Lunar bone.* **S. car'tilages,** *Semilunar fibrocartilages, Sigmoid cartilages;* two fibrocartilages between the condyles of the os femoris and the articular surfaces of the tibia. The innermost, which is longer from before to behind than transversely, is nearly semicircular. The outermost forms almost an entire circle, an arrangement, in both cases, corresponding to the different surfaces of the tibia. They are thicker at their outer circumference, which is convex, than at the inner, which is concave and very thin. Both are inserted, before and behind, into the spine of the tibia by means of fibrous fasciæ. **S. fas'cia,** bicipital fascia. **S. fold of Doug'las,** a lunated edge marking a deficiency in the posterior wall of the sheath of the rectus abdominis muscle. **S. fold of the eye,** small fold of conjunctiva in the inner canthus, representing the *membrana nictitans* of quadrupeds and birds. **S. folds of peritone'um,** recto-uterine folds. **S. gan'glion** belongs to the great sympathetic. These ganglia present considerable variety, being deeply situate in the abdomen above and behind the suprarenal capsules. They correspond posteriorly to the pillars of the diaphragm and the aorta. They have the shape of a crescent reversed, often surrounded by other ganglia of a smaller size. From their periphery numerous filaments proceed which go to form the solar plexus. **S. lobes,** two lobes of the posterior lobe of the cerebellum, the superior being above the great horizontal fissure, while the inferior is below the same fissure. **S. notch of il'ium,** notch between anterior superior and anterior inferior spines of ilium. **S. notch of the ster'num,** fourchette. **S. sur'face,** smooth cartilaginous surface surrounding the acetabular fossa. **S. tract,** a tract of fibres situate in the external portions of the cerebellum. **S. valves,** sigmoid valves.

Semiluna're os. See *Lunar bone.*

Semilu'nula (dim. of **Lu'na,** moon) **un'guium** (*semi, lunula,* small moon). See *Nail.*

Semimas, sem'e-mas (*semi, mas,* male). Eunuch.

Semimasculatus, sem-e-mas-ku-lat'us. Eunuch.

Semimasculus, sem-e-mas'ku-lus (*semi, masculus,* male). Eunuch.

Semimembraneous, sem-e-mem-bran'e-us. Semimembranosus.

Semimembranosus, sem-e-mem-bran-o'sus (*semi, membrana,* membrane). Muscle situate at the posterior part of the thigh; flat, thin, narrow, and aponeurotic in the upper third; broader and fleshy in the middle; tendinous below. It is attached above to the tuberosity of the ischium; below—by a tendon which has three divisions—to the outer condyle of the femur and to the posterior and inner part of the internal tuberosity of the tibia. This muscle is a rotator inward and flexor of the leg. It can also bend the thigh upon the leg. In standing it maintains the pelvis in position, and can even draw it downward.

Semimortuus, sem-e-mort'u-us (*semi, mortuus,* dead). Half-living; half-dead.

Semina (pl. of **Se'men,** seed) **cataputiæ** (sem'in-ah kat-ap-u'she-e) **majo'ris.** See *Ricinus communis.* **S. frig'ida majo'ra,** the greater cold seeds; the ancients gave this name to the emulsive seeds of the cucumber, melon, gourd, and watermelon. **S. frig'ida mino'ra,** the lesser cold seeds; the ancients gave this name to seeds of the lettuce, purslane, endive, and cichory. **S. in'dageer,** Nerium antidysentericum. **S. ric'ini vulga'ris,** see *Ricinus communis.*

Sem'inal (*semen*). Spermatic. **S. animal'cule,** spermatozoon. **S. cells,** amœboid cells found in the seminal tubules, and supposed to secrete the fluid portion of the semen. **S. cysts,** a variety of retention cyst or tumor, including encysted hydrocele and hydrocele of the spermatic cord or spermatocele; the fluid obtained from these cysts usually contains seminal filaments or spermatozoa. **S. ducts,** ejaculatory ducts. **S. fil'aments,** spermatozoa. **S. fluid,** sperm. **S. gran'ules,** see *Granule.* **S. loss'es,** spermatorrhœa. **S. tu'bules,** seminiferous tubules. **S. ves'icles,** two convoluted tubular sacs for reception of semen, situate one on either side of the base of the bladder. The duct of each joins with the vas deferens of the same side, forming the ejaculatory duct.

Semina'le mem'brum (seminal member). Penis.

Seminalis, sem-in-al'is. Spermatic.

Semina'tion. Introduction of spermatic fluid into the uterus.

Seminervosus, sem-e-nerv-o'sus (*semi, nervus,* sinew). Semitendinosus.

Seminex, sem'in-eks (*semi, nex,* death). Half-living; half-dead.

Semin'ia morbo'rum (*seminium,* seed). Predisposition. The seeds of disease.

Seminiferous, sem-in-if'er-us (*semen, fero,* to carry). *Spermatophorous.* Epithet given to the vessels which secrete and convey the seminal fluid. **S. tu'bules,** finely convoluted tubules composing the glandular part of the testis, discharging their secretion into the straight tubules.

Seminist, sem'in-ist (*semen*). Animalculist. The term was also used for one who believed that the new being was formed by admixture of the seed of the male with the supposititious seed of the female.

Seminium, sem-in'e-um (seed). Sperm.

Semiography, sem-e-og'raf-e. Semeiography.

Semiology, sem-e-ol'o-je. Semeiology.

Semion, sem-e'on (*semeion*). Sign.

Semiorbicularis, sem-e-or-bik-u-lar'is. See *Orbicular muscles.*

Semios'seus in'dicis. Abductor indicis.

Semiot'ic. Symptomatic.

Semiotice, sem-e-ot'is-e. Semeiology. **S. fa'ciei,** physiognomy.

Semipes'tis (*semi,* half, *pestis,* plague). Typhus.

Semiplegia, sem-e-plej'e-ah (*semi, plege,* stroke). Hemiplegia.

Semisex'tum. Hemiecton.

Semisicilicus, sem-e-sis-il'ik-us. A weight of one drachm or three scruples.

Semisideratio, sem-e-sid-er-ah'she-o (*semi, sideratus,* planet-struck). Hemiplegia.

Semisidera'tus. Hemiplegic.

Semisom'nis (*semi, somnus,* sleep). Coma.

Semisopitus, sem-e-sop'it-us (*semi, sopio,* to put to sleep). Coma.

Semisopo'rus (*semi, sopor,* sleep). Coma.

Semispec'ulum (*semi, speculum,* mirror). Instrument used in dilating the incision made into the neck of the bladder in the operation of lithotomy.

Semispina'lis cap'itis. See *Complexus.* **S. col'li,** part of transversospinal. Muscle arising from the

transverse processes of the six uppermost dorsal vertebræ, by an equal number of distinct tendons, running obliquely under the complexus, being inserted into the spinous processes of all the cervical vertebræ except the first and last. Its action is to extend the neck obliquely backward and to one side. **S. dor'si,** part of transversospinal. Muscle arising from the transverse processes of the seventh, eighth, ninth, and tenth dorsal vertebræ, by as many distinct tendons, soon growing fleshy, and then again becoming tendinous, being inserted into the spinous processes of the sixth or seventh uppermost dorsal, and two lowest cervical vertebræ, by as many tendons. Its action is to extend the spine obliquely backward. **S. exter'nus,** semispinalis dorsi. **S. inter'nus,** transversalis dorsi. **S. spina'tus,** longissimus dorsi; semispinalis dorsi.

Semispina'tus col'li. Semispinalis colli.

Semissis, sem-is'sis. The half of a pound, ounce, drachm, etc.

Semisul'cus longitudina'lis. Groove on parietal bone forming, with its fellow of opposite side, the broad groove which lodges the superior longitudinal sinus. **S. petro'sus infe'rior,** groove on sides of basilar portion of occipital bone lodging the inferior petrosal sinus. **S. sagitta'lis,** semisulcus longitudinalis.

Semitendino'sus. Muscle situate at the posterior part of the thigh. It extends obliquely, downward and inward, from the tuberosity of the ischium—to which it is attached by a flat tendon common to it and the biceps—as far as the posterior and inner part of the tibia, to which it is attached by means of another round tendon. Its fibres are commonly interrupted by an aponeurosis. Its uses are the same as those of the semimembranosus.

Semitertian, sem-e-tur'shan (*semi, tertiana,* tertian). Term applied to a fever possessing the characters of a tertian and a quotidian intermittent. **S. fe'ver,** malarial fever having daily paroxysms, of which those occurring every other day are more violent.

Semiuncia, sem-e-un'se-ah (*semi, uncia,* ounce). Half an ounce.

Semivir, sem'e-vur (*semi, vir,* man). Eunuch.

Semivivus, sem-e-ve'vus (*semi, vivus,* alive). Half-alive, half-dead.

Sempervivum acre, sem-per-ve'vum ak're (*semper,* always, *vivus,* alive, because always green). Sedum. **S. tecto'rum,** *Houseleek, Sengreen, Jupiter's beard.* The leaves have a mild, subacid austerity, and are often applied to bruises and old ulcers.

Semp'stress's pal'sy. See *Palsy, sempstress's.*

Se'muda. Betula.

Semuncia, se-mun'se-ah. Half an ounce.

Se'na. Cassia senna.

Senebiera coronopus, sen-e-be-a'rah kor-on'o-pus (after J. Sénébier, the naturalist, of Geneva). Cochlearia coronopus.

Sen'eca oil (after the Seneca Indians). Petroleum.

Senecio, sen-e'se-o (*senex,* old man, in allusion to the grayish down on many species). *Groundsel, Fireweed;* ord. Compositæ. A common plant in Europe; frequently applied, bruised, to inflammation and ulcers as a refrigerant and antiscorbutic. **S. aur'eus,** *Golden ragweed, Wild valerian, Life root, Squaw root;* indigenous; is an excitant, diaphoretic, and diuretic. The dried plant is used in decoction—℥ss to Oj of water. **S. hieracifo'lius,** Erecthites hieracifolius. **S. Jacobæ'a,** *St. James's wort, Ragwort.* The leaves have a roughish, bitter, subacid, and extremely nauseous taste. A decoction has been used in dysentery. A poultice of the leaves has been recommended in rheumatic affections, and a decoction of the root has been employed for wounds and bruises. **S. vulga'ris,** senecio.

Senecta, sen-ek'tah. Old age; see *Senectus.* **S. decrep'ita,** decrepitude. **S. extre'ma,** decrepitude. **S. sum'ma,** decrepitude. **S. ul'tima,** decrepitude.

Senec'tus (*senex,* old person). *Old age, Senility.* The last period of life, commencing, according to some, at 60 years of age—according to M. Flourens, at 70—but varying according to numerous circumstances. It is characterized by progressive diminution of the physical and mental faculties. See *Age.* **S. ul'tima,** decrepitude.

Sen'ega. Polygala senega. **S. snake'root,** senega.

Sen'egæ ra'dix. See *Polygala senega.*

Sen'egal, gum. Exudation from Acacia or Mimosa Senegal, ord. Leguminosæ, growing in that part of Africa through which the river Senegal runs. It is in loose or single drops, much larger than gum arabic or the gum which exudes from the cherry tree.

Sen'egin. See *Polygala senega.*

Sen'eka. Polygala senega.

Senescence, sen-es'sence (*senex,* old man). Old age.

Sen'green. Sempervivum tectorum.

Se'nile (*senex,* old person). Relating or belonging to old age, as senile delirium; dotage. **S. chore'a,** paralysis agitans; also a form of true chorea. **S. gan'grene,** dry gangrene of the extremities due to atheromatous vessels, with diminution of blood-supply. **S. trem'bling,** see *Senile.*

Seni'lis. Relating to old age; old. **S. ar'cus,** see *Arcus senilis.*

Senil'ity. Senectus.

Sen'na (Ph. U. S.). Leaflets of Cassia acutifolia and C. elongata. See *Cassia senna.* **S. acutifo'lia,** Cassia acutifolia. **S. Alexandri'na,** Cassia senna. **S., Amer'ican,** Cassia Marilandica. **S. angustifo'lia,** Cassia elongata. **S., blad'der,** Colutea arborescens. **S. figs,** see *Cassia senna.* **S. German'ica,** colutea. **S. In'dica,** Tinnevelly senna. **S. Ital'ica,** Cassia senna. **S. obova'ta,** Cassia obovata. **S. officina'lis,** Cassia elongata. **S. paste,** see *Paste, senna.* **S., prai'rie,** Cassia chamæcrista. **S., wild,** Cassia chamæcrista; Cassia Marilandica; Globularia alypum.

Sennaar gum, sen-nah-ar' gum. A variety of gum acacia, so named from the town on the Red Sea whence it is exported.

Sennacrol, sen'nak-rol. A pungent, acrid principle obtained from senna; soluble in ether.

Sennapicrin, sen-nah-pi'krin. A bitter principle of senna, obtained from the alcoholic extract of the drug.

Sensa'tion (*sentio, sensum,* to feel). The consciousness or cognizance by the brain of an impression caused by an external body on the organs of the senses. It is not necessarily confined to bodies external to us, for we can receive an impression by touching any part of our own body. The body which communicates the impressions needs but to be external to the part impressed. Sensations are divided into external, internal, and morbid. The external are communicated by the five organs of the senses. The internal are such as occur within the body, and arise from some alteration in the function of the part for the time being. Hunger and thirst are internal sensations, as well as all the natural wants. Morbid sensations may be either internal or external. Objective sensations are produced by impressions on the peripheral nerves, as in vision, audition, etc. Subjective sensations are such as originate centrically or in the encephalon, as tinnitus aurium.

Sensa'tional. Sentient.

Sense. A faculty possessed by animals of appreciating impressions from external objects. The senses are five in number: sight, hearing, smell, taste, and touch. Of these, the first two and the last administer more to the intellect, and hence have been called by some the intellectual senses; the other two seem more connected with the nutrition of the body, and hence have been termed corporeal or nutritive senses. Other senses have been suggested—as the intense sensation experienced during the venereal act; a sense of heat and cold; a muscular sense. **S. or'gans,** those which when stimulated produce sensation. **S. or'gans, cen'tral,** central collections of cells which receive peripheral impulses and convert them into reflex action, sensation, or both sensation and reflex action. **S. or'gans, periph'eral,** special sensory nerve-endings, including touch- and taste-corpuscles, organ of Corti, the retina, etc.

Senses, ner'vous sys'tem of the. Medulla oblongata.

Sensibil'itas. Sensibility. **S. anom'ala,** see *Irritable.* **S. auc'ta,** see *Irritable.* **S. morbo'sa,** see *Irritable.*

Sensibility, sen-sib-il'it-e (*sentio,* to feel, *habilis,* able). The faculty of receiving and transmitting impressions and having the consciousness of them. It thus includes impressibility, transmissibility, and perceptibility. Bichat defined it as the property possessed by living bodies of receiving impressions, whether the individual be conscious of them or not. If conscious, the sensibility is called animal; if not, organic. This last is common to vegetables and animals, and presides over nutrition, absorption, exhalation, secretion, etc. The other does not exist in vegetables: it is the origin of the sensations—olfaction, vision, gustation thirst, hunger, pain, etc. The free extremities of the hair and nails and the epidermis are not so sensible. See *Insensibility.* **S., organ'ic,** unconscious transmission of afferent or efferent impulses. **S., range of,** see *Weber's law.* **S., recur'rent,** see *Vertebral nerves.*

Sen'sible. Having the faculty of sensation.

Sensiferous, sen-sif'er-us (*sensus, fero,* to carry). Sentient.

Sensio, sen'se-o. Sense.

Sen'sitive. Having the faculty of feeling. Relating or appertaining to the senses or to sensation.

Senso'rial. Sentient. **S. pow'er,** the two functions of sensation and volition, to which some add the power of muscular contraction; but it should not be extended to acts in which there is not consciousness.

Sensorimo'tor. Name applied to certain nerve-fibres which act conjointly in sensation and muscular acts.

Sensorium, sen-so're-um. The common centre of sensations. By many it is considered to be represented by the optic thalami, the corpora striata, and the ganglionic nuclei of the nerves of the different senses.

Sensorivolitional, sen-so-re-vo-lish'un-al. A term applied to nervous fibres passing to and from the cerebrospinal axis, and respectively concerned in sensation and volition.

Sen'sory. Sensorium; sentient. **S. cells,** the nerve-cells composing end-organs of nerves, as, for example, the cells of the taste end-organs, situate in the tongue. **S. gan'glia,** a series of ganglionic masses at the base of the brain, in direct communication with the nerves of sensation, as the olfactory, optic, auditory, and gustatory. **S. nerves,** *Nerves of sensation,* so called in contradistinction to motor nerves. There are general sensory nerves, as those connected with the posterior part of the spinal marrow and the fifth pair; and special sensory, as those of the senses.

Sensus ægritudinis, sen'sus e-gre-tu'din-is (a feeling of sickness). Indisposition. **S. osmomet'ricus,** olfaction. **S. perver'sus,** pseudæsthesia.

Sentient, sen'she-ent (*sentio,* to feel). *Sensory, Ideagenous, Sensorial, Sensational, Sensiferous.* Feeling; causing feeling. **S. extrem'ities of nerves** are their minute terminations in the organs.

Sentina, sen-te'nah. Pituitary gland.

Sep'arate sys'tem. A form of sewage which excludes, in whole or part, the rainfall. See *Sewerage.*

Sep'arator. Instrument used to separate the teeth, to correct their abnormal position by continuous pressure.

Separato'rium (*separo,* to separate). A surgical instrument for separating the pericranium from the skull. A *Separatory* is a pharmaceutical vessel for separating fluids of different densities from each other.

Sep'aratory. Separatorium.

Sepedogenesis, sep-e-do-jen'es-is. Sepedonogenesis.

Sep'edon. Putrefaction.

Sepedonodes, sep-ed-on-o'dees. Putrid.

Sepedonogenesis, sep-e-don-o-jen'es-is (*sepedon, genesis,* generation). A septic disposition or tendency, such as is met with in typhus gravior. Putrescence.

Se'pes (a hedge, a row) **den'tium.** A row of teeth.

Sephirus, sef'ir-us. Scleriasis.

Sepia, se'pe-ah. *Cuttlefish.* Class Cephalopoda. The osseous part of the cuttlefish; has been used as an absorbent, and is often added to tooth-powders.

Seplasia'rius. Name formerly given to one who sold perfumes, ointments, etc. (From *Seplasia,* a public place at Capua, where they were frequently sold.) A druggist.

Sepsichymia, sep-se-kim'e-ah. Putrefaction or putrescency of the humors.

Sep'sin (*sepsis,* putrefaction). A substance extracted from putrid animal material, and supposed to be the active cause of certain cases of septicæmia.

Sep'sis. Putrefaction. Infection with pathogenic micro-organisms.

Septæmia, sep-te'me-ah (*septos,* putrid, *haima,* blood). *Septicæmia, Septic fever, Putrid infection.* Morbid condition of the blood produced by septic or putrid matters—animal poisons especially—the inhalation of foul air or septic gases. It resembles pyæmia in its symptoms. The latter may be regarded, however, as a purulent infection; septæmia, as a putrid infection. The micro-organisms producing septæmia are generally those which produce suppuration—staphylococci and streptococci. See *Micro-organisms, Bacteria,* etc.

Sep'tal (*septum*). Relating or appertaining to a septum; as septal walls of the heart, those that separate the cavities from each other.

Septana (sep-tan'ah) **fe'bris** (*septem,* seven). Septan fever.

Sep'tate. Provided with one or more partitions. **S. u'terus,** uterus divided by a septum into two cavities.

Septenary, sep'ten-a-re (*septem,* seven). Consisting of seven. The septenary years of the old believers in critical periods were times at which it was supposed important changes might be expected to take place. The grand climacteric was fixed at 63, and it was considered that if a person passed that age, he had well-founded expectations that his life might be protracted to 90.

Septenniad, sep-ten'ne-ad (*septem,* seven). See *Climacteric years.*

Septerius, sep-ta're-us. Septic.

Sept'foil, up'right (*septem,* seven, *folium,* leaf). Tormentilla.

Septhæ'mia. Septæmia.

Sep'tic (*septos,* putrid). That which produces putrefaction. A substance corroding and disorganizing the soft parts without causing much pain. See *Antiseptic.* **S. fe'ver,** septæmia. **S. infec'tion,** effect of absorption of septic matters. **S. poi'son,** see *Poison.* **S. poi'soning,** that due to absorption of septic poisons.

Septicæmia, sep-tis-e'me-ah. Septæmia.

Sep'tico-pyæ'mia. A combination of septicæmia and pyæmia; combined septic and purulent toxæmia.

Septimes'tris fœ'tus (*septem,* seven, *mensis,* month). A seven months' fœtus.

Sep'tine (*septos*). Sepsin.

Septiner'via (*septem,* seven, *nervus,* nerve). Plantago.

Septochymia, sep-to-kim'e-ah (*septos,* putrid, *chumos,* juice). Putrefaction or putrescency of the humors.

Septom'eter. Instrument for measuring thickness of nasal septum.

Sep'ton (*septos,* putrid). Azote.

Septopyæmia, sep-to-pe-e'me-ah. A combination of septæmia and pyæmia.

Septopyra, sep-top'ir-ah (*septos,* putrid, *pur,* fever). Typhus gravior.

Sept'ula (pl. of **Septulum**) **fibro'sa.** Fine trabeculæ of fibrous tissue running from the deep fascia of the penis into the corpus cavernosum. **S. interalveola'ria,** septum between the pulmonary alveoli. **S. medul'læ spina'lis,** the connective tissue septa of the spinal cord. **S. re'num,** columns of Bertin. **S. tes'tis,** see *Septulum.*

Sept'ulum (dim. of **Septum**). A division between small spaces or cavities, as the septula testis or fibrous

cords given off by the mediastinum testis to be inserted into the inner surface of the tunica albuginea.

Sep'tum (*sepio*, to fence in). A part destined to separate two cavities from each other or to divide a principal cavity into secondary cavities. These septa are numerous in the human body. The chief are the following: **S. an'nuli crura'lis**, crural canal. **S. aor'ticum**, aortic segments. **S. atrio'rum cor'dis**, septum or partition between the auricles of the heart. **S. at'rium**, auricular septum of heart. **S. auricula'rum**, S. atriorum. **S. bronchia'le**, bronchial septum. **S. bul'bi ure'thræ**, median septum of the bulb of the urethra. **S. bursa'rium omenta'le**, ligament running from stomach to pancreas; gastropancreatic ligament. **S. cartilagin'eum**, cartilage of nasal septum. **S. cerebel'li**, falx cerebelli. **S. cer'ebri**, falx cerebri. **S. cervica'le**, arachnoid septum. **S. coch'leæ audito'riæ**, lamina spiralis. **S. cor'dis**, the partition which separates the two ventricles of the heart. **S. crura'le**, see *Crural canal*. **S. enceph'ali**, tentorium. **S. fem'oris**, lamina of compact tissue inside the femur at junction of neck and shaft, serving to greatly strengthen the bone. **S. glan'dis**, median connective-tissue septum of glans penis. **S. inguina'le exter'num**, part of superficial abdominal fascia which is attached to the internal pillar of the external ring of the inguinal canal. **S., lin'gual**, median fibrous septum of the tongue. **S. longitudina'le**, longitudinal septum of spinal cord. **S. longitudina'le poste'rius**, posterior median fissure of spinal cord. **S. lu'cidum**, the soft portion or medullary substance which separates the two lateral ventricles of the brain from each other. This septum is composed of two laminæ, between which a small cavity exists, ventriculus septi pellucidi, filled by a serous fluid; see *Ventricles of the brain*. **S. mea'tûs acus'tici**, lamina cribrosa. **S. media'num dorsa'le**, posterior median fissure of cord. **S. me'dium cer'ebri**, S. lucidum. **S. me'dium cor'dis**, interventricular septum. **S. medulla're triangula're**, S. lucidum. **S. membrana'ceum**, columna nasi. **S. membrana'ceum au'ris**, tympanic membrane. **S. mo'bile**, columna nasi. **S. na'rium**, the partition between the nares. It is formed by the vomer, the perpendicular plate of the ethmoid bone, and a cartilage of triangular shape, septum narium cartilagineum. See *Nasal cartilage*. These parts are lined by the pituitary membrane, which receives a considerable number of nerves and vessels. **S. na'si**, see *Nares* and *Septum narium*. **S. ner'veum**, crista acustica. **S. of the nose**, septum narium. **S. os'sis ethmoï'dei**, lamina of bone dividing ethmoidal cells. **S. paramedia'num dorsa'le**, posterior paramedian fissure. **S. parieta'le**, posterior leaflet of the mitral valve. **S. par'vum occipita'le**, falx cerebelli. **S. pectinifor'me**, see *Cavernous bodies*. **S. pellu'cidum**, S. lucidum. **S. of pons Varo'lii**, median raphe due to decussating fibres. **S. posti'cum**, arachnoid septum. **S. rectovagina'le**, wall between rectum and vagina. **S. sca'læ**, lamina spiralis. **S. scro'ti**, see *Scrotum*. **S. sin'uum sphenoïda'lium**, septum of sphenoid bone. **S. sphenoïda'le**, laminæ dividing sphenoidal cells. **S. staphyli'num**, venum pendulum palati. **S. subarachnoï'deum**, imperfect membranous septum passing from arachnoid to pia along posterior median fissure of the spinal cord. **S. ten'ue et pellu'cidum**, S. lucidum. **S. thora'cis**, mediastinum. **S. transver'sum**, crista acustica, tentorium, diaphragm. **S. tu'bæ**, thin lamina of bone separating tensor tympani muscle from Eustachian tube in canalis musculotubarius. **S. ure'thræ vagina'le**, anterior vaginal wall. **S. vagi'næ vaso'rum crura'lium**, septum between femoral vein and artery. **S. ventriculo'rum**, interventricular septum. **S. vestib'uli nervosomembrana'ceum**, see *Labyrinth*.

Sep'tus (*septos*). Septic.

Se'pum. Sevum.

Sequela, sek-we'lah. Singular of **Sequelæ**.

Sequelæ, sek-we'le (*sequor*, to follow). Popularly, *Dregs*. Morbid phenomena left as the result of a disease.

Sequestrec'tomy (*sequestrum*, *ektome*, excision). Hybrid term for excision of a sequestrum.

Sequestrot'omy (*sequestrum*, *tome*, section). Hybrid term for the operation for removal of sequestrum in necrosis.

Seques'trum (*sequestro*, to separate from). That portion of bone, in necrosis, which is dead and separated from the living bone; acting, while retained, as an extraneous body. When the sequestrum is superficial and small it is called *exfoliation*. The portion of bone surrounding it is the capsula sequestralis. Sequestra are termed primary, secondary, and tertiary, according to the degree of attachment and the necessity for operative interference.

Seralbu'min. The albumin of the blood-serum.

Sera'peum. Syrup.

Serapinon, ser-ap-e'non. Sagapenum.

Sera'pium. Syrup.

Serbet, sur'bet. Scherbet.

Se'rial sec'tions. Consecutive or successive sections cut from a specimen.

Sericeps, ser'e-seps. Device for delivering the fœtal head. It is made of a piece of cloth nine inches long, furnished with ribbons, so as to make loops for traction.

Sericocarpus (ser-e-ko-kar'pus) **tortifo'lius** (*serikos*, silken, *karpus*, fruit). Indigenous; ord. Compositæ; is said to be diuretic.

Ser'icum. Silk (from Seres—the Thibetans, probably—from whom it was first obtained). The thread spun by the silkworm. Used by surgeons for ligatures, etc. **S. An'glicum**, see *Sparadrapum adhæsivum*.

Seridion, ser-id'e-on. Cichorium intybus.

Se'ries den'tium. A row of teeth.

Se'rine. Serum-albumin.

Seri'ola. Cichorium intybus.

Se'rious. Grave. A term applied to a disease or to a symptom that is attended with danger.

Se'ris. Cichorium intybus.

Sermoun'tain. Lacerpitium album.

Se'ro. In composition, serous membrane.

Serocolitis, se-ro-ko-le'tis. See *Colitis*.

Serocyst, se'ro-sist. See *Serocystic*.

Serocys'tic. Epithet for tumors of the female breast, *serocysts*, which consist in the first stage of one or more membranous cysts, produced perhaps by dilatation of portions of the lactiferous tubes.

Seroenteritis, se-ro-en-tur-e'tis. See *Enteritis*.

Serohepatitis, se-ro-hep-at-e'tis. Inflammation of serous coat of liver. See *Hepatitis*.

Se'roid (*serum*, *eidos*, resemblance). Resembling a serous membrane.

Serolin, se'ro-lin. Peculiar fatty matter found in the blood. Normal fæces contain serolin or stercorin, produced by transformation of the cholesterin of the bile during the digestive act.

Seropur'ulent. Composed of both serum and pus.

Sero'sa. Membrane of embryo of birds analogous to chorion of mammals. Also a serous membrane.

Serosanguineous, se-ro-san-gwin'e-us. Consisting of or resembling blood and serum.

Serosity, se-ros'it-e. Serum.

Serosub'limate gauze. Antiseptic gauze (Lister), being gauze made up of corrosive sublimate solution in blood-serum.

Se'rous (*serum*). Thin, watery. Relating to the most watery portion of animal fluids or to membranes that secrete them. See *Serum*. **S. ap'oplexy**, serous effusion into the ventricles of the brain, with clinical symptoms of true apoplexy. **S. cysts**, cysts with thinly liquid contents, usually seated in or near secreting glands or membranes or vascular glands. **S. glands**, racemose glands secreting a clear serous secretion; for example, the parotid. **S. lay'er**, embryonic area. **S. mem'branes**, membranes, serous.

Serpe'do (*serpo*, to creep). Psoriasis.

Ser'pens. Serpent.

Ser'pent (*serpo*, to creep). A snake. Many serpents are venomous, and the bites of some fatal. See *Poisons, table of*. **S. teeth**, a term used with reference to the torsion of one or more of the incisors, resem-

bling those of the ophidian reptiles. **S. ul'cer,** sinuous ulcer of the cornea.

Serpenta'ria (*serpens*, snake). Snake root. Rhizome and rootlets of Aristolochia serpentaria and S. reticulata. See *Aristolochia serpentaria.* **S. Gallo'rum,** Arum dracunculus. **S. Hispan'ica,** scorzonera. **S. mi'nor,** Arum maculatum. **S. ni'gra,** Actæa racemosa. **S. Virginia'na,** serpentaria.

Serpenta'riæ Brazilien'sis ra'dix. Caincæ radix. **S. ra'dix,** see *Aristolochia serpentaria.*

Serpenta'rin. See *Aristolochia serpentaria.*

Ser'pentary root. Aristolochia serpentaria.

Ser'pentine (*serpens*, serpent). See *Ophites.*

Ser'pes (*serpo*, to creep). Herpes.

Serpiginous, sur-pij'in-us (*serpo*, to creep). Epithet given to certain affections which creep, as it were, from one part to another, as serpiginous erysipelas. **S. ul'cer,** sinuous ulcer which seems to creep or crawl from one part of the surface to another.

Serpigo, sur-pe'go (*serpo*, to creep). Herpes circinatus; lichen psoriasis. **S. facie'i,** herpes facialis.

Serpil'lum (*serpo*, to creep). Thymus serpyllum.

Serpul'lum. Thymus serpyllum.

Serpyllum, sur-pil'lum (*serpo*, to creep). Thymus serpyllum. **S. citra'tum,** see *Thymus serpyllum.*

Ser'ra. Saw. **S. amputato'ria,** saw, amputation. **S. sal'via,** wild sage; Artemisia frigida; antiperiodic. **S. versat'ilis,** trepan.

Ser'rate su'ture. Suture between bones having saw-like edges which fit accurately together, as the cranial bones.

Ser'rated (*serra*, saw). Dentate; saw-shaped.

Serra'ti inter'ni. The infracostal muscles.

Serratiform, ser-rat'i-form. Serrated.

Serrat'ula (dim. of **Serratus,** saw-shaped) **ama'ra.** So called from the leaves, owing to their serrated shape. A species of sawwort, recommended in ague. **S. be'hen,** Centaurea behen.

Serratus (*serra*, saw). Dentate. **S. anti'cus,** serratus magnus. **S. anti'cus ma'jor,** serratus magnus. **S. anti'cus mi'nor,** pectoralis minor. **S. inter'nus,** the subcostal muscles, collectively. **S. mag'nus** (so called from its serrated appearance), a very broad (especially anteriorly), thin, flat, irregularly quadrilateral muscle situate at the sides of the thorax. It is attached before to the external surface of the first eight or nine ribs by as many distinct digitations, and behind to the spinal edge of the scapula. The superior fibres are almost horizontal; the lower become gradually more and more oblique upward and backward. This muscle carries the scapula forward, and causes it to execute a movement of rotation, which directs its inferior angle forward and the anterior upward. When the shoulder is fixed it raises the ribs. **S. ma'jor,** serratus magnus. **S. ma'jor anti'cus,** serratus magnus. **S. pal'sy** or **paral'ysis,** palsy from lesion of the long thoracic nerve. **S. posti'cus infe'rior,** a broader and thinner muscle than the following, but nearly of the same shape. It is situate obliquely at the lower part of the back, extending from the spinous processes of the last two or three dorsal vertebræ and the first two or three lumbar to the inferior margin of the last four false ribs. This muscle depresses the ribs, and thus concurs in expiration. It is an antagonist to the next. **S. posti'cus supe'rior,** a flat, thin, quadrilateral muscle situate obliquely at the posterior inferior part of the neck and the superior part of the back. It passes from the posterior cervical ligament, from the spinous process of the last cervical vertebræ, from the spinous processes of the first two or three dorsal to the second, third, fourth, and fifth ribs, into which it is inserted by as many digitations. It raises the ribs, and is consequently an inspiratory muscle.

Serre-fine (F. *serrer*, to press, *fin*, fine). A small spring forceps. It is formed of a wire of metal turned in the middle into two spirals, one in front of the other. This constitutes the spring. Each branch describes nearly the letter S, and one extremity forms the spiral, the other lays hold of the parts to be united.

Serre-nœud (F. *serrer*, to press, *nœud*, knot). Name given to various instruments employed by the surgeon for tightening a ligature around a pediculated tumor or any part which has to be destroyed by ligature slowly and gradually.

Serres, an'gle of. The metafacial angle, that made by the pterygoid processes with the base of the cranium. **S., den'tal glands of,** see *Tooth.*

Serto'li's col'umns. Rod-shaped nucleated masses bearing spermatoblasts in the testis.

Ser'tula campa'na (dim. of **Serta,** garland). Trifolium melilotus.

Se'rum. Whey. The most watery portion of animal fluids, exhaled by serous membranes. It is a constituent part of blood, milk, etc. Also sperm. **S. albu'men,** that of blood-serum. **S. of the blood** is the liquid which separates from the blood when coagulated at rest. It is of a greenish-yellow color, viscid, slightly coagulable by heat, acids, and alcohol. It is composed of water, of sodium chloride, certain phosphates, and albumen, constantly united to soda, almost in a saponaceous combination. The fluid which exudes from the albumen of the serum of the blood, when coagulated by heat, is by some called *Serosity.* **S. ca'sein,** serum globulin. **S. cerebrospina'le,** cerebrospinal fluid. **S. fibrin'ogen,** proteid existing in blood-serum in small amount; supposed to assist in coagulation of the blood. **S. glob'ulin,** paraglobulin. **S. lac'teum,** serum lactis. **S. lac'tis** or **lac'teum,** *Serum of milk, Whey;* that part of milk from which the butter and caseous matter have been separated. It is a transparent, citrine-colored liquid containing sugar of milk, mucilage, acetic acid, phosphate of calcium, and some other saline substances. It is used as a slightly nutritious diluent and refrigerant. **S. lac'tis ac'idum,** acid whey. **S. lac'tis alumina'tum,** alum whey. **S. lac'tis dul'ce,** whey after neutralization of its free acid by an alkaline carbonate. *Rennet whey* is made thus: milk 2 pints, rennet ℥ss, infused in a little hot water; mix and keep in a gentle heat for some hours, then strain. **S. san'guinis,** serum of the blood. **S. of se'rous mem'branes,** *Water of dropsy,* resembles the serum of the blood, especially in cases of hydrocele. The water of hydrothorax and ascites contains much less albumen—sometimes enough to coagulate on the application of heat; at others, not.

Se'rumal cal'culus. Tartar deposited on the teeth from serum proceeding from disease of the gums.

Serumuria, se-rum-u're-ah. Albuminuria.

Ser'vice, moun'tain. Sorbus aucuparia. **S. tree,** Sorbus domestica.

Ser'vice-be'ing. Amelanchia Canadensis.

Sesame, ses'am-e. Sesamum Indicum; leaves are officinal. **S. oil,** oil of sesamum.

Sesami (ses'am-e) **fo'lium.** Sesamum.

Ses'amoid (*sesame*, grain of sesamum, *eidos*, resemblance) **bod'ies.** Small fibrocartilages of the digits, developing in the tendons. **S. bones,** small bones situate in the substance of tendons near certain joints. Their number is various. They are commonly more in the male than female. Two are constantly met with beneath the metatarsophalangeal articulations of the great toe. Sometimes the articulations of other bones of the metatarsus with the phalanges of the toes have them likewise. In the hand there are two before the metacarpophalangeal joint of the thumb. At times they are met with in the other metacarpophalangeal articulations. Occasionally two exist behind the condyles of the femur, in the tendons of the gastrocnemii muscles. A considerable os sesamoideum is also met with in the tendon of the peronæus longus. These bones are commonly round, and flattened only on one surface, which is encrusted with cartilage. Their size is very variable, according to the joints in which they exist. Sesamoid bones in infants are replaced by small cartilaginous concretions. Sesamoid bones are, like the patella (which is a true sesamoid bone), composed of much cellular substance, covered by a thin layer of compact tissue. The use of these bones is to allow the

tendon to be inserted into the lever at a greater angle, and thus enable the power to act more advantageously. Two bony points sometimes met with—the one at the outer side of the carotid canal of the temporal bone, and the other at the edge of the cavernous sinus, at the side of the internal carotid artery—have also been called sesamoid bones. **S. car'tilages,** cartilages occurring in tendons under the same conditions as sesamoid bones. **S. car'tilages of the lar'ynx,** small nodules found in connection with the vocal cords. **S. car'tilages of the nose,** two small cartilaginous plates situate between the alar and triangular cartilages.

Ses'amum. See *Sesamum orientale.* **S. In'dicum,** native of East Indies. This herb is cultivated for its seeds, from which oil is obtained. **S. orienta'le,** *Benne, Oily grain.* Seeds of this African plant, cultivated in the Southern United States, have been used by the negroes with Indian corn as an article of food. They yield a larger proportion of oil than any other vegetable. Benne oil, the oil of the seed, is used in the Southern States as a laxative. The leaves, Benne leaves, which are referred to Sesamum orientale and S. Indicum, afford, by infusion, an excellent mucilage.

Sesba'nia grandiflo'ra. An Indian tree having a bark of astringent properties.

Sescuncia, sesk-un'se-ah. An ounce and a half. See *Sesqui.*

Seseli, ses'el-e. Laserpitium siler. **S. Ægopo'dium,** Ligusticum podagraria. **S. an'nuum,** S. tortuosum. **S. ca'rum,** carum. **S. car'vi,** carum. **S. cre'ticum,** Tordylium officinale. **S. fœniculifo'lium,** Sison ammi. **S. grave'olens,** Apium graveolens. **S. me'um,** Æthusa meum. **S. pa'tens,** S. tortuosum. **S. praten'se,** Peucedanum silaus. **S. tortuo'sum,** *Hartwort of Marseilles;* seeds have a warm taste, and a greater degree of pungency than those of Laserpitium siler, which is the seseli of some of the pharmacopœias.

Ses'elis. Laserpitium siler.

Ses'qui. This word, joined with any number, weight, measure, etc., signifies one and a half; as sesquigranum, a grain and a half.

Sesqui-ox'ide of iron. Fe_2O_3. Ferric oxide; ferri oxidum hydratum.

Sesquiuncia, ses-kwe-un'se-ah. Sescuncia.

Ses'sile. Term applied to tumors having no pedicle.

Se'ta equi'na (*seta,* bristle, *equinus,* horse). Horsehair. *Hairworm.* Pale-brown worm from 4 to 6 inches long, found in stagnant water and twisted into knots and contortions. It is common in the intestines of the Laplanders, causing the colica Lapponica, in which the gripings are, at times, exceedingly severe.

Setaceous, se-ta'se-us. Having hairs or bristles; hairy.

Seta'ceum (*seta,* bristle). *Seton.* A long strip of fine linen or cotton twist, passed through the skin and areolar membrane to keep up an issue, or through suppurating cavities, between the fragments of fractured bones, etc. to fulfil certain indications. The term is also applied to the issue so established. Setons are employed for the relief of obstinate ophthalmia, cephalalgia, epilepsy, thoracic and abdominal affections, etc., but are not as much used as formerly.

Setæ siliquæ hirsutæ, se'te sil'ik-we hur-su'te. Cowhage.

Setaria roccella, se-tah're-ah rok-sel'lah (*seta,* bristle). Lichen roccella.

Set'fast. See *Furunculus.*

Sethia acuminata, seth'e-ah ak-u-min-at'ah. An Indian tree belonging to the Lineæ, the leaves of which have been used as a vermifuge.

Se'ton. Setaceum.

Setschenow's cen'tres. Reflex inhibitory centres supposed to be situate in the basal ganglia and spinal cord.

Set'terwort. Helleborus fœtidus.

Set'ting a frac'ture. See *Reduction.*

Seutin's band'age. Ordinary muslin roller impregnated with starch. Starch bandage.

Sevadil'la (S. *sebadilla*). Veratrum sabadilla.

Sevatio, sev-ah'she-o (*sevum*). Steatoma.

Sev'en barks. Hydrangea arborescens.

Sev'en-day disease. See *Trismus.* **S.-d. fe'ver,** relapsing or spirillum fever.

Seventeen-day fe'ver. Relapsing or spirillum fever.

Seville or'ange. Bitter species of orange.

Se'vum. Suet, mutton suet, the prepared suet of ovis aries. Pinguedo. **S. bovi'num,** tallow made from the ox. **S. ce'ti** (*cetus,* whale), cetaceum. **S. ovil'lum,** tallow made from the sheep. **S. præpara'tum,** *Prepared suet;* formed by cutting suet in pieces, melting over a slow fire, and straining through linen. It is emollient, being boiled in milk (℥j to Oj), and has been used in diarrhœa and dysentery. Its principal employment is in plasters. **S. verveci'num,** sevum.

Sew'age. Term applied to system of sewers designed to carry away the filth of a community. Iron or earthen pipes are usually employed, and various systems have been devised. By *the separate system* is meant any system of sewers which excludes the rainfall in whole or in part. Such systems are operated by means of flush-tanks, or by creating a partial vacuum in the pipes, and then drawing the sewage through.

Sewer, su'er. Underground canal or pipe for conveying away foul water, etc. from houses.

Sew'er-gas. A combination of gases found in sewers. Its composition varies according to the contents of the sewers and other conditions. Sometimes it is highly toxic.

Sex. The physical difference between male and female in animals and vegetables.

Sexdig'ital. Possessing six fingers or toes.

Sex'tan fe'ver. Malarial fever in which the paroxysm occurs every sixth day.

Sex'tans (*sextus,* sixth). Sixth part of a pound.

Sexta'rius (*sextus,* sixth). An ancient measure for liquid and solid substances; sixth part of a congius or gallon. See *Weights and Measures.*

Sextula, seks'tu-lah (*sextus,* sixth). Sixth part of an ounce.

Sexual, seks'u-al (*sexus,* sex). That which relates to the sex or which characterizes the sex. **S. act,** coition. **S. diseases** are the diseases of the sexual organs, as sexual functions are the genital functions. **S. in'stinct, inver'sion of,** sexual desire for one of the same sex. **S. in'tercourse,** coition. **S. or'gans,** genital organs.

Sexual'ity. The characteristic marks of either sex.

Sex'us. Sex. **S. al'ter,** see *Sex.* **S. for'tior,** see *Sex.* **S. mulie'bris,** see *Sex.* **S. po'tior,** see *Sex.* **S. se'quior,** see *Sex.* **S. viri'lis,** see *Sex.*

Sexval'ent. Term to denote an element requiring six atoms of hydrogen to dissolve it.

Shack'le. Carpus.

Shack'le-hammed. See *Cnemoscoliosis.*

Shad'bush. June-berry; Amelanchier Canadensis.

Shad'dock. *S. orange.* Fruit of Citrus decumana, called after the captain of a vessel who first took it to the West Indies from China. It is large, inferior to the orange in flavor, but, as it keeps longer, is useful on long voyages.

Shad'ow-test. See *Skiascopy* and *Retinoscopy.*

Shaft of hair. Portion of hair exterior to the skin.

Shag'bark. See *Hickory.*

Shag'gy cho'rion. Villous chorion.

Sha'kers. See *Convulsionnaire.*

Shakes. Intermittent.

Sha'king. Intermittent. See *Rigor.* **S. pal'sy,** paralysis agitans.

Shallot'. Eschalot, a species of allium, employed in culinary preparations.

Sham A'braham. See Abraham man.

Shampoo'ing. *Champooing, Chamboning, Massing, Massage.* A Hindoo process which consists in pressing the body of the bather in a peculiar manner, cracking the various joints, and employing blows and friction. A variety of this was employed by the an-

cients in their baths. With the Romans the operators were called fricatores and tractores. Kneading consists in pressing alternately upon a part of the body to arouse the muscles to more energetic action. Massage is now very popularly employed in cases of nervous exhaustion as an adjuvant of the "rest cure," electrical treatment, etc. During the last few years it has been extensively studied and its various systems of procedure modified and improved, so as to be of service in a large number of medical and surgical cases. See *Massage.*

Sham'rock, In'dian. Trillium latifolium. **S., wa'ter,** Menyanthes verna.

Shank. Part of leg between ankle and knee.

Shan'ker. Chancre.

Shape. Vulva.

Share'bone. Pubes.

Shark oil. Fixed oil gotten from liver of several species of shark; has been employed in place of cod-liver oil for the same therapeutic indications in which the latter is used.

Sharp'ey's fi'bres. Penetrating connective-tissue fibres which run from the periosteum into the substance of bones.

Shave-grass. Equisetum hymenale.

Shea-but'ter. Galam butter.

Shealkanta oil. See *Argemone Mexicana.*

Sheath. Vagina. **S. of Hen'le,** see *Huxley's sheath.* **S., Hux'ley's,** see *Huxley's sheath.* **S. of op'tic nerve,** a continuation of cerebral membranes upon the optic nerve. The dural and arachnoid coverings pass into the sclerotic, but the nerve pia passes on into the choroid coat. **S. of Schwann,** see *Nerve-fibre.*

Shed'ding of the teeth. See *Dentition.*

Sheep ber'ry. Viburnum lentigo. **S. laurel,** Kalmia angustifolia. **S. poi'son,** Kalmia latifolia. **S. pox,** see *Varicella.* **S. sor'rel,** rumex acetosella. **S. weed,** soap-root; saponaria officinalis.

Shell flow'er. Trillium latifolium. **S. liq'uid,** see *Calcis murias.* **S. mem'brane,** membrana testæ.

Shell'bark. See *Hickory.*

Shep'herd's club. Ordinary mullein; Verbascum thapsus. **S.'s purse,** Thlaspi bursa. **S.'s sun'-dial,** Anagallis arvensis.

Sherbet. Scherbet. **S., or'ange,** see *Syrupus aurantii.*

Sher'ry (*Xeres,* in Spain). Sack. See *Wine.*

Shield, antither'mic. Device for preventing the cautery from destroying the tissues around the field of operation. **S. fern,** small plant of ord. Filices. **S., wa'ter,** Nelumbium luteum.

Shield'bone. Scapula.

Shikimi or **Shikimin.** Poisonous crystalline substance in Illicium religiosum, a Japanese variety of star anise.

Shima-mushi. A Japanese disease supposed to arise from sting of an insect. The symptoms have some resemblance to those of syphilis, and the affection is marked by high fever.

Shin. The spine or anterior part of the tibia or leg.

Shin'bone. Tibia.

Shin'gles (*cingulum,* girdle). Herpes zoster. **S., brow,** see *Herpes zoster.*

Shin'leaf. Pyrola.

Shin'lock. Brassica eruca.

Ship fe'ver. See *Typhus.*

Shirt-stud ab'scess. Form of abscess having a superficial cavity connected with a deeper one by a sinus.

Shiv'ering. See *Rigor.*

Shock. See *Concussion.* **S., ner'vous,** *Neuroparalysis, Vital shock, Vital depression, Nervous depression, Fatal sinking.* Sudden or instantaneous depression of organic, nervous, or vital power, often with more or less perturbation of body and mind, passing into reaction or into fatal sinking, occasioned by the nature, severity, or extent of an injury, or by an overwhelming moral calamity. **S., sec'ondary,** that occurring after primary shock has passed away. **S., vi'tal,** nervous shock.

Shod'dy disease or **fe'ver.** A disease of shoddy-workers, attended by fever, dyspnœa, dry throat, and violent headache.

Shoe, Scar'pa's. Shoe devised by Scarpa for rectifying the deviation in talipes varus.

Shoe'maker's cramp. See *Cramp, writer's.*

Shoot. See *Crick in the neck* and *Pain.*

Shore'weed. Aralia spinosa.

Short. A word used, by anatomists, in opposition to long, to distinguish parts from each other that have otherwise the same name. Short bones, for example, are those in which the three dimensions—length, breadth, and thickness—are nearly alike; such are the vertebræ, bones of the carpus, tarsus, etc. **S. car'damom,** short, nearly round variety of cardamom seed. **S. com'missure,** commissura brevis. **S. pro'cess of in'cus,** roundish process of incus attached to wall of tympanum. **S. of puff,** short-winded. **S. ribs,** see *Costa.* **S. of wind,** out of breath; easily put out of breath. The cause may be cardiac, pulmonary, from obesity, etc.

Short-sight. See *Myopia.*

Short-sight'ed. Myopic.

Short-sight'edness. Myopia.

Shot'bush. Aralia spinosa.

Shot'gun prescrip'tion. A prescription containing many drugs of divers properties. **S. quar'antine,** prevention of traffic to or from yellow-fever districts by mob force.

Shot'ted su'ture. See *Suture.*

Shoul'der. Humerus. **S. blade,** scapula. **S. bone,** humerus. **S. joint,** scapulohumeral articulation.

Shov'el pick'erel weed. Unisema deltifolia. **S. pond,** Unisema deltifolia.

Show. See *Parturition.*

Show'choo. See *Spirit.*

Show'er-bath. See *Bath.*

Shrap'nell's mem'brane. Membrana flaccida of the tympanic membrane.

Shriv'el. To shrink to the degree of wrinkling of the surface.

Shrub. A compound of spirits, lemon-juice, and sugar. **S., sweet,** calycanthus. **S., sweet-scent'ed,** calycanthus.

Shrub'by tre'foil. Ptelea trifoliata.

Shrump-shoul'dered. See *Hump.*

Shud'dering. A peculiar sensation, felt either externally or internally, seeming to be the result of a spasmodic movement of the parts in which it occurs. A slight feeling of cold sometimes accompanies it. It is at times the result of a moral cause, and is often the precursor of shivering.

Shu'mac. Rhus coriaria.

Shut'tle-bone. See *Scaphoid bone.*

Siagantritis, se-ag-an-tre'tis (*sutron,* cavity, *itis,* inflammation). Inflammation of the lining membrane of the antrum of Highmore.

Siagon, se'ag-on. Maxillary bone.

Siagonagra, se-ag-on'ag-rah (*siagon, agra,* seizure). Gouty or rheumatic affection of the joint of the lower jaw.

Sialachus, se-al'ak-us (*sialon,* saliva). Salivation.

Sialaden, se-al'ad-en (*sialon,* saliva, *aden,* gland). Salivary gland.

Sialadenitis, se-al-ad-en-e'tis (*sialon, aden,* gland, *itis*). Inflammation of a salivary gland. At times improperly written *Syaladenitis.*

Sialadenoncus, se-al-ad-en-on'kus (*sialon,* saliva, *onkos,* tumor). Tumor of a salivary gland.

Sialagogue, si-al'a-gog (*sialon, ago,* to drive). That which provokes the secretion of saliva. Pyrethrum and mercury are sialagogues. Sialagogues may be of two kinds—those acting through the circulation, and those acting immediately on the salivary organs.

Sialica, se-al'ik-ah (*sialon*). Medicines which affect the salivary glands.

Si'aline. Ptyalin.

Sialismus, se-al-iz'mus. Salivation.

Sialochous, se-al'o-kus (*sialon, chuo,* to pour). Salivation.

Sialocineticus, se-al-o-sin-et'ik-us (*sialon, kineo,* to move). Sialagogue.

Sialoid, se'al-oid. Having the nature of, or resembling, saliva.

Sialolithi, se-al-ol'ith-e (*sialon, lithos,* stone). Salivary calculi.

Sialolithiasis, se-al-o-lith-e'as-is (*sialon,* saliva, *lithos,* stone). The production of salivary calculi.

Sialolog'ia (*sialon, logos,* discourse). Treatise on saliva.

Si'alon. Saliva.

Sialoncus, se-al-on'kus (*sialon,* saliva, *onkos,* tumor). Tumor from obstruction of the salivary ducts, as from calculus.

Sialorrhœa, se-al-or-rhe'ah (*sialon, rheo,* to flow). Salivation. Abnormal flow of saliva.

Si'alos. Saliva.

Sialoschesis, se-al-os'kes-is. Retention or suppression of the saliva.

Sialosyrin'ges (*sialon, surinx,* pipe). Salivary fistulæ.

Sialozemia, se-al-o-za'me-ah (*sialon, zemia,* loss). Salivation. **S. mercuria'lis,** salivation, mercurial.

Si'amese twins. See *Twins.*

Sibare, sib'ar-e. Phrenitis.

Sib'bens. Name applied to a violent type of syphilis, especially marked by skin eruptions of great severity, which occurred in epidemic form in Scotland during the 17th and 18th centuries. Siwin is the Celtic name for raspberry, and the name sibbens is said to have been derived from it, because of the fungoid eruption on the skin which resembled a raspberry.

Siberian (si-be're-an) **plague.** Anthrax.

Si'bi. Elephantiasis or other extensive tumor of the leg (Fiji).

Sibilant, sib'il-ant (*sibilo,* to hiss, to whistle). Making a hissing or whistling sound. See *Râle, sibilant.*

Sibilismus aurium, sib-il-iz'mus aw're-um. See *Tinnitus aurium.*

Sib'ilus. Sibilant. **S. au'rium,** see *Tinnitus aurium.*

Sic'cant. Drying.

Siccantia, sik-kan'she-ah (*sicco,* to dry). Drying medicines. See *Desiccativa.*

Siccatio, sik-kah'she-o. The act of drying.

Siccative, sik'ka-tiv. Drying.

Sicchasia, sik-kah'se-ah. Distressing disgust for food, such as is experienced by pregnant women.

Sicilicum, sis-il'ik-um. A Roman weight of about two drachms.

Sick. *Diseased, Distempered, Ill, Ailing, Disordered.* Laboring under disease. In most parts of the United States, if a patient is affected with a slight indisposition he is said to be sick; if with one more severe, he is said to be ill. In England it commonly means affected with disorder of the stomach or nausea. A sick person under the charge of a physician is said to be a patient or the patient of the physician. At times patient is used for a sick person in the abstract. **S. gid'diness,** a condition between sick headache and epilepsy in appearance and symptoms, not in pathology. **S. head'ache,** migraine; headache accompanied with disordered stomach. **S. stom'ach,** nausea; milk sickness.

Sick'le-weed. Smartweed.

Sicklewort. Brunella vulgaris; astringent shrub.

Sick'ly. *Morbulent, Unhealthy.* Subject to sickness or in feeble health. Ailing.

Sick'ness. Disease; plague; nausea. See *Sick.* **S., bad, of Cey'lon,** beriberi. **S., fall'ing,** epilepsy. **S., month'ly,** menstruation. **S., moun'tain,** puna. **S. rate,** ratio of sickness to the population in any locality. **S., riv'er,** milk sickness. **S., sea,** nausea marina. **S. of the stom'ach,** vomiting. **S., swamp,** milk sickness.

Siclium, sik'le-um. Sicilicum.

Sicua, sik'u-ah. Cupping-glass.

Sicula, sik'u-lah. Penis.

Sicye'don. Cauledon.

Sic'yos. Cucumis sativus.

Sida, se'dah. Genus of plants belonging to ord. Malvaceæ. **S. abu'tilon,** Abutilon avicennæ. **S. retu'sa,** E. Indian plant, used in rheumatism and consumption and as a sudorific. The leaves are used externally as poultices for snake-bites and the stings of venomous insects. **S. spino'sa,** indigenous to the tropics, but growing in the U. S. Possesses demulcent properties.

Sid'dons fe'ver. See *Fever, Siddons.*

Side. In medicine, half of the body. Also applied to half of symmetrically bilateral organs. **S., pain in the,** pleurodynia.

Side'bone. Ilium.

Sideratio, sid-er-ah'she-o (*sidus,* star, because the condition was thought to be produced by the influence of the stars). The state of one struck suddenly, and without apparent cause, and as if by the influence of the stars or planets—planet-struck. The ancients comprised under this name different morbid conditions, as paralysis, apoplexy, gangrene, asphyxia, and phrenitis. **S. os'sis,** spina ventosa.

Sideration, sid-er-a'shun. Action of the stars upon a person; hence apoplexy. See *Sideratio.*

Siderion, sid-a're-on (*siderion,* iron tool). Surgical instrument made of iron.

Siderites, sid-er-e'tees (*sideros*). Magnet.

Sideritis, sid-er-e'tis. Magnet; Teucrium chamæpitys.

Siderokrenæ, sid-er-o-kre'ne (*sideros, krene,* spring). Water, mineral (chalybeate).

Sideropegæ, sid-er-o-pa'ge (*sideros, pege,* spring). Water, mineral (chalybeate).

Sideros, sid-a'ros. Iron.

Siderosis, sid-er-o'sis (*sideros,* iron). A disease resulting from the inhalation of iron-dust, similar in morphology, etc. to anthracosis resulting from inhalation of coal-dust. Discoloration of various internal organs from the influence of iron in the pigmentary deposit.

Sideroxylon, sid-er-oks'il-on (*sideros, xulon,* wood). Chrysophyllum cainito.

Sidesad'dle plant. Sarracenia.

Siegesbeckia (se-ges-beck'e-ah) **orienta'lis.** A small composite plant growing in hot climates. It has been used as an alterative, and also as a sudorific, and as an external application to various forms of ulceration.

Siegle's (se'gel's) **o'toscope.** Instrument devised to create a vacuum in the external meatus, permitting at the same time a view of the membrana tympani.

Sielismus, se-el-iz'mus. Salivation.

Sielon, se'el-on. Saliva.

Sier'ra Leone' fe'ver. See *Fever, Sierra Leone.* **S. sal'via,** Artemisia fragula.

Sieve. See *Cribration.* **S. drum,** see *Cribration.*

Sigaul'tian opera'tion or **sec'tion** (after Dr. J. R. Sigault, a French physician). Symphyseotomy.

Sige, se'ga. Taciturnity.

Sigh. Suspirium.

Sight. Vision. **S. askew',** vision only accurate when the object is placed obliquely. **S., day,** hemeralopia. **S., false,** metamorphopsia; pseudoblepsia. **S., fee'bleness of,** amblyopia. **S., long,** hyperopia. **S., night,** nyctalopia. **S., short,** myopia.

Sight'less. Blind.

Sigillation, sij-il-la'shun (*sigillum,* seal). Mark of a cicatrix.

Sigillum (sij-il'lum) (*signum,* mark) **Salamo'nis** (Solomon's seal). Convallaria polygonatum. **S. virginita'tis,** hymen.

Sigmatism, sig'mat-ism. Condition of speech in which the pronunciation of the letter *s* is defective or deficient.

Sigmatoid, sig'mat-oid. Sigmoid.

Sig'moid (*sigma, eidos,* resemblance). *Sigmoidal, Sigmatoid.* Having the form of the Greek Σ, or of *c,* an old form of sigma. **S. ar'tery,** branch of inferior mesenteric, supplying sigmoid flexure of colon. **S. car'tilages,** semilunar cartilages. **S. cath'eter,** an S-shaped female catheter. **S. cav'ities of the fos'sæ of the ul'na,** *Sinus lunati;* two notches at the upper part of that bone—one for the reception of the hu-

merus, the other for that of the radius. The articular surface on inner side of lower end of radius is also termed *sigmoid cavity*. **S. flex'ure of the co'lon** is a turn the colon takes immediately before terminating in the rectum; see *Colon*. **S. folds**, those caused by circular muscular fibres of the colon. **S. fos'sa** (of the temporal bone), fossa sigmoïdea. **S. mesoco'lon**, see *Mesocolon*. **S. of semilu'nar valves** are three valvular folds at the commencement of the pulmonary artery and aorta. These valves have the form of a crescent when applied against the parietes of the vessel. When the blood is sent from the ventricles by their contraction, the valves are applied against the sides of the vessel; but during the diastole of the ventricle they are depressed, and prevent the blood from returning to the heart. At the middle of the convexity of each valve is a small, hard, triangular granulum, called corpusculum or globulus Arantii, which completely closes up the passage. It is also called corpusculum Morgagnii and C. sesamoïdeum. **S. si'nus**, portion of lateral sinus between tentorium and jugular vein. **S. val'ves**, semilunar valves of the heart.

Sign, sine. Any present or past circumstance afforded by the examination of a patient or of matters concerning him, whence a conclusion may be drawn regarding the nature and seat of his disease. The phenomena preceding the disease are called anamnestic or commemorative signs; those which accompany it are termed diagnostic if they reveal the nature or seat of the disease; prognostic when they indicate its probable duration and termination. See *Symptom*.

Signa, sig'nah. In prescriptions signa or S., its symbol, means mark, being the directions to the patient to be placed on the label. **S. assiden'tia**, accompanying, concomitant, or accessory symptoms.

Sig'nal symp'tom. A symptom, such as pain, tingling, or unusual motion, that gives warning of some lesion, as of disease or lesion of the great nervous centres.

Signature, sig'nat-ure (*signum*, sign). Term applied in the Eastern countries, in the Middle Ages, to mystic characters of good or bad augury, with which it was pretended that every one was marked by the star under which he was born. Signatures of plants meant certain peculiarities in their external formation or color showing that they were adapted for particular diseases.

Sig'num. Sign; see *Parturition*. **S. characteris'ticum**, see *Pathognomonic*. **S. conjunc'tum**, see *Pathognomonic*. **S. diacrit'icum**, differential symptom of disease. **S. mor'bi essentia'le**, see *Pathognomonic*.

Sikeranine, sik-er-an'een. Hyoscine.

Sikimine, sik'im-een. Poisonous principle contained in fruit of Illicium religiosum.

Sik'ka. Chique.

Silene (sil-a'na) **crassifo'lia.** Cucubalus behen. **S. infla'ta**, Cucubalus behen. **S. Pennsylva'nica**, see *Silene Virginica*. **S. tho'rei**, Cucubalus behen. **S. Virgin'ica**, *Ground pink, Wild pink, Catchfly;* ord. Caryophyllaceæ. The root has been employed in decoction as an efficacious anthelmintic. *Silene Pennsylvanica* probably has the same properties.

Siler lancifolium, se'ler lan-se-fo'le-um. Laserpitium siler. **S. monta'num**, Laserpitium siler.

Silica, sil'ik-ah. SiO_2. Dioxide of silicon, occurring in nature in nearly all kinds of rock and minerals. It has been used as a dentifrice.

Silicas, sil'ik-as. Silicate. **S. potas'sii**, potassium silicate. **S. so'dii**, sodium silicate.

Sil'icate (*silicas*). Any salt formed by silicic acid.

Silicic (sil-is'ik) **ac'id.** H_2SiO_3. This acid is only known by its combinations and in solutions.

Silicious, sil-ish'us. Resembling or of the nature of silica.

Silicium, sil-is'e-um. Silicon.

Silicon, sil'ik-on. An elementary form of matter, existing in nature in combination, in form of silica (SiO_2) and the silicates. It does not exist in the free state.

Siliqua, sil'ik-wah. The carat; a weight of about four grains; a pod. **S. Arab'ica**, tamarindus. **S. ar'aci aromat'ica**, see *Vanilla*. **S. banil'læ**, see *Vanilla*. **S. dul'cis**, Ceratonium siliqua. **S. vanig'liæ**, see *Vanilla*. **S. vanil'liæ**, see *Vanilla*.

Siliquas'trum Plin'ii (*siliqua*, pod). Capsicum annuum.

Silk. Sericum. **S. grass**, Yucca filamentosa. **S. weed**, Asclepias Sullivantii, Asclepias tuberosa. **S. weed, com'mon**, Asclepias Syriaca. **S. weed, flesh-colored**, Asclepias incarnata. **S. weed, swamp**, Asclepias incarnata. **S. worm**, see *Sericum*.

Sil'lus or **Si'lo** (*sillos*). One who has a short, stumpy nose.

Silphium, sil'fe-um (*silphion*). Laserpitium. **S. lacinia'tum**, *Rosinweed, Compass plant, Polar plant*, **S. perfolia'tum**, *Cup plant, Turpentine sunflower*, and **S. terebinthina'ceum**, *Prairie burdock*, ord. Compositæ, indigenous in Ohio and Michigan, yield a fragrant gum which is esteemed stimulant and antispasmodic.

Silphologic, sil-fo-loj'ic. Term applied to diseases the symptoms of which are marked by other symptoms or circumstances. Larval.

Silurus glanis, sil-u'rus glan'is. See *Ichthyocolla*.

Silus, sil'us (*sillos*). See *Sillus*.

Sil'ver. Argentum. **S. and ammo'nia, chlo'ride of**, see *Argentum*. **S. and ammo'nia, chlo'ruret of**, see *Argentum*. **S., ammoniochlo'ride of**, see *Argentum*. **S., chlo'ride of**, see *Argentum*. **S., chlo'ruret of**, see *Argentum*. **S., cy'anide of**, see *Argentum*. **S., cyan'uret of**, see *Argentum*. **S. fir**, Abies pectinata. **S., i'odide of**, see *Argentum*. **S., io'duret of**, see *Argentum*. **S. leaf**, Magnolia macrophylla. **S., mu'riate of**, see *Argentum*. **S., ni'trate of**, argenti nitras. **S. o'leate**, see *Oleate*. **S., ox'ide of**, see *Argentum*. **S. and so'da, hyposul'phite of**, sodii et argenti hyposulphis. **S. stain**, argyria. **S. wat'tle**, Acacia dealbata, native of Australia. It is one of the species furnishing Australian gum. **S. weed**, a small herb, Potentilla anserina.

Silver-fork deform'ity. A peculiar deformity characteristic of some forms of fracture of the lower extremity of the radius.

Silves'ter's meth'od of restor'ing suspend'ed anima'tion. This consists in placing the patient on the back, pulling the tongue forward; then drawing the arms slowly over the head, by which means the ribs are elevated by the pectoral muscles and the chest is enlarged. The arms are now to be brought down to the side of the chest, which must be made to compress slightly. These movements must be repeated so as to stimulate respiration. See *Drowning, resuscitation from*.

Silybum, sil'e-bum. Carduus marianus. **S. macula'tum**, Carduus marianus. **S. maria'num**, Carduus marianus.

Simaba, sim-ah'bah. Genus of Simarubæ. **S. ce'dron**, a S. American tree, the seeds of which—cedron seeds—have been used as an antidote for snake-bites, in mental diseases, and in epilepsy. The scrapings of the wood have been used as a substitute for sulphate of quinia. **S. ferrugin'ea**, similar in properties to S. cedron; native of Brazil. **S. quassioï'des**, Nima quassioïdes.

Simarouba, sim-ar-oo'bah. Quassia simarouba. **S., bit'ter**, Quassia simarouba.

Simaruba, sim-ar-u'bah. Quassia simarouba. **S. ama'ra**, S. officinalis. **S. excel'sa**, see *Quassia*. **S. glau'ca**, S. medicinalis. **S. Guianen'sis**, S. officinalis. **S. medicina'lis**, native of Florida, Central America, and West India Islands. **S. officina'lis**, a tropical tall tree, Quassia simarouba.

Similatio, sim-il-ah'she-o (*simĭlis*, like). Assimilation.

Similia similibus curantur, sim-il'e-ah sim-il'ib-us ku-ran'tur (like are cured by like). See *Homœopathy*.

Simitium, sim-ish'e-um. Plumbi subcarbonas.

Simo, se'mo (*simos*). One who has a short, stumpy nose.

Simo'nea folliculo'rum (after Simon, a German dermatologist). Acarus folliculorum.

Si'mon's opera'tion. An operation for repair of complete rupture of the perineum by means of sutures, the mucous membrane of the rectum being first approximated by a line of sutures tied in the rectum, following which the external sutures are inserted and the parts brought together.

Simotrachelus, sim-o-trak-a'lus (*simos,* bent short, *trachelos,* neck). Morbid shortness or stiffness of the neck.

Sim'ple (opposite to compound). A medicinal herb. One skilled in simples is called a simplist or simpler. "To simple" and "to cull simples" signify to gather medicinal herbs. Used in pharmacy to denote certain uncomplicated preparations. **S. ce'rate,** ceratum (Ph. U. S.). **S. chol'era,** sporadic cases of the disease. **S. contin'ued fe'ver,** a continuous fever, presenting no obvious lesion nor any characteristic temperature curve of any other disease. **S. elix'ir,** elixir aurantii. **S. oint'ment,** lard, 80; yellow wax, 20 parts; heat and mix (U. S. P.). **S. syr'up,** sugar, 65; water, 35 parts; mix (U. S. P.). **S. tis'sues,** term applied to tissues all the cells of which are alike in morphological structure.

Sim'pler. See *Simple.*

Sim'pler's joy. Verbena hastata.

Sim'ples. Medicinal herbs. See *Simple.*

Sim'plist. See *Simple.*

Simp'son's opera'tion. Division of cervix uteri on both sides. **S.'s trac'tor,** device furnished with india-rubber cup with attached pump. This is applied to the fœtal head, the air exhausted, and then delivery is assisted by traction.

Sims's depress'or. Coarse wire loop for depressing the anterior wall of the vagina during examinations. **S.'s feed'er,** instrument devised by Sims to aid in passing sutures obliquely through tissues; especially useful in operations about the mucus-lined cavities of the body. **S.'s posi'tion,** the patient lies upon the side and chest; the arm next to the table is drawn behind the patient, thus facilitating examination of the vagina or rectum. **S.'s shield,** instrument having a semicircular piece at its extremity; used to facilitate introduction and fastening of wire sutures. **S.'s spec'ulum,** a form of vaginal speculum; also called duckbill speculum from shape of the blades. It consists of two blades at right angles to either end of a fixed piece, thus enabling one to be used as a handle while the other exposes the vaginal wall.

Sim'ulated diseases. Feigned diseases.

Simulati morbi, sim-u-lat'e mor'be. Feigned diseases.

Simula'tion (*simulo,* to feign). Feigning of disease; malingering. See *Feigned diseases.*

Sim'ulo. Capparis coriacea, a species of hyssop.

Simus, se'mus. See *Sillus.*

Sin, beset'ting. Masturbation.

Sina Levantica, se'nah lev-an'tik-ah. Artemisia santonica.

Sinal'bin. Crystalline principle obtained from seeds of Sinapis alba: $C_{30}H_{44}N_2S_2O_{16}$.

Sinapelæon, sin-ap-el-e'on (*sinapis, elaion,* oil). Oil impregnated with mustard.

Sina'pi. Sinapis.

Sina'pine. An alkaloid from both kinds of Sinapis.

Sina'pis. *Napy, Common black mustard.* Ord. Cruciferæ. Seeds are inodorous when entire; when bruised, the odor is very pungent; taste bitterish and acrid. They yield their virtues to water, and afford a bland oil by expression. The seeds are stimulant, diuretic, emetic, and rubefacient. They are sometimes recommended to be swallowed whole in dyspepsia, torpor of the bowels, etc. Externally, they are applied in the form of cataplasm. **S. al'ba,** *White mustard,* also is used medicinally. It is somewhat less pungent than the black. The distilled oil, *Oleum sinapis, Oil of mustard,* is a powerful stimulant and rubefacient. The seeds of Sinapis nigra and Sinapis alba are officinal. Flour of mustard, generally called mustard, is the powder obtained from the seeds of both varieties; see *Sinapism.* **S. arven'sis,** *Charlock, Wild mustard, Garlock, Chadlock, Runsh;* the seeds are sometimes substituted for black mustard. **S. cer'nua,** sinapis. **S. eru'ca,** Brassica eruca. **S. folio'sa,** S. alba. **S. In'dica,** Indian mustard. **S. jun'cea,** species growing in India and southern part of Russia; Russian mustard or sarepta. **S. ni'gra,** see *Sinapis.* **S. oliveria'na,** sinapis. **S. tamoria'na,** S. arvensis. **S. tubero'sa,** Brassica rapa.

Sin'apism (*sinapis,* mustard). A cataplasm of which mustard forms the basis, being used for exciting redness and as a counter-irritant. It is prepared by mixing flour of mustard and vinegar or water together to the due consistence. See *Cataplasma sinapis.* A *sinapized paper,* first prepared by a French pharmacien, and said to be more certain than a cataplasm made with flour of mustard, consisted in extracting the fixed oil while retaining the rubefacient principle. Such convenient papers are now in common use. See *Charta sinapis.*

Sinapismus, sin-ap-iz'mus. Sinapism. Mustard cataplasm.

Sin'apized paper. See *Sinapism* and *Charta sinapis.*

Sincipital, sin-sip'it-al. Relating to the sinciput. **S. an'gle,** angle made by the facial line at its intersection with a line drawn from root of nose to middle point of spheno-occipital suture of skull.

Sin'ciput (*semi,* half, *caput,* head, or *summum caput,* top of the head). *Sincipital region; Synciput.* The French use it synonymously with vertex (mesocranium or mesocranum). By some it is applied to the frontal region or fore part or fore half of the cranium (hemicephalium, hemicephalum). The parietal bones have been called sincipital bones, ossa sincipitis.

Sinde boil. An endemic form of ulcer occurring chiefly in hot countries. It is probably mycotic in origin.

Sinepi, sin-a'pe. Sinapis.

Sinew, sin'yu. Tendon or ligament.

Singultous, sin-gul'tus (*singultus,* hiccough). Relating to or affected with hiccough.

Singultus, sin-gul'tus. A noise made by the sudden and involuntary contraction of the diaphragm, and the simultaneous contraction of the glottis arresting the air in the trachea. It is a symptom of many morbid conditions, and especially of gangrene, but occurs frequently in persons otherwise in good health. Also a sob.

Sinigrin, sin-ig'rin. Substance allied to sinalbin found in seeds of Sinapis nigra; chemically it is a myronate of potassium, $C_{10}H_{18}NS_2KO_{10}$.

Sin'istrad (*sinister,* to the left hand). A term used adverbially to signify "toward the sinistral aspect." See *Mesial.*

Sinis'tral as'pect. See *Mesial.*

Sinistrin, sin-is'trin. Gummy substance derived from squill.

Sink'ing, adynam'ic. See *Adynamic.* **S., fa'tal,** shock, nervous. **S., ty'phoid,** see *Adynamic.*

Sinuositas, sin-u-os'it-as. Sinus.

Sinuous, sin'u-us. Epithet given to certain ulcers, and especially to certain fistulæ and sinuses which are tortuous.

Si'nus. Any cavity the interior of which is more expanded than the entrance. In this sense anatomists have applied the term to cavities in certain bones of the head and face. It has been applied to certain venous canals into which a number of vessels empty themselves, such as the sinuses of the dura mater and of the spine, the sinus of the vena porta, uterine sinuses, etc., and to the bosom and the vulva. In surgery it means a long, narrow, hollow track leading from an abscess, diseased bone, etc. Sinuses of bones form part of the nasal cavities. They are the frontal, sphenoidal, maxillary, etc. The name has also been given occasionally to the ethmoid and mastoid cells. **S. acus'ticus,** auditory canal, internal. **S. a'læ par'væ,** S. sphenoparietalis. **S. ampulla'ceus,** dilatation at one end of the semicircular canals of the ear. **S. anterio'res,** lateral ventricles of the brain. **S. aor'tici,** sinuses of Valsalva. **S. arachnoïda'lis,** expansions of subarachnoid spaces. **S. arterio'sus,** S. pulmonalis. **S. art'lii,** recessus sacci lacrymalis. **S.**

atlan'tis, notch upon upper surface of atlas. **S., ba'silar**, sinus transversus. **S. basila'ris poste'rior**, S. occipitalis. **S. of the bulb**, enlarged portion of urethra at the position of the bulb. **S. cana'lis vertebra'lis**, veins of spinal canal. **S. carot'icus veno'sus**, prolongation of cavernous sinus within carotid canal. **S. caverno'si u'teri**, sinus uterini. **S. caverno'sus**, cavernous sinus. **S. ca'vi cra'nii**, sinus duræ matris. **S. cer'ebri**, ventricles of the brain. **S. cervica'lis**, sulcus of embryo appearing about the fourth week, and caused by the difference in development of the branchial arches. **S., cir'cular, of Rid'ley**, sinus coronarius. **S. circula'ris**, S. coronarius. **S. circula'ris foram'inis mag'ni**, sinus partially surrounding foramen magnum, formed by confluence of the two marginal sinuses. **S. circula'ris foram'inis occipita'lis**, S. circularis foraminis magni. **S. circula'ris infe'rior**, inferior intercavernous sinus. **S. circula'ris i'ridis**, *Canal of Schlemm*; a minute canal between the sclerotic coat of the eye and the ciliary ligament. **S. coch'leæ**, vein passing through aquæductus cochleæ from cochlea, emptying into internal jugular vein. **S. colum'næ vertebra'lis**, anterior spinal veins. **S. commu'nis**, see *Semicircular canals*. **S. commu'nis vena'rum cardi'acum**, S., coronary venous. **S. condylo'rum ante'rior**, fossa of the patella. **S. corona'rius**, *Circular sinus of Ridley*, *Coronary sinus;* a venous canal surrounding, in a more or less regular manner, the pituitary fossa and gland, emptying itself into the corresponding cavernous sinus by each of its extremities. **S., cor'onary**, sinus coronarius. **S., cor'onary, of the heart**, sinus, coronary venous. **S., cor'onary ve'nous**, *Coronary sinus of the heart;* a name given, on account of its great size, to that portion of the great coronary vein embracing the left auriculoventricular furrow. **S. coronoï'deus**, S. circularis. **S. costa'les**, facets for reception of costocartilages upon sides of sternum. **S. cox'æ**, see *Cotyloid*. **S. dex'ter cor'dis**, right auricle of the heart; see *Auricula*. **S. duc'tum lactifero'rum**, ampullæ of the ducts of the mammary gland. **S. du'ræ ma'tris**, sinus formed by the dura mater. **S. ellip'ticus**, S. circularis. **S. epididym'idis**, furrow between testis and epididymis. **S. falcifor'mis infe'rior**, see *Sinuses, longitudinal*. **S. falcifor'mis supe'rior**, see *Sinuses, longitudinal*. **S. fos'sæ basila'ris**, transverse sinus. **S., fourth**, torcular Herophili. **S. fronta'les**, frontal sinuses. **S. ge'næ pituita'rius**, antrum of Highmore. **S. genita'lis**, an embryonic cavity, formed by the union of the Wolffian and Müllerian ducts, which develops in females into the vagina and uterus, while in males it becomes the prostatic vesicle. **S. intercaverno'si**, S. circularis. **S. of the ju'gular vein**, see *Jugular veins*. **S. lacryma'lis**, lacrymal sac. **S. lactif'eri secunda'rii**, ampullæ of mammary ducts without the areola. **S. lactif'erus**, see *Lactiferous vessels*. **S. larynge'i**, ventricles of the larynx. **S. latera'lis**, lateral sinus. **S. latera'lis si'nûs superio'ris**, lacunæ surrounding Pacchionian bodies. **S. longitudina'lis cer'ebri**, S. longitudinalis superior. **S. longitudina'lis colum'næ vertebra'lis**, longitudinal meningorachidian veins. **S. longitudina'lis supe'rior**, superior or great longitudinal sinus. **S. luna'tus**, lesser sigmoid cavity of ulna, articulating with head of radius. **S. luna'tus ra'dii**, sigmoid cavity of radius articulating with lower extremity of ulna. **S., lymph**, see *Lymph*. **S. mag'ni**, sinuses, lateral. **S. Mai'eri or of Maier**, diverticulum of the lacrymal sac. **S. margina'lis**, marginal sinus. **S., max'illary**, antrum of Highmore. **S. max'imus**, olecranon fossa. **S. max'imus aor'tæ**, sinus of aorta. **S., me'dian**, see *Semicircular canals*. **S. mediastinocosta'lis**, union of mediastinal and costal portions of pleural sac. **S. Morgag'nii**, ventricles of the larynx. **S. muco'si**, see *Urethra*. **S. mulie'bris**, vagina. **S. obli'quus**, S. rectus. **S., occip'ital**, these sinuses commence at the sides of the foramen magnum of the occipital bone, and ascend—becoming broader and nearer each other—into the substance of the falx cerebelli, where they frequently unite. Each opens into the inferior part of the torcular Herophili. They receive the veins of the falx cerebelli, of the dura mater lining the fossæ cerebelli, and of the posterior part of the cerebellum. Haller and Sömmering have named them *posterior occipital sinuses*, to distinguish them from the transverse sinus, which they have called *anterior occipital sinus*. **S. occipita'lis ante'rior**, sinus transversus. **S., ophthal'mic**, see *Cavernous sinus*. **S. ophthalmope'tro'sus**, occasional communication between ophthalmic vein and superior petrosal sinus. **S. ova'tus**, see *Crista vestibuli*. **S. pericardiacocosta'lis**, left S. mediastinocostalis. **S. perpendicula'ris**, S. quartus. **S., pe'tro-occip'ital, supe'rior**, inferior petrosal sinus. **S. pe'tro-occipita'lis infe'rior**, name suggested for veins occupying petro-occipital suture outside the cranium; it connects the inferior petrosal with the cavernous sinus. **S. petrososquamo'sus**, groove at times observed along the petrosquamous suture within the skull. **S. petro'sus infe'rior**, inferior petrosal sinus. **S. petro'sus me'dius**, an occasional communication between superior and inferior petrosal sinuses. **S. petro'sus profun'dis**, inferior petrosal sinus. **S. petro'sus supe'rior**, superior petrosal sinus. **S. phrenicocosta'lis**, the furrow of the pleural sac formed by junction of its costal and diaphragmatic portions. **S. phrenicomediastina'lis**, furrow formed by junction of diaphragmatic and mediastinal portions of the pleural sac. **S. pituita'rii fron'tis**, frontal sinuses. **S., placen'tal**, see *Placenta*. **S. pleu'ræ**, S. pericardiacocostalis, S. mediastinocostalis, S. phrenicocostalis, S. phrenicomediastinalis. **S. pocula'ris**, see *Ejaculatory ducts*. **S. polymor'phus**, cavernous sinus. **S. porta'rum**, see *Liver* and *Porta vena*. **S. præcervica'lis**, sac of embryo, due to invagination of posterior branchial arches; also S. cervicalis. **S. prostat'icus**, see *Ejaculatory ducts*. **S. puden'di**, vagina. **S. pudo'ris**, vagina; vulva. **S. pulmona'les**, sinuses of Valsalva. **S. pulmona'lis**, left auricle of the heart; see *Auricula*. **S. of the pul'monary veins**, left auricle. **S., pyram'idal** or **pyr'iform**, a pyramidal space—the laryngopharyngeal or lateral pharyngeal sulcus, sinus, or fossa—continuous with the pharynx and sloping down to the entrance of the œsophagus. **S. pyrifor'mes**, sinus, pyramidal. **S. quar'tus**, *Straight sinus*. This sinus—triangular throughout, wide posteriorly, narrower anteriorly, slightly oblique downward and backward—passes along the base of the falx cerebri from the termination of the inferior longitudinal sinus to the torcular Herophili. It receives the inferior longitudinal sinus, the veins of the lateral ventricles or vena Galeni, the superior cerebellous veins, etc. **S. quar'tus aor'tæ**, sinus of aorta. **S. rec'tus**, straight sinus. **S. re'num**, pelvis of the kidney. **S. reu'niens**, large venous cavity of embryo formed by union of veins just before they pass into the heart. **S. rhomboï'deus**, see *Ventricles of the brain*. **S. Rid'leyi**, S. circularis. **S. rotun'dus**, see *Crista vestibuli*. **S. sagitta'les**, S. longitudinales. **S. of Santori'ni**, bulbus vestibuli and cavernous body of the vagina. **S. Schlem'mii**, ciliary canal. **S. semiova'lis**, see *Crista vestibuli*. **S. of the sep'tum lu'cidum**, fifth ventricle. **S. sigmoï'deus**, S. lateralis. **S. sin'ister cor'dis**, S. pulmonalis. **S. sphenoida'lis**, cavernous sinus; see *Sphenoid bone*. **S. sphenoparieta'lis**, sphenoparietal sinus. **S. squamosopetro'sus**, S. petrososquamosus. **S., straight**, S. quartus. **S. subarachnoidea'les**, subarachnoid venous pathways. **S. sulcifor'mis**, see *Crista vestibuli*. **S. sulcifor'mis Morgag'ni**, internal opening of the aqueductus vestibuli. **S. supercilia'res**, frontal sinuses. **S., supe'rior**, crus commune. **S. tar'si**, open groove between astragalus and calcaneum at entrance to tarsal canal. **S. tento'rii**, S. rectus. **S. tento'rii me'dius**, S. rectus. **S. tento'rii poste'rior**, S. sigmoïdeus. **S. termina'lis**, circulus venosus. **S. transver'si**, sinuses, lateral. **S. transver'sus**, *Basilar sinus*. This sinus lies transversely at the anterior part of the basilary process of the occipital bone, forming a communication between the two petrous sinuses and the cavernous sinus of one side, and those of the other. Its breadth is commonly very great. It is situate be-

tween two layers of the dura mater, and presents internally a kind of cavernous tissue. **S. transver'sus ma'jor,** lateral sinus receiving blood from the superior longitudinal sinus. **S. transver'sus mi'nor,** lateral sinus not receiving blood of superior longitudinal sinus. **S. transver'sus pericar'dii,** sinus within the pericardium between two layers of its tubular sheath. **S. triangula'ris,** see *Sinuses, longitudinal.* **S. tym'pani,** a hollow on wall of tympanum between the promontory and the pyramid. **S. un'guis,** furrow about the nails. **S. ure'thræ,** S. of the bulb. **S. urogenita'lis,** urogenital sinus. **S. uteri'ni,** *Uterine sinuses,* cavities formed by the uterine veins in the substance of the uterine parietes. They are very large during pregnancy. **S. utriculo'sus,** see *Semicircular canals.* **S. of the ve'na ca'va,** right auricle. **S. of the ve'na por'ta,** see *Vena porta* and *Liver.* **S. vena'rum cava'rum,** S. dexter cordis. **S. vena'rum pulmona'lium,** S. pulmonalis. **S. veno'sus,** S. dexter cordis. **S. vul'væ,** rima vulvæ.

Si'nuses, con'fluence of. Torcular Herophili. **S. of the du'ra ma'ter** are formed by a separation of the layers of the dura mater acting as a substitute for the outer membrane of veins. There are four great sinuses, of which all the others seem to be dependencies—the two lateral sinuses, the straight sinus, and the longitudinal sinus. Belonging to the lateral sinuses are the petrous sinuses, superior and inferior; transverse sinus, cavernous sinus, coronary sinus, and occipital sinuses. To the straight sinus belongs the inferior longitudinal sinus. The longitudinal sinus, properly so called, has no sinus under its dependence. **S., fron'tal,** frontal sinuses. **S. of the lar'ynx,** ventricles of the larynx. **S., lat'eral,** sinus divided into right and left, beginning at the torcular Herophili and terminating at the sinus of the jugular vein. **S., lat'eral pharynge'al,** see *Sinus, pyramidal.* **S., longitu'dinal,** two in number: 1. *Superior longitudinal sinus,* long triangular canal occupying the whole of the upper edge of the falx cerebri; broad behind, and much narrower before, where it commences by a *cul-de-sac* at the crista galli of the ethmoid bone. It passes along the front or coronal crest, sagittal suture, and the vertical groove of the occipital bone; receives several veins from the dura mater, and those spreading over the surfaces of the two hemispheres of the brain; and empties into the upper part of the torcular Herophili. 2. *Inferior longitudinal sinus* is much narrower than the last; it occupies the inferior edge of the falx cerebri from its anterior third to the tentorium cerebelli, where it ends commonly by two branches in the straight sinus. **S., petro'sal** or **pe'trous,** petrous sinuses. **S. of Valsal'va,** three depressions in the aorta and pulmonary artery immediately opposite the semilunar valve. They leave the edges of the valves free, so that they can be caught by the refluent blood. Where the aorta is about to send off the first of its long branches at the top of the thorax it is of great size, and has been called the large sinus of Valsalva. **S., ver'tebral,** two great sinuses, different from those of the dura mater, extending the length of the vertebral canal, from the occipital foramen to the end of the sacrum, behind the bodies of the vertebræ, before the dura mater, and at the sides of the posterior vertebral ligament. At the inner side they communicate by branches, which form true *transverse sinuses.* They are situate at the middle of the body of each vertebra, passing under the posterior vertebral ligament. They receive at the middle part of the veins the spongy tissue of the vertebræ. Sinuses arising on the external side communicate with the posterior branches of the vertebral, intercostal, and lumbar veins. At their posterior side they receive the veins creeping on the prolongation of the dura mater that envelops the marrow.

Sipee'ri. Bebeeru.

Sip'erine. An alkaloid of the bark of bebeeru.

Siphilis, sif'il-is. Syphilis.

Siphita, sif'it-ah. Somnambulism. **S. pra'va,** chorea.

Sipho, se'fo. Siphon. **S. auricula'ris,** a species of syringe used for injecting the ear. **S. uri'næ,** diabetes.

Siphon, si'fon (*siphon,* tube). A bent tube with limbs of unequal length, used for transferring liquids from one vessel to another. With this view the shorter limb is plunged into the liquid, and air is sucked from the extremity of the longer limb. The pressure of the atmosphere forces the fluid through the tube; the liquid will flow as long as the extremity of the lower limb is below the level of the fluid in which the shorter limb is immersed. A syringe may be attached to the longer extremity of the siphon, by which the air can be drawn from it.

Siphonia cahuchu, sif-o'ne-ah ka-hu'chew (*siphon,* tube, from the use made of it). See *Caoutchouc.*

Siphoniferous, sif-on-if'er-us (*sipho,* siphon, *fero,* to bear). Siphon-bearing; term applied to molluscs, as nautilus, etc.

Siphonobranchiate, si-fon-o-brank'e-ate (*siphon, branchia,* the Branchiæ). A siphon or tube by which the water to be inhaled by mollusks is carried to the gills.

Siphonoma, sif-o-no'ma (*siphon,* tube). A peritoneal growth known as cylindroma, sometimes called Henle's tubular tumor.

Siphonostome, si'fon-os-tome (*siphon, stoma,* mouth). Applied to a family of crustaceans, including those which have a siphon-shaped mouth for suction.

Siphunculus, sif-un'ku-lus (*siphon,* tube). Syringe.

Si'ra. Orpiment.

Si'ren. An amphibian reptile resembling an eel; destitute of lower extremities and pelvis.

Sirenomelus, sir-en-om'el-us (*siren, melos,* a limb). A class of monsters in which the lower extremities taper to points and are united, with entire absence of feet.

Si'rens. Symmeles.

Siriasis, sir-e'as-is (*siriasis,* disease supposed to be produced by Sirius, the dog-star, or by the sun). Coup-de-soleil; insolation; phrenitis. **S. Ægypti'aca,** coup-de-soleil; insolation; phrenitis.

Sirium myrtifolium, sir'e-um mur-te-fo'le-um. Santalum album.

Sir'ius (*seirios*). Dog-star. See *Canicula.*

Si'rup. Syrup.

Si'son am'mi. Ord. Umbelliferæ. Plant that affords the ammi verum of the shops. The seeds—Semen ammios cretici or veri—were used as a carminative. **S. amo'mum,** excitant and diuretic; it is the field honeywort. **S. ani'sum,** Pimpinella anisum. **S. podagra'ria,** Ligusticum podagraria.

Sis'tens (*sisto,* to keep back). Epischetic, an agent that diminishes—secretion, for example.

Sisymbrium alliaria, sis-im'bre-um al-le-ah're-ah (*sisumbrion*). Alliaria. **S. barba'rea,** Erysimum barbarea. **S. erucas'trum,** Brassica eruca. **S. menthas'trum,** Mentha aquatica. **S. nastur'tium,** watercress; ord. Cruciferæ. Watercress is used in salad; antiscorbutic. **S. officina'le,** erysimum. **S. parvifio'rum,** S. sophia. **S. so'phia,** *Flix-weed, Flux-weed;* once reputed to be anthelmintic, and valuable in hysterical affections. Other species of nasturtium—as N. palustre, marsh watercress, and N. amphibium, water-radish—possess similar virtues with N. officinale.

Sisyrinchium Bermudianum, sis-ir-ink'e-um bermu-de-an'um (*sisurinchion*). *Blue-eyed lily, Physic* or *Scurvy grass.* Indigenous; ord. Iridaceæ. A decoction of the root is acrid and cathartic.

Sit'fast. See *Furunculus.*

Siticulosus, sit-ik-u-lo'sus (*sitis,* thirst). Thirsty. See *Alterative.*

Sitiens, sish'e-ens (*sitio,* to thirst). Thirsty.

Sitiology, sit-e-ol'o-ge (*sition,* food, *logos,* discourse). A treatise on food or dietetics.

Sitis, se'tis. Thirst. **S. inten'sa,** polydipsia. **S. morbo'sa,** polydipsia.

Sitophobia, se-to-fo'be-ah (*sitos,* food, *phobos,* dread). Intense dread or abhorrence of food.

Sitos, sit'os. Aliment.

Situs alienus, se'tus al-e-a'nus (*situs*, position). Foreign or unnatural position. Ectopia. **S. anom'alus** or **perver'sus intestino'rum**, misplacement or ectopia of the intestines. **S. muta'tus**, ectopia; see *Monster*. **S. perver'sus**, ectopia.

Sitz-bath. Seat-bath. Hip-bath. See *Bath, half.*

Sium, se'um. *Creeping water parsnep.* Ord. Umbelliferæ. Stimulant and supposed to be diuretic and lithontriptic. Sometimes employed in cutaneous eruptions. **S. angustifo'lium**, S. nodiflorum. **S. a'pium**, Apium graveolens. **S. ber'ula**, S. nodiflorum. **S. bulbocas'tanum**, Bunium bulbocastanum. **S. car'vi**, carum. **S. erec'tum**, S. nodiflorum. **S. grave'olens**, Apium graveolens. **S. inci'sum**, S. nodiflorum. **S. latifo'lium**, or common *Water parsnep* of this country. Said to be poisonous. **S. luna're**, the root is eaten; has an agreeable nutty flavor. Canadians called it the *Queue de rat* (rat's tail). The poisonous roots of Cicuta virosa, C. maculata, and C. bulbifera are mistaken for it. **S. nin'si**, plant whose root is called *Radix ninsi, Ninzin, Nindsin;* root long supposed to be the same as ginseng; it possesses similar, though weaker, properties; see *Panax schinseng.* **S. nodiflo'rum**, sium. **S. si'laus**, Peucedanum silaus. **S. sis'arum**, *Skirret.* Used as a salad in Europe and an article of diet in chest affections. **S. vulga're**, Ligusticum podagraria.

Siv'vans or **Siv'vens.** Sibbens.

Size. Term given to the buffy coat appearing on the surface of a blood coagulum obtained from an inflammatory region.

Sizy, si'ze (*siza*, glue). Like size; glutinous; having the adhesiveness of glue, as applied to blood when it exhibits the buffy coat.

Skate oil. Fixed oil obtained from skate's liver, and supposed to contain a larger proportion of iodine than cod-liver oil, for which it may be substituted.

Skat'ol (*scor*, fæces). Decomposition product of human fæces, due to action of trypsin on peptone, giving to the evacuations of the bowels their strong odor.

Skel'etal (*skeleton*). Pertaining to the skeleton.

Skeleteuma, skel-et-u'mah. Sceleteuma.

Skeleteusis, skel-et-u'sis. Mummification; sceleteusis.

Skeletia, skel-et-e'ah. Emaciation.

Skeletography, skel-e-tog'ra-fe (*skeleton, graphe*, description). Description of the skeleton.

Skeletology (skel-e-tol'o-je) (*skeleton, logos*, discourse). *Sceletology.* Treatise on the solid parts of the body. It includes osteology and syndesmology.

Skel'eton (*skeletos*, dried up, *skello*, to dry up). *Atomy, Anatomy.* A dried body. The aggregate of the hard parts of the body or the bones. A skeleton exists in almost all animals, although not always formed in the same manner. In some, as the Crustacea and Testacea, it is wholly or partly external—exoskeleton or dermoskeleton. In others, as birds, Mammalia, etc., it is internal—endoskeleton or neuroskeleton. It serves as a support for other organs. On it the general shape of the body and of its various parts depends. When the bones are united by their natural ligaments, the skeleton is said to be natural, sceletum naturale; when articulated by wires, artificial or articulated, sceletum artificiale. (For weights and measurements of the skeleton see *Man.*)

Skeletopœia, skel-e-to-pe'yah (*skeleton, poieo*, to make). The part of practical anatomy treating of the preparation of bones and the construction of skeletons. Bones are prepared to exhibit their conformation, structure, chemical composition, mode of development, and changes, the different cavities formed by their union, and to demonstrate their connections, relations, modes of union, etc.

Skeletotrophic, skel-e-to-trof'ik (*skeleton, trophe*, nourishment). Term applied to connective tissue.

Skene's tubes or **tu'bules.** Blind tubules lying along the female urethra and opening near the meatus. They are probably rudiments of the Wolffian ducts, and correspond to the vesiculæ seminales of the male.

Skerljevo, sker-lie'vo. Scherlievo.

Skew mus'cles. Angular muscles in which the plane of origin intersects that of insertion. **S. sight,** oblique sight. See *Sight, skew.*

Skiascopy, ske-as'ko-pe. A method of estimating refraction of the eye by observation of direction and rapidity of movements of shadowy edges of images, as of a flame, which are formed upon the retina. See *Retinoscopy.*

Skin. Cutis. **S., bronzed,** see *Capsule, renal.* **S., diseases of the,** cutaneous diseases. **S., pie'bald,** see *Achroma.* **S. re'flexes,** see *Reflexes.* **S., scarf,** epidermis. **S., traumat'ic diseases of,** see *Traumatic.*

Skin'bind. Induration of the cellular tissue; scleroderma.

Skin'bound disease. Induration of the cellular tissue; scleroderma.

Skin-graft'ing. *Skin-transplantation.* A method for treating large ulcerated surfaces by transplanting small pieces of skin from another part of the body, cicatrization frequently resulting without contraction or deformity, as in extensive burns. The method of skin-grafting is as follows: The area from which grafts are taken should be well washed with soap, water, and bichloride of mercury, 1 : 1000, followed by sterilized salt solution (5 parts to 95 parts water, boiled for one hour). Small or large pieces of cuticle, including rete mucosum, but not corium, are removed by scalpel or scissors and placed, fresh surface down, on top of the place to be grafted. When the operation is completed, apply protective, wet in salt solution, and an antiseptic dressing, which retain in place with a roller bandage firmly applied. Grafts used should be from young, healthy subjects. See *Graft.*

Skin'ny. Emaciated; wanting flesh.

Skin'tight. Induration of the cellular tissue.

Skin-transplanta'tion. Skin-grafting.

Skiomachia, ske-o-mak'e-ah. Sciomachy.

Skirr or **Skir'rhus.** Scirrhus.

Skir'ret. Sium sisarum.

Skirt. Diaphragm.

Skleriasis, skler-e'as-is (*skleros*, hard). Scleroderma.

Skleroderma, skler-o-dur'mah. Scleroderma.

Skodaic (sko-da'ik) **res'onance.** Peculiar tympanitic resonance.

Sko'da's sign. Peculiar tympanitic resonance elicited in extensive effusion of the pleural sac.

Skoke. Phytolacca decandra.

Skolemora Fernambucensis, sko-lem-o'ra fer-nambu-sen'sis (*skolex*, a worm, *moroo*, to stupefy). Geoffræa vermifuga.

Skoliosis, sko-le-o'sis. Scoliosis.

Skue'sight. Oblique sight; dysopia lateralis.

Skulein (skoo'le-in). *Scillin.* Bitter, poisonous property of squill.

Skull. Cranium.

Skull'cap. Scutellaria galericulata. **S., mad-dog,** Scutellaria laterifolia.

Skunk-cab'bage (owing to strong and offensive odor like that of the skunk). Dracontium fœtidum.

Skunk'weed. Dracontium fœtidum.

Slab'bering. Slavering.

Slag. Term applied to dross or recrement of a metal; also vitrified masses of glossy compounds, silicates, etc.

Slaked lime. White powder made by adding water (one-half weight of the lime) upon quicklime; used for preparation of lime-water.

Slashed. Divided into narrow parts or segments by sharp incisions; lancinated.

Slate. Term applied to varieties of an argillaceous stone having the property of being split into slates or thin laminæ.

Sla'ters. Onisci aselli.

Slatkaia trava, slat-ka'yah trah'vah. See *Spirit.*

Sla'ty. Having nature or properties of slate; applied to a form of induration of the lung in which pigmentation of the tissue occurs, resembling the color of slate.

Slav'ering, Slab'bering, Slob'bering. *Drivelling.* Involuntary flow of saliva from sluggish deglutition, without increased secretion. It is seen in the infant, the aged, and the idiot.

Sleep. Temporary interruption of our relations with external objects. Repose of the organs of sense, intellectual faculties, and voluntary motion. The act of quitting this condition is called awaking; it may be progressive and natural or sudden and starting—as in nightmare, affections of the heart, hypochondriasis, etc. **S. disease**, a fatal malady peculiar to the Ethiopian race and met with chiefly in Congo. The prominent symptom is a tendency to sleep, which may become continuous and terminate in death. See *Sleeping sickness* and *Narcolepsy*. **S. ep'ilepsy**, S. disease. **S., magnet'ic**, sleep induced by so called animal magnetism; see *Magnetism, animal*. **S., ner'vous**, see *Magnetism, animal*. **S. of plants**, term applied by Linnæus to the state of certain plants, the leaves of which droop and fold at night. **S., win'ter**, hibernation.

Sleep'ing sick'ness. Fatal disease affecting negroes of the West Indies, characterized by headache, increasing somnolence, and emaciation. It resists all methods of treatment. Called also African lethargy.

Sleep'lessness. Insomnia.

Sleep'walking. Somnambulism.

Sleep'wort. Garden lettuce.

Sleep'y. Drowsy; inclined to sleep.

Slen'der col'umn. Funiculus gracilis. **S. lobe**, narrow part of posterior lobe of the cerebellum, which sometimes appears as a distinct lobe.

Slide. Glass plate used for mounting, or on which specimens are placed for microscopic examination.

Slieve'fish. Sepia.

Sli'my. Resembling slime; viscous; glutinous.

Sling. Bandage employed to keep the forearm bent on the arm in case of injury to those parts, in fracture of the clavicle, injury of the hands, etc. A handkerchief is often used for the purpose, folded diagonally and tied by the extremities around the neck.

Slink'ing. Miscarrying, as a beast.

Slip'pers. Impatiens.

Slipper'wort. Calceolaria.

Slip'pery elm. Inner bark of Ulmius fulva.

Slit-and-tail band'age. Invaginated bandage.

Slob'bering. Slavering.

Sloe. Viburnum prunifolium. **S. tree**, Prunus spinosa.

Sloke, green. Ulva latissima.

Slops. *Slop diet.* Liquid food, largely watery and containing little nutrition.

Slough, sluf. Eschar.

Slough'ing. See *Eschar*.

Slo'ven wood. Artemisia abrotanum.

Slows. Milk sickness.

Sludge. Mud; mire; slush; semiliquid deposit of sewage as treated by any of the precipitation methods.

Slug'gish lay'er. In the passage of blood-corpuscles through the capillaries a few adhere, and tear themselves away to again move slowly, constituting the sluggish layer.

Slum'ber. Somnolency.

Small azygos (az'ig-os) **vein.** Left lower azygos vein. **S. deep petro'sal nerve**, see *Nerves, petrosal*. **S. meninge'al ar'tery**, branch of internal maxillary which passes through the foramen ovale. It supplies the dura mater in the middle fossa. **S. occip'ital nerves**, see *Nerves, occipital*. **S. spike'wood**, false sarsaparilla; Aralia nudicaulis. **S. superfic'ial petro'sal nerve**, see *Nerves, petrosal*.

Small'age. Apium graveolens.

Small'er Sol'omon's seal. Polygonatum biflorum. Indigenous.

Small'pox. Variola. **S., abor'tive**, varioloid. **S., con'fluent**, see *Variola*. **S., cor'ymbose**, see *Variola*. **S., discrete'**, see *Variola*. **S., hemorrhag'ic**, see *Variola*. **S., mod'ified**, varioloid. **S., pete'chial**, see *Variola*. **S. plant**, side-saddle plant; Sarracenia purpurea. **S., varicel'loid**, see *Variola*.

Smalt or **Smaltz.** *Protoxide of cobalt, Blue starch.* This oxide has been given in rheumatism in the dose of ten to twenty grains. A larger quantity causes emesis.

Smaragdinus, smar-ag'din-us. Color of emerald or grass.

Smaragdus, smar-ag'dus (*smaragdos*). The emerald. Formerly regarded as a tonic.

Smart'weed. Polygonum hydropiper; P. punctatum.

Smear'case. See *Cheese*.

Smectica, smek'tik-ah (*smektikos*, cleansing). Detergents.

Smectis, smek'tis (*smektis*, a detersive earth). Cimolia terra.

Smectris, smek'tris. Cimolia terra.

Smegma, smeg'mah (*smegma, smecho*, to wipe, to cleanse). Soap; grease; salve; liniment. Also secretion from the sebaceous follicles of the skin. **S. articula're**, synovia. **S. cuta'neum**, see *Sebaceous glands*. **S. embryo'num**, sebaceous covering of fœtus. **S. præpu'tii**, fatty secretion from the follicles of the glans penis.

Smegmatorrhœa, smeg-mat-or-rhe'ah (*smegma, rheo*, to flow). Stearrhœa.

Smegmorrhœa, smeg-mor-rhe'ah. Stearrhœa.

Smell, mor'bid. Parosmia; depraved olfaction. **S., sense of**, olfaction.

Smell'ing. Olfaction. **S. salt**, a popular term applied to various flavored preparations of ammonium carbonate, used to stimulate the olfactory nerves and revive the spirits.

Smilacin, smi'las-in. See *Smilax sarsaparilla*.

Smilacina racemosa, sme-lah-se'nah ras-e-mo'sah (*smilax*). *False spikenard;* indigenous; ord. Liliaceæ. Alterative, diuretic, and diaphoretic.

Smi'lax (*smilax*). Taxus baccata. **S. as'pera**, in Southern Europe, where it grows, is used instead of sarsaparilla; supposed to produce Italian sarsaparilla. **S. as'pera Chinen'sis**, Smilax China. **S. as'pera Peruvia'na**, Smilax sarsaparilla. **S. canellæfo'lia**, S. pseudochina. **S. Chi'na**, ord. Smilaceæ. The root was formerly employed in cutaneous and venereal affections. **S. glau'ca**, indigenous; has similar virtues to sarsaparilla **S. hederæfo'lia**, S. pseudochina. **S. In'dica spino'sa**, Smilax pseudochina. **S. med'ica**, Mexican sarsaparilla. **S. officina'lis**, indigenous; a source of Jamaica sarsaparilla; Smilax sarsaparilla. **S. papyra'cea**, probable source of Para sarsaparilla. **S. pseudochi'na**, *American* or *West Indian China*. In scrofulous disorders the root has been preferred to the oriental kind. In other cases it possesses similar virtues. **S. sarsaparil'la**, *Jamaica sarsaparilla*. The root of this and other species of smilax, *Sarsaparilla* (Ph. U. S.), *Sarsæ radix* (Ph. Br.), is diuretic and demulcent, and has been employed in the sequelæ of syphilis, when, after a mercurial course, nocturnal pains, ulcerations, etc. continue. It has been used also in scrofula, chronic rheumatism, etc. It is obtained from Honduras, Brazil, and Peru. A principle called *Smilacin, Sarsaparillin*, or *Pariglin* has been obtained from it. **S. tamnoï'des**, indigenous, has similar properties.

Smile (sme'la). A curved, two-edged bistoury; a knife.

Smilion, smil'e-on (*smilion, smile*). Scalpel.

Smith's ante'rior splint. Consists of a stout wire frame, about 3½ inches wide above and 2¾ inches wide below, used for suspension of the lower limb. It is applied on the anterior surface of the limb, and extends from the anterior spine of the ileum to a little beyond the toes. It is bent at the ankle, knee, and hip, to conform to individual cases.

Smith's cramp. A neurotic affection due to the occupation of blacksmithing.

Smith'sonite. *Calamine.* Native zinc carbonate, containing over 50 per cent. of pure metal.

Smo'ker's patch'es. An affection of the mucous membrane in which white patches occur on the lips, tongue, and mouth of excessive tobacco-smokers.

Smo'ky. Having the appearance or nature of smoke.

Smothering, smuth'er-ing. Affected as by suffocation; stifled; deprived of air by covering the mouth and nostrils.

Smyrna, smur'nah. Myrrh. **S. galls**, an inferior variety of commercial galls from Turkey. **S. o'pium**, so named from place of export; it furnishes the most abundant supply of this drug in the market. **S. scam'mony**, once a commercial name for an inferior quality of this drug.

Smyrnis'mus (*smyrna*). Embalming.

Smyrnium olusatrum, smur'ne-um o-lu-sat'rum (*smyrna*, the odor of the seeds resembling myrrh). A plant once cultivated for culinary purposes. The seeds are bitter and aromatic, and the roots very bitter; were recommended as resolvent, diuretic, emmenagogue, etc.

Snag. A tooth standing alone or projecting beyond the others.

Snag'gle teeth. Irregularity and obliquity of the teeth.

Snag'rel. Aristolochia serpentaria.

Snail. Limax. **S. shell**, cochlea. **S. track**, an aphthous ulceration of the throat met with in the second stage of syphilis.

Snake, hood'ed. Cobra di capello. **S., spec'tacled**, cobra di capello.

Snake'head. Chelone glabra.

Snake'root. Garuleum bipinnatum. **S., birth'wort**, Aristolochia serpentaria. **S., black**, Actæa racemosa, Sanicula Marilandica. **S., but'ton**, Eryngium aquaticum, Liatris spicata. **S., Can'ada**, Asarum Canadense. **S., Dewitt**, prenanthes. **S., ever'green**, Polygala paucifolia. **S., heart**, Asarum Canadense. **S., Virgin'ia**, Aristolochia serpentaria. **S., white**, Eupatorium ageratoïdes.

Snake's milk or **milk-weed.** Euphorbia corollata.

Snake'weed. Aristolochia serpentaria; Helenium autumnale; Polygonum bistorta. **S., Amer'ican**, Cicuta maculata.

Snap'dragon. Linaria vulgaris.

Snaps. Phaseolus.

Snare. Instrument for removal of soft growths, as nasal polypi.

Sneeze'weed. Helenium autumnale.

Sneeze'wort. Achillea ptarmica; Helenium autumnale.

Sneez'ing. Convulsive motion of the expiratory muscles by which air rushes sonorously through the nasal fossæ, carrying with it the mucus and foreign bodies adhering to the pituitary membrane which have occasioned the movement.

Snel'len's for'ceps. Form of forceps for surrounding the minor growths of the eyelids during enucleation. **S.'s types**, see *Test.*

Snif'fles. Snuffles.

Snor'ing. Noise made in the posterior part of the mouth and nasal fossæ during the movements of inspiration, particularly in sleep, both when the person is in health, and in disease as in apoplexy. In certain affections of the chest—some cases of pulmonary catarrh—a kind of snoring may be distinctly heard by applying the ear to the chest.

Snout. Expanded nose of some of the lower animals.

Snow. Water in a solid state falling from the atmosphere in white flakes. Used externally as a tonic and discutient.

Snow'ball. Cephalanthus occidentalis.

Snow'berry. Symphoricarpus racemosus.

Snow-blind'ness. Blindness produced by the reflection of the solar light from snow. As a preventive snow-eyes are used by the Esquimaux; made of light wood, with a bridge resting on the nose like spectacles, and a narrow slit for the passage of the light.

Snow'drop tree. Chionanthus Virginica.

Snow-eyes. See *Snow-blindness.*

Snow'plant. Sarcodes sanguinea.

Snow'rose. Rhododendron chrysanthemum.

Snow'shoe disease'. Painful affection of the feet occurring in the Arctic regions among those wearing snow-shoes on long journeys.

Snuff, cephal'ic. Pulvis asari compositus.

Snuf'fles. Breathing hard through the nose, often owing to accumulation of the mucous secretions; an affection to which infants are liable, relieved by oiling the interior of the nostrils.

Soap. Sapo. **S. ac'id**, see *Sapo.* **S. bark**, quillaia bark. **S. ber'ries**, Sapindus saponaria; contain saponin. **S., black**, see *Sapo.* **S., Castile**, sapo durus. **S. ce'rate**, ceratum saponis. **S. of co'coanut oil**, see *Sapo.* **S., com'mon**, see *Sapo.* **S. of guai'ac**, sapo guaiacinus. **S., liq'uid**, see *Sapo.* **S., medic'inal**, see *Sapo.* **S. nut**, fruit of Sapindus trifoliatus. **S. plant**, Chlorogallum pomeridium, California soapwort. **S. plas'ter**, emplastrum saponis. **S. root**, root of Saponaria officinalis. **S., soft**, S., common. **S., Span'ish**, sapo durus. **S. wort**, saponaria. **S., yel'low**, see *Sapo.*

Sob. Spasmodic momentary contraction of the diaphragm, at once followed by relaxation, by which the little air that the contraction has caused to enter the chest is driven out with noise.

Soboles, sob'o-lees (offspring). Progeny; superfœtation.

Soboliferous, sob-o-lif'er-us (*soboles*, shoot, *fero*, to bear) Producing shoots from near the ground; bearing shoots.

Sobrietas, sob-re'et-as. Temperance.

Socaloïn, so-kal'o-in. Crystalline active principle of Socotrine aloes.

Socia parotidis, so'se-ah par-ot'id-is (companion of the parotid). See *Parotid.*

So'cial e'vil. Prostitution.

Soci'ety (*socius*, a companion). Association promoting some common object.

Sociology, so-se-ol'o-je (*socius*, fellow-being, *logos*, discourse). The science treating of social organization; study of mutual relations of the people.

Sock'et of the eye. Orbit. **S. of the teeth**, see *Alveolus.*

Socordia, so-kor'de-ah (*socors*, *se*, separation, *cor*, heart; without intellect). Hallucination.

Soc'otrine al'oes. See *Aloe Socotrina.*

So'da. *Protoxide of sodium.* Its action is like that of potassa. *S. impura*, the mineral alkali, is obtained from several sources: naturally in Egypt, artificially from the incineration of marine plants and from the decomposition of sodium sulphate, etc. Principally derived from plants growing on the sea-coast—as the Salsola sativa, S. soda, S. tragus, Salicornia herbacea, S. Arabica, etc.—which are collectively called *varec* or *varech*, corrupted in the Channel Isles to *vraic* and *vraich*, where they are used as manure. The barilla ashes are from the ashes of the Salicornia Europæa; the kelp from the Fucus vesiculosus and other varieties; the Turkey barilla, rochetta Alexandrina, from the Mesembryanthemum Copticum; the Alicant barilla, soda Alicantina or alonensis, from the Mesembryanthemum nodiflorum; and the Carthagena barilla from the salicornia and salsola. Impure S. subcarbonate consists of sodium subcarbonate, potash, sodium chloride, clay, and other earthy substances. It is used for preparing the pure subcarbonate. The word soda also means cardialgia, cephalalgia, and pyrosis. **S. aceta'ta**, *Sodium acetate, Acetate of soda.* This salt is used in similar cases with the acetate of potassium. **S. aëra'ta**, sodii carbonas. **S. alonen'sis**, soda. **S., arsen'iate of**, arseniate of sodium. **S., ben'zoate of**, used in gout and rheumatism to eliminate uric acid; prepared by saturating a solution of benzoic acid with carbonate of sodium. **S., bibo'rate of**, borax. **S., bicar'bonate of**, sodium carbonate. **S., bicar'bonate of, commer'cial**, sodii bicarbonas venalis. **S., bi'late of**, picromel. **S., bo'rate of**, borax. **S. boraxa'ta**, borax. **S., car'bonate of**, *Bicarbonate of soda, Carbonate of protoxide of sodium, Bicarbonate of sodium.* Made from powdered commercial bicarbonate of sodium by percolation and drying on bibulous paper. Its use is the same as the subcarbonate, though less caustic and better for effervescing draughts. **S. caus'tica**, *Protoxide of sodium, Caustic soda.* May be used as a caustic, like the potassa fusa, and is even preferable, as it does not deliquesce and run. **S., chlo'ride of**, *Chlorinated soda, Oxymuriate of soda.* Salt used as a disinfectant, both to remove offensive smells in chambers and to

alter the condition of fetid ulcers; see *Liquor sodæ chlorinatæ*. **S., chlo'rinated,** soda, chloride of. **S., ci'trate of,** sodii citras. **S., efferves'cent citrotar'trate of** (sodæ bicarb. pulv., ℥xvij; acid. tartaric. pulv., ℥viij; acid. citric. pulv., ℥vj; Ph. Br.); dose, ʒj–ʒij. **S. Hispan'ica,** see *Soda*. **S., hydrochlo'rate of,** sodium muriate. **S., hypophos'phite of,** sodii hypophosphis. **S., hyposul'phite of,** *Hyposulphite of sodium*. This salt has been extolled in chronic skin and scrofulous affections, and especially in phthisis, and in cases in which the sulphite of sodium seems indicated; see *Sodii sulphis;* dose, gr. x and more, in syrup. **S. impu'ra,** see *Soda*. **S., lith'ate of,** urate of sodium. **S., meph'ite of,** sodium subcarbonate. **S. mint,** a combination of bicarbonate of sodium, ʒj; aromatic spirit of ammonia, fʒj; spearmint-water, fʒij; dose, fʒss–fʒj for adult; fʒss–fʒj for an infant. **S., mu'riate of,** *Common salt, Sea salt, Rock salt, Bay salt, White salt, Hydrochlorate of protoxide of sodium, Hydrochlorate of soda, Chloride of sodium*. In an impure state this salt is one of the most abundant of natural productions. It is soluble in 3 parts of water, is tonic, purgative, and anthelmintic; externally, stimulant. A useful culinary substance. It has been recommended as an antiperiodic in the dose of ℥ss or ℥j. **S., ni'trate of,** *Salpetra, Nitrate of sodium, Protonitrate of sodium, Cubic nitre*. Occurs, native, in Peru, but may be made by neutralizing carbonate of sodium by nitric acid, evaporating, and crystallizing. Its virtues are similar to those of nitrate of potassium. **S., ni'trite of,** formerly used in the preparation of spiritus ætheris nitrosi (Ph. Br.). **S., oxymu'riate of,** sodium chloride. **S., phos'phate of,** *Subphosphate of protoxide of sodium, Subprotophosphate of sodium, Subphosphate of sodium, Tribasic phosphate* or tasteless purging salt, poured off from the dregs and heated. **S., phos'phate of, triba'sic,** S., phosphate of. **S. plant,** salsola kali, saltwort, seagrape. **S. pow'ders,** see *Powders, soda*. **S., sil'icate of,** *Soluble glass;* internally, it is supposed to promote the discharge of uric acid by the kidneys; externally, it is employed, like silicate of potassium, for immovable bandages. **S. and sil'ver, hyposul'phite of,** sodii et argenti hyposulphis. **S., subcar'bonate of,** *Sal sodæ, Carbonate of soda, Carbonate of sodium, Subcarbonate of protoxide of sodium;* impure carbonate dissolved in water; the solution filtered and crystallized. Used as an antacid and a deobstruent in scrofulous and other affections. Dose, gr. x to ʒss. *Dried carbonate* or *Subcarbonate of soda* or *sodium* is employed as an antacid and lithontriptic. Dose, gr. x to xv. **S., subphos'phate of,** S., phosphate of. **S., sul'phate of,** *Sulphate of sodium, Aperient salt of Frederick, Glauber's salt;* purgative, and in small doses diuretic. Dose, ʒvj-x. **S., sul'phite of,** sodii sulphis. **S., sulphovi'nate of,** sulphovinate of sodium. **S., tar'trate of,** *Tartrate of sodium and potassium, Tartrate of potassa and soda, Tartarized* or *Tartarated soda, Rochelle* or *Seignette's salt;* a gentle cathartic; dose, ℥ss to ℥j. **S., u'rate of,** urate of sodium. **S., vale'rianate of,** sodium valerianas. **S. vitriola'ta,** S., sulphate of. **S. wa'ter,** acidulous water, simple.

So'dæ ace'tas. Soda, acetate of. **S. et argen'ti hyposul'phis,** *Hyposulphite of sodium and silver*. (This salt is formed by pouring a solution of hyposulphite of sodium over oxide of silver recently precipitated by potassa until the oxide is entirely dissolved. Crystals are afforded by evaporation.) Solution of it is used in the same cases as one of the nitrate of silver. **S. arse'nias,** arseniate of soda. **S. azo'tas,** soda, nitrate of. **S. ben'zoas,** soda, benzoate of. **S. bibo'ras,** borax. **S. bicarbo'nas,** soda, carbonate of. **S. bo'ras,** see *Borax* and *Sodii boras*. **S. bo'ras alcales'cens,** borax. **S. bo'ras supersatu'rus,** borax. **S. carbo'nas,** sodium, subcabornate of. **S. carbo'nas exsicca'tus,** see *Soda, subcarbonate of*. **S. carbo'nas impu'rus,** soda. **S. chlo'ras,** sodii chloras. **S. ci'tras,** *Citrate of sodium*. White salt formed by saturating a solution of citric acid with bicarbonate of sodium; a pleasant purgative, with properties similar to citrate of magnesia; dose is eight to twelve drachms in aqueous solution or acidulated with citric acid and sweetened. **S. citrotar'tras efferves'cens,** sodium, citrotartrate of, effervescent. **S. hyposul'phas,** sodii hyposulphis. **S. mu'rias,** soda, muriate of. **S. ni'tras,** soda, nitrate of. **S. phos'phas,** soda, phosphate of. **S. et potas'sæ tar'tras,** sodium tartrate. **S. potassiotar'tras,** soda, tartrate of. **S. sub-bo'ras,** borax. **S. subcarbo'nas impu'ra,** soda. **S. sulphas,** see *Sodii sulphis*. **S. sul'phis,** see *Sodii sulphis*. **S. valeria'nas,** *Valerianate of sodium*. Chiefly employed for obtaining the other valerianates.

So'dii ace'tas (Ph. U. S.). Soda, acetate of. **S. arse'nias,** arseniate of soda, arseniate of sodium; action same as other arsenic salts. **S. auroterchlo'ridum,** see *Gold*. **S. ben'zoas,** soda, benzoate of; benzoate of sodium; white amorphous or semi-crystalline powder; odorless; effervescent on exposure to air; taste sweet, astringent; prepared by adding benzoic acid to hot solution of sodium carbonate; action is antilithic, antiseptic; useful in gout, rheumatism, scarlet fever, phthisis, etc. **S. bicarbo'nas,** soda, carbonate of; bicarbonate of sodium; white, odorless, opaque powder, saline and cooling taste; action same as carbonate, but milder. **S. bicarbo'nas vena'lis,** *Commercial bicarbonate of sodium*. White opaque powder containing variable amounts of soda not fully saturated with carbonic acid. *Sodii bicarbonas* (Ph. U. S.) is obtained from it. **S. bisul'phis,** bisulphite of sodium; prepared by saturating a concentrated solution of carbonate of sodium with sulphurous acid gas; action same as S. sulphis. **S. bo'ras,** borate of sodium; borax; colorless, transparent prisms, odorless, efflorescent in dry air; exists native in Europe, Peru, abundant in certain lakes of Thibet and Persia, in California and the deserts of Nevada; action alterative; mild stimulant to mucous surfaces; parasiticide, antiseptic; supposed to have a specific action on the uterus; used in dysmenorrhœa, in nephritic troubles due to excess of uric acid, aphthæ, and as an injection in infantile diarrhœa; locally in recent wounds and surgical operations. **S. bro'midum,** salt resembling in dose and properties the bromide of potassium, but containing more bromine, and considered less irritating. **S. carbo'nas,** soda, subcarbonate of. **S. carbo'nas exsicca'tus,** soda, subcarbonate of; dried carbonate of sodium. Uses same as carbonate. On account of its dryness, it cannot be made into pills. **S. chlo'ras,** chlorate of sodium; transparent crystals; permanent in air; saline taste and cooling; odorless. It should never be triturated with combustible substances. Uses similar to chlorate of potassium, but more soluble. **S. chlo'ridum,** common salt; native in many countries; purified by dissolving in water and recrystallizing. Active stimulant; resolvent; increases the salivary secretion; antidote to silver nitrate; soda, muriate of. **S. chlorure'tum,** soda, muriate of. **S. citrotar'tras efferves'cens** (Ph. Br.), effervescent citrotartrate of soda. Laxative and refrigerant; dose, ʒj–ij in water. **S. hypophos'phis,** hyposulphite of sodium. White, granular rods or small colorless plates; sweetish taste. Nerve tonic, alterative, and useful in phthisis and scrofulous diathesis; also in cases of lowered nerve-force. **S. hyposul'phis** (Ph. U. S.), salt of soda combined with hyposulphurous acid, used for the same purposes as the sulphite. Dose, gr. x–xx, three times daily; externally, ʒj dissolved in fʒj of water. See *Sulphurous acid*. **S. io'didum** (Ph. U. S.), *Iodide of sodium*. Salt prescribed in the same cases as the iodide of potassium, especially in syphilis. Dose, gr. xx–xxx. **S. meth'ylas,** methylate of sodium; purgative in quarter-drachm doses without producing cramps. **S. ni'tras,** soda, nitrate of. **S. phos'phas,** phosphate of sodium. Prepared by adding solution of acid phosphate of calcium (prepared from a mixture of bone-ash and sulphuric acid) to a solution of sodium; it is found in the urine and other animal secretions. Useful in cases of supposed deficiency of phosphorus, infantile diarrhœa with green stools. **S. pyrophos'phas,** pyrophosphate of sodium. Prepared by heating phosphate of sodium in suitable

dish to redness, dissolving in water, filtering, and crystallizing. Uses and action same as phosphate of sodium. **S. sal'icylas** (Ph. U. S. and Br.), salicylate of sodium. Therapeutic action is that of salicylic acid, but less irritating, and it is more rapidly absorbed. **S. santoni'nas**, santoninate of sodium. A salt that should be used with caution; prepared by adding santonin to hot solution of caustic soda so long as it is dissolved. It should not be used as a vermifuge in place of santonin, as it is too soluble, and apt to be poisonous. **S. sil'icas**, silicate of sodium (soluble glass); useful for splints, jackets for fractures, spinal curvatures, etc. **S. sul'phas**, soda, sulphate of; Glauber's salt; sulphate of sodium. Found native and inmate of many springs; usually obtained as secondary product in manufacture of common salt or carbonate of magnesium; purified by dissolving in water and recrystallizing. Cathartic, diuretic, and sedative; should always be given diluted with water. **S. sul'phis**, sulphite of sodium. Made by passing sulphurous acid gas into a solution of carbonate of sodium. Antizymotic, parasiticide. Like sulphurous acid, it has been used to arrest fermentation, as in zymotic diseases; the sulphurous acid, it is imagined, being set free by the acid of the yeasty matter. Dose, ʒj, three times a day. On a similar hypothesis it has been used locally in sore mouth presumed to be of parasitic origin—ʒj of the salt to fʒj of water. It has also been given in intermittents. **S. sulphocar'bolas**, sulphocarbolate of sodium. Made by mixing carbolic and strong sulphuric acid, which is kept at a temperature of 131° F. for several days, when water is added; then carbonate of barium is gradually added until efflorescence ceases; filter after precipitation, add carbonate of sodium until precipitation ceases, filter, evaporate, and crystallize. **S. sulphovi'nas**, ethylsulphate of sodium. Prepared by action of sulphuric acid on alcohol. **S. valeria'nas**, valerianate of sodium. Uses same as ammonium valerianate.

Sodioben'zoate of caf'feine. Benzoate of sodium added to citrate of caffeine, the solubility of caffeine being greatly increased by the addition. The addition of salicylate of sodium to caffeine has a similar effect, producing *sodiosalicylate of caffeine.*

Sodiosal'icylate of caf'feine. See *Sodiobenzoate of caffeine.*

Sodiotheobro'mine sal'icylate. Diuretin.

So'dium. The metallic basis of soda. **S., ac'etate of,** soda, acetate of. **S., arse'niate of,** soda, arseniate of. **S. aurochlo'ride,** yellow powder, used in syphilis; dose, gr. $\frac{1}{6}$–j. **S. ben'zoate,** sodii benzoas. **S. bicar'bonate,** sodæ carbonas. **S. bicar'bonate, commer'cial,** sodii bicarbonas venalis. **S. bisul'phate,** acid sulphate of sodium. **S. bisul'phite,** sodii bisulphis. **S. bo'rate,** borax. **S. bro'mide,** sodii bromidum. **S. car'bolate,** salt formed by action of carbolic acid upon caustic soda. **S., car'bonate of,** soda, subcarbonate of. **S., car'bonate of, dried,** see *Soda, subcarbonate of.* **S. chlo'rate,** sodii chloras. **S., chlo'ride of,** soda, muriate of. **S. chlorobo'rate,** white powder; soluble; decided antiseptic. **S. ci'trate,** sodii citras. **S. creoso'tate,** antipyretic. **S. di-iodosal'icylate,** antithermic, analgesic, antiseptic, in parasitic skin diseases. **S. dithiosal'icylate,** see *Dithiosalicylic acid.* **S. eth'ylate,** caustic alcohol; product of action of absolute alcohol upon metallic sodium; escharotic. **S. ethylsul'phate,** sodium sulphovinate. **S. for'mate,** C_2H_5NaO; used in tubercular diseases. **S. hip'purate,** sodii hippuras. **S. hy'drate,** soda. **S. hydrocar'bonate,** sodium bicarbonate. **S. hydrox'ide,** soda. **S. hypochlo'rite,** sodium salt of hypochlorous acid. **S. hypophos'phite,** sodii hypophosphis. **S. hyposul'phite,** soda, hyposulphite of. **S. i'odide,** sodii iodidum. **S. lac'tate,** sodii lactas. **S. molyb'date,** obtained by neutralizing molybdic acid with sodium carbonate. **S. monosul'phide,** salt obtained by saturating solution of soda (spec. grav. 1.332) with hydrogen sulphide, and keeping product free from air until crystallization occurs. **S., ni'trate of,** soda, nitrate of. **S. ni'trite,** salt prepared by deflagrating a mixture of 7 parts of sodium nitrate and 1 part of starch; used in 2-grain doses, or more, in epilepsy and angina pectoris. **S. paracreoso'tate,** white powder, antiseptic and antiarthritic; less poisonous than sodium salicylate. **S. perman'ganate,** sodii permanganas. **S. phe'nate,** sodium carbolate. **S. phe'nol,** sodium sulphocarbolate. **S. phos'phate,** sodii phosphas. **S. polysul'phide,** sulphurated soda. **S. protoni'trate,** sodium, nitrate of. **S., protox'ide of, hydrochlo'rate of,** soda, muriate of. **S., protox'ide of, ni'trate of,** sodium nitrate. **S., protox'ide of, phos'phate of,** sodium phosphate. **S., protox'ide of, subcar'bonate of,** soda, subcarbonate of. **S. pyrophos'phate,** sodii pyrophosphas. **S., quadrichlo'ruret of,** soda, muriate of. **S. sal'icylate,** sodii salicylas. **S. santoni'nate,** sodii santoninas. **S. sil'icate,** sodii silicas. **S. silicoflu'oride,** white powder; antiseptic, disinfectant, and styptic. **S., sub-bo'rate of,** protoxide of borax. **S., subprotobo'rate of,** borax. **S., subprotophos'phate of,** soda, phosphate of. **S., sul'phate of,** soda, sulphate of. **S. sulphoben'zoate,** prepared by dissolving sodium benzoate in strong solution of sodium sulphite; antiseptic. **S., sulphocar'bolate of,** see *Sulphocarbolate.* **S. sulpho-ich'thyolate,** ichthyol. **S. sulphometh'ylate,** prepared similar to sodium sulphovinate, except that methyl alcohol is used in preparation of sulphovinic acid instead of ordinary alcohol; purgative. **S. sulphophe'nate,** sodium sulphocarbolate. **S. sulphoric'inate,** brown liquid, used as solvent for iodine, iodoform, etc. **S. sulphosal'icylate,** astringent powder; anti-arthritic. **S. sulphovi'nate,** sodii sulphovinas. **S. tell'urate,** used in night-sweats of phthisis. **S. thiosul'phate,** sodium hyposulphite. **S. vale'rianate,** sodii valerianas.

Sod'oma Gallo'rum (*Sodom, Galli,* the French). Syphilis.

Sodom'ia (*Sodom,* sin of Sodom). Sexual intercourse by the rectum.

Sod'omy. Sexual intercourse by the rectum.

Sœmisch's ul'cer. Infectious ulcer of the cornea.

Sœmmering (sem'mer-ing), **fora'men of.** See *Foramen of Sœmmering.* **S., gray sub'stance of,** peduncle of the brain. **S., yel'low spot of,** macula lutea.

Sœm'mering's bone. Marginal process of malar bone.

Soft'ening. Mollities. **S. of the brain,** mollities cerebri. **S. of the heart,** softening of the muscular structure of the heart from anemic condition of the artery. **S., mu'coid** or **mu'cous,** see *Mucoid.* **S. of the stomach,** gastromalacia, occurring sometimes after death; see *Autodigestion.*

Soil-pipe. Pipe conducting waste material from houses to the common sewer.

Sol. The sun; gold.

Solamen (so-lah'men) **intestino'rum** (*solor,* to comfort). Pimpinella anisum. **S. scabioso'rum,** fumaria.

Solanaceæ, so-lan-ah'se-e. An important natural order of plants, among which are a few trees found in all parts of the world except the Arctic regions.

Solanaceous, so-lan-a'she-us. Resembling the solanum.

Solania, so-lan'e-ah. See *Solanum dulcamara.*

Solanicin, so-lan'is-in. Compound produced by action of strong hydrochloric acid upon solanidin.

Solanidin, so-lan'id-in. A product resulting from the action of dilute acids upon solanin.

Solanine, so'lan-een. Bitter alkaloid from Solanum dulcamara. See *Solanum dulcamara.*

Solanoid, so'lan-oid (*solanum,* potato, *eidos,* resemblance). Resembling a potato. Epithet applied to a form of cancer, *Solanoma,* which appears to be intermediate between scirrhus and encephaloid, increasing more rapidly than the former, yet approaching it in firmness.

Solanoma, sol-an-o'mah (*Solanum tuberosum,* potato). See *Solanoid.*

Solanum, so-lan'um (*solor,* to soothe). *Common* or *Garden nightshade.* Family Solanaceæ. Narcotic poison. The oil is anodyne and discutient. **S. Carolin-**

en'se, *Horse nettle;* indigenous. The juice of the berries is said to have been employed successfully in idiopathic tetanus. **S. dulcama'ra,** *Bittersweet, Woody nightshade, Bittersweet nightshade, Bittersweet vine, Nightshade vine, Violet bloom.* The taste of the young branches—Dulcamara (Ph. U. S.)—is bitter, followed by sweetness; hence its name. It has been used as a diuretic and sudorific, especially in chronic rheumatism, humoral asthma, dropsy, skin diseases, scrofula, and jaundice. Its principle is called solanine or solania, $C_{42}H_{87}NO_{15}$, an alkaloidal glucoside, used as a substitute for morphia in neuralgia, bronchitis, asthma, vomiting of pregnancy, etc. **S. esculen'tum,** S. tuberosum. **S. fœ'tidum,** fetid solanum; another name for Datura stramonium. **S. furio'sum,** Atropa belladonna. **S. horten'se ni'grum,** Atropa belladonna. **S. Humboldt'ii,** S. lycopersicum. **S. letha'le,** deadly solanum; name for Atropa belladonna. **S. ligno'sum,** *Woody nightshade;* another name for Solanum dulcamara. **S. lycoper'sicum,** *Loveapple plant;* the fruit, *Tomata, Tomato,* or *Loveapple,* is much eaten in the United States, and forms an esteemed sauce. **S. mag'num Virginia'num ru'brum,** Phytolacca decandra. **S. mani'acum,** Atropa belladonna, Datura stramonium. **S. melanocer'asus,** Atropa belladonna. **S. melon'gena,** *Egg-plant, Mad-apple plant;* native of Asia, Africa, and America. Its oblong, egg-shaped fruit, pomum melongenæ, malum insanum, is prepared in soups and sauces in those countries. **S. ni'grum,** solanum. **S. ni'veum,** S. African plant; the leaves, applied to foul ulcers, cleanse them. The fresh juice of the berries and leaves, as an ointment, is used by the farmers for the same purpose. **S. panicula'tum,** a shrub of Brazil, where the juice of the bruised leaves, unripe fruit, the plant itself, and its root are used as a tonic. **S. Parmente'rii,** S. tuberosum. **S. pseudocap'sicum,** Jerusalem cherry. **S. pseudolycoper'sicum,** S. lycopersicum. **S. quadrifo'lium,** paris. **S. racemo'sum America'num,** Phytolacca decandra. **S. sanc'tum,** *Palestine nightshade.* The fruit is globular, and eaten in the countries where it is native. **S. scan'dens,** S. dulcamara. **S. tubero'sum,** *Potato;* native of Peru; a nutritious and wholesome vegetable; one of the most useful that exists. One hundred pounds of potatoes afford ten pounds of starch equal to arrow root as a nutrient and demulcent, called potato flour, potato starch, French sago, common arrow root, etc. **S. u'rens,** Capsicum annuum. **S. vesica'rium,** physalis. **S. Virginia'num,** indigenous; said to resemble Solanum nigrum in its properties. **S. vulga're,** solanum.

So'lar (*sol,* the sun). Relating to the sun, having rays like the sun. **S. asphyx'ia,** see *Coup-de-soleil* and *Insolation.* **S. cy'cle,** *Cycle of the sun,* period of 28 years, at end of which time days of the month return to the same days of the week. **S. exhaus'tion,** see *Coup-de-soleil* and *Insolation.* **S. plex'us,** *Epigastric plexus;* collection of ganglions and filaments interweaving and anastomosing repeatedly, and belonging to the system of the great sympathetic. This vast plexus, lying on the vertebral column, the aorta, and the pillars of the diaphragm, has a very irregular shape. The ganglions and filaments composing it are soft, reddish, and almost all issue from the semilunar ganglions; it receives the branches from the pneumogastrics. It seems to be chiefly intended for the aorta, and accompanies all its branches, furnishing secondary plexuses which are called the infradiaphragmatic, cœliac, superior mesenteric, inferior mesenteric, renal or emulgent, spermatic, etc. **S. spec'trum,** see *Spectrum.*

Solarium, sol-ah're-um (*sol,* sun). Sun-dial; sun-bath.

Solariza'tion. Exposure to direct rays of the sun; in photography, injury of negative due to its over-exposure to the sun's light, whitish in the camera.

Solayre's (so-lairs') **obliq'uity.** Descent of the child's head by its long diameter into the oblique diameter of the pelvis.

Soldanella, sol-dan-el'lah (*solido,* to make firm). Convolvulus soldanella.

Soldier's (sole'jur's) **spots.** Maculæ albæ. **S. wood,** matico.

Sole (*solum,* the ground). Sole of the foot; the under surface of the foot.

So'lea. Sole. **S. ipecacuan'ha,** see *Ipecacuanha.* **S. verticillat'a,** Ionidium polygalæfolium.

So'len. Canal; cradle. See *Solenarium* and *Vertebral column.*

Solenarium, so-len-ah're-um (*solenarion,* a small canal, a pipe). Instrument of surgery representing a kind of gutter, in the cavity of which the penis was placed like a limb in a cradle. Solen itself—*canali*—was used in antiquity for a grooved channel or cradle in which a fractured limb was placed.

Solenochalasis, so-len-o-kal'as-is (*solen*). Enlargement of a canal.

Solenostegnosis, so-len-o-steg-no'sis (*solen, stegnosis,* constriction). Narrowing of a canal.

Solenostemma (so-len-o-stem'mah) **ar'gel.** Cynanchum oleæfolium.

Sole'us (*solea,* sole of a shoe, from its shape). *Gastrocnemius internus.* Muscle situate at the posterior part of the leg; broad, flat, and almost oval; attached above to the posterior edge of the fibula, to the oblique line on the posterior surface, and to the inner edge of the tibia. It terminates below by a large tendon, which unites to that of the gastrocnemius externus to form the tendo Achillis. This muscle extends the foot on the leg, and conversely. See *Gastrocnemii.*

Solicatio, so-lik-ah'she-o (*sol,* the sun). Insolation.

Sol'id. Body whose integrant molecules are so united by the force of cohesion that they will not separate by their own weight. The solids in the human body are the bones, cartilages, tendons, muscles, ligaments, arteries, veins, nerves, membranes, skin, etc. The study of the solids is called *Stereology* (*stereos,* solid, *logos,* a discourse). **S. par'affin,** one of the products of petroleum. See *Paraffin.*

Solidago, sol-id-ag'o (*solido,* to make firm, in allusion to its properties as a vulnerary). See *Solidago virgaurea.* **S. odo'ra,** golden rod; indigenous; popular diaphoretic and emmenagogue. **S. rig'ida,** *Rigid golden rod;* indigenous; of the Compositæ family; is astringent and tonic. **S. Saracen'ica,** S. virgaurea. **S. virgaur'ea,** *Golden rod.* The leaves and the flowers of *Odora solidago, Fragrant* or *Sweetscented golden rod,* have been recommended as aperients and tonics in urinary diseases and internal hemorrhage. **S. vulga'ris,** S. virgaurea.

Solidifica'tion, sol-id-if-i-ka'shun (*solidus,* solid, *facio,* to make). Act of making solid.

Sol'idism (*solidus,* solid). The doctrine of physicians—*Solidists*—who refer all diseases to alterations of the solid parts of the body. They think the solids alone are endowed with vital properties; that they alone can receive the impression of morbific agents and be the seat of pathological phenomena.

Sol'idists. See *Solidism.*

Solid'ity. State of being solid. Opposed to fluidity.

Sol'ids (*solidus,* solid). Term referring to the bones, ligaments, muscles, nerves, and vessels of the body.

Solidungulata (sol-id-un-gu-lat'ah) or **Solidun'gulates** (*solidus,* solid, *ungula,* hoof). Animals with solid hoofs.

Solidungulus, sol-id-un'gu-lus. Having solid hoofs. Applied to the mammalian family having a solid hoof to each foot, as the horse, etc.

Soliped, sol'i-ped (*solus,* alone, *pes,* foot). An animal whose hoof is not cloven. Solidungulus.

Solitarius pharyngis, sol-it-ah're-us fah-rin'jis. Azygos pharyngis.

Sol'itary bun'dle. Bunch of nerve-fibres in upper portion of the spinal cord and in the medulla oblongata. **S. fol'licles** or **glands of intes'tine,** small granular bodies found in the mucous membrane of the small intestines. **S. tu'bercle,** a tubercular nodule composed of miliary tubercles enclosed in fibrous tissue, frequently found in the central nervous system.

Solium, so'le-um. A bathing-tub. Also tænia solium.

Sollu'nar (*sol*, sun, *luna*, moon). Applied to a fancied influence exerted by the sun and moon on man in a state of health and disease.

Sol'omon's seal. Polygonatum multiflorum. The false Solomon's seal is a perennial plant; genus Smilucina.

Solubility, sol-u-bil'it-e (*solveo*, to set free, *habilis*, able). That property of a body by virtue of which it can be dissolved in a menstruum, when it is said to be soluble.

Sol'uble. Relaxing. Term applied to the bowels when gently relaxed. See *Solubility*. **S. glass,** silicate of potassium or sodium.

So'lum. Sole. **S. pe'dis,** metatarsus, sole.

Solutio, so-lu'she-o. Solution. **S. alexite'ria Gaubia'na,** see *Disinfection*. **S. ammo'niæ subcarbona'tis,** liquor ammonii subcarbonatis. **S. arsenica'lis,** liquor arsenicalis. **S. arsenica'ta,** liquor arsenicalis. **S. arseni'tis kal'icæ,** liquor arsenicalis. **S. cal'cis,** liquor calcis. **S. cam'phoræ æthe'rea,** tinctura ætherea camphorata. **S. cam'phoræ oleo'sa,** linimentum camphoræ. **S. contin'ui,** solution of continuity. **S. cu'pri ammonia'ti,** liquor cupri ammoniati. **S. fer'ri nitra'tis,** liquor ferri nitratis. **S. guai'aci gummo'sa,** mistura guaiaci. **S. muria'tis bary'tæ,** baryta, muriate of. **S. muria'tis cal'cis,** see *Calcis murias*. **S. muria'tis fer'rici æthe'rea,** tinctura or alcohol sulfurico-æthereus ferri. **S. muria'tis hydrar'gyri oxygena'ti,** liquor hydrargyri oxymuriatis. **S. potas'sii io'didi ioduret'a,** liquor iodinii compositus. **S. resi'næ guai'aci aquo'sa,** mistura guaiaci. **S. solven'tis minera'lis,** liquor arsenici chloridi. **S. subcarbona'tis ammoni'aci spirituo'sa,** spiritus ammoniæ. **S. sulpha'tis cu'pri compos'ita,** *Sydenham's styptic water;* made of copper sulphate, alum, sulphuric acid, and water; styptic and, largely diluted, an astringent collyrium.

Solution, so-lu'shun. Operation consisting in dissolving a solid body in a menstruum. Likewise, the product of such operation—*Solutum;* official title, *Liquor*. It means also with many the termination of a disease, with others the termination accompanied by critical signs, and with others, again, it is synonymous with crisis. **S. of ac'etate of ammo'nia,** liquor ammonii acetatis. **S. of ac'etate of mor'phia,** liquor morphiæ acetatis. **S., al'kaline,** see *Fuligokali*. **S. of al'kaline iron,** liquor ferri alkalini. **S. of al'um, compound,** liquor aluminis compositus. **S. of ammo'nia, ben'zinated,** see *Ammonii sulphas*. **S. of ammo'nia, subcar'bonate of,** liquor ammoniæ subcarbonatis. **S. of ammo'niated cop'per,** liquor cupri ammoniati. **S. of arsen'iate of so'da,** see *Arseniate of soda*. **S. of arsen'iate of so'dium,** see *Arseniate of soda*. **S., arsen'ical,** liquor arsenicalis. **S., arsen'ical, De Velangin's,** liquor arsenici chloridi. **S. of atro'pia,** liquor atropiæ. **S. of car'bonate of so'dium,** liquor sodii carbonatis. **S. of char'coal, con'centrated,** see *Tinctura catechu*. **S. of chlor'ide of ar'senic,** liquor arsenici chloridi. **S. of chlor'ide of zinc,** see *Burnett's disinfecting liquid*. **S. of chlor'inated so'da,** liquor sodæ chlorinatæ. **S. of chlor'ine,** see *Chlorine*. **S. of ci'trate of ammo'nium,** liquor ammonii citratis. **S. of ci'trate of magne'sium,** see *Magnesii citras*. **S. of ci'trate of potas'sium,** liquor potassæ citratis. **S. of continu'ity,** division of structures by injury, ulceration; see *Continuity*. **S. of corro'sive sub'limate,** liquor hydrargyri oxymuriatis. **S., De Valan'gin's,** liquor arsenici chloridi. **S., Don'ovan's,** see *Arsenic and mercury, iodide of*. **S., Fow'ler's,** liquor arsenicalis. **S., Gan'nal's,** see *Aluminii acetas*. **S., Goad'by's** (called after the proposer), is made of bay salt, ℥iv; corrosive sublimate, gr. iv; alum, ℥ij; and boiling water, Oiv. Employed to preserve animal substances. For most purposes it may be diluted with an equal bulk of water. **S. of gut'ta-per'cha in chlo'roform,** see *Gutta-percha*. **S., Hein'ecke's,** see *Arseniate of sodium*. **S. of hydri'odate of potas'sa,** liquor potassæ hydriodatis. **S. of hydrochlo'rate of mor'phia,** liquor morphiæ muriatis. **S. of i'odide of i'ron,** liquor ferri iodidi. **S. of i'odine, com'pound,** liquor iodinii compositus. **S. of i'ron, ni'trated,** liquor ferri nitratis. **S., Lab'arraque's,** liquor sodæ chlorinatæ. **S. of lime,** liquor calcis. **S. of lime, sac'charated,** liquor calcis saccharatus. **S., Lu'gol's,** liquor iodini compositus. **S. of magne'sia, condensed,** magnesia, fluid. **S. of Monro',** liquor of Monro. **S., Monsel''s,** see *Ferri sulphas*. **S. of mu'riate of mor'phia,** liquor morphiæ muriatis. **S. of ni'trate of i'ron,** liquor ferri nitratis. **S. of ni'trate of mer'cury,** see *Hydrargyri nitras*. **S. of o'pium,** Battley's liquor morphiæ sedativus. **S. of oxymu'riate of mer'cury,** liquor hydrargyri oxymuriatis. **S., Pear'son's,** see *Arseniate of soda*. **S. of perman'ganate of potas'sium,** liquor potassii permanganatis. **S. of persul'phate of i'ron,** see *Ferri sulphas*. **S., Plenck's,** see *Hydrargyri oxydum cinereum*. **S. of potas'sa,** liquor potassæ. **S., sat'urated,** utmost limit of solubility of a solid in a menstruum. **S. of sesquini'trate of i'ron,** liquor ferri nitratis. **S. of so'da,** liquor sodæ. **S. of strych'nia,** see *Strychniæ murias*. **S. of subac'etate of lead,** liquor plumbi subacetas. **S. of subac'etate of lead, dilu'ted,** liquor plumbi subacetatis dilutus. **S. of subcar'bonate of potas'sium,** liquor potassii subcarbonatis. **S. of subsul'phate of i'ron,** see *Ferri sulphas*. **S. of sul'phate of mor'phia,** liquor morphiæ sulphatis. **S. of tar'tarized an'timony,** vinum antimonii tartarizati. **S. of terchlor'ide of an'timony,** see *Antimonium muriatum*. **S. of terni'trate of sesquiox'ide of i'ron,** liquor ferri nitratis. **S. of Van Swie'ten,** liquor hydrargyri oxymuriatis. **S., Vlem'inckx's,** see *Calcis sulphuretum*.

Solutivus, sol-u-te'vus. Laxative.

Sol'utol. Solution of cresol in creasotate of sodium. Its applications are similar to those of solveol.

Solu'tum. Solution.

Sol'vens (*solveo*, to set free). Medicine supposed to possess the property of dissolving or removing obstructions and extraneous substances. Thus we have solvents of stone in the bladder, etc. See *Dissolventia*. **S., min'eral,** liquor arsenicalis.

Sol'vent treat'ment. Continuous treatment of uric-acid calculi by potassium citrate, etc., and of hepatocystic calculi or gall-stones by olive oil, etc., with the view of effecting their solution.

Solveol, sol've-ol. Solution of sodium-cresol in excess of cresol. Applied in surgery in solution of 0.5 per cent. as an antiseptic application to wounds and abscesses, and in bacteriological researches.

So'ma. Body; corpus.

Somacule, so'mah-kule (*soma*, body). Minutest division of protoplasm possible for retention of physiological properties.

Somascetics, so-mas-set'iks (*soma*, *askesis*, exercise). Gymnastics.

Somatic, so-mat'ik. Concerning the body, as somatic death, or death of the body, in contradistinction to molecular death, or the death of a part.

Somatocatagoniodes, so-mat-o-cat-ag-o-ne-o'dees. Double monster with separate trunks, the axes of which are divergent.

Somatodymia, so-mat-o-dim'e-ah (*soma*, *duo*, to enter into). Double monstrosity in which the trunks are united. There are several varieties: Vertebrodymia, where the union is by the vertebræ; ischiodymia, by the ossa ischii; sternodymia, by the sternum; supra-omphalodymia, by the super-umbilical regions; supra- and infra-omphalodymia, by the superior and inferior umbilical regions; and sterno-omphalodymia, where the union is by both the sternal and the umbilical regions.

Somatology, so-mat-ol'o-je (*soma*, *logos*, discourse). Treatise on the human body. Anatomy.

So'matome (*soma*, body, *tome*, division). Vertebral segment of embryo. Segment of the body.

Somatopagus, so-mat-op'ag-us. Double monstrosity with separate trunks.

Somatoparalle'lus. Double monster with separate trunks, the axes of which are parallel.

Somatopleure, so'mat-o-plure (*pleura*). Top layer of mesoblast.

Somatot'omy (*soma, tome*, incision). Anatomy.

Somatotridymus, so-mat-o-trid'im-us. Monstrosity with three bodies.

Somites, so'mit-ees. Segments of mesoderm.

Som'nal. Ethylated chloral urethane. Made by combining, in a vacuum apparatus, urethane alcoholate and chloral. Hypnotic, resembling chloral; no disagreeable after-effects, but given in tincture of ginger. Useful in insomnia of children, acute alcoholism, etc.

Somnambulation, som-nam-bu-la'shun. Somnambulism.

Somnambulism, som-nam'bu-lizm (*somnus, ambulo*, to walk). *Sleep-walking.* Condition of the brain which occasions the individual to execute, during sleep, some actions that commonly occur when awake. The causes of somnambulism are obscure. **S., artific'ial, magnet'ic**, or **mesmer'ic**, is that peculiar condition into which individuals are thrown by the animal magnetizer. It occurs only in those of weak nervous temperament, in hysterical females, etc.; see *Magnetism, animal.*

Somnambulis'mus. Somnambulism. **S. artificia'lis**, somnambulism, magnetic.

Somnam'bulist. Sleep-walker.

Somnambulis'tic. Relating or appertaining to somnambulism, as the somnambulistic state.

Somnam'bulo. Somnambulist.

Somnam'bulous. Somnambulistic.

Somnav'olism. Somnambulism.

Somniatio, som-ne-ah'she-o (*somnium*, dream). Act of dreaming. **S. morbo'sa**, hallucination; morbid uneasy dreaming. **S. in stat'u vigil'i**, hallucination.

Somnifacient, som-ne-fa'shent (*somnus*, sleep, *facio*, to make). Hypnotic; a drug inducing sleep.

Somnif'erin (*somnus*, sleep, *fero*, to bear). A morphine-ether compound, thought to be stronger than morphine and without action upon the heart.

Somniferous, som-nif'er-us (*somnus, fero*, to carry). An epithet for a medicine causing sleep.

Somniloquist, som-nil'o-kwist (*somnus*, sleep, *loquor*, to speak). One who talks in his sleep.

Somniloquium, som-nil-o'kwe-um. *Somniloquism.* Talking in sleep.

Somniloquus, som-nil'o-kwus. Somniloquist.

Somnium, som'ne-um (*somnus*, sleep). A confused assemblage or accidental and involuntary combination of ideas and images presenting themselves to the mind during sleep. The state between sleeping and waking in which persons perform acts of which they are unconscious. Waking dreams. See *Hallucination.*

Som'nolence. Somnolency.

Somnolency, som'no-len-se (*somnus*). *Slumber; Heaviness.* Sleepiness; a state intermediate between sleeping and waking; often a symptom of disease.

Som'nolent (*somnus*, sleep). Sleepy; drowsy.

Somnolentia, som-no-len'she-ah. Somnolency.

Som'nolism. State of somnolency induced by animal magnetism.

Somnopathy, som-nop'ath-e (*somnus, pathos*, affection). Magnetic somnambulism.

Somnovigil, som-no-vij'il (*somnus, vigil*, awake). Somnambulism.

Som'nus. Sleep.

Somp'nus. Sleep.

Sonchus, son'kus. *Sow thistle, Swine thistle;* ord. Cichoraceæ. Most species of it abound with a milky juice, which is bitter and said to possess diuretic virtues. **S. arven'sis**, plant of Europe, grown in this country; field sow thistle; decoction of the leaves has been used as a galactagogue. **S. Florida'nus**, Mulgedium Floridanum. **S. olerac'eus**, European plant grown in the United States; common sow thistle.

Sonde (F.). Sound.

Son'itus aur'ium (sound of the ears). Tinnitus aurium. **S. cardi'acus**, see *Heart* (*sounds*). **S. cor'dis**, see *Heart* (*sounds*). **S. flu'idi**, sound of fluid, heard by auscultation or otherwise. **S. hepat'icus**, sound rendered by the liver on percussion. **S. intestina'lis**, sound of the movement of the intestines, heard by the stethoscope. **S. stomach'icus**, sound heard on auscultating or percussing the region of the stomach.

Sonometer, so-nom'e-tur (*sonus*, sound, *metron*, measure). A hybrid word denoting an instrument consisting of a small bell fixed upon a table, for testing efficiency of treatment for deafness. More correctly a phonometer.

Sono'rous rhon'chus. Râle sonore.

So'nus. Sound. **S. vo'cis**, accent.

Sooja. See *Dolichos.*

Sool. See *Gastroperiodynia.*

Soor. Aphthæ; parasitic stomatitis.

Soot. Fuligo. **S. can'cer**, cancer, chimney-sweeper's. **S. drops**, mixture used in hysteria, consisting of wood-soot, asafœtida, and alcohol. **S. tea**, see *Fuligokali.* **S. wart**, cancer, chimney-sweeper's. **S. of wood**, substance formed by combustion of wood.

Sophia, so'fe-ah (*sophia*, wisdom, from its virtues). Sisymbrium sophia. **S. chirurgo'rum**, Sisymbrium sophia.

Sophistication, so-fis-tik-a'shun (*sophistikos*, after the manner of the Sophists, captious, deceitful). Falsification or adulteration of drugs.

Sophoma'nia (*sophos*, wise, *mania*). A form of mania of grandeur, in which the patient believes in his own superior wisdom.

Sophora heptaphylla, so-fo'rah hep-tah-fil'lah. Ord. Leguminosæ. The root and seeds of this shrub are intensely bitter. Said to be useful in cholera, colic, dysentery, etc. **S. Japon'ica**, tree of Asia, grown in the United States, flowers of which are used in China to dye a yellow color. **S. seric'ea**, herb growing in Western United States; contains an alkaloid thought to be the same as sophorine. **S. specio'sa**, tree growing in Texas, seeds of which are poisonous and yield a volatile liquid alkaloid, sophorine. **S. tincto'ria**, *Wild indigo, Indigo weed, Broom, Indigo broom, Horsefly weed, Yellow broom, Clover broom, Rattlebush, Yellow indigo.* Indigenous; the taste of the root is unpleasant, subacrid, and nauseous—similar to ipecacuanha. In a large dose the bark of the root acts both as an emetic and cathartic. It has been considered antiseptic and febrifuge, and has been used, in the form of fomentation or cataplasm, in phagedenic and gangrenous ulcers. A liniment, prepared by simmering the cortical part of the root in cream, has been found efficacious applied to sore nipples and ulcerated breasts.

Sophorine, so'for-een. Alkaloid of Sophora speciosa.

Sophroneticus, so-fro-net'ik-us. Wisdom tooth.

Sophronistæ (so-fron-is'te) **den'tes** (*sophroneo*, to act wisely). Wisdom teeth. See *Dentition.*

Sophronisteres (so-fron-is'ter-ees) **den'tes.** See *Dentition.*

Sophros'yne (*sophrosune*). Temperance.

So'piens (*sopio*, to put to sleep). Paregoric.

Sopient, so'pe-ent. Putting to sleep.

Sopio, so'pe-o. Opium.

So'por. Sleep, and especially a profound sleep, from which the person can be roused with difficulty; a symptom in many of the neuroses. **S. caro'ticus**, the last and totally insensible stage of coma.

Soporariæ (so-por-ar'e-e) **arte'riæ.** Carotids.

Soporativus, so-por-at-e'vus (*sopor*). Somniferous.

Soporiferous, so-por-if'er-us (*sopor, ferre*, to carry). Somniferous.

Soporif'ic (*sopor, facio*, to make). Somniferous.

So'porose (*sopor*, sleep). Sleepy.

So'porous (*sopor*). Sleepy; causing sleep.

So'ra. Essera.

Sorb tree. Sorbus domestica.

Sorbastrel'la. Pimpinella saxifraga.

Sorbefacient, sor-be-fa'shent (*sorbeo*, to suck in, *facio*, to make). Remedy promoting absorption.

Sorbet'. Scherbet.

Sorbe'thum, Sorbet'tum, or **Sorbe'tum.** Scherbet.

Sor'bic ac'id. Acid of mountain-ash berry.

Sor'bin. Sugar obtained from mountain-ash berry.

Sor'bit. Crystalline saccharine principle of mountain-ash berry; isomeric with mannit.

Sorbitio, sor-bish'e-o (*sorbeo,* to drink). Soup or broth.

Sorbitium, sor-bish'e-um. Soup or broth.

Sor'bum. See *Sorbus domestica.*

Sor'bus. Cratægus aria, Sorbus domestica. **S. alpi'na,** Cratægus aria. **S. America'na,** *American mountain-ash;* bark resembling wild cherry, and useful in the same cases. **S. a'pia,** Cratægus aria. **S. aucupa'ria,** *Mountain service, Sorbus of the birdcatchers, Mountain-ash, Quicken tree, Roan tree, Witch hazel, Witchwood,* ord. Rosaceæ; berries of tree are employed for same purposes as those of Sorbus domestica. **S. of the bird'catchers,** S. aucuparia. **S. cydo'nia,** Pyrus cydonia. **S. domes'tica,** *Service* or *Sorb tree;* family Rosaceæ; the fruit of the tree, sorbum, is astringent, and has been recommended in diarrhœa and dysentery, given in the form of rob. A kind of cider is made from it; also brandy. Saccharine matter extracted from the fruit has been called *sorbin.* **S. ma'lus,** Pyrus malus.

Sor'des (filth). Dirty-looking sanies discharged from ulcers. Also accumulations of the secretions of the mouth on the teeth, in adynamic fevers especially, and of foul matters in the stomach—sordes primarum viarum, rhyparia. Dirt of any kind. **S. acathar'sia,** ichor, saburra. **S. ac'idæ,** acidities. **S. aur'ium,** cerumen. **S. prima'rum via'rum,** embarras gastrique; see *Sordes.* **S. ven'tris,** excrement.

Sordiculæ (sor-dic'u-le) **aur'ium** (*sordes*). Cerumen.

Sor'did (*sordidus,* to be filthy or dirty). Filthy; foul.

Sore. Ulcer. **S., bay,** disease considered as true cancer, endemic in the Bay of Honduras. **S. mouth,** stomatitis. **S. mouth, gan'grenous,** cancer aquaticus. **S. mouth, Swan Al'ley,** see *Phagedenic chancre.* **S. throat,** cynanche. **S. throat, cler'gyman's,** pharyngitis, follicular. **S. throat, Foth'ergill's,** see *Scarlatina.* **S. throat, inflam'matory,** cynanche tonsillaris. **S. throat, pu'trid,** cynanche maligna. **S. throat, tuber'cular,** pharyngitis, follicular. **S. throat, ul'cerous,** cynanche maligna.

Sore'ness. Painful uneasiness or tenderness, local or general, on being touched with pressure that does not usually excite distressing feeling; often a febrile symptom. Also the tenderness of a wound, ulcer, etc.

Sorghum, sor'gum. Panicum Italicum. **S. saccha'rum,** see *Saccharum.*

Soroc'co. Puna.

Sororiatio, so-ror-e-ah'she-o (*sorores,* sisters). The period at which the breasts of females become developed. The act of thus becoming developed. A young maiden whose mammæ begin to show was formerly called *Sororians virgo.*

Soro'sis (*soros,* a collection). Multiple fruit resembling a mulberry.

Sor'rel, com'mon. Rumex acetosus. **S., field,** rumex acetosella. **S., French,** Rumex scutatus. **S., gar'den,** Rumex scutatus. **S., moun'tain,** Oxalis acetosella, Oxyria reniformis. **S., Ro'man,** Rumex scutatus. **S., salt of,** potassium oxalate. **S., sheep,** Rumex acetosella. **S. tree,** andromeda, A. mariana. **S., Welsh,** Oxyria reniformis. **S., white,** Oxalis acetosella. **S., wood, yel'low,** Oxalis stricta.

Sos'trum (*sostron,* a reward for preserving life). Reward to one saving life. A physician's fee or honorarium.

Sote'ria doctri'na (*soterios,* preserving). Medicinal.

Soteriology, so-te-re-ol'o-je (*soterios,* preserving, *logos,* discourse). Treatise on hygiene.

So'trum (*sotron*). Sostrum.

Souf'fle. Murmur. **S., amphor'ic,** see *Cavernous respiration.* **S., bron'chic** see *Murmur, respiratory.* **S., metal'lic,** see *Cavernous respiration.* **S., placen'tal,** bruit placentaire. **S., trache'al,** see *Murmur, respiratory.* **S., u'terine,** bruit placentaire. **S., whis'pering,** bellows sound heard over a solidified lung and excavations when the patient whispers.

Soulamea amara, sou-lah-me'ah am-a'rah. Shrub of the Moluccas; very bitter; employed by the Malays in cholera and pleurisy and as a febrifuge.

Soul'-blindness. Sight without power of recognizing objects seen, due to injury of cerebral area of the visual centre.

Sound. Instrument used by surgeons to discover the existence of stone in the bladder; usually made of highly polished steel and shaped like the catheter. The operation is termed sounding. The French *sonde* has a more distinct signification. It is a name given to different instruments introduced into cavities or into wounds and fistulas, to probe their condition or to fulfil some therapeutical indication. See *Sonde.* Also noise, or the sensation produced on the auditory nerve by the vibrations of a sonorous body. Sounds may be propagated in—1, reciprocation or consonance, as when a sounding body of a definite pitch produces a musical tone when another body of the same pitch is sounded near; 2, by resonance, as when a sounding body is placed next another, one or more of whose parts may be thrown into reciprocal vibration; 3, conduction, as where the vibrations are transmitted through fluid, liquid, or solid media. Sound also means healthy. As a verb, to catheterize. **S., auric'ular,** sound or probe for the ear. **S., bel'lows,** friction, rasp, saw sound; see *Bruit.* **S., cracked-pot,** bruit de pot félé. **S., crump'ling, pul'monary,** respiratory sound like that of a membrane rubbing against a hard body. **S. of the heart,** see *Heart.* **S., hydat'ic,** sound heard on percussion over tumors containing hydatids. **S., larynge'al,** laryngeal sound heard by the stethoscope during breathing and speaking. **S., mu'sical,** sifflement modulé. **S., Nél'aton's,** sound, porcelain. **S.** or **Probe, por'celain,** *Nélaton's probe,* a probe having a bulbous extremity of porcelain for probing deep gunshot wounds with the view of detecting the presence of a ball, which makes a leaden mark on the bulb; first, perhaps, used by Dr. Nélaton of Paris, in Garibaldi's case. **S., u'terine,** instrument somewhat like a small male catheter, to be introduced into the cavity of the uterus in the diagnosis of diseases of that viscus. When notched on the stem it enables the size of the uterine cavity to be appreciated, and becomes a good hysterometer.

Sound-conduct'ing appara'tus. Those parts of the auditory apparatus external to the labyrinth.

Sound'ing. Searching. See *Sound.* **S. the chest,** see *Auscultation.*

Sound'ness of mind. Sanity.

Soup. See *Broth.*

Sour ber'ry. See *Oxyacantha Galeni, Vaccinium oxycoccos.* **S. crout,** sauerkraut. **S. dock, boreal,** Oxyria reniformis, Rumex crispus. **S. gum,** Nyssa capitata. **S. gum tree,** Nyssa multiflora. **S. leaf,** Andromeda arborea. **S. milk,** buttermilk. **S. sop,** Bromelia ananas; fruit of Anona muricata. **S. tree,** Andromeda arborea. **S. wood,** Andromeda arborea, Andromeda mariana, Oxydendron arboreum.

South Amer'ican ki'no. Caraccas kino. Resembles West India kino in property and Jamaica kino in solubility.

South'ern prick'ly ash. Xanthoxylum Carolinianum.

South'ernwood. Artemisia abrotanum. **S., field,** Artemisia campestris. **S., mar'itime,** Artemisia maritima. **S., Tartar'ian,** Artemisia santonica.

Sow bread. Arthanita; Cyclamen. **S. this'tle,** Sonchus oleraceus.

Sow'ens. Flummery.

Soy. See *Dolichos soja.*

Soymida febrifuga, soy-me'dah feb-rif'u-gah. Swietenia febrifuga.

Soy's disease. Horse-pox.

Sozoiodol, so-zo-i'o-dol. *Di-iodo-phenol-sulphuric acid.* Monobasic acid, containing nearly 53 per cent. of iodine and 7 per cent. of sulphur; in soluble, needle-shaped prisms; odorless; antiseptic, and employed wherever iodoform may be prescribed, in skin diseases, in gynecological practice, venereal diseases, general surgery, etc. **S., mer'cury,** has been employed in syphilis, applied locally or subcutaneously. **S., potas'sium,** and **S., so'dium,** are used, especially the latter, in ulcers, affections of the bladder by irrigation, and in

nasal catarrh. **S., zinc,** is similarly employed, and is also used in mucous genito-urinary discharges.

Sozoio'dolates (of mercury, potassium, sodium, and zinc). See *Sozoiodol, Mercury, Potassium,* etc.

Sozoiodolic (so-zo-i-o-dol'ik) **ac'id.** Obtained by decomposition of sozoiodol.

Sozolic (so-zol'ik) **ac'id.** *Aseptol.* Liquid with odor of carbolic acid. Disinfectant and antiseptic.

Space, ax'illary. See *Axillæ.* **S., Doug'las's,** see *Uterus.* **S. of Fonta'na,** see *Fontana.* **S., Haver'sian,** space in cancellous tissue of bone. **S., interpedun'cular,** see *Interpeduncular.* **S., per'forated, ante'rior,** locus perforatus anticus. **S., per'forated, poste'rior,** see *Tarini pons.* **S. of Poiseuille,** see *Still layer.* **S. of Ret'zius,** see *Retzius.* **S. of Te'non,** see *Fascia of Tenon.*

Spade'bone. Scapula.

Spa'do (*spadon*). Castratus; spasm.

Spa'don. Castratus; spasm.

Spagyr'ia. Chemistry.

Spagyrists, spaj'ir-ists (*spao,* to separate, *ageiro,* to assemble). Sect of physicians pretending to account for the changes in the human body in health and disease in the same manner as the chemists formerly explained those of the inorganic kingdom.

Span. Space from end of thumb to end of little finger when extended; nine inches; one-eighth of a fathom.

Spanæmia, span-e'me-ah (*spanos,* poor, *haima,* blood). Poverty of the blood. Diminution of the quantity of red corpuscles of the blood.

Spanæmic, span-e'mik. Relating to spanæmia. Medicine whose continued use is said to impoverish the blood.

Spanapogon, span-ap-o'gon (*spanos,* rare, *pogon,* beard). One who has lost his beard or has a thin beard.

Spandarapum, span-dar-ap'um. Sparadrapum.

Spa'ning. Weaning. **S. brash,** brash, weaning.

Span'ish bari'la. Plant called saltwort. Barilla. **S. bay'onet,** plant of genus Yucca, found in some parts of the Southern United States, in New Mexico and Arizona, having stiff, sharp-pointed leaves. **S. broom,** shrub of genus Spartium, thickly set with verdant, flexible, rush-like twigs. **S. fe'ver,** Texas cattle fever. **S. fly,** cantharis. **S. juice,** extractum glycyrrhizæ. **S. lic'orice-root,** glycyrrhiza (U. S. P.). **S. moss,** Tillandsia usneoïdes. **S. nee'dle,** Bidens bipinnata. **S. oak,** Quercus falcata. **S. pel'litory,** Anacyclus pyrethrum. **S. saf'fron,** variety of commercial saffron. **S. soap,** Castile soap. **S. wal'nut oil,** candle-nut oil. **S. white,** impalpable powder of prepared chalk; nitrate of bismuth. **S. wind'lass,** old-fashioned tourniquet, made by tying a cord or handkerchief around the limb and tightening it with a piece of wood.

Span'ton's opera'tion. Method for radical cure of hernia by an instrument resembling a corkscrew, which is twisted through the canal.

Spar. A term applied to crystallized earthy mineral of shining lustre. **S., flu'or** or **flu'orite,** fluoride of calcium; Derbyshire spar. **S., heav'y,** native sulphate of baryta.

Sparadrap. (F.). Any adhesive plaster spread upon linen or paper.

Sparadrapa, spar-ad-rap'ah. Sparadrapum.

Sparadrapum, spar-ad-rap'um. Sparadrap. **S. adhæsi'vum,** *Adhesive plaster;* spread plaster of emplastrum adhæsivum; also called strapping when applied. *English courtplaster* or *Isinglass plaster* is a sparadrap. It is made by stretching black silk and brushing it with a solution of isinglass. **S. pro fontic'ulis,** issue plaster. **S. Galte'ri,** *Defensive plaster,* used for issues and to keep on dressings, and **S. vesicato'rium,** under which name substances introduced as substitutes for blistering plaster (see *Emplastrum lyttæ*) have been employed, see *Charta vesicatoria, Charta cantharidis,* etc.

Sparadrapus, spar-ad-rap'us. Sparadrapum.

Sparagma, spar-ag'mah (*sparasso,* to tear). Laceration.

Sparagmus, spar-ag'mus (*sparagmos,* tearing). Spasm, especially epileptic.

Sparagnosis, spar-ag-no'sis (*spargao,* to swell). Elephantiasis Arabum.

Spar'agrass. Asparagus.

Sparagus, spar'ag-us. Asparagus.

Sparallium, spar-al'le-um. Injection into the vagina.

Sparedia, spar-a'de-ah. Bandage covered with the white of egg.

Sparganium ramosum, spar-gan'e-um ram-o'sum (*sparganon,* swathing-clothes, owing to the band-like leaves). *Great burreed.* Indigenous; ord. Typhaceæ. Roots are subastringent, but esculent, yielding a fine fecula similar to salep; sometimes made into a poultice for inflamed mammæ.

Sparganon, spar'gan-on (*spargo,* to swathe, to wrap). Swathing-clothes; kind of bandage with which children were formerly surrounded; also a fascia or band.

Sparganosis, spar-gan-o'sis (*sparganosis,* to be full to bursting). Extreme distension, as of the breasts by milk; wrapping of a child in swathing-clothes; elephantiasis Arabum. **S. puerpera'rum,** phlegmatia dolens.

Spar'ganum. Sparganon.

Spargosis, spar-go'sis (*spargao,* to swell). Term applied to distension of secretory organs, especially to enlargement of the breasts with milk. Elephantiasis. Sparganosis.

Spar'rowgrass. Asparagus.

Sparse (*spargo,* to strew about). Term applied to branches, leaves, peduncles, and the like which are scattered or preserve no regular order.

Sparsiflo'rous (*sparsus,* scattered, *flos,* flower). Having scattered flowers.

Sparsifo'liate (*sparsus,* scattered, *folium,* leaf). Having scattered leaves.

Spar'sus (*spargo, sparsum,* to throw here and there). Sporadic.

Spartein, spar'te-in. Liquid alkaloid from spartium scoparium. Cardiac tonic and diuretic. See *Spartium scoparium.*

Spartium junceum, spar'she-um jun'se-um. *Spanish broom;* ord. Leguminosæ; small European shrub cultivated in the United States; seeds are diuretic and tonic in small doses, emetic and cathartic in large; used in dropsy. **S. scopa'rium,** *Broom.* Broom tops, *Scoparius* (Ph. U. S.); tops of Sarothamnus scoparius; Scoparii cacumina (Ph. Br.); have a bitter taste and possess diuretic properties. They have been used in dropsies. It possesses an organic liquid base —sparteïn or sparteia, $C_{15}H_{26}N_2$, a volatile oily liquid, which has narcotic properties; used in form of sulphate; also a yellow crystallized non-poisonous substance—*Scoparin*—which is diuretic. **S. tincto'rium,** Genista tinctoria.

Spasis, spas'is. Spasm.

Spasm (*spasmos, spao,* to draw). The Greeks thus named all convulsions. The word is now usually applied to involuntary muscular contractions, and these again have been divided into tonic spasm—paratonia—consisting in permanent rigidity and immobility of the muscles that are the seat of it (see *Tetanus*), and clonic spasm, consisting in alternate contractions and relaxations; see *Convulsion.* **S., clon'ic,** see *Spasm* and *Convulsion.* **S., cyn'ic,** see *Canine laugh.* **S., fixed,** continuously rigid tetanic condition of a muscle or muscles. **S., func'tional,** cramp, writer's. **S. of the glot'tis,** asthma thymicum. **S., hab'it,** spasmodic actions resulting from habit; one form of chorea, for example. **S., histrion'ic, of the face,** see *Tic.* **S. of the lar'ynx,** asthma thymicum. **S., lock,** a form of writer's cramp in which the fingers become so rigidly contracted upon the pen that it cannot be removed. **S., mas'ticatory, of the face,** trismus. **S., mim'ic, of the face,** see *Neuralgia, facial.* **S., mus'cular, idiopath'ic,** tetanilla. **S., re'flex,** see *Reflex.* **S. with rigid'ity,** tetanus. **S. of the stom'ach,** cardialgia. **S., synclon'ic,** tremulousness of muscular action. **S., ton'ic,** spasm in which the

affected muscles remain persistently and equally contracted. **S., wri'ter's,** cramp, writer's.

Spas'ma. Spasm.

Spasmatic, spas-mat'ik. Relating to spasm. See *Spasmotic.* One, in a convulsive disease, in the state of excitement. *Spasmatode* is one unexcited.

Spas'matode. See *Spasmatic.*

Spasmatodes, spas-mat-o'dees. Spasmotic.

Spasmi, spaz'me. Spasms. See *Spasm.*

Spasmodes, spaz-mo'dees. Convulsive.

Spasmodic, spaz-mod'ik. Spasmotic.

Spasmodyspnœa, spas-mo-dis-ne'ah (*spasmos,* spasm, *dyspnœa,* difficulty of breathing). Spasmodic or convulsive breathing.

Spasmology, spaz-mol'o-je (*spasmus, logos,* treatise). Treatise on spasm.

Spasmolygmus, spas-mo-lig'mus. Hiccough.

Spasmophilia, spas-mo-fil'e-ah (*spasmus, phileo,* to love). *Convulsibility.* Tendency to convulsions from unusual excitability of the motor nervous system.

Spasmorthopnœa, spas-mor-thop-ne'ah. Spasmodic breathing.

Spasmot'ic. *Spastic, Spasmodic, Spasmatic, Spasmotic.* Anything relating to spasm; also an antispasmodic. Spasmodic diseases are those accompanied with spasm.

Spasmotoxine, spas-mo-toks'een (*spasmos,* convulsion, *toxicon,* poison). Ptomaïne base obtained from cultures of bacillus tetani, producing in animals violent clonic and tonic spasms.

Spas'mous. Having the character of spasm.

Spas'mus (*spasmos*) Convulsion; spasm. **S. au'rium,** otalgia. **S. bronchia'lis,** asthma. **S. cani'nus,** see *Canine laugh.* **S. clon'icus,** convulsion. **S. cyn'icus,** see *Canine laugh* and *Risus sardonicus.* **S. facia'lis,** neuralgia, facial. **S. glot'tidis,** asthma thymicum. **S. lin'guæ,** glossospasmus. **S. maxil'læ inferio'ris,** trismus. **S. muscula'ris,** cramp. **S. musculo'rum,** cramp. **S., musculo'rum facie'i,** canine laugh. **S. nic'titans,** spasmodic or convulsive winking. **S. nu'tans,** convulsion, salaam. **S. peripher'icus,** horrida cutis. **S. universal'is,** synclonus. **S. ventric'uli,** see *Cardialgia.* **S. vesi'cæ,** spasm of the bladder.

Spasnia, spas'ne-ah. Lancinating pain produced at times in the chest by violent fits of coughing.

Spas'tic (*spastikos*) Spasmodic; spasmotic; in a state of tonic spasm; tetanic. **S. anæ'mia,** anæmia accompanying spasmodic contraction of the arteries. **S. dipleg'ia,** see *Birth palsy.* **S. gait,** peculiar stiff gait of spastic paraplegia, based on approximation of the knees and dragging of the leg. **S. paral'ysis,** paralysis attended with contraction or spasm of muscles, as in the occupation neuroses, writer's cramp, etc.

Spath'a (*spathe,* broad, flat instrument for stirring liquids, spreading plasters, etc.). Spatula for spreading ointments.

Spathaceous, spath-a'shus. Resembling a spatha.

Spathester, spath-es'ter (*spao,* to draw). Surgical instrument for drawing the prepuce over the glans when too short.

Spathomele, spath-o-ma'la (*spatha, mele,* probe). Spatula.

Spath'ula. Scapula; spatula. **S. fœ'tida,** Iris fœtissima.

Spath'ulate. Like a spatula.

Spath'um pondero'sum. Barium sulphate.

Spathyema fœtida, spath-e-a'mah fe'tid-ah. Dracontium fœtidum.

Spatia, spah'she-ah (pl. of **Spatium,** space) **intercosta'lia.** Intercostal spaces. **S. interlobula'ria,** interlobular fissures. **S. intermuscula'ria,** spaces in the popliteal region between the hamstring muscles and quadriceps extensor. **S. interos'sea metacar'pi,** spaces between the metacarpal bones.

Spatile, spat'il-a (human excrement). Liquid fecal evacuation. Excrement.

Spatium (spah'she-um) **cerebellomedulla're.** Fissure between inferior vermiform process of cerebellum and choroidal plexus of fourth ventricle. **S. interaponeurot'icum suprasterna'le,** space between superficial and deep layers of deep cervical fascia above the manubrium. **S. interpeduncula're,** interpeduncular fissure. **S. intervalvula're,** space between sinuses of Valsalva on outer surface of aorta. **S. o'ris,** space of the mouth; mouth. **S. suprachoroï'deum,** fissure between velum interpositum and lyra fornicis. **S. trigo'num,** lyra fornicis.

Spat'terdock. Nuphar advena.

Spatula, spat'u-lah. Flat instrument used for spreading plasters, stirring ointments, holding down the tongue, etc. Also the scapula. **S. mal'lei,** flattened end of handle of malleus. **S. pro o're,** spatula for the mouth.

Spatulate, spat'u-late. Like a spatula.

Spav'in. A swelling in or near the hock joint of a horse, which produces lameness.

Spay'ing (*spao,* to draw; *spado,* a castrated person). Removal of the ovaries. See *Castration.*

Spear'mint. Mentha viridis. **S. wa'ter,** see *Aqua menthæ piperitæ.*

Spear'wort. Ranunculus flammula.

Spec'ial. See *Specific.*

Specialist, spesh'al-ist (*species,* peculiar sort). One devoting himself to a specialty, as to diseases of particular parts, the eye, ear, chest, etc.

Species, spa'se-aze (Eng. spe'shees). Official mixtures of substances cut or bruised. Formerly always used for compound powders. See *Pulvis.* **S. anthelmin'ticæ,** equal parts of absinthium, tansy, chamomile, and santonica; the first three cut fine and mixed with the last. **S. aromat'icæ,** pulvis cinnamomi compositus. **S. diacinnamo'mi,** pulvis cinnamomi compositus. **S. diacre'tæ,** pulvis cretæ compositus. **S. diajala'pæ,** pulvis jalapæ compositus. **S. diam'bræ si'ne odora'tis,** pulvis cinnamomi compositus. **S. diatragacan'thæ frig'idæ,** pulvis tragacanthæ compositus. **S. diuret'icæ,** roots of lovage, asparagus, fennel, parsley, and butcher's broom, equal parts. **S. emollien'tes,** emollient species. **S. hi'eræ pic'ræ,** pulvis aloës cum canellâ. **S. lætifican'tes Rha'zis,** pulvis cinnamomi compositus. **S. laxan'tes,** Saint Germain tea. **S. ligno'rum,** wood tea. **S. pectora'lis,** pectoral tea. **S. purgati'væ,** Saint Germain tea. **S. e scor'dio cum o'pio,** pulvis cretæ compositus cum opio. **S. e scor'dio si'ne o'pio,** pulvis cretæ compositus. **S. sudorif'icæ,** wood tea. **S. vulnera'riæ,** mixture of aromatic and slightly astringent plants, reputed to be vulnerary.

Specif'ic (*species,* peculiar sort, *facio,* to make). Substance to which is attributed the special property of removing some particular disease. Mercury in syphilis and sulphur in the itch have been regarded as examples. Also used adjectively in the sense of special, as specific or special action of a drug. Specific is a term also applied to diseases like syphilis, which has a specific or undoubted origin, and in this sense it is commonly used in practice. In other words, specific diseases are those which have a distinct course and are due to absorption and development of a distinct contagion, virus, or microbe. See *Specificity, morbid.* **S. grav'ity,** relation between the weight of a body and its bulk. Specific gravities of different bodies are, as the weights, bulk for bulk. For solids and liquids water is taken as the unit; atmospheric air for gases. Thus, water is 1.000; mercury, at common temperature, 13.58; mercury is therefore more than thirteen times heavier than water. When the specific gravity of a substance is given, the temperature is assumed to be at 60° Fahr. The following table expresses the specific gravity of some of the officinal fluids of the Ph. U. S. (Attfield):

Acid, acetic	1.048	Acid, phosphoric	1.347
" " dil.	1.008	" " dil.	1.057
" " glacial	1.056–1.058	" sulphuric	1.840
" hydrobromic dil.	1.077	" " aromat.	.955
" hydrochloric	1.160	" " dil.	1.067
" " dil.	1.049	" sulphurous	1.022–1.023
" lactic	1.212	Æther	.750
" nitric	1.420	" acetic	.889–.897
" " dil.	1.059	" fortior	.725
" oleic	.800–.810	Alcohol	.820

Alcohol, dil	.928
Amyl nitris	.872–.874
Aq. ammon.	.959
" " fort.	.900
Bals. Peru	1.135–1.150

S. heat, quantity of heat required to raise the temperature of a body one degree, taking as the unit of measure the quantity required to raise the same weight of water one degree. **S. inten'sity**, vital statistical term used to express the number living at a certain age divided by the number dying at that age.

Specificity (spes-if-is'it-e), **mor'bid.** Occult quality of a disease which gives occasion to peculiarity in its nature, evolution, and treatment.

Specif'icum Paracel'si. Potassii sulphas.

Specillum, spes-il'lum (*specio*, to examine). *Stylet.* An instrument employed for examining wounds, fistulas, and for passing setons, etc.; usually made of silver, and terminating at one end by an olive-shaped button. The eyed probe has an aperture at the other extremity. The perforator of the trocar is called a stylet or specillum; also the wire or metallic rod of the flexible catheter, which gives it firmness. See *Everriculum, Hypaleiptron, Sound.* **S. auricula'rium**, sound or probe without a button or nut. **S. ce'reum**, bougie. **S. excava'tum**, a hollow sound. **S. la'tum**, spatula. **S. mi'nus**, a small probe. **S. sulca'tum**, see *Grooved.*

Speck'led leech. Hirudo medicinalis.

Specks of cor'nea. See *Caligo.*

Speclarion, spek-lah're-on (*speklarion*). Specillum.

Spec'tacled snake. Naja vulgaris or cobra di capello, so named from resemblance of certain lines on its head to spectacles.

Spec'tacles (*specto*, to behold). Glasses to assist the sight; arranged so as to be adapted to both eyes, and more or less concave or convex according as the sight is short (myopic) or long (presbyopic). Periscopic spectacles consist of concavo-convex and convexo-concave lenses, and therefore have but little spherical aberration. Pantoscopic spectacles have a different focus in the upper and lower part. Prismatic glasses are employed in muscular asthenopia. Protected or protective lenses include tinted glasses and lenses arranged to protect the eyes from heat, dust, etc., sometimes made of wire, mica, etc. When the glass is adapted to one eye, it is called an eyeglass, conspicillum, perspicillum, vitrum oculare. See *Lens.* **S., protect'ed** or **protec'tive**, see *Spectacles.*

Spec'tra (pl. of **Spectrum**), **fortification.** See *Teichopsia* and *Spectrum.*

Spec'troscope (*spectrum*, *skopeo*, to view). See *Spectrum analysis.*

Spectroscopy, spek'tros-cop-e. Use of the spectroscope; investigation with the spectroscope.

Spec'trum (*specio*, to see). *Spectre.* An appearance, real or imaginary. **S. anal'ysis**, *Prismatic analysis.* Delicate method of analysis, consisting in decomposing by means of a prism the colored light given by the salts of metals to the colorless flames of alcohol or coal gas. The spectrum is passed through a telescope, the apparatus thus constructed being called a spectroscope. It is a useful aid to quantitative analysis, as the colored flame of each metal, even in the minutest quantity, is found to give a well-marked and characteristic spectrum. Bunsen estimated that the amount of sodium which admitted of detection by prismatic analysis was the 195,000,000th part of a grain, of lithium the 70,000,000th, of calcium the 100,000,000th of a grain, and so on with other substances. Blood-stains can also thus be detected; see *Poisons.* **S., oc'ular**, disturbance of vision, consisting in the appearance of objects after the objects themselves have been withdrawn; see *Colors, accidental.* **S., so'lar**, the colored image produced by white light which has been decomposed by passing through a prism. It consists of seven different colored fringes arranged as follows: red, orange, yellow, blue, green, indigo, and violet. (The word *vibgyor*, including the initial letter of each, is a convenient means of memorizing them.) Three of these—blue, red, and yellow—are simple; the others being mixtures of them.

Specular, spek'u-lar (*specularis*). Belonging to a speculum. **S. iron**, a species of iron ore; hæmatite.

Spec'ulum (Latin, mirror, *specio*, to behold). Surgically, an instrument for dilating cavities and facilitating their examination. See *Dilator.* There are various instruments of this kind: for examination of the anus, the speculum ani; of the ear, speculum auris; of the vagina, speculum vaginæ (colpeurynter, elytreurynter); of the uterus, speculum matricis; of the eye, speculum oculi; of the nose, speculum nasi; of the mouth, speculum oris; of the throat, speculum gutturis; of the bladder, speculum vesicæ. **S. cit'rinum**, orpiment. **S., Helmon'tic**, centre, phrenic. **S. Helmon'tii**, central tendon of diaphragm. **S. In'dicum**, iron filings. **S., intra-u'terine**, form of speculum devised for the introduction into the cavity of the uterus of powerful remedies, such as nitric acid. **S. laryn'gis**, laryngoscope. **S. lu'cidum**, septum lucidum. **S. oc'uli**, see *Ophthalmoscopy.* **S. o'ris**, tongue-holder. **S., pneumat'ic**, form of aural speculum having a tube attached in such a way that the surgeon can by suction produce motion in the membrana tympani. **S. rhomboi'deum**, rhomboid space formed by tendon of trapezius muscles at lower cervical and upper dorsal spines. **S., Sims's**, see *Sims.* **S. ven'eris**, Achillea millefolium.

Specus, spa'kus. Vulva. **S. cor'dis**, ventricle of the heart. **S. pro medul'lâ spina'li**, see *Vertebral column.* **S. vertebra'lis**, see *Vertebral column.*

Spedalske, spa-dal'skee. See *Radzyge.*

Spedalskhed, spa-dalsk'hed. See *Radzyge* and *Elephantiasis Græcorum.*

Speech. The articulated voice. **S., affec'tions of**, see *Aphasia, Anarthria, Apraxia*, etc. **S. cen'tre**, see *Centre.*

Speech'lessness. Dumbness; aphasia.

Speed'well, brook'lime. Veronica beccabunga. **S., fe'male**, Antirhinum elatine. **S., offic'inal**, ve-

ronica. **S., pur'slain,** Veronica peregrina. **S., wa'ter,** Veronica beccabunga.

Speed'y cut. Injury of front leg of horse inflicted by the opposite fore part.

Spell'bone. Fibula.

Spel'trum. Zinc.

Spend'ing (*expendo*, to weigh out, to expend). Ejaculation of semen.

Sperage, sper'aje. Asparagus.

Sper'agus. Asparagus.

Sperm (*sperma*, the germ). *Spermatic fluid* or *liquor, Seminal fluid, Seed, Semen, Serum, Male's milk, Propagatory* or *Genital liquor, Vital* or *Quickening venom.* Whitish, viscid fluid of a peculiar smell secreted by the testicles, whence it is carried by the vasa deferentia to the vesiculæ seminales, to be thrown into the vagina, during coition, through the ejaculatory ducts and the urethra. It is the fecundating fluid, and must come into contact with the germ of the female. The aura seminis is incapable of effecting fecundation. Semen, at the time of emission, is composed of two different fluids: the one liquid and transparent, considered to be the secretion of the prostate; the other white, and as thick as mucilage, the product of the testicular secretion. Sperm contains, according to Vauquelin, 900 parts of water, 50 of animal mucilage, 10 of soda, and 30 of calcareous phosphate. The animal matter is peculiar, and by some termed spermatin. An extract made from the testicular secretion has been employed as a general invigorator, especially advocated by Dr. Brown-Séquard. Microscopic observations show that it contains spermatozoa, or more properly spermatozoids, for their animalcular nature is not demonstrated. They are produced in cells—sperm-cells—and have probably no more title to be considered animalcular than the cilia of the ciliated epithelium or filaments. By careful examination other minute, round, granulated bodies may be detected, less numerous than the spermatozoa, and called seminal granules, granula seminis, spermatophori. Pure sperm consists principally of spermatozoids and seminal granules enveloped in a small quantity of fluid, liquor seminis, spermatic liquor. It has been erroneously imagined that during coition there is a secretion of female sperm—semen muliebre. The increased secretion that takes place is chiefly from Duverney's glands. Sperm also means spermaceti. **S. cells,** see *Sperm.* **S. fil'aments,** spermatozoa; see *Sperm.* **S. whale,** physeter macrocephalus.

Sperma (spur'mah), **Sper'ma viri'le.** Sperm. **S. mercu'rii,** hydrargyrus acetatus. **S. rana'rum,** frog's spawn, once used in medicine.

Spermaceti, spurm-as-e'te (*sperma, cetus*, a whale). Cetaceum. **S. whale,** see *Cetaceum.*

Spermacrasia, spur-mah-kras'e-ah (*sperma, akrasis*, want of self-control). Spermatorrhœa.

Spermagon'ia. Spermatogonia.

Spermaspasmos, spur-mah-spaz'mos (*sperma, spasma*, spasm). See *Spermatorrhœa.*

Spermatacrasia, spur-mat-ak-rah'se-ah (*sperma, akrasia*, want of self-control). Spermatorrhœa.

Spermatacratia, spur-mat-ak-rat-e'ah (*sperma, a*, priv., *kratos*, power). Spermatorrhœa.

Spermatemphrax'is (*sperma, emphraxis*, obstruction). Obstruction to discharge of semen.

Spermatic, spurm-at'ik. *Seminal.* Relating to the sperm. A name given to different parts connected with the organs of generation. **S. ar'teries** are two in number—one on each side—arising from the sides of the aorta, sometimes from the renal arteries. They descend almost vertically at the sides of the vertebral column, and are distributed differently in the two sexes. In man the spermatic artery, situate at the side of the vas deferens, issues by the abdominal ring, gives numerous ramifications to the spermatic cord, and divides into fasciculi of branches, one going to the testicle, the other to the epididymis. In the female the spermatic artery, *ovarian* or *utero-ovarian artery*, dips into the pelvis and passes to the ovarium, Fallopian tube, and round ligament. **S. cord** or **chord,** *Testicular cord*, the vascular and nervous cord by which the testicle is suspended. It is composed of the spermatic artery and veins, of other small vessels, of lymphatics, of nervous filaments from the spermatic plexus and from the genito-crural branch of the lumbo-abdominal plexus, of the vas deferens, and often of a fibrocellular cord uniting the peritoneum to the upper part of the tunica vaginalis, and in which encysted hydrocele of the spermatic cord occurs. All these parts are united together by coats which, from without, are—1. The skin and areolar membrane. 2. A fibrocellular membrane, formed by the fascia superficialis. 3. A thin layer, formed by fibres of the cremaster muscle, united archwise before, and often also behind, the cord. 4. The sheath proper of the spermatic vessels, or the tubular prolongation furnished by the fascia transversalis to the cord, on a level with the superior orifice of the inguinal canal. The spermatic cord is commonly shorter on the right side than on the left, and of a different size in different individuals. It ascends almost vertically from the superior margin of the testicle as far as the lower orifice of the inguinal canal, passes through this canal, and enters the abdomen, crossing the epigastric artery. Here it forms an evident elbow, directing its course backward. Here, also, the organs composing it separate, the vas deferens descending into the pelvis to pass behind the bladder—the blood-vessels and lymphatics ascending toward the lumbar region. **S. duct,** vas deferens. **S. fas'cia,** intercolumnar fascia. **S. fil'aments,** spermatozoa. **S. fluid,** sperm. **S. gan'glion,** a large ganglion formed by branches from the hypogastric ganglion and spermatic plexus. It supplies the fundus uteri. Besides these, other ganglia have been described, such as the vesical and vaginal ganglia, and anterior and posterior subperitoneal ganglia and plexuses, which communicate with the preceding and constitute an extensive nervous rete over the entire uterus. **S. liq'uor,** liquor seminis; see *Sperm.* **S. pas'sages** or **ways,** canals concerned in the excretion of semen; see *Testicle.* **S. plex'uses of nerves** are two in number, furnished by the renal plexuses. Their filaments, called spermatic nerves, follow the arteries of the same name to the testicle in man, and to the ovary and Fallopian tube in the female—ovarian nerves. **S. veins** are two or three in number on each side. They accompany the spermatic artery, and open—those of the right, into the vena cava inferior; those of the left, into the corresponding renal vein. These veins form, above the testicle, a kind of venous network, the spermatic plexus and corpus varicosum; and another plexus before the psoas muscles, called the corpus pampiniforme.

Spermatides, spurm'at-eeds. Immature spermatozoa.

Spermatin, spurm'at-in. See *Sperm.*

Sperm'atis. Spermatic vein.

Spermatism, spurm'at-izm. Emission of sperm. *Animalculism.* The doctrine that the embryo is produced by the so-called spermatic animalcules.

Sperm'atist. Animalculist.

Spermatoblast, spurm'at-o-blast. Round or oval epithelial body of seminal tubules from which spermatozoa develop.

Spermatocele, spurm-at-o-se'le (Eng. spurm'at-o-seel) (*sperma, kele*, tumor). Swelling of the testicle, formerly regarded as produced by an accumulation of sperm in the organ. Encysted hydrocele of the testicle. Varicocele.

Spermatochorda, spurm-at-o-kor'dah (*sperma, chorda*, cord). Spermatic cord.

Spermatoclemma, spurm-at-o-klem'mah (*sperma, klepto*, to steal). Involuntary ejaculation of semen. See *Pollution.*

Spermatoclepsis, spurm-at-o-klep'sis. See *Pollution.*

Spermatocydia, spurm-at-o-sid'e-ah. Seminal ducts.

Spermatocystides, spurm-at-o-sis'tid-ees (pl. of **Spermatocystis**) (*sperma, kustis*, bladder). Vesiculæ seminales.

Spermatocystidorrhagia, spurm-at-o-sis-tid-or-rhaj'e-ah (*spermatocystides, rhage*, breaking forth). Discharge of blood from the urethra in the act of ejaculation of sperm.

Spermatocystitis, spurm-at-o-sis-te'tis (*spermatocystis, itis*). Inflammation of the vesiculæ seminales.

Spermatocyte, spurm'at-o-site (*sperma, kutos*, a cell). Epithelial cell from which is developed the spermatozoön.

Spermatodes, spurm-at-o'dees (*sperma, odes*). Gonoïdes.

Spermatogenesis, spurm-at-o-jen'e-sis (*sperma, genesis*, producing). Formation of sperm.

Spermatogeny, spurm-at-oj'en-e. Developmental formation of sperm.

Spermatogonia, spurm-at-o-gon'e-ah (*sperma, gennao*, to beget). Preparation or secretion of sperm.

Sperm'atoid (*sperma, eidos*, resemblance). Like sperm. Spermatozoa.

Spermatolep'sis, (*sperma, lepsis*, taking away). See *Pollution.*

Spermatolipsis, spurm-at-o-lip'sis. See *Pollution.*

Spermatol'ogy (*sperma, logos*, discourse). Treatise on sperm.

Spermatomere, spurm'at-o-mere. Spermatoblast.

Spermatopathia, spurm-at-o-path-e'ah (*sperma, pathos*, disease). Morbid condition of the sperm.

Spermatop'athy. Spermatopathia.

Spermatopho'bia (*sperma, phobos*, dread). State of mind attendant on seminal losses.

Spermatophore, spurm'at-o-for (*sperma, phoreo*, to carry). Albuminous nest-eggs, as it were, of the spermatozoa.

Spermatophorous, spurm-a-tof'or-us (*sperma, phoreo*, to carry). Sperm-bearing. The cells or granules in the sperm have been so called, *Spermatophori.* See *Sperm.*

Spermatopœ'ia or **Spermatopoe'sis** (*sperma, poieo*, to make). Preparation or secretion of sperm.

Spermatopoet'ic. Spermatopœus.

Spermatopœus, spurm-at-o-pe'us. Food to which has been attributed the property of augmenting the secretion of semen, and consequently of exciting the venereal act. Very succulent and nutritious substances have been so considered.

Spermatorrhœa, spurm-at-or-rhe'ah (*sperma, rheo*, to flow). An emission of sperm without copulation. Spasmodic spermatorrhœa, spermaspasmus, is an emission of sperm simultaneous with erection of the penis or after its partial subsidence. See *Gonorrhœa* and *Pollution.* **S. aton'ica,** discharge occurring to a person awake, without erection. **S. dormien'tium,** nocturnal emission of semen. **S., false,** *Prostatorrhœa.* Emission of fluid devoid of spermatozoa.

Spermatos'chesis (*sperma, schesis*, retention). Retention or suppression of the spermatic secretion.

Spermatosis, spurm-at-o'sis. Production of semen.

Spermatosomata, sperm-at-o-so'mat-ah (*sperma, soma*, body). Spermatozoa.

Spermatospores, spurm'at-o-spores. Large cells of seminal tubules which produce spermatoblasts.

Spermatozemia, spurm-at-o-ze'me-ah (*sperma, zemia*, loss). Spermatorrhœa.

Spermatozo'a (pl. of **Spermatozoön**) (*sperma, zoön*, animal). *Protozoids, Seminal* or *Spermatic filaments, Spermatic* or *Seminal animalcules.* Reputed animalcules seen in the sperm, considered to be the formative agents furnished by the male in generation. The following facts of interest as to spermatozoa have been collected (Vierordt): The rapidity of motion of spermatozoa is 1.2–2.7 mm. per minute (Henle, Kramer, Hensen), 3.6 mm. per minute (Lott). In three hours they can reach the neck of the uterus, starting from the external orifice of the hymen (Sims). The most favorable temperature for their mobility is 35° C. (Engelmann). Motion was found to exist in spermatozoa taken from the cervix uteri of a woman after five days (even after seven and a half days, B. Hausmann). A temperature of 17° C. deprives the spermatozoa of motion (Mantegazza), while it was found that they exhibited motion at 47° C. See *Sperm.*

Spermatozo'ids (*sperma, zoön*, animal, *eidos*, resemblance). Spermatozoa.

Spermatozoön, spurm-at-o-zo'on. See *Spermatozoa.*

Sperm'iduct (*sperma, ductus*, duct). Vas deferens.

Spermine, sperm'een. C_2H_5N. Leucomaïne procured from semen and other sources, such as liver, heart, testicles, etc. Also base obtained from the testicles or sperm of man and other animals; used in nervous depression and debility. See *Sperm* and *Leucomaïnes* (table).

Spermi'ni hydrochlo'ras. *Spermine hydrochlorate* or *muriate.* Salt of spermine used therapeutically. See *Spermine.*

Spermiolum (sperm-e'o-lum) **rana'rum.** Frog's spawn, once used in medicine.

Spermium, spurm'e-um. Sperm.

Spermoblast, spurm'o-blast. Spermatoblast.

Spermob'ole (*sperma, ballo*, to throw). See *Ejaculation* and *Spermatism.*

Spermœdeonecrosis, spurm-e-de-o-nek-ro'sis (*spermœdia*, diseased seeds). Sphacelus produced by ergotism.

Spermoëdia clavius, spurm-o-ed'e-ah klav'e-us (*sperma, oideo*, to swell). Ergot.

Spermolith, spurm'o-lith (*sperma, lithos*, a stone). A calculus in the spermatic duct or vesicula seminalis.

Spermoneuralgia, spurm-o-nu-ral'je-ah (*sperma, neuralgia*). Neuralgia of the spermatic cord.

Spermophlebectasia, spurm-o-fleb-ek-taz'e-ah (*sperma, phleps*, vein, *ektasis*, dilatation). A varicose condition of the spermatic veins.

Spermophleps, spurm'o-fleps (*sperma, phleps*, vein). Spermatic vein.

Spermophorum, spurm-of'o-rum. Vesicula seminalis.

Spermorrhœ'a. Spermatorrhœa.

Spermoste'mon (*sperma, stemon*, the thread of the weft). Spermatozoon.

Spermothe'ca (*sperma, theca*, sheath). A reservoir or sac in the interior of the body of some insects, as the bee, becoming filled with the fertilizing fluid of the male.

Spermozo'a (pl. of **Spermozoön**) (*sperma, zoön*, animal). Spermatozoa.

Spes phthisica, spaze tis'ik-ah. Hopeful temperament of the consumptive.

Spewing, spue'ing (*ptuo*, to spit). Vomiting.

Sphacelated (sfas'e-la-ted) or **Sphacela'tus.** Affected with sphacelus.

Sphacelation, sfas-e-la'shun. Mortification.

Sphacelia segetum, sfas-a'le-ah sej'et-um (*sphacelus*). Ergot.

Sphacelinic (sfas-e-lin'ik) **ac'id.** Acid contained in ergot.

Sphacelism, sfas'el-izm. State of being affected with sphacelus. **S. of the brain,** phrenitis.

Sphacelis'mus. Sphacelism. **S. cer'ebri,** phrenitis.

Sphacel'ium. Claviceps purpurea. Parasitic fungus of rye.

Sphaceloderma, sfas-el-o-dur'ma (*sphacelus, derma*, skin). Skin gangrene. See *Gangrene, symmetrical,* and *Raynaud's disease.*

Sphaceloid, sfas'el-oid. Resembling sphacelus.

Sphacelous, sfas'el-us. Pertaining to sphacelus.

Sphacelus, sfas'el-us (*sphazo*, to slay). *Mortification.* Word used by some synonymously with gangrene; by others with gangrene when it occupies the whole substance of a limb. It also means the disorganized portion in cases of mortification, anthraconecrosis, which must be thrown off, or is, in other words, totally dead. The foul, disorganized portion of an ulcer—called the slough—must be considered a kind of sphacelus. Sphacelus was formerly used to denote excessive pain, and also agitation from excessive pain or violent emotion. **S. cerea'lis,** ergotism. **S. nosocomia'lis,** hospital gangrene.

Sphæra, sfe'rah (*sphaira*, ball). A ball. **S. mari'na,** Pila marina. **S. thalas'sia,** Pila marina.

Sphæræsthesia, sfer-ees-tha'ze-ah. Sensation of the presence of a globular body, as in globus hystericus.

Sphæran'thus (sfe-ran'thus) **In'dicus** (*sphæra, anthos*, flower). A Malabar plant, acrid and aromatic.

Sphærecphlogiscum, sfe-rek-flo-gis'cum (*sphæra, ekphlogizo*, to light up). Chicken-pox with spherical vesicles.

Sphæria Sinensis, sfe're-ah sin-en'sis (*sphaira*, globe). *Summer plant, Winter worm, Vegetable caterpillar.* Fungus projecting from the neck of a lepidopterous insect, esteemed by the Chinese as a tonic, like ginseng.

Sphæridion, sfe-rid'e-on (dim. of **Sphæra**). Globule; small pill or granule.

Sphæ'rion. Globule; small pill or granule.

Sphærobacteria, sfe-ro-bak-te're-ah. Micrococci.

Sphærocephala elatior, sfe-ro-sef'al-ah el-at'e-or (*sphæra, kephale*, head). Echinops.

Sphærococcus (sfe-ro-kok'kus) **cris'pus** (*sphæra, kokkos*, berry). Fucus crispus. **S. edu'lis,** Halymenia edulis. **S. helmintho'chortus,** Corallina Corsicana; variety of Mediterranean algæ known as Corsican moss. **S. lichenoï'des,** Fucus amylaceus; Ceylon moss which is edible. **S. mamillo'sus,** Chondrus mamillosus.

Sphæroma, sfe-ro'mah. Spherical prominence, swelling, or tumor.

Sphærom'eter. Spherometer.

Sphærula Galeni, sfe'ru-lah gal-a'ne (dim. of **Sphæra**). Pilula; small pill or granule.

Sphæ'rulæ san'guinis. Blood-globules.

Spha'ge (*sphage*). Throat.

Sphagiasmus, sfaj-e-as'mus. Spasm of the neck-muscles.

Sphalerotocia, sfal-er-o-to'se-ah (*sphaleros*, false, *tokos*, parturition). Counterfeit labor-pains.

Sphendone, sfen'do-na (*sphendone*, sling). A sling or sling-bandage. See *Funda.*

Sphenenceph'alus. See *Sphenocephale.*

Sphe'nion. Apex of sphenoidal angle of parietal bone on the surface of the skull.

Sphe'no. In the composition of anatomical terms, the sphenoid bone.

Sphenocephalia, sfen-o-sef-al'e-ah (*sphen*, a wedge, *kephale*, head). Monstrosity in which the head is wedge-shaped, owing to the projection of the anterior fontanelle region, giving a bird-like appearance to the face. The monster is called a *Sphenocephalus.*

Sphenocephalus, sfen-o-sef'al-us (*sphen*, a wedge, *kephale*, head). See *Sphenocephalia.*

Sphe'no-ethmoid'al recess'. Recess in the angle formed by the cribriform and body of the sphenoid.

Sphe'noid (*sphen*, a wedge, *eidos*, resemblance). Wedge-shaped. Hence, **S. bone,** *Pterygoid bone;* an azygous bone, situate on the median line and at the base of the cranium. It articulates with all the bones of that cavity, supports them, and strengthens their union. Its form is singular, and resembles a bat with the wings extended. It has—1. An inferior or guttural surface, on which is situate the crista that joins the vomer, a channel which occurs in forming the pterygopalatine foramen, the pterygoid process, the pterygoid fossa, the scaphoid depression, the Vidian of pterygoid canal, the foramina (f. ovale, f. spinale). 2. A superior or cerebral surface, on which are the clinoid processes, the pituitary fossa, the foramina (f. ovale, f. rotundum, and f. spinale), the apophysis of Ingrassias or lesser wing, the foramen opticum, etc. 3. An occipital or posterior surface articulating with the basilary process of the occipital bone. 4. An anterior or orbitar nasal surface, having anteriorly a crista to unite with the ethmoid bone, and on each side a round aperture leading into two cavities in the substance of the bone, separated by a middle septum, and called the sphenoidal sinuses or cells. 5. Two zygomato-temporal or external surfaces corresponding to the temporal and zygomatic fossæ. Some divide the sphenoid into body or middle portion, and alæ, four in number, subdivided into great (temporal plates or wings, alæ magnæ) and little (apophyses of Ingrassias, alæ minores, processus ensiformes). The sphenoid suture surrounds the bone. **S., spi'nous pro'cess of,** sphenoid bone.

Sphenoid'al. Belonging or relating to the sphenoid bone. **S. an'gle,** angle formed by lines drawn from saddle-shaped depression of sphenoid bone to the middle of the anterior wall of the foramen magnum, and to a point of junction of the nasal and frontal bones. **S. ar'tery,** branch of middle cerebral artery supplying sphenoidal lobe. **S. cells,** see *Sphenoid bone.* **S. cor'nua,** *Cornua of Bertin, Pyramids of Wistar, Bones of Bertin;* two small, thin, and curved bones situate between the sphenoid and ethmoid, with which they are confounded in the adult. They have the shape of a hollow pyramid with the base turned backward, and are developed by a single point of ossification. They are articulated with the sphenoid, ethmoid, palate-bone, and vomer. **S. crest,** thin projecting edge, in middle line of anterior surface of the body, which extends downward from the sphenoidal spine and terminates in the rostrum. **S. diam'eter, min'imum,** smallest transverse diameter of space measured in the temporal fossa. **S. fon'tanelle,** see *Fontanelle.* **S. fora'men,** opening formed in greatest part by a deep notch between the orbital and sphenoidal processes, and completed above by the sphenoidal spongy bone. It leads from the spheno-maxillary fossa into the nasal cavity, and transmits an internal vein from Meckel's ganglion and nasal branch of internal maxillary artery. **S. or'bitary fis'sure,** large fissure between the great and little alæ of the sphenoid, seen at the upper and back part of the orbit, between which and the cranium it is a means of communication, and transmits the third, fourth, and sixth pairs of nerves, and the first branch of the fifth pair, to the eye and its appendages. **S. pro'cess,** thin layer of bone curving upward, inward, and backward from posterior part of vertical plate. Its superior or external surface is in contact with the sphenoidal spongy bone and base of internal pterygoid plate, and is grooved for completion of pterygo-palatine canal. Its internal or under surface looks to the posterior nares; at its base a third surface looks forward and outward into the spheno-maxillary fossa. Its inner extremity is in contact with the wing of the vomer. **S. si'nuses,** see *Sphenoid.* **S. spine**—1. A projecting crista at the inferior surface of the sphenoid bone for articulation with the vomer. 2. A triangular process met with near the posterior margin of the same bone, behind the foramen spinale. At the point of the spinous process a styloid process is frequently met with. **S. spon'gy bones** or **tur'binate bones** (cornua, sphenoidalia) form a considerable part of the anterior wall of the body of the sphenoid, including the foramen of each sinus. They have a triangular form, with the apex directed downward. In the adult they are usually incorporated with the sphenoid, but originally are separately developed.

Sphenoida'le basila're ante'rius. Anterior portion of the body of the sphenoid. **S. basila're posti'cum,** lower part of sphenoid bone. **S. latera'le poste'rius,** lateral portion of sphenoid bone.

Sphenoida'lia latera'lia. Sphenoidal wings.

Sphenoï'des (*sphenoeides*). Cuneiform; sphenoid. **S. os,** sphenoid bone.

Sphenoïdo-auricular (sfe-no'id-o-aur-ik'u-lar) **in'dex.** Relation between least sphenoidal diameter of the skull in the temporal fossa and the least biauricular diameter, taken as one hundred.

Sphenoidofron'tal in'dex. Relation between least sphenoidal diameter of the skull and the least frontal diameter, taken as one hundred.

Sphenoidopari'etal in'dex. Relation between the least sphenoidal diameter of the skull and the greatest frontal diameter, taken as one hundred.

Sphenoma'lar su'ture. Articulation between great wing of sphenoid and malar bone.

Sphenomaxillary, sfe-no-maks'il-la-re. Relating to the sphenoid and maxillary bones. **S. crest,** highest portion of sphenoid which separates the sphenomaxillary and infratemporal surfaces of bone. **S. fis'sure** is situate at the posterior part of the angle formed by the union of the internal and inferior parietes of the orbit. It is constituted, above, by the sphenoid bone, below by the superior maxillary and

palate bones, and before by the malar bone. It is narrower at the middle than at the extremities, and forms a communication between the orbitar cavity and the zygomatic fossa. **S. fos'sa,** depression at the union of the sphenomaxillary and pterygomaxillary fissures. **S. sur'face,** external surface of great wing of the sphenoid which faces the zygomatic fossa.

Sphenometer, sfe-nom'et-ur (*sphenoid, metron*). Instrument used to ascertain the length of bone to be removed in correcting deformity of the sphenoid bone.

Sphe'no-occip'ital bone. Part formed by union of occipital with sphenoid bone.

Spheno-orbitar, sfe'no-or'bit-ar. Name given to the anterior part of the body of the sphenoid bone.

Sphenopalatine, sfe-no-pal'at-een. Relating to the sphenoid and palate bones. **S. ar'tery,** *Large lateral nasal artery,* termination of the internal maxillary. It enters at the posterior part of the superior meatus of the nose through the sphenopalatine foramen, and spreads its numerous branches on the pituitary membrane covering the septum, the cornua, and the meatus. **S. fora'men,** round aperture formed by the vertical portion of the os palati and the sphenoid. It establishes a communication between the nasal fossæ and the zygomatic fossa. **S. gan'glion,** *Ganglion of Meckel, Sphenoidal ganglion;* small, nervous ganglion, of variable size, situate without the foramen sphænopalatinum in the pterygomaxillary fissure. It seems suspended by several nervous filaments to the trunk of the superior maxillary nerve, and gives off internal or sphenopalatine filaments, inferior or palatine filaments, and a posterior filament, which is the Vidian or pterygoid nerve. **S. nerves,** *Lateral nasal nerves;* these arise from the ganglion just described, at its inner part, and enter the nasal fossæ by the sphenopalatine foramen. They are five or six in number, and distribute their filaments to the outer and inner parietes of the nasal fossæ. One remarkable branch is the nasopalatine. **S. notch,** space existing between the orbital and sphenoidal processes of the palate-bone, which go to form the sphenopalatine foramen. **S. plex'us,** nerve-plexus which communicates with the sphenopalatine ganglion. **S. veins,** tributaries of pterygoid plexus adjacent to artery of the same name.

Sphenopalatinus, sfe-no-pal-at-e'nus. Levator palati.

Sphenoparietal, sfe-no-par-i'e-tal. Belonging or relating to the sphenoid and parietal bones. **S. in'dex,** sphenoidoparietal index. **S. si'nus,** anterior part of cavernous sinus of dura mater where it joins the ophthalmic vein. **S. su'ture,** formed by the articulation of the extremity of the greater ala of the sphenoid with the anterior and inferior angle of the parietal bone.

Sphenopetro'sal fis'sure. Fissure at base of skull between apex of petrous bone and greater wing of sphenoid. **S. lam'ina,** thin horizontal plate projecting backward from the foramen spinosum of the sphenoid bone. **S. su'ture,** line of union between petrous portion of temporal bone and greater wing of sphenoid.

Sphenopharynge'us. Separated portion of superior constrictor of pharynx arising from spine of sphenoid.

Sphenopterus, sphen-op'ter-us (*sphen,* wedge, *pteron,* wing). Possessing wings like a wedge.

Sphenopterygopalatinus, sfen-o-ter-ig-o-pal-at-e'nus. Circumflexus.

Sphenosalpingostaphyli'nus. Tensor palati.

Spheno'sis (*sphenosis*). See *Wedged.*

Sphenospi'nous ar'tery. Middle meningeal artery.

Sphenosqua'mous su'ture. Line of union between greater wing of sphenoid and squamous portion of temporal bone.

Sphenostaphylinus, sfen-o-staf-il-e'nus. Circumflex muscles (of the palate).

Sphenotemporal, sfe-no-tem'po-ral. Belonging to the sphenoid and temporal bones. **S. su'ture,** suture at the articulation of the great ala of the sphenoid bone with the squamous portion of the temporal. Béclard named *sphenotemporal* the posterior part of the body of the sphenoid, which is developed by distinct points of ossification.

Sphenotresia, sfen-o-tra'ze-ah (*sphen,* wedge, *tresis,* boring). Destruction of base of skull in operation of craniotomy.

Sphere (*sphæra,* globe). Body contained under a single surface every part of which is equidistant from its centre.

Spherical, sfer'ik-al. Possessing shape of a sphere. **S. aberra'tion,** excess of refraction of the peripheral part of a convex lens over the central area, producing an imperfect focus and an indistinct image. **S. nu'cleus,** nucleus of gray matter in the cerebellum near the corpus dentatum.

Spherobacte'rium. Sphærobacterium.

Spherocerebrin, sfe-ro-ser'eb-rin (*sphaira,* ball, *cerebrum*). Nitrogenized substance found in cerebral structure.

Spheroid, sfe'roid. Like a sphere.

Spheroidal (sfe-roid'al) or **Spheroidic,** sfe-roid'ik. Having the form of a spheroid; applied to crystals having several convex surfaces.

Spherom'eter (*sphaira,* sphere, *metron,* measure). Instrument chiefly used for measuring the curvation of surface of lenses.

Spherule, sfer'yule. Little sphere or spheroidal body, as quicksilver; when poured upon a plane, it divides into a number of minute spherules.

Sphincter, sfink'tur (*sphingo,* to constrict). *Constrictor.* Name given to several annular muscles constricting or closing certain natural openings. **S. a'ni,** anatomists describe two sphincter muscles of the anus: 1. *S. externus* or *cutaneus,* situate around the anus, is elliptical from before to behind, flattened, and pierced at the middle. Its fibres describe concentric arcs, which are attached behind to the extremity of the coccyx by a dense areolar substance, and are confounded anteriorly with the bulbocavernosi and transversi perinei muscles. This muscle contracts and closes the anus. 2. *Inner* or *Internal sphincter ani, S. intestinalis,* is by many anatomists considered the termination of the circular fibres of the rectum. It is annular, and situate above the inferior extremity of the rectum to the extent of about a finger's breadth. It has the same uses as the other. **S. a'ni ter'tius,** rectal folds. **S. col'li,** deeper of two primitive layers from which the facial muscles are derived; buccinator, orbicularis oris, and other deep muscles are formed from it. **S. gu'læ,** constrictor pharyngis. **S. il'ei,** Bauhin, valve of; ileocæcal valve. **S. intestina'lis,** sphincter ani internus. **S. ir'idis,** circular muscle at inner edge of iris, contraction of which lessens the diameter of the pupil. **S. labio'rum,** orbicularis oris. **S. laryn'gis,** aryteno-epiglottic muscles of two sides encircling superior orifice of larynx. **S. of lar'ynx,** sphincter laryngis. **S. oc'uli,** orbicularis palpebrarum. **S. œsophage'us,** hiatus œsophageus. **S. o'ris,** orbicularis oris. **S. o'ris exter'nus,** superficial fibres of orbicularis oris not derived from the buccinator. **S. o'ris inter'nus,** deep fibres of orbicularis oris derived from buccinator. **S. palpebra'rum,** orbicularis palpebrarum. **S. pharyngolarynge'us** includes the following three sets of muscles considered as one: inferior constrictor, cricothyroideus anticus, and thyroideus. **S. pros'tatæ,** sphincter urethræ prostaticus. **S. pupil'læ,** sphincter iridis; see *Iris.* **S. pylo'ri,** pylorus; see *Pylorus.* **S. ure'thræ prosta'ticus,** prostatic muscular fibres surrounding the urethra below the sphincter vesicæ internus. **S. vagi'næ,** perineal muscle arising from central tendon of perineum, surrounding the vaginal orifice and embracing the bulb of the vestibule; inserted upon corpora cavernosa of clitoris. Constrictores cunni. **S. vagi'næ profun'dus,** constrictor vaginæ profundus. **S. ventric'uli,** pylorus. **S. vesi'cæ,** *Sphincter of the bladder;* some anatomists have given this name to whitish, elastic, and circular fibres surrounding the neck of the bladder, but not constituting a particular muscle. The name *Pseudosphincter* is sometimes applied to the anterior fibres of the levator ani which pass beneath the neck of the bladder and

by their contraction close that opening. See *Compressor urethræ.*

Sphincteralgia, sfink-ter-al'je-ah (*sphincter, algos,* pain). Pain in the anal sphincter or immediate vicinity.

Sphincterotomy, sfink-tur-ot'o-me. Incision into or operation upon the sphincter.

Sphingo'sin. Alkaloid found in brain structure.

Sphinxis, sfinks'is (*sphingo,* to bind). Constriction.

Sphondylium, sfon-dil'e-um (*sphondulion*). Heracleum spondylium.

Sphongus, sfon'gus (*sphongos*). Fungus; spongia.

Sphragidonychargocometa, sfrag-id-o-nik-ar-go-kom-a'tah (*sphragis,* seal, *onuchos,* nail, *argos,* white, or perhaps *arguros,* silver, *komeo,* to adorn). A charlatan who adorned his fingers to the very nails with rings.

Sphygma, sfig'mah (*sphugmos,* pulse). Pulse.

Sphygmic, sfig'mik. Relating to the pulse; pulsatory. **S. art,** art of the pulse.

Sphygmica doctrina, sfig'mik-ah dok-tre'nah. Sphygmology.

Sphygmical, sfig'mik-al (*sphugmos,* pulse). Relating to the pulse.

Sphygmicus, sfig'mik-us (*sphugmikos,* relating to the pulse). Throbbing.

Sphygmocephalus, sfig-mo-sef'al-us (*sphugmos,* pulse, *kephale,* head). A pulsatory pain in the temples.

Sphygmo'des (*sphygmos,* pulse). Throbbing.

Sphygmogram, sfig'mo-gram (*sphygmos, gramme,* a tracing). Tracing produced by the sphygmograph.

Sphyg'mograph (*sphygmos, grapho,* to describe). An instrument applied over the heart or an artery, indicating graphically the character of the pulse as to force and extent of undulations.

Sphygmography, sfig-mog'raf-e (*sphygmos, grapho*). Description of the pulse, its nature, causes, and pathological changes.

Sphyg'moid (*sphygmos, eidos,* resemblance). Similar to a pulse or to a pulsation.

Sphygmolegium, sfig-mo-lej'e-um (*sphygmos, lego,* to read). Instrument for measuring the quickness or force of the pulse.

Sphygmology sfig-mol'o-je (*sphygmos, logos,* description). The doctrine of the pulse.

Sphygmomanometer, sfig-mo-man-om'et-ur (*sphygmos, manos,* in small quantity, *metron*). Instrument by which blood-pressure in the arteries is measured.

Sphygmom'eter. Instrument for measuring the quickness or force of the pulse.

Sphyg'mophone (*sphygmos, phone,* sound). An instrument devised to enable the ear to determine the rhythm, etc. of the pulse of a person at a distance by means of the electric wire.

Sphyg'mos (*sphugmos*). Pulse; pulsation.

Sphyg'moscope (*sphygmos, skopeo,* to examine). Instrument to exhibit the motion of the heart or of the blood-vessels in their pulsations.

Sphygmoscopy, sfig-mos'ko-pe (*sphugmos, skopeo,* to see). Science of tracing a pulse-curve by means of the sphygmoscope.

Sphygmosystole, sfig-mo-sis'to-le (*sphygmos, systole,* contraction). The time during which the systole at the heart influences the pulse-beat, as demonstrated by the sphygmograph.

Sphygmotechny, sfig'mo-tek-ne (*sphygmos, tekne,* art). Art of examining the pulse as a medium for diagnosis.

Sphyg'mous. Relating to or having the character of a pulse.

Sphyg'mus (*sphugmos*). Pulsation; pulse.

Sphy'ra or **Sphy'ron** (*sphuron,* the ankle). Malleolus.

Sphyrotomy, sfi-rot'o-me (*sphura,* malleus, *tome,* section). The operation of excising the handle of the malleus.

Sphyxis, sfix'is (*sphuxis*). Pulsation.

Spica, spi'kah. Spica bandage. A bandage so called in consequence of its somewhat resembling a spike of barley. The turns of the bandage cross like the letter V, each leaving a third of the roller uncovered. It is distinguished into ascending and descending. It may be applied over various parts of the body, and in a different manner in each case: thus, there is the spica or fascia inguinalis, spica inguinalis duplex, the spica for the shoulder, and another for the thumb. Ribbail's bandage is a form of spica for the instep, the use of which is indicated where pressure is needed. Lavandula spica. **S. alpi'na,** Valeriana Celtica. **S. Cel'tica,** Valeriana Celtica. **S. In'dica,** Nardus Indica. **S. nar'di,** Nardus Indica.

Spicate, spi'kate (*spica,* spike). Relating to a spike; term applied to flowers.

Spice. See *Species.* **S. berry,** gaultheria; Laurus benzoin. **S. bush,** Laurus benzoin. **S. plas'ter,** made by mixing equal parts of allspice, cloves, cinnamon, and nutmegs, and adding thereto one-half part of black pepper. These are made into a mass by using a knife-blade to stir them, and are then sewed up in a bag which is quilted to prevent sagging of the contents. One side of the plaster is now wet with warm brandy, whiskey, or vinegar, and is then ready for use. **S. wood,** Laurus benzoin.

Spices, four. See *Myrtus pimenta.*

Spicillium, spis-il'le-um. Specillum.

Spicula, spik'u-lah. See *Spiculum.*

Spiculum, spik'u-lum (pl. **Spicula**). A small spike-like fragment of bone.

Spi'der. See *Araneæ tela.*

Spi'der's web. Araneæ tela.

Spi'derwort. Liliago; Tradescantia Virginica.

Spigelia, spi-je'le-ah (after Adrian Spigelius, the anatomist). S. Marilandica. **S. anthel'mia,** *Demerara pinkroot,* native of South America and the West India Islands. **S. gentianoï'des,** native perennial plant of Florida having white or purple flowers. S. anthelmia has properties like the **S. Marilan'dica,** *Perennial wormgrass* or *Indian pink, Carolina pink, Starbloom, Wormroot;* ord. Gentianaceæ; indigenous. The root—Spigelia (Ph. U. S.), pinkroot—is a useful anthelmintic, particularly in cases of lumbrici, and is said to have been found serviceable in remittent fever. It is a narcotico-acrid.

Spige'lian lobe of the liv'er. Small lobe of the liver which extends from the rear of the under surface of the right lobe of the liver.

Spigeline (spij'el-een) or **Spigelin,** spij-el'in. A volatile alkaloid obtained from the root of Spigelia Marilandica and S. anthelmia.

Spig'nel. Æthusa meum.

Spig'net. Aralia racemosa.

Spike lav'ender. Lavandula spica.

Spike'nard (*spica,* spike, *nardus,* nard). Conyza squarrosa, Nardus Indica. **S., Amer'ican,** Aralia racemosa. **S., false,** Smilacina racemosa. **S., small,** Aralia nudicaulis. **S. tree,** Aralia spinosa.

Spilan'thes. Spilanthus.

Spilanthus acmella, spil-an'thus ak-mel'lah (*spilos,* spot, *anthos,* flower, owing to its dotted or speckled flower). *Balm-leaved spilanthus,* ord. Compositæ. The herb and seed are diuretic and emmenagogue. They have been given in dropsies, jaundice, fluor albus, and calculous complaints, in infusion. **S., balm'-leaved,** Spilanthus acmella. **S. cilia'ta,** S. acmella. **S. fimbria'ta,** S. acmella. **S. olera'ceus,** *Spear-leaved spilanthus;* tincture of the plant has been recommended in toothache.

Spili, spe'le (*spilos,* spot or stain). See *Nævus.*

Spiloma, spil-o'mah (*spiloma*). See *Nævus vascularis.*

Spiloplan'ia (*spilos,* spot, *planos,* wandering). Small spots—maculæ—on the skin. Elephantiasis Græcorum.

Spiloplax'ia. Red spots occurring in elephantiasis Græcorum.

Spilo'sis (*spilos,* spot, *osis*). Simple discoloration of the surface. **S. ephe'lis,** ephelides. **S. polio'sis,** poliosis.

Spi'lus (pl. **Spili**). See *Nævus.*

Spi'na (thorn). Process on the surface of a bone which has been compared to the spines or thorns on certain vegetables. The chief processes of this name are the nasal spine, the spine of the scapula, the

spine of the ischium, the four iliac spines, the palatine spine, the maxillary, the sphenoid, etc. The spine of the back is the collection of vertebræ constituting the vertebral column. Penis. **S. accesso'ria is'chii,** little eminence occasionally occurring in great sciatic notch, at junction of ilium and ischium. **S. ac'ida,** Oxyacantha Galeni. **S. Ægypti'aca,** see *Acacia.* **S. al'ba,** Carduus marianus, Mespilus oxyacantha, Onopordon acanthium. **S. angula'ris,** sphenoid spine. **S. bicipita'lis exter'na,** pectoral ridge. **S. b. inter'na,** inner lip of bicipital groove. **S. bif'ida,** name given to certain congenital malformations of the vertebral canal, with protrusion of some of its contents in the form of a fluid humor. The usual site of the lesion is in the lumbosacral region, but it may be found in the upper cervical and other parts of the column; see *Hydrorhachis.* **S. cervi'na,** rhamnus. **S. con'dyli exter'na fem'oris,** outer lip of linea aspera. **S. c. inter'na fem'oris,** inner lip of linea aspera. **S. condyloï'dea exter'na,** outer supracondylar ridge. **S. c. inter'na,** inner supracondylar ridge. **S. Darwin'ii,** Darwinian tubercle. **S. domes'tica,** rhamnus. **S. dor'si,** vertebral column. **S. dor'si intror'sum flex'a,** lordosis. **S. ethmoïda'lis,** ethmoidal spine. **S. fer'rea,** pin. **S. fronta'lis,** nasal spine (frontal bone). **S. hel'icis,** process of helix. **S. Helmon'tii,** proximate cause of inflammation, as if the part or organ was pricked with a thorn. **S. hir'ci,** astragalus verus. **S. il'io-pectine'a,** spine of pubis. **S. infecto'ria,** rhamnus. **S. infe'rior muscula'ris,** crista arcuata cartilaginis arytenoïdeæ. **S. intercondyloï'dea** or **S. interme'dia,** spine of tibia. **S. ischiad'ica, ischiat'ica,** or **is'chii,** spine of ischium. **S. jugula'ris,** jugular spine. **S. menta'lis** or **menta'lis inter'na,** genial tubercle. **S. mus'culi ter'eti majo'ris,** process for insertion of teres major, found on lower part of axillary border of scapula. **S. nasa'lis or nasa'lis ante'rior,** nasal spine. **S. nasa'lis os'sis fron'tis,** nasal spine (frontal bone). **S. nasa'lis os'sis maxilla'ris superio'ris,** anterior nasal spine. **S. nasa'lis poste'rior os'sis palati'ni,** posterior nasal spine. **S. nasa'lis supe'rior,** nasal spine (frontal bone). **S. na'si,** prominent line on the lateral surface of the nose. **S. navicula'ris,** pointed process found at inner edge of scaphoid bone of tarsus. **S. neura'lis,** neural spine. **S. nodo'sa,** rhachitis. **S. occipita'lis,** occipital protuberance. **S. orbita'lis infe'rior,** small spine frequently found on orbital surface of greater wing of sphenoid, affording attachment to orbital muscle of Müller. **S. orbita'lis supe'rior,** spina recti lateralis. **S. os'sis il'ii,** spine of ilium. **S. os'sis is'chii,** spine of ischium. **S. os'sis pu'bis,** spine of pubis. **S. palati'na,** posterior nasal spine. **S. pe'dum,** corn. **S. pu'bis,** spine of pubis. **S. rec'ti latera'lis,** small projection on border of greater wing of sphenoid, bounding the sphenoidal fissure, for attachment of external rectus muscle of the eye. **S. scap'ulæ,** spine of scapula. **S. sphenoïda'lis,** sphenoidal spine; spine of sphenoid. **S. supe'rior muscula'ris,** prominence of the arytenoid cartilage. **S. tib'iæ,** spine of tibia. **S. transver'sa,** crista arcuata cartilaginis arytenoideæ. **S. trochanter'ica ma'jor,** outer lip of linea aspera. **S. t. mi'nor,** inner lip of linea aspera. **S. trochlea'ris,** trochlear spine. **S. tuber'culi majo'ris,** pectoral ridge. **S. t. mino'ris,** inner lip of bicipital groove. **S. tympan'ica,** small projection from tympanic ring of middle ear. **S. t. ante'rior,** small projection not seen when ring unites with tegmen tympani. **S. t. ma'jor,** spina tympanica anterior. **S. t. mi'nor,** small process or projecting end of tympanic ring. **S. t. poste'rior** serves as point of attachment of anterior ligament of malleus. **S. vento'sa,** *Exostosis, Osteoid cancer, White swelling* (of some); cystic or osseous formation situate beneath the periosteum. Term of no definite meaning, as is obvious from these various words being considered its synonyms. By some it is defined to be a disease of the osseous system, in which the texture of the bone dilates, seeming to be distended with air and constituting a variety of osteosarcoma. By others it is considered to be a tumor arising from an internal caries of a bone, occurring most frequently in the carpus or tarsus. The term itself is a translation from the Arabic of Rhazes. See *Hydrarthrus, Mollities ossium,* and *Osteoid.* **S. vertebra'lis,** vertebral column. **S. vestib'uli,** crista vestibuli. **S. zygomat'ica,** portion of zygomatic process of superior maxillary bone contributing to margin of sphenomaxillary fissure.

Spin'ach or **Spina'chia.** See *Spinacia.*

Spina'cia (*spina,* thorn or prickle). *Spinach.* Ord. Chenopodiaceæ. Plant resembling the cabbage in its dietetic powers. The leaves boiled, with the addition of oil, form a good emollient cataplasm. Used in phthisical complaints. **S. olera'cea,** spinacia.

Spi'næ (pl. of **Spina**). Spinous processes. **S. menta'les,** genian apophyses or processes. **S. ventos'itas,** spina ventosa.

Spin'age. Spinacia.

Spi'nal (*spina,* spine). Relating to the vertebral column. **S. ac'cessory,** spinal nerve. **S. ac'cessory nu'cleus,** compact group of cells lying dorsolaterally from central group of cells in anterior column of the cord, which is the origin of the spinal accessory nerve. **S. ar'teries,** two in number: 1. The *Posterior spinal artery.* It arises from the vertebral, near the corpora pyramidalia, and descends on the posterior surface of the spinal marrow, distributing its ramifications to it. 2. The *Anterior spinal artery* is larger than the last, and arises, also, from the vertebral. It descends in a serpentine manner upon the anterior surface of the marrow, furnishes ramusculi to it, and unites with that of the opposite side opposite the foramen magnum occipitis. A very tortuous branch arises from this union, which descends as far as the inferior extremity of the marrow, to which it sends numerous divisions. The term *Spinal arteries* or *Rachidian arteries* is also given in the abstract to all arteries of the spinal marrow and vertebral canal. The same may be said of the veins and nerves. **S. canal',** vertebral canal surrounding and protecting the spinal cord and its investments. **S. cen'tre,** spinal marrow; spinal cord. **S. cen'tres,** motor centres in the spinal cord; see *Centre.* **S. col'umn,** vertebral column, composed of 33 vertebræ. **S. com'missure,** transverse portion connecting two halves of cord, measuring $\frac{1}{25}$th or $\frac{1}{30}$th of an inch in average thickness, and consisting of two portions, anterior white and posterior gray commissures. The anterior is proportional in size to the size of the nerve-roots. The posterior is largest in the upper part of the cornu medullaris. **S. cord,** medulla spinalis. **S. debil'ity,** spinal weakness. **S. foram'ina,** in the abstract, are the foramina formed by every two contiguous vertebræ through which the spinal nerves issue; see *Vertebral.* The term *Foramen spinale* or *spinosum* is especially applied to a small foramen in front of the spinous process of the sphenoid bone, through which the middle artery of the dura mater enters the cranium. It is likewise called *Foramen spheno-spinosum.* **S. fur'row,** vertebral groove. **S. gan'glion,** see *Encephalon.* **S. gray,** gray matter of spinal cord. **S. ice-bag,** india-rubber bag filled with cracked ice; a convenient method of making application of cold to the spinal cord. **S. irrita'tion,** pathological view referring nervous diseases to irritation of the spinal cord. This irritation is presumed to be indicated by tenderness on pressure over the spinous process of one or more vertebræ, or over the nerves proceeding from the cord and distributed to the parts at the sides of the spine. Such tenderness, however, by no means indicates the pathological condition in question, as it is often met with in those enjoying good health. **S. localiza'tion,** the designation of a particular part of the spinal cord as the centre of certain physiological functions, or of pathological interest as the location of morbid processes. **S. mar'row,** medulla spinalis. **S. meningi'tis,** inflammation of spinal meninges or membranes. **S. nerve,** *Accessory of the par vagum* or *eighth pair, Accessory nerve of Willis, Spinal accessory, Superior respiratory nerve, Eleventh pair of encephalic nerves,* arises from the medulla spinalis, within the verte-

bral canal, between the anterior and posterior roots of the cervical nerves, at a greater or less distance from the cranium. The roots unite to form the nerve, which ascends into the cranium through the foramen magnum of the occipital bone, and issues by the foramen lacerum posterius, crossing the sterno-cleido-mastoïdeus, to which it gives filaments, and losing itself entirely on the trapezius muscle. The pneumogastric and spinal accessory nerves together—*nervus vagus cum accessorio*—resemble the spinal nerves; the former, with its ganglion, being the posterior root; the latter the anterior. **S. nerves,** vertebral nerves. **S. point,** tender spot over spinous process of a vertebra in neuralgia, indicating the nerve affected. **S. prolonga'tion,** medulla spinalis. **S. re'gion,** space on either side of vertebral spine. **S. stim'ulant,** that which increases the functional activity of the spinal cord. **S. sys'tem of nerves,** see *Nerves.* **S., true,** see *Nerves.* **S. veins,** longitudinal meningorachidian veins. **S. weak'ness,** *Spinal debility;* vaguely used for want of power in the extensor or other muscles of the spine, with tendency to deviation of the vertebral column. It is mostly seen in nervous and delicate females, and is often due to carelessness of posture.

Spina'les col'li mino'res, interspinales colli. **S. et transversa'les lumbo'rum,** transversalis dorsi.

Spina'lis cap'itis. S. cervicis, S. colli, and S. dorsi. **S. cervi'cis,** semispinalis colli. **S. col'li,** semispinalis colli. **S. dor'si,** name of fleshy fasciculi situate on the lateral surface of the spinous processes, from the third dorsal vertebra to the first or second lumbar, which form part of the transversospinalis of most authors. **S. dor'si ma'jor,** S. dorsi. **S. dor'si mi'nor,** some small fleshy fibres situate on each side of the interspinal ligament; short, flat, and passing from one spinous process to another. Like the preceding, they form part of the transversospinalis. All these fleshy fasciculi strengthen the vertebral column. **S. lumbo'rum,** longissimus dorsi.

Spi'nants. Medicines which, by their action on the spinal nervous system, excite muscular contraction, as strychnia, brucia, etc.

Spinati, spin-at'e. Interspinales colli.

Spinatus, spin-at'us. Spinal.

Spin'dle cells. Fusiform cells seen in certain malignant growths under the microscope; in sarcoma, for example. **S. tree;** Euonymus Americanus.

Spin'dle-cell lay'er. Term applied to deep layer of cortical gray matter of brain.

Spin'dle-celled sarco'ma. See *Sarcoma.*

Spine. Spina; vertebral column. **S., cur'vature of,** angular deformity occurring in rickets, caries of the spine, etc. **S., hæ'mal,** sternum. **S. of il'ium,** projections on anterior and posterior borders of ilium. The anterior superior spine and posterior superior spine are situate at corresponding ends of the crest of the ilium. The anterior inferior spine is above and in front of the acetabulum. The posterior inferior spine is above the greater sacrosciatic notch. **S. of is'chium,** eminence about the central part of the posterior edge of the ischium, affording attachment to the lesser sacrosciatic ligament. **S., men'tal,** projections on the deep surface of the body of the inferior maxillary bone. **S., neu'ral,** spinous process. **S. of pu'bis,** process at anterior end of iliopectioneal line, at point at which it passes into the crest of the pubis. **S., rail'way,** see *Concussion.* **S., revolv'ing,** see *Rotatio spinæ.* **S. of scap'ula,** ridge of bone on posterior surface of scapula, affording attachment to the trapezius and deltoid muscles. **S. of sphe'noid,** sharp prolongation extending back into the angle between the petrous and squamous portions of the temporal bone. **S. of Spix,** pointed prominences at border of inferior dental foramen for attachment of internal lateral ligament of jaw. **S. of tib'ia,** anterior projection between the condyloid surfaces.

Spin'gle. Anethum.

Spini-axoïdo-occipitalis, spe'ne-aks-o'id-o-ok-sip-it-al'is. Rectus capitis posticus major.

Spini'tis. Inflammation of spinal cord; myelitis.

Spinobul'bar (*spina,* spine, *bulbus,* bulb). Relating to the spinal cord and the medulla oblongata; as the spinobulbar neuroses, which include paralysis agitans, chorea, and tetanus.

Spinocostales, spe-no-cos-tal'ees. Superior and inferior posterior serratus muscles.

Spinodorsitis, spe-no-dor-se'tis (*spina, dorsum,* back, *itis*). Myelitis.

Spinola, spin'o-lah (*spina,* spine). See *Hydrorhachis.*

Spinomus'cular seg'ment of the motor system of the nerves. Motor cells in the medulla oblongata and spinal cord and the nerves arising from them.

Spinoneu'ral. Term applied to spinal cord and nerves immediately associated with it.

Spino'sus (*spina,* spine). Spinal.

Spinotransversa'lis. Erector spinæ; also splenius. **S. bre'vis,** rotator spinæ.

Spinotransversa'rii. Splenius and obliquus capitis, considered as a common mass.

Spi'nous (*spina,* thorn). Having the shape of a spine or thorn. **S. point,** see *Apophysary.* **S. pro'cess of sphe'noid,** spine of sphenoid. **S. pro'cesses of il'ium,** spines of ilium. **S. pro'cesses** or **apoph'yses of the ver'tebræ,** situate at the posterior part of each vertebra, and affording attachment to the muscles whose office is to extend the spine; see *Vertebra.*

Spintherismus, spin-ther-iz'mus (*spintherizo,* to emit sparks). Sensation of sparks flashing before the eyes; synchisis scintillans.

Spintherometer, spin-ther-om'et-ur (*spinther,* spark, *metron,* measure). Instrument for measuring the size, power, and shock of electrical sparks.

Spintheropia, spin-ther-o'pe-ah (*spinther,* spark, *ops,* vision). See *Confusio.*

Spin'ula (dim. of **Spina,** thorn). Pin.

Spi'ny clot'bur. Xanthium spinosum.

Spiracula, spir-ak'u-lah (pl. of **Spiraculum**) (*spiro,* to breathe, breathing-holes). Respiratory pores of the skin.

Spiræ cerebri, spir'e ser'eb-re (*speira,* fold, winding). Cerebral convolutions.

Spiræ'a denuda'ta (*spira,* spire). S. ulmaria. **S. filipen'dula,** *Dropwort;* ord. Rosaceæ. The root is said to possess astringent and lithontriptic virtues. **S. loba'ta,** *Queen of the prairie, American meadowsweet;* an oil resembling oleum gaultheriæ is obtained from the roots and stems. **S. opulifo'lia,** *Opulus-leaved spiræa, Nine-bark,* has similar properties. **S. palma'ta,** S. lobata. **S. prunifo'lia,** ornamental shrub of Japan, cultivated in the United States, bearing white flowers in profusion. **S. tomento'sa,** *Hardhack, Red meadowsweet, Steeplebush, Rosy bush, Whiteleaf;* root of this indigenous species, *Spiræa,* is abundant in the Northern States; is tonic and astringent. It is usually administered either in the form of extract or decoction. **S. trifolia'ta,** Gillenia trifoliata. **S. ulma'ria,** *Meadowsweet, Queen of the meadows;* leaves have been recommended as mild astringents and diuretics—the flowers as antispasmodics and diaphoretics.

Spi'ral (*spira,* coil, spine). Winding like a screw. **S. band'age,** bandage ascending obliquely around more or less conical portions of the body, each turn being applied smoothly to the surface, the folds being sometimes reversed to attain this object. **S. canal' of modi'olus,** opening of spiral lamina of cochlea at axial margin, which contains spiral ganglion. **S. crest,** pointed, indentated border of limbus of spiral lamina turned toward organ of Corti. **S. fi'bre,** process of bipolar ganglionic cells that is wound around another. **S. fis'sure,** fissure between two plates of spiral lamina of cochlea, giving exit to filaments of cochlear nerve. **S. grooves,** two in number: internal, situate at periphery of spiral lamina of cochlea; external, on the external wall of the cochlear duct. Musculo-spiral grooves. **S. lam'ina,** bony lamina dividing scala tympani from scala vestibuli of cochlea. **S. lig'ament,** thickened portion of external periosteum of cochlea, corresponding to cochlear duct. **S. line of fe'mur,** intertrochanteric line. **S. nerve,**

musculo-spiral nerve. **S. plate,** lamina spiralis. **S. tract,** depression at bottom of internal auditory meatus by which filaments of cochlear nerve enter internal ear. **S. tubes of kid'ney,** tubuli uriniferi. **S. tu'bule of Schachowa,** spiral portion of uriniferous tubule between first convoluted tubule and looped tubule of Henle.

Spi'rals, Cursch'mann's. See *Curschmann.*

Spiramenta (spir-am-en'tah) **pulmo'num** (air-holes of the lungs) (*spiro,* to breathe). See *Lung.*

Spiramentum animæ, spir-am-en'tum an'im-e (air-hole of the breath). Lung.

Spiramina (spir-am'in-ah) (pl. of **Spiramen**) **palpebra'rum** (pores of the eyelids). Lacrymal puncta. **S. pulmo'num,** see *Lung.*

Spiratio, spir-ah'she-o (*spiro, spiratum,* to breathe). Respiration.

Spirema, spir-a'mah. Period of division of the nucleus in which chromatin becomes a long filament wound into spherical shape, and the nucleoli disappear. See *Karyokinesis.*

Spiril'lum. A genus of Bacteriaceæ, consisting of cells of fungi having a serpentine motion.

The following table gives a view of the most important species of spirilla (Crookshank):

ASSOCIATED WITH DISEASE:		
In man	Spirillum Obermeieri	Pathogenic.
	Spirillum choleræ Asiaticæ	Pathogenic in man (?), possibly only saprophytic. Pathogenic in animals.
	Spirillum Finkleri	Saprophytic in man. Pathogenic in animals.
In animals	Spirillum sputigenum	Saprophytic. Pathogenic in animals.
	Spirillum tyrogenum	
UNASSOCIATED WITH DISEASE:		
	Spirillum rubrum	Chromogenic saprophyte.
	Spirillum plicatile	Simple saprophytes.
	Spirillum serpens	
	Spirillum tenue	
	Spirillum undula	
	Spirillum volutans	
	Spirillum Rosenbergii	
	Spirillum attenuatum	
	Spirillum leucomelaneum	

Spirillum sanguineum, S. rosaceum, and *S. violaceum* have also been described, but they are probably only phase-forms of Beggiatoa roseo-persicina.

Of the spirilla above mentioned, several are sufficiently important for separate mention: **S. chol'eræ Asiat'icæ,** *Comma bacillus* (Koch), *Bacillus of Asiatic cholera,* having the appearance of curved rods or commas, about half the length of a tubercle bacillus. They are isolated or connected with each other like an S or in larger screw shapes, the latter being like those of relapsing fever. Inoculation of a cultivation of the comma bacillus in the small intestine of guinea-pigs produced choleraic symptoms without peritonitis or putrid infection, and the characteristic bacilli were found in the contents of the intestines, in the superficial necrosed layer of the intestine, in the mucous flakes and liquid contents of the intestinal canal of Asiatic cholera. **S. fe'ver,** relapsing fever. **S. of Fink'ler-Pri'or** (discovered in 1885), *Comma bacillus of cholera nostras;* the curved comma-like rods are thicker than those of spirillum choleræ Asiaticæ (Koch's comma bacillus). **S. Obermei'eri,** *Spirochæte Obermeieri;* spirillum of relapsing fever, observed in the blood of that disease, but not in the secretions; they have only been noticed during the relapses. They are very numerous and very movable, and from experiments on monkeys seem to be well credited as the cause of the disease. **S. of relaps'ing fe'ver,** S. Obermeieri. **S. sputig'enum** (Lewis), rods resemble comma bacilli of Koch; they are found associated with other bacteria in saliva and in scrapings from decaying teeth. **S. tyrog'enum** (Deneke), the rods resemble those of the comma bacillus of Koch, but are smaller. They have been isolated from old cheese, but their pathogenic properties are not established.

Spir'it (*spiro,* to breathe, to exhale). Name given to every liquid product of distillation. Spirits were formerly distinguished into inflammable, acid, and alkaline; consequently a number of substances were crowded together resembling each other in no other property than in being volatile. The term is now confined to alcoholic liquors, the chief of which are: I. *Arack* or *Arrack.* Distilled from coarse palm-sugar, named jaggery; fermented with the bark of the Mimosa leucophlea; also from rice and the fermented juice of the palm, made in India. Its varieties are—Mahwah arrack, made in India from the flowers of the Madhuca tree, Bassia butyracea. II. *Araka.* Distilled by the Tartars from koumis, fermented mare's milk. III. *Araki.* Distilled from dates by the Egyptians. IV. *Arika.* Variety of koumis distilled from fermented mare's milk in Tartary and Iceland. V. *Brandy.* Distilled from wine, figs, peaches, persimmons, apples, mulberries, and sometimes other fruits, in Europe, Asia, North and South America, wherever wine is made. The best brandy is that of Cognac; the next, that of Bordeaux and Rochelle. Brandy is officinal in the Ph. U. S. and Br. under the name *Spiritus vini Gallici, Spirit of French wine.* Varieties are—*Aguardiente* (S.). In Peru the common brandy obtained from grapes is the Aguardiente de Pisco, so called because shipped at the port of Pisco. Another kind, much dearer and of excellent flavor, is made from Muscatel grapes, and is called Aguardiente de Italia. It is sometimes seen in the United States. *Lau.* Made from rice in Siam. *Rakia.* Made in Dalmatia from the husks of grapes mixed with aromatics. *Rossolio.* Made at Dantzic from a compound of brandy, rossolis, and other plants. *Troster.* Made on the Rhine from the husks of grapes, fermented with barley and rye. *Sekiskaya vodka.* Made from the lees of wine and fruit at Scio. VI. *Geneva, Hollands.* Distilled from malted barley and rye, rectified on juniper berries, in Holland. Its variety is—*Gin.* Made in England from malted barley, rye, potatoes, rectified with turpentine. VII. *Goldwasser.* Distilled at Dantzic from wheat, barley, and rye, rectified with aniseed, cinnamon, and other spices. VIII. *Kirschwasser.* Distilled from the Malacheb cherry in Switzerland. IX. *Maraschino, Marasquino.* Distilled from the Macarska or Maraska cherry at the capital of Dalmatia. X. *Rum* (supposed to be derived from the terminal syllable of the word *saccharum*). Distilled in the West Indies and South America from cane-sugar and molasses, and in North America from maple-sugar. Its variety is—*Sakee, Saki.* A Japanese beverage distilled from rice. XI. *Slatkaia trava.* Made in Kamtschatka from a sweet grass. XII. *Showchoo.* Distilled in China from the lees of mandarin, a wine made from boiled rice. XIII. *Tuba.* Made from palm wine, in the Philippine Islands. See *Arack.* XIV. *Whiskey* (supposed to be derived from *usque,* the first two syllables of *usquebaugh,* the original name in Ireland—itself from Irish *uisge* and *beatha,* life, *Uisge beatha, Aquæ vitæ,* water of life). Distilled in Scotland and Ireland from malted and raw barley, rye, oats, and potatoes; and in the south of France from sloes. In Ireland it was called *builceaum,* or madness of the head. *Whiskey,* under the name *Spiritus frumenti,* is officinal in the Pharmacopœia of the United States. It is obtained from fermented grain by distillation, and contains from 48 to 56 per cent. by volume of absolute alcohol. For medical use it should not be less than two years old. XV. *Y-wer-a.* Distilled in the Sandwich Islands from the root of the teeroot, baked, pounded, and fermented. To these may be added an intoxicating liquor made by the Afghanistans from ewes' milk; and that made in Kamtschatka, from a species of mushroom, named *muchumer.* **S. of am'ber,** spiritus volatilis succini. **S. of ammo'nia,** spiritus ammoniæ. **S. of ammo'nia, aromat'ic,** spiritus ammoniæ aromaticus. **S. of ammo'nia, fet'id,** spiritus ammoniæ fœtidus. **S. of ammo'nia, suc'cinated,** spiritus ammoniæ succinatus. **S. of an'iseed,** spiritus anisi. **S., bone,** liquor volatilis cornu cervi. **S. of caj'eput,** see *Cajeput oil.* **S. of cam'phor,** spiritus camphoræ.

S. of car'away, spiritus carui. **S. of chlo'ric e'ther,** spirit of chloroform. **S. of chlo'roform,** spiritus chloroformi. **S. of cin'namon,** spiritus cinnamomi. **S. of cit'ron,** two per cent. solution of oil of citron in alcohol. **S. of cochlea'ria,** spiritus cochleariæ. **S. of col'chicum, ammo'niated,** spiritus colchici ammoniatus. **S. of e'ther,** spiritus ætheris sulphurici. **S. of e'ther, aromat'ic,** spiritus ætheris aromaticus. **S. of e'ther, com'pound,** spiritus ætheris compositus. **S. of French wine,** spiritus vini Gallici. **S., fu'ming,** ammonii sulphuretum. **S., fu'ming, of Boyle,** ammonii sulphuretum. **S. of Ga'rus,** aloes 5, myrrh 2, clove 5, nutmeg 10, cinnamon, 20, saffron 5, alcohol (sp. gr. 864) 5000; macerate, filter, and add water 1000; distil 4500. **S. of gaulthe'ria,** spiritus gaultheriæ. **S. of harts'horn,** liquor volatilis cornu cervi. **S. of horse'radish, com'pound,** spiritus armoraciæ compositus. **S. of hydrochlo'ric e'ther,** spiritus ætheris muriatici. **S. of ju'niper, com'pound,** spiritus juniperi compositus. **S. of lav'ender,** spiritus lavandulæ. **S. of lav'ender, com'pound,** spiritus lavandulæ compositus. **S. of lem'on,** spiritus limonis. **S. of mindere'rus,** liquor ammonii acetatis. **S. of muriat'ic e'ther,** spiritus ætheris muriatici. **S. of mus'tard,** spiritus sinapis. **S. of myr'cia,** spiritus myrciæ. **S. of ni'tre, sweet,** spiritus ætheris nitrosi. **S. of ni'tric e'ther,** spiritus ætheris nitrosi. **S. of nut'meg,** spiritus myristicæ. **S. of or'ange,** spiritus aurantii. **S. of pennyroy'al,** spiritus pulegii. **S. of pep'permint,** spiritus menthæ piperitæ. **S. of pimen'to,** spiritus pimentæ. **S., proof,** spiritus tenuior. **S., pyro-ace'tic,** acetone. **S., pyrox'ylic,** spiritus pyroxylicus; acetone. **S. of rose'mary,** spiritus rosmarini. **S. of salt,** muriatic acid. **S. of scur'vygrass, gold'en,** see *Spiritus armoraciæ compositus.* **S. of spear'mint,** spiritus menthæ viridis. **S. of sulphu'ric e'ther,** spiritus ætheris sulphurici. **S. of sulphu'ric e'ther, com'pound,** spiritus ætheris sulphurici compositus. **S. of tur'pentine,** oleum terebinthinæ rectificatum. **S. of ver'digris,** acetic acid. **S. of vin'egar, aromat'ic,** see *Acetic acid.* **S. of vit'riol,** sulphuric acid. **S. of wine,** spiritus rectificatus. **S. of wine and cam'phor,** spiritus camphoræ. **S., wood,** spiritus pyroxylicus.

Spir'its, an'imal. Nervous fluid. **S., ar'dent,** distilled products of vinous liquors, as brandy, rum, etc.

Spirituo'sus. Alcoholic.

Spir'ituous (*spiritus*). Alcoholic.

Spir'itus (*spiro*, to breathe). Breath; life; respiration; spirit. **S. æru'ginis,** acetum radicale. **S. æthe'reus,** spirit of ether. **S. æthe'reus nitro'sus,** spiritus ætheris nitrici. **S. æthe'reus vitriol'icus,** spiritus ætheris sulphurici. **S. æ'theris** (Ph. U. S. and Br.), spirit of ether (æther. fortior, f℥iv; alcohol, f℥viiiss); dose is f℥j–iij; has therapeutic effects of ether. **S. æ'theris aromat'icus,** *Sweet elixir of vitriol, Aromatic spirit of ether* (cinnam. cort., ℥ij; cardam. sem., ℥iss; piperis longi fruct., zingib. rad., āā ℥j; spiritus ætheris sulphuric., Oj). Stimulant in nervous affections; dose, ♏xxx–f℥j. **S. æ'theris chlora'ti,** spiritus ætheris muriatici. **S. æ'theris compos'itus,** spiritus ætheris sulphurici compositus. **S. æ'theris hydrochlo'rici,** spiritus ætheris muriatici. **S. æ'theris muriat'ici,** *Spirit of hydrochloric* or *muriatic ether, Dulcified marine acid.* Muriatic acid one part, rectified spirit three parts; action is like that of the spiritus ætheris nitrici. **S. æ'theris ni'trici,** spiritus ætheris nitrosi (Ph. U. S.), *Sweet spirit of nitre, Nitre drops, Spirit of nitric* or *nitrous ether.* A mixture of nitrous ether or ethyl nitrate and alcohol, the nitrous ether being formed by reaction of nitric acid with alcohol. It is refrigerant, diuretic, antispasmodic, and diaphoretic, and largely employed as an ingredient of fever mixtures; dose, gtt. xxv–f℥j. **S. æ'theris nitro'si,** spirit of nitrous ether. **S. æ'theris oleo'sus,** spiritus ætheris sulphurici compositus; oleum æthereum. **S. æ'theris sulphu'rici,** *Spirit of sulphuric ether* (æther. sulphuric., f℥x, sp. rect., Oj). Stimulant, diaphoretic, diuretic, and antispasmodic; dose, ♏xxx–f℥ij. **S. æ'theris sulphu'rici compos'itus,** spiritus ætheris compositus (Ph. U. S.), *Compound spirit of sulphuric ether, Hoffman's anodyne* or *anodyne liquor* (æther. fort., Oss; alcohol, Oj; ol. æther., f℥v. Mix). Stimulant and spasmodic. **S. æ'theris vitriol'ici compos'itus,** spiritus ætheris sulphurici compositus. **S. ammoniaca'tus anisa'tus,** anisated water of ammonia. **S. ammo'niæ** (Ph. U. S.), *Spirit of ammonia; S. of hartshorn;* a solution of ammonia in alcohol. Stimulant and antispasmodic. **S. ammo'niæ anisa'tus,** anisated water of ammonia. **S. ammo'niæ aromat'icus** or **ammo'niæ compos'itus,** *Aromatic ammoniated alcohol, Aromatic spirit of ammonia, Sal volatile drops* (ammon. carb., gr. d; aquæ ammoniæ, f℥xxij; ol. limonis, f℥iij; ol. lavand. flor., ♏xiv; ol. pimentæ, ♏xij; alcohol., f℥xxiv; aquæ destillat., q. s., to make Oij). Stimulant; dose, ♏xv–xxx. **S. ammo'niæ compos'itus,** spiritus ammoniæ aromaticus. **S. ammo'niæ fœ'tidus,** *Fetid spirit of ammonia, Fit drops* (asafœtid., ℥iss; liquor ammoniæ fortior, f℥ij; spirit. rectificat., q. s. ut fiat Oj; Ph. Br.). Stimulant and antispasmodic; dose, ♏xxx–f℥j. **S. ammo'niæ succina'tus,** *Succinated spirit of ammonia, Common eau de luce* (mastich., ℥iij; sp. rect., f℥ix; ol. lavand., gtt. xiv; ol. succin., gtt. iv; liq. ammon., f℥x). Stimulant and antispasmodic; dose, ♏x–xxx. **S. angel'icæ compos'itus,** compound spirit of angelica. **S. ani'si** (Ph. U. S.), *Spirit of aniseed* (ol. anis., f℥ij; alcohol., f℥xxij). Carminative; dose, f℥ss–f℥ss. **S. an'thos,** spiritus rosmarini. **S. armora'ciæ compos'itus,** *Compound spirit of horseradish* (armorac. rad., aurant. cort., āā ℥xx; myrist. nuc., ℥ss; spirit. ten., cong.; aquæ, Oij). Stimulant and antiscorbutic; dose, f℥j–f℥iv. **S. auran'tii** (Ph. U. S.), *Spirit of orange* (ol. aurantii, f℥j; alcohol., Oj). **S. beguin'is,** ammonii sulphuretum. **S. belli'dis,** see *Osmitopsis asteriscoides.* **S. caju'puti,** spirit of cajuput; see *Cajeput oil.* **S. cam'phoræ** (Ph. U. S. and Br.) or **camphora'tus,** *Spirit of wine and camphor, Spirit of camphor* (camphor., ℥iij; alcohol., f℥xxv; aquæ, f℥vj). Stimulant, anodyne, and discutient. **S. car'ui,** *Spirit of caraway, Strong carui waters* (carui sem., ℔iss; sp. tenuior., cong.; aquæ, q. s.). Carminative; dose, f℥j to f℥ss. **S. chlorofor'mi** (Ph. U. S. and Br.), *Spirit of chloroform* (chloroform purif., ℥j; alcohol., Oj); see *Ether, chloric.* **S. cinnamo'mi,** *Spirit of cinnamon, Strong cinnamon-water* (ol. cinnam., f℥j; alcohol. fort., f℥xij). Stimulant and carminative; dose, gtt. xx–f℥j. **S. cochlea'riæ,** spirit of cochlearia. **S. col'chici ammonia'tus,** *Ammoniated spirit of colchicum, Compound tincture of colchicum* (sem. colchic., ℥ij; sp. ammon. aromat., Oj). Narcotic, cathartic, and diuretic; used in gout, rheumatism, and dropsy; dose, from gtt. xxx to f℥j. **S. concentra'tus,** alcohol, sp. gr. .834 to .930. **S. cor'nu cer'vi,** liquor volatilis cornu cervi. **S. cor'nu cer'vi succinat'us,** spiritus ammoniæ succinatus. **S. dilu'tus,** diluted alcohol. **S. formica'rum,** formic acid 4, alcohol 70, water 26 parts; mix; also prepared by macerating wood-ants in diluted alcohol, and distilling off a portion of the resulting tincture. Stimulant and rubefacient. **S. for'tior,** alcohol, spec. grav. .834; see *Alcohol.* **S. frumen'ti** (Ph. U. S.), whiskey; see *Spirit.* **S. fu'mans Beguin'i,** ammonii sulphuretum. **S. Gal'licus,** brandy. **S. gaulthe'riæ** (Ph. U. S.), spirit of gaultheria (ol. gaultheriæ, ♏clx; alcohol., Oj). As a flavoring agent; dose, ♏x–xx. **S. genital'is,** aura seminis. **S. Jamaicen'sis,** rum. **S. junip'eri,** spirit of juniper; see *Spiritus juniperi compositus.* **S. junip'eri compos'itus** (Ph. U. S.), *Compound spirit of juniper* (ol. junip., ♏xxiv; ol. carui, ol. fœnicul., āā ♏ij; alcohol., Oj; aquæ, q. s. to make Oiss). Stimulant and diuretic; dose, f℥j to f℥ss. The Ph. U. S. and Br. contain also a *Spiritus juniperi,* made (Ph. U. S.) by dissolving 224 minims of oil of juniper in a pint of stronger alcohol. **S. laur'i cinnamo'mi,** spiritus cinnamomi. **S. lavan'dulæ** (Ph. U. S. and Br.), *Spirit of lavender, Lavender-water* (ol. lavand. flor., f℥ss; alcohol., Oj). Used as a perfume chiefly. **S. lavan'dulæ compos'itus,** *Red hartshorn, Lavender drops, Compound spirit of lavender*

(ol. lavand., f℥j ; ol. rosmarin., f℥ij ; cinnamom., ℥ij ; caryophyll., ℥ss ; myristic., ℥j ; santal., gr. ccclx ; alcohol., Ovj ; aquæ, Oij ; alcohol. dilut., q. s.). Stimulant ; dose, gtt. xl. to f℥ij. **S. letha'lis,** carbonic acid. **S. limo'nis** (Ph. U. S.), *Spirit of lemon, Essence of lemon* (ol. limon., f℥j ; cort. lim. recente rasp., ℥ss ; alcohol., q. s. to make Oj). To give odor and flavor. **S. lumbrico'rum,** liquor volatilis cornu cervi. **S. me'dius,** alcohol, spec. grav. .850. **S. melis'sæ compos'itus,** compound spirit of balm. **S. men'thæ piperi'tæ** (Ph. U. S. and Br.), *Spirit of peppermint, Tincture of oil of peppermint, Essence of mint* or *peppermint* (ol. menth. pip., f℥xj ; menthæ piperit., gr. lx ; alcohol., q. s. to make Oj) ; dose, gtt. v–xx, as a carminative. **S. men'thæ sati'væ,** spiritus menthæ viridis. **S. men'thæ vir'idis,** *Spirit of spearmint, Tincture of oil of spearmint, Essence of spearmint. Spiritus menthæ viridis* (Ph. U. S.) is made like S. menthæ piperitæ, and has the same properties and dose. **S. millepeda'rum,** liquor cornu cervi. **S. mindere'ri,** liquor ammonii acetatis. **S. muriat'icus æthe'reus,** spiritus ætheris muriatici. **S. myr'ciæ** (Ph. U. S.), *Spirit of myrcia, Bay rum* (ol. myrciæ, f℥j ; ol. aurant. cort., ♏xxxv ; ol. piment., ♏xxx ; alcohol., Ov ; aquæ, Oviij) ; also obtained by distilling rum with the leaves of *Myrcia acris, Eugenia* or *Myrtus acris, M. caryophyllata, Bayberry tree,* ord. Myrtaceæ of the West Indies ; used externally like cologne-water, and in cases where whiskey would be applied. **S. myris'ticæ** (Ph. U. S.), *Nutmeg-water* (ol. myrist., f℥ss ; alcohol., Oj). Cordial and carminative ; dose, f℥j to f℥iv. **S. myr'ti pimen'tæ,** spiritus pimentæ. **S. ni'tri ac'idus,** nitric acid. **S. ni'tri dul'cis,** spiritus ætheris nitrici. **S. ni'tri du'plex,** nitric acid. **S. ni'tri fu'mans,** nitric acid. **S. ni'tri Glau'beri,** nitric acid. **S. ni'tri sim'plex,** see *Nitric acid.* **S. ni'trico-æthe'reus,** spirit of nitrous ether. **S. nu'cis moscha'tæ,** spiritus myristicæ. **S. odora'tus** (Ph. U. S.), perfumed spirit, cologne-water (ol. bergamot., f℥ij ; ol. limonis, f℥j ; ol. rosmarin., f℥j ; ol. lavand. flor., f℥ss ; ol. aurant. flor., f℥ss ; æther. acetic., f℥ij ; aquæ, f℥xviij ; alcohol., Oviss). **S. oleo'so-aromat'icus Syl'vii,** spiritus ammoniæ aromaticus. **S. ophthal'micus mindere'ri,** liquor ammonii acetatis. **S. pimen'tæ,** *Spirit of pimenta* (ol. piment., f℥ij ; alcohol. dilut., cong.). Cordial and carminative ; dose, f℥j. **S. pule'gii,** *Spirit of pennyroyal* (olei pulegii, ℈vij ; sp. rect., Oivss ; aquæ, q. s. ; distil a gallon). Same as spirit of spearmint in properties and dose. **S. pyro-ace'ticus,** acetone. **S. pyroxyl'icus,** *Wood spirit, Wood alcohol, Pyroxylic alcohol, Methylic alcohol, Hydrated oxide of methyl, Bihydrate of methylene ;* see *Acetone.* When wood is subjected to destructive distillation, about one per cent. of an inflammable volatile liquid, along with other products, passes over, which, when separated and purified, constitutes pyroxylic spirit. It is given in the same cases and doses as acetone. **S. Raph'ani compos'itus,** spiritus armoraciæ compositus. **S. rectificatis'simus,** alcohol, spec. grav. 8.30 to 8.28. **S. rectifica'tus** (Ph. Br.), *Alcohol, Spirit of wine ;* alcohol, C_2H_5HO, with 16 per cent. of water ; obtained by distillation of fermented saccharine fluids ; see *Alcohol.* Rectified spirit is much used in pharmacy to dissolve resinous and other substances. It is seldom exhibited internally, although it exists in the diluted state in all vinous and spirituous liquors. Externally it is employed as a discutient. **S. rec'tor,** aroma. **S. rorif'erus,** gas sanguinis. **S. rosmari'ni,** *Spirit of rosemary, Hungary water* (ol. rosmarini, f℥j ; spirit. rectificat., f℥xlix). Stimulant ; perfume and ingredient in lotions and liniments. **S. sa'lis ac'idus** or **fu'mans,** muriatic acid. **S. sa'lis ammoni'aci,** spiritus ammoniæ. **S. sa'lis ammoni'aci aquo'sus,** liquor ammoniæ. **S. sa'lis ammoni'aci caus'ticus,** water of ammonia. **S. sa'lis ammoni'aci lactes'cens** or **lac'teus,** spiritus ammoniæ succinatus. **S. sa'lis ammoni'aci sulphura'tus,** ammonii sulphuretum. **S. sa'lis dul'cis,** spiritus ætheris muriatici ; spirit of hydrochloric ether. **S. sa'lis Glau'beri,** muriatic acid. **S. sa'lis mari'ni coagula'tus,** potassæ murias. **S. sa'lis volat'ilis oleo'sus,** spiritus ammoniæ aromaticus. **S. sapo'nis,** tincture of soap. **S. sapo'nis alkali'nus,** solution of green soap, ℥ij, in alcohol, ℥j, to which, after filtration, spirit of lavender, ℥ij, is added. It has been recommended as an application in seborrhœa. A more elegant preparation is made by dissolving ℥ij of the soap in ℥x of cologne-water. **S. sapo'nis camphora'tus,** soap liniment. **S. sina'pis,** spirit of mustard. **S. sulphu'rico-æthe'reus camphora'tus,** tinctura ætherea composita. **S. sulphu'rico-æthe'reus martia'lis,** tincture or alcohol sulphurico-æthereus ferri. **S. sul'phuris,** sulphuric acid, sulphurous acid. **S. sul'phuris per campa'nam,** sulphurous acid. **S. sul'phuris volat'ilis,** ammonii sulphuretum. **S. sulphuro'sus volat'ilis,** sulphurous acid. **S. tenu'ior,** *Proof spirit* (generally made for pharmaceutical purposes by mixing equal parts of rectified spirit and distilled water). Employed in the same cases as those in which alcohol is used, chiefly as a solvent of vegetable matters in the form of tinctures ; see *Alcohol.* **S. ten'uis,** alcohol, sp. gr. .942 to .940. **S. terebin'thinæ,** oil of turpentine. **S. ven'eris,** aceticum acidum. **S. vi'ni concentra'tus,** alcohol, sp. gr. .8336. **S. vi'ni dilu'tus,** alcohol, sp. gr. .892. **S. vi'ni Gal'lici,** brandy. **S. vi'ni rectificatis'simus,** alcohol, sp. gr. .838. **S. vi'ni rectifica'tus,** dilute alcohol. **S. vino'sus camphora'tus,** spiritus camphoræ. **S. vino'sus tenu'ior,** spiritus tenuior. **S. vita'lis,** nervous fluid. **S. vitri'oli,** sulphuric acid. **S. vitri'oli ac'idus Vog'leri,** sulphuricum acidum dilutum. **S. vitri'oli coagula'tus Mynsich'ti,** potassii sulphas. **S. vitri'oli dul'cis,** spiritus ætheris sulphurici. **S. vitri'oli phlogistica'tus,** sulphurous acid. **S. volat'ilis aromat'icus,** spiritus ammoniæ aromaticus. **S. volat'ilis cor'nu cer'vi,** spirit of hartshorn. **S. volat'ilis fœ'tidus,** spiritus ammoniæ fœtidus. **S. volat'ilis suc'cini,** spirit of amber.

Spirit-weed. Indian red root, Sachnanthes tinctoria.

Spirobacte'ria. Twisted or spiral-celled bacteria. See *Bacteria.*

Spirochæta, spir-o-ke'tah. Genus of schizomycetes, individualized by cells presenting long, thin threads twisted into a spiral ; their movements are active. **S. bucca'lis,** leptothrix of the mouth. **S. Cohn'ii,** noticed on the teeth, resembling S. Obermeieri, but not so long. **S. Obermei'eri** occurs in blood of patients suffering with relapsing fever ; see *Spirillum.* **S. plicat'ilis,** found in stagnant water.

Spirocolon, spir-o-ko'lon. Syphiloid affection, endemic in Greece during the war of freedom from 1820 to 1825.

Spirograph, spi'ro-graf (*spiro,* to breathe, *grapho,* to write). See *Atmograph.*

Spi'roid (*speira,* a winding, *eidos,* resemblance). Resembling a screw or spiral. **S. canal',** aquæductus Fallopii.

Spirokolon, spir-o-ko'lon. Spirocolon.

Spirometer, spi-rom'et-ur (*spiro,* to breathe, *metron,* measure). Properly *Anapnometer, Pneometer, Pneusometer, Pneumometer, Pneumatometer, Pneumonometer.* Any instrument for measuring the quantity of air concerned in respiration, and consequently the capacity of the lungs. This mode of measurement has been called spirometry and pneometry, as it was formerly called pulmometry. The term spirometer is now usually applied to a kind of gasometer to estimate the quantity of air contained in, or rather expelled from, the lungs under different circumstances. A wet meter is sometimes used to ascertain the breathing capacity, and has been called a spiroscope, spiroscopium.

Spirometry, spi-rom'et-ry. Use of the spirometer.

Spirophore, spi'ro-fore (*spiro, phero,* to carry). Instrument used in artificial respiration in new-born children.

Spiroptera hominis, spir-op'tur-ah hom'in-is (*speira,* spire, *pteron,* wing). See *Parasites.*

Spiroscope, spi'ro-skope (*spiro,* to breathe, *skopeo,* to examine). See *Spirometer.*

Spissantia, spis-san'she-ah (*spisso,* to thicken). See *Incrassantia.*

Spis'sated (*spissatus*). Thickened.

Spis'situde (*spisso*, to thicken). State of being thick or dense.

Spit. Sputum.

Spit'al. Hospital.

Spith'ama (*spithame*). Measure of twelve fingers' breadth or about nine inches.

Spit'ting (see *Spit*). Exspuition. **S. of blood,** see *Hæmoptysis.*

Spit'tle. Hospital; saliva. **S., sweet,** see *Salivation.*

Spix, angles of. Angles between alveolo-nasal line and coronal or naso-basilar line. **S., horizon'tal plane of,** alveolo-condylean plane.

Splanchna, splank'nah (*splanchna*). Entrails.

Splanchnectopia, splank-nek-top'e-ah (*splanchna, ek,* out of, *topos,* place). Misplacement or ectopia of the intestines.

Splanchnelmin'tha (*splanchna, helmins,* a worm). Worms.

Splanchneurysma, splank-nu-riz'mah (*splanchna, euruno,* to dilate). Morbid dilatation of the intestines.

Splanch'nic. Relating or belonging to the viscera. **S. cav'ities** are the three great cavities of the body—cranium, chest, and abdomen. **S. gan'glion,** ganglion on great splanchnic nerve over eleventh or twelfth dorsal vertebra. **S. nerves** belong to the great sympathetic; two in number on each side. They are distinguished into: 1. The *great splanchnic nerve.* Its roots—four or five in number—come from the 6th, 7th, 8th, 9th, and sometimes the 10th thoracic ganglia. They descend inward on the sides of the vertebral column beneath the pleura, and unite into a single trunk, which enters the abdomen through a separation of the fleshy fibres of the pillars of the diaphragm; passes behind the stomach and divides into several branches which pass into the semilunar ganglion. 2. The *lesser splanchnic nerve, Renal nerve,* is composed of two distinct branches proceeding from the 10th and 11 thoracic ganglia, which unite on the 12th dorsal vertebra into a cord that pierces the diaphragm singly; enters the abdomen and divides into two branches, one anastomosing with the greater splanchnic nerve, the other sending its filaments to the renal and solar plexuses.

Splanch'nica. Medicines adapted to diseases of the bowels. Diseases affecting the collatitious viscera, and characterized by disquiet or diseased action in the organs auxiliary to the digestive process without primary inflammation.

Splanchnodiastasis, splank-no-de-as'tas-is (*splanchna, diastasis,* displacement). Misplacement of the intestines.

Splanchnodyne, splank-nod'in-a (*splanchna, odune,* pain). Pain in the bowels.

Splanchnograph'ia. Splanchnography.

Splanchnography, splank-nog'raf-e (*splanchna, grapho,* description). The part of anatomy treating of the viscera.

Splanch'nolith (*splanchna, lithos,* stone). Calculus in the viscera.

Splanchnolithiasis, splank-no-lith-e'as-is (*splanchna, lithos,* stone). Formation of a calculous concretion in a viscus.

Splanchnol'ogy (*splanchna, logos,* a discourse). A treatise on the viscera; also splanchnography.

Splanch'non or **Splanch'num** (sing. of **Splanchna**). Viscus.

Splanchnopathi'a (*splanchna, pathos,* suffering). Disease of the intestines or of the viscera; *Splanchnopathy.*

Splanchnopleure, splank'no-plure (*splanchnon, pleuron,* side). Lower division of mesoblast covered with hypoblast.

Splanchnopto'sis (*splanchna, ptosis,* falling). Sinking or prolapse of the viscera.

Splanchnosclerosis, splank-no-skler-o'sis (*splanchnon, skleros,* hard). Induration of a viscus.

Splanchnoscopy, splank-nos'ko-pe (*splanchnon, skopeo,* to examine). Examination of viscera.

Splanchnoskel'eton (*splanchnon, skeleton*). Bony formation in viscera.

Splanchnotomy, splank-not'o-me (*splanchna, tome,* section). Dissection or anatomy of the viscera.

Splat'foot. See *Kyllosis.*

Splay'foot (*splay,* spread). See *Kyllosis.*

Spleen (*splen*). Soft, spongy, parenchymatous organ, of a more or less deep violet red, situate deeply in the left hypochondrium, below the diaphragm, above the colon, between the great tuberosity of the stomach and the cartilages of the false ribs, and above and anterior to the kidney. The following measurements have recently been made of this organ:

Weight	176 g. (Blosfeld), 298 g. (Dieberg).
Volume	238 cm.
Length	120–130 cm.
Breadth	70– 80
Thickness	30
Follicle of spleen	0.35 in size.

Its parenchyma, which is bathed in blood, constituting the *pulp, pulpa, substantia pulposa* or *rubra* or *vasculosa,* contains a multitude of grayish, soft, and semitransparent granulations—*splenic corpuscles, Malpighian bodies of the spleen, Corpuscula Malpighii* or *lienis, Glandulæ Malpighii, Acini lienis, Vesiculæ griseæ.* It is covered by a serous membrane furnished by the peritoneum, and by a proper coat, of a fibrous nature, membrana propria or albuginea or fibrosa, which is intimately united with it, and transmits into its interior delicate, solid, and very elastic prolongations—trabeculæ. At the inner edge is a fissure—hilus or porta lienis—by which the vessels and nerves enter. The upper extremity is the head, or caput lienis; the lower, the tail, or cauda lienis. The exact functions of the spleen are unknown. The best opinion is that it appertains to hæmatosis, and acts also as a diverticulum to the vascular system. Hypochondriasis. **S., am'yloid disease of,** see *Lardaceous.* **S., at'rophy of,** wasting or atrophy of the spleen. **S., ba'con,** lardaceous spleen. **S., larda'ceous,** see *Lardaceous.* **S., Malpig'hian bod'ies of the,** see *Spleen.* **S., sa'go,** sago spleen; amyloid disease of the follicles of Malpighi. **S., supernu'merary,** lienculus. **S., suspen'sory lig'ament of,** see *Suspensory.* **S., wax'y,** see *Lardaceous.*

Spleen'wort. Asplenium, A. filix fœmina, Asplenium scolopendrium. **S. bush,** Comptonia asplenifolia.

Splen. Spleen.

Splenalgia, splen-al'ge-ah (*splen, algos,* pain). Pain in the spleen. **S. Bengalen'sis,** see *Cachexia, splenic.* **S. phlegmono'dea,** splenitis. **S. subinflammato'ria chron'ica,** splenoncus.

Splenatrophia, splen-at-rof'e-ah (*splen, atrophia,* atrophy). Wasting or atrophy of the spleen.

Splenauxe, splen-owks'e (*splen, auxe,* increase). Enlargement or tumor of the spleen.

Splenculi, splen'ku-le (pl. of **Splenculus**). Small spleens. See *Lienculus.*

Splenectama, splen-ek'tam-ah (*splen, ektama,* dilatation). Enlargement of the spleen.

Splenectasis, splen-ek'tas-is (*splen, ektasis,* dilatation). Enlargement of the spleen.

Splenectomia, splen-ek-tom'e-ah (*splen, ektome,* excision). Splenectomy.

Splenec'tomy (*splen, ektome,* excision). Removal of the spleen by excision.

Splenectopia, splen-ek-top'e-ah (*splen, ektopos,* out of place). Dislocation of the spleen; *Splenec'topy.*

Splenelcosis, splen-el-co'sis (*splen, helcosis,* ulceration). Ulceration of the spleen.

Splenemphraxis, splen-em-fraks'is (*splen, emphrasso,* to obstruct). Obstruction of the spleen. See *Splenoncus.*

Splen'es (pl. of **Splen**). Hypochondriasis.

Splenetic, splen-et'ik. Relating to the spleen. One laboring under diseased spleen. A medicine adapted for diseases of the spleen.

Splen'ic (*splen*). Relating to the spleen. **S. anæ'mia,** Hodgkin's disease. **S. ap'oplexy** or **fe'ver,** anthrax. **S. ar'tery** arises from the cœliac, and

passes from right to left, forming many windings along the upper edge of the pancreas, which lodges it in a special groove. It reaches the fissure of the spleen, and divides into several branches that enter the organ. In its course it furnishes the pancreatic, left gastro-epiploic, and the vasa brevia. **S. cachex'ia,** see *Cachexia splenica.* **S. cor'puscles,** see *Spleen.* Lymphatic nodules occurring in the spleen about the arterioles. **S. fe'ver,** anthrax; Texas cattle fever. **S. flex'ure,** separation of cœliac plexus surrounding splenic plexus. **S. plex'us** is a nervous network proceeding from the cœliac plexus and accompanying the splenic artery, sending secondary plexuses to each division. **S. pouch,** peritoneal pouch for reception of the spleen, formed by phrenocolic ligament. **S. vein** arises from the spleen and accompanies the splenic artery; proceeding from left to right, to unite with the superior mesenteric vein, and to form, with it, the abdominal vena porta. In its course it receives veins corresponding to the vasa brevia, the right and left gastro-epiploic, the duodenal, pancreatic, coronaria ventriculi, and inferior mesenteric veins.

Splen'ica. Splenalgia. Also medicines affecting the spleen.

Splenicopancreat'ic ar'teries. See *Arteries.* **S. glands,** lymphatic glands along the course of the splenic vessels.

Splenicus, splen'ik-us. Splenetic; splenic.

Splenification, splen-e-fik-a'shun (*splen, fio,* to become). Splenization.

Spleniola, splen-e'o-lah (dim. of **Splen**). Compress.

Sple'nis tu'mor (tumor of the spleen). Ague-cake.

Spleniscus, splen-is'kus. Compress.

Splenisis, splen'is-is (*splen*). Splenization.

Splenit'icus. Splenic.

Splenitis, splen-e'tis (*splen, itis*). Inflammation of the spleen. Rare disease, characterized by local pain, swelling, and heat, sometimes terminating by suppuration. It generally affects the capsule—being called episplenitis or perisplenitis—and must be treated like other inflammations.

Sple'nium. Compress. **S. cor'poris callo'si,** see *Corpus callosum.* **S. crucia'tum,** Maltese cross.

Sple'nius. *Posterior mastoid muscle.* So called from its resemblance to the spleen of certain animals. A muscle situate on the posterior part of the neck and upper part of the back; broader above than below, where it terminates in a point. Attached by its inner edge to the spinous processes of the first five dorsal vertebræ, to that of the seventh cervical, and to the inferior part of the posterior cervical ligament. By its upper extremity it is attached to the transverse processes of the first two cervical vertebræ, to the mastoid process, and to the posterior surface of the occipital bone. Some have considered this muscle to be formed of two portions, which they have called *Splenius colli* and *Splenius capitis.* The splenius extends the head, inclines it, and rotates it. If the splenii act together, they extend the head. **S. accesso'rius,** rhombo-atloideus. **S. cap'itis,** splenius. **S. cervi'cis** or **col'li,** splenius.

Splenization, splen-i-za'shun. *Splenification.* Term applied to the state of the lung in the first or second stage of pneumonia, in which its tissue resembles that of the spleen. To a conversion of the lung into a spleen-like substance in the yellow fever of Gibraltar the term splenisis was given by Louis and others.

Splenoce'le (Eng. splen'o-seel) (*splen, kele,* tumor). Hernia formed by the spleen.

Splenoceratosis, splen-o-cer-at-o'sis. Hardness of the spleen.

Splenocol'ic. Relating to the spleen and colon. **S. lig'ament,** fold of peritoneum between spleen and mesocolon.

Spleno'des (*splen, odes*). Splenoid.

Splenodynia, splen-o-din'e-ah (*splen, odune,* pain). Splenalgia.

Splenography, splen-og'raf-e (*splen, graphe,* description). Description of the spleen.

Splenohæmia, splen-o-he'me-ah (*splen, haima,* blood). Congestion or hyperæmia of the spleen, a common phenomenon in many diseases, especially typhoid and intermittent fevers.

Sple'noid (*splen, eidos,* resemblance). Spleen-like. Having the appearance of the spleen.

Splenol'ogy (*splen, logos,* discourse). Treatise on the spleen.

Spleno'ma or **Splenon'cus.** Tumor of the spleen.

Splenomalacia, splen-o-mal-ah'se-ah (*splen, malakos,* soft.) Morbid softening of the spleen.

Splenoncus, splen-on'cus (*splen, onkos,* tumor). Tumefaction of the spleen. See *Ague-cake.*

Splenoparec'tama (*splen, parektama,* excessive volume). Excessive enlargement of the spleen.

Splenoparectasis, splen-o-par-ek'tas-is. Splenoparectama.

Splenopathy, splen-op'ath-e (*splen, pathos,* disease). Disease of the spleen.

Splenophraxia, splen-o-fraks'e-ah (*splen, phrasso,* to shut up). Obstruction of the spleen.

Splenophren'ic. Relating to the spleen and diaphragm. **S. lig'ament,** fold of peritoneum between the spleen and diaphragm.

Splenophthisis, splen-o-te'sis. Atrophy of the spleen.

Splenorrhagia, splen-or-rhaj'e-ah (*splen, rhage,* bursting forth). Hemorrhage from the spleen.

Splenoscirrhus, splen-o-skir'rhus (*splen, skirrhos,* hardness). Scirrhus or cancer of the spleen.

Splenotomy, splen-ot'o-me (*splen, tome,* incision). Dissection of the spleen.

Splenypertrophia, splen-ip-er-trof'e-ah (*splen,* spleen, *hypertrophia*). Enlargement of the spleen.

Splint. Flexible and resisting lamina of wood used in treating fractures to keep the fragments in apposition and to prevent displacement. Splints are made of iron, wood, bark of trees, leather, leather felt, gutta-percha, pasteboard, a combination of paraffine and stearine—paraffo-stearine forming a bandage splint, Startin's bandage. See *Apparatus, immovable.* Splints are generally padded, and are fixed by a roller or by tapes, according to circumstances. **S. band'age,** see *Splint.* **S. bone,** fibula.

Splin'ter. A term applied to a small piece of wood which entering the skin gives rise to much irritation until removed. It is also applied to fragments separating from a fractured or diseased bone. **S. bone,** fibula.

Split cloth. Bandage for the head consisting of a central part and six or eight tails. The single split cloth has four tails. A convenient bandage for the head, face, and jaws. **S. pel'vis,** congenital want of union of pubic bones at the symphysis.

Split'rock. Heuchera cortusa.

Spo'dium Græco'rum (*spodion,* dross). Album Græcum.

Spo'gel seeds. Ispaghul seeds.

Spoke bone. Radius.

Spolia'rum (*spolio,* to deprive of covering). See *Apodyterium.*

Spoliative, spo'le-a-tiv (*spolio,* to take away). Bloodletting, used for the purpose of diminishing the mass of blood.

Spoliato'rium (*spolio,* to deprive of covering). Apodyterium.

Spon'dles (*spondylus*). Vertebræ.

Spondylalgia, spon-dil-al'je-ah (*spondylus, algos,* pain). Pain in the vertebræ. See *Vertebral disease.*

Spondylarthritis, spon-dil-ar-thre'tis (*spondylus, arthron,* joint, *itis*). Gouty or rheumatic inflammation of the spinal column.

Spondylarthrocace, spon-dil-ar-throk'as-e (*spondylus, arthron,* joint, *kakos,* evil). Vertebral disease.

Spondylexarthrosis, spon-dil-eks-ar-thro'sis (*spondulos,* vertebra, *exarthrosis,* luxation). Dislocation of the spine.

Spondyli, spon'dil-e. Vertebræ.

Spondylisthesis, spon-dil-is-tha'sis (*spondylus, olisthesis,* slipping or sliding). Dislocation of the vertebræ, as of the last lumbar vertebra forward on the sacrum, thus producing pelvic contraction.

Spondylitis, spon-dil-e'tis (*spondylus, itis*). Inflam-

mation of the vertebræ. **S. defor'mans,** deformity produced by ossification of cartilages occurring in spondylitis.

Spondyl'ium. Heracleum spondylium.

Spondylocace, spon-dil-ok'as-e (*spondylus, kakos,* evil). Vertebral disease.

Spondylodynia, spon-dil-o-din'e-ah (*spondylus, odune,* pain). Pain in the vertebræ.

Spondylolisthe'sis. Spondylisthesis.

Spondylopathia, spon-dil-o-path-e'ah (*spondylus, pathos,* disease). Disease of the vertebral column; *Spondylopathy.*

Spondylopyo'sis (*spondylus, puosis,* suppuration). See *Vertebral disease.*

Spondylot'omy (*spondylus, tome,* incision). Cutting through the spine, as in the fœtus in cross-births, where turning is impossible.

Spondylozematic (spon-dil-o-ze-mat'ik) **pel'vis.** Deformity of the pelvis occurring in spondylolisthesis.

Spon'dylus. A vertebra. Also the vertex.

Sponge. Spongia. **S., bas'tard,** see *Alcyonium.* **S. bath,** see *Bath, sponge.* **S., prepared',** see *Spongia.* **S. tent,** see *Spongia.* **S. tent, car'bolized,** see *Spongia.*

Sponge-graft'ing. Filling a cavity with sponge, which is allowed to be absorbed.

Spon'gi (*spongos*). Tumefied glands of the neck.

Spon'gia. *Sponge* (pron. spunj). An organized marine substance, of the class Porifera, met with in many seas, but especially in the Mediterranean and Arabian. It is supple, elastic, porous, and capable of absorbing fluids in which it may be placed, and of thus increasing in size. Employed in surgery for cleansing or washing, for absorbing acrid discharges from ulcers, suppressing hemorrhage when the mouth of the vessel can be compressed by it, and for forming tents for dilating wounds; in which case the sponge is immersed in melting wax and cooled before being used. It is then called *Spongia cerata, Waxed, Cerated,* or *Prepared sponge* or *Sponge tent.* Sponges are rendered antiseptic for surgical use. Carbolized sponge tents are also employed. **S. Adriat'ica,** Turkey cup-sponge. **S. as'sa,** S. usta. **S. cera'ta,** see *Spongia.* **S. compres'sa,** compressed sponge. **S. cynos'bati,** bedegar. **S. equi'na,** horse sponge. **S. gossypi'na,** wool sponge. **S. officina'lis,** Levant or common sponge. **S. pres'sa,** compressed sponge. **S. us'ta,** *Burnt sponge,* contains carbonate and phosphate of calcium, carbonate of sodium, charcoal, and iodine. Used in bronchocele, scrofulous affections, and herpetic eruptions. Its good effects seem to be dependent upon iodine.

Spon'giæ la'pis. Small friable stones found in sponge, formerly esteemed lithontriptic.

Spon'giform (*spongia, forma,* form). Spongoid.

Sponging (spun'jing) **bath.** Bath, sponge.

Spongioblasts, spun'je-o-blasts (*spongos, blastos,* germ). Small dots in internal reticular layer of retina which send thin prolongations into rod and cone layer.

Spongiodes, spun-je-o'dees. Spongoid.

Spongiopilin (spun-ge-o-pi'lin) or **Spongiopi'line** (*spongia,* sponge, *pilus,* hair). A fabric composed of sponge and wool felted together in three layers, and coated on one surface with caoutchouc, which renders it impermeable. It is of great service as a cataplasm, fomentation, vehicle for lotions, liniments, etc.

Spongioplasma, spun-ge-o-plaz'mah (*plasma*). Chromatin of cell-nucleus.

Spongiose, spun'ge-ose (*spongos*). Resembling a sponge in being full of pores.

Spongio'sum (os). Ethmoid bone.

Spongio'sus. Spongoid.

Spongo'des (*spongia, odes*). Spongoid.

Spongoid, spun'goid (*spongia, eidos,* resemblance). Resembling sponge. Of the nature of sponge. *Spongy.* **S. inflamma'tion,** hæmatodes fungus. **S. tis'sue,** an adventitious spongy tissue found in rickets.

Spon'gos. Tonsil.

Spon'gy. Spongoid. **S. bones,** those having a particularly porous or spongy texture, as the ethmoid, turbinated bones, etc. **S. por'tion of ure'thra,** part surrounded by corpus spongiosum. **S. tis'sue,** see *Bone.*

Spon'sa so'lis (spouse of the sun). Calendula officinalis.

Sponta'neous (*sponte,* voluntarily). That which occurs of itself or without any manifest external cause. Evacuations are termed spontaneous which are not produced by medicine. Spontaneous lassitude is that which is not the result of fatigue. Diseases are also spontaneous which supervene without apparent cause. Spontaneous or intra-uterine amputation is the separation of a limb from the fœtus in utero. It has been found, in such cases, that it is the left arm which is usually wanting. **S. combus'tion,** see *Combustion.* **S. cre'tinism,** condition of idiocy in individuals not living or having resided in goitrous districts. **S. evolu'tion,** see *Evolution.* **S. genera'tion,** see *Generation.* **S. ver'sion,** spontaneous evolution.

Spoon (from its hollowness). Umbilicus.

Spoon-saw, Thomas's. Instrument shaped like a spoon with serrated edge; used as a curette.

Spoon'wood. Kalmia latifolia; Tilia Americana.

Spoon'wort. Cochlearia officinalis.

Spo'ra. Spore.

Sporad'ic (*sporadikos,* scattered, occurring in all seasons and places). An epithet for diseases supervening indifferently in every season and situation from accidental causes, and independently of epidemic or contagious influence. **S. chol'era,** acute gastro-enteric affection with symptoms resembling cholera; not epidemic. **S. gan'glia,** enlargements caused by nerve-corpuscles grouping along the course of peripheral nerves.

Sporadic'ity. State of being sporadic.

Spore (*sporos,* sowing). The reproductive body in cryptogamous plants, analogous to the seed of phanerogamous plants.

Sporid'ium (*sporos,* sowing). The reproductive body in algaceous plants, resembling the spore of other plants.

Sporiso'rium ma'idis. See *Pellagra.*

Sporosper'mia (*sperma*). Psorospermia.

Sporozo'a. Parasites belonging to the lowest division of the protozoa or psorosperms.

Spor'ula, Spor'ule, Spor'ulus, Spo'rum, or **Spo'rus.** Spore.

Spot. Macula. **S., blind,** point of entrance of optic nerve at the fundus of the eye. **S. of Sömmering,** see *Foramen centrale.*

Spots, cer'ebral. Red marks or stains noticed in hydrocephalic children when pressure is made on the skin. **S., ger'minal,** see *Molecule.* **S., meningit'ic,** S., cerebral. **S., red,** *Rose spots, Lenticular spots;* small red spots appearing in typhoid fever from the eighth to the fifteenth day of the disease. They are most frequently seen on the lower and middle portions of the chest and upper part of the abdomen. **S., rose,** spots, red. **S., sum'mer,** ephelides. **S., wine,** see *Telangeiectasia.*

Spot'ted al'der. Witch-hazel; Hamamelis Virginica. **S. cow'bane,** Cicuta maculata. **S. fe'ver,** cerebrospinal meningitis. **S. gera'nium,** Geranium maculatum. **S. hem'lock,** Conium maculatum. **S. kid'ney,** see *Kidney.* **S. par'sley,** Conium maculatum. **S. spurge,** Euphorbia maculata. **S. wa'ter-hem'lock,** Cicuta maculata. **S. win'tergreen,** Chimaphila maculata.

Sprain (corrupted from *strain* [?]). *Wrench.* Violent straining or twisting of the soft parts surrounding the joints. According to the degree of the sprain, the fibrous parts of the joint may be simply stretched or ruptured. This affection, which has been regarded as incomplete luxation, occurs, particularly, in the ginglymoid joints, as the foot, wrist, knee, etc. Violence causes an afflux of blood; the serum of the blood is poured out, and often the blood itself, owing to the rupture of vessels, and inflammation arises, ending in resolution or induration. **S. frac'ture,** separation of a tendon from point of insertion, a thin shell of bone being detached.

Sprat, yel'low-billed. Clupea thryssa.

Spray. See *Pulverization.* **S. cure,** variety of the douche, consisting in the application of water in the form of spray. See *Pulverization.*

Spray-produ'cers. See *Pulverization.*

Spring conjunctivi'tis. Inflammation of conjunctiva, occurring principally in young persons, and recurring in the spring or summer, and disappearing with cold weather.

Spring-nail. Hang-nail.

Spring'worm. Oxyuris vermicularis.

Spruce. See *Pinus abies.* **S. beer,** *White spruce beer;* beer made of water, sugar, essence of spruce, and yeast. It is grateful and antiscorbutic. **S. fir,** Abies excelsa.

Sprue. Thrush.

Spuitio, spu-ish'e-o (*sputum,* to spit). Exspuition.

Spu'ma argen'ti (froth of silver). Plumbi oxidum semivitreum. **S. cerevis'iæ,** yeast. **S. tri'um drac'num,** antimonium muriatum.

Spume (*spuma,* froth). Froth or serum which rises to the surface of fluids, especially when heat is applied.

Spumo'sus (*spuma,* froth). Frothy.

Spunk. Boletus igniarius.

Spur. Angle at which the arteries leave a cavity or trunk. Ergot.

Spur'blind (purblind). Myopic.

Spurge, ca'per (*purgo,* to purge). Euphorbia lathyris. **S., cy'press,** Euphorbia cyprissias. **S., flax,** Daphne gnidium. **S., flow'ering, large,** Euphorbia corollata. **S., gar'den,** Euphorbia lathyris. **S., great'er,** Euphorbia palustris. **S., ipecacuan'ha,** Euphorbia ipecacuanha. **S. laur'el,** Daphne laureola. **S., marsh,** Euphorbia palustris. **S., ol'ive,** Daphne mezereum, Cneorum tricoccum. **S., pet'ty,** Euphorbia peplus. **S., sea,** Euphorbia paralias. **S., spot'ted,** Euphorbia maculata. **S., sun,** Euphorbia helioscopia. **S., wart'wort,** Euphorbia helioscopia.

Spu'rious preg'nancy. Presence of symptoms resembling pregnancy.

Spur-pep'per. Fruit of Capsicum frutescens.

Spu'ta (pl. of **Sputum**). See *Sputum.* **S., prune-juice,** see *Prune-juice.*

Sputa'men (*spuo,* to spit). Saliva; sputum.

Sputamen'tum. Saliva; sputum.

Sputatio, spu-tah'she-o. Exspuition.

Sputa'tion. Exspuition.

Sputato'rius. Expectorant.

Spu'tum (*spuo, sputum,* to spit). *Spit.* The secretion ejected from the mouth in the act of spitting; composed of saliva and of the mucus secreted by the mucous membrane of the nasal fossæ and fauces, and often by the membrane of the larynx and bronchia. The sputa are sometimes called eruginous when of a greenish-yellow color; gummy, when resembling a thick solution of gum; frothy, when covered with froth; mucoid, in acute bronchitis, asthma, and early stages of pneumonia; muco-purulent, as in chronic pulmonary and bronchial catarrh, phthisis, etc.; purulent, as in pulmonary abscess, discharge of empyema into the lung, etc.; prune-juice, as in retention of blood in the lung, pulmonary gangrene or cancer, etc.; rusty, as in croupous pneumonia; currant-jelly, in pulmonary cancer; nummular, when in masses or rolls like coin (see *Nummular*); rubiginous, when of a reddish-yellow; and streaked, when mixed with lines of blood. It may be fetid in advanced phthisis, abscess, or gangrene of the lung, etc. Pneumonia, gangrene of the lung, acute bronchitis, phthisis, etc. all have characteristic sputa, the properties of which aid in the formation of a diagnosis. Also saliva. **S. concoc'tum,** the expectoration of phthisis as modified by the administration of cod-liver oil, the sputa being flattened and ripened. **S. cruen'tum,** hæmoptysis. **S. dul'ce,** saccharorrhœa pulmonalis. **S. o'ris,** salivation. **S., prune-juice,** see *Prune-juice.* **S. sacchara'tum,** saccharorrhœa pulmonalis. **S. san'guinis,** hæmoptysis.

Squall'ing. Cry of the new-born child.

Squama, squaw'mah. Squamous portion; table. **S. fronta'lis,** vertical portion of frontal bone. **S. occipita'lis,** supra-occipital bone. **S. os'sis fron'tis,** squama frontalis. **S. os'sis occip'itis,** supra-occipital bone. **S. os'sis tem'porum** or **S. tempora'lis,** thin portion of squamous part of temporal bone.

Squa'mæ (pl. of **Squama**). Scaly diseases.

Squama'ria. Plumbago Europæa.

Squamiformis, squaw-mif-or'mis (*squama,* scale, *forma,* shape). Squamous.

Squamopari'etal su'ture. Line of union between squamous portion of temporal bone and parietal bone.

Squamosal, squaw-mo'sal. Scale-like. **S. bone,** squamous portion of temporal bone. **S. su'ture,** squamous suture.

Squamosotem'poral a'rea. See *Areas of skull.*

Squamosphenoi'dal su'ture. Line of union between squamous portion of temporal bone and great wing of sphenoid bone.

Squa'mous (*squama,* scale). *Scaly.* Relating to or resembling a scale. **S. epithe'lium,** pavement epithelium. **S. por'tion of tem'poral bone,** upper part of the temporal, so called from a fancied resemblance to a scale; see *Temporal bone.* **S. su'ture,** the suture uniting the squamous portion of the temporal bone to the parietal. Certain scaly cutaneous affections are also called squamous. See *Scale.*

Squam'ule. Small scale.

Squamulose (squawm'u-loze) or **Squam'ulous.** Lined with small scales.

Square lobe of cerebel'lum. Lobus quadrangularis. **S. mus'cle,** quadratus lumborum. **S. stalk,** Monarda coccinea.

Squar'ra (*squarra,* scurfiness). Rough crusts of tinea. **S. ton'dens** (*tondeo,* to shave), Porrigo decalvans.

Squash, round or **pat'typan.** See *Cucurbita pepo.* **S., wart'ed** or **long-necked,** see *Cucurbita pepo.*

Squat'ting pills. Pilulæ opiatæ.

Squaw ber'ry. Vaccinium stamineum. **S. bush,** Viburnum opulus. **S. huck'leberry,** Vaccinium stamineum. **S. mint,** hedeoma. **S. root,** Actæa racemosa; Caulophyllum thalictroïdes; Senecio aureus. **S. vine,** Mitchella repens. **S. weed,** Erigeron Philadelphicum.

Squeam'ishness. Fastidium cibi.

Squeas'iness. Nausea.

Squibb's diarrhœa mixture. Contains tinctura opii, spirit. camphor., tinct. capsici, āā f℥j; chloroform. pur., f℥iij; alcoholis (95 per cent.), ad f℥v; dose, gtt. x to f℥j.

Squill. Scilla. **S., vin'egar of,** acetum scillæ.

Squil'la. Scilla.

Squinan'cy, com'mon. Cynanche tonsillaris.

Squinan'thia. Cynanche tonsillaris.

Squinan'thus. Juncus odoratus.

Squin'sy. Cynanche tonsillaris.

Squint. Strabismus.

Squint'er. See *Strabismus.*

Squint'eyed. See *Strabismus.*

Squint'ing. Strabismus.

Squin'zey. Cynanche tonsillaris.

Squir'rel corn. Dicentra Canadensis.

Squirrus, skwir'rhus. Scirrhus.

Squirt. Syringe.

Squirt'ing cu'cumber. Ord. Cucurbitaceæ. Ecballium elaterium; an ordinary European weed. **S. c. fruit,** nearly ripe fruit of squirting cucumber; contains active principle, elaterin.

Stab cul'ture. Made by thrusting inoculated wire into a tube containing gelatin or agar.

Stabile, sta'bil (*stabilis,* stable, *sto,* to stand). Word employed in electrotherapy. In applying electrodes to a diseased surface, if they remain stationary they are said to be stabile.

Stachys, stak'is (*stachus,* spike). Surgical bandage to the lower belly. Hypogastrium. **S. fœ'tida,** galeopsis.

Stac'te (*stakte,* myrrh in a liquid state). Myrrha.

Stactometer, stak-tom'e-tur (*staktos,* dropping, *metron,* measure). Instrument for measuring drops.

Stadium, stad-e'um. Period; stage. **S. ac'mes,** the period of the height of a disease. **S. annihilatio'nis** or **convalescen'tiæ** or **reconvalescen'tiæ,** the period of recovery from disease. **S. augmen'ti** or **in-**

cremen'ti mor'bi, the period or stage of increase of a disease. **S. calo'ris**, hot stage. **S. convalescen'tiæ**, S. annihilationis. **S. decremen'ti**, the period or stage of decrease of a disease. **S. decrustatio'nis**, see *Exanthem.* **S. desquamatio'nis**, see *Exanthem.* **S. eruptio'nis**, see *Exanthem.* **S. exsiccatio'nis**, see *Exanthem.* **S. floritio'nis**, see *Exanthem.* **S. frigo'ris**, cold stage; see *Intermittent fever.* **S. incremen'ti mor'bi**, S. augmenti morbi. **S. laten'tis conta'gii**, prodromus. **S. opportunita'tis**, prodromus. **S. prodromo'rum**, prodromus; see *Exanthem.* **S. reconvalescen'tiæ**, S. annihilationis.

Staff. Instrument of great importance in lithotomy, being the director for the gorget or knife. It is made of steel, and the handle is flat and rough, in order that it may be securely held; the groove is on the convex surface. **S. tree, climb'ing**, Celastrus scandens. **S. vine**, Celastrus scandens.

Staf'fa. Stapes.

Staf'fordshire or **Tait's knot.** Used in ovariotomy to tie the pedicle. It is made thus: the pedicle is transfixed by an aneurismal needle armed with a double thread; into the loop of this thread are passed the ends of the ligature, which has been laid on the abdomen loosely around the pedicle; the needle upon being withdrawn brings with it these two ends of ligature, which now lie above their own loop; one of these ends is passed under this loop and is firmly tied into a square knot. Free ends are now thrown around the pedicle and again tied.

Stage. *Stadium.* The period or degree of a disease, especially the period of an intermittent—as the cold stage, hot stage, etc. **S. of labor**, see *Labor.* **S. microm'eter**, a glass slide used on the microscope and ruled for minute measurements.

Stag'gerbush. Andromeda mariana.

Stag'gergrass. Amaryllis atamasco; plant supposed to produce 'staggers' in cattle.

Stag'gers. See *Cœnurus.*

Stag'gerweed. Delphinium.

Stag'horn su'mach. Rhus typhina.

Sta'gium. The sixth part of an ounce.

Stag'ma (*stagma*, a drop, a liquor). *Stalagma.* Distilled liquid or liquor.

Stagna'tion (*stagno*, to form a pond). Accumulation and retardation of fluids in any part of the body.

Stag'num chy'li (pond of the chyle). Receptaculum chyli.

Stag's piz'zle. See *Cervus.*

Stahlian, stall'yan. Follower of the doctrine of Stahl.

Stahl'ianism. See *Animist.*

Stain'ing. Use of various dyes to color tissues and bacteria for microscopic purposes. **S. rea'gents**, hæmatoxyline, carmine, and other similar colors used in coloring microscopic specimens.

Stains, blood. See *Blood-stains.*

Stalagma, stal'ag-mah (*stalagma*). Stagma.

Stalagmite, stal-ag'mite (*stalagmos*, a dropping). Cylinder or cone-shaped formation of carbonate of calcium found in caves.

Stalagmitis cambogioïdes (stal-ag-me'tis cam-boge-o-e'dees) or **S. cambo'gia** (*stalagmos*, a dropping, the gum exuding by drops). Gamboge was long ascribed to this fancied Ceylonese plant. It is now known that the name was given to specimens of two distinct trees of different genera. See *Cambogia.*

Stalag'mus (*stalagmos*, a dropping). Distillation.

Stalk. Stem or main axis of a plant.

Stal'tica (*staltikos*, astringent). Repellents; astringents.

Sta'men. Male organ of flowers, consisting of anthus, or fertilizing part, which is borne on a stem called a filament.

Stam'ina. Inherent strength of constitution.

Stam'mer. Uttering or pronouncing with hesitation or imperfectly.

Stam'mering. See *Balbuties* and *Stammer.* **S. of the fin'gers**, cramp, writer's.

Stamp. Cachet. **S. med'icine**, cachet. **S., oc'ulist's**, cachet.

Stamp out. Term used by Sir James Y. Simpson in the sense of to extirpate a disease, as in the case of the rinderpest by killing all the diseased cattle, and in that of small-pox by isolation.

Stamp'ing mill. See *Pulverization.*

Stand. Body of microscope without eye-pieces and objectives.

Stand'ard (*extendo*, to spread out). That which is a basis for comparison.

Stan'ni chlo'ridum. Tin, muriate of. **S. mu'rias**, tin, muriate of. **S. oxid'uli mu'rias**, tin, muriate of. **S. pul'vis**, see *Tin.*

Stan'nic. Relating to stannum or tin.

Stanniolum, stan-ne'o-lum (*stannum*). Tinfoil.

Stan'nite. Sulphide of tin. Also frequently called bell-metal ore.

Stan'num. Tin. **S. chlora'tum**, tin, muriate of. **S. cine'reum**, bismuth. **S. folia'tum**, tinfoil. **S. glacia'le**, bismuth. **S. granula'tum**, see *Tin.* **S. In'dicum**, zinc. **S. muriat'icum**, tin, muriate of.

Stape'dius (*stapes*). Muscle of the middle ear which draws the stapes obliquely upward.

Stapelia, stap-a'le-ah. Genus of plants, order of Asclepiadaceæ, which comprise numerous species of leafless herbs growing about Cape of Good Hope.

Stapes, stap'ees (*sto*, to stand, *pes*, foot). Stirrup. Innermost of the small bones of the ear, so called because it resembles a stirrup; situate horizontally in the cavity of the tympanum. Its head, which is directed outward, is articulated with the os orbiculare. The base faces inward, and is applied to the fenestra ovalis, which it closes imperfectly, and to the membrane to which it is united. Its branches are an anterior and a posterior. They are curved, and the space between them is parabolic. Surgeons have given the name stapes to a bandage used in bleeding from the foot, which forms a figure of 8 around the ankle.

Stapha, staf'ah. Stapes.

Staphis, staf'is (*staphis*, grape or vine). Delphinium staphisagria.

Staphisagria (Ph. U. S.), staf-is-ag're-ah (*staphis*, grape, *agrios*, wild). Seed of Delphinium staphisagria.

Staphisagrine, staf-is-ag'reen. Alkaloid of staphisagria.

Staphylæmatoma, staf-il-e-mat-o'mah (*staphyle*, uvula, *hæmatoma*). Tumor formed by effusion of blood beneath the mucous membrane of the uvula.

Staph'ylagra (*staphyle*, *agra*, seizure). Instrument for laying hold of and seizing the uvula.

Staphyle, staf'il-a (*staphule*, grape). Uvula. See *Vitis vinifera.*

Staphyle'a trifo'lia. Bladder-nut. Ord. Sapindaceæ. Native shrub of the United States.

Staphylepartes, staf-il-a-par'tees (*staphyle*, *epairo*, to lift up). An instrument for laying hold of and removing the uvula.

Staphyletomia, staf-il-et-om'e-ah (*staphyle*, *tome*, incision). Amputation of the uvula.

Staphyli'ni (*staphyle*). See *Azygos muscle.* **S. me'dii**, see *Azygos muscle.*

Staphylinopharyngeus, staf-il-e-no-far-in-ja'us. Palatopharyngeus.

Staphylinus, staf-il-e'nus. Azygos uvulæ. **S. exter'nus**, tensor tympani. **S. inter'nus**, levator palati.

Staphylion, staf-il'e-on (*staphyle*). Median point of posterior nasal spine.

Staph'ylis (*staphule*, grape). Nipple.

Staphylitis, staf-il-e'tis (*staphyle*, *itis*). Uvulitis.

Staphyl'ium (*staphulion*, a small grape). Nipple.

Staphylococcus, staf-il-o-kok'kus (*staphyle*, *kokkos*, kernel). Micrococcii arranged in heaps or irregular masses. **S. ce'reus al'bus**, found in pus; by culture, producing white, somewhat shining growth. **S. c. fla'vus**, similar to S. albus, but culture yields citron-yellow growth; occurs in pus. **S. flaves'cens**, yellowish-white S. found in pustules of small-pox. **S. pyog'enes al'bus**, *Micrococcus pyogenes albus*, resemble S. p. aureus morphologically and pathogenically. **S. pyog'enes au'reus** (golden-yellow), *Micrococcus*

pyogenes aureus; found in pus and boils and in abscesses of pyæmia and puerperal fever; coccus of acute infectious osteomyelitis. **S. p. cit'reus,** like the former, except color is lemon-yellow; they are often present in pus. **S. pyosep'ticus** is more virulent than the aureus, which it resembles. **S. saliva'rius pyog'enes,** found in human saliva; culture yields a whitish appearance on gelatin and orange-yellow on agar. Inoculated, it produces suppuration. **S. vir'idis flaves'cens,** found in pustules of small-pox; not pathogenic.

Staphylodialysis, staf-il-o-de-al'is-is (*staphyle, dialusis,* dissolution). Tumefaction of the uvula; staphylœdema.

Staphylœdema, staf-il-e-de'mah (*staphyle, œdema*). Relaxation and tumefaction of the uvula, which, from inflammation or infiltration, hangs so as to occasion difficult deglutition, cough, etc. Scarification, astringent gargles, and, if necessary, excision, constitute the treatment.

Staphyloma, staf-il-o'mah (*staphuloma, staphule,* grape). Protrusion of the anterior surface of the eye, usually the cornea and iris or sclerotic and choroid; due to previous ulceration causing local attenuation. **S., an'nular,** see *Staphyloma of the sclerotic.* **S., cil'iary,** see *Staphyloma of the sclerotic.* **S. con'icum,** staphyloma of the cornea. **S. con'icum pellu'cidum,** staphyloma of the cornea. **S. of the cor'nea,** *Sugarloaf cornea* or *Conical cornea, Prolapsus corneæ,* is an unequal, embossed, bluish or whitish, round or conical or hyperboloid tumor of variable size, formed by the projection of the transparent cornea, which is sometimes extenuated and distended, at others thickened. **S. i'ridis,** hernia iridis. **S. racemo'sum,** form of staphyloma in which the cornea is perforated at several points, through which small portions of iris protrude. **S., scle'ral,** or **of the sclerot'ic** differs from the last in the prominence existing on a part of the eye covered by the sclerotic, which is much thinner; it is generally due to irido-choroiditis. *Posterior staphyloma, S. posticum, Sclerectasia posterior,* is a disease whose chief characteristics are posterior elongation of the eyeball and loss of pigment and atrophy of the choroid. *Anterior staphyloma of the sclerotic, Ciliary staphyloma,* is a staphylomatous projection of the sclerotic in the ciliary region of the eye. When the ciliary region around the cornea is involved, it is called *annular staphyloma.* **S. of the sclerot'ic, ante'rior,** see *Staphyloma of the sclerotic.* **S. of the sclerot'ic, poste'rior,** see *Staphyloma of the sclerotic.* **S. u'veæ,** projection of a part of the uveal tract through an opening in the sclerotic coat.

Staphyloncia, staf-il-on'ke-ah (*staphyle, onkos,* swelling). Staphylœdema.

Staphyloncus, staf-il-on'kus. Staphylœdema.

Staphyloplastic, staf-il-o-plas'tic (*staphyle, plasso,* to form). Epithet applied to the operation for replacing the soft palate when it has been lost. *Staphyloplasty,* uranoplasty, palatoplasty, a word of hybrid formation, is the operation for closing the palatine vault.

Staphyloptosis, staf-il-op-to'sis (*staphyle, ptosis,* falling). Falling down or abnormal lengthening of the uvula.

Staphylorrhaphy, staf-il-or'rhaf-e (*staphyle, rhaphe,* suture). Operation for uniting a cleft palate, consisting in paring the edges of the cleft, passing ligatures through them, and uniting them.

Staphylosis, staf-il-o'sis (*staphyle*). Staphyloma.

Staph'ylotome (*staphyle, tome,* incision). Knife adapted to the operation for staphyloma.

Staphylotomy, staf-il-ot'o-me. Amputation of the uvula.

Staphylygroma, staf-il-ig-ro'mah (*staphyle, hygroma,* serous cyst). Staphylœdema.

Star an'ise or **S. a. fruit** (B. P.). Illicium anisatum. **S. apple, broad'-leaved.** Chrysophyllum cainito. **S. of Beth'lehem,** Ornithogallum umbellatum. **S., bla'zing,** Aletris farinosa. **S. bloom,** Spigelia Marilandica. **S. grass,** *Starwort, Blazing star, Colicwort;* Aletris farinosa, Hypoxys erecta. **S. knap'weed,** Centaurea calcitrapa. **S. of the North,** Geum urbanum. **S. stroke,** see *Coup-de-soleil.* **S. this'tle,** Centaurea calcitrapa.

Starch. Amylum. **S., an'imal,** corpora amylacea and glycogenic matter. **S., blue,** smalt. **S., can'na,** tous-les-mois. **S., corn,** see *Zea mays.* **S. cor'puscles,** corpora amylacea. **S., i'odide of,** prepared by triturating iodine and starch; said to have the eutrophic effects of iodine, but probably inert. **S., liv'er,** glycogenic matter. **S., pota'to,** see *Solanum tuberosum.* **S. su'gar,** glucose. **S., tac'ca,** arrow root, Tahiti.

Stark mad. See *Mania.*

Stars of Verhey'en. Stellate veins.

Star'tin's band'age. See *Splint.*

Starva'tion. Death from hunger or cold.

Star'wort. Aletris farinosa. **S., gold'en,** bubonium. **S., wa'ter,** Callitriche verna.

Sta'sis (*stasis,* situation; standing still). It has nearly the same signification as stagnation. Stagnation, however, sometimes includes a morbid condition of the fluids—stasis never. Also station. **S. dermato'ses,** affections of the skin due to passive impairment of blood- and lymph-channels. **S. phleg'mons,** deep-seated inflammation of the skin, as in phlegmonous erysipelas.

State. In pathology, crisis, stationary point, or height of disease. **S. med'icine,** see *Medicine, state.*

Stat'ic or **Stat'ical.** Relating to statics, or the branch of mechanics showing the properties of bodies as respects weight, equilibrium, etc. An epithet applied to the physical phenomena presented by organized bodies—biostatic—in contradistinction to the organic or vital. Also, of old, a restraining or astringent remedy. **S. electric'ity,** electricity at rest in equilibrium. The use of the frictional electric machine is an illustration of this form of electricity.

Statica medicina, stat'ik-ah med-is-e'nah. That part of medical observation consisting in the daily weighing of the human body and the various ingesta and egesta. **S. sep'ti na'rium,** cutaneous appendage to the septum narium.

Stat'ical. Static.

Statice (stat'is-e) (*statikos,* restraining, owing to its astringency) **arme'ria.** Plant, root of which is reputed to be tonic and astringent. **S. Brasilien'sis,** native plant of Brazil, Carolina, and Florida; astringent. **S. Carolinia'na,** *American* or *Seaside thrift, Marsh rosemary, Marshroot, Inkroot, Sea lavender.* A variety of the Statice limonium. **S. limo'nium,** *Sea lavender, Red behen, Marsh rosemary, Lavender thrift;* roots have been esteemed astringent, tonic, and eminently antiseptic. **S. macrophyl'la,** native plant of Canary Islands, bearing beautiful flowers. **S. marit'imum,** S. limonium. **S. mucrona'ta,** plant used as a nervine; native of Morocco. **S. vulga're,** S. limonium.

Stat'ics. See *Static.*

Station, sta'shun (*sto, statum,* to stand). Act of standing.

Stationary, sta'shun-a-re. Name given to certain diseases depending upon a particular state of the atmosphere, and prevailing in a district for a certain number of years, and then giving way to others.

Statis'tics, med'ical (*status,* state). *Vital statistics.* That part of medicine relating to details—medico-statistical—connected with the mortality, salubrity, etc. of different States, countries, and situations. Used in a milder sense to signify the same as *Numerical method*—a method applied to the systematization of medical facts or to the use of numbers in investigating disease. **S., vi'tal,** statistics, medical.

Stat'ure (*sto, statum,* to stand). Height of the human body.

Stat'us (*sto, statum,* to stand). Position; period of disease at which the symptoms are most violent; acme. **S. convulsi'vus,** continuous convulsive condition, of very young children especially, producing marked disturbance of respiration, circulation, etc. **S. crudita'tis,** crudity. **S. epilep'ticus,** continuous epileptic convulsive condition; series of epileptic attacks, at times persisting for several days. **S. erethrit'icus,**

nervous diathesis. **S. gas'tricus**, embarras gastrique; saburra. **S. nervo'sus**, nervous diathesis. **S. parturien'di**, parturition. **S. sthen'icus**, strength. **S. vermino'sus**, helminthiasis.

Stauroplegia, stau-ro-plej'e-ah (*stauros*, cross, *plege*, stroke). Hemiplegia in which an upper extremity on one side is paralyzed, together with the lower limb on the opposite side.

Staves'acre. Delphinium staphisagria.

Stave'wood. Simaruba medicinalis.

Stax'is (*stazo*, to drop). Slight defluxion of any humor, as nasal hemorrhage.

Steam doctor. Term applied to one treating all or most diseases by steam.

Steapsin, ste-ap'sin (*stear*, fat). Ferment of pancreatin possessing the property of decomposing and emulsifying fats. See *Ferments* and *Enzymes*.

Ste'ar (*stear*). See *Fat* and *Sevum*.

Ste'arates. Combinations of stearic acid with copper, manganese, zinc, etc., used as dusting powders or in ointment in some cutaneous affections.

Stearentine, ste-ar'en-teen. Sebaceous matter of greenish color found in infants' stools.

Stearic (ste-ah'rik) **ac'id.** Term applied to acid derived from stearine.

Steariform, ste-ah're-form (*stear*, fat). Like fat.

Ste'arin or **Stearine**, ste'ah-reen. See *Fat*.

Stearinum cetaceum, sta-ar-e'num set-as'a-um. Cetaceum.

Stearoconote, ste-ar-ok'o-note. Solid substance found in the brain-structure, which is fusible and not soluble.

Stearoconotum, ste-ar-o-co-no'tum (*stear*, fat, *konis*, dust). Peculiar dry fat found in brain-substance, said to contain phosphorus and sulphur.

Stearopten, ste-ar-op'ten (*stear*, fat, *ptenos*, winged; hence volatile). Concrete or solid part of a volatile oil.

Stearoricinate, ste-ar-o-ris'in-ate. Name applied to stearoricinic acid combined with a base.

Stearoricinic, ste-ar-o-ris'in-ik. Name applied to one of three acids obtained during saponification of castor oil.

Stearo'sis (*stear*, *osis*). Steatosis.

Stearrhœa (ste-ar-rhe'ah) or **Stearorrhœ'a** (*stear*, *rheo*, to flow). *Sebaceous flux.* Augmentation of secretion from the sebaceous follicles of the skin, *Stearrhœa simplex.* The greasy condition of the skin of the face—cutis unctuosa—is a form of stearrhœa. The color of the sebaceous secretion sometimes becomes changed. When yellow it is called stearrhœa flavescens; when blue, stearrhœa cærulea; when black, stearrhœa nigricans. **S. amian'thaca**, *Seborrhœa amianthaca;* seborrhœa having the appearance of scales from a preponderance of the solid constituents of the sebaceous secretion. **S. cæru'lea**, see *Stearrhœa*. **S. flaves'cens**, see *Stearrhœa*. **S. ni'gricans**, black discoloration of the face, observed in young females affected with derangement of the catamenia, due to a dark secretion from the cutaneous sebaceous glands. **S. sim'plex**, see *Stearrhœa*.

Ste'atine or **Ste'atin** (*stear*). Stearin. Made up of fat.

Ste'atite. Soapstone; talc.

Steati'tes (*stear*). Polysarcia.

Steatitis, ste-at-e'tis (*stear*, fat). Inflammation of fatty tissue.

Steatocele, ste-at-o-se'le (Eng. ste-at'o-seel) (*stear*, *kele*, tumor). Tumor formed by a collection of steatomatous matter in the scrotum.

Steatocryptoses, ste-at-o-krip-to'sees (*stear*, *krypto*, to conceal). Disordered function of sebaceous glands.

Steato'des. Containing fat or something similar to it.

Steato'ma (*stear*, *oma*). An encysted tumor whose contents are similar to fat. **S. Müller'i**, see *Lipoma*.

Steatom'atous (*steatoma*). Having the nature of, or belonging to, steatoma.

Steatopath'ic (*stear*, *pathos*, affection). Relating to affections of the sebaceous glands.

Steatopy'ga or **Steatopy'gia** (*stear*, *puge*, buttocks). Buttock-hump. Fat buttocks, such as exist in the Hottentot female.

Steatopygous, ste-at-op'ig-us (*stear*, *puge*, buttocks). Pertaining to steatopyga.

Steatorrhagia, ste-at-or-rhaj'e-ah. Seborrhœa.

Steatorrhœa, ste-at-or-rhe'ah. Stearrhœa.

Steato'ses. Skin diseases in which the sebaceous secretion is faulty.

Steato'sis (*stear*, *osis*). *Stearosis.* Fatty degeneration of a part or unusual deposition and accumulation of fat in its adipose tissue. **S. cor'dis**, *Fatty heart, Fatty degeneration of the heart.* Unusual deposition of fat on the heart: by some presumed to be occasionally a true adipose degeneration of the heart-substance. **S. hepat'ica**, see *Adiposis hepatica*.

Steatozo'on folliculo'rum (*stear*, *zoon*, animal). Acarus folliculorum.

Steel. Chalybs. **S. mix'ture**, mistura ferri composita.

Steep. Rennet.

Steep'lebush. Spiræa tomentosa.

Steganop'odes (*steganopodes*, having flat feet or webfooted). Planipedes.

Steg'anus (*steganos*, contracted). Constipated.

Stegno'sis (*stegnosis*, constriction). *Stenosis.* Constriction or narrowness of the pores and vessels. Stricture; constipation; suppression or stopping or stoppage of the evacuations. See *Arctatio*.

Stegnot'ic (*stegnosis*, constriction). Astringent.

Stegnot'ica. Astringents.

Steiro'sis (*steiros*, barren). Sterility.

Stel'la (star). Bandage improperly compared to a star, because crossed like the letter X. This bandage is applied to one or both shoulders. In the first case it is called simple, in the second double. It was employed in fractures of the sternum, clavicle, and scapula, in luxations of the humerus, etc. **S. ter'ræ**, Plantago coronopus.

Stella'ria me'dia (*stella*, star). Alsine media. **S. scil'la**, scilla.

Stella'ta rupi'na (*stella*). Centaurea calcitrapa.

Stel'late (*stella*, star). Resembling the form of a star. **S. band'age**, bandage wound crosswise on the back **S. lig'ament**, name given to the anterior costovertebral ligament, from its shape. **S. veins**, stellulæ Verheyenii.

Stelliform, stel'le-form (*stella*, *forma*, form). Possessing the form of a star.

Stel'lula (little star). See *Stellulæ*.

Stel'lulæ Verheyen'ii (*stella*, star, *stellula*, a little star). Stelliform plexus of veins at the surface of the kidney, giving origin to the interlobular veins.

Stellulate, stel'u-late. Like a star.

Stell'wag's symp'tom. Slight retraction of the upper eyelid in exophthalmic goitre.

Stelochitis, stel-o-ke'tis. Osteocolla.

Stem of hair. Shaft of hair. **S. pes'sary**, see *Pessary*.

Ste'ma (*stema*). Penis (especially the glans).

Stenag'ma. A sigh.

Stenag'mus. A sigh.

Ste'no (*stenos*). In composition, narrow. **S., duct of**, see *Parotid*. More correctly, Stensen's duct.

Stenobreg'mate (*steno*, *bregma*, the top of the head). See *Cranium*.

Stenocar'dia (*steno*, *kardia*, heart). Angina pectoris; cardiostenosis.

Stenocephalous, sten-o-sef'al-us (*steno*, *kephale*, head). Elongated or narrowed head.

Stenochasmus, sten-o-kaz'mus (*stenos*, narrow, *chasma*, opening). Applied to skulls having a sector of from 94° to 74° for cavum nasopharyngeum.

Stenochoria (sten-o-ko're-ah) or **Stenochori'asis** (*steno*, *chora*, space). Narrowness, stricture, or contraction, of the vagina especially. Stricture of the lacrymal passages. **S. intesti'ni rec'ti**, stricture of the rectum. **S. œsoph'agi**, stricture of the œsophagus.

Stenocori'asis. Narrowing of the pupil.

Stenodon, sten'o-don (*stenos*, narrow, *odous*, tooth). Having narrow teeth.

Stenomycte'ria (*steno*, *mukter*, nose). Contraction of the nasal passages.

Ste'non, duct of. See *Parotid.*

Steno'nian duct. See *Parotid.*

Stenoræic, sten-o-re'ik (*stenos*, narrow, *orao*, to see). Applied to lens having a narrow opening or slit for passage of rays of light.

Stenoraic, sten-o-ra'ik. See *Stenoræic.*

Steno'sis (*stenos*, *osis*). Narrowness or constriction.

Stenostegnosis, sten-o-steg-no'sis (*Steno*, *stegnosis*). Narrowness or constriction of the duct of Steno.

Stenosteno'sis (*Steno*, *stenosis*, contraction). Narrowness or constriction of the duct of Steno.

Stenostomia (sten-o-stom'e-ah) or **Stenos'tomy** (*steno*, *stoma*, mouth). Contraction of the mouth.

Stenothorax, sten-o-thor'aks (*steno*, *thorax*, chest). Narrow chest.

Stenot'ic (*stenos*, narrow). Small; contracted in size.

Sten'sen's canal'. Incisor canal. **S.'s duct,** parotid duct. **S.'s exper'iment,** ligature of aorta of the dog above the renal arteries, producing by malassimilation stiffness of the muscles of the posterior extremities, which disappears when obstruction to circulation is removed. **S's foramī'na,** see *Scarpa's foramina.* (All named after N. Stensen, of seventeenth century).

Stentorophonous, sten-tor-of'on-us (*Stentor*, a Greek of powerful voice in the army before Troy, *phone*, voice). One having a strong voice.

Step. Space produced by the separation of the two lower limbs, and including that plus the length of the foot.

Stephane, stef'an-e. Crown.

Stephanic (stef-an'ik) **diam'eter.** Superior frontal diameter of Broca. **S. in'dex,** frontal index.

Stephanion, stef-an'e-on (*stephane*, crown). Point of crossing of the coronal sutures and temporal lines. See *Skull.*

Stephen'sia elonga'ta. Matico.

Step'mother's bless'ing. Hang-nail.

Step'page gait. Gait of chronic multiple neuritis, in which the individual lifts the foot high, turns the toe up, and puts the heel down first.

Steppe disease. Rinderpest.

Stercobilin, stur-co-bi'lin (*stercus*, excrement, *bilis*, bile). A coloring matter extracted from the feculent contents of the intestines.

Ster'colin (*stercus*). Serolin.

Stercoraceous (stur-co-ra'shus) or **Stercora'rius** (*stercus*). *Stercoral*, *Fecal*, *Fæcal.* Relating to excrement.

Stercoræmia, stur-ko-re'me-ah (*stercus*, fecal matter, *haima*, blood). Term applied to indicate systemic poisoning resulting from the arrest of intestinal excretion, thus causing the absorption of toxic fecal alkaloids.

Ster'coral ul'cer. Ulcer produced by pressure of fecal secretions.

Stercorin (stur'ko-rin) or **Ster'corine** (*stercus*). See *Excrement* and *Serolin.*

Sterculia, stur-ku'le-ah. Trees of Sterculiaceæ, comprising numerous species, distributed in tropic regions of the world. **S. acumina'ta,** *Kola*, *Cala*, or *Kola acuminata*; native tree of Soudan, Guinea, etc., producing kola nut, which is chewed in many parts of Africa; used as a stimulant to the nervous system; they contain caffeine. **S. Carthaginen'sis,** native tree of Brazil, Mexico, and Colombia, which bears edible fruit. **S. scaphig'era,** native tree of China and Anam, bearing fruit called tambayan, which is recommended in diarrhœa and dysentery. **S. u'reus,** native Indian tree bearing fruit and yielding a gum called kuteera.

Stercus, stur'kus. Excrement. **S. an'seris,** Fimus anseris. **S. cani'num al'bum,** Album Græcum. **S. diab'oli,** asafœtida. **S. e'qui non castra'ta,** Fimus equinus. **S. huma'num,** human excrement.

Sterelmin'tha (*stereus*, solid, *helmins*, worm). A class of solid worms, as the bothriocephalus, tænia solium, etc., found in the human intestines and other organs.

Sterelmintha, ster-el-min'tha (*stereos*, solid, *helmins*, worm). Term applied to two varieties of worms having no true abdominal cavity—tænia solium and bothriocephalus latus.

Ste'reocyst or **Stereocystis,** ster-e-o-sis'tis (*stereus*, *kustis*, cyst). A hard encysted tumor.

Stereometer, ste-re-om'e-tur (*stereos*, firm, *metron*, measure). Instrument for determining specific gravity of liquid bodies, porous bodies, and powders, as well as solids.

Stereometry, ster-e-om'e-tre. Art of measuring solid bodies and finding their solid contents.

Stereomonoscope (ste-re-o-mon'o-skope), **Stereophantascope** (ste-re-o-fan'ta-skope), or **Stereophoroscope,** ste-re-o-for'o-skope (*stereos*, solid, *phero*, to carry, *skopeo*, to see). Instrument with two lenses by which a stereoscopic effect may be obtained for one picture.

Ste'reoplasm (*stereus*, *plasma*). Solid, insoluble portion of protoplasm.

Ste'reoscope (*stereus*, *skopeo*, to view). A physical instrument by which plane pictures of an object are made on each retina, and so blended as to appear as one in relief. Also an instrument for detecting a calculus in the bladder and foreign bodies in the soft parts; it resembles a common catheter, having an expanded free extremity.

Stereoscop'ic vis'ion. Binocular vision. See *Stereoscope.*

Stereotica, ster-e-ot'ik-ah (*stereus*). Fortuitous lesions or deformities affecting the hard parts.

Ste'reus (*stereos*). Solid.

Ster'ile (*sterilis*, barren). Barren. Not producing fruit; infecund.

Ster'ilis. Sterile.

Sterilitas, ster-il'it-as. *Sterility*, *Barrenness*, *Infecundity.* Quality of that which is barren. Sterility may be absolute or relative. The former depends upon some vicious conformation of the genital organs, apparent or concealed, and occasionally admits of cure. Sterility is relative when a female does not conceive with one individual, but does with another. Sterility in females is often dependent upon a condition of the uterus characterized by membranous menstruation; but sterility ascribed to the woman may really be caused by functional or organic defect of power in the male.

Sterility, ster-il'it-e. Incapability of reproducing; barrenness. See *Sterilitas.*

Sterilization, ster-il-i-za'shun (*sterilis*, barren). Production of a condition in which reproduction is impossible, as in making a substance aseptic by destruction of all vital matters by means of heat or other disinfectants.

Sterilizator, ster-il-i-za'tor. That which is used for sterilizing or killing germs by heat.

Ster'nad. See *Sternal.*

Ster'nal. Relating to the sternum or breast-bone. **S. ar'teries,** offsets from the internal mammary to the anterior and posterior surfaces of the sternum and triangularis sterni. **S. as'pect,** the aspect of the body where the sternum is situate. *Sternad* is used adverbially to signify toward the sternal aspect. **S. bend,** bend at inner side of the clavicle. **S. fora'men,** an orifice occasionally seen between the third and fourth pieces of the gladiolus or second bone of the sternum, from arrest of development. **S. glands,** a few lymphatic glands along the course of the internal mammary artery. **S. groove,** seen upon the surface of the body over the sternum and between the pectoral muscles. **S. line,** line of reference in examination, drawn through central portion of sternum. **S. nerves,** downward branches of the cervical plexus which pass to the sternal region. **S. ribs,** ribs (seven in number) which articulate with the sternum.

Sternalgia, stur-nal'je-ah (*sterno*, *algos*, pain). Pain referred to the sternum. Angina pectoris.

Sterna'lis bruto'rum. Sternalis muscle. **S. mus'cle,** rare muscle running vertically, superficial to great pectoral.

Sterne'bra. Segment of the sternum.

Ster'no. In composition, the sternum.

Ster'no-abdomina'lis. Triangularis sterni and transversalis abdominis considered as one muscle.

Sternocervica'lis. Supernumerary muscular slip arising from the manubrium and inserted into fascia of neck.

Sternochondroscap'ular mus'cle. Sternoscapular muscle.

Sternoclavic'ular. Rleating to the sternum and clavicle. **S. articula'tion,** the union of the inner extremity of the clavicle with a round facette at each side of the superior extremity of the sternum. In this articulation there are, besides the incrusting cartilages, two radiated sternoclavicular, one anterior and one posterior; an interclavicular ligament extending between the clavicles; and two synovial capsules, separated by an interarticular fibrocartilage. The costoclavicular ligament may also be considered to belong to this articulation.

Sternoclavicula'ris anti'cus. Supernumerary muscle sometimes found, arising from sternum and inserted upon anterior surface of clavicle. **S. posti'cus,** rare muscular slip passing from inner end of manubrium to clavicle behind the joint. **S. supe'rior,** muscle arising above sternoclavicularis anticus and passing to clavicle.

Sternoclaviobrachia'lis. Pectoralis major.

Sternoclaviohu'meral. Pectoralis major.

Sternoclaviohyoï'deus. Sternohyoid muscle.

Sternoclaviomastoï'des. Sternocleidomastoid.

Sternoclaviomastoï'deus. Muscle arising by two heads from sternum and clavicle, and inserted in mastoid process of skull. It crosses the neck obliquely.

Sternocleidomastoide'us (*sterno, kleis,* clavicle, *mastos,* mastoid process). Muscle situate at the anterior and lateral part of the neck. It is long and flattened, simple above and divided below, where it is inserted into the anterior and superior part of the sternum and the inner quarter of the clavicle. Above, it terminates at the mastoid process, which it embraces at the neighboring part of the temporal bone, and at the outer third of the upper curved line of the occipital bone. It carries the head forward, inclines and rotates it to one side. When both parts of the muscle contract they bend the head directly forward.

Sternocostocarot'icus. Abnormal insertion of sternothyroid muscle upon carotid sheath.

Sternocostoclavihu'meral. Pectoralis major.

Sternocostocoracoï'deus. Pectoralis minimus.

Sternocos'to-epitrochlea'ris. Muscular strip occasionally attached to lower border of pectoralis major, and inserted into epitrochlea.

Sternocostofascia'lis. Abnormal insertion of fibres of sternothyroid upon sternal fascia.

Sternocostoglos'sus. Sternoglossus.

Sternocostohyoï'deus profun'dus. Portion of sternothyroid muscle which occasionally passes to great cornu of hyoid bone; also muscle formed by union of sternothyroid and thyrohyoid muscle, the thyroid insertion being lost.

Sternocostothyroï'deus. Sternothyroid muscle.

Sternodynia, ster-no-din'e-ah (*sterno, odune,* pain). Sternalgia. **S. syncopa'lis,** angina pectoris. **S. syncop'tica et pal'pitans,** angina pectoris.

Sternofacia'lis. Sternoclavicularis.

Sternoglos'sus. Stray form of sternohyoid, in which it passes upward and unites with hyoglossus muscle.

Sternohu'meral. Pectoralis major.

Sternohyoï'deus (*sterno, hyoïdes,* hyoid bone). *Sternocleidohyoïdeus, Sternohyoïdes, Hyoïdes primus.* Muscle situate at the anterior part of the neck; inserted above at the inferior edge of the body of the hyoid bone; below, into the upper part of the posterior surface of the sternum—at the posterior part of the sternoclavicular articulation, and sometimes into the cartilage of the first rib. It depresses the hyoid bone.

Sternomas'toid ar'teries. Branches from external carotid or some of its divisions to sternomastoid muscle. **S. mus'cle,** sternal head of sternocleidomastoid, in contradistinction to clavicular head (cleidomastoid).

Sternomaxilla'ris. Occasional slip of sternomastoid inserted upon angle of jaw.

Ster'no-omoï'deus. Sternoclavicularis superior.

Sterno-omphalodymia, stur'no-om-fal-o-dim'e-ah (*sterno, omphalos,* navel, *duo,* to mingle). See *Somadymia.*

Sternopa'gia (*sterno, pagios,* fixed). Monstrous union of fœtuses in which they are attached at the sternum.

Sternopagus, ster-nop'ag-us (*sternum, pagios,* fixed). Double monster united by the sternum.

Sternopericar'diac lig'aments. Two bands passing to pericardium from manubrium and ensiform process of sternum.

Sternoscap'ular mus'cle. Sometimes found in man, extending from the sternum to the superior border of the scapula.

Sternothyrioï'des or **Sternothyrioï'deus.** *Bronchius.* Muscle situate at the anterior part of the neck. Attached above to the oblique line seen on the outer surface of the thyroid cartilage, and terminating below at the upper part of the posterior surface of the sternum and the cartilage of the second rib. When it contracts it depresses the thyroid cartilage and hyoid bone by the medium of the thyrohyoid membrane.

Sternothyroï'des or **Sternothyroï'deus.** Sternothyriodes.

Sternotrypesis, stur-no-trip-a'sis (*sterno, trupesis,* perforation). Perforation of the sternum.

Sternoxi'phoid lig'aments. Bands which connect the sternum with the xiphoid cartilage.

Ster'num (*sternon,* anterior bony part of chest). *Breast-bone, Hæmal spine* of Owen. Azygous symmetrical bone situate at the fore part of the chest. It is flat, broad above, narrow in the middle, and terminates below by a pointed cartilage—the xiphoid. It has an anterior or cutaneous surface, a posterior or mediastinal, a superior or clavicular extremity, and an inferior or abdominal. Articulated with the clavicles and the seven upper ribs on each side by means of their cartilages. In the adult it is in three parts—the manubrium, the body or gladiolus, and the inferior part or point, the ensiform process.

Sternumentum, ster-nu-men'tum (*sternuto,* to sneeze often). Sneezing.

Sternutament, stur-nu'tam-ent (*sternuto,* to sneeze often). That which causes sneezing.

Sternutamento'ria (*sternuto,* to sneeze often). Achillea ptarmica.

Sternutamentum, stur-nu-tam-en'tum. Sneezing.

Sternutatio, stur-nu-tah'she-o. Sneezing.

Sternutation, stur-nu-ta'shun (*sternuto,* to sneeze often). Act of sneezing.

Sternutatory, stur'nu-ta-to-re. *Sternutory.* Substance provoking sneezing, as tobacco, etc.; see *Errhine.* **S. pow'der,** asarabacca leaves, betonica leaves, sweet marjoram leaves, lily-of-the-valley flowers, equal parts, in fine powder; mix.

Ster'nutory. Sternutatory.

Ster'tor (*sterto,* to snore). Deep snoring accompanying inspiration in some diseases, particularly in apoplexy. Such respiration is said to be stertorous.

Ster'torous. See *Stertor.*

Stethæmia, steth-e'me-ah (*stethos,* chest, *haima,* blood). Hyperæmia of the lungs. Congestion or accumulation of blood in the pulmonary vessels.

Steth'o (*stethos,* chest). In composition, the chest.

Stethocatharsis, steth-o-kath-ar'sis (*stetho, katharsis,* purging). Expectoration.

Stethochysis, steth-ok'is-is (*stetho, chuo,* to pour out). Hydrothorax.

Stethodesmis (steth-o-dez'mis), **Stethodes'mium,** or **Stethodes'mus** (*stetho, desmos,* bandage). Corset.

Steth'ograph. Instrument for measuring movements of the chest in respiration. Pneumograph.

Stethom'eter (*stetho, metron,* measure). An instrument for measuring the extent of movement of the walls of the chest as a means of diagnosis in thoracic

diseases. A similar instrument has been called a *Thoracometer* or *Chest-measurer*. See *Chest-measurer*.

Stethoparalysis, steth-o-par-al'is-is (*stetho, paralusis*, paralysis). Palsy of the muscles of the chest.

Stethorrheu'ma (*stetho, rheuma*, defluxion, rheumatism). Pleurodynia.

Stethoscope, steth'o-skope (*stetho, skopeo*, to examine). An instrument invented by Laënnec, of Paris, for exploring the chest. It is a cylinder of wood, from four inches to a foot long, pierced through and through by a longitudinal canal about a quarter of an inch in diameter. One end of it is applied to the chest of the patient, the other to the ear of the examining physician. Double or binaural stethoscopes have been invented to enable both ears to be used at the same time. Stethoscopes are sometimes flexible, like the flexible ear-trumpet. This mode of examining affections of the chest, *Stethoscopy*, is also called *Mediate auscultation*.

Stethoscopia, steth-o-skop'e-ah (same etymon). See *Auscultation* and *Stethoscope*.

Stethoscopic, steth-o-skop'ik. Furnished by stethoscopy or auscultation, as a stethoscopic sign. Relating to stethoscopy.

Stethoscopy, steth'os-ko-pe. Stethoscope.

Ste'thus (*stethos*, chest). Thorax.

Sthenia, sthen-e'ah (*sthenos*, strength, power). Strength or excess of strength; excitement of the organic actions. Sthenic or dynamic diseases are such as depend upon excessive excitement.

Sthen'ic. Active. See *Sthenia*. **S. diseases**, diseases the result of inflammatory or increased action. **S. fe'ver**, form of continued fever marked by high temperature and quick pulse.

Sthenopyra, sthen-op'ir-ah (*sthenos*, strength, *pur*, fever). See *Synocha*.

Sti'an. Hordeolum.

Stib'i. Antimonium.

Stibia'lis. Antimonial.

Stibialism, stib'e-al-ism (*stibium*, antimony). The aggregate phonomena produced by antimonials when given in large quantities; antimonial intoxication or poisoning.

Stibia'tus tar'tras lixiv'iæ. Antimonium tartarizatum.

Stib'ii buty'rum. Antimonium muriatum. **S. chlora'tum**, antimony chloride. **S. chlora'tum solu'tum**, solution of antimony chloride. **S. deutomu'rias sublima'tus**, antimonium muriatum. **S. hydrosulphure'tum ru'brum**, antimonii sulphuretum rubrum. **S. jodat'um**, antimony iodide. **S. ox'idum ac'ido muriat'ico oxygena'to para'tum**, algaroth. **S. ox'idum al'bum median'te ni'tro confec'tum**, antimonium diaphoreticum. **S. ox'idum præcipitan'do para'tum**, algaroth. **S. oxo'des al'bum**, antimonium diaphoreticum. **S. oxo'des sulphure'tum**, antimonii sulphuretum præcipitatum. **S. oxyda'tum**, antimonious oxide. **S. ox'ydi sulphura'ti hydrosulphure'tum lu'teum**, antimonii sulphuretum præcipitatum. **S. oxydula'ti sulphure'tum**, antimonii sulphuretum præcipitatum. **S. oxydula'tum vit'reum**, antimony glass. **S. oxyd'ulum vitrea'tum**, antimonii vitrum. **S. ox'ydum semivit'reum**, antimonii vitrum. **S. ox'ydum sulphura'tum**, oxydum stibii sulphuratum. **S. oxysulfura'tum**, antimony oxysulphuret. **S. et potas'sæ deutotar'tras**, antimonium tartarizatum. **S. sesquichlora'tum**, antimony chloride. **S. subhydrosul'phas**, antimonii sulphuretum rubrum. **S. submu'rias præcipitan'do para'tum**, algaroth. **S. sulphura'ti hydrosulphure'tum ru'brum**, antimonii sulphuretum rubrum. **S. sulphura'tum auranti'acum**, antimony pentasulphide. **S. sulphure'tum ni'grum**, antimonium. **S. s. ni'grum læviga'tum**, purified antimony sulphide. **S. s. ru'brum**, antimony oxysulphuret. **S. vit'rum**, antimonii vitrum.

Stibiodermic, stib-e-o-dur'mik (*stibium*, antimony, *derma*, skin). Term applied to the use of antimonial ointment as a counter-irritant when rubbed on the skin.

Stibio'sum hydrosulphure'tum cum sul'phure. Antimonii sulphuretum præcipitatum. **S. ox'idum**, Antimonium diaphoreticum.

Stib'ium. Antimonium.

Stib'nite. Native sulphide of antimony, affording much of the market supply of this metal.

Stibogram, stib'o-gram (*stibos*, a beaten path, *grapho*, to write). Written record of footsteps.

Stichas, stik'as. Lavandula stœchas.

Sticking-plaster. Emplastrum resinæ.

Stick-lac. Lac in natural state investing tree twigs.

Stick'wort. Agrimony.

Sticta pulmonacea (stick'tah pul-mo-nah'se-ah) or **pulmona'ria** (*stiktos*, spotted). Lichen pulmonarius.

Stictacne, stikt-ak'ne (*stiktos*, punctated, *acne*). Form of acne in which the pustule has a red elevated base with central dark point.

Stiff joint, mus'cular. Contractura; anchylosis. **S. joints**, milk sickness. **S. neck**, torticollis.

Sti'fle joint. Femorotibial articulation of cattle.

Stig'ma (*stigma*, small puncture). Cicatricula. See *Stigmata*. **S. of Graa'fian fol'licle**, place where blood-vessels are absent in the wall surrounding the follicle, and point at which rupture finally occurs.

Stigmata, stig'mat-ah (pl. of **Stigma**). Breathing pores of insects are so called. Bleeding point upon the skin, as in purpura and sometimes in hysteria. See *Nævus* and *Petechiæ*. **S. heredita'lis**, marks of heredity. **S. Malpig'hii**, small venous openings which appear in large numbers along the course of the larger veins of the spleen. **S. may'dis**, corn-silk; see *Ustilago*. **S. ovario'rum**, cicatrices left in the ovary after the escape of ova.

Stigmat'ic. Pertaining to the stigma.

Stigmatiform, stig-mat'e-form (*stigma*). Resembling a stigma.

Stig'matism. See *Astigmatism*.

Stigmatization, stig-mat-i-za'shun. Ecchymosed spots upon various parts of the body.

Stigmatophorus, stig-mat-of'or-us (*stigma*, stigma, *phoreo*, to bear). Bearing stigmata.

Stigmatose, stig'mat-ose. Belonging or relating to stigma.

Stilbo'ma (*stilboo*, to make shining.) Cosmetic.

Stilette'. Wire or trocar passed through a tube or canula.

Still (*stilla*). See *Alembic*. **S. layer of Poiseuille**, *Space of Poiseuille;* thin stratum of liquid in contact with the capillary vessels, in which the white corpuscles of the blood seem to be retarded, while the red corpuscles are hurried along in the centre of the current.

Still'a. Drop.

Stillatio sanguinis (stil-lah'she-o san'guin-is) **e na'ribus** (*stillo*, to drop). Bleeding at the nose.

Stillation, stil-la'shun (*stilla*, a drop). Passage of a liquid drop by drop.

Still'birth. See *Stillborn*.

Still'born. Born still or without life; a stillborn child.

Stillicidium, stil-le-sid'e-um (*stilla*, drop, *cado*, to fall). Term often used synonymously with strangury, but meaning the flow of any liquid—particularly the urine—drop by drop. Also a kind of embrocation, stillicidium supra partem, effected by dropping a liquid upon a part. **S. lacryma'rum**, epiphora. **S. na'rium**, coryza. **S. san'guinis e nar'ibus**, bleeding at the nose. **S. su'pra par'tem**, see *Stillicidium*. **S. uri'næ**, see *Stillicidium*.

Stillingia, stil-lin'je-ah. *Queen's root, Queen's delight, Yaw root, Marcory, Cockup hat.* Indigenous plant growing in pine barrens from Virginia to Florida. The root, Stillingia (Ph. U. S.), is said to be used in syphilis, obstinate cutaneous affections, etc., like sarsaparilla. **S. sebif'era**, native tallow tree of China which is grown in the Southern United States; yields a vegetable wax which is said to be nearly pure stearine. **S. sylvat'ica**, see *Stillingia*.

Stilling's canal'. Canal in the vitreous humor through which, in the fœtus, an artery passes to the lens. **S. nu'cleus.** Red nucleus.

Sti'lus. Stylus. **S. ante'rior, S. infe'rior, S. inter'nus, S. supe'rior,** see *Peduncles of optic thalamus.* **S. dilu'bilis** or **S. un'gueus,** medicated pencil.

Stimato'sis (*stuma,* priapism). *Stymatosis.* Hemorrhage from the male organ, accompanied or not with priapism.

Stim'mi. Antimonium.

Stim'ulant (*stimulo,* to excite). *Excitant, Incitant, Hypersthenic, Pyretogenetic.* Medicine having the power of exciting the organic action of the different systems of the economy. Some stimulants are diffusible, having a prompt but temporary action; others are permanent or persistent. The action of stimulants is called stimulation. Cardiac stimulants increase the heart's action; cerebral stimulants, that of the brain; diffusible stimulants, like ammonia, have a quick but transient effect; spinal stimulants excite the action of the spinal cord. See *Excitants.*

Stimulate, stim'u-late (*stimulo,* to goad). To produce an exaltation of vital activity in a part or organ.

Stimulation, stim-u-la'shun. Action of stimulants.

Stim'uli (pl. of **Stimulus**). Excitants.

Stimulus (goad). That which excites the animal economy. **S. dif'ference,** difference in activity between two stimuli. **S. receptiv'ity,** ability of receiving and appreciating the highest degree of stimulus. **S. scope,** limit between stage of stimulus susceptibility and that of receptivity. **S. susceptibil'ity,** ability of perceiving a stimulus. **S. thresh'old,** see *Threshold.* **S. val'ue,** term applied in psychophysics to point out sign or formula indicating intensity of stimulus.

Sting. Acute and sudden pain, as from a bee. Stimulus.

Stinge. Variety of urticaria affecting the mouth and nose of cattle in hot weather.

Stink bush. Illicium floridanum. **S. poke,** Dracontium fœtidum. **S. weed,** Chenopodium anthelminticum, Datura stramonium, Polanisia graveolens.

Stipa'tio (*stipo, stipatum,* to stop up). Narrowness or constriction. **S. te'læ cellulo'sæ infan'tum,** induration of the cellular tissue of children.

Stip'itate. Possessing stalk or pedicle.

Stip'ites dulcama'ræ. Dulcamara. **S. lamina'riæ,** Laminaria Cloustoni.

Stipticus, stip'tik-us. Styptic.

Stitch (same root as **Stick**). Point. Acute lancinating pain like the puncture of a sharp needle. **S., com'mon,** suture, common. **S., loop,** see *Suture.* **S., ro'yal,** see *Suture.* **S. in the side,** pleurodynia; also a symptom in pleurisy or pneumonia. **S. wort,** common chickweed.

Stizolo'bium (*stizo,* to prick, *lobion,* small pod). Dolichos pruriens. **S. pru'riens,** Mucuna pruriens. **S. u'rens,** Mucuna urens.

Stlen'gis. A flesh-brush. An instrument used in ancient baths for scraping off the sweat.

Stobæ'a rubricau'lis (after Dr. Stobæus of Sweden). S. African plant, ord. Compositæ. A tincture of the bruised roots is diuretic and of service in gravel.

Stock'ing, elas'tic, gum, or **laced.** Bandage used by surgeons, consisting of a stocking made of cloth or silk, admitting of tight lacing anteriorly; it is also made of fine elastic gum cloth. It is employed in varices and ulcers of the legs.

Stœ'chas Arab'ica. Lavandula stœchas.

Stœchiology (ste-ke-ol'o-je) or **Stoichiol'ogy** (*stoicheion,* an element, *logos,* discourse). Treatise on, or the theory of, elements, hence of the elementary parts of organized substances.

Stoicheion, stoi-ki'on. Element.

Stokes. See *Cheyne.* **S., disease of,** see *Exophthalmia.* **S.'s law,** paralysis affecting underlying inflamed serous or mucous membranes. **S.'s lin'iment,** mixture of oil of turpentine, acetic acid, and yolk of egg.

Stolid'ity. Stupidity; imbecility; amentia.

Sto'ma (*stoma*). Mouth.

Stomacace, sto-mak'as-e (*stoma, kakos,* evil). *Noma, Canker.* Fetor of the mouth, with a bloody discharge from the gums; scurvy; see *Cancer aquaticus.* Porphyra nautica. **S. gangræno'sum,** cancer aquaticus. **S. universa'le,** purpura hæmorrhagica.

Stomach, stum'ak. One of the principal organs of the digestive apparatus. A musculo-membranous reservoir, continuous on the one side with the œsophagus, on the other with the duodenum. It is situate beneath the diaphragm, between the liver and the spleen, and occupies the epigastrium and part of the left hypochondrium. In it the food is formed into chyme. Viewed externally, the stomach has—1. An anterior face, which looks a little upward. 2. An inferior face, directed downward. 3. An inferior or colic margin, which is convex and extensive, and is called the greater curvature. It gives origin to the omentum majus. 4. A superior or diaphragmatic margin, shorter, concave, and called the lesser curvature. The lesser omentum is attached to this. 5. A left or œsophageal orifice, called also the cardia or upper orifice. 6. A right or intestinal or inferior orifice, called the pylorus. 7. A considerable dilatation, situate to the left of the cardia and greater curvature, called the great tuberosity or great cul-de-sac or fundus or splenic portion of the stomach. 8. A less extensive dilatation, situate to the right of the greater curvature—the lesser tuberosity or lesser cul-de-sac, pyloric portion. The inner surface of the stomach is of a reddish-white color, and has a marbled appearance. It is constantly covered by thick mucus, and is lined by a mucous membrane presenting numerous wrinkles or rugæ. The parietes of the stomach consist of three membranes in superposition. The outermost is serous, and is an extension of the peritoneum. The middle coat is muscular—some fibres running longitudinally, others transversely, and others obliquely. The innermost membrane is of a mucous nature, but not exactly a continuation of the membrane that lines the œsophagus. The mucous and muscular membranes form, at the pylorus, a valve called the pyloric valve. These three coats are united by a dense, close, areolar membrane, and between the mucous and muscular coats, along the two curvatures especially, is a quantity of muciparous glands, called glands of Brunner. The matrix is the fibrous network uniting the cylindrical tubes of the stomach, and also surrounding the intestinal tubes. The arteries of the stomach are very numerous, and proceed from the coronary of the stomach, the pyloric, splenic, and right and left gastro-epiploic. The veins have the same name and pursue the same course as the arteries. They pour their blood into the trunk of the vena porta. Its lymphatic vessels are very numerous, and pass into ganglia situate along the two curvatures. The nerves of the stomach proceed from the pneumogastric and three divisions of the cœliac plexus.

The following estimates have been made of the measurements of the stomach:

Weight, 202 g. (Dursq).	
Length from fundus to pylorus	270–320 mm.
Distance from the lesser to greater curvature in the middle part	90–110
Distance from the lesser to greater curvature at the fundus	120
Distance from the lesser to greater curvature at the antrum pylori	40–50
Width of cardia and pylorus	30
Length of stomach in the new-born	80

Stomach ache. Cardialgia; colic. **S., cadav'eric soft'ening of,** see *Cadaveric.* **S. cells,** honeycomb-like depressions in the lining membrane of the stomach. **S. disease,** general term for gastric affections; see also *Limosis.* **S., first,** ingluvies. **S. fis'tula,** fistula, gastric. **S., hemorrhag'ic ero'sion of,** see *Erosion.* **S. pump,** a useful instrument for conveying fluids to the stomach when deglutition is impracticable, and for pumping out the contents of that organ. It consists of a forcing syringe, to the bottom and nozzle of which flexible tubes can be attached. When the object is to force fluids into the stomach, the stomach-tube must be attached to the nozzle and passed down the throat, the tube connected with the bottom of

the syringe being placed in the fluid to be injected. To empty the stomach, the stomach-tube must be attached to the bottom of the instrument. This instrument is of great service where poisons have been taken. The antidote, when any exists and is at hand, should be promptly administered if it is capable of at once neutralizing the poison. The stomach-pump was first employed in America by Dr. Physick in 1812. **S., sec'ond,** proventriculus. **S., sick,** nausea; milk sickness. **S., third,** ventriculus callosus. **S. tooth,** canine tooth, lower jaw, first dentition; so named owing to gastric disturbance frequently ensuing at its eruption. **S. tube,** see *Tube, œsophageal.* **S., ul'cer of,** gastric ulcer. **S. vertigo,** vertigo ascribed to gastric origin.

Stomachal, stom'ak-al. *Stomachic, Stomachical.* Belonging to the stomach; being good for the stomach; strengthening the stomach. Medicine giving tone to the stomach.

Stomachalgia, stom-ak-al'je-ah (*stomach, algos,* pain). Cardialgia.

Stom'achi resolu'tio (weakness of stomach). Dyspepsia.

Stomach'ic. Stomachal.

Stomach'ical. Stomachal.

Stomachus, stom'ak-us (*stomachos*). Word used in several different acceptations; for example, for the œsophagus, for the cardiac orifice of the stomach (see *Cardia*), and for the stomach itself.

Stomadæum, stom-ad-e'um. Stomodæum.

Stomæmorrhagia, stom-e-mor-rhaj'e-ah (*stoma,* mouth, *haima,* blood, *rhegnumi,* to burst forth). Hemorrhage from the mouth.

Stomal'gia (*stoma, algos,* pain). Pain in the mouth.

Stomapodous, stom-ap'o-dus (*stoma,* mouth, *pous,* foot). Having feet near the mouth.

Stomapyra, stom-ap'ir-ah (*stoma, pur,* fire, fever). Aphthæ. **S. aph'tha,** aphthæ.

Stomata, stom'at-ah (pl. of **Stoma**). Mouths.

Stomatalgia, stom-at-al'je-ah (*stoma, algos,* pain). Pain in the mouth.

Stomate, sto'mate. Having a mouth.

Stomatelcia (stom-at-el'se-ah) or **Stomatelco'sis** (*stoma, helkos,* an ulcer). Ulceration of the mouth.

Stomatelcosis, stom-at-el-ko'sis (*stoma, helcosis,* ulceration). Ulceration of the mouth.

Stomatia, stom-ah'shee-ah (*stoma*). Disease of the mouth.

Stomat'ic (*stomatikos,* relating to the mouth). Medicine used in diseases, etc. of the mouth. Dentifrices, masticatories, etc. are stomatics.

Stomatitis, stom-at-e'tis (*stoma, itis*). Inflammation of the mouth. **S., aph'thous,** *S., follicular* or *ulcerous* or *parasitic.* Inflammation of the follicles of the mouth, constituting the aphthæ of the adult, which is generally accompanied by cephalic, gastric, and general disturbance. It may be discrete or confluent, and requires general and local treatment adapted to the case; see *Aphthæ.* **S. catarrha'lis,** catarrhal inflammation of the mucous membrane of the mouth. **S. cremo'sa,** aphthæ. **S. diphther'ica,** diphtheritic inflammation of the mouth. **S., erythem'atous,** simple inflammation of the mouth. **S. exsudati'va,** aphthæ. **S. exul'cerans,** S., ulcerative. **S., follic'ular,** S., aphthous. **S. gangræno'sa,** cancer aquaticus. **S. mater'na,** stomatitis of nursing women. **S. mercuria'lis,** see *Salivation, mercurial.* **S. of nurs'ing women** appears to be a variety of S., aphthous. **S. nutri'cum,** stomatitis of nursing women. **S., parasit'ic,** S., aphthous. **S., pseudomem'branous,** *Pseudomembranous inflammation of the mouth;* in its worst form, *Stomatyphus.* Inflammation of the mouth accompanied by the exudation of a false membrane—a disease rarely seen extensively except in large foundling establishments. **S., ul'cerative,** inflammation of the mouth, accompanied with ulceration; frequently described under the vague name of *Aphthæ.* **S., ul'cerous,** S., ulcerative. **S., vesic'ular,** aphthæ. **S. vesiculo'sa infan'tum,** aphthæ.

Stomatoc'ace (*stoma, kakos,* evil). Stomacace.

Stomatocatharsis, stom-at-o-kath-ar'sis (*kathairo,* to purge). Ptyalism.

Stomatodynia, stom-at-o-din'e-ah (*stoma, odune,* pain). Pain in the mouth.

Stomatodysodia, stom-at-o-dis-od'e-ah (*stoma, dys, ozo,* to smell). Offensive smell of the breath upon exhalation.

Stomatogastric, stom-at-o-gas'trik (*stoma, gaster,* stomach). *Stomogastric.* Appertaining to the mouth and stomach, as the stomatogastric ganglia of the lower animals. See *Encephalon.*

Stomatoïatria, stom-at-o-e-at-re'ah (*stoma, iatreia,* medical treatment). Treatment of diseases of the mouth.

Stomatomalacia putrida, stom-at-o-mal-ah'she-ah pu'trid-ah (*stoma, malakia,* softness). Cancer aquaticus.

Stomatomenia, stom-at-o-men'e-ah. Vicarious menstruation by the mouth.

Stomatomia, stom-at-om'e-ah (*stoma, tome,* incision). Incision or operation on the mouth. Incising the mouth of the uterus.

Stomatomorphous, stom-at-o-mor'fus (*stoma, morphe,* form). Term in botany, meaning mouth-shaped.

Stomatonecrosis, stom-at-o-ne-kro'sis (*stoma, nekrosis,* death). Cancer aquaticus; stomacace.

Stomatono'ma (*stoma, nome,* an ulcer). Stomacace.

Stomatopa'nus (*stoma, panu,* very much). Tumefaction of the glands of the mouth.

Stomatopathi'a or **Stomatop'athy** (*stoma, pathos,* disease). Disease of the mouth.

Stomatophyma, stom-at-o-fe'mah (*stoma, phuma,* swelling). Swelling of the mouth. **S. glandulo'sum,** tumefaction of the glands of the mouth.

Stomatoplas'tic (*stoma, plasso,* to form). Epithet for the operation of forming a mouth where the aperture has been contracted from any cause—*Stomatoplasty.*

Stomatoplasty, stom'at-o-plas-te (*stoma, plasso,* to form). Plastic operation about the mouth.

Stomatorrhagia, stom-at-or-rhaj'e-ah (*stoma, rhegnumi,* to break out). Hemorrhage from the mouth. **S. alveolo'rum,** phatnorrhagia. **S. gingiva'rum,** bleeding from the gums.

Stomatorrhœ'a (*stoma, rheo,* to flow). Excessive flow of liquid from the mouth; see *Stomatorrhagia.*

Sto'matoscope (*stoma, skopeo,* to view). Instrument for keeping the mouth open, so as to permit the parts within to be inspected—*Speculum oris.* Also an instrument like the laryngoscope, provided with a mirror to reflect light on the interior of the mouth.

Stomatosepsis, stom-at-o-sep'sis (*stoma, sepsis,* putrefaction). Cancer aquaticus.

Stomato'sis (*stoma*). Bleeding from the mouth.

Stomatospasmus, stom-a-to-spaz'mus (*stoma, spasmus*). Trismus; lockjaw.

Stomatosyrinx, stom-at-o-sir'inks (*stoma, surinx,* tube). Eustachian tube.

Stomaty'phus (*stoma, typhus*). Pseudomembranous stomatitis.

Stomencephalus (stom-en-sef'al-us) or **Stomoceph'alus** (*stoma, kephale,* head), Genus of monsters having two contiguous eyes, or a double eye occupying the median line; the nasal apparatus atrophied and forming a tube; the jaws rudimental; and the mouth imperfect or wanting. A variety of Cyclocephalus.

Sto'mium. See *Stoma.*

Stomodæum, stom-o-de'um (*stoma, daio,* to divide). Invagination of epiblast forming mouth of embryo.

Stomoman'icon (*stoma,* face, *manos,* thin). Platysma myoides.

Stomorrhagia, stom-or-rhaj'e-ah. Bleeding from the mouth.

Stone bind'er. Osteocolla. **S. in the blad'der,** vesical calculus. **S. crop,** sedum. **S. crop, bi'ting,** sedum. **S. mint,** Cunila mariana. **S. moss,** rock lichens of Arctic regions of America, eaten as food. **S. pine,** Pinus cembra; Pinus pinea. **S. pock,** acne. **S. root,** Collinsonia Canadensis. **S. sweat,** see *Hyraceum.*

Stone-cut'ter's phthi'sis, Affection of the lungs,

sometimes chronic interstitial pneumonia, ultimately becoming tuberculous, due originally to inhalation of fine particles in stone-cutting.

Stones, the. Testes.

Stool. Dejection. **S., cal'omel,** see *Calomel.*

Stop'page. Cessation of a flow. Obstructive interference with a function. Obstruction of a canal.

Stop'ping. Filling; stegnosis. **S. of the bel'ly, bow'els, guts,** or **stom'ach,** constipation.

Stor'age albu'men. Albumen remaining in circulation. **S. bat'tery,** see *Faure's battery.*

Sto'rax or **Sty'rax.** Gum-resin derived from liquidambar and Styrax officinalis. **S. liq'uida,** Liquidambar styraciflua.

Storesin, sto-rez'in. Largest constituent of storax.

Storck's blennorrhœ'a. Mucous discharge from the upper air-passages.

Stork'bill or **Storks'bill.** Geranium maculatum, Erodium cicutarium.

Stough'ton's elix'ir. Tinctura absinthii composita. Gentian, wormwood, rhubarb, germander, bitter orange-peel, each 25 parts; aloes, cascarilla, each 5 parts; alcohol, 1000 parts. Make into a tincture.

Stove. Limited space, warmed artificially, in which the air is slowly renewed; used for drying various substances, as plants, extracts, conserves, etc., or for taking vapor-baths. In this case the stew or stove is said to be wet or humid; in the opposite case it is said to be dry. The latter, which is used by the Turks, is the *Calidarium* or *Caldarium, Turkish, Eastern,* or *Roman bath.* In the true Turkish bath, however, the air of the bathing apartment is densely charged with vapor, which the the so-called Turkish bath of modern introduction here and elsewhere is generally not. The former is their trepidarium or vaporarium, which see. These kinds of baths greatly excite the cutaneous transpiration, and are valuable agents in rheumatic and other affections.

Stra'bi (*straboi*). Those affected with squint. See *Strabismus.*

Strabilismus, strab-il-iz'mus. Strabismus.

Strabis'mic. Relating to or affected with strabismus.

Strabismometer, strab-is-mom'et-ur (*strabismus, metron,* measure). Instrument for measuring the linear deviation of a squinting eye.

Strabismus, strab-iz'mus (*strabismos,* squinting; state of having crooked eyes). Want of concordance of the optic axes. It may be dependent upon natural or acquired inequality in the action of the motor muscles of the eye, on a convulsive state of one of those muscles, a difference in the sensibility of the two eyes, or a cerebral affection. If the disease be symptomatic of cerebral affection, attention must, of course, be directed to the latter. Strabismus may be single, affecting one eye only, or double, affecting both eyes, and it may be convergent or divergent; that is, with the ball drawn toward the nose or away from it; other varieties are the upward, downward, periodic, and paralytic forms. Those affected with strabismus have been called *Squinters* or *Squint-eyed.* Slight deviation is generally called a cast in the eye, and sometimes *Cockeye.* **S., conver'gent,** see *Strabismus.* **S., diver'gent,** see *Strabismus.* **S., doub'le,** see *Strabismus.* **S., sin'gle,** see *Strabismus.*

Strabometer, strab-om'e-tur. Graduated instrument devised for the purpose of measuring the degree of strabismus.

Strabo'nes or **Strabo'ni.** Those affected with strabismus.

Straboscopic, strab-o-skop'ic (*strabos,* twisted, *skopeo,* to see). Referring to likeness of objects as seen by a strabismatic person. **S. disk,** form of instrument in which objects appear distorted.

Strabositas, strab-os'it-as. Strabismus.

Strabot'omy or **Strabotomia,** strab-o-tom'e-ah (*strabos,* one who squints, *tome,* incision). Operation for the removal of squinting by the division of the muscle or muscles that distort the eyeball. *Strabotomist* is one who practises strabotomy.

Straight si'nus. It runs backward in the base of the falx cerebri, gradually widening as it approaches the torcular Herophili, in which it terminates. Beside the inferior longitudinal sinus, the venæ Galeni and superior veins of the cerebellum open into it. **S. tu'bule,** central stem of uriniferous tubule which urine from collecting tubules enters. **S. tu'bules of tes'tis,** short, straight tubes of the testis, receiving secretion of seminiferous tubules, and discharging it into the rete testis.

Strain (*stringo,* to constrict or squeeze). Sprain. To pass decoctions, infusions, etc. forcibly through linen; also to exert an effort. This is accomplished by fixing firmly the parts where the muscles to be exerted originate, in order that their full power may be developed.

Strain'er. Sieve for filtration used in pharmacy.

Strain'ing. Muscular effort.

Straight-jack'et or **Straight-waist'coat.** Jacket, made of strong material, used for restraining maniacs or those laboring under violent delirium, and having long sleeves which are tied behind, so that the arms cannot be extricated.

Straits of the pel'vis. See *Pelvis.*

Stramineous, stram-in'e-us (*stramen,* straw). Color of, or like, straw.

Stramo'nia. Datura stramonium.

Stramo'nii fo'lia (Ph. U. S). See *Datura stramonium.* **S. fo'lium,** see *Datura stramonium.* **S. se'men** (Ph. U. S.), stramonium seeds.

Stramonium, stram-o'ne-um (*struchnos, manikos,* maniacal). Datura stramonium. **S. fœ'tidum,** Datura stramonium. **S. ma'jus al'bum,** Datura stramonium. **S. oint'ment,** unguentum stramonii. **S. plas'ter,** emplastrum stramonii. **S. spino'sum,** Datura stramonium. **S. vulga'tum,** Datura stramonium.

Stram'ony. Datura stramonium.

Strangalæsthesia, stran-gal-ees-the'ze-ah. Morbid sensation of constriction of a part as by a rope or band.

Strangalides, stran-gal'id-ees (*strango,* to compress). Small, hard tumors, as in the breast when the milk does not find issue.

Stranga'lion. Tubercle.

Stran'galis (*strangalis,* a hard kernel). Tubercle.

Strangalismus, stran-gal-iz'mus (*strangalismos,* act of twisting). Strangulation.

Stran'ger's cold or **fe'ver.** Murri-murri. See *Fever, stranger's.*

Stran'gles. Tumor or swelling in throat of horse.

Stran'gulated. Constricted tightly. **S. her'nia,** hernia irreducible from constriction; see *Strangulation.*

Strangula'tio (*strango,* to compress). Orthopnœa. Strangulation. **S. uteri'na,** globus hystericus; see *Angone.* **S. vul'væ,** hysteria.

Strangula'tion. State of a part too closely constricted. Thus we say that there is strangulation of an intestinal hernia when the opening that gives passage to the protruded intestine seriously intercepts the continuity of the digestive canal. In legal medicine it means the forcible obstruction of the air-passages, by a ligature or by the hand, for criminal purposes. See *Suffocation.*

Stran'gulator. A species of cynanche. See *Lycoides.*

Strangu'ria. Strangury. **S. cruen'ta,** discharge of blood from the vessels of the urinary bladder.

Strangurious, stran-gu're-us. Affected with or of the nature of strangury.

Strangury, stran'gu-re (*strango,* to squeeze, *ouron,* urine). *Dysuria.* Extreme difficulty in evacuating the urine, which issues only drop by drop, and is accompanied with heat, pain, tenesmus at the neck of the bladder, etc. See *Ischuria* and *Retention.*

Stranx. Drop.

Strap'ping. The dressing of ulcers by means of straps or strips of adhesive plaster, linen, etc. Also the plaster thus applied. **S., wa'ter,** see *Water-dressing.* **S., wet,** see *Water-dressing.*

Strass'burg tur'pentine. Variety of turpentine obtained by puncturing vesicles forming in bark of Abies pectinata.

Strass'burg's test, for bile-acid in urine. Add cane-sugar to urine, into which dip filter-paper; dry the paper and apply a drop of H_2SO_4; a violet color is soon noticed.

Strass'burger's cell-plate. Equatorial plate produced in karyokinesis.

Stratiotes, strat-e-o'tees. Achillea millefolium.

Stra'tum (*sterno, stratum,* to spread or cover, to pave). Layer. **S. arysyndes'micum,** syndesmo-arytenoideus. **S. bacilla'tum, bacillo'sum,** or **bacillo'rum,** bacillary layer; see *Tunica Jacobi.* **S. Bowman'i,** the anterior elastic lamina of the cornea, between the proper cornea and the conjunctival epithelium, which, according to Bowman, aids the cornea in maintaining its exact curvature. **S. cellula'rum pyramida'lium,** large pyramidal layer. **S. choriocapilla're,** tunica Ruyschiana. **S. cine'reum,** layer of investing gray matter in anterior corpora quadrigemina, beneath superficial stratum zonale; also layer of gray matter on floor of fourth ventricle. **S. convolu'tum,** stratum radiatum and layer of large pyramidal cells taken together. **S. cor'neum,** epidermis. **S. cor'porum nervo'rum arcto'rum,** stratum granulosum. **S. cuta'neum,** dermoid layer of membrane of tympanum. **S. cylindro'rum,** layer of rods and cones; tunica Jacobi. **S. dorsa'le,** dorsal layer. **S. episclera'ta,** part of capsule of Tenon on the sclerotic coat. **S. gelatino'sum,** gelatinous layer. **S. germinati'vum,** germinal spot; proligerous disk. **S. glomerulo'sum,** glomerular layer. **S. granulo'sum,** granular layer of retina; also upper portion of rete mucosum; a narrow layer of pyramidal cells in the fascia dentata of the brain corresponding to similar cells on external surface of the brain. **S. horizonta'le,** superficial arcuate fibres over surface of anterior pyramid of the medulla. **S. interme'dium,** layer of fibres in crura cerebri. **S. l. thal'ami,** subthalamic tegmental region. **S. lacuno'sum,** layer of cortical cells in hippocampus major. **S. lemnis'ci,** deepest layer of anterior quadrigemina. **S. lu'cidum,** layer of cells in skin between stratum granulosum and horny layer. **S. Malpigh'ii,** corpus mucosum. **S. media'num horizonta'le,** horizontal stratum. **S. medulla're,** layer of medullated nerve-fibres in olfactory bulb. **S. m. me'dium,** stratum lacunosum. **S. molecula're,** gelatinoid layer of olfactory bulb; molecular layer of cortex. **S. muco'sum,** corpus mucosum. **S. muscula're lin'guæ,** aberrant collection of muscular fibres running in middle glosso-epiglottic fold. **S. ni'grum,** substantia nigra. **S. op'ticum,** layer of delicate longitudinal nerve-fibres in corpora quadrigemina. **S. o'riens,** delicate layer of cells in cortex of hippocampus major. **S. pigmen'ti,** see *Choroid.* **S. profun'dum pon'tis,** deep layer of transverse fibres of pons Varolii. **S. prolig'erum,** proligerous disk. **S. radia'tum,** cortical layer of hippocampus major. **S. reticula're,** stratum lacunosum. **S. reticula'tum,** latticed layer. **S. semiluna're,** spiral ligament. **S. subthalam'icum,** subthalamic tegmental region. **S. superficia'le pon'tis,** outer layer of transverse fibres of pons Varolii. **S. supravascula're,** external muscular coat of uterus. **S. thy'reo-ar'y-epiglot'icum,** thyreo-ary-epiglotticus muscle. **S. thyreomembrano'sum,** thyro-epiglotticus muscle. **S. transver'sum,** stratum zonale. **S. vascula're,** middle muscular coat of uterus. **S. zona'le,** collections of white fibres on the surface of the cerebro-spinal axis, as upon the medulla, corpora quadrigemina, optic thalamus, and corpus striatum.

Straw'berry (strewberry). Fragaria. **S. bush,** Euonymus Americanus. **S., shrub'by,** Rubus arcticus. **S. toma'to,** Physalis alkekengi. **S. tongue,** a characteristic appearance of the tongue in scarlatina, in which, after the clearing away of a thick white fur, the organ becomes preternaturally red and clean. **S. tree,** Euonymus Americanus. **S., wild,** Fragaria Virginiana.

Streak, prim'itive. Groove, primitive.

Streb'li (*strebloi*). See *Strabismus.*

Streblosis, streb-lo'sis (*streblos,* twisted). Luxation.

Strem'ma (*stremma*). Luxation; sprain.

Strength'ening plas'ter. Iron plaster.

Strephotome, stref'o-tome (*strepho,* to turn, *tome,* incision). Name given to twisted needle used in Spanton's operation for radical cure of inguinal hernia.

Strepito'sus mor'bus or **affec'tus.** A kind of flatulent disease, said to be once not uncommon in the Austrian Alps, in which emphysematous tumors form on different parts of the body, accompanied by sonorous excretion of gas by the mouth and anus.

Strep'itus (*strepito,* to make a noise). A sound heard on percussion or auscultation. **S. au'rium,** noise of the ears; tinnitus aurium.

Streptobacte'ria (*streptos,* formed in rings). Chain-like bacteria; named from their forming links.

Streptococcus, strep-to-kok'kus (*streptos,* twisted, *kokkos,* kernel). Micrococci arranged in strings. **S. diphthe'riæ,** found by Prudden in diphtheritic membranes. **S. erysipel'atis** or **erysipelato'sus,** micrococcus erysipelatosus. **S. of Fehleisen,** micrococcus erysipelatosus. **S. lanceola'tus,** micrococcus Pasteuri. **S. plicat'ilis,** found in drinking-water and a disease affecting the lips of children. **S. pyog'enes,** micrococcus found in acute abscess. **S. sep'ticus,** found in polluted soil. **S. septopyæ'micus,** found in human saliva; pathogenic, like erysipelas micrococci. **S. vaccin'iæ,** found in vaccine lymph.

Strep'tothrix (*streptos, thrix,* hair). Genus of schizomycetes with hair-like filaments.

Stretch'er. Litter for transporting the sick.

Stretch'ing. Pandiculation.

Stria, stre'ah. Parallel line or groove. **S. acus'tica,** portion of cochlear duct of internal ear to which are distributed filaments of the auditory nerve. **S. al'ba tu'beris,** occasional white band on base of brain, passing from lateral edge of corpus mammillare forward, outward, and upward above the optic chiasma to the fornix. **S. cor'nea,** the superficial stratum of the tænia semicircularis. **S. dorsa'lis,** dorsal olfactory root. **S. exter'na,** ligamentum tectum. **S. latera'lis,** external olfactory root. **S. longitudina'le of cor'pus callo'sum,** whitish antero-posterior striatum on superior surface of corpus striatum. **S. media'lis,** internal olfactory root. **S. medulla'ris ascen'dens,** a medullary stria of fourth ventricle, rising obliquely upward and outward. **S. m. of op'tic thal'amus,** white streaks from pineal gland to foramen of Munro. **S. pinea'lis,** stria medullaris. **S. termina'lis,** part of internal capsule separating optic thalamus from corpus striatum. **S. vascula'ris,** a vascular strip on the outer wall of the membranous canal of the labyrinth.

Stri'æ (pl. of **Stria,** a furrow). See *Vibices.* **S. acus'ticæ,** medullary striæ. **S. atroph'icæ,** linear lesions seen in atrophy of the skin. **S. cilia'res,** ciliary processes. **S. cor'neæ,** tænia semicircularis. **S. gravida'rum,** lineæ albicantes. **S. lib'eræ,** median striæ longitudinales of corpus. **S. longitudina'les cor'dis,** muscular fibres of heart running in vertical direction along posterior longitudinal furrow. **S. longitudina'les Lancis'ii,** see *Corpus callosum.* **S. medulla'res,** see *Processus teretes.* **S. obtec'tæ,** striæ longitudinales of corpus callosum, covered by edge of hemisphere. **S. olfacto'riæ,** olfactory roots. **S. ret'inæ subjec'tæ ligamen'to cilia'ri,** halo signatus. **S. of Ret'zius,** Retzius, striæ of. **S. semiluna'res,** tænia semicircularis. **S. tec'tæ,** striæ obtectæ. **S. termina'les,** tænia semicircularis. **S. transversa'les Willis'ii,** see *Corpus callosum.*

Stri'ated (*stria,* a channel or groove). Marked with small channels or grooves or with lines of another color. **S. ar'teries,** minute branches from anterior and middle cerebral arteries entering anterior perforated space and supplying corpus striatum. **S. coat,** see *Artery.* **S. ipecacuan'ha,** Peruvian ipecacuanha. **S. mus'cular fi'bre,** see *Muscular fibre.*

Striatus, stre-at'us (*striatus,* grooved or furrowed). Grooved, striated; see *Corpora striata.*

Stribili'go. Efflorescence.

Strictu'ra. Stricture. **S. a'ni,** stricture of the rectum. **S. intesti'ni rec'ti,** stricture of the rectum.

S. intesti'ni rec'ti spasmod'ica, spasmodic stricture of the rectum. **S. œsoph'agi,** stricture of the œsophagus. **S. œsoph'agi callo'sa,** stricture of the œsophagus. **S. œsoph'agi spasmod'ica,** œsophagismus. **S. pharyn'gis** or **œsoph'agi ve'ra,** stricture of the œsophagus. **S. præpu'tii,** phimosis. **S. pylo'ri,** stricture of the stomach at the pylorus; see *Gastrostenosis.* **S. ure'thræ,** stricture of the urethra. **S. ventric'uli,** stricture of the stomach; see *Gastrostenosis.*

Strict'ure (*stringo, strictum,* to draw tight). A diminution or contracted condition of some tube or duct, as the œsophagus, rectum, urethra, etc. This must be dilated by appropriate bougies. Strictures may also occur in the intestines. **S., an'nular,** circular stricture producing ring-like obstruction around urethral or intestinal canal. **S., bri'dle,** fold of membrane forming crescentic obstruction or stretched across the canal, attached at either end. **S., car'diac,** stricture at cardiac extremity of the stomach; see *Gastrostenosis.* **S., conges'tive,** stricture, result of acute congestion. **S., contrac'tile,** S., recurrent. **S. fe'ver,** constitutional disturbance following stricture; urethral rheumatism. **S., hour'glass,** S., bridle. **S., imper'meable,** one which will not admit passage of instrument. **S., ir'ritable,** one in which slightest instrumental interference causes pain and spasm. **S., lin'ear,** S., bridle. **S. of the œsoph'agus,** dysphagia constricta. **S., pack'-thread,** S., bridle. **S., per'meable,** S. admitting passage of instrument. **S. of the phar'ynx,** dysphagia constricta. **S. of the rec'tum** occurs organically, and is usually a serious affection, being generally dependent upon scirrhus. **S. of the rec'tum, spasmod'ic,** an affection occurring in the nervous especially, which subsides spontaneously after a longer or shorter continuance. **S., recur'rent,** resilient stricture, or one which readily contracts after dilatation. **S. of the stom'ach,** see *Gastrostenosis.* **S. of the ure'thra,** urethrostenosis. **S. of the u'rinary blad'der,** stricture or saccated condition of urinary bladder. **S., val'vular,** S., bridle. **S. vesi'cæ urina'riæ,** stricture or saccated condition of urinary bladder.

Stricturotomy, strikt-ure-ot'o-me. Urethrotomy.

Stri'dor. Grating noise. **S. den'tium,** grinding of the teeth.

Stridulant, strid'u-lant. Applied to a harsh grating sound.

Strid'ulous. Applied to respiration, cough, or voice when it possesses the character of a grating sound.

Stri'ga (furrow) **cartilagino'sa cor'dis.** Isthmus of the fossa ovalis.

Strigillation, strij-il-la'shun. See *Strigis.*

Strig'ilos. Strigis.

Stri'gis (*stringo,* to touch lightly). A flesh-brush. Also an instrument anciently used in the baths for scraping off the perspiration. The process was called *Strigillatio, Strigillation.*

String'halt (sometimes called **Spring'halt**). Sudden twitching of hind leg of horse, or involuntary or convulsive motion of muscles that contract the hind leg.

Striped dog'wood. Acer Pennsylvanicum. **S. ma'ple,** Acer Pennsylvanicum. **S. mus'cular fi'bre,** see *Muscular fibre.*

Strobila (strob'il-ah) or **Strobile,** stro'bil. Adult tænia.

Strob'ile. Multiple fruit in form of cone or head, as that of the hop or pine; a cone.

Strob'ili lu'puli or **Strob'ili hu'muli.** Hops.

Strobilites, stro-bil'it-ees (*strobilos,* pine cone). Wine impregnated with the cones of the pine. Form of fruit resembling strobile.

Stroboscopic (stro-bo-skop'ik) **disk.** See *Stroboscopic.*

Stroem'ia (after H. Stroem, a Norwegian naturalist). Cadaba.

Stroke. Sudden attack of disease. **S., apoplec'tic,** an apoplectic seizure. **S., back of the heart,** diastolic impulse. **S., paralyt'ic,** a sudden attack of encephalospinal paralysis. **S., sun,** sunstroke; see *Insolation.* **S., wa'ter,** see *Hydrocephalus internus.*

Stro'ma (*stroma,* bed or couch). The bed or foundation texture of an organ, as the stroma of the ovary. Applied also to the bed or base of any formation, as the amorphous stroma of scrofulous formations. **S., fi'brin,** formed direct from fibrin. **S., intertu'bular,** see *Kidney.*

Stro'mal (*stroma*). Relating or appertaining to the stroma of an organ.

Strong'er al'cohol. Alcohol fortior. **S. e'ther** (æther fortior), name given to ether; specific gravity .716. **S. wa'ter of ammo'nia,** aqua ammoniæ fortior; specific gravity .900.

Strongul'ion. Strangury.

Strongylus, stron'gil-us (*strongulos,* round). Hippocrates and others mean the *Ascaris lumbricoïdes* by this term. The *Strongylus gigas* is, however, distinct. It is sometimes met with—five inches, a foot, and even three feet long, and from two lines to half an inch in diameter; occasionally in the human kidney; rarely in other viscera, and still more rarely in the intestinal tube. Teres. See *Parasites.* **S. arma'tus,** worm which causes verminous aneurism in the horse. **S. bronchia'lis,** see *Parasites.* **S. longevina'tus,** see *Parasites* and *Worms.* **S. paradox'us,** see *Parasites.*

Stron'tium bro'mide. In colorless soluble needles, used in various affections of the stomach, in acid conditions of that organ, in Bright's disease, epilepsy, etc.; dose, 10 to 30 grains three times a day, gradually increased in epilepsy. **S. i'odide,** prescribed in scrofuloderma, enlarged lymphatic glands, scrofulous otorrhœa, ozæna, lupus vulgaris, etc.; dose, gr. x–xx. **S. lac'tate,** white soluble powder used in some renal affections, as albuminuria, but not when there is diminished amount of urine or uræmia.

Strophan'thidin. Principle derived from strophanthin by action of sulphuric acid.

Strophanthin, stro-fan'thin. Glucoside of strophanthus, $C_{20}H_{34}O_{101}$; white crystalline powder, soluble in water, sparingly soluble in ether or chloroform; probably the active principle. Action on the heart resembles that of digitalin.

Strophan'thus his'pidus. Kombé arrow-poison. Ord. Apocynaceæ; seeds are used; native of Africa and Asia; action cardiac, stimulant, and tonic; diuretic similar to digitalis, probably a bitter diuretic in heart dropsy; dose of the tincture, 5 to 10 drops.

Strophocephalus, strof-o-sef'al-us (*strophe,* a turning round, *kephale,* head). Monster with distorted head.

Strophoceph'aly. Condition of strophocephalus.

Stro'phos (*strophos,* a twisted cord). Tormina.

Strophulus, strof'u-lus. *Red gum, Gum rash, Red gown, Tooth rash.* Consists of an eruption of red or sometimes whitish pimples, *White gum, Milk-spots,* occurring in early infancy, chiefly about the face, neck, and arms, surrounded by a reddish halo or interrupted by irregular patches of cutaneous blush. All the varieties under this genus arise in consequence of the extreme vascularity and irritability of the skin at this period of life, when the constitution is liable to be disturbed by irritation, either in the alimentary canal, gums, or other parts. **S. prurigino'sus** is rather an obstinate form of lichen with pruriginous papules, and should therefore be more properly termed *Lichen pruriginosus.* **S. sylves'tris,** Ignis sylvaticus. **S. volat'icus,** Ignis sylvaticus.

Stro'phus (*strophos,* twisted cord). Tormina.

Structio, struk'she-o (*struo, structum,* to build). Structure.

Structural, struk'shur-al. Of or belonging to structure. **S. diseases,** diseases due to or produced by organic tissue-changes.

Struc'ture. The arrangement of the different tissues or organic elements of which animals and vegetables are composed. See *Tissue.*

Stru'ma. Scrofula; bronchocele. **S. adipo'sa,** fatty neck; prominence of the neck from obesity. **S. cys'tica, S. fibro'sa, S. gelatino'sa, S. hyperplas'tica, S. os'sea, S. parenchymato'sa, S. petro'sa,** are different varieties of goitre, as named from their physical characteristics. **S., follic'ular,** bronchocele. **S. fungo'sa,** encephaloid.

Strumipriva cachexia, stru-me-pre'vah kak-eks'-e-ah (*struma, privus,* deprived of). Loss of the thyroid gland and resulting condition; myxœdema or condition allied to it.

Strumoderma, stru-mo-dur'mah. Scrofulous affection of the skin and superficial glands; scrofuloderma.

Strumo'sis cer'ebri. Tubercles of the brain. **S. pulmo'num,** tubercles of the lungs.

Strumo'sus or **Stru'mous.** Scrofulous.

Struthiophagus, stru-the-of'ag-us (*strouthion,* a young ostrich, *phago,* to eat). Ostrich-eating; struthiophagous tribes still exist in parts of Africa.

Stru'thium (*strouthion*). Saponaria.

Strychnia, strik'ne-ah. *Strychnine.* Alkaline principle, solid, crystalline, inodorous, bitter, and excessively poisonous, which has been found in *Strychnos nux vomica, S. colubrina, S. tieuté, Ignatia amara, Cerbera thevetia,* and *C. ahovai.* Formula for its preparation was omitted in last edition of the Ph. U. S., as it is usually made by the manufacturing chemist. The action—therapeutical and toxical—of strychnia on man and animals is exactly like that of the alcoholic extract of nux vomica. It is, however, more active. An eighth of a grain is sufficient to kill a large dog, and a quarter of a grain produces marked effects on the human body when in health. It has been given in paralysis and other cases like nux vomica. See *Poisons* (table of). **S. ac'etate,** strychniæ acetas. **S. arse'niate,** white bitter powder; tonic and diuretic. **S. ar'senite,** soluble salt employed in intermittent fever in the minimum dose of the sulphate. **S. bro'mide,** strychniæ bromidum. **S. hydri'odate,** hydriodate of strychnine. Occurs in white scales or needles, and contains 72 per cent. strychnia; soluble in alcohol, slightly so in water. Action and uses same as sulphate. Dose, $\frac{1}{60}$ to $\frac{1}{8}$ grain. **S. hydrobro'mate,** hydrobromate of strychnia; forms in prismatic needles, and contains 80 per cent. of strychnia. Prepared by adding solution of potassium bromide in water and alcohol to solution of sulphate of strychnine in alcohol and water. Uses same as sulphate. **S. hydrochlo'rate,** muriate of strychnia; crystallizes in silky needles; soluble in sixty parts of cold water. Prepared by dissolving strychnine in warm dilute muriatic acid. Contains 84 per cent. strychnine. For action and uses, see *Sulphate.* **S. i'odate,** strychniæ iodas. **S. i'odide,** strychniæ hydriodas. **S., i'odide of iodhy'drate of,** made by pouring a solution of ioduretted iodide of potassium into a solution of a salt of strychnia. Used in the same cases as strychnia. Dose, a tenth to a sixth of a grain. **S. mu'riate,** strychniæ murias. **S. ni'trate,** strychniæ nitras. **S. o'leate,** see *Oleate.* **S. sul'phate,** strychniæ sulphas. **S. and zinc, double i'odide of,** zinc and strychnia, double iodide of.

Strych'niæ ace'tas. Acetate of strychnia or of strychnine. Salt formed by the direct combination of strychnia with acetic acid. It is given in the same cases as pure strychnia. **S. bro'midum,** bromide of strychnia; prepared by a process analogous to bromide of quinia. Prescribed in syrup, each drachm containing gr. $\frac{1}{32}$ of strychnia. **S. hydri'odas,** hydriodate or iodide of strychnia; prepared by mixing a solution of iodide of potassium with a concentrated solution of acetate of strychnia. **S. i'odas,** iodate of strychnia or of strychnine. Salt formed by adding a concentrated solution of iodic acid to strychnia. **S. mu'rias,** muriate of strychnia. (The product of the union of muriatic acid and strychnia.) Used in the same cases as strychnia. Liquor strychniæ, solution of strychnia (Ph. Br.), is composed of strychnia, gr. iv; acid. hydrochlor. dil., ℥vj; sp. rectif., f℥ij; aq. destillat., f℥vj; dose, gtt. iv–viij. **S. ni'tras,** nitrate of strychnia or of strychnine. (The product of the union of nitric acid and strychnia.) Used in the same cases as strychnia. **S. sul'phas** (Ph. U. S.), sulphate of strychnia or of strychnine. (The product of the union of strychnia and dilute sulphuric acid.) The salt of strychnia usually prescribed. See *Strychnos nux vomica.*

Strychnina, strik-ne'nah (Ph. U. S.). $C_{21}H_{22}N_2O_2$. Strychnia or strychnine. See *Strychnia.*

Strychninæ sulphas, strik-ne'ne sul'fas. $(C_{21}H_{22}N_2O_2)_2H_2SO_4,7H_2O$. Strychniæ sulphas.

Strych'nine. Strychnia. **S., az'otate of,** strychniæ nitras. **S., sul'phate of,** strychniæ sulphas.

Strychni'num. Strychnia.

Strych'nism. See *Strychnos nux vomica.*

Strych'nium. Strychnia. **S. ace'ticum,** strychniæ acetas. **S. ni'tricum,** strychniæ nitras. **S. sulphu'ricum,** strychniæ sulphas.

Strychnoma'nia. With the ancients, the delirium caused by the Strychnos or Atropa belladonna.

Strych'nos. Atropa belladonna; Solanun dulcamara. **S. colubri'na,** see *Strychnia* and *Strychnos nux vomica.* **S. Guianen'sis,** see *Curare.* **S. Igna'tii,** Ignatia amara. **S. nux vom'ica,** *Nux vomica, Koochla tree;* ord. Loganiaceæ. A tree of the family Strychnoïdes, growing in India. The seeds have been long sold in the shops under the names *Nux vomica, Vomic* or *Poison nut, Bachelor's button,* etc. For a long time these seeds were used only for poisoning rats, but subsequently an extract was prepared from them, which was administered in paralytic affections in small doses. It produces a kind of tetanic convulsion in the paralyzed parts when given to the requisite extent. It has also been administered in chronic diarrhœa and dysentery. When taken to such an extent as to induce toxical phenomena—*strychnism*—it causes at first, or when given in a smaller dose, greatly augmented excitability of the spinal nervous system, with slight transient paroxysms or spasms of the limbs and hurried respiration. In larger doses the excitability is still more developed, with paroxysms of prolonged general tetanic convulsions, laryngismus or contraction of the glottis, violent efforts of respiration, and asphyxia. The most important principles obtained from it are strychnia and brucia. Igasuria has also been derived from it. See *Strychnia, Brucia, Igasuria,* etc. The bark is the false angustura or false cusparia bark, rohun; see *Brucea antidysenterica. Strychnos colubrina, Modira caniram,* an Indian tree containing strychnine, was formerly considered a specific against the bites of venomous animals, and was recommended in intermittents. The wood is lignum colubrinum. **S. potato'rum** (strychnos of drinkers), *Clearing nut;* fruit of a large tree of Silhet, which, when ripe, is sold under the name *Nirmullees* or *Nirmillies.* Well rubbed for a minute or two around the inside of a vessel containing water, it purifies it by causing the impurities which the fluid contains to be deposited, it is supposed, by its albumen and casein. **S. pseudoqui'na,** *Quina do campo,* of Brazil, is used by the natives as a substitute for cinchona. **S. tieu'té,** see *Strychnia* and *Upas.* **S. toxica'ria** or **toxif'era,** see *Curare.*

Stryphna, strif'nah (*struphnos,* acerb or sour). Astringents.

Stryphnodendron (strif-no-den'dron) **barbatima'o** (*stryphnos, dendron,* a tree). Cortex adstringens Brasiliensis.

Stryphnos, strif'nos (*struphnos,* sour, harsh). Acerb.

Studio'sus medici'næ (fond of medicine). A lover of medicine.

Studium inane, stu'de-um in-an'e (empty study). Brown study or listless musing.

Stud'y, brown. Listless musing.

Stuff'ing. Cynanche trachealis. Filling, as in dentistry.

Stultitia, stul-tish'e-ah. Mental imbecility; idiotism; dementia.

Stump. Part remaining from which a limb or other part has been amputated or removed in any manner. Also the portion of a tooth remaining in the alveolus after the corona has been removed. **S. of eye'ball,** remainder of globe left after excision of the ball. **S., su'gar-loaf,** conical stump occasioned by extensive retraction of muscles following amputation.

Stump'foot. Kyllosis.

Stunned (*attonitus,* astonished). Epithet applied to one who, in consequence of a fall or other accident,

has received such a concussion of the brain as to deprive him, for a time, of mental manifestations.

Stunt'edness. Being stunted or hindered in growth.

Stu'pa. Tow used in certain surgical apparatuses and dressings. Also a stupe; that is, cloth or tow used in fomentations. A flannel or other article wrung out of hot water, plain or medicated, applied to a part, is a stupe. The act of applying it is called *Stuping.*

Stupe. Stupa.

Stupefacientia, stu-pe-fah-she-en'she-ah (*stupeo*, to be benumbed, *facio*, to make). Narcotics.

Stupefac'tion. Narcosis.

Stupeion, stu-pi'on. Stupa.

Stupha, stu'fah. Stove; stupa.

Stupia, stu'pe-ah. Tin.

Stupid'itas (*stupeo*, to be benumbed). Idiotism; imbecility.

Stu'ping. See *Stupa.*

Stu'por (*stupeo*, to be benumbed). Diminished activity of the intellectual faculties, often amounting to lethargy. It occurs in many affections, especially in the neuroses. **S., aner'gic,** acute dementia. **S. ar'tuum,** state of the limbs being asleep. **S. den'tium,** great sensibility of the teeth; toothedge. **S. formi'cans,** formication. **S. men'tis,** see *Stultitia.* **S. vig'ilans,** catalepsy.

Stup'pa. Stupa.

Stupra'tion. Stuprum.

Stu'prum. *Rape, Stupration.* Forcible and illicit connection with a married or unmarried woman. When committed upon the latter, it is also called defloration. In judging whether rape has been committed the state of the genital organs, the age of the individual, and the possibility of accidents and diseases of the parts will have to be considered. It will be necessary also to be acquainted with the evidences of virginity, and to determine—if signs of virginity no longer exist—whether its loss is attributable to copulation or to the introduction into the vagina of any other body than the male organ, etc. Recent deflowering can, of course, be much more readily distinguished than that which has taken place some time before. Rape almost always includes the idea of violence, while sexual intercourse with persons in an unconscious condition, or with idiots or insane persons, is at times separated from rape and reckoned as violation.

Stur'dy. See *Cœnurus.*

Stut'terer. One affected with stuttering.

Stut'tering. Stammering. See *Balbuties.*

Sty or **Stye** (pron. sti). See *Hordeolum.*

Style, lac'rymal. Metal wire worn in the nasal duct in treatment of lacrymal obstruction.

Stylet' (*stylus*). See *Specillum.*

Styli, ste'le (pl. of **Stylus**). Styloid processes.

Styliform, sti'le-form (*stylus, forma*, shape). Styloid.

Styliscus, stil-is'kus (*stylus*). Tent.

Sty'lo (*stylos*, style). In composition, the styloid process of the temporal bone.

Stylo-auricula'ris. Auriculoglossus.

Styloceratohyoïdeus, ste-lo-ser-at-o-he-o-e'da-us. Stylohyoïdeus.

Styloceratoï'des. Stylohyoïdeus.

Stylochondrohyoïdeus, ste-lo-kon-dro-he-o-e'da-us. Name given to a fleshy fasciculus which the stylohyoid muscle sometimes presents, attached to the lesser cornu of the os hyoides. It is also called stylohyoïdes novus, stylohyoïdeus alter.

Styloglos'sal nerve. Facial branch supplying the styloglossus muscle and mucous membrane at the base of the tongue.

Styloglos'sus. A muscle situate at the anterior and superior part of the neck. It is narrow behind, much broader before; is attached to the styloid process of the temporal bone and to the stylomaxillary ligament, and is inserted into the side of the tongue. It raises the base of the tongue and carries it backward.

Stylohy'al bone. Styloid process.

Stylohy'oid arch. Hyoidean arch. **S. lig'ament,** a fibrous flattened cord passing from the styloid process to the lesser cornu of the os hyoides. **S. nerve,** second branch given off by the facial.

Stylohyoï'deus. *Stylohyoïdes major.* A muscle situate at the superior, anterior, and lateral part of the neck. It is thin and narrow, especially posteriorly; anteriorly, it opens to give passage to the tendon of the digastricus. It is attached to the styloid process of the temporal bone, and to the body of the hyoid bone. It raises the hyoid and carries it backward.

Sty'loid (*stulos*, style, peg, pin, *eidos*, shape). Shaped like a peg or pin. **S. bone,** see *Styloid processes.* **S. cor'nua,** see *Hyoid bone.* **S. pro'cesses,** *Pencil-like processes,* are—1, a long and slender process of the temporal bone, to which are attached the styloglossus, stylopharyngeus, and stylohyoïdeus muscles and the stylohyoid and stylomaxillary ligaments. This sometimes remains distinct in many animals, and is then called the *styloid bone.* 2. Two slender and pyramidal processes at the inferior extremities of the radius and ulna.

Stylolarynge'us. Portion of stylopharyngeus inserted upon epiglottis and cartilage of thyroid.

Stylomas'toid. Relating to the styloid and mastoid processes. **S. ar'tery** arises from the posterior auricular, and in some subjects from the occipital; it enters the stylomastoid foramen, passes along the aqueduct of Fallopius, and spreads its ramifications on the mucous membrane of the tympanum and in the mastoid cells and semicircular canals, and terminates by anastomosing with a branch of the middle meningeal artery, which enters by the hiatus Fallopii. The name stylomastoid is also given to the posterior auricular artery itself. **S. fora'men,** foramen situate at the inferior surface of the petrous portion of the temporal bone, between the styloid and mastoid processes. It terminates the aqueduct of Fallopius and gives passage to the facial nerve.

Stylomaxillary, sti-lo-maks'il-la-re. Relating to the styloid process and the jaw. **S. lig'ament,** a ligamentous flat cord extending between the styloid process and the angle of the jaw.

Stylopharyngeus, ste-lo-far-in-ja'us. Muscle situate at the anterior and lateral part of the neck. It is slender, thin above, attached to the styloid process of the temporal bone, and terminates in the parietes of the pharynx, as well as at the posterior margin of the thyroid cartilage. It raises the pharynx and carries it backward.

Stylophorum diphyllum, stil-of'o-rum dif-il'lum (*stulos*, style, *phero*, to bear). *Celandine* or *Hornpoppy, Bruiseroot.* Indigenous plant, family Papaveraceæ. The juice is fetid and narcotic. Infused in wine, it has been given internally in gravel, and has been applied externally to contusions, etc.

Stylosan'thes. *S. elatior.* Herb used for relief of uterine irritability during the progress of gestation.

Stylostaph'yline. Pertaining to the velum palati and styloid process.

Stylosteophy'tum (*stylo, osteon*, bone, *phuton*, growth). Osteophyte resembling a spike.

Stylostixis, stil-o-stiks'is (*stylus*, style, *stixis*, act of puncturing). Acupuncture.

Stylotonsilla'res. Stylopharyngeus fibres passing to the tonsil.

Stylus, ste'lus (*stulos*, stake, style). Style; pin; peg; sound. **S. excava'tus,** hollow sound.

Sty'ma (*stuma*, stiffening). Erection; priapism.

Stymatosis, stim-at-o'sis (*styma, osis*). Hemorrhage from the male organ, accompanied or not by priapism.

Stym'mata (pl. of **Stymma**) (*stumma*, that which constricts or thickens). The most solid ointments; also the ingredients for increasing their consistence.

Stypsis, stip'sis (*stupsis*). Astriction; constipation.

Stypteria, stip-ta're-ah (*stupteria*). Alumen; styptics.

Styp'tic (*stuptikos*). See *Styptics.* **S., Binel'li's,** aqua Binellii. **S., Brocchie'ri's,** aqua Brocchierii. **S. collo'dion** contains tannic acid in a mixture of alcohol, ether, and collodion; employed to control small

hemorrhages; seldom used, and not a clean way to stop bleeding. **S. col'loid**, see *Colloid*. **S. cot'ton**, absorbent cotton impregnated with a solution of ferric chloride or ferric sulphate, and dried. **S., Helve'tius's**, see *Ferrum tartarizatum*. **S., Paglia'ri's**, hæmostatic, Pagliari's. **S., Ruspi'ni's**, a nostrum said to consist of gallic acid, a small quantity of sulphate of zinc and opium, dissolved in a mixture of alcohol and rose-water, which had much reputation as an internal and external astringent. **S. weed**, Cassia occidentalis.

Stypticity, stip-tis'it-e. Possessing styptic power.

Styptics, stip'tiks (*stupho*, to constringe). Sometimes used synonymously with astringent, but generally applied to a substance employed to arrest hemorrhage. See *Astringents*. A mechanical styptic is one that arrests the flow of blood by being applied immediately to the mouth of the bleeding vessel, or by inducing a coagulum, mechanically, in it. A chemical styptic is one which coagulates, chemically, the blood around a bleeding orifice.

Styracin, sti'ras-in. Crystalline substance found in storax and other balsams.

Styrac'inum o'leum. Oil obtained by boiling storax in good olive oil.

Styracol, sti'rak-ol. Cinnamyl-guiacol; result of action of guiacol on cinnamyl chloride; antiseptic. Prescribed internally in chronic catarrh of the bladder, gonorrhœa, and catarrh of the stomach and intestines, and as a substitute for guaiacol in the treatment of pulmonary tuberculosis.

Sty'rax (Ph. U. S.) (*sturax*). Balsam or resin obtained from inner bark of Liquidambar orientale; also from Styrax officinalis and S. calamita. It is the solid storax—officinal storax. Two kinds of storax are met with: red storax, gum storax, obtained by incision from the Styrax officinalis and from the Liquidambar Orientale; and common styrax, Styrax calamita, that which has been received in reeds or vessels, and has had sawdust added immediately to thicken it. Like the other balsams, it is stimulant and expectorant. *Purified storax*, *S. præparatus* (Ph. U. S.), *Extractum styracis*, is storax purified by means of rectified spirit and straining. **S. al'ba**, see *Myroxylon Peruiferum*. **S. ben'zoin**, see *Benzoin*. **S. calam'ita**, see *Styrax*. **S. liq'uida**, Liquidambar styraciflua. **S. officina'lis**, see *Styrax*.

Sty'rol. Volatile oil derived from styrax. Cinnamene. **S. cin'namate**, styracin.

Sty'rone. Amyl alcohol derived from styrax; antiseptic.

Sty'sis (*stusis*, erection). Erection; priapism.

Suakim gum. Product of Acacia stenocarpa and A. Senegal; inferior variety of gum acacia.

Suave'olens (*suavis*, sweet, *olens*, smelling). Sweet-scented, as a medicine.

Sub (L.). In composition, beneath or lower degree. Before *c* it becomes *suc;* before *f*, *suf;* before *g*, *sug;* before *p*, *sup;* before *r*, *sur;* and before *s*, *sus*. In some words, however, it is *su*, as in suspiro.

Subace'tas. Subacetate. **S. cu'pricus**, verdigris. **S. plum'bicus liq'uidus**, solution of subacetate of lead.

Subac'etate. Salt of acetic acid containing more than one equivalent of base to one of acid.

Subac'idus. Acidulous.

Subacro'mial bur'sa. Upper portion of deltoid bursa.

Subactio, sub-ak'she-o (*subigo*, *subactum*, to subject or prepare). Operation of making plasters, extracts, etc. with the hand or with the pestle and mortar.

Subacute'. Acute in moderate degree. **S. myeli'tis**, myelitis in which the affection reaches its height in from two to six weeks. **S. spi'nal at'rophy**, progressive muscular atrophy.

Subaffectio, sub-af-fek'she-o. Hydropathy.

Subagitatrix, sub-aj-it-at'riks (*sub*, *agito*, to agitate). One who practises tribadism.

Subala'ris vena. Axillary vein.

Subarachnoid, sub-ar-ak'noid (*sub*, *arachnoid*). *Subarachnoidean*, under the arachnoid membrane. Term applied to various spaces situate between this membrane and different nervous structures, anterior, posterior, superior, and spinal subarachnoidean spaces. The fluid filling these spaces is called the subarachnoidean or cerebrospinal fluid.

Subarachnoi'dal space of op'tic nerve. Interval between arachnoidal sheath and optic nerve.

Subatloïdeus, sub-at-lo-id-a'us. Situate beneath the atlas or first cervical vertebra. The second pair of cervical nerves.

Subaxoïdeus, sub-aks-o-id-a'us. Below the axis or vertebra dentata. The third pair of cervical nerves.

Subazo'tas bismu'thicus. Bismuth subnitrate.

Subbo'ras na'tricum. Borax.

Subbrachycephalic, sub-brak-e-sef-al'ik. Having cephalic index from 80° to 84°.

Subbromhy'dras quin'icus. Hydrobromate of quinine.

Subcæ'cal fos'sa. Pouch sometimes found in the peritoneum behind the cæcum, running up into the folds of the mesocolon.

Subcar'bonate. Combination of carbonic acid with base, in which the latter is in excess.

Subcartilagineum, sub-kar-til-aj-in'e-um (*sub*, *cartilago*, cartilage). Hypochondre.

Subcen'tral arch. Hæmal arch.

Subcerebel'lar ar'tery. Anterior inferior cerebellar artery.

Subchlo'ride of mer'cury. Mercurous chloride.

Subchlo'ris cal'cicus. Calcis chloridum.

Subclavian, sub-kla've-an (*sub*, *clavis*, clavicle). Under the clavicle. **S. ar'teries** are situate at the upper part of the chest and the lateral and lower parts of the neck. The right arises at the corresponding side of the trachea, and comes off from the arteria innominata or brachiocephalic trunk. The left leaves the aorta at the end of the arch. Both extend as far as the superior surface of the first rib, in the space between the scaleni muscles, beyond which they take the name axillary arteries. The subclavian arteries run for some distance without sending off any branch. In the neighborhood of the first rib, however, they give off—upward, the vertebral and inferior thyroideal; downward, the internal mammary and superior intercostal; outward, the transverse cervical or posterior scapular, the superior scapular, and the posterior cervical or profunda. **S. bur'sa**, bursa subclavia. **S. glands**, lymphatic glands beneath arch of right subclavian artery. **S. groove**, groove on first rib for subclavian artery. Groove on apex of the lung made by the subclavian artery. Depression on the clavicle for subclavius muscle. **S. lymphat'ic**, axillary lymphatic trunk. **S. mus'cle**, *Subclavius*, is situate at the superior and anterior part of the chest. It is attached by its inner extremity to the superior surface of the cartilage of the first rib, and by its superior margin and outer extremity to the inferior surface of the clavicle. This muscle depresses the clavicle and carries it forward. When the shoulder is fixed, it can raise the first rib. **S. plex'us of lymphat'ics**, anastomoses of branches of lymphatic subclavian trunk. **S. tri'angle**, see *Triangles of the neck*. **S. veins** are continuations of the axillary, and extend from the inferior extremity of the scalenus anticus, in front of which they pass, to the vena cava superior, which they form by their union. The right subclavian vein is very short, the left longer and broader. These veins receive the mouths of the internal and external jugulars, vertebral, and superior intercostal. The left subclavian receives two veins more than the right—the left internal mammary and the left inferior thyroid. The thoracic duct opens into the left subclavian, the corresponding great lymphatic vessel into the right.

Subclavicula, sub-klav-ik'u-lah (*sub*, *clavicula*, clavicle). The first rib.

Subclavicula'ris. Subclavian.

Subclavius, sub-klav'e-us. Subclavian muscle.

Subcontin'ual fe'ver. Malarial fever.

Subcor'acoid. Under the coracoid process; as the subcoracoid dislocation of the humerus.

Subcos'tal. Beneath a rib. **S. ar'tery,** superior intercostal artery. **S. groove,** sulcus costalis inferior.

Subcrepitant, sub-krep'it-ant (*sub, crepitant*). See *Râle.*

Subcruentus, sub-kru-en'tus (somewhat bloody) (*sub, cruentus,* bloody). Having the color and nature of blood. An epithet given to certain excreted substances mixed with blood or having the appearance of blood.

Subcruræi, sub-kru-re'e. See *Cruralis.*

Subcrura'lis. Subcruræus.

Subcuta'nea col'li. Anterior jugular vein.

Subcuta'neous (*sub, cutis,* the skin). That which is placed immediately under the skin. See *Hypodermic* and *Hypodermatic.* **S. sec'tion,** section of subcutaneous parts, as of muscles and tendons.

Subcuta'neus col'li. Superficialis colli. **S. ma'læ** (nervus), orbitar nerve. **S. nu'chæ,** muscle of nuchal fascia.

Subdelir'ium. Typhomania.

Subdicrot'ic. Partially or obscurely dicrotic.

Sub'dita (*subdo,* to put under). Medicines introduced into one of the natural apertures, as suppositories, pessaries, etc.

Subditit'ia. Subdita.

Subdolichocephalic, sub-dol-ik-o-sef-al'ik (*dolikos,* long, *kephale,* head). Having cephalic index of 70 to 74.

Subductio, sub-duk'she-o (*sub, duco, ductum,* to lead). Dejection.

Subdu'ral. Under the dura mater. **S. space,** interval between dura mater and arachnoid. **S. space of op'tic nerve,** interval between dural sheath and optic nerve.

Subectop'ic gesta'tion (*sub, ektopos,* out of place). Gestation in which the ovum is implanted upon the lower zone of the uterine cavity.

Subencephalon, sub-en-sef'al-on. Medulla oblongata, pons Varolii, and corpora quadrigemina.

Subepithe'lial lay'er of coch'lea. Layer of cells near inner rods of organ of Corti at exit of nerve-filaments of cochlea.

Su'ber. Cork, the bark of Quercus suber or cork-tree. Family, Amentaceæ. Cork, when burnt, is applied as a mechanical styptic to bleeding piles, etc. Surgeons use it for making tents.

Su'berate. Salt of suberic acid.

Su'beric ac'id. Acid once obtained from action of nitric acid upon cork; since found to be result of oxidation of several fatty matters.

Su'berin. Trade name for finely pulverized cork.

Su'berose or **Su'berous.** Corky.

Subfronta'lis sutu'ra (*sub, frons,* forehead). Suture resulting from articulation of the os frontis with the nasal process of the superior maxillary bone and the proper bones of the nose.

Subglenoïda'lis. Accessory subscapular muscle.

Subglossitis, sub-glos-se'tis (*sub, glossa,* tongue). Inflammatory condition of the lower surface of the tongue and the structures in immediate contact.

Subhumeratio, sub-hu-mer-ah'she-o (*sub, humerus,* shoulder). See *Catomismus.*

Subic'ulum cor'nu ammo'nis. Sigmoid convolution of the cornu. **S. promonto'rii,** ridge of bone on medial wall of tympanum, extending downward from the promontory to the floor between the foramen rotundum and sinus tympani.

Subigitatrix, sub-ij-it-at'riks (*sub, agito,* to agitate). Tribas.

Subinflammatio, sub-in-flam-mah'she-o. Subinflammation. **S. hep'atis,** chronic hepatitis.

Subinflamma'tion (*sub, inflammatio*). Mild degree of inflammation, so slight as hardly to deserve the name inflammation.

Subintran'tes feb'res (*sub, intro,* to enter). Fevers primarily intermittent whose paroxysms approximate, so that one paroxysm begins before that which preceded it has gone through its stages.

Subinvolu'tion. Condition of retarded or imperfect restoration of the uterus to its original dimensions after delivery.

Sub'ject (*subjicio, subjectum,* to place under). Corpse.

Subjec'tive. Relating to one's self; having no relation with external objects. **S. sensa'tions,** see *Sensation.*

Subjee. Cannabis Indica.

Sublatio (sub-lah'she-o) **catarac'tæ.** Operation in which a cataract lens is depressed.

Subligac'ulum (*sub, ligo,* to bind). Truss.

Subligam'en (same etymon). A hernial truss.

Subligatu'ra. Truss.

Sub'limate, corro'sive. Hydrargyri chloridum corrosivum.

Sublimatio, sub-lim-ah'she-o. Sublimation. Cloud suspended in the urine as it cools.

Sublimation, sub-lim-a'shun (*sublimis,* high). Operation by which dry and solid matters are volatilized and condensed at the upper part of a subliming apparatus. Calomel, sal ammoniac, etc. are commonly obtained by sublimation. The product of sublimation is a *Sublimate.*

Sublima'tum corrosi'vum. Hydrargyri chloridum corrosivum.

Sublima'tus corrosi'vus. Hydrargyri chloridum corrosivum.

Sublime'. To expose to action of sublimation.

Sublimed' sul'phur. Sulphur prepared from crude sulphur by sublimation.

Subli'mis. Name given to certain muscles situate more superficially than their kindred muscles. These last have been called profundi or deep; the flexor sublimis digitorum is an example of the former.

Sublingua, sub-lin'gwah (*sub,* lower, *lingua,* tongue). Uvula.

Sublingual, sub-lin'gwal (*sub, lingua,* tongue). Seated under the tongue. **S. ar'tery,** with some, is the lingual; with others, a branch given off by the lingual opposite the genioglossus muscle, distributed particularly to the sublingual gland, mylohyoid and genioglossus muscles, etc. **S. car'uncle,** papilla behind lower incisor teeth, at which Wharton's duct opens. **S. gan'glion,** ganglionic group of cells scattered among fibres of sublingual nerve, near the S. gland. **S. gland** is seated in the substance of the inferior paries of the mouth, beneath the anterior part of the tongue. It is smaller than the submaxillary, of which it frequently seems to be only a prolongation. It is oblong, flattened, amygdaloid, and is covered by the mucous membrane of the mouth, beneath which it projects. This gland has 10 or 12 excretory ducts —*Ductus Riviniani* or *Waltheriani*—some of which open beneath the frænum linguæ, joining Wharton's duct, while others pierce the mucous membrane of the mouth separately. It has the same structure as the parotid. **S. nerve,** submaxillary ganglionic branch, which supplies the sublingual glands, the floor of the mouth, and gums. **S. veins** correspond to ranine artery, emptying into lingual vein.

Sublin'guium. Uvula.

Sublinguum, sub-lin'gwum. Epiglottis.

Sublob'ular (*sub, lobulus,* little lobe). Placed under a lobe. **S. veins of the liv'er,** veins in which the intralobular veins terminate. By their union the sublobular veins form the hepatic veins.

Subluxatio (sub-luks-ah'she-o) or **Subluxation,** subluks-a'shun (*sub, luxo,* to dislocate). Imperfect luxation of a bone. See *Luxation* and *Dislocation.* Not infrequently used for a sprain.

Submam'mary (*sub, mamma,* breast). Under the mamma or breast; hence submammary inflammation, inflammation of the areolar tissue beneath the mamma.

Submax'illary (*sub, maxilla,* jaw). Seated beneath the jaw. **S. ar'tery,** facial branch to submaxillary gland. **S. fos'sa,** depression on inferior maxillary bone in which is situate the submaxillary gland. **S. gan'glion,** small nervous ganglion situate opposite the gland. It seems to be formed by the superior branch of the Vidian nerve, and communicates with the lingual nerve of the inferior maxillary. Its filaments form a plexus penetrating the submaxillary gland. **S. gland,** *Maxillary gland;* salivary gland,

smaller than the parotid, at the inner side of the ramus and body of the inferior maxillary bone, in the triangular space between the two bellies of the digastricus. Irregularly ovoid, and flattened on three surfaces, it has the same aspect and organization as the other salivary glands. Its excretory duct is called Wharton's duct, ductus Whartonianus or submaxillaris, and terminates at the side of the frænum linguæ by a very small orifice called the ductus inferior. **S. re'gion,** space between the hyoid bone and lower jaw. **S. tri'angle,** see *Triangles of the neck.* **S. vein,** tributaries of facial vein from submaxillary gland.

Submen'tal (*sub, mentum,* chin). Situate under the chin. **S. ar'tery** is furnished by the facial, near the base of the jaw. It passes forward along the attachment of the mylohyoideus, to which it furnishes branches, crossing it to anastomose with those of the sublingual. Near the median line it bifurcates, to be distributed to the chin and muscles of the infrahyoid region. **S. vein,** which accompanies the artery, opens into the labial.

Submerge' (*sub,* under, *mergo,* to dip). To place under the surface of a liquid; to immerse.

Submersio, sub-mur'se-o. Submersion. Drowning.

Submersion, sub-mer'shun (*sub, mergo,* to plunge). Act of plunging, or being entirely plunged, in a liquid. *Asphyxia by submersion* does not occur from a certain quantity of liquid being introduced into the alimentary or air passages, but simply from the interception of air and of the respiratory phenomena. It is a case of suffocation, the signs of which on dissection are equivocal without circumstantial evidence.

Submesaticephalic, sub-mez-at-e-sef-al'ik. Having cephalic index of 75 or 76.

Submetallic, sub-me-tal'lik. Mineralogical term used to imply imperfect metallic lustre.

Submissio, sub-mis'se-o (*sub, mitto, missum,* to send). Remission. **S. cor'dis,** systole.

Submu'cous (*sub, mucus*). Under a mucous membrane, as the submucous areolar tissue.

Submu'rias ammoni'aco-hydrargyr'icus. Hydrargyrum præcipitatum.

Submu'riate. Combination of hydrochloric acid with a base, in which the latter is in excess.

Submus'cular (*sub, musculus,* muscle). Seated beneath muscles or a muscular layer.

Subna'sal point. In craniometry applied to the centre of the inferior border of the anterior nasal aperture.

Subni'tras. Subnitrate. **S. bismuth'icus,** bismuth subnitrate. **S. hydrargyro'sus,** basic mercurous nitrate.

Subni'trate. Salt of nitric acid having an excess of base.

Subnor'mal. Below the usual.

Suboccip'ital (*sub, occiput*). Situate under the occiput. **S. an'gle,** formed by lines drawn from auricular point to inion and opisthion. **S. glands,** lymphatic glands near superior oblique line of occipital bone. **S. nerve,** occipital nerve.

Suboccipita'lis. Transversus nuchæ.

Suboccipitobregmat'ic diam'eter. Diameter from point midway between occipital protuberance and foramen magnum to bregma, about 3¾ inches in fœtus at term.

Subopercular, sub-o-pur'ku-lar. Term used to denote one of four opercular bones which is below both the interopercular and preopercular.

Subor'bitar (*sub, orbita,* orbit). Seated beneath the orbitar cavity. **S. ar'tery** proceeds from the internal maxillary, from which it separates near the anterior and superior part of the zygomatic fossa. It enters the infraorbitar canal and passes through it, giving branches to the anterior and superior dental canal; issues by the foramen infraorbitarium, and divides, in the fossa canina, into a number of branches, which lose themselves in the neighboring parts. The infraorbitar vein follows the same course. **S. canal',** small canal running obliquely through the substance of the inferior paries of the orbit. It begins behind by a simple gutter, and divides anteriorly into two branches, one descending into the anterior paries of the maxillary sinus, while the other passes out in the canine fossa by an orifice called the foramen infraorbitarium. **S. fis'sure,** fissure in the superior maxillary bone; the superior commencement of the suborbitar canal. **S. fos'sa,** canine fossa. **S. nerves** seem to terminate the superior maxillary. They issue from the infraorbitar canal by the foramen of the same name, and spread out in a radiated manner in the canina fossa, to divide into the superior or palpebral filaments, inferior or labial, internal or nasal, and external or buccal.

Subordina'tion (*sub, ordo,* order). Under control of another. Applied to organs controlled or dependent upon other organs.

Subpari'etal sul'cus. Shallow furrow sometimes seen on median surface of the brain, continuing backward from the callosomarginal sulcus, following its general direction to the corpus callosum.

Subpedun'cular lobe. Flocculus.

Subperiosteal, sub-per-e-os'te-al. Beneath the periosteum.

Subperitone'al (*sub, peritoneum*). Lying under the peritoneum. **S. aponeuro'sis,** subperitoneal fascia. **S. gan'glia,** see *Spermatic ganglion.* **S. inflamma'tion,** see *Parametritis.* **S. plex'us,** union of visceral and parietal arteries in lumbar and iliac regions beneath the peritoneum.

Subplacenta, sub-plas-en'tah. Decidua membrana.

Subpleural, sub-plu'ral (*sub, pleura*). Situate under the pleura. **S. mediasti'nal plex'us,** numerous vessels anastomosing in the mediastinal space; branches of superior phrenic, internal mammary, bronchial, and intercostal arteries.

Subpon'tine ar'teries. Branches from basilar artery to lower edge of pons Varolii on the median line.

Subpoplitæus, sub-pop-lit-e'us. Poplitæus muscle.

Subpu'bic an'gle. Formed by union of the pubic bones at the arch. **S. arch,** a strong arch of the superior pelvic aponeurosis which completes the posterior orifice of the obturator or subpubic canal. **S. fas'cia,** triangular ligament of urethra. **S. lig'ament,** dense triangular band which passes beneath the symphysis pubis and arches over the subpubic angle. **S. mem'brane,** obturator membrane.

Subpubiofemora'lis. Adductor brevis.

Subpubioprostat'icus. Compressor prostatæ.

Subpu'tris (*sub, putris,* putrid). Becoming putrid; slightly putrid.

Sub'salt. Oxysalt containing a less number of equivalents of acid than of base, or in which the latter is suboxide.

Subscapular, sub-skap'u-lar (*sub, scapula*). Beneath the scapula. **S. an'gle,** angle made at deepest part of the subscapular fossa by the ridge at the axillary border. **S. ar'tery,** large axillary branch distributed to the scapular muscles and latissimus dorsi. The posterior branch winds around the axillary border of the scapula and ramifies in the infraspinous fossa; the descending branch runs along the axillary border. **S. fas'cia,** continuous with the lumbodorsal fascia, and covering the anterior surface of the subscapular muscle. **S. fos'sa,** considerable excavation at the anterior surface or venter of the scapula, in which the subscapularis is seated. **S. glands,** lymphatic glands along the subscapular artery. **S. groove,** shallow groove on costal surface of the scapula, affording attachment to the outer portion of the subscapular muscle. **S. mus'cle,** a muscle situate in the above-mentioned fossa. It is flat, broad, and triangular, is attached by its base to the subscapular fossa and to the anterior lip of the edge of the spine of the scapula, and is inserted into the lesser tuberosity of the humerus. It carries the arm in rotation inward. It can also depress it and bring it toward the body. **S. nerves,** two in number: one arises from the brachial plexus above the clavicle, the other from the posterior aspect of the plexus within the axilla. They are distributed to the subscapularis muscle.

Subscapulocapsula'ris. Accessory subscapular muscle.

Subscapulohumera'lis. Accessory subscapular muscle.

Subsep'tate (*sub*, *septum*). Divided partially.

Subse'rous (*sub*, *serous*). Under a serous membrane, as the subserous areolar tissue.

Subserrate, sub-ser'rate. Slightly serrate.

Sub'sidence. Sediment. Gradual disappearance of morbid symptoms.

Subsidentia, sub-sid-en'she-ah (*sub*, *sedo*, to settle). Sediment. **S. pupil'læ,** closure of the pupil.

Subsist'ence (*sub*, *sisto*, to stand). Sustaining nourishment or food. Existence.

Sub'stance, æsthesod'ic. See *Æsthesodic.* **S., horn'y,** see *Tooth.* **S., hy'aline,** cytoblastema. **S., intercel'lular,** cytoblastema. **S., white, of Schwann,** a hollow cylinder within the tubular nervous fibre, differing in composition and refracting power from the matter occupying the centre of the tube.

Substantia adamantina dentium, sub-stan'she-ah ad-am-an-te'nah den'she-um (adamantine substance of the teeth). Enamel. **S. cine'rea gelatino'sa,** substantia gelatinosa. **S. cineri'tia,** see *Kidney.* **S. compac'ta,** see *Bone.* **S. ebur'nea,** see *Tooth.* **S. ferrugin'ea,** ash-colored substance produced by the existence of well-marked pigmentary matter in the fourth ventricle or rhomboid fossa. **S. filamento'sa den'tium,** enamel. **S. fus'ca** (brown substance), a name given to certain spots in the brain, also called substantia nigra, etc., which have a dark color from the presence of ganglion cells. **S. gelatino'sa,** translucent posterior portion of the posterior horns of the gray matter of the spinal cord, the remaining portion being called substantia cinerea vasculosa spongiosa. **S. glomerulo'sa,** see *Kidney.* **S. gri'sea centralis,** see *Medulla spinalis.* **S. hyali'na,** cytoblastema. **S. inter'na,** see *Kidney.* **S. ni'gra pedun'culi,** see *Peduncles of the brain.* **S. os'sea den'tium,** see *Tooth.* **S. ostoï'dea,** see *Tooth.* **S. perfora'ta ante'rior,** locus perforatus anticus. **S. perfora'ta me'dia,** when the pia mater has been removed from the space between the crura cerebri, termed the intercrural or interpeduncular space, the surface appears cribriform, from the perforations of the numerous minute vessels penetrating it. This is the *substantia perforata media* of Vicq d'Azyr. **S. perfora'ta poste'rior,** see *Tarini pons.* **S. pulpo'sa den'tis,** dental pulp. **S. radia'ta,** stellulæ Verheyenii. **S. rhomboï'dea,** corpus dentatum. **S. rubicun'da,** see *Kidney.* **S. spongio'sa,** see *Bone.* **S. spongio'sa ure'thræ,** corpus spongiosum urethræ. **S. stella'ta serpenti'na,** stellula Verheyenii. **S. vasculo'sa,** see *Kidney.* **S. vit'rea,** cytoblastema. **S. vit'rea den'tium,** enamel.

Sub'stantive (*sub*, *sto*, to stand). An epithet applied to aliments which are nutritious, in contradistinction to adjective aliments, which are not possessed of nutritive virtues, but impart to the digestive organs greater energy, so as to enable them to extract more nutriment from the substantive aliments. Meat is a substantive aliment; mustard, eaten with it, an adjective aliment.

Substil'lum (*sub*, *stilla*, drop). Stillicidium.

Substitute, sub'ste-toot (*substituo*, to put in place of another). Standing in lieu of something else.

Sub'stituted presenta'tion. See *Presentation.*

Sub'stitutive (*sub*, *statuo*, to place). That may be substituted or put in place of another. An agent is said to be substitutive which—as in the case of nitrate of silver applied to inflammation of a mucous membrane—substitutes a temporary irritation for one tending to be more permanent. Such a mode of treatment is termed substitutive medication.

Substratum, sub-strat'um (*sub*, *stratum*, layer). Layer or stratum beneath another.

Subsul'fas hydrargyr'icus. Basic mercuric sulphate.

Subsul'phas. Subsulphate. **S. cinchon'icus,** cinchonine sulphate. **S. cinchonid'icus,** cinchonidine sulphate. **S. quin'icus,** quinine sulphate. **S. quinid'icus,** quinidine sulphate.

Subsul'phate. Sulphate containing more than one atom of base for one of acid.

Subsultio, sub-sul'she-o (*subsilio*, *subsultum*, to make short leaps). Palpitation.

Subsul'tus ten'dinum. *Twitching of the tendons.* Twitching communicated to the tendons by the involuntary and instantaneous contraction of the muscular fibres; more observable at the wrist than elsewhere, and an evidence of great cerebral irritability and debility when occurring at an advanced period of fever. The muscular agitations or twitchings occurring in febrile diseases, especially of children.

Subsurditas, sub-surd'it-as (*sub*, *surdus*, deaf). Deafness.

Subtarsalis, sub-tar-sal'is (*sub*, *tarsus*, eyelid). Muscular fibres of orbicularis palpebrarum that pass behind the tarsi and do not reach the outer angle of the eye.

Subtem'poral point. Point where the infratemporal crest crosses the sphenotemporal suture.

Subthal'amic tegmen'tal re'gion. Continuation of tegmentum forward under ophthalamic thalami as far as the corpora albicantia.

Subthyroïdeus, sub-thir-o-id-a'us. Muscle formed by partial union of superior and inferior portions of thyro-arytenoid muscle.

Subtrophic, sub-trof'ic (*sub*, *trophe*, nourishment). Relating or appertaining to defective nourishment or nutrition.

Subu'beres (pl. of **Sububer**) (*sub*, *ubera*, breasts). Sucking children. Infants at the breast, in contradistinction to *Exuberes*, or those weaned.

Subunguial, sub-un'gwe-al (*sub*, *unguis*, nail). Belonging to parts under the nail, as subunguial exostosis, an exostosis under the nail, of the great toe especially.

Subvagi'nal space. Intervaginal space.

Subversio (sub-vur'she-o) **stom'achi** (*sub*, *verto*, *versum*, to turn). Vomiturition.

Subver'tebra (*sub*, *vertebra*). Sacrum.

Subver'tebrum. Sacrum.

Sub'vola (*sub*, *vola*, the palm of the hand). Hypothenar.

Subzo'nal layer. Cell-layer in mammalian ovum at close of segmentation, lying next to the zona pellucida.

Suc. As a prefix, under.

Succago, suk-kah'go (*succus*, juice). The inspissated juice of plants, robs, jellies, etc.

Succedaneum, suk-se-dan'a-um (*succedo*, to go under, to come in place of another). An epithet for medicines that may be substituted for others possessing similar properties. In dentistry, an amalgam for filling teeth. **S. ca'put,** see *Caput.*

Succenturiatus, suc-cen-tu-re-at'us (*succenturio*, to fill a vacancy; hence to substitute or put in the room of). Substitute for another, as renes succenturiati, the suprarenal capsules; ventriculus succenturiatus, the duodenum, etc.

Succhar, suk'kar. Saccharum.

Succi, suk'se (pl. of **Succus**). Juices.

Succidaneum, suk-sid-an'e-um. Succedaneum.

Suc'cin. See *Succinum.*

Suc'cinate (*succinas*), Combination of succinic acid with a base, as succinate of ammonia or of iron.

Succinctu'ra (*suc*, *cingo*, *cinctum*, to gird). Diaphragm.

Succinctus, suk-sink'tus. Diaphragm.

Succini resina, suk'sin-e res-e'nah. Artificial musk.

Succin'ic ac'id. Acid of succinum; considered antispasmodic and diaphoretic in the dose of five to twenty grains.

Succinum, suk'sin-um (*succus*, juice, because at one time supposed to exude from a tree). *Amber, Yellow amber.* A kind of fossil resin found on the shores of the Baltic, composed of a resinous matter, an essential oil, and an acid *sui generis*, used for affording its essential oil, oleum succini (Ph. U. S.), which has stimulant, antispasmodic, diuretic, and rubefacient properties. *Oleum succini rectificatum, Rectified oil of*

amber, was formerly officinal. **S. cine'reum**, ambergris. **S. gris'eum**, ambergris.

Succis'sa (*succido, succisum*, to cut, from its indented appearance). Scabiosa succisa. **S. praten'sis**, S. succisa.

Succis'us (*succido*, to cut down). In botany, abruptly broken off or having such an appearance.

Succocollata, suk-ko-kol-lat'ah. Chocolate.

Succollat'a. Chocolate.

Succory (suk'ko-re), **wild.** Cichorium intybus; Chironia angularis.

Succuba, suk'ku-bah. See *Succubus.*

Succubus, suk'ku-bus (*suc, cubo*, to lie). Nightmare. Succuba is fancifully, according to some, a female phantom, with which a man in his sleep may believe he has intercourse—as incubus has been applied to the male phantom, with which a female may dream she is similarly situate. See *Incubus.*

Succulent, suk'u-lent. Juicy, as succulent vegetables.

Succus, suk'kus (*sugo, suctum*, to suck). *Juice.* Fluid obtained by pressing plants, flesh, etc., succus expressus. Succus (Ph. Br.) is the expressed juice of fresh plants by the addition of one-third of their bulk of alcohol. Succus is also applied to certain animal fluids, as S. gastricus, gastric juice, S. entericus, intestinal juice, etc. **S. aca'ciæ German'icæ inspissa'tus**, see *Prunus spinosa.* **S. aca'ciæ nostra'tis**, see *Prunus spinosa.* **S. ar'borum**, sap. **S. auran'tii**, see *Citrus aurantium.* **S. belladon'næ**, juice of belladonna (fresh leaves and young branches of belladonna, ℥vij; rectified spirit, q. s.; Ph. Br.). **S. coni'i** (Ph. Br.), *Juice of conium, J. of hemlock;* made like S. belladonnæ. **S. Cyrena'icus**, laserpitium. **S. enter'icus**, *Intestinal* or *Enteric juice* or *fluid;* fluid copiously secreted from the lining membrane of the small intestines; see *Intestine.* **S. expres'sus**, expressed juice of plants. **S. gas'tricus**, gastric juice; see *Stomach.* **S. glycyrrhi'zæ**, extractum glycyrrhizæ. **S. hyoscy'ami** (Ph. Br.), made like S. belladonnæ. **S. hypocist'idis**, see *Cytinus.* **S. intestina'lis**, succus entericus. **S. Japon'icus**, catechu. **S. junip'eri inspissa'tus**, inspissated juice of fresh juniper berries. **S. limo'nis**, see *Citrus medica.* **S. liquirit'iæ**, extractum glycyrrhizæ. **S. liquirit'iæ depura'tus**, cold evaporated infusion of licorice root. **S. muscula'ris**, muscle-juice. **S. ner'veus**, nervous fluid. **S. nutrit'ius**, chyle. **S. or'ni concre'tus**, see *Fraxinus ornus.* **S. pancreat'icus**, see *Pancreas.* **S. scopa'rii** (Ph. Br.), *Juice of broom;* diuretic; generally used as adjuvant to other diuretics. **S. spissa'tus aconi'ti napel'li**, extractum aconiti. **S. spissa'tus at'ropæ belladon'næ**, extractum belladonnæ. **S. spissa'tus coni'i macula'ti**, extractum cicutæ. **S. spissa'tus hyoscy'ami ni'gri**, extractum hyoscyami. **S. spissa'tus lactu'cæ sati'væ**, extractum lactucæ. **S. tarax'aci** (Ph. Br.), tonic, diuretic, aperient, and cholagogue. **S. Theba'icus**, opium.

Succussion, suk-kush'un (*succutio, succussum*, to shake from beneath). Mode of ascertaining the existence of a fluid in the thorax—fluctuation by succussion—by giving the body one or more slight shakes. Ballottement.

Suchor, su'kor. Saccharum.

Sucinum, suk'in-um. Succinum.

Suck'ing (*sugo, suctum*, to suck). Act of drawing liquid into the mouth by forming a vacuum with the tongue acting as a piston, during inspiration. **S. bot'tle**, bottle so formed that, when filled with milk, it can be sucked from instead of the breast. **S. child**, a suckling.

Suckle, suk'l. To give suck; to nurse.

Suck'ling. Lactation; a sucking child; Lonicera periclymenum.

Su'crose. See *Saccharum.*

Suctio, suk'she-o (*sugo, suctum*, to suck). Sucking.

Suc'tion. Sucking. A method of extraction of cataract; see *Cataract.* **S. pow'er**, the force presumed to be exerted on the blood in the veins by the active dilatation of the heart. See *Derivation.*

Suctoria, suk-to're-ah (*sugo, suctum*, to suck). Animals provided with mouths for sucking. Also organs for sucking or adhesion; hence termed suctorial, as suctorial oscula or mouths.

Suctorial, suk-to're-al. See *Suctoria.*

Suc'tus. Sucking.

Sucus, su'kus. Succus or juice.

Sudamina, su-dam'in-ah (pl. of **Sudamen**) (*sudor*). Small vesicles appearing upon the skin, especially in the summer-time, in hot countries, and in diseases attended with much sweating; *Sweat-vesicles.* It is a miliary eruption. See *Miliary fever, Desudatio, Lichen tropicus.* **S. al'ba**, form in which the epidermis forming a vesicle is macerated, its contents having a milky appearance. **S. crystal'lina**, form in which vesicular contents are clear. **S. malig'na**, miliaria. **S. ru'bra**, form in which the vesicles have a reddish base.

Suda'rium. Sweating room in the ancient bagnios.

Sudatio (su-dah'she-o) or **Suda'tion.** Sweating.

Sudatiuncula, su-dat-e-un'ku-lah (dim. of **Sudatio**). Sweating,

Sudatoria, su-dat-o're-ah. Sweating. **S. malig'na**, see *Sudor Anglicus.* **S. milia'ria**, miliary fever.

Sudato'rium or **Su'datory.** Sweating room in the ancient bagnios. As an adjective, anything exciting or accompanying sweating.

Su'dor. The product of cutaneous transpiration when visible on the surface of the body. It is colorless, of an odor more or less strong and variable, and of a saline taste. It is composed of water, lactic acid, sodium lactate, animal matter, sodium chloride, potassium chloride, earthy phosphate, and oxide of iron. Miliary fever. **S. An'glicus**, *Sweating sickness, Sweating fever;* severe epidemic disease, characterized by profuse sweating, which appeared in England in 1486, and recurred at different times until about the middle of the sixteenth century. It was accompanied with coldness, excessive prostration of strength, palpitation, frequency and inequality of the pulse, etc., and terminated, favorably or unfavorably, in the course of twenty-four hours. A form in which the perspiration was of a black color was called *Sudor Anglicus niger, Black English sweating sickness* or *fever.* **S. colliquati'vus**, S. profusus. **S. cruen'tus**, *Sweating of blood, Bloody sweat, Hemorrhage from the skin;* cutaneous perspiration intermixed with blood. **S. dul'cis**, a discharge of saccharine matter by perspiration. **S. lac'teus**, sweating of milk. **S. loca'lis**, meridrosis. **S. milia'ris**, miliary fever; sudor Anglicus. **S. partia'lis**, partial perspiration. **S. pericar'dicus**, miliaris sudatoria; an epidemic disease which appeared several times in Picardy; the principal symptoms were profuse sweats and miliary eruption. The disease recurred in 1821, and consisted of a simultaneous state of inflammation of various tissues. It was proposed to class it with variola, scarlatina, and measles. **S. profu'sus**, profuse or immoderate sweat. **S. sabulo'sus**, sweating of granular urine. **S. sanguin'eus**, sudor cruentus. **S. universa'lis**, sweating over the whole body. **S. urino'sus**, urinous sweating.

Sudo'ral diarrhœ'a. See *Diarrhœa.* **S. exanthem'ata**, cutaneous eruptions concurrent with profuse perspirations, in young children especially.

Sudor'ifer. Sudoriferous; sudorific.

Sudoriferous, su-dor-if'er-us (*sudor, fero*, to carry). *Sudatory.* That which carries sweat, as the sudoriferous ducts or glands.

Sudorific, su-dor-if'ik (*sudor, facio*, to make). Medicine provoking sweating; see *Diaphoretic.*

Sudoriparous, su-dor-ip'ar-us (*sudor, pario*, to produce). See *Perspiration.* **S. glands**, sweat-glands of the skin, consisting of minute coiled tubes situate in the subcutaneous areolar tissue.

Sudo'ris nul'litas. Absence or deficiency of sweat. **S. priva'tio**, absence or deficiency of sweat. **S. suppres'sio**, suppression of sweat.

Su'et. Sevum.

Suf. As a prefix, *Sub.*

Suf'fering (*suf, fero*, to bear). Any painful feeling

produced by a general or local pathological condition.

Suffimen, suf-fe'men. Suffimentum.

Suffimentum, suf-fim-en'tum (*suffio,* to perfume). Perfume; fumigation.

Suffitio, suf-fish'e-o. Fumigation.

Suffitus, suf-fe'tus. Fumigation.

Sufflatio, suf-flah'she-o (*suf, flo, flatum,* to blow). Puffiness.

Suffocatio, suf-fo-kah'she-o. Suffocation; orthopnœa. **S. hypochondri'aca,** hypochondriasis. **S. hyster'ica,** angone. **S. mulie'rum,** hysteria. **S. strid'ula,** cynanche trachealis. **S. uteri'na,** angone.

Suffocation, suf-fo-ka'shun (*suffoco, suffocatum,* to stop the breath). *Asphyxia, Melanæma.* Death, or suspended animation from impeded respiration, whether caused by the inhalation of noxious gases, drowning, hanging, strangling, or smothering. The principal morbid appearances in such cases are: the lungs of a deep-blue color, with the blood extravasated in the air-cells; right auricle and ventricle more or less filled with dark blood, as well as the neighboring veins; lividity of the countenance; turgescence and perhaps rupture of the vessels of the brain; left side of the heart containing much less blood. The treatment of suspended animation by suffocation in general is as follows: The patient must be conveyed into a room not too warm; friction must be employed with salt or warm flannels; stimulating fluids, in a dilute state, be poured into the stomach by means of a tube, and attempts be made to inflate the lungs; laryngotomy, if necessary. For modes of resuscitation in cases of drowning see *Ready method* and *Drowning, resuscitation from.* The term suffocation is used, as strangling is, for threatened suffocation. It means the state of dyspnœa and oppression experienced when a sufficient quantity of air does not enter the lungs, or when the chemical phenomena of respiration are imperfectly executed, as in cases of asthma.

Suffoca'tive catarrh'. Capillary bronchitis; asthma.

Suffrago, suf-frah'go. The ham.

Suffumigation, suf-fu-me-ga'shun (*suf, fumigo,* to produce smoke). Fumigation; perfume.

Suf'fumige. Fumigation; perfume.

Suffumigium, suf-fu-mij'e-um. Fumigation; perfume.

Suffuminatio, suf-fu-min-ah'she-o. Fumigation; perfume.

Suffusio, suf-fu'se-o (*suf, fundo, fusum,* to pour). False sight; generic term for perversion of vision. **S. aurigino'sa,** icterus. **S. bi'lis,** icterus. **S. col'orans,** chromopsia. **S. congen'ita,** see *Cataract.* **S. dimid'ians,** hemiopia. **S. du'ra,** see *Cataract.* **S. exclar'ans,** oxyopia. **S. fel'lis,** icterus. **S. len'tis crystal'linæ,** cataract. **S. metamorphop'sis,** metamorphopsia. **S. mol'lis,** see *Cataract.* **S. mul'tiplicans,** see *Diplopia.* **S. myo'des,** metamorphopsia. **S. ni'gra,** amaurosis. **S. oc'uli,** cataract, pseudoblepsia. **S. oculo'rum,** metamorphopsia. **S. ra'dians,** scotasma. **S. san'guinis,** ecchymoma. **S. ex vul'nere,** see *Cataract.*

Suffusion, suf-fu'zhun. Full to flowing over; spreading over. See *Suffusio.*

Sug. As a prefix, under.

Sugar, shoo'gar. Saccharum. **S., bar'ley,** penidium; saccharum hordeatum. **S. beet,** Beta vulgaris. **S., black,** extractum glycyrrhizæ. **S. can'dy,** saccharum candidum. **S. cane,** see *Saccharum.* **S. cane, Chinese',** see *Saccharum.* **S., diabet'ic,** glucose. **S., fruit,** glucose. **S. fun'gus,** see *Urine.* **S. of gel'atin,** glycosin. **S., grape,** glucose. **S., hepat'ic,** see *Saccharum.* **S., hon'ey,** glucose. **S. of lead,** plumbi superacetas. **S., liv'er,** see *Saccharum.* **S., ma'ple,** Saccharum acernum; see *Acer saccharinum.* **S. of milk,** *Lactose, Lactine,* or *Lactin,* obtained from whey by evaporation and crystallization. It possesses the demulcent properties of the sugars. **S., mus'cle,** inosite. **S. pine.** see *Arrow root.* **S., starch,** glucose. **S., u'rinary,** glucose. **S., va'rious,** see *Saccharum.*

Sug'arberry. Celtis occidentalis.

Sugar-coat'ed. Covered with a layer of refined sugar. Sugar-coated pills are prepared like the sugar-plums of the confectioners, and are much used in modern pharmacy, especially when the pills are composed of nauseous ingredients. See *Dragée.*

Sug'ar-loaf stump. A conical shape assumed by the stump after amputation, presenting the appearance described by its name; due to excessive muscular retraction.

Suggestion, sug-jest'yun (*suggero,* to convey). That which is suggested. The subjection of a person under hypnotic influence to the wishes of another. See *Hypnotism.*

Sug'gillated. Pertaining to suggillation.

Suggillation, suj-jil-la'shun (*sugillo,* to beat black and blue). *Bruise, Ecchymosis,* and *Ecchymoma.* Also spots or ecchymoses occurring in consequence of intrinsic causes in disease and in incipient putrefaction. It is common in dead bodies. To this last case it is, indeed, restricted by some medico-legal writers. An interesting question sometimes arises—whether the appearance has been induced before death or afterward, and whether it is a case of ecchymosis or of suggillation.

Suggrundium, sug-grun'de-um (*sug, gradior,* to go). Eave of a house. **S. oc'uli,** superciliary arch. **S. supercilio'rum,** frontal protuberance.

Suicida, su-e-se'dah. Suicide.

Suici'dal insan'ity. See *Suicide.*

Suicide, su'i-side (*sui, cædes,* murder of one's self). The act of killing one's self. Suicide is frequently the result of disease of the mind, the individual seeming to be irresistibly impelled to self-destruction, *Suicidal insanity.* Also one who commits self-murder.

Suint. Wool-fat; peculiar fat found in sheep's wool, hair, feathers, etc.

Sul'cated (*sulcus,* a furrow or groove). Deeply grooved or furrowed.

Sulcatus, sul-kat'us (*sulcus*). Sulcated.

Sulci, sul'se ([L.] pl. of **Sulcus**). Grooves. **S. arterio'si,** sulci for meningeal arteries of interior surface of bones of the skull. **S. caroticotympan'ici,** sulci for caroticotympanic nerves on promontory of middle ear. **S. of cerebel'lum,** these include the sulcus horizontalis magnus, sulci vermiculares, sulcus inferior lateralis, and sulcus collateralis inferior (which see) or great horizontal fissure along the lateral edges of the organ. **S. cilia'res,** ciliary sulci. **S. collatera'les medul'læ spina'lis,** see *Grooves, anterolateral* and *posterolateral.* **S. cubita'les,** two grooves on either side of biceps tendon near the cubital fossa. **S. longitudina'les cor'dis,** longitudinal sulci of the heart. **S. meninge'i,** sulci for meningeal arteries on inner surface of the skull, especially upon the parietal bone. **S. occipita'les,** occipital sulci. **S. poplite'i,** sulci at the three principal angles of the popliteal space. **S. supraorbita'les longitudina'les,** small longitudinal sulci on the orbital surface of the hemispheres. **S. tempora'les,** temporosphenoidal grooves. **S. tempora'les transver'si,** transverse temporal grooves. **S. vermicula'res,** sulci separating the vermis from either hemisphere, including the superior, anterior, and posterior sulci, being laterally directed on the superior surface; the inferior, anterior (sulcus of the flocculus), middle (also called anterior), and posterior. **S. vertebra'les,** vertebral grooves or sulci.

Sulculus (dim. of **Sulcus**) **labii superioris,** sulk'ulus lab'e-e su-pe-re-o'ris. Lacuna labii superioris.

Sul'cus. Furrow; groove; groove on the surface of a bone or on other organs; also the vulva. See *Anfractuosity.* In the cerebral hemispheres the term is limited by some to those furrows which concern only the gray matter of the cortex; see *Fissure.* **S. ala'ris,** sulcus between the movable and more fixed parts of the side of the nose. **S. alveolobucca'lis,** sulcus in mucous membrane of the mouth between the cheek and the gums. **S. alveololingua'lis,** sulcus in mucous membrane of mouth between gums and tongue. **S. anterotempora'lis,** median temporal sulcus. **S. antibra'chii radia'lis,** delicate groove in the skin on outer side of a muscular forearm, showing interval between
